

TSIRS Meeting #59 - Overview

SECAS

TSIRS Meeting #59 - Overview

- The TSIRS meeting took place on 12 December 2019
- Discussion took place on the units of measure for gas meters:
 - HAN messages: £/kWh
 - WAN messages: £/m³
 - This is a closed issue and further information can be found in TS1208 and TS1079
 - BEIS confirmed that the definitions in SMETS take precedent with GBCS pointing to the definitions in SMETS
- Inclusion of supporting documents in the Technical Specifications
 - Supporting documents will be included only if manufacturers are building to them or they contain other generally useful information.
 - It was agreed that these documents must not require system or device changes.
 - Changes in functionality must be raised as an IRP.

TSIRS Meeting #59 - Overview

- Alert reduction
 - PPMID/IHD attribute requests may be rejected by the ESME or the GPF leading to Alerts.
 - A “back off” for the PPMID and IHD was proposed with the aim of minimizing Alerts resulting from unauthorised access (0x8F3E).
 - The group discussed the introduction of gas consumption timestamps from SECMP0015.
 - The timestamp would allow an IHD/PPMID to better establish when to request data from the GPF and help to reduce the number of Alerts generated.
- Issue Resolutions Proposals (IRP)
 - IRP610 Inconsistency in Mapping Table refs for Twin Element ESME.
 - IRP615 GCS05 Discrepancy in specifications.
 - These will be discussed at the February TSIRS meeting.

TSIRS Meeting #59 - Overview

- BEIS announced a consultation on the subject of splitting the technical specifications at a device level.
 - The consultation was published as of 14 January 2020
 - Closing date is 10am on 18 February 2020
