Conclusions Report – version 0.1

About this document

This document summarises the responses received to the Modification Report Consultation regarding approval or rejection of this modification.

Summary of conclusions

Modification Report Consultation

SECAS received three responses to the Modification Report Consultation. They all believed that the modification should be approved. They considered the modification better facilitated SEC Objective (a)[1].

[1] To facilitate the efficient provision, installation, and operation, as well as interoperability, of Smart Metering Systems at Energy Consumers' premises within Great Britain.

Modification Report Consultation responses

Summary of responses

All three respondents believed the modification should be approved. One respondent noted the modification makes sense and facilitates the efficient installation of smart metering systems. This is considering the volumes of Communications Hubs currently held by Suppliers, and the issues associated with the installation of GB Companion Specification (GBCS) v3.2 Communications Hubs.

Another respondent advised that it is sensible that energy suppliers have longer to install required Communications Hub stock, to prevent wastage and unnecessary cost.
