1. SEC MP096 and Subsequent Amendments to the PMM

Changes required under SEC MP096 will require DCC to report on new Power Outage Alert (POA) measures and Power Restoration Alert (PRA) indicators. The methodology for the POA measures is required to be included in the Performance Measurement Methodology (PMM) document.

In addition, DCC has been asked to stop reporting POA and PRA under the Reported List of Service Provider Performance Measures (RLoSPPM).

SEC H13.6 requires that any changes to the PMM and RLoSPPM must be made through industry consultation where the former also requires SEC Panel approval before implementation.

DCC is working to amend the RLoSPPM and is updating the PMM with:

1. The addition of a new Code Performance Measure 3a (Power Restoration Alerts)
2. The addition of new Performance Indicators (Power Restoration Alerts)
3. The removal of Service Provider Performance Measures 12.1 and 12.2

DCC will also take the opportunity to make other amendments to the PMM and plan to issue a single consultation covering all the changes described in a single consultation.

2. Timeline

DCC expect to issue the consultation covering changes to the PMM and the RLoSPPM in early / mid September, with a four week response period.

Responses will be reviewed and considered before the consultation and feedback being presented to SEC Operations in late October or early November (depending on availability).

Following this changes and feedback will be presented to October SEC Panel where they will be asked to provide final approval for their implantation.

3. Clarification Points

The timeline is subject to feedback received from the consultation and other engagement. Where responses do not agree with the changes made in relation to SEC MP096 this could result in a delay. However, should DCC receive negative responses in relation to the other, non-SEC MP096 changes only, DCC will continue to engage as described above on those SEC MP096 related changes.

Indicative timescales for updating the PMM have been provided. The reporting for AD1s, 8F35 and 8F36 Alerts will continue to be provided to the DNOs in the manner and method as currently received. Following the revision of the PMM the report will form part of the PMR pack and will be appended as such.

Both the consultation and engagement at SEC panel and Operations will ensure that readers or members are aware that should SEC MP096 not be approved for implementation that the related changes will be withdrawn. SEC Panel approval will therefore be subject to the final approval of the modification.

DCC will continue to keep DNOs up to date on the progress of the implementation of the PMM changes and confirm the first date when the report will be formally included as part of the PMR.

DCC commits to producing the data required under SEC MP096 as soon as possible and without delay, regardless as to which should get approved first - SEC MOD096 or the PMM amendments.
