2. Define

New Draft Proposals

DP125

[DP125 'Correcting the ESME variant'](#) was raised by John Noad from Npower on 7 May 2020.

A gaining Supplier is unable to update the 'ESMEVariant' field of a commissioned Electricity Smart Metering Equipment (ESME) after Service Request (SR) 12.2 has been executed incorrectly by the previous installing Supplier.

DP126

[DP126 'Smart meter consumer data access and control'](#) was raised by Ed Rees from Citizens Advice on 11 May 2020.

Consumers rely on their Energy Supplier to provide information through the In-Home Display (IHD), which is not an ideal position for consumers to receive impartial advice. Data Communications Company (DCC) Users are required to make privacy and security provisions before they can access consumers' energy data; however, the DCC does not authenticate DCC Users' permissions for each individual data request. As a result, those other DCC Users' access to consumers energy use data could have issues where data is incorrectly logged or processed, data breaches or consent issues which leads to consumers issues with privacy and security.

DP127

[DP127 'SMKI RAPP Security Screening clarification'](#) was raised by Gordon Hextall on behalf of the Security Sub-Committee (SSC) on 11 May 2020.

The SSC has confirmed that the obligations in SEC Section G 'Security' G4.2 and G4.3 apply to Authorised Responsible Officers (AROs) and that AROs should be subject to security screening to British Standard (BS) 7858:2019 or equivalent. However, this obligation isn't made explicit in the Appendix D 'SMKI Registration Authority Policies and Procedures' (SMKI RAPP) which is followed by Users and the DCC Registration Authority in processing applications for the appointment of AROs. Failure to comply with the obligation in Section G4.3 will result in a non-compliance being raised during a User Security Assessment.

DP128

[DP128 'Gas Network Operators SMKI Requirements'](#) was raised by Earl Richards of Cadent Gas on 11 May 2020.

Gas Network Operators are required by the SEC to place their Smart Metering Key Infrastructure (SMKI) Organisation Certificates in the SMKI Repository and to undertake SMKI & Repository Entry Process Tests (SREPT). The Proposer believes this is a very expensive process if the Gas Network Party does not have the infrastructure to create and maintain the SMKI Keys and to complete SREPT. They also consider this obligation provides no benefit to Gas Network Operators since they do not

receive Alerts. Consequently, the Proposer feels that Gas Network Party have no current benefit in becoming DCC Users.

DP129

[DP129 'Allowing the use of CNSA variant for ECDSA'](#) was raised by David Rollason from the DCC on 12 May 2020.

The Data Service Provider (DSP) considers itself to be a Remote Party in the context of SEC Schedule 8 'GB Companion Specification' (GBCS) Section 4.3.3.2. It therefore interpreted the GBCS as mandating the GBCS variant of Elliptic Curve Digital Signature Algorithm (ECDSA) for all device critical command signing operations, rather than the more common Commercial National Security Algorithm (CNSA) Suite variant, which is approved by the National Institute of Standards and Technology (NIST).

The Department for Business, Energy and Industrial Strategy (BEIS) advised that the DSP could have used the CNSA variant and remained compliant. The SMKI Policy Management Authority (SMKI PMA) also agreed that the GBCS wording lacked clarity and would need to be updated to explicitly permit the use of CNSA by Remote Parties.

MP130

[MP130 'CH order and delivery changes due to COVID-19'](#) was raised by David Rollason from the DCC on 12 May 2020.

The current UK Government social distancing guidance issued to help reduce the spread of the coronavirus (COVID-19) means only essential Communications Hub installations are taking place. There is currently no definitive end date to this guidance.

The manufacturers of Communications Hubs are not UK-based and therefore are not subject to the same social distancing guidance. They are continuing to manufacture Communications Hubs and the DCC's Service Providers are contractually obliged to receive them. Under the SEC, Suppliers are obliged to receive the deliveries they ordered.

This has resulted in large numbers of Communications Hubs being held by Suppliers. Scheduled deliveries that are required under the SEC to continue mean Suppliers now face the challenge of reduced warehouse capacity and the need to minimise the unnecessary movement of Communications Hub stock.

The Proposer requested this be treated as an Urgent Proposal. This request was approved by the Authority. On Friday 22 May, The Change Board voted to recommend the Authority approve this Modification Proposal. The Authority approved this modification on 26 May 2020, and it was implemented on 27 May 2020.

DP131

[DP131 'Default maximum demand configuration conflict'](#) was raised by Chun Chen from the DCC on 21 May 2020.

According to the Smart Metering Equipment Technical Specifications (SMETS), GBCS use case definitions, the DCC User Interface Specification (DUIS) and the Message Mapping Catalogue (MMC), values of week definition and date range cannot be configured, for example only the time of day can be configured via defined use case. The Companion Specification for Energy Metering (COSEM) template (attached in GBCS Section 18.2 (use case ECS37)) also shows the date configuration for the maximum demand.

Following implementation of [SECMP0018 'Standard Electricity Distributor Configuration Settings'](#), GBCS Table 28d is in conflict with ENA-required default configuration and the above SEC documents. It is proposed that a correction is made to GBCS v3.2 Table 28d to align it with the ENA-required default configuration.

DP132

[DP132 'DLMS references in GBCS'](#) was raised by Tony Pile from Landis & Gyr on 21 May 2020.

The Device Language Message Specification (DLMS) has issued a new version of the DLMS Green and Blue Books. These documents are referenced in the GBCS and must be updated.

DP133

[DP133 'Consequential changes to SEC Section G'](#) was raised by Simon Crouch from Utiligroup on 22 May 2020.

Currently SEC Section G1.7 lists exclusions for Export Suppliers and Registered Supplier Agents (RSAs). The "Shared Resources" section isn't currently listed under G1.7, which means these Parties can ignore those obligations whilst not being in breach of the SEC. This error needs to be corrected.

DP134

[DP134 'Use of SMKI Certificates relating to a SoLR event'](#) was raised by Easton Brown from DCC on 29 May 2020.

Only the relevant Supplier (or their agent) holds the SMKI Private Keys that enable Critical Commands, such as Emergency Credit, to be sent and actioned by the meter. It can commonly take between two and four weeks from the point of SoLR appointment for the new Supplier to change the SMKI Certificates and much longer in some instances where there are problems with data and communications. During this time Prepayment meter customers may be off supply.

Change Sub-Committee decisions

On 26 May 2020, the Change Sub-Committee (CSC) determined that the following Draft Proposals were ready to be presented to the Panel for conversion to a Modification Proposal:

- [DP094 'Supporting prepayment customers in no SM WAN scenarios'](#)
- [DP124 'Consequential changes to DUIS and MMC'](#)
- [DP125 'Correcting the ESME variant'](#)

- [DP127 'SMKI RAPP Security Screening clarification'](#)
- [DP128 'Gas Network Operators SMKI Requirements'](#)
- [DP129 'Allowing the use of CNSA variant for ECDSA'](#)

On 4 June 2020, the CSC subsequently agreed via correspondence that the following Draft Proposals should be presented to the Panel for conversion to a Modification Proposal:

- [DP132 'DLMS references in GBCS'](#)
- [DP134 'Use of SMKI Certificates relating to a SoLR event'](#)
