## **MP090 ‘Incorporation of Non GBCS Non-Mandated Alerts into the SEC’**

### **March 2020 Working Group Meeting summary**

#### **Overview**

SECAS provided an overview of the issue identified by MP083 and the proposed solution.

Issue:

- Non Mandated Non GBCS (NGNM) Alerts are being generated by Devices and unsolicited messages sent to the User
- As the Alerts are non-GBCS there is no contextual information associated with them
- Users cannot turn these Alerts off

Solution:

- Include the NGNM Alerts in GBCS

#### **Configuration**

Within the Problem Statement and the business requirements, it was expected that these NMNG Alerts were to be configurable by the DCC Users. This has resulted that the solution described in the DCC Preliminary Assessment will make these Alerts configurable. The Proposer has highlighted that this is not the intention of the Modification Proposal, and that it was only intended to migrate the NMNG Alerts from a separate spreadsheet on the SEC website into GBCS. Therefore, the DCC Preliminary Assessment is against incorrect requirements and does not have the appropriate costs and lead-times. It was queried if these Alerts are not to be configurable, and only included into GBCS, then would a DCC System change be required. The consensus was that there would be a DCC System impact as the Alerts will need to be processed through Parse and Correlate.

It was agreed that the business requirements would be reviewed, removing reference to configuration, and a new DCC Preliminary Assessment requested. The Proposer highlighted that if a DCC User did want to configure these Alerts, they can raise a Proposal to do so.

#### **Next steps**

The following actions were recorded from the meeting:

SECAS will review the business requirements to remove any requirement for these NMNG Alerts to be configurable

- These business requirements would be approved by the Proposer
- SECAS would request a new DCC Preliminary Assessment against the updated business requirements
