# SECMP0015 ‘GPF timestamp for reading instantaneous Gas values’ Modification Report Consultation responses

## About this document

This document contains the full collated responses received to the SECMP0015 Modification Report Consultation.

## Summary of responses

## Question 1: Do you believe that SECMP0015 should be approved?

Question 1			
Respondent	Category	Response	Rationale
<b>E.ON</b>	Large Supplier	Approve	E.ON is supportive of this change to support meter triage and improve billing and customer data accuracy.
<b>OVO</b>	Large Supplier	Approve	The impact on the customer journey and issues relating to Prepayment require this to continue although the costs for doing so may mean this will not happen and getting the best outcome for the customer may not be possible due to exorbitant costs the DCC seem to charge Users.  We agree these align to SEC Objectives (a) and (c).
<b>Scottish Power</b>	Large Supplier	Reject	We were broadly supportive of this modification in light of the positive cost benefit ratio suggested from its preliminary assessment 2 years ago, which was around £600k. However, the full impact assessment suggests costs nearer £4.6m for PROD delivery. In our view this completely undermines the case for implementation.

## Question 2: Please provide any further comments you may have

Question 2		
Respondent	Category	Comments
<b>E.ON</b>	Large Supplier	Can the DCC give an indication of the cost savings associated with testing using real devices instead of emulators, as referred to in Section 5. The section suggests that additional detail is available in Annex C, but there isn't a clear statement of the cost saving.
<b>OVO</b>	Large Supplier	The costs are not finalised and this needs to be challenged and drawn out. DCC need to clarify the costing to use actual devices and not emulators. It must also be flagged the cost for this change is huge and far outside the acceptable tolerances. This needs to be discussed and go through before this is cleared to be progressed. It is a shame this is no longer an Authority Driven change as it would be interesting to see their view of the costs and how much changing the Solution, especially for Prepayment customers, will be charged to Users.
<b>Scottish Power</b>	Large Supplier	N/A
