A.1.1 Table 1 below describes the information provided for each Communications Hub, each carton containing a Communications Hub and each pallet of Communications Hubs for delivery, depending upon the Region to which the associated Communications Hub Order relates. A summary of data items included in the Advance Shipment Notification and the associated Delivery Note is also provided.

Table 1; Consignment labelling and information

	CH Marking		Carton Labels	Pallet Labels	Advanced Shipment Notification		Delivery/Transfer Note	
	North Region	Central & South Regions	All Regions	All Regions	North Region	Central & South Regions	North Region	Central & South Regions
CHF Identifier (EUI-64 unique number)	Y	Y	Y		Y	Y		
Communications Hub Variant	Y	Y	Y	Y	Y	Y	Y	Y
GPF identifier (EUI-64 unique number)	Y	Y			Y	Y		
Zigbee MAC address	Y	Y			Y	Y		
SM WAN identifier					Y			

OMS Order Reference				Y	Y	Y	Y	Y
Party order reference				Y	Y	Y	Y	Y
Consignment reference				Y	Y	Y	Y	Y
Delivery Location					Y	Y	Y	Y
Scheduled Delivery Date and Time					Y	Y	Y	Y
Firmware version number					Y	Y		
Hardware version number	Y				Y	Y		
Device configuration identifier	Y				Y			
Manufacturer, country and date of manufacture	Y	Y			Y	Y		
Batch number					Y	Y		
Reconditioned status (Y/N)					Y	Y		
Pallet identifier				Y	Y	Y	Y	Y
Quantity of Cartons on the pallet				Y	Y	Y	Y	Y
Carton identifier			Y	Y	Y	Y	Y	Y
Quantity of Communications Hubs in carton			Y		Y	Y	Y	Y
Pallets in delivery					Y	Y	Y	Y

Annex B. Communications Hub Pallet and Carton Quantities

B.1. Communications Hub Packaging

B.1.1 Consignments will be delivered in accordance with the packaging quantities set out in Table 2 below. Maximum delivery volumes assume double stacked pallets. Individual Communications Hub Consignments may therefore include pallets in different pallet layers.

B.1.2 Where Communications Hub Orders in the North Region are placed for multiple Communications Hub Variants, these Communications Hub Variants will be delivered on separate pallets. Pallets will not contain a mix of different Communications Hub Variants.

Table 2; Communications Hub delivery packaging

Packaging Information	North Region	Central Region and South Region
DCC Pallet size	Standard 4 Way L:1.2m, w:1m, H: 1m	Standard 4 Way L:1.2m, w:1m, H: 1m
Packaged Communications Hubs per carton	28	Either: 14 – Single Band Cellular Communications Hub Variant or 10 – all Communications Hub Variants except the Single Band Cellular

		Communications Hub Variant
Cartons per layer	8	16
Maximum layers per pallet	4	4
Cartons per full pallet	32	64
Boxes per full pallet	896 (28 boxes x 32 cartons)	Between 640 and 896 (64 cartons, each containing either 10 or 14 boxes)
Actual weight per full pallet	333 kg for Single Band Communications Hubs 200 kg for Dual Band Communications Hubs - Standard 420 DB Variant (est.)	
Maximum weight per pallet		Max 500 kg
Maximum pallet height (incl. Pallet base)	1m	1m
Maximum volume (m3) per pallet	1.2 m3	1.2 m3
Maximum Pallets per trailer	52	40
Maximum packaged Communications Hubs per trailer	46,592	Between 25,600 and 35,840

Annex C. Communications Hub storage and installation environmental conditions

C.1. Storage and installation environmental conditions

C.1.1 Communications Hubs are designed to be stored and operated within a defined range of environmental conditions; exposure to conditions outside this range may lead to premature failure of the device.

C.1.2 Communications Hubs are designed to be stored under the following conditions:

(a) individual Communications Hubs should be kept in the original packaging provided for shipment prior to installation;

(b) any storage environment should meet European Telecoms Standards Institute ETSI EN 300 019-1-.1 Class 1.2 (Weather protected not temperature- controlled storage locations), or any equivalent standard that replaces this; and

(c) Good Industry Practices suitable for the handling, storage, preservation and internal delivery of the inventory of Communications Hubs that prevent damage, deterioration or misuse during internal processing should be followed.

C.1.3 Communications Hubs are designed to be transported in the following conditions:

(a) individual Communications Hubs should be transferred between locations packaged in their original packaging such that they are protected from damage during normal handling; and

(b) the transport environment should meet the European Telecoms Standards Institute ETSI EN 300 019-1-.2 Class 2.3 (Public Transportation), or any equivalent standard that replaces this.

C.1.4 Communications Hubs are designed to be installed and operated under the following conditions:

(a) the Communications Hub should not be subject to moisture ingress or foreign object ingress during the installation process;

(b) following correct installation onto an ICHS-compliant host, moisture or foreign object ingress conditions should not exceed that specified in the IP53 Code under IEC standard 60529 or any equivalent standard that replaces this;

(c) the Communications Hub should not be subject to humidity outside the range of 10% to 90% non-condensing; and

(d) the Communications Hub should not be exposed to extremes of temperature of below -20°C or above +55°C.

Annex D. Communications Hub Packaging

D.1.1. Communications Hubs will be individually packaged in a cardboard box that:

(a) is robust enough to protect the ICHIS connector pins during transport and handling; and

(b) allows for both the CHF Identifier and Communications Hub Variant information to be visible directly through a cut-out without removing any of the packaging.

D.1.2. Individually boxed Communications Hubs will be grouped and packed in cardboard cartons that:

(a) protect the Communications Hub from damage during transport and handling;

(b) will contain the quantities set out in Annex B;

(c) are labelled in accordance with Annex A; and

(d) contain a single Communications Hub Variant.

D.1.3. Cartons of Communication Hub will be delivered on UK standard pallets in the quantities per pallet set out in Annex B. The pallets will be wrapped in industrial pallet or stretch wrap material.

Version I 5.0

APPENDIX I

CH Installation and Maintenance Support Materials

Definitions

Cellular Communications	means a WAN Variant in the Central Region and the South Region which is capable of using mobile cellular radio technology to connect to the SM WAN.
Central Region	means the Region which covers the majority of Wales and the majority of central England.
CH No SM WAN Installation Procedure	means the procedure by which a Supplier Party installs a Communications Hub where it has not established a connection to the SM WAN as described in clauses 4.8 to 4.10 of this document
CH Status Information	means the visual information that is displayed by the Communications Hub to indicate the current operational status of the Communications Hub, as further set out in the CH Supporting Information.
CH Supporting Information	has the meaning given to that term in the CH Handover Support Materials.
CHF Identifier	has the meaning given to that term in CHTS.
Communications Hub Availability and Diagnostics Check	means the procedure set out in clause 5.2 of this document.
Communications Hub Fault Handling Procedures	means the processes set out in clauses 8.3 to 8.11 of this document.
Communications Hub Variants	means variations of Communications Hubs describing their HAN and WAN communications characteristics.
Coverage Area	means the geographical coverage of the SM WAN at a point in time.
DCC Installer Training Plan	means the training materials provided by the DCC to support the development of Communications Hub installation and maintenance training.
DCC Returns Location	means a location at which a Party should deliver Communications Hubs that it wishes to return to the DCC.
Dual Band Communications Hub	a HAN Variant which is capable of using 2.4GHz and Sub-GHz frequencies for communication on the Home Area Network (HAN).
Fault Analysis Report	means the report provided to a Party by the DCC pursuant to Section F9.11 of the Code.

Installation Location	means the location of a premises at which a Communications Hub is planned to be, or has been, installed.
Installation Point	means the location at an Installation Location where a Communications Hub is installed.
Mesh Communications Hub	means a WAN Variant in the Central Region and the South Region which is capable of using both mobile cellular radio technology and wireless mesh radio technology to connect to the SM WAN.
North Region	means the Region which covers the majority of Scotland and the majority of northern England.
Order Management System (or **OMS)**	has the meaning given to that term in the CH Handover Support Materials.
Return Date	means the date on which a Communications Hub is arranged to be delivered to the DCC by a Party
Return Delivery Note	means an electronic or paper form containing the information set out in clause 10.12.
Return Materials Authorisation (or **RMA**)	means the procedure whereby the DCC authorises a Party's request to return a Communications Hub to the DCC in accordance with clauses 10.5 to 10.7 of this document.
Significant Metallic Obstruction	means a metallic object of such scale and proximity to the Communications Hub as is likely to cause obstruction to SM WAN communications to the Communications Hub, and as further described in the CH Supporting Information.
Single Band Communications Hub	means a HAN Variant which is only capable of using 2.4GHz frequency for communication on the Home Area Network (HAN).
Special Installation Mesh Communications Hub	means a WAN Variant in the Central Region and the South Region which provides two external aerial ports on the front face to enable connection of two external aerials – one cellular (either a T1 Aerial Type, T2 Aerial Type or T3 Aerial Type) and one mesh (either an M1 Aerial Type or M2 Aerial Type). This WAN variant may not be ordered by Parties but is supplied and fitted directly by DCC.
South Region	means the Region which covers the majority of southern England.
Substantial Stone Walls	means walls with external or internal structure primarily made of stone, and of sufficient thickness to be likely to prevent connectivity to the SM WAN by the Communications Hub, as further described in the CH Supporting Information.

Working Hours	has the meaning given to that term in the CH Handover Support Materials.

1. INTRODUCTION

Document purpose

1.1 Sections F7 to F9 set out principal rights and obligations applying to the installation and maintenance of Communications Hubs, which are supplemented by the provisions set out below. This document forms Appendix I of the Code.

General clarifications

1.2 Unless expressly stated otherwise, the obligations set out in this document are applicable to all Regions.

1.3 Unless expressly stated otherwise none of the obligations in this document apply to Test Communications Hubs.

2. GENERAL OBLIGATIONS IN RELATION TO THE INSTALLATION AND MAINTENANCE OF COMMUNICATIONS HUBS

DCC Obligations

2.1 The DCC shall ensure that it provides upon request to Parties a DCC Installer Training Plan which is sufficient to enable individuals accredited in accordance with it to carry out Communications Hub installation and maintenance activities in accordance with the CH Support Materials.

Supplier Party Obligations

2.2 Each Supplier Party shall ensure that any installations or maintenance of Communications Hubs undertaken on its behalf are undertaken by individuals that are certified to carry out Communications Hub installation and maintenance activities in accordance with the process for independent certification set out in the DCC Installer Training Plan.

3. PRE-INSTALLATION PROCEDURES

Activation prior to installation

3.1 A Party shall take all reasonable steps to prevent any Communications Hub in its possession from establishing a connection to the SM WAN prior to its installation for the purposes of Commissioning the Communications Hub Function.

Communications Hub inspections prior to installation

3.2 When installing a Communications Hub, prior to removing any packaging, a Supplier Party shall ensure that visual checks are undertaken to confirm that the packaged Communications Hub is not damaged.

3.3 Following the removal of all packaging, a Supplier Party shall ensure that visual checks are undertaken to confirm that the connecting pins (as described in the ICHIS) on the Communications Hub appear to be aligned and that the Communications Hub is not otherwise visibly damaged.

3.4 Where a Party, following inspection in accordance with clauses 3.2 and 3.3 above identifies damage to the Communications Hub or its packaging (including where the connecting pins are misaligned) that has caused or may reasonably be assumed to have caused more than superficial scratching or cosmetic damage to the body of the Communications Hub, the Party shall not attempt to install the Communications Hub and shall return the Communications Hub in accordance with clauses 10.1 to 10.20 of this document.

Pre-requisites for Fitting of Communications Hubs

3.5 Each installing Supplier Party shall ensure that a Communications Hub is not installed where it ascertains that:

(a) the environmental conditions as defined in Annex C of the CH Handover Support Materials are not met; or

(b) the estimated temperature difference between the Communications Hub to be installed and the ICHIS compliant host exceeds 10 degrees Celsius.

3.6 Prior to attempting a Communications Hub installation, a Supplier Party shall ensure that the Installation Point is visually inspected to assess whether it lies entirely within a metallic enclosure or if any Significant Metallic Obstruction(s) exists. A Supplier Party shall ensure that a Communications Hub is not installed where its visual inspection determines that:

(a) the Installation Point is entirely within a metallic enclosure; or

(b) a Significant Metallic Obstruction exists with respect to three or more of the following surfaces:

(i) the front surface of the Communications Hub;

(ii) the top surface of the Communications Hub;

(iii) the left-side surface of the Communications Hub; or

(iv) the right-side surface of the Communications Hub;

and where (a) or (b) applies that the use of an aerial is not determined to be likely to provide connectivity.

4. COMMUNICATIONS HUB INSTALLATION

4.1 When attempting the initial installation of a Communications Hub, a Supplier Party shall ensure that it uses the WAN Variant that was identified as being required for the Installation Location on the Coverage Database when the Supplier Party checked the Coverage Database, provided that this check was performed at any time within the period 30 days prior to the Installation Date.

4.2 It is a Supplier Party's responsibility to decide which HAN Variant to install at each customer's premises.

4.3 When installing a Communications Hub or Communications Hub Auxiliary Equipment, as set out in the Annex E of this document, a Supplier Party shall ensure that all appropriate tools and equipment are used.

Fitting and activation

4.4 A Supplier Party shall ensure that a Communications Hub is fitted according to the procedure set out in Annex A of this document.

4.5 On completion of the fitting procedure, the relevant Supplier Party shall ensure that the activation procedures for the Device Model that has been fitted are undertaken, as set out in Annex B of this document.

4.6 Where, during the installation process, the Supplier Party suspects that a fault has occurred with the Communications Hub, the relevant Supplier Party shall follow the procedures set out in clauses 8.1 to 8.13 of this document.

Post Installation Update Procedure

4.7 Where following completion of both the relevant fitting procedures and the relevant activation procedures, the Communications Hub is successfully connected to the SM WAN, the relevant Supplier Party shall:

(a) ensure that the Communications Hub is fitted with a security seal; and

(b) submit a Service Request 8.14.1 (Communications Hub Status Update – Installation Success) in accordance with the DUIS within five (5) Working Days.

CH No SM WAN Installation Procedure

4.8 Where, following the fitting and activation procedure, a Supplier Party wishes to leave a Communications Hub installed without establishing a connection to the SM WAN, the Supplier Party shall:

(a) ensure that the power supply to the Communications Hub is capable of being maintained following fitting and activation;

(b) verify that the CH Status Information does not indicate any fault other than failure to connect to the SM WAN;

(c) ensure that the Communications Hub is fitted with a security seal; and

(d) the relevant Supplier Party shall notify the DCC by submitting a Service Request 8.14.2 (Communications Hub Status Update Install No SM WAN) in accordance with the DUIS, within three (3) Working Days.

4.9 Pursuant to 4.8(d) a Supplier Party submitting an 8.14.2 Service Request shall indicate whether each of the following conditions exists:

(a) a Significant Metallic Obstruction exists at the Installation Point with respect to any of the following surfaces;

(i) the front surface of the Communications Hub;

(ii) the top surface of the Communications Hub;

(iii) the left-side surface of the Communications Hub; or

(iv) the right-side surface of the Communications Hub.

(b) (without detailed or expert assessment), the Installation Point appears to have Substantial Stone Walls; or

(c) the Installation Point is in a shared or communal area, outside the individual premises.

4.10 Following receipt of a Service Request 8.14.2 (Communications Hub Status Update Install No SM WAN), the DCC shall create an Incident and shall include within the Incident details of any Network Enhancement Plan affecting the Installation Location.

5. COMMUNICATIONS HUB DIAGNOSTICS

5.1 Where, following successful installation of a Communications Hub and Commissioning of the related Communications Hub Function, a Supplier Party identifies a potential Communications Hub fault, pursuant to Section H9.6 of the Code, that Supplier Party shall take all reasonable steps to complete the Communications Hub Availability and Diagnostics Check procedure prior to raising an Incident with the DCC.

Communications Hub Availability and Diagnostics Check

5.2 A Supplier Party may undertake a Communications Hub Availability and Diagnostics Check, by either:

(a) utilising the Self-Service Interface to complete the Communications Hub availability and diagnostic check as defined in the Self-Service Interface Access Control Specification and the SSI Baseline Requirements Document; or

(b) sending Service Requests 6.13: (Read Event or Security Log) for the CHF event log and Service Request 8.9: (Read Device Log) for the CHF Device Log, in accordance with DUIS and interpreting the Service Responses received.

5.3 Where any Communications Hub Availability and Diagnostics Check indicates that the Communications Hub Function does not:

(a) have a network status of 'activated'; or

(b) the Communications Hub Availability and Diagnostics Check response indicates that an error has occurred;

the Supplier Party shall verify that the SMI Status of the Communications Hub Function is not 'pending', 'installed not commissioned' or 'decommissioned', prior to raising an Incident.

5.4 Where any Communications Hub Availability and Diagnostics Check indicates that the SM WAN is unavailable for the Communications Hub, the Supplier Party shall check that there is no planned maintenance or existing DCC notified problem relating to SM WAN connectivity affecting the Installation Location by using the SM WAN network coverage functionality of the Self-Service Interface, prior to raising an Incident.

5.5 A Supplier Party shall include any relevant information from the Communications Hub Availability and Diagnostics Check in any Incident raised relating to that Communications Hub.

6. SPECIAL INSTALLATIONS & MODIFICATIONS

6.1 Where DCC identifies that resolution of an Incident relating to the ability to connect to the SM WAN requires work to be undertaken at a premises, the DCC shall notify the Supplier Party that raised the Incident accordingly. Such notification shall include details of the potential work required. The Supplier Party that raised the Incident may request that the DCC undertakes such work at the premises and the DCC shall be required to undertake such work, subject to the provisions of Section F7.5 – F7.7 of the Code.

6.2 Where a Supplier Party requires the DCC to undertake work at the premises, the Supplier Party shall update the Incident accordingly. The Supplier Party shall update the Incident with the following information when it is available:

(a) confirmation that consent for the work to be carried out has been obtained in accordance with Section F7.5 and F7.6 of the Code;

(b) the date and time at which the DCC should attend the relevant premises to carry out the work where;

(i) the Supplier Party shall ensure that the date shall be a Working Day, and the time shall be between 09:00 and 17:00;

(ii) the Supplier Party shall ensure that the date is no less than five (5) Working Days after the date of this update; and

(c) contact details that the DCC should use to confirm attendance prior to the agreed date and time or in the event that further liaison with the Supplier Party is required

(d) details of the reasoning for the need for DCC to attend.

6.3 Following the updates made pursuant to clause 6.2, the DCC shall subsequently update the Incident to provide contact details for its field force engineers at least one full Working Day prior to the date and time set for attendance at the relevant premises.

6.4 The DCC shall take all reasonable steps to attend the relevant premises at the specified date and time to undertake the work in accordance with Section F7.7 of the Code and shall notify the Supplier Party immediately where a delay to arrival is likely.

6.5 Where the DCC fails to meet the appointment, the DCC shall provide a list of reasonable options for revised dates and times from which the Supplier Party may select. Where the Supplier Party selects one of the potential dates and times offered by the DCC the provisions of clause 6.4 shall apply to that new date and time.

6.6 Where, in the Central Region and South Region, the DCC attends the relevant premises and identifies that T3 Aerial Type is required to resolve an Incident, the DCC shall:

(a) provide a T3 Aerial Type and any other equipment required to achieve connectivity between the Communications Hub and the SM WAN; and

(b) undertake such authorised work as is required to install such aerial and any additional required equipment.

6.7 Where, in the Central Region and South Region, the DCC attends the relevant premises and identifies that a Special Installation Mesh Communications Hub is required to resolve an Incident, the Supplier Party shall install a Special Installation Mesh Communications Hub provided by the DCC (as further set out in the CH Handover Support Materials) by following the fitting procedure set out in Annex A.1 of this document.

6.8 Following completion by the Supplier Party of the fitting procedure set out in Annex A.1 of this document for a Special Installation Mesh Communications Hub, the DCC shall:

(a) provide any aerial as deemed necessary (T1 Aerial Type, T2 Aerial Type, T3 Aerial Type, M1 Aerial Type or M2 Aerial Type) and any other equipment required to connect the Special Installation Mesh Communications Hub to the SM WAN; and

(b) undertake such work as is required to install such aerials or other equipment.

6.9 Where successful connection to the SM WAN is indicated, following installation of either:

(a) a Special Installation Mesh Communications Hub, with associated aerials and any additional required equipment:

or

(b) a T3 Aerial Type;

the Supplier Party shall complete the procedure set out in clause 4.7.

6.10 Where successful connection to the SM WAN is not achieved, following installation of a Special Installation Mesh Communications Hub, associated aerials and any additional required equipment, the Supplier Party may either:

(a) follow the fault handling procedure in accordance with clauses 8.3 to 8.6;

(b) leave the Special Installation Mesh Communications Hub installed without establishing a connection to the SM WAN by following the CH No SM WAN Installation Procedure; or

(c) remove the Special Installation Mesh Communications Hub in accordance with the process set out in Annex A of this document, in which case:

(i) the DCC shall remove all aerials and other equipment installed in accordance with 6.8(b);

(ii) the Supplier Party shall return the Special Installation Mesh Communications Hub to the DCC in accordance with clause 10.1 and in accordance with Section F7.4A;

(iii) the Supplier Party shall update the existing Incident with details of the steps that have been undertaken within three (3) Working Days; and

(iv) a notification shall be deemed not to have occurred for the purposes of Section F7.18.

6.11 Where a successful connection to the SM WAN is not achieved, following installation of a T3 Aerial Type and any additional required equipment, and where the DCC has decided not to require the Supplier to install a Special Installation Mesh Communications Hub, the Supplier Party may either:

(a) follow the fault handling procedure in accordance with clauses 8.3 to 8.6;

(b) leave the Communications Hub installed and connected to the T3 Aerial Type without establishing a connection to the SM WAN by following the CH No SM WAN Installation Procedure; or

(c) in accordance with any instruction from DCC, restore the Communications Hub aerial to its previous state, in which case:

(i) the DCC shall remove the T3 Type Aerial and other equipment installed in accordance with 6.8(b);

(ii) the Supplier Party shall update the existing Incident with details of the steps that have been undertaken within three (3) Working Days; and

(iii) a notification shall be deemed not to have occurred for the purposes of Section F7.18.

6.12 No Party other than the DCC may install, repair or remove T3 Type Aerials and/or M1 / M2 Type Aerials and other equipment installed in accordance with clause 6.8(b), without first seeking permission from DCC (save that such a Party may take action in accordance with Good Industry Practice to protect the health and safety of persons or to prevent imminent damage to property).

7. DCC REQUEST TO ATTEND A PREMISES

7.1 Where, in accordance with Section F7.13, DCC wishes to request permission to attend a premises at which a Communications Hub is installed, the DCC shall notify the Supplier Party from whom access is being requested. Such notification shall include:

(a) details of any premises which the DCC wishes to attend, and the nature of the activity or inspection that the DCC intends to conduct; and

(b) DCC email and telephone contact details for the Party to use in relation to the process of arranging attendance at the premises.

7.2 Where the Supplier Party agrees to a request from DCC in accordance Section F7.14, or is required to take all reasonable steps to obtain Energy Consumer consent in accordance with Section F7.15, the Party shall notify the DCC, using the contact details provided pursuant to clause 7.1(b), of the following:

(a) confirmation that consent for the work to be carried out has been obtained or notification that consent has not been obtained;

(b) where consent has been obtained, the date and time at which the DCC should attend the relevant premises where;

(i) the Supplier Party shall ensure that the date is a Working Day, and the time shall be between 09:00 and 17:00;

(ii) the Supplier Party shall ensure that the date is no less than thirty (30) Days after the DCC notification was issued in accordance with clause 7.1 or the Panel determination was made pursuant to Section F7.15; and

(c) contact details that the DCC should use to confirm attendance prior to the agreed date and time or in the event that further liaison with the Supplier Party is required.

7.3 Following notification to the DCC pursuant to clause 7.2, the DCC shall, using the contact details provided, inform the Supplier Party of contact details for their personnel at least one full Working Day prior to the date and time set for attendance at the relevant premises.

7.4 The DCC shall attend the relevant premises at the specified date and time and shall immediately notify the Supplier Party, using the contact details provided, where a delay to arrival is likely.

8. ON-SITE FAULT RESOLUTION AND COMMUNICATIONS HUB REPLACEMENT

Site Visit - Environment Check Procedure

8.1 Where a Supplier Party is at a premises and prior to undertaking any Communications Hub Fault Handling Procedures, or replacing a previously installed Communications Hub, a Supplier Party shall take all reasonable steps to verify that:

(a) the ICHIS compliant host is providing power to the Communications Hub; and

(b) that the prerequisites for installation of a Communications Hub set out in clauses 3.5 to 3.6 of this document are met.

8.2 Where the Supplier Party reasonably determines that the conditions in clause 8.1 are met the Supplier Party shall:

(a) where physical damage that is more than cosmetic is identified, remove the Communications Hub in accordance with clauses 9.1 to 9.9 of this document; and

(b) undertake the relevant Communications Hub Fault Handling Procedures.

Special Installation Mesh Communications Hub Fault Handling Procedures

8.3 Where following a remote fault diagnosis a Supplier Party reasonably assumes that a fault is attributable to a Special Installation Mesh Communications Hub or T3 Aerial Type or M1 / M2 Aerial Type, the Supplier Party shall raise or update an Incident in accordance with clause 6.2 to request that the DCC attends the Installation Location to resolve the Incident other than where DCC has indicated that that a site visit is not required to resolve the matter.

8.4 Where a Supplier Party is at a premises and a Special Installation Mesh Communications Hub, based on the CH Status Information, indicates an error state, and the Supplier Party reasonably determines that the either or both of the T3 Aerial Type or M1 / M2 Aerial Types (if installed) is at fault:

(a) where the DCC is in attendance, the DCC shall remove and replace either or both of the aerials immediately; or

(b) where the DCC is in not in attendance, the Supplier Party shall raise an Incident to request that the DCC undertakes such work at the premises and update the Incident with further information when it is available in accordance with clause 6.2.

8.5 Where a Supplier Party is at a premises and a Special Installation Mesh Communications Hub, based on the CH Status Information, indicates an error state, and the Supplier Party reasonably determines that the Special Installation Mesh Communications Hub is at fault, the Supplier Party shall:

(a) where the Supplier Party reasonably determines that the Special Installation Mesh Communications Hub can be removed and re-installed without disturbing either the installed T3 Aerial Type and/or M1 / M2 Aerial Types, take the following steps to remove and re-install the Communications Hub:

(i) disconnect the installed T3 Aerial Type and/or M1 / M2 Aerial Type;

(ii) remove the Communications Hub in accordance with clause 9 of this document;

(iii) following a period of no less than three (3) minutes, during which there is no physical connection to the host, re-install the same Communications Hub using the fitting and activation procedures as set out in A.1 and B.2 of this document, including the re-connection of the existing aerials;

(b) where having undertaken the activities set out in 8.5(a), the Special Installation Mesh Communications Hub, based on the CH Status Information, continues to indicate an error state; raise or update an Incident in accordance with clause 6.2 to request that the DCC attends the Installation Location to resolve the Incident

(c) where having undertaken the activities set out in 8.5(a), the Special Installation Mesh Communications Hub, based on the CH Status Information indicates a normal operating state: update any existing Incident with details of the steps that have been undertaken to resolve the Incident within three (3) Working Days.

8.6 Where the activities in clause 8.5(a) have been followed and the DCC is in attendance at the Installation Location, the Party shall then return the Special Installation Mesh Communications Hub in accordance with Section 10 of this document; and

(a) where the Party wishes to hand back the Special Installation Mesh Communications Hub the DCC shall accept the removed Communications Hub; and

(b) the DCC shall provide a replacement Special Installation Mesh Communications Hub immediately.

General Fault Handling Procedures

8.7 Where the Communications Hub (other than a Special Installation Mesh Communications Hub) based on the CH Status Information, indicates an error state, the Supplier Party shall ensure that:

(a) the Communications Hub is removed in accordance with clause 9 of this document; and

(b) following a period of no less than ten (10) seconds in the North Region and three (3) minutes in the Central Region and South Region, during which there is no physical connection to the host, the same Communications Hub is re-installed using the fitting and activation procedures as set out in Annex A and Annex B of this document.

8.8 Where, having undertaken the activities set out in clause 8.7, the Communications Hub (other than a Special Installation Mesh Communications Hub), based on the CH Status Information, continues to indicate an error state, and the Supplier Party wishes to resolve the fault, the Supplier Party shall ensure that:

(a) the Communications Hub is removed in accordance with clause 9; and

(b) a replacement Communications Hub is installed in accordance with the fitting and activation procedures set out in Annex A and Annex B of this document.

8.9 Where, having undertaken the activities set out in clause 8.7, the Communications Hub (other than a Special Installation Mesh Communications Hub), based on the CH Status Information indicates a normal operating state:

(a) update any existing Incident with details of the steps that have been undertaken to resolve the Incident within three (3) Working Days.

8.10 Where the Communications Hub is located within the Central Region or South Region and the Communications Hub, based on the CH Status Information, indicates an 'Attempting connect to the SM WAN' state for the maximum duration set out in the Communications Hub Supporting Information and the Communications Hub is a Cellular Communications Hub, the Supplier Party shall ensure that the following steps are undertaken when attempting to resolve the fault:

(a) the Communications Hub is removed in accordance with clause 9 of this document; and

(b) the fitting and activation procedures relevant to a Mesh Communications Hub are undertaken as set out in Annex A and Annex B of this document.

8.11 Where a Mesh Communications Hub (other than a Special Installation Mesh Communications Hub) is located within the Central Region or South Region and the Communications Hub, based on the CH Status Information, indicates an 'Attempting connect to the SM WAN' state for the maximum duration set out in the Communications Hub Supporting Information, the Supplier Party shall ensure that an aerial is fitted in accordance with the procedures set out in A.2 of this document.

SM WAN Connectivity

8.12 Where a Supplier Party determines that, having undertaken the relevant Communications Hub Fault Handling Procedure, no fault exists with a Communications Hub, but no SM WAN connection is achieved, that Supplier Party shall raise or update an Incident in accordance with the Incident Management Policy to inform DCC of a local SM WAN connectivity issue, subject to clause 8.13.

8.13 Prior to informing DCC of a local SM WAN connectivity issue a Supplier Party shall:

(a) ensure that the power supply to the Communications Hub is maintained following the completion of the fault handling procedure;

(b) verify that the Communications Hub Status Information does not indicate any fault other than failure to connect to the SM WAN; and

(c) ensure that the Communications Hub is fitted with a security seal.

9. COMMUNICATIONS HUB REMOVAL AND NOTIFICATION OF RETURNS

Communications Hub removal

9.1 A Supplier Party may remove a Communications Hub from an ICHIS compliant host that is powered.

9.2 Where a Supplier Party removes a Communications Hub and any associated Communications Hub Auxiliary Equipment, the Supplier Party shall do so in accordance with the procedures set out in Annex A of this document.

Notification of returns

9.3 Following the removal of a Communications Hub, as a result of a suspected or actual fault in the Communications Hub the Supplier Party shall notify the DCC of its removal by submitting a Service Request in accordance with clauses 9.4 or 9.5 as applicable within five (5) Working Days of the date of removal.

9.4 Where the Communications Hub has been removed due to physical damage, the Supplier Party shall submit a Service Request 8.14.3 (Communications Hub Status Update – Fault Return) indicating the appropriate fault return type and reason as specified in the DCC User Interface Specification (DUIS).

9.5 Where a Communications Hub is removed in accordance with clause 8.8, the Supplier Party shall submit a Service Request 8.14.3 (Communications Hub Status Update – Fault Return) indicating the appropriate fault return type as specified in the DUIS.

9.6 Where a Communications Hub is removed and clauses 9.4 and 9.5 do not apply, the Supplier Party shall submit a Service Request 8.14.4 (Communications Hub Status Update – No Fault Return) indicating the appropriate return type as specified in Section F9, within five (5) Working Days of the date of removal.

9.7 Where either:

(a) a Communications Hub is to be returned prior to installation pursuant to clause 3.4; or

(b) the DCC has requested the return of a Communications Hub in accordance with Section F8.1(b) of the Code or the Supplier Party is required to return pursuant to Section F8.6 of the Code;

the Party shall submit a Service Request 8.14.3 (Communications Hub Status Update – Fault Return).

9.8 Where a Communications Hub is to be returned prior to installation pursuant to Section F8.7(a) of the Code, the responsible Party shall submit a Service Request 8.14.4 (Communications Hub Status Update – No Fault Return).

9.9 In the event that a Party is not able to submit a Service Request in accordance with clauses 9.4, 9.5, 9.6, 9.7 or 9.8 that Party shall contact the Service Desk.

10. COMMUNICATIONS HUB RETURNS

10.1 Where a Supplier Party has handed back a Special Installation Mesh Communications Hub to the DCC whilst in attendance at the relevant premises and where the Special Installation Mesh Communications Hub had been installed at a previous installation visit, the Party shall submit Service Request 8.14.3 (Communications Hub Status Update – Fault Return) or Service Request 8.14.4 (Communications Hub Status Update – No Fault Return) in respect of the Communications Hub returned in accordance with DUIS within three (3) Working Days.

10.2 In all circumstances other than those specified in clause 10.1, including where a Party wishes to return a Special Installation Mesh Communications Hub or T3 Aerial Type and/or M1 / M2 Aerial Types when the DCC is not in attendance at the relevant premises in accordance with Section 6 of this document, the Party shall follow the procedure in clauses 10.3 - 10.20 of this document to return the Special Installation Mesh Communications Hub, and return the T3 Aerial Type and/or M1 / M2 Aerial Types within this process.

10.3 Following the acceptance of Communications Hubs, where a Party wishes to return Communications Hubs to the DCC, that Party shall do so in accordance with the procedures set out in clauses 10.1 to 10.20 of this document.

10.4 The DCC shall make available to all OMS account profiles, the following information for any DCC Returns Location:

(a) the full delivery address;

(b) operating hours; and

(c) the name, email address, and telephone number for a nominated contact in relation to Communications Hub returns.

Return Materials Authorisation

10.5 To return a Communications Hub a Party shall request a Returns Material Authorisation (RMA) once that Party has notified the DCC by either having:

(a) submitted Service Request 8.14.3 or Service Request 8.14.4 in respect of the Communications Hub to be returned; or

(b) contacted the Service Desk.

10.6 The requesting Party shall ensure that the request for an RMA is:

(a) made via the CH Ordering System; and

(b) includes:

(i) the CHF Identifier for each Communications Hub to be returned under that RMA, as previously notified to the DCC in accordance with clause 10.5

(ii) the contact name, email address, and telephone number to be used by the DCC to contact the Party in relation to that RMA;

(iii) the preferred DCC Returns Location; and

(iv) a preferred Return Date, which shall be on a Working Day at least five (5) Working Days following the date that the request for the RMA is submitted.

10.7 Following acceptance of an RMA request, the DCC shall:

(a) confirm authorisation to the submitting Party using the contact details provided;

(b) provide the Party with the following information via the Order Management System using either the 'CH Ordering' or 'CH Delivery and Returns' OMS profiles or via notification to the contact details provided:

(i) a unique booking reference;

(ii) confirmed timeslot for delivery;

(iii) RMA reference; and

(iv) any changes to the DCC contact details for the purposes of the return; and

(c) request any additional information as may be reasonably required to facilitate the logistics of the return in accordance with good industry practice.

Returns Equipment and Packaging

10.8 A Party shall ensure that all Communications Hubs returned to the DCC are in packaging of equivalent standard to that in which a Communications Hub of that Device Model was originally packaged, not exceeding the maximum number of Communications Hubs per carton and cartons per pallet set out in the CH Handover Support Materials.

10.9 A Party may return aerials or other equipment to DCC within a Communications Hub return delivery and must ensure that any aerials or other equipment returned to the DCC are in packaging of equivalent standard to that in which the aerials or other equipment was originally packaged.

10.10 Where a Communications Hub has been subject to environmental or biological contamination, the Party shall:

(a) where it is safe to do so, place the Communications Hub in appropriately sealed packaging such that DCC can clearly identify the nature of the contamination without removing or unsealing such packaging; or

(b) where safe return of a contaminated Communications Hub is not possible, safely and securely dispose of the Communications Hub.

Delivery of Returns

10.11 Where the Party does not return a Communications Hub within 90 days pursuant to Section F8.6 of the Code, the Communications Hub shall be deemed to be lost or stolen and the DCC shall prevent that Communications Hub from connecting to the SM WAN.

10.12 The Party shall ensure that the Communications Hub delivery is accompanied with a Return Delivery Note that contains, as a minimum, the following information:

(a) booking reference for the return delivery as supplied by DCC pursuant to clause 10.7;

(b) return date and return delivery time;

(c) Party Signifier;

(d) DCC Returns Location;

(e) list of all CHF Identifiers being returned; and

(f) (where one or more pallets are to be returned), the pallet identifiers for each pallet being returned.

10.13 The DCC shall provide the Party with a printable RMA label for each return delivery via the OMS (using the CH Ordering or CH Delivery and Returns profile) immediately following authorisation. The Party shall securely attach the corresponding RMA label on each pallet and each carton (where a carton is not part of a pallet) and each Communications Hub (where a Communications Hub is not part of a pallet or carton) for each return delivery.

10.14 The Party shall notify the DCC if there are any known issues that mean the delivery will be late, stating the reason for the delay and the expected time of arrival. The Party shall take all reasonable steps to make such notification a minimum of 5 Working Hours prior to the return delivery booking time. The DCC shall take all reasonable steps to accommodate a revised return delivery booking time and shall confirm to the Party that the DCC is either:

(a) able to accept the late return delivery; or

(b) unable to accept the return delivery.

10.15 Where the DCC is unable to accept the return delivery the DCC shall notify the returning Party as soon as reasonably practicable and shall notify the Party of the full range of available delivery dates and times within the following 90 days and the Party shall notify the DCC of an acceptable revised date and clauses 10.13 and 10.14 shall apply in relation to the revised date.

Delivery Acceptance

10.16 Prior to signing the Return Delivery Note, the DCC may carry out the following;

(a) assessment of pallets delivered against those recorded under the RMA request;

(b) checks between CHF Identifiers received against those listed under the RMA request; and

(c) checks that the number of Communications Hubs returned match the number of CHF Identifiers listed in the RMA request.

10.17 The DCC may reject any returned Communications Hubs where unloading them would present a health and safety risk. Where the DCC rejects the return delivery, the Party shall be required to request a new RMA and rearrange the return delivery following the relevant procedures set out in clauses 10.5 to 10.15 of this document.

10.18 Following the checks performed pursuant to clause 10.16, the DCC shall record any discrepancies between the return delivery and the Return Delivery Note.

10.19 Where requested to do so the DCC shall sign and retain a copy of the Return Delivery Note.

10.20 Where the Party fails to provide the DCC with a fault reason for each CHF Identifier in accordance with the requirements set out in this document, the Communications Hub shall be deemed to be a return pursuant to Section F9.5 (e) of the Code and the Communications Hub Fault shall be a CH User Responsibility in accordance with Section F9.6 (a) of the Code.

11. CH FAULT DIAGNOSIS BY DCC

Receipt of Communications Hubs

11.1 The DCC shall create an individual record for each returned Communications Hub on receipt of Service Request 8.14.3, 8.14.4 or any return notified through the Service Desk. For each returned Communications Hub this record shall contain all details received by DCC from the Party within the Service Request or provided via the Service Desk and other supporting information as set out in Annex D, and shall be made available by the DCC to the Party that returned the Communications Hub within seven (7) days after the return of the Communications Hubs via the CH Ordering System.

Notification

11.2 Where the DCC intends to undertake any CH Fault Diagnosis, the DCC shall update the relevant record, as described in Annex D of this document, indicating that further analysis is required, in accordance with Section F9.9 of the Code. The DCC shall make this information available and notify the Party that returned the Communications Hub within ten (10) days after the return of the Communications Hubs or notification of its loss or destruction pursuant to Section F9.9, of this revision.

11.3 In the event that a Party is not able to access the record created in accordance with clause 11.1, that Party may contact the Service Desk in order to access the record, which the DCC shall enable.

Fault Diagnosis Approach

11.4 The DCC shall undertake CH Fault Diagnosis using visual and electronic analysis of returned Communications Hubs, as set out in clauses 11.5 and 11.6.

Visual analysis

11.5 The DCC may undertake the following visual inspections of a returned Communications Hub and shall subsequently update the information in the record created pursuant to 11.1 to include the results from this analysis:

(a) check for any physical damage to any part of the Communication Hub including, but not limited to, the outer casing, external interfaces and connectors;

(b) check to identify any loose internal components and for evidence that such components were previously connected correctly;

(c) check for any evidence of tampering; and

(d) check for any evidence of exposure to adverse environmental conditions including, but not limited to, water, condensation, smoke, chemicals, pests, etc.

Electronic analysis

11.6 Where the Communications Hub is not deemed to be physically damaged in accordance with clause 11.5, the DCC may undertake the electronic diagnostic tests described in Annex C of this document and shall subsequently update the information in the record created pursuant to 11.1 to include the results from this analysis.

Fault Analysis Report

11.7 Pursuant to Section F9.11, where the DCC disputes the reason given by a Party for the return of a Communications Hub, the DCC shall provide the Party which returned the Communications Hub with a report. The DCC shall provide this report by updating the relevant Fault Analysis Report record maintained for each returned Communications Hub, as set out in Annex D of this document, with the results of the Fault Analysis and make this available via the CH Ordering System and notify the Party that returned the Communications Hub.

Acceptance

11.8 Where the DCC provides a Fault Analysis Report and the Party does not object in accordance with Section F9.13 of the Code, no further action is required by the Party and the DCC shall update the 'Returns Record Status' field to "Closed".

Objections

11.9 Where the Party wishes to notify the DCC of their objection pursuant to Section F9.14 of the Code it shall do so via the Service Desk.

Annex A. CH Fitting and removal procedures

A.1. Fitting procedure

A.1.1 A Party shall ensure that all reasonable precautions are taken to avoid electrostatic discharge whilst handling the Communications Hub.

A.1.2 A Supplier Party shall ensure that all reasonable precautions are taken to avoid electrostatic discharge when installing any Communications Hub and Communications Hub Auxiliary Equipment.

A.1.3 The Communications Hub shall be mounted vertically above the ICHIS compliant host, ensuring that the Communications Hub Variant labelling text on the front face is horizontal.

A.1.4 A Party may mount a Communications Hub on an ICHIS compliant host that is powered.

A.1.5 A Supplier Party shall fit a Communications Hub in accordance with the steps set out below:

(a) **Step 1 -** Align Communications Hub guide rails with the U-channel of the ICHIS compliant host;

(b) **Step 2 -** Slide the Communications Hub on to the ICHIS compliant host, ensuring that the Communications Hub guide rails remain within the U-Channel of the ICHIS compliant host;

(c) **Step 3 -** Press the front faceplate in order to connect the Communications Hub to the interface of the ICHIS compliant host, applying hand pressure only; and

(d) **Step 4 -** Screw in the M4 retaining screw located on the front faceplate of the Communications Hub to fasten it to the ICHIS compliant host.

A.2. Installation of Communications Hub aerials - Central Region and South Region

A.2.1 For the South Region or Central Region, where a Communications Hub (as indicated by the Coverage Database) requires an aerial (T1 Aerial Type or T2 Aerial Type), or where an aerial is required as a result of a failure as described in B.2.4 of this document, the Supplier Party shall ensure that a Mesh Communications Hub is installed and that when installing an aerial:

(a) all reasonable steps are taken to ensure any aerial (T1 Aerial Type or T2 Aerial Type) is positioned vertically and avoiding any Significant Metallic Obstruction;

(b) all reasonable steps to minimise risk of damage to the aerial lead during installation are undertaken and that the environmental conditions for the Communications Hub as defined in Annex C of the CH Handover Support Materials are not exceeded;

(c) stub aerials (i.e. with no cable attached) are not used to connect the aerial directly onto the Communications Hub, the cable must always be used as supplied.

A.2.2 For the South Region or Central Region, a Supplier Party shall:

(a) first attempt to install a standard Communications Hub T1 Aerial Type in accordance with the installation steps set out in A.2.3; and

(b) where, in step 6 (A.2.3(f)), the minimum signal strength required as indicated by the Visual Information set out in the CH Supporting Information is not obtained, the Party shall remove the T1 Aerial Type and install a T2 Aerial Type in accordance with the installation steps set out in A.2.3.

A.2.3 A Supplier Party shall install a Communications Hub aerial in accordance with the steps below:

(a) **Step 1 -** unpack the aerial and inspect for damage;

(b) **Step 2 -** attach the aerial to the cable SMA connector, if the cable is not supplied already integrated with the aerial;

(c) **Step 3 -** ensure the Communications Hub is powered up and fully initialised when connecting the aerial and cable to the SMA connector on the Communications Hub;

(d) **Step 4 -** fasten all SMA connectors to finger-tightness;

(e) **Step 5 -** secure the Communications Hub hinged plastic cover over the connector, ensuring that the aerial cable routes through the provided aperture on the base of the cover and remains free to allow aerial positioning once fitted;

(f) **Step 6 -** for connection of a T1 Aerial Type, T2 Aerial Type or T3 Aerial Type only, use the Visual Information set out in the CH Supporting Information to identify the strength of the signal at varying positions of the aerial and cable to first maximise the signal strength and second minimise the distance to the Communications Hub;

(g) **Step 7 -** if the aerial position does not require the full length of the supplied aerial cable, the spare aerial cable shall be loosely coiled and fastened using a fabric hook- and-loop cable tie ensuring not to crush or kink the aerial cable;

(h) **Step 8 -** for connection of a T1 Aerial Type, T2 Aerial Type or T3 Aerial Type only, once the optimum location for the aerial has been confirmed the aerial shall be positioned vertically with the cable connector at the base then either:

(i) fasten the aerial in place using the appropriate fasteners provided in the assembly kit: or

(ii) depending on the type of aerial used, connect to a wall using self-adhesive.

(i) **Step 9 -** following installation of the aerial as set out in steps 1-8 above, the installer should wait for a minimum of two (2) minutes, and then undertake the activation processes set out in Annex B of this document.

A.2.4 For the South Region or Central Region, where a Special Installation Mesh Communications Hub is to be installed and requires an aerial (T1 Aerial Type or T2 Aerial Type and M1 Aerial Type), or where an aerial is required as a result of a failure as described in B.2.4 of this document, the Supplier Party shall ensure that a Special Installation Mesh Communications Hub is installed and that when installing an aerial:

(a) all reasonable steps are taken to ensure any aerial (T1 Aerial Type, T2 Aerial Type or M1 Aerial Type) is positioned vertically and avoiding any Significant Metallic Obstruction;

(b) all reasonable steps to minimise risk of damage to the aerial lead during installation are undertaken and that the environmental conditions for the Communications Hub as defined in Annex C of the CH Handover Support Materials are not exceeded;

(c) stub aerials (i.e. with no cable attached) are not used to connect the aerial directly onto the Communications Hub, the cable must always be used as supplied;

A.2.5 For the South Region or Central Region, where a Special Installation Mesh Communications Hub is to be installed and requires an external aerial (T3 Aerial Type or M1 / M2 Aerial Types), or where an aerial is required as a result of a failure as described in B.2.4 of this document, the Supplier Party shall ensure that a Special Installation Mesh Communications Hub is installed and that when installing an external aerial, the manufacturer's instructions for selecting the installation position and mounting the aerials are followed, particularly with reference to the following:

(a) The aerial must be mounted in a vertical plane with the cable exiting from the bottom,

(b) The aerial should be located such that the distance to any nearby device or metal structure should exceed the stated minimum distance. The aerial must not be installed on or close to a metal panel,

(c) The aerial should be mounted in such a way that no person is likely to be within the RF exclusion zone while the aerial is in use,

(d) If both the T3 Aerial Type and M2 Aerial Types are specified for installation on the external wall of a property, the T3 Aerial Type should be mounted vertically above the M1 / M2 Aerial Types such that the minimum vertical separation between them is met or exceeded,

(e) Only those brackets and fittings supplied by the manufacturers should be used for installing the T3 Aerial Type or M1 / M2 Aerial Types.

A.3. Communications Hub removal procedure

A.3.1 Where a Supplier Party removes a Communications Hub, the Supplier Party shall:

(a) **Step 1 -** Remove or break the security seal;

(b) **Step 2 -** Remove the M4 retaining screw located on the front faceplate of the Communications Hub to enable its removal from the ICHIS compliant host; and

(c) **Step 3 -** Slide the Communications Hub from the ICHIS compliant host, ensuring that the Communications Hub guide rails remain within the U-Channel of the Electricity Smart Meter, Cradle or Hot Shoe.

Annex B. Activation Procedure

B.1. Communications Hub Activation Procedure - North Region

B.1.1. For the North Region, following the fitting of a Communications Hub, the Supplier Party shall verify the successful activation of the Communications Hub by monitoring that the CH Status Information indicates the following Communications Hub states as set out in the CH Supporting Information, in the sequence:

(a) 'SM WAN initialising';

(b) 'Attempting to connect to the SM WAN'; and

(c) 'SM WAN connected'.

B.1.2. For the North Region, where the Communications Hub activation fails to complete, the Supplier Party shall ensure that:

(a) where the CH Status Information indicates that the Communications Hub is in an error state, the Communications Hub Fault Handling Procedures are followed; or

(b) where the Communications Hub fails to transition from the 'Attempting connect to the SM WAN' state to the 'SM WAN connected' state within the maximum time set out in the CH Supporting Information, but no fault is indicated, the Supplier Party may wish to undertake the CH No SM WAN Installation Procedure.

B.2. Communications Hub Activation Procedure - Central Region and South Region

B.2.1. Following the fitting of a Cellular Communications Hub, the Supplier Party shall ensure that a check is performed to confirm that the following Communications Hub states are achieved, based on the CH Status Information, as set out in the CH Supporting Information:

(a) initialisation complete ('Device initialising' transition steps complete successfully);

(b) SW LED 'Normal operating state';

(c) WAN LED 'Attempting connect to SM WAN'; and

(d) WAN LED 'SM WAN connected'.

B.2.2. Where the Communications Hub activation fails to complete, the Supplier Party shall ensure that:

(a) where the CH Status Information indicates that the Communications Hub is in an error state (SW LED 'Device in error state' or WAN LED 'SM WAN error'), the fault resolution procedures set out in clauses 8.1 to 8.13 of this document are followed; or

(b) where the WAN LED indicator fails to transition from the 'Attempting connect to SM WAN' state to the 'SM WAN connected' state within the maximum time set out in the CH Supporting Information, the Cellular Communications Hub is removed and a Mesh Communications Hub is fitted in accordance with the fitting and activation procedures set out in Annex A and Annex B of this document.

B.2.3. Where installing a Mesh Communications Hub or Special Installation Mesh Communications Hub, the Supplier Party shall ensure that the Visual Information set out in the CH Supporting Information is monitored to confirm the following Communications Hub states are achieved:

(a) initialisation complete ('Device initialising' transitions complete successfully);

(b) SW LED showing 'Normal operating state';

(c) and either:

(i) SM WAN (cellular) - WAN LED showing 'Attempting connect to SM WAN';

(ii) SM WAN (cellular) - WAN LED showing 'SM WAN connected';

or

(iii) Mesh - MESH LED showing 'Attempting to connect to Mesh'; and

(iv) Mesh - MESH LED showing 'Mesh connected'.

B.2.4. Where the Mesh Communications Hub activation fails to complete, the Supplier Party shall ensure that:

(a) where the CH Status Information indicates that the Mesh Communications Hub is in an error state, the fault resolution procedures set out in clauses 6.1 to 6.5 of this document are followed; and either:

(b) where no Communications Hub T2 Aerial Type has previously been fitted and the WAN LED indicator fails to transition from the 'Attempting connect to SM WAN' state to the 'SM WAN connected' state or from the 'Attempting to connect to Mesh' state to the 'Mesh connected' state within the maximum time set out in the CH Supporting Information, a Communications Hub T2 Aerial Type is fitted in accordance with the fitting and activation procedures set out in Annex A and Annex B of this document.

or

(c) where a Communications Hub T2 Aerial Type has previously been fitted and the Mesh Communications Hub fails to transition from the 'Attempting to connect to SM WAN' state to the 'SM WAN connected' state or from the 'Attempting to connect to Mesh' state to the 'Mesh connected' state within the maximum time set out in the CH Supporting Information, but no fault is indicated, the Supplier Party may wish to undertake the CH No SM WAN Installation Procedure.

Annex C. Electronic Fault Diagnosis

C.1.1. The DCC may carry out the following checks as part of the Communications Hub Fault Handling Procedure:

a) check of hardware and firmware;

b) check of device configuration;

c) checks of power consumption;

d) detection of malfunction of internal components via self-tests;

e) connectivity test for HAN components;

f) connectivity test for SM WAN components;

g) functional check of visual status indicators (LEDs);

h) verification that power outage power storage is within expected tolerance;

i) tamper detection check;

j) clock test (set real-time clock or read real-time clock); and

k) review of the security and event logs.

Annex D. Fault Analysis Report – fault record data items

D.1.1. Table 1 identifies the data fields that will be provided in the Communications Hub Fault Analysis Report. Data items shall be updated in line with the progress of the fault analysis and some items may therefore be blank.

Table 1; Fault Analysis Report – fault record data field descriptions

Field name	Description
Returns record id	Unique reference for the returns Record.
Incident reference	This field displays the Incident request identifier if provided by a Party
User ref id	Unique reference for the update provided by a Party.
User id	SEC Party Signifier of the Party that submitted the Communications Hub status update
CHF return type	Category of Return, as provided by a Party and specified in DUIS
User fault diagnosis (CHF fault reason)	Initial fault diagnosis code, as provided by a Party and specified in DUIS.
CSP fault diagnosis	DCC fault diagnosis following the fault analysis process.
DCC fault diagnosis	DCC fault diagnosis following conclusion of any objection process.

User fault responsibility	Derived from user fault diagnosis
CSP fault responsibility	DCC fault responsibility derived from DCC fault diagnosis
Final agreed fault responsibility	Derived from DCC fault diagnosis
CSP id	The DCC Service Provider identified by the Region.
Device id	The unique CHF ID
Return record create date	The Date and time the returns record was created.
User job date time	Time of removal of the Communications Hub provided by a Party.
Preliminary FAR received date	The date the DCC updated the record to issue the preliminary Fault Analysis Report.
CSP FAR received date	The date the DCC issued the final Fault Analysis Report.
Return closed date	The date and time the DCC issued the final Fault Analysis Report.
Received communications hub date	The date and time the DCC receives the Communications Hub from the Party.
Dispute start date	The date and time the dispute was notified to DCC and the record status was updated to 'In Dispute'.
Other device id	UID of the ESME or GSME
CHF connection method	To record whether hot-shoe or cradle CHF installation
	To record how the Communications Hub has been installed and connected to the rest of the Smart Metering System within the premises Valid set: Hot-shoe Cradle ESME
Cause of fault	A short description of the fault cause supplied by the DCC

Additional information	Further Analysis details from the Fault Cause supplied by the DCC
Full analysis	Y/N flag indicating whether a full analysis is required. Will drive the status of the returns record
User organisation	Details of organisation associated with User ID
Premises postcode	Derived from MPAN / MPRN associated with the Communications Hub
Product name	Derived from CHF ID
Model	Derived from CHF ID
Manufacturer	Derived from CHF ID
Communications hub delivery location	The location the Communications Hub was delivered to (provided by DCC)
Communications hub installation date	From the Smart Metering Inventory, where applicable.
Incident resolved date	Manually populated by Service Desk
CSP region	The Region in which the Communications Hub was installed.
Communications hub commissioned date	From the Smart Metering Inventory
Communications hub device type	Supplied on creation by DCC
Communications hub returning supplier	Supplied on creation by DCC
Communications Hub delivery date	From the Smart Metering Inventory.

Annex E. Equipment Supplied

E.1. North Region

E.1.1. The DCC shall supply the following equipment, which can be ordered via the OMS:

a) ‘Standard 420’ Communications Hub Variant with captive security screw; and

b) ‘Standard 420 DB’ Communications Hub Variant with captive security screw; and

c) ’Variant 450 DB’ Communications Hub Variant with captive security screw.

E.2. Central and South Regions

E.2.1 The DCC shall supply the following equipment, which can be ordered via the OMS:

a) ‘SKU1 Cellular’ Communications Hub Variant with captive security screw; and

b) ‘SKU2 Cellular + Mesh’ Communication Hub Variant with captive security screw; and

c) ‘Cellular DB’ Communications Hub Variant with captive security screw; and

d) ‘Cellular + Mesh DB’ Communications Hub Variant with captive security screw; and

e) Communications Hub Auxiliary Equipment, including aerials, aerial cable and fabric hook-and-loop ties, two aerial types shall be provided:

e)1 T1 Aerial Type; and

e)2 T2 Aerial Type.

E.2.2 The DCC shall supply the following equipment directly at joint visits:

a) ‘SKU3 SIMCH’ (Special Installation Mesh Communications Hub) Communications Hub Variant with captive security screw; and

b) ‘SIMCH DB’ Communications Hub Variant with captive security screw; and

c) Up to three aerial types and related cables and fixings shall be provided:

i) T3 Aerial Type

ii) M1 Aerial Type

iii) M2 Aerial Type

E.2.3 All Communications Hub Variants, their HAN/WAN Variant attributes and CSP Regions are listed in table 2.

Table 2; Summary of all Communications Hub Variants with their HAN/WAN Variant attributes and CSP Regions

CH Variant	HAN Variant	WAN Variant	CSP Region
Standard 420	Single Band (2.4GHz only)	420	CSP North
Standard 420 DB	Dual Band (868MHz and 2.4GHz)	420	CSP North
Variant 450 DB	Dual Band (868MHz and 2.4GHz)	450	CSP North

SKU1 Cellular	Single Band (2.4GHz only)	Cellular	CSP South & Central
SKU2 Cellular + Mesh	Single Band (2.4GHz only)	Cellular+Mesh	CSP South & Central
SKU3 SIMCH	Single Band (2.4GHz only)	Special Installation Mesh	CSP South & Central
Cellular DB	Dual Band (868MHz and 2.4GHz)	Cellular	CSP South & Central
Cellular + Mesh DB	Dual Band (868MHz and 2.4GHz)	Cellular+Mesh	CSP South & Central
SIMCH DB	Dual Band (868MHz and 2.4GHz)	Special Installation Mesh	CSP South & Central

868MHz means, for the purposes of the Code, sub-GHz

E.3. Communications Hub WAN Variant Values

E.3.1 For the purpose of providing WAN Technology values for use with the 12.1 RequestWANMatrix Service Request as detailed in APPENDIX AD ‘DCC User Interface Specification’, Communications Hub WAN Variant values are listed in table 3

Table 3; Summary of all Communications Hub WAN Variants for use with Service Request 12.1

WAN Variant (DCC 1.3)	WAN Variant (DCC 2.0)	CSP Region
Standard 420	420	CSP North
Variant 450	450	CSP North
Cellular	Cellular	CSP South & Central
Cellular+Mesh	Cellular+Mesh	CSP South & Central
No Coverage Intended	No Coverage Intended	N/A
" " Space	" " Space	CSP South & Central

To note: on Table 3, " " Space above, CSP South & Central will respond to a SMWAN Coverage request (CSPM-S1 or CSPM-S2) with an Availability Date for coverage but without confirming the WAN Variant that

will need to be used. Upon receipt of this WAN Variant, the Service User will read “ “ Space as WAN Variant unknown.

Version J 7.0

Appendix J

Enduring Testing Approach Document

1. Introduction

Scope

1.1 The Enduring Testing Approach Document (ETAD) describes the detailed procedural and technical requirements for the Testing Services, as defined in Section H14.1 of this Code, that the DCC will make available to Testing Participants on an enduring basis. Unless indicated otherwise this ETAD applies to Testing Services in respect of SMETS1 Devices and SMETS2+ Devices

2. Security Requirements

2.1 For the purposes of this document, "Testing Participant Systems" means:

(a) any Systems (excluding any Devices) that are operated by or on behalf of a Testing Participant and used in whole or in part for the testing equivalent of:

(i) constructing Service Requests;

(ii) sending Service Requests over the DCC User Interface;

(iii) receiving, sending, storing, using or otherwise carrying out any processing in respect of any Pre-Command or Signed Pre-Command;

(iv) receiving Service Responses or Alerts over the DCC User Interface;

(v) generating Data for communication to the OCA, DCA or ICA, or receiving Data from the OCA, DCA or ICA (including any Systems which store or use Secret Key Material for such purposes) but only communications in relation to Devices that have an SMI Status of "commissioned" or "installed not commissioned";

(vi) generating any Unique Transaction Reference Number;

(vii) providing (or procuring the provision of) Registration Data in respect of a particular MPAN or MPRN; and/or

(viii) the collection, storage or communication of the Registration Data referred to in sub-clause vii) above prior to, or for the purposes of, its provision to DCC over the Registration Data Interface; and

(b) any other Systems from which the Systems used in whole or in part for the purposes set out in clause (a) are not Separate.

2.2 Each Testing Participant shall ensure that its Testing Participant Systems are Separate from:

(a) its RDP Systems or User Systems, as appropriate; and

(b) any other Systems not used for the purposes of carrying out tests using the Testing Services.

2.3 Each Testing Participant shall take reasonable steps to ensure that:

(a) its Testing Participant Systems are capable of detecting any unauthorised software that has been installed or executed on them and any unauthorised attempt to install or execute software on them;

(b) if those Testing Participant Systems detect any such software or such attempt to install or execute software, that the installation or execution of that software is prevented; and

(c) where any such software has been installed or executed, to take appropriate remedial action.

2.4 Each Testing Participant shall ensure that it carries out assessments that are designed to identify any vulnerability of its Testing Participant Systems to Compromise:

(a) prior to accessing any Testing Services using such Testing Participant Systems and on at least an annual basis thereafter;

(b) in respect of each new or materially changed component or functionality of its Testing Participant Systems, prior to that component or functionality becoming operational; and

(c) on the occurrence of any security issue in relation to its Testing Participant Systems.

2.5 Where, following any assessment of its Testing Participant Systems in accordance with clause 2.4 or otherwise, any material vulnerability has been detected, the Testing Participant shall:

(a) take reasonable steps to ensure that the cause of the vulnerability is rectified, or the potential impact of the vulnerability is mitigated, as soon as is reasonably practicable; and

(b) promptly notify the DCC of the steps being taken to rectify its cause or mitigate its potential impact (as the case may be) on DCC Systems and the time within which they are intended to be completed, and comply with any reasonable request from the DCC to mitigate or prevent any potential adverse impact on the DCC Systems arising from such vulnerability.

3. IKI and SMKI Test Certificates

3.1 The DCC shall issue Test Certificates simulating the function of Organisation Certificates, OCA Certificates, Device Certificates, DCA Certificates, IKI Certificates and ICA Certificates in accordance with the relevant provisions of the “Test Documents”.

3.2 For the purposes of clause 3.1, the Test Documents means:

(a) the Test Certificate Policy, which shall be a document published on the DCC Website and approved by the SMKI PMA which corresponds (insofar as relevant in respect of the Testing Services) in purpose, content and effect to the Organisation Certificate Policy, the Device Certificate Policy and the IKI Certificate Policy; and

(b) subject to clauses 3.3 and 3.4:

(i) the SMKI RAPP;

(ii) the SMKI Interface Design Specification;

(iii) the SMKI Code of Connection;

(iv) the SMKI Repository Interface Design Specification; and

(v) the SMKI Repository Code of Connection.

3.3 For the purposes of clause 3.2(b) (i), each Testing Participant shall, when completing the forms in the appendices of the SMKI RAPP for test purposes, clearly mark each page with the text, “For Testing Purposes” and submit the completed forms to the SMKI Registration Authority, in writing, as directed on the DCC Website.

3.4 For the purposes of clause 3.2(b):

(a) any reference in such documents to any office, function, role, system, process or other thing shall be construed as being a reference to the corresponding equivalent of that office, function, role, system, process or thing which is established, undertaken, operated or given effect (as the case may be) for the purposes of the Testing Services;

(b) Testing Participants shall not be required to complete SMKI and Repository Entry Process Tests to become eligible to obtain IKI and SMKI Test Certificates;

(c) where agreed by the DCC and a Testing Participant, any of the requirements that a Testing Participant must satisfy in order to be entitled to become an Authorised Subscriber for a Test Certificate may be disregarded for the purposes of such entitlement;

(d) the DCC shall publish on the DCC Website, and from time to time update, limits on the number of Certificate Signing Requests that each Testing Participant may submit in any particular time period over any relevant interface for testing purposes;

(e) each Testing Participant shall take all reasonable steps to ensure it does not submit certificate signing requests for testing purposes in excess of any limit published (or updated) in accordance with clause (d) above;

(f) the DCC shall publish on the DCC Website, and from time to time update, limits on the total number of Certificate Signing Requests across all Testing Participants that can be processed each day. The DCC shall not be required to process any Certificate Signing Request in excess of such limits that is submitted by any Testing Participant.

4. DCCKI Test Certificates

4.1 The DCC shall issue DCCKI Test Certificates simulating the function of DCCKI Certificates in accordance with the relevant provisions of the “DCCKI Test Documents”. A separate DCCKI Test Certificate will be required for each test environment.

4.2 For the purposes of clause 4.1, the DCCKI Test Documents means, subject to clauses 4.3 and 4.4:

(a) the Test DCCKI Certificate Policy;

(b) the DCCKI RAPP;

(c) the DCCKI Interface Design Specification and DCCKI Repository Interface Design Specification; and

(d) the DCCKI Interface Code of Connection and DCCKI Repository Code of Connection.

4.3 For the purposes of clause 4.2 (a) and for issuing Test DCCKI Certificates, the Test DCCKI Certificate Policy shall be the most recent DCCKI Certificate Policy at that date, modified such that:

(a) the OID in clause 1.2 is replaced by 1.2.826.0.1.8641679.1.2.1.12

(b) the modifications identified in clause 4.5 below apply; and

(c) any changes that:

(i) have been approved by the DCCKI PMA function prior to taking effect; and

(ii) do not directly affect any rights or obligations of Parties (other than the DCC) or RDPs, apply.

4.4 For the purposes of clause 4.2:

(a) any reference in such documents to any office, function, role, system, process or other thing shall be construed as being a reference to the corresponding equivalent of that office, function, role, system, process or thing which is established, undertaken, operated or given effect (as the case may be) for the purposes of the Testing Services;

(b) Parties and RDPs shall be considered to be DCCKI Authorised Subscribers for testing purposes where they have appointed at least one DCCKI SRO and at least one DCCKI ARO;

(c) any reference to lodging of information in the DCCKI Repository, including DCCKI Certificates, EII DCCKICA CRL and DCCKI ARL, shall be modified such that the DCC may, where the DCCKI Repository is not available, provide such information via an alternative means to be notified to DCCKI Authorised Subscribers, and where approved in advance by the DCCKI PMA function;

(d) all obligations on the DCC in respect of timescales associated with the delivery of DCCKI Services or DCCKI Repository Services, shall be modified so that any such timescales shall be replaced with “as soon as reasonably practicable, having regard to the requirement to provide DCCKI Services and DCCKI Repository Services”;

(e) any reference to raising Incidents and Major Security Incidents shall not apply and the provisions of the Testing Issue Resolution Process shall apply; and

(f) the following provisions of the documents shall be disregarded and treated as forming no part of the DCCKI Test Documents:

(i) references to interactions with the Service Desk processes shall not apply, except to the extent that such processes are required to support the identity verification of individuals nominated to become DCCKI SROs or DCCKI AROs for testing purposes; and

(ii) clauses 3.2 (b); 3.15; 3.16; and 4.4 to 4.12; in the DCCKI RAPP shall not apply.

4.5 For the purposes of clause 4.2(b), each Testing Participant shall, when completing the forms in the annexes of the DCCKI RAPP for testing purposes, clearly mark each page with the text, “For Testing Purposes” and submit the completed forms to the DCCKI Registration Authority, in writing, as directed on the DCC Website.

5. Obligations on Testing Participants using Remote Test Labs

5.1 In accordance with Section H14.31, Testing Participants are eligible to connect to a simulation of the SMETS2+ SM WAN ("a test SMETS2+ SM WAN") for the purposes of conducting Device and User System Tests remotely at premises of their choice. The DCC shall offer a service of providing connections to the test SMETS2+ SM WAN, but shall not offer such service in respect of the SMETS1 SMWAN. However, where a Testing Participant is able to arrange for its own connection to a simulation of the SMETS1 SM WAN ("test SMETS1 SM WAN"), that Testing Participant shall be entitled to conduct Device and User System Tests remotely at premises of their choice.

SMETS 2+

5.2 As well as providing the necessary Test Communications Hubs, Smart Meters and any other Devices which they choose to test, the Testing Participant may need to establish a connection to the test SMETS2+ SM WAN (in the chosen Region(s)). DCC will provide separate testing environments to support fix on fail and development activities. Testing Participants will need to establish connections to the environments they choose to test in.

5.3 The DCC shall include a description of the equipment that will be provided to enable connection to and use of a test SMETS2+ SM WAN for the purposes set out above in the guide for Testing Participants which the DCC is obliged to publish under Section H14.3.

5.4 Where a Testing Participant is considering ordering a connection to the test SMETS2+ SM WAN, the Testing Participant shall first contact the DCC via the Service Desk to request a site survey and resulting quotation setting out the charges to apply. For each additional Remote Test Lab connection to a specific testing environment, a site survey may be required.

5.5 When seeking a connection to the SMETS2+ SM WAN, a Testing Participant shall comply with any reasonable requests of the DCC to provide supporting information, which may include but not be limited to:

(a) location of the site which needs to be connected;

(b) an estimate of the number of Test Communications Hubs, Electricity Meters and Gas Meters that the Testing Participant wishes to install in its test facility and each testing environment; and

(c) a digital floor plan including the area surrounding the test facility, including dimensions, floors above and below and outside windows.

5.6 On receiving a request for a site survey and a quotation of the charges to apply for connection to the test SMETS2+ SM WAN, the DCC shall undertake the steps detailed below as soon as is reasonably practicable:

(a) conduct a site survey to assess the equipment that needs to be provided by the DCC, and any specific requirements to be fulfilled by the DCC for the premises at which the equipment is to be installed. For this purpose, the Testing Participant shall provide the DCC personnel with access to its site to enable the DCC to conduct a site survey; and

(b) set out the charges to apply, which may comprise:

(i) a connection charge for standard connection equipment;

(ii) an additional charge for additional, non-standard connection equipment; and

(iii) a monthly operating charge.

5.7 Upon receipt of the details of the site survey and the charges which will apply, the Testing Participant shall, if it wishes to place an order, notify the DCC accordingly within 30 days of receipt. Any dispute relating to the charges specified by the DCC shall be resolved in accordance with Section M7.2(d).

5.8 Where the Testing Participant notifies the DCC that it wishes to place an order under clause 5.70, the DCC shall provide the connection as soon as is reasonably practicable, and in any event within 6 months of the order being placed.

5.9 The DCC shall provide reasonable notice to the Testing Participant of the planned date of installation of the connection equipment and the establishment of the connection to the test SMETS2+ SM WAN.

5.10 Where the Testing Participant requests a change to the planned date of installation advised by the DCC, that planned date of installation shall be amended, subject to the Testing Participant agreeing to pay for any additional charges notified by the DCC to cover the additional reasonable costs incurred by the DCC resulting from the change of date. In first providing the connection at the premises, the DCC shall procure that the test SMETS2+ SM WAN connection equipment is installed at the premises and that it is done so in accordance with Good Industry Practice and all applicable Laws and Directives.

5.11 A Testing Participant at whose premises test SMETS2+ SM WAN connection equipment has been installed shall implement and maintain reasonable controls to ensure the physical security of the equipment and ensure that no damage is deliberately or negligently caused to that equipment (save that such a Party may take emergency action in accordance with Good Industry Practice to protect the health and safety of persons or to prevent imminent damage to property).

5.12 The test SMETS2+ SM WAN connection equipment shall (as between the DCC and the Testing Participant) remain the property of the DCC, and shall form part of the DCC System. No Testing Participant shall hold itself out as the owner of such connection equipment, or purport to sell or otherwise dispose of such connection equipment. Such equipment is installed at the DCC's risk and no Testing Participant shall have liability for any loss or damage to the equipment unless and to the extent that such loss or damage arose as a result of that Testing Participant's breach of this Code.

5.13 Where test SMETS2+ SM WAN connection equipment is to be installed at a Testing Participant's premises, the Testing Participant shall for each connection to a testing environment:

(a) provide a suitably prepared area, with suitable power feeds prior to the installation of any equipment by the DCC, as specified by the DCC as part of the site survey ahead of an order being confirmed;

(b) provide suitable broadband connectivity or a phone connection as advised by the DCC following a site survey or analysis of the Testing Participant's requirements, over which a connection can be established to the data centre for the relevant Region and testing environment, as required, which enables transmission of data between the Testing Participant's test laboratory and the DCC;

(c) carry out routine inspection of the equipment supplied by the DCC and notify the DCC's Service Desk if there appears to be a problem with the equipment; and

(d) carry out maintenance of the environment in which the equipment is located.

5.14 Where the DCC is required to install any test SMETS2+ SM WAN connection equipment, the DCC shall take all reasonable steps to avoid interruption to existing services at those premises. Where existing services are interrupted, the DCC shall take all reasonable steps to minimise the length and impact of any interruption and shall ensure that existing services are restored as soon as reasonably practicable.

5.15 Where the DCC has acted in accordance with Good Industry Practice during installation, maintenance and / or removal activities, the DCC shall not be responsible for or liable to the Testing Participant for making good any minor repairs to decoration that have become necessary as a result of those activities.

5.16 The Testing Participant shall be entitled to and shall only use the connection to the test SMETS2+ SM WAN for the purposes of undertaking the tests set out in Section H14.1(c); Section H14.1(d); and Section H14.1(e), and shall not use it for any other purpose.

5.17 [NOT IN USE]

Fault Diagnosis, Maintenance and Removal of Test SMETS2+ SM WAN Connection Equipment

5.18 The DCC shall undertake the following in relation to the test SMETS2+ SM WAN connection:

(a) provide remote assistance to the Testing Participant to diagnose faults with any connection to the test SMETS2+ SM WAN, including faults with any test SM WAN connection equipment or environment supplied by the DCC;

(b) rectify any faults with the connection to the test SMETS2+ SM WAN, including faults with any test SMETS2+ SM WAN connection equipment supplied by the DCC. Where rectification requires replacement of equipment the DCC shall remove any redundant equipment within 30 days of replacement of the equipment. In the event that the DCC fails to remove the equipment within this period, the Testing Participant may dispose of the equipment and shall notify the DCC at least 5 days prior to disposing of the equipment, provided that the DCC shall have the right to remove the equipment prior to the end of that 5 day period;

(c) provide ongoing configuration management of test SMETS2+ SM WAN connection equipment;

(d) ensure that the equipment is operated and maintained in accordance with Good Industry Practice, and that it complies with all applicable Laws and Directives; and

(e) manage and implement firmware and hardware upgrades associated with the test SMETS2+ SM WAN connection equipment.

5.19 The DCC may modify or replace the equipment where necessary to maintain the operation of the test SMETS2+ SM WAN, provided that such modification or replacement does not materially diminish the performance of the test SMETS2+ SM WAN, and only after giving reasonable notice to the Party of the need to modify or replace the equipment.

5.20 The Testing Participant, at whose premises the test SMETS2+ SM WAN connection equipment is (or is to be) installed, shall provide the DCC with such access to that premises as the DCC may reasonably require in order to allow it to undertake the installation, maintenance or removal of the test SMETS2+ SM WAN connection equipment. The DCC shall ensure that all persons exercising such rights of access do so in compliance with the site rules and reasonable instructions of the Testing Participant.

5.21 Where the Testing Participant ceases to be a Party or notifies the DCC that it no longer requires the connection to the test SMETS2+ SM WAN (on not less than 1 month’s prior notice), then the DCC shall within 30 days of that notice period ending or that Testing Participant ceasing to be a Party, remove the test

SMETS2+ SM WAN connection equipment from the relevant premises in accordance with Good Industry Practice and all applicable Laws and Directives.

5.22 In the event that test SMETS2+ SM WAN connection equipment is not removed within 30 days, the Testing Participant may dispose of that equipment and shall notify the DCC at least 5 days prior to disposing of the test SMETS2+ SM WAN connection equipment, provided that the DCC shall have the right to remove the equipment prior to the end of that 5 day period.

6. Requirements for Use of DCC Test Labs

6.1 Pursuant to Section H14.9(a), the DCC shall make available the DCC's physical test laboratories to Testing Participants to conduct User Entry Process Tests, Device and User System Tests, Modification Proposal implementation testing, DCC Internal Systems change testing, Interoperability and Innovation Events and RF Noise Testing.

6.2 Where a Testing Participant is performing tests in a DCC physical test laboratory, it must comply with any reasonable supplemental terms and conditions that are required by the DCC and notified prior to testing which may include:

(a) identification and authorisation of the individual(s) requiring access to the DCC physical test laboratory;

(b) requirements to maintain confidentiality of information;

(c) policies relating to the acceptable use of the laboratory and equipment; and

(d) requirements to follow:

(i) health and safety guidance for test laboratories;

(ii) security guidance; and

(iii) training on use of test laboratories and installation of Devices in the spaces provided.

6.3 Where DCC considers that the Testing Participant has breached any SEC obligations relating to the use of a Testing Service at the physical test laboratory it shall notify the Testing Participant to that effect. The DCC and Testing Participant shall use reasonable steps to rectify the situation. Where DCC considers that the situation has not been rectified the DCC may request that the Testing Participant shall immediately remove its Devices from the Test Lab and the Testing Participant shall comply with such a request. DCC will provide the Testing Participant with:

(a) the reason(s) for this instruction; and

(b) the steps that must be taken and the evidence required, in order for the Participant to re-commence testing.

6.4 A Testing Participant may dispute the reasons for the instruction in clause a) or b) to the Panel and the DCC and Testing Participant shall comply with any determination.

6.5 Where a Testing Participant wishes to install their own Devices, in a DCC physical test laboratory, the Testing Participant must provide the following to the DCC prior to installing a Device in a DCC physical test laboratory:

(a) in the case of SMETS2+ Devices only, where a Testing Participant reasonably believes that Devices do not conform to SMETS2+ that any non-compliant aspects are notified to, and agreed with, the DCC (such agreement not to be unreasonably withheld). Supporting information should be provided, including evidence of testing that has been undertaken, which could include the use of GIT for Industry;

(b) evidence that all the supplied Devices are safe to store, install, operate and decommission. This may be in the form of a statement of compliance with the relevant parts of the CE marking or equivalent; and

(c) confirmation that the Devices have been produced in accordance with a recognised quality assurance process and a defined testing issue management and configuration management process.

6.6 Where a Testing Participant wishes to install their own Devices in a DCC physical test laboratory, the Testing Participant must:

(a) remove Devices from the DCC physical test laboratory by 17:00 on the last day of the allocated test slot; and

(b) comply with any other reasonable restrictions notified by the DCC, which the DCC shall notify to a Testing Participant when informing them that their requested test slot is available.

6.7 For the purpose of Section H14.10, storage space requirements for equipment shall be arranged between the DCC and the Testing Participant when making application to use the physical test laboratory. Pursuant to Section H14.10, the DCC will store at its physical test laboratories any number of Devices that a Testing Participant has procured itself that the DCC can reasonably accommodate.

6.8 In relation to testing being undertaken in a DCC physical test laboratory:

(a) without prejudice to the DCC's obligations under Section M4 (Confidentiality), each Testing Participant shall take reasonable steps to preserve the confidentiality of the Testing Participant's Confidential Information;

(b) no Testing Participant shall attempt to discover, overhear or obtain Data regarding testing being conducted by other Testing Participants in the DCC physical test laboratory; and

(c) (without prejudice to (b) above) no Testing Participant shall disclose or use any Data of the DCC or any other Testing Participant that the first Testing Participant discovers, overhears or obtains in the course of using the DCC's physical test laboratory.

7. User Entry Process Tests

7.1 In accordance with Section H14.9, DCC physical test laboratories will house sets of Devices for a Testing Participant undertaking User Entry Process Testing or Additional SR Testing, via UEPT process, or the DCC shall provide Test Stubs or emulators for SMETS2+ Devices, with a set consisting of:

(a) For tests in respect of SMETS2+ Devices, if this functionality is being tested:

(i) one Test Communications Hub;

(ii) one Electricity Smart Meter or one Electricity Smart Meter which supports Auxiliary Load Control;

(iii) one Gas Smart Meter;

(iv) one Standalone Auxiliary Proportional Controller; and

(v) one HAN Controlled Auxiliary Load Control Switch;

(b) For tests in respect of SMETS1 Devices, two sets of Devices comprising Device Model Combinations that are on the list of Eligible Product Combinations, comprising one of the following, if this functionality is being tested:

(i) a Communications Hub, an Electricity Smart Meter, a Gas Smart Meter and an IHD; or

(ii) a Communications Hub, an Electricity Smart Meter, a Gas Smart Meter and a SMETS1 PPMID.

7.2 DCC shall allocate a number of spaces in the DCC physical test laboratory, together with Device sets to the Testing Participant, if undertaking User Entry Process Testing or Additional SR Testing, via the UEPT process, as agreed at the initiation meeting, according to the following allocation schedule:

(a) Parties that are Affiliates undertaking testing in the User Roles of Import Supplier and / or Gas Supplier will collectively be allocated a total of two SMET2+ Device sets and two SMETS1 Device sets to undertake testing in those User Roles;

(b) Parties that are Affiliates undertaking testing in the User Role of Export Supplier will collectively be allocated a total of two SMETS2+ Device sets and two SMETS1 Device sets to undertake testing in that User Role;

(c) Parties that are Affiliates undertaking testing in the User Roles of Electricity Distributor and / or Gas Transporter will collectively be allocated a total of two SMETS2+ Device sets and two SMETS1 Device sets to undertake testing in those User Roles. Where Parties that are Affiliates hold Electricity Distribution Licences and/or Gas Transportation Licences in different Regions, in the case of SMETS2+ Device sets, such Affiliates shall be offered on request two Device sets collectively in relation to each Region; and

(d) Parties that are Affiliates undertaking testing in the User Role of Other User will collectively be allocated a total of two SMETS2+ Device sets and two SMETS1 Device sets to undertake testing in that User Role.

7.3 The Device sets allocated for the conduct of User Entry Process Tests or Additional SR Testing, via the UEPT process shall not be used for other testing without the agreement of DCC, such agreement not to be unreasonably withheld.

8. Device and User System Tests

8.1 Each Party is eligible to undertake Device and User System Tests once the following entry criteria have been achieved:

(a) for a Testing Participant conducting the user system element of Device and User System Testing:

confirmation from the DCC that the Testing Participant has successfully completed SREPT and UEPT for the User Role(s) that they intend to participate in when undertaking User System Testing.

(b) for a Testing Participant conducting the device testing element of Device and User System Testing, either:

(i) confirmation from the DCC that the Testing Participant has successfully completed SREPT and UEPT for the User Role(s) that they intend to participate in when undertaking Device Testing; or

(ii) if the Testing Participant is not eligible to conduct UEPT:

(A) demonstrate to the DCC that it is capable of sending Service Requests and receiving Service Responses in accordance with the DCC User Interface Specification by establishing a DCC Gateway Connection and performing a DUIS Connectivity Test, (as defined in the Common Test Scenarios Document); and

(B) provide evidence to the DCC that all Service Requests can be generated in accordance with the DCC User Interface Specification; the form of this evidence may include test results and will be agreed on an individual basis between the DCC and each Testing Participant.

8.2 Where agreement cannot be reached under clause 8.1, the Testing Participant may dispute the reasons for disagreement to the Panel under Section H14.16.

8.3 For the purpose of user system testing or Additional SR Testing via the Device and User System Testing (DUST) process, with SMETS2+ Devices, the DCC shall provide upon request Device(s), Test Stubs or Emulators, as provided for in Section H14.9. In respect of user system testing or Additional SR Testing via the Device and User System Testing (DUST) process with SMETS1 Devices, the DCC shall, at a minimum, provide Device Model Combinations upon request for use in a DCC laboratory that consists of two Device Model Combinations that are on the list of Eligible Product Combinations comprising one of each of the following:

(a) a SMETS1 Communication Hub, a SMETS1 Electricity Smart Meter, a SMETS1 Gas Smart Meter, and a SMETS1 IHD; and

(b) a SMETS1 Communication Hub, a SMETS1 Electricity Smart Meter, a SMETS1 Gas Smart Meter, and a SMETS1 PPMID.

Subject to Clause 8.3A, the DCC shall take all reasonable steps to provide all of the Device Model Combinations that are on the list of Eligible Product Combinations for use in testing, and to enable a Testing Participant to select the particular Device Model Combination(s) that it uses in testing, subject to the DCC being able to source the Device Model Combinations.

8.3A Where Migration DUST is no longer available pursuant to clause 17.24 of the MTAD (as described in Appendix AK) the DCC shall no longer be required to install new Devices pursuant to Clause 8.3 where those Devices are of Device Models that would, prior to the decommissioning of the associated Requesting Party, have been capable of being migrated from the SMETS1 SMSO associated with that Requesting Party. In circumstances where there are insufficient test devices available to fulfil concurrent demand for Testing Services, DCC may prioritise the provision of Devices to a Testing Participant for undertaking UEPT and will therefore be entitled to delay the provision of Device and User System Testing (DUST) to the Testing Participant that requires use of the same Devices. Where the DCC delays the provision of DUST to the Testing Participant it shall notify the Testing Participant that it is doing so due to the need to prioritise the use of Devices for UEPT. Where the Testing Participant disagrees with the DCC's decision to prioritise the use of Devices for UEPT, it may refer the matter to the Panel and the DCC and Testing Participant shall comply with any final determination of the Panel as to which Testing Service should be prioritised.

8.4 As set out in Section H14.10, a Testing Participant may supply its own Device(s) provided prior agreement has been obtained from the DCC and providing that the Device(s) complies with the following:

(a) the Device(s) can reasonably be accommodated in the space allocated;

(b) the Device(s) meet the criteria set out in clause 6.5, were they to be installed in a DCC physical test laboratory;

(c) In the case of SMETS1 Devices:

(i) the Device Model Combination is on the list of Eligible Product Combinations; and

(ii) Migration DUST is available pursuant to clause 17.24 of the MTAD (as described in Appendix AK):

(d) Unless otherwise agreed: each Testing Participant shall be responsible for ordering from the DCC the SMETS1 Communications Hubs, Test Communications Hubs and Smart Meters, IHDs, SMETS1 PPMIDs, Test Stubs or emulators for testing that it wishes the DCC to provide and installing them in the space allocated, as well as for their removal at the end of the testing slot; and

(e) any other physical interaction with the Devices shall be the responsibility of that Testing Participant and in accordance with any other reasonable instructions notified to the Testing Participant by the DCC.

8.5 The following alerts may be generated by SMETS2+ Devices or, as necessary, Test Stubs or emulators and Test Communications Hubs from within a DCC physical test laboratory:

(a) GSME – Low Battery Capacity (GBCS reference 0x8F1F)

(b) ESME / GSME Only: Trusted Source Authentication Failure (GBCS reference 0x8F3D)

(c) Supply Armed (GBCS reference 0x8F32);

(d) Polyphase ESME – Voltage Alert (GBCS reference 0x8005)

(e) Device Joined SMHAN (GBCS reference 0x8183);

(f) Average RMS Voltage above Average RMS Over Voltage Threshold (current value over threshold, previous value below threshold) (GBCS reference 0x8002);

(g) Future - date HAN Interface Command Successfully Actioned (GBCS reference 0x8F66);

(h) Supply Outage Restored (GBCS reference 0x8F35);

(i) Supply Outage Restored – Outage >= 3 minutes (GBCS reference 0x8F36);

(j) Device Identity Confirmation (DUIS reference N16);

(k) Schedule removal because of CoS (DUIS reference N17);

(l) Device CoS (DUIS reference N27); and

(m) PowerOutageEvent (DUIS reference AD1).

8.6 The DCC will support the generation of the following alerts, upon Test Participant request, in relation to SMETS1 Devices within a DCC physical test laboratory:

(a) Unauthorised Physical Access: Tamper Detect (SMETS1 Supporting Requirements reference 0x8F3F))

(b) Supply Armed (SMETS1 Supporting Requirements reference 0x8F32);

(c) SMETS1 Average RMS Voltage above Average RMS Over Voltage Threshold (SMETS1 Supporting Requirements reference 0x8F40);

(d) Device Identity Confirmation (DUIS reference N16);

(e) Schedule removal because of CoS (DUIS reference N17);

(f) Device CoS (DUIS reference N27);

(g) SMETS1 Service Provider Alert (DUIS reference N55); and

(h) SMETS1 Service Provider Provision of prepayment top-up UTRN (DUIS reference N56).

8.7 Additional alerts or response codes required may also be generated by the Testing Participant when using Smart Meters (including Electricity Smart Meters which support Auxiliary Load Control), SMETS1 Communications Hubs, Test Communications Hubs, HAN Controlled Auxiliary Load Control Switches and Standalone Auxiliary Proportional Controllers within a DCC physical test laboratory. However, further alerts may only be generated where they do not require physical interaction with the Devices or a change to the power supply in the DCC physical test laboratory, or where the DCC has given prior agreement and the actions comply with Health and Safety and any other reasonable instructions of the DCC.

8.8 When undertaking Device and User System Testing, the DCC and each Testing Participant shall take reasonable steps to comply with the timetables set out in Table 1 and Table 2 in clause 8, or another timetable reasonably agreed.

Table 1, below, sets out a high-level timetable for initiating testing. In the From and To columns, where an item is relevant to test laboratories, either “Remote Lab” or “DCC Lab” is shown, to clarify whether it relates to Testing Participants using Remote Test Labs or DCC physical test laboratories (or both).

Ref	By When	Action	From	To	Information / Action Required	Method
1a	See lead times described in the Guide for Testing Participants	Order equipment and DCCKI Test Certificate required to commence testing specifying which environment. Note a separate DCCKI Test Certificate will be required for	Testing Participant (Remote Lab)	DCC	This could include ordering • Remote SM WAN equipment to connect Remote Lab to CSP test system (SMETS2+ only) • DCC Gateway Connection • Test Communications Hubs (SMETS2 + only)	Via DCC Service Desk

		each test environment				
1b			Testing Participant (DCC Lab)	DCC	This could include ordering - DCC Gateway Connection	Via DCC Service Desk
2	See lead times agreed with Device manufacturer (or with DCC if Devices provided by DCC)	Order Devices required to commence testing, including supply of certificates	Testing Participant (Remote Lab + DCC Lab)	Meter Manufacture r (or DCC)	Order Devices	Via Meter Manufacturer or via DCC Service Desk
3	40 working days (or where less, as much prior notice as is reasonably practicable, as per H14.8) before Participant intends to commence testing[1]	Notify DCC of intention to commence testing specifying which environment. Subject to potential later constraints and agreement with DCC it may be possible to change the specified environment during the 40 Working Day period	Testing Participant (Remote Lab + DCC Lab)	DCC	Date to commence testing, whether testing to be conducted in DCC physical test laboratory (and which) or in remote test lab.	Email
4	30 Working Days before Participant intends to commence testing	Test Initiation Meeting	Testing Participants (Remote Lab + DCC Lab)	DCC	Entry criteria, as described in clause 8.1, evidenced. (Meeting offered to all TP's can be declined by TP's who are already testing in End to End)	Meeting

[1] This notification can be given before a Testing Participant completes UEPT. The Testing Participant may commence User System/Device Testing immediately upon completing UEPT, providing that 40 working days have elapsed since giving notice.

5	20 Working Days prior to the start of testing	Publish Schedule of available test slots in DCC physical test laboratories	DCC		Schedule – which will be maintained on an enduring basis	DCC SharePoint
6	15 Working Days prior to the start of Device and User System Testing	Health/safety & other CSP Lab training	DCC	Testing Participant (DCC Lab)	DCC to deliver training as described in clause 6.2. Method of training to be agreed.	As set out in Guide for Testing Participants
7	No later than 10 Working Days prior to the start of testing	Provide test tool to participant to record Testing Issues	DCC	Testing Participant (Remote Lab + DCC Lab)	Testing Issue Management Tool	
8	No later than 5 Working Days prior to the start of testing	Complete Readiness Verification	Testing Participant (Remote Lab + DCC Lab)	DCC	Completed Quality Gate Checklist, see section entitled 'Checklist' in Guide for Testing Participants.	Email
9	No later than 2 Working Days prior to the start of testing	Confirm criteria in Quality Gate Checklist met or request further preparatory work	DCC	Testing Participant (Remote Lab + DCC Lab)	Quality Gate Checklist If DCC requests further preparatory work, it may be necessary to release the test slot and reschedule the testing, and Testing Participant to repeat step 8.	Meeting
10a	1st Day of testing	Perform DUIS connectivity test, as defined in Common Test Scenarios Document, if necessary, and commence testing	Testing Participant (Remote Lab)		In accordance with terms and conditions provided by DCC.	
10b		Unless otherwise agreed install	Testing Participant (DCC Lab)			

		Devices, and commence Testing				
11	Last day of testing	Unless otherwise agreed uninstall Devices from DCC test laboratory	Testing Participant (DCC Lab)		Terms and conditions required by DCC	

Table 1 - Timetable for test initiation

Table 2, below, sets out the timetable to be followed by DCC and each Testing Participant on a monthly basis to enable scheduling of Testing Participants into a DCC physical test laboratory.

Ref	By When	Action	From	To	Information Required	Method
1	15th of each month (or previous working day)	Request test slot[2] specifying which environment	Testing Participant (CSP Lab)	DCC	Date of commencing test slot, number of meter Devices sets / DMCs to be tested which DMCs to be tested and duration of testing.	Email
2	First working day after 15th of each month	Publish test slot details	DCC	Testing Participant (CSP / DCC Lab)	Confirm that requested test slot is available (for slot commencing following month) or suggest alternative.	Email
3	Within 5 working days of DCC's publication of test slot	Confirm intention to use test slot in DCC physical test laboratory	Testing Participant (CSP Lab)	DCC		Email
4	Periodically, as required.	Update test schedule and republish	DCC	Testing Participants (CSP Lab)	Start and duration of test slot and number of spaces for Device sets	DCC SharePoint

[2] Note that test slots commence on the first working day of each month. Notice must be given by the 15th of a month (or the previous working day if 15th is not a working day), to obtain a slot commencing the following month.

Table 2 - Timetable for test slot scheduling

9. SMETS1 Pending Product Combinations Tests

9.1 A Testing Participant can request the DCC to execute SMETS1 Pending Product Combinations Tests (hereafter referred to as a "**PPCT**") to one or more combinations of SMETS1 Device Models (hereafter referred to as "**DMCs**") and communication services provider that are not at that time on the list of Eligible Product Combinations.

9.2 When requesting PPCT, the Testing Participant shall provide the DCC with all data pertaining to the DMC that is reasonably required and requested by the DCC, and shall indicate whether it is requesting that the processing of the DMC through PPCT is prioritised due to the DMC arising as a consequence of the need for a firmware upgrade that is required to address a material security vulnerability on an urgent basis. This data reasonably required by the DCC shall include (but is not limited to) Device Models, release notes, Device configuration, user guidance notes, and a nominated contact for the DCC to liaise with during testing for receipt of reports, and associated contact details. When a Testing Participant requests PPCT, subject to clause 9.3, the DCC shall enter the DMC on the list of Pending Product Combinations with a status of 'under assessment'.

9.3 Each Testing Participant that is requesting PPCT shall ensure that it has obtained consent from any relevant Manufacturer for its name to be published in the list of Pending Product Combinations or shall notify the DCC at the time that it is requesting the testing that such information should be treated as confidential in accordance with Section M4 of this Code. In the absence of such a notification, the DCC shall not be required to treat such information as confidential. Where the DCC is required to treat the information as confidential it shall not add the DMC to the list of Pending Product Combinations.

9.4 Following receipt of all of the data that the DCC reasonably requires and requested pursuant to clause 9.2, the DCC shall determine whether testing is required and shall notify the Testing Participant accordingly.

9.5 In determining whether or not testing is required, the DCC shall take into account the following:

(a) whether the DMC proposed for testing is on the list of SMETS1 Eligible Product Combinations; and

(b) whether the DMC proposed is substantively equivalent to an existing DMC that is on the list of SMETS1 Eligible Product Combinations.

9.6 Where the DMC proposed for testing is on the list of SMETS1 Eligible Product Combinations or where, in the DCC's opinion the DMC proposed for testing is substantively equivalent to a DMC that is on the list of SMETS1 Eligible Product Combinations, the DCC shall notify the Testing Participant accordingly and PPCT shall be deemed to have been successfully completed for the purposes of this Code. The DCC shall:

(a) where the DCC is of the opinion that the DMC proposed for testing is substantively equivalent to a DMC that is on the list of SMETS1 Eligible Product Combinations, ensure that it documents within its organisation its evidence and/or rationale to support this position;

(b) provide a PPCT completion certificate to the Testing Participant; and

b) subject to clause 9.3, update the list of Pending Product Combinations to reflect the DMC testing status as 'completed' and indicating that the DMC has been entered on the list of SMETS1 Eligible Product Combinations.

9.6A Following expiry of the RP Decommissioning Date for a Requesting Party (pursuant to Clause 7 of Appendix AL) the DCC shall no longer be required to install new Devices in its test laboratory where those Devices are of Device Models that would only, prior to the decommissioning of the associated Requesting Party, have been capable of being migrated from the SMETS1 SMSO associated with that Requesting Party.

9.6B The DCC shall not be required to complete PPCT for a DMC where:

(a) the RP Decommissioning Date for the Requesting Party associated with the SMETS1 SMSO from whom the new DMC would only have been capable of being migrated has expired (pursuant to Clause 7 of Appendix AL);

(b) DCC determines that the new DMC is not substantively equivalent to a DMC that is on the list of SMETS1 Eligible Product Combinations and testing within PPCT is required for the proposed Device Model Combination; and

(c) DCC has no existing device(s) in the DCC test laboratory that can be firmware upgraded to align with the proposed new Device Model(s) and used for testing.

The DCC shall promptly notify the Testing Party where it cannot complete PPCT and copy any such notification to the Authority and the Secretary of State.

9.7 Where the DCC determines that testing is required, the DCC shall notify the Testing Participant and shall state whether the Testing Participant is required to provide DCC with two sets of the DMC for testing. Following receipt of the DCC’s notice, the Testing Participant shall provide the DCC with:

(a) their proposed start date for testing; and

(b) where the testing participant is required to provide two sets of the DMC for testing, the date on which they will provide the DCC with two sets of the DMC to be installed by the DCC for testing.

The proposed start date for testing shall be at least 25 Working Days after the date on which the Testing Participant informs the DCC of its proposed date. The date on which the Testing Participant shall provide the DMCs to the DCC for PPCT shall be at least 5 Working Days prior to the Testing Participant’s proposed start date for testing.

9.8 Following the receipt of the proposed start date for testing, the DCC shall provide confirmation to the Testing Participant of the start date and the date on which the DMCs will be provided to the DCC (except where the proposed dates do not meet the minimum notice periods set out in clause 9.7 in which case the DCC shall ask the Testing Participant to re-submit their proposed dates). In doing so the DCC shall take all reasonable steps to accommodate the two dates set out in clause 9.7, where this is not possible the DCC shall select start dates that are as soon as reasonably practicable thereafter.

9.9 Following receipt of the DMC device sets from the Testing Participant, the DCC shall install the component Devices that make up the DMC in the DCC test laboratory, in order to facilitate the commencement of testing on the agreed start date.

9.10 The DCC shall take all reasonable steps to commence the tests on the start date and complete them as soon as is reasonably practicable. Where:

(a) the DCC is unable to commence the tests on the start date; or

(b) where the Testing Participant is unable to provide the DMC device sets by the agreed planned date,

the DCC shall discuss with the Testing Participant and shall notify a revised date(s), which shall be the earliest available date(s) in the DCC's testing schedule.

9.11 Upon successful completion of testing of the DMC the DCC shall:

(a) provide a PPCT completion certificate to the Testing Participant;

(b) return the test devices provided to the DCC to the Testing Participant; and

(c) subject to clause 9.3, update the list of Pending Product Combinations to reflect the DMC testing status as 'completed' and indicating that the DMC has been moved to the list of SMETS1 Eligible Product Combinations.

9.12 Where testing has not successfully completed, the DCC shall:

(a) inform the Testing Participant in a summary report which sets out:

(i) the reason(s) why the DMC testing has been suspended as either:

(A) change is required to the DMC to enable successful completion of testing; or

(B) a material change to the DCC Systems and/or modification to this Code need to be made in respect of the combination of SMETS1 Device Models to enable successful completion of testing.

(ii) the details of all test results which are not an expected outcome, and:

(A) where a Testing Participant has provided a production device for testing, the DCC shall provide a report which shall contain logging of the traffic on the DCC systems;

(B) where a Testing Participant has provided devices capable of revealing the Zigbee and network link keys, the DCC shall provide a report which shall contain logging of the traffic on the DCC systems and Zigbee logs of HAN traffic; and

(b) subject to clause 9.3, update the list of Pending Product Combinations to reflect the DMC's testing status as 'suspended'.

9.13 Where the information provided by the DCC pursuant to Clause 9.12 indicates that the inability to successfully complete testing arose as a consequence of an issue(s) with the Device(s) provided for testing, a Testing Participant may submit a revised DMC for testing once the issue(s) has been resolved. In so doing, the Testing Participant shall provide a release note that confirms that the appropriate fixes have been applied and tested successfully, and shall follow the process for requesting PPCT as set out in this Clause 9. The DCC shall then update the list of Pending Product Combinations to reflect the testing status of the original DMC as 'withdrawn'.

9.14 Where the information provided by the DCC pursuant to Clause 9.12 (i) (B) indicated that that in order for testing to successfully complete, a material change was required to the DCC Total System or a SEC Modification was required, the Testing Participant shall be entitled to resubmit the DMC for testing where the required change or Modification has been made and where it wishes to resubmit shall follow the process for requesting PPCT set out in this Clause 9.

SMETS1 Pending Product Combinations Tests: Fast Track Process

9.15 Where, for a firmware upgrade required to address a material security vulnerability, a Testing Participant requests that the processing of a DMC through PPCT is prioritised in order to achieve their proposed rectification date for the vulnerability, the DCC shall contact the Code Administrator to confirm that the security vulnerability has been notified to the Security Sub-Committee in accordance with Section G3.18(c) of the Code. The DCC shall also inform the Code Administrator of when (subject to Clause 9.10) processing of the DMC through PPCT would complete if it is not prioritised and, if the proposed rectification date of the vulnerability is earlier than this date, when it would be expected to complete if it is prioritised.

9.16 The Code Administrator, on behalf of the Security Sub-Committee, shall confirm to the DCC whether:

(a) the vulnerability has been reported to the Security Sub-Committee;

(b) the Security Sub-Committee Chair considers the vulnerability to be material; and

(c) whether the Security Sub-Committee Chair considers that the materiality of the vulnerability warrants the processing of the resultant DMC through PPCT on an urgent basis.

9.17 Where, pursuant to Clause 9.16, it is confirmed that the Security Sub-Committee considers that the DMC should be processed through PPCT on an urgent basis, then the DCC shall so prioritise the processing of the DMC. Where this (despite the DCC taking reasonable steps to avoid this being the case) results in previously notified commencement dates for the testing of other DMCs in PPCT needing to change, the DCC shall notify the affected Testing Participant(s). In determining the revised dates, the DCC shall, where reasonably practicable, take any affected Testing Participant's views of those dates into account.

10. DCC Internal System Change Testing

10.1 The DCC shall publish a plan notifying changes to the DCC Internal Systems which includes a reasonable period for Parties and/or RDPs to be involved in any testing of the change to the DCC Internal Systems prior to its implementation, as provided for in Section H8.8(c).

10.2 DCC shall provide Parties and/or RDPs the opportunity to conduct testing of the change to the DCC Internal System remotely and / or in DCC physical test laboratories.

10.3 DCC and each Party or RDP wishing to conduct testing of changes to DCC Internal Systems shall take reasonable steps to comply with the timetables set out in Table 1 and Table 2 in clause 8 where required the type of testing being performed, unless determined otherwise in accordance with the DCC Release Management Policy.

11. Modification Proposal Implementation Testing

11.1 Where the Panel determines, pursuant to Section H14.35, persons eligible to undertake implementation testing for a Modification Proposal, the DCC shall facilitate their participation remotely and / or using DCC physical test laboratories, unless determined otherwise by the Panel.

12. Use of Testing Issue Management Tool

12.1 Where DCC makes available a Testing Issue Management Tool to a Testing Participant and the Testing Participant elects to use such tool, the DCC and each Testing Participant shall comply with all reasonable terms set out by the DCC relating to the use of the Testing Issue Management Tool.

12.2 The DCC shall notify any terms relating to the use of the Testing Issue Management Tool to each Testing Participant prior to use of the Testing Issue Management Tool in support of any period of testing by a Testing Participant.

12.3 The Testing Issue Management Tool terms may include, without limitation:

(a) operational security;

(b) authentication and access control;

(c) boundary protection and interfaces;

(d) protecting data at rest and in transit;

(e) user and administrator separation of data;

(f) information relating to permitted users; and

(g) testing security.

13. Other Obligations

13.1 The DCC shall ensure that, where requested by a Testing Participant, it provides reasonable assistance and support to that Testing Participant in resolving testing issues. In support of the activities detailed in this document the DCC Service Providers shall provide support which shall include inter alia:

(a) the installation and removal of SMETS1 Device Model Combinations (including SMETS1 IHDs) from DCC test laboratories;

(b) capturing and analysis of logs for test issue resolution; and

(c) representation on calls for a Testing Participant's test planning.

13.2 The DCC shall be accountable and responsible for the following deliverables in support of the test activities detailed in this document:

(a) general administration

(b) DCC test infrastructure and environments;

(c) DCC test laboratory premises

13.3 Parties shall be accountable and responsible for their test infrastructure and their environments.

13.4 The DCC shall:

(a) notify Parties of outages and other matters affecting their testing; and

(b) support Parties undertaking the test activities detailed in this document.

13.5 The DCC systems integrator shall:

(a) support Parties undertaking of the test activities detailed in this document

(b) provide test execution and environment usage schedules;

(c) administer the testing issue resolution process and provide the testing issue management tool; and

(d) operate the master configuration management plan.

13.6 The DCC DSP shall:

(a) provide the DSP component of the relevant test environment and related data;

(b) provide support for DSP solution elements and DSP component of the relevant test environment;

(c) provide fixes required in DSP solution elements; and

(d) provide resource to support Parties undertaking testing.

13.7 Other DCC Service Providers shall:

(a) provide relevant components of or connections to the relevant test environment and related data;

(b) provide support for relevant solution elements and components of the relevant test environment;

(c) provide fixes required in relevant solution elements;

(d) provide resource to support Parties undertaking testing;

(e) provide support to the DCC Systems Integrator in assisting in the administration of testing; and

(f) provide resource to triage and fix Testing Issues.

13.8 The DCC shall take all reasonable steps to maximise the reuse of any test Devices that are SMETS1 test Devices in its test laboratories and shall take all reasonable steps to ensure that such test Devices are used in accordance with Good Industry Practice.

14. Radio Frequency Noise Testing

14.1 RF Noise Testing shall be undertaken to the requirements as set out in the current Intimate Communications Hub Interface Specification (ICHIS) and the associated ICHIS Test Specification published on the DCC Website.

14.2 The DCC shall provide a reasonable number of each Communications Hub Antenna Structure (CHAS) test device listed in the current ICHIS to Testing Participants for the purposes of RF Noise Testing.

14.3 RF Noise Testing shall also provide the ability for the DCC to test new CHAS test devices not yet listed in the current ICHIS with SMETS2+ ESME and Communications Hub Hot Shoe Devices upon agreement with the relevant Testing Participant.

14.4 Where a Testing Participant requests RF Noise Testing, the DCC shall provide confirmation that it can accommodate the request and a quotation for the Charges associated with the service.

14.5 Where a Testing Participant wishes to accept the quotation for RF Noise Testing, the Testing Participant shall notify the DCC.

14.6 Where RF Noise Testing is undertaken at the DCC Test Labs then Section 6 will apply.

15. Interoperability and Innovation Events

15.1 Testing Participants will be notified of the schedule of events and issued invitations to attend by the DCC. Invitations to attend shall be issued via e-mail at least one month prior to the event.

15.2 The DCC shall notify any terms relating to the attendance of Interoperability and Innovation Events to each Testing Participant prior to the attendance of such an event.

15.3 Where an Interoperability and Innovation Event is held at the DCC Test Labs then Section 6 will apply.

15.4 No certification or accreditation is provided by attending these events.

16. GFI Testing

16.1 The DCC shall develop and make available via the DCC Website a policy describing the provisions and allocation requirements for types of GFI Testing.

16.2 The Testing Participant shall request GFI Testing Tools in accordance with the GFI Testing Policy.

16.3 Where a Testing Participant requests GFI Testing outside of the provisions and allocation requirements set out in the GFI Testing Policy, the DCC shall provide confirmation that it can accommodate the request and a quotation for the Charges of the service.

16.4 Where a Testing Participant wishes to accept the quotation for GFI Testing, the Testing Participant shall notify the DCC.

17. Wired Instrumented Test Communications Hub (ITCH)

17.1 The DCC shall make available to Testing Participants Dual Band SMETS2+ Instrumented Test Communication Hubs (ITCHs) which are a Communications Hub (CH) variant in which the SM-WAN interface is disabled. The Wired ITCH will contain the capability to be connected to a test environment Personal Computer (PC) via a wired interface. This will enable a Testing Participant to exchange messages, responses and alerts between the PC and the CH without the use of a WAN network.

17.2 Testing Participants may order Wired ITCHs in accordance with SEC Section F10.

Definitions & Interpretation

Communications Hub Antenna Structure (CHAS)	means a unit which is used for testing against the Intimate Communications Hub Interface Specification (ICHIS) Test Specification.
GIT for Industry	means a test tool provided by DCC to validate implementation of GBCS by a Device.
Quality Gate Checklist	means a checklist document used to support assessment whether criteria have been met.
Testing Issue Management Tool	means a test management tool that has the ability to log and track Testing Issues.
Testing Participants	means, in respect of each Testing Service, the persons (whether or not they are Parties) who are entitled to undertake such tests, as described in Section H14 (Testing Services).

18. DCC Boxed

18.1 The DCC shall develop and make available via the DCC Website a policy describing the provisions and allocation requirements for types of DCC Boxed.

18.2 The Testing Participants shall request DCC Boxed in accordance with such policy, and the DCC shall comply with such policy.

Version K 4.0

Appendix K

SMKI and Repository Test Scenarios Document

1. Introduction

1.1. Purpose

The purpose of this document is to:

- define the procedural steps to be undertaken by a Party or RDP wishing to complete the SMKI and Repository Entry Process Tests (SREPT). Section H14.23 requires those tests to be undertaken in accordance with this SMKI and Repository Test Scenarios Document;
- set out the SMKI and Repository Entry Process Tests that a Relevant Party or RDP must successfully complete in order to be entitled to apply to become an Authorised Subscriber or access the SMKI Repository in accordance with Section L7.1; and
- describe the role and responsibilities with regard to the conduct of SREPT including:
  - entry and exit requirements;
  - defining Test Scripts;
  - defining Test Data;
  - planning the manner in which tests will be undertaken;
  - executing the tests;
  - reporting the results of those tests to the DCC for approval; and
  - performing regression testing where required.

2. Scope

Section 5 of this document sets out which Test Scenarios a Relevant Party or RDP must successfully complete, depending upon:

- which SMKI interfaces or SMKI Repository Interface the Relevant Party or RDP will access and whether this is for Device Certificates or Organisation Certificates; and
- whether access to the SMKI interfaces will be through a DCC Gateway Connection or using the SMKI Portal interface via the Internet.

Section 8 Appendix C: Test Scenarios of this document sets out the SMKI and Repository Entry Process Test Scenarios as referred to in Section H14.22.

3. Test Preparation

The Enduring Testing Approach Document sets out rights and obligations relating to gaining Test Certificates.

Parties or RDPs wishing to undertake SREPT must comply with the security requirements applicable to Testing Participants set out in the Enduring Testing Approach Document.

To gain access to the test systems to undertake SREPT, as set out in the Enduring Testing Approach Document, the following activities must take place:

- the applicant organisation must have completed the procedure to verify the organisational identity for testing purposes;
- an applicant organisation must have at least one test SMKI Senior Responsible Officer (SMKI SRO) appointed for test purposes;
- an applicant organisation must have at least one test SMKI Authorised Responsible Officer (SMKI ARO) appointed for test purposes; and
- the procedure for provision of test credentials to SMKI AROs for accessing test SMKI Services and/or the test SMKI Repository Service must have been completed.

4. Test Sequence

A Relevant Party or RDP may undertake the Test Scenarios set out in this document in any order.

5. SREPT Procedure

5.1. Overview

This section describes the procedure that must be completed in order for a Relevant Party or RDP to complete SREPT.

5.2. SMKI & Repository Entry Process Testing

The matrices in Table 1 SREPT Matrix – DCC – DCC Gateway Connection and Table 2 SREPT Matrix – No DCC Gateway Connection, below, provide a mapping to determine which Test Scenarios described in this document a Relevant Party or RDP must undertake. The column 'SMKI RAPP Ref' is used to determine which tests should be performed, based on the interfaces the Relevant Party or RDP wishes to use to access the SMKI Services and/or SMKI Repository Services and whether they wish to subscribe for Organisation Certificates and/or Device Certificates.

Detailed Test Scenarios identified to support the SREPT process are listed in section 8.1 'SMKI and Repository Entry Process Test Scenarios with DCC Gateway Connection' and section 8.2 'SMKI & Repository Entry Process Test Scenarios without DCC Gateway Connection'.

5.2.1 Test Scenarios for Parties or RDPs with a DCC Gateway Connection

		Applicant Organisation				
Test Scenario Reference	Test Scenario Title	DCC (DCC Service Provider)	Supplier	RDP	Non-Supplier Party	SMKI RAP Ref
SMKI 02	Access the test SMKI Service, through the SMKI Portal interface over a DCC Gateway Connection	✓	✓	✓	✓	5.4.1 5.4.2
SMKI 03	Access the test SMKI Service, through the Ad Hoc Device CSR Web Service interface and the Batched Device CSR Web Service interface, over a DCC Gateway Connection	✓	✓		✓*	5.4.3 5.4.4
SMKI 05	Access the test SMKI Repository through the SMKI Repository Portal interface over a DCC Gateway Connection	✓	✓	✓	✓	5.4.5
SMKI 06	Access the test SMKI Repository via the SMKI Repository Web Service interface over a DCC Gateway Connection	✓	✓	✓	✓	5.4.6
SMKI 07	Access the test SMKI Repository through the SSH File Transfer Protocol (SFTP) interface over a DCC Gateway Connection	✓	✓	✓	✓	5.4.7
SMKI 22	Submit Organisation Certificate Signing Requests and receive the resulting Organisation Certificates, through the SMKI Portal interface over a DCC Gateway Connection	✓	✓	✓	✓	5.4.1
SMKI 23	Submit a Device Certificate Signing Request and receive the resulting Device Certificate through the SMKI Portal interface over a DCC Gateway Connection	✓	✓		✓*	5.4.2
SMKI 24	Submit a Batched Certificate Signing Request and receive Device Certificates through the SMKI Portal interface over a DCC Gateway Connection	✓	✓		✓*	5.4.2

SMKI 25	Submit a Device Certificate Signing Request and receive the resulting Device Certificate through the Ad Hoc Device CSR Web Service interface over a DCC Gateway Connection	✓	✓			5.4.3
SMKI 29	Download a copy of all 'In Use' SMKI Test Certificates from the test SMKI Repository through the SFTP (SSH File Transfer Protocol) interface over a DCC Gateway Connection	✓	✓	✓	✓	5.4.7
SMKI 30	Download a daily delta file of SMKI Test Certificates through the SFTP interface over a DCC Gateway Connection	✓	✓	✓	✓	5.4.7
SMKI 31	Query the test SMKI Repository for Organisation Certificates through the SMKI Repository Portal interface over a DCC Gateway Connection	✓	✓	✓	✓	5.4.5
SMKI 32	Query the test SMKI Repository for Organisation Certificates through the SMKI Repository Web Service interface over a DCC Gateway Connection	✓	✓	✓	✓	5.4.6
SMKI 33	Query the test SMKI Repository for Device Certificates through the SMKI Repository Portal interface over a DCC Gateway Connection	✓	✓		✓	5.4.5
SMKI 34	Query test SMKI Repository for Device Certificates through the SMKI Repository Web Service interface over a DCC Gateway Connection	✓	✓		✓	5.4.6
SMKI 48	Obtain the latest Organisation CRL and Organisation ARL through the SMKI Repository Portal interface over a DCC Gateway Connection	✓	✓	✓	✓	5.4.5
SMKI 50	Obtain the latest Organisation CRL and Organisation ARL through the SMKI Repository Web Service interface over a DCC Gateway Connection	✓	✓	✓	✓	5.4.6
SMKI 57	Submit a Batched Device Certificate Signing Request and receive Certificates for Devices through the Batched Device CSR Web Service interface over a DCC Gateway Connection	✓	✓		✓*	5.4.4

Table 1 SREPT Matrix – DCC Gateway Connection

Key

✓	Applicant organisation required to undertake this test if they wish to receive credentials for this service / access to this interface

✓* Applicant organisation required to undertake this test if they wish to access to this interface and can provide reasonable evidence to suggest that it is necessary for the applicant organisation to become an Authorised Subscriber for Device Certificates in order for them to carry out business processes that will, or are likely to, lead to the installation of Devices in premises

5.2.2 Test Scenarios for Parties without a DCC Gateway Connection

		Applicant Organisations		
SMKI SRTSD Scenario Reference	Headline Scenario Title	Supplier	Non-Supplier Party	SMKI RAPP Ref
SMKI 04	Access the test SMKI Services for (i) Organisation Certificates through the SMKI Portal interface over the internet	✓ ✓	✓ ✓*	5.4.1, 5.4.2
SMKI 08	Submit Requests for Repository content using the SMKI Portal interface over the internet	✓ ✓	✓ ✓*	5.4.1, 5.4.2
SMKI 26	Submit an Organisation Certificate Signing Request and receive the resulting Organisation Certificate through the SMKI Portal interface over the internet	✓	✓	5.4.1
SMKI 38	Download Organisation Certificates and OCA Certificates through the SMKI Portal interface over the internet	✓ ✓	✓* ✓	5.4.1, 5.4.2

Table 2 SREPT Matrix – No DCC Gateway Connection

Key

✓ Applicant organisation required to undertake this test if they wish to receive credentials for this service / access to this interface

✓* Applicant organisation required to undertake this test if they wish to access this interface and can provide reasonable evidence to suggest that it is necessary for the applicant organisation to become an Authorised Subscriber for Device Certificates in order for them to carry out business processes that will, or are likely to, lead to the installation of Devices in premises.

5.3. SREPT Initiation

Each Relevant Party or RDP and the DCC shall each take reasonable steps to comply with the timescales that are set out within the procedures in Table 3, Table 4 & Table 5. In the event that a Relevant Party or RDP does not comply with the timescales in Table 3, Table 4 & Table 5, the DCC will reschedule subsequent activities to occur as soon as is reasonably practicable thereafter and for such purposes the DCC may reschedule that Relevant Party or RDP's test execution date.

5.3.1 Procedural Steps

The table below sets out the steps that must be undertaken prior to initiation of the SREPT by both the DCC and the Relevant Party seeking to undertake SREPT and the timeframes within which such steps must be completed.

Ref	When	Action	From	To	Information Required	Method
5.3.1.1	60 Working Days (WD) prior to commencement of SREPT	Notify intention to undertake SREPT	Relevant Party or RDP	DCC	Party / RDP notification of intention to undertake testing • Party / RDP id (s) • Confirmation that notification provided to SECAS, User Role(s) • Test start date • Identity of Test Manager and contact details	By email as attachments
5.3.1.2	Within 2 WD of receipt of the notification under 5.3.1.1	Acknowledge request	DCC	Relevant Party or RDP	Confirmation of Party / RDP notification: • Party / RDP id (s) • Test start date • DCC Test Manager contact • Date for SREPT initiation meeting	By email as attachments
5.3.1.3	Within 5 WD of receipt of the notification under 5.3.1.2	Conduct SREPT initiation meeting	DCC	Relevant Party or RDP	DCC to provide guidance information on conducting SREPT including a guide to the SMKI and Repository Entry Process Tests.	Meeting

5.3.1.4	In each week occurring within the period from 40 WD prior to start of testing	Provide progress report, demonstrating readiness to begin tests	Relevant Party or RDP	DCC	Test Readiness Report	By email as attachments
5.3.1.5	25 WD prior to start of testing	Provide test artefacts to support conduct of SREPT	Relevant Party or RDP	DCC	• Test Plan incorporating the Test Schedule • Requirements Traceability Matrix (see section 6.1.6) • Test Scripts (see section 6.1.7) • Test Data Plan (see section 7)	By email as attachments
5.3.1.6	By 20 WD prior to start of testing	DCC complete review of test artefacts	DCC	Relevant Party or RDP	Details regarding any deficiencies in the test artefacts and where necessary, a revised start date for testing provided – continue from 5.3.1.7 Or, confirmation that the DCC has accepted the test artefacts – continue from 5.3.1.9	By email as attachments
5.3.1.7	By 10 WD prior to start of testing	Party / RDP to provide revised documents	Relevant Party or RDP	DCC	Revised documents	By email as attachments
5.3.1.8	By 7 WD prior to start of testing	DCC complete review of revised test artefacts	DCC	Relevant Party or RDP	Details regarding any deficiencies in the test artefacts and a revised start date for testing provided where agreed it is necessary – Regress and continue from 5.3.1.7 Or confirmation that test	By email as attachments

					artefacts accepted – continue from 5.3.1.9	
5.3.1.9	By 5 WD prior to start of testing	1. Review Test Readiness Report and confirm the Entry Criteria for commencing testing in relation to Relevant Party or RDP have been met 2. Confirm Start Date and Test Schedule for execution of tests by Relevant Party or RDP	DCC Quality Gate meeting	Relevant Party or RDP	Source: Test Readiness Report, Test Schedule Output: Confirmation of Relevant Party or RDP readiness to proceed	Quality Gate Review meeting
	If there is any outstanding documentation presented at the Quality Gate Review, the DCC shall assess it as part of its assessment of the Entry Criteria under clause 5.3.2					

Table 3 SREPT Initiation: Procedural Steps

5.3.2 SREPT Entry Criteria

Each Relevant Party or RDP wishing to undertake SREPT must comply with (and, where specified below, shall provide evidence of complying with) the following criteria prior to entry into SREPT:

- the interfaces that the Relevant Party or RDP wishes to access must have been identified to determine the SMKI & Repository Entry Process Tests that are to be undertaken;
- all relevant test artefacts (as set out in sections 5.3.1.1, 5.3.1.4 and 5.3.1.5) must have been produced by the Relevant Party or RDP and accepted by the DCC. This includes:
  - Party / RDP Notification of Intention to Undertake Testing
  - Test Readiness Report
  - Test Plan incorporating the Test Schedule

  - Requirements Traceability Matrix
  - Test Scripts
  - Test Data Plan
- have provided evidence that an appropriate test environment and an appropriate level of resources available to support the SREPT process; and
- confirm that the security requirements set out in the Enduring Testing Approach Document have been met.

Where the DCC reasonably believes that the Relevant Party or RDP has not met the Entry Criteria, the DCC may:

- prevent the Relevant Party or RDP from undertaking SREPT until such time as the DCC reasonably believes that the Relevant Party or RDP meets the Entry Criteria (and in which case DCC shall inform the Relevant Party or RDP why it believes that they have not met the Entry Criteria); and
- reschedule the test start date for the Relevant Party or RDP. In doing so, the DCC shall provide the earliest practicable alternative date; or
- provide provisional approval of the Test Readiness Report (and approval to proceed) with an understanding that the outstanding documentation will be provided before the start of testing, otherwise testing will not commence.

Pursuant to Section H14.25, where the DCC does not reasonably believe that a Relevant Party or RDP meets the Entry Criteria to commence testing, the Relevant Party or RDP may refer the matter to the Panel. Where the Panel determines that the Relevant Party or RDP has met the Entry Criteria, the DCC shall schedule the start of testing as soon as reasonably practicable thereafter.

5.4. SREPT Execution

5.4.1 Procedural Steps

The table below sets out the steps that must be undertaken prior to or during test execution by either the DCC or a Relevant Party or RDP seeking to undertake SREPT and the timeframes within which such steps must be complete as set out in the Test Schedule which will be updated by the Relevant Party or RDP from time to time to reflect test progress.

Ref	When	Action	From	To	Information Required	Method
5.4.1.1	SREPT Start Date or earlier (if appropriate)	Verification of Organisation Identity and appointment of, SMKI SRO and SMKI ARO	Relevant Party or RDP	DCC	Submission of relevant forms	As per Enduring Testing Approach Document

		for test purposes				
5.4.1.2	SREPT Start Date or earlier (if appropriate)	Carry out checks such that the Relevant Party or RDP has at least one test SMKI SRO and at least one test SMKI ARO. Confirm with Relevant Party or RDP.	DCC	Relevant Party or RDP	Confirm Organisation Identity is verified and test SMKI ARO and test SMKI SRO Registration is complete. Grant approval to execute SREPT scenarios and which scenarios will be undertaken	As per Enduring Testing Approach Document
5.4.1.3	In accordance with Test Schedule and 5.4.1.2 completed	Conduct SREPT	Relevant Party or RDP		Approved test artefacts	As per test artefacts
5.4.1.4	Daily Basis, or alternative schedule agreed with DCC	Provide daily progress report using the template provided to DCC	Relevant Party or RDP	DCC	Test execution dashboard and Daily Testing Issue Report	By email as attachment
5.4.1.5	SREPT execution complete	Provide Test Completion report	Relevant Party or RDP	DCC	SREPT completion report including: details of Test Scripts executed and Testing Issues resolved (see section 9.6)	By email as attachment

Table 4 SREPT Execution: Procedural Steps

5.4.2 SREPT Test Suspension/Resumption

During the execution of tests the DCC, Relevant Party or RDP each have the right to suspend testing where it reasonably considers that this is necessary.

Testing will only recommence when agreed by both the DCC and the Relevant Party or RDP subject to the suspension.

5.4.2.1 Possible Suspension Criteria

Reasonable grounds for suspension of testing may include any of the following;

- application components are not available as scheduled;
- a Testing Issue prevents further useful testing from proceeding;
- a significant percentage of planned Test Scripts for a given day fail, taking Testing Issue severity and volume of tests into consideration which would generate root cause analysis to be undertaken to establish the cause. Testing Issues trending should also be used to determine any recommendation. The outcome of any root cause analysis activity may result in testing being suspended;
- Test Scripts to be executed are in a "blocked" status due to an identified Testing Issue; and
- the Relevant Party or RDP has failed to comply with the procedural steps for executing SREPT.

5.4.2.2 Test Resumption Criteria

Where testing has been suspended, either the DCC or the Relevant Party or RDP as appropriate shall produce a test suspension report reflecting the cause of the suspension, and what actions are to be taken by whom and when in order for testing to resume – the 'Test Resumption Criteria'. The DCC and the Relevant Party or RDP shall take reasonable steps to support each other to achieve the Test Resumption Criteria.

Testing will only resume once the DCC or Relevant Party or RDP has demonstrated to the other Party's satisfaction that the Test Resumption Criteria have been met.

5.4.2.3 Disputes regarding Test Suspension/Resumption

Each of the DCC and the Party or RDP undertaking the SMKI and Repository Entry Process Tests may suspend testing in accordance with the requirements set out above. Any dispute between the DCC and a Party or the RDP regarding the suspension (or consequent resumption) of such testing may be referred to the Panel for its determination. Where the DCC or the Party or RDP disagrees with any such determination of the Panel, then the DCC or the Party or RDP may refer the matter to the Authority for its determination (which determination shall be final and binding for the purposes of this Code).

Where a dispute regarding the suspension/resumption of testing is made, testing will not resume whilst the dispute is being heard by the Panel, and/or until the Test Resumption Criteria are met by the DCC or the Relevant Party or RDP.

5.5. SREPT Completion

5.5.1 Procedural Steps

The table below sets out the steps that must be undertaken during test completion by either the DCC or Relevant Party or RDP and the timeframes within which such steps must be complete.

Ref	When	Action	From	To	Information Required	Method
5.5.1.1	Within 2 WD of receipt of the report in 5.4.1.5	Confirm receipt of notification of test complete (Test completion report)	DCC	Relevant Party or RDP	Test Completion Report (see section 9.6)	By email
5.5.1.2	Within 5 WD of receipt of the notification 5.5.1.1	DCC review completion report and confirm that SREPT concluded or further testing required	DCC	Relevant Party or RDP	Test Completion Report and evidence as requested by DCC. 5.4.1.5 refers	Quality Gate Review meeting
5.5.1.3	Within 2 WD of successful Quality Gate Review meeting	Confirm Test Complete	DCC	Relevant Party or RDP, SMKI Registration Authority	Issue Test Completion Certificate (see section 10) and provide copy to Registration Authority	By email as attachment

Table 5 SREPT Completion: Procedural Steps

Notwithstanding 5.5.1.3 above pursuant to Section H14.28 the DCC shall confirm on request by the Relevant Party or RDP whether or not it considers that the Relevant Party or RDP has successfully completed SREPT.

5.5.2 SREPT Exit Criteria

A Relevant Party or RDP must meet the following Exit Criteria prior to that Relevant Party's or RDP's completion of and exit from SREPT:

- all tests have been executed and results have been documented by the Relevant Party or RDP and evidence captured in the Relevant Party or RDP's Test Management Tool (or other system) and provided to the DCC;

- all testing issues identified during a Relevant Party's test execution have been recorded in the Test Management Tool. Of those Testing Issues either:
  - the Testing Issue generated by the Relevant Party as a result of its UEPT has been fixed and verified by retest; or
  - where outstanding, the Testing Issue has been reviewed and documented, and been included as part of a remediation plan that outlines the next steps to be taken, including estimated timescales required to resolve each of their outstanding Testing Issues. The remediation plan must be agreed by the DCC;
- any outstanding Testing Issue count must not exceed those defined in Table 6 - Testing Issue Threshold below:

Severity***	Threshold for Outstanding Testing Issues
1	0
2	0
3	5*
4	10*
5	As agreed**

Table 6 Testing Issue Threshold

* - Work around and remediation plan to be agreed with the DCC for each issue that ensures no impact on other Users

** - As agreed with the DCC, requiring no impact on market operations

*** - Refer to Appendix G for definitions of Issue severities.

- A Test Completion Report has been created by the Relevant Party or RDP and approved by the DCC; and
- A Quality Gate Review meeting has been held between the Relevant Party or RDP and the DCC, with progress approved by the DCC.

Pursuant to Section H14.25, where the DCC considers that a Relevant Party or RDP has not met the SREPT Exit Criteria, the Relevant Party or RDP may refer the matter to the Panel.

Where a dispute regarding whether a Relevant Party or RDP has met the SREPT Exit Criteria occurs, the SREPT Completion process will not resume whilst the dispute is being heard by the Panel, or until the SREPT Exit Criteria are met by the Relevant Party or RDP.

5.5.3 Quality Gate Review

Evidence of test completion may be requested for all or any of the tests during the Quality Gate Review, and irrespective of whether the information is reviewed, it shall be retained by the Relevant Party or RDP and may be requested by DCC at a later date.

Any remediation plan shall be discussed by the DCC and the Relevant Party or RDP and agreed as part of the evidence review.

A final decision regarding whether a Relevant Party or RDP has successfully completed SREPT will be provided to the Relevant Party or RDP no later than 2 Working Days after the date on which the Quality Gate Review meeting is held.

In addition, pursuant to Section H14.28, the DCC shall confirm on request by the Relevant Party or RDP whether or not it considers that the Relevant Party or RDP has successfully completed SREPT.

5.5.4 SREPT Test Completion Certificate

The Test Completion Certificate shall be issued by the DCC to the Relevant Party or RDP once the Quality Gate Review has concluded that the Relevant Party or RDP has met the SREPT Exit Criteria.

5.6. SREPT Regression Testing

DCC shall inform all Relevant Parties and RDPs undertaking SREPT and all Relevant Parties and RDPs that have completed SREPT of any change to DCC Systems that may affect SREPT.

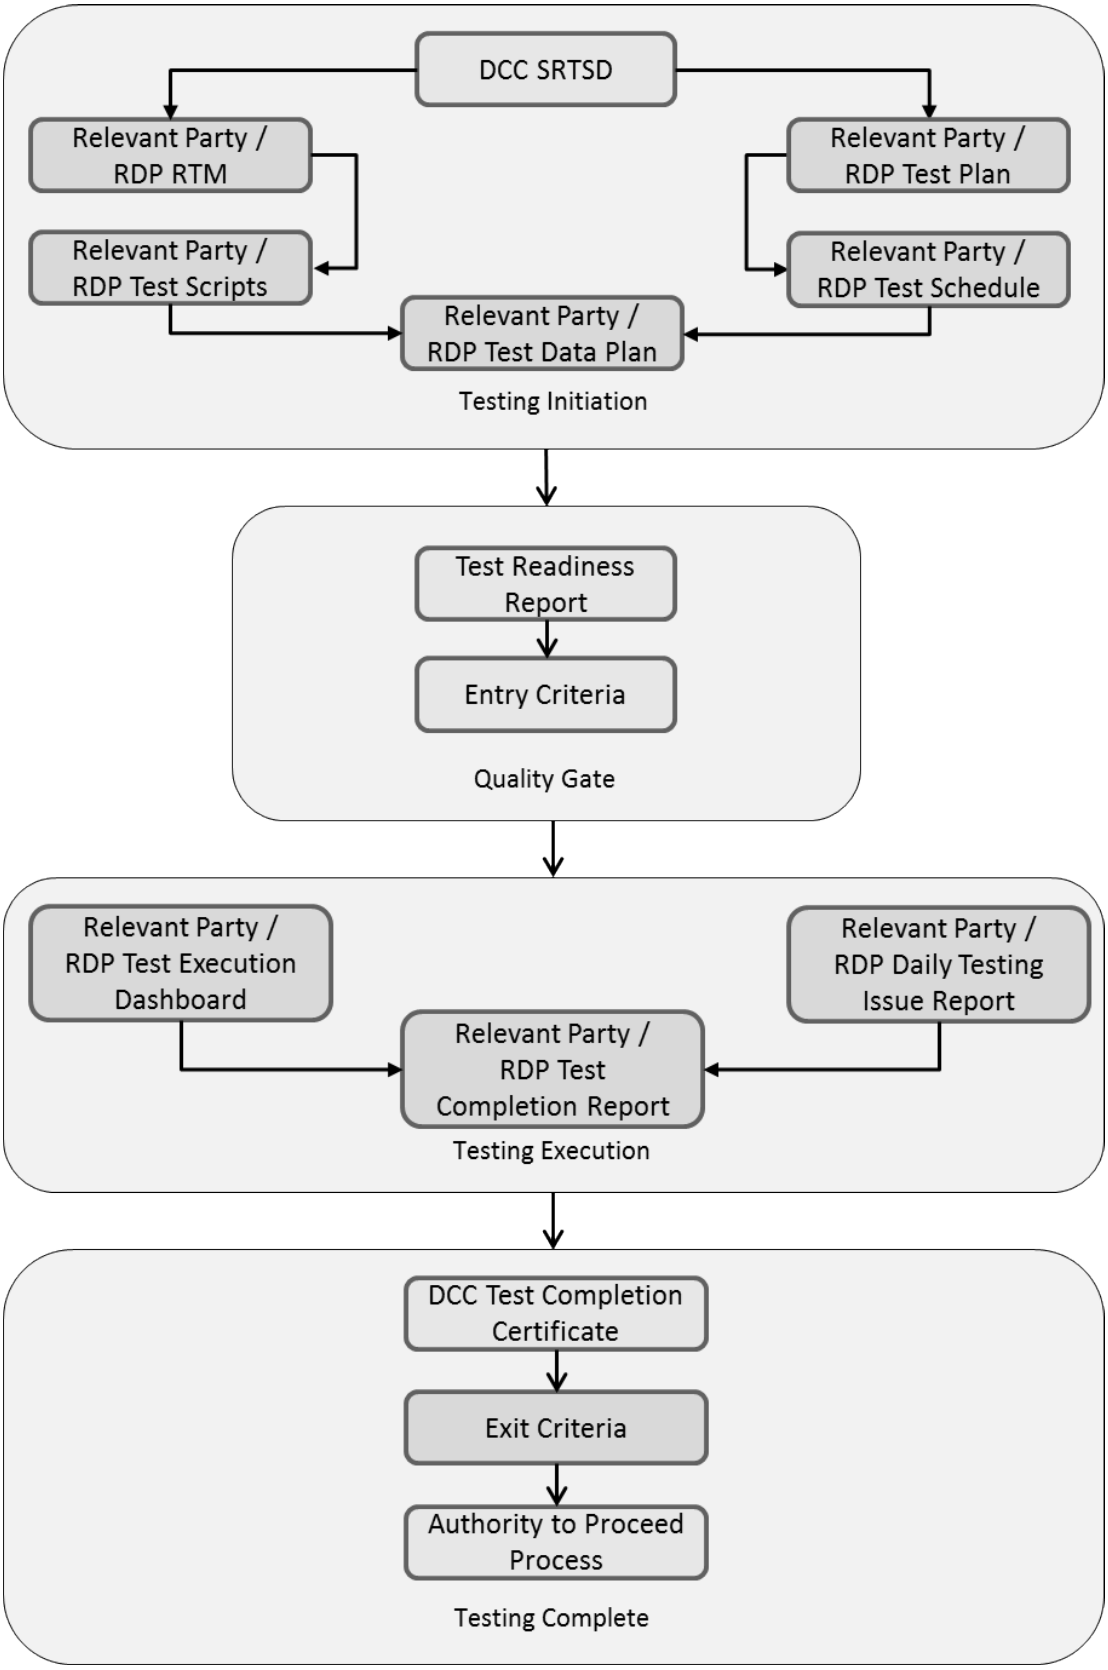
Where the DCC deems that a change to DCC Systems necessitates Regression Testing, DCC may require Relevant Parties and RDPs to perform Regression Testing of the SREPT.

Where DCC does not require Relevant Parties or RDPs to perform Regression Testing, the decision as to whether Regression Testing is performed as a consequence of a change to DCC Systems or a change to User Systems, rests with the Relevant Party or RDP.

Where a Relevant Party or RDP performing Regression Testing has already completed SREPT, the Test Completion Certificate shall remain effective.

6. Appendix A: Test Artefacts

The DCC and each Relevant Party or RDP will be required to produce and maintain a number of documents, dashboards and reports during the testing lifecycle as depicted in Figure 1 Test Documentation Hierarchy, below.



DCC SRTSD
Relevant Party / RDP RTM
Relevant Party / RDP Test Plan
Relevant Party / RDP Test Scripts
Relevant Party / RDP Test Schedule
Relevant Party / RDP Test Data Plan
Testing Initiation
Test Readiness Report
Entry Criteria
Quality Gate
Relevant Party / RDP Test Execution Dashboard
Relevant Party / RDP Daily Testing Issue Report
Relevant Party / RDP Test Completion Report
Testing Execution
DCC Test Completion Certificate
Exit Criteria
Authority to Proceed Process
Testing Complete

Figure 1 Test Documentation Hierarchy

6.1. Relevant Party or RDP Documents & Reports

6.1.1 Test Preparation Document Set

The following documentation must be produced by a Relevant Party or RDP before Testing commences:

- Test Readiness Report
- Scope of SREPT testing
- Test Plan
- Test Data Plan
- Test Schedule
- Requirements Traceability Matrix
- Test Scripts

Note regarding scope of SREPT testing - which SREPT test scenarios need to be undertaken is determined by:

- which SMKI interface or SMKI Repository Interface the Relevant Party or RDP will access and whether this is for Device Certificates or Organisation Certificates; and
- whether access to the SMKI interfaces will be through a DCC Gateway Connection or using the SMKI Portal interface via the Internet.

6.1.2 Reports and Dashboard

Table 7 Test Stage Supporting Documentation Set sets out the Reports and Dashboard that a Relevant Party or RDP must produce to demonstrate progress in preparing for and executing testing.

6.1.3 Test Readiness Report (TRR)

The Test Readiness Report shall be produced by the Relevant Party or RDP.

The report must be provided to the DCC by the Party or RDP on a weekly basis, commencing 40 Working Days prior to the start of Testing and must indicate progress against the following criteria:

- Previous Test Phase / Stage Exit Criteria (if appropriate);
- Relevant Party or RDP Test Management tool selected and available;
- Relevant Party or RDP key RAID (Risk, Assumption, Issue and Dependency) items, including, for each key item that has the potential to cause significant disruption to the commencement and / or completion of SMKI & Repository Entry Process Testing:
    - Priority (High, Medium, Low);
    - Severities of open issues;

    - Action taken;
    - Target close date; and
    - Overall RAG status (based on progress to plan);
- Relevant Party or RDP Test Plan produced;
- Relevant Party or RDP Test Schedule produced;
- Relevant Party or RDP Requirements Traceability Matrix containing:
    - Total numbers of Requirements identified;
    - Total number of testable requirements documented;
    - Total number of testable requirements in progress;
    - Total number of testable requirements not started; and
    - Total number of Requirements deemed not testable; and
- Relevant Party or RDP Test Script complete to date – to reflect the following breakdown:
    - Planned number of Test Scripts;
    - Total number of Test Scripts produced to date;
    - Total number of Test Scripts in progress;
    - Total number of Test Scripts not started;
    - % Test Data readiness by Party against planned Test Scripts;
    - Readiness of Party or RDP Test Resources and Technical (support) Resource;
    - Relevant Party or RDP test environment readiness – to include;
        - Security code of connection satisfied;
        - All interfaces required to support testing; and
    - Overall RAG status (based on likelihood of starting to plan).

6.1.4 Test Execution Dashboard

The Test Execution Dashboard will identify the Relevant Party or RDP's progress when executing testing and will be provided in a format specified by the DCC. The dashboard must be updated by the Relevant Party or RDP and provided to the DCC on a daily basis once testing commences, or per an alternative schedule agreed with the DCC.

The dashboard will include the following details:

- Name of Relevant Party or RDP, Party or RDP IDs under test;
- Location of Relevant Party or RDP testing;
- Date and time test execution dashboard updated by Relevant Party or RDP;
- Total number of tests Relevant Party or RDP scheduled for execution and projected as a test execution glide path;
- Actual number of tests executed by Relevant Party or RDP to date reflected on an incremental daily count including test results (passed, failed, blocked, not run, Ready for Test);
- Relevant Party or RDP summary of Testing Issues to include:
    - Total number of Testing Issues generated
    - Counts by status Open, Fixed, Closed etc.
    - Counts by Severity 1, 2, 3 etc.
    - Counts by Priority
    - Escalated to Issue Resolution Board (IRB).
- Relevant Party or RDP Regression Test execution results;
- Relevant Party or RDP summary progress against Exit Criteria;
- Relevant Party or RDP top 5 risks and issues – to include any environment concerns; and
- Relevant Party or RDP overall RAG status (based on progress against testing schedule).

6.1.5 Test Completion Report

The Relevant Party or RDP shall produce a Test Completion Report and submit the draft to the DCC 10 working days prior to the test completion date or at such time as agreed between DCC and the Party or RDP. The finalised version of the Test Completion Report will be submitted to the DCC on completion of each test execution activity.

A Test Completion Report template will be provided by the DCC to ensure that all Relevant Party or RDP reports contain the same level of detail. The report will include:

- Relevant Party or RDP Test approach and Scope of Testing Undertaken;
- Details of updates made to the test environment during the course of testing;
- Relevant Party or RDP Summary of the Test Results;
- Total number of tests originally scheduled for execution;
- Total number of tests executed;

- A table of tests run to include:
  - Overall results achieved ('Passed', 'Failed', 'Blocked', 'Not Run'); and
  - Any tests not run, blocked or not successfully executed end to end must be supported by an explanation.
- Relevant Party or RDP Summary of Testing Issues:
  - Total number of Testing Issues generated;
  - Total counts by status Open, Fixed, Closed; and
  - Total counts by Severity.

6.1.6 Test Traceability

To provide the DCC with a sufficient level of test assurance, all tests executed by each Relevant Party or RDP undertaking SREPT will be required to demonstrate full traceability as follows:

- Each requirement captured in the Requirements Traceability Matrix that can be tested during SREPT must be linked to one or many Test Scripts;
- Each Test Script executed must be reflected in one or many test execution cycles;
- A record of each test executed and the results of that test;
- Where an executed test generates a Testing Issue;
  - each Testing Issue must be linked to the test that generated the Testing Issue;
  - any subsequent retesting to validate a fix of Testing Issue carried out must be linked to the Testing Issue; and
  - each retest executed must reflect a result achieved as a result of execution.

6.1.7 Test Scripts

A Relevant Party or RDP shall develop its own test scripts and demonstrate how those test scripts meet the requirements in accordance with H14.26.

Test Stage Supporting Documentation Set

No	Phase	Description	DCC Responsibility	Relevant Party or RDP Responsibility	When/Frequency	Entry Criteria	Exit Criteria	Sign-Off Authority

1	Initiation	Guide to the SMKI and Repository Entry Process Tests	Produce and maintain	None	Prior to commencement of SREPT	N	N	DCC
2	Initiation	Test Data Plan (Device CSRs)	Produce	Use, if required	Prior to commencement of SREPT	N	N	DCC
3	Initiation	Test Plan including Test Schedule	Review and Approve	Produce and maintain	Test Stage Entry Quality Gate and updated during execution as required in preparation for Test Stage Exit Quality Gate	Y	Y	DCC
4	Initiation	Requirements Traceability Matrix	Review and Approve	Produce and maintain	Test Stage Entry Quality Gate and updated during execution as required in preparation for Test Stage Exit Quality Gate	Y	Y	DCC
5	Initiation	Test Scripts	Review and Approve	Produce and maintain	Test Stage Entry Quality Gate and updated during execution as required in preparation for Test Stage Exit Quality Gate	Y	Y	DCC

8	Initiation	Test Stage Entry Criteria (part of final Test Readiness Report)	Review and Approve	Produce	Test Stage Entry Quality Gate	Y	N	DCC

9	Execution	Test Execution Dashboard	Review	Produce and maintain	Produced and updated daily (or other schedule agreed with the DCC) during execution in preparation for Test Stage Exit Quality Gate	N	Y	DCC
10	Execution	Testing Issue Report (part of the Test Execution Dashboard)	Review	Produce and maintain	Produced and updated daily (or other schedule agreed with the DCC) during execution in preparation for Test Stage Exit Quality Gate	N	Y	DCC
11	Execution	Test Completion Report	Provide Template Review and Approve	Produce and file	Test Stage during execution in preparation for Test Stage Exit Quality Gate	N	Y	DCC
12	Execution	Test Stage Quality Gate Exit Criteria (part of Test Completion Report)	Review and Approve	Produce	Test Stage Exit Quality Gate	N	Y	DCC

Table 7 Test Stage Supporting Documentation Set

Once these steps are complete the DCC will issue a Test Completion Certificate (see section 10).

7. Appendix B: Test Data

A Test Data Plan will be developed by the Relevant Party and coordinated with DCC in accordance with Section 5.4.1.3. The DCC and Relevant Party will be responsible for set up of Test Data on their respective system which must be defined in the Relevant Party Test Data Plan. The Data defined will be based on the following principles;

- No personal data which identifies any individual will be used for testing, but anonymised live Data is acceptable;
- Test Data will be representative of data likely to be used in the live environment once the Relevant Party is eligible in the relevant User Role; and
- A full range of Test Data covering all services to be tested will be used.

The DCC shall ensure that data supplied by the DCC for the purposes of testing is segregated when testing is being conducted by multiple Relevant Parties.

Table 8 Test Data Responsibilities below outlines the responsibilities in regard to preparing Test Data required to support UEPT.

Deliverable / Activity	Accountable / Responsible	Support
Test Data Preparation	DCC Licensee, Relevant Party or RDP	DSP

Table 8 Test Data Responsibilities

The DCC shall not provide the Relevant Party or RDP with Certificate Signing Requests (CSRs) in respect of either IKI Certificates or Organisation Certificates. Instead, a Relevant Party or RDP shall provide sufficient test data to be able to demonstrate its capability to produce CSRs for test Organisation Certificates in accordance with ETAD. The DCC shall provide Device CSRs for those Parties who are not able to provide their own to be able to undertake Device-related SMKI interface testing.

8. Appendix C: Test Scenarios

8.1. SMKI & Repository Entry Process Test Scenarios with DCC Gateway Connection

The following sub sections contain the SMKI & Repository Entry Process Test Scenarios that are applicable to each prospective user of SMKI & Repository Services that have access to a DCC Gateway Connection.

8.1.1 Security Credentials Access Tests for Test SMKI Service

ID	SMKI 02
Title:	Access the test SMKI Service, through the SMKI Portal interface over the DCC Gateway Connection.
Description	A Party / RDP's SMKI Authorised Responsible Officer (SMKI ARO) accesses the Test SMKI Services, through the SMKI Portal interface via the DCC Gateway Connection, using the security credentials supplied by the DCC.
Objective	• To prove that the SafeNet[1] Client Installed on the SMKI ARO's computer validates their security credentials. • To prove that a Party / RDP's ARO can use the FIPS Token which is registered to them and their organisation when accessing the SMKI Portal interface via the DCC Gateway Connection for Organisation Certificates and / or Device Certificates (as required).

ID	SMKI 03
Title:	Access the Test SMKI Services, through the Ad Hoc Device CSR Web Service interface and the Batched Device CSR Web Service interface, over a DCC Gateway Connection.

[1] The DCC makes available to PKI Client software (SafeNet Client), as set out in section 2.3.1 of the SMKI Code of Connection.

Description	A Party's system using the IKI security credentials supplied by the DCC accesses the Test SMKI Services, through the Ad Hoc Device CSR Web Service interface and the Batched Device CSR Web Service interface over a DCC Gateway Connection.

Objective	• To prove that the Party can access the Test SMKI Services through the Ad Hoc Device CSR Web Service interface and Batched Device CSR Web Service interface, as required, using the relevant IKI credentials. • To prove IKI credentials correctly authenticate to the SMKI web service interfaces.

8.1.2 Security Credentials Access Tests to the test SMKI Repository

ID	SMKI 05
Title:	Access the test SMKI Repository through the SMKI Repository Portal interface over a DCC Gateway Connection.
Description	A Party / RDP's SMKI ARO uses their individual IKI security credentials to access the test SMKI Repository through the SMKI Repository Portal interface.
Objective	• To prove access for the Party / RDP's ARO to the test SMKI Repository using the SMKI Repository Portal interface using the SMKI Repository URL, username and password.

ID	SMKI 06
Title:	Access the test SMKI Repository via the SMKI Repository Web Service interface over a DCC Gateway Connection.
Description	The Party's system uses the API Key issued by the DCC to access the test SMKI Repository using the SMKI Repository Web Service interface.
Objective	• To prove that the Party's system can access the test SMKI Repository using the SMKI Repository Web Service interface.

ID	SMKI 07
Title:	Access the test SMKI Repository through the SSH File Transfer Protocol (SFTP) interface over a DCC Gateway Connection.

Description	The Party / RDP's system or ARO uses the security credentials provided by the DCC to access the test SMKI Repository through the SMKI Repository SFTP (SSH File Transfer Protocol) interface.

Objective	• To prove that the Party / RDP's system or ARO can access the test SMKI Repository through the SMKI Repository SSH (Secure File Transfer Protocol) interface.

8.1.3 Submission of CSRs and Receipt of Certificates

ID	SMKI 22

Title:	Submit Organisation Certificate Signing Requests and receive the resulting Organisation Certificates through the SMKI Portal interface over a DCC Gateway Connection.

Description	A Party / RDP's SMKI Authorised Responsible Officer (SMKI ARO) submits an Organisation CSR and receives an Organisation Certificate for that CSR through the SMKI Portal interface.

Objective	• To prove a Party / RDP can generate and submit an Organisation CSR in the format specified in the SMKI Interface Design Specification. • To prove that a Party / RDP can download Organisation Certificates issued in respect of the submitted CSRs, and to confirm the information contained in the issued Organisation Certificate is consistent with the information contained within the corresponding CSR. • To prove that an Organisation Certificate can be rejected by the Party / RDP (according to the mechanism set out in the SMKI RAPP and / or specified in the SMKI Interface Design Specification).

ID	SMKI 23

Title:	Submit a Device Certificate Signing Request and receive a Device Certificate through the SMKI Portal interface over a DCC Gateway Connection.

Description	A Party's SMKI ARO submits a Device CSR and receives a Device Certificate for that Device CSR through the SMKI Portal interface.

Objective	• To prove that the Party's ARO can use the SMKI Portal Interface to submit a Device Certificate Signing Request.

	• To prove that the Party can use the SMKI Portal Interface to download individual Device Certificates and confirm the information contained in the issued Device Certificate is consistent with the information contained within the corresponding submitted Device CSR. • To prove that the issued Device Certificate can be rejected by the Party (according to the mechanism set out in the SMKI RAPP and / or specified in the Portal specification).

ID	SMKI 24

Title:	Submit Batched Certificate Signing Requests and receive Device Certificates through the SMKI Portal interface over a DCC Gateway Connection.

Description	A Party's SMKI ARO submits a Batched Certificate Signing Request and receives Device Certificates for each valid Device CSR through the SMKI Portal interface.

Objective	• To prove that the Party's SMKI ARO can use the SMKI Portal Interface to submit Batched Certificate Signing Request. • To prove that Device CSRs are batched correctly by the Party. • To prove that the Party can use the SMKI Portal Interface to download Device Certificates issued from the Batched Certificate Signing Request. • To prove that the issued Device Certificates are also lodged in the test SMKI Repository.

ID	SMKI 25

Title:	Submit a Device Certificate Signing Request and receive Device Certificate through the Ad Hoc Device Web Service interface over a DCC Gateway Connection.

Description	A Party's system submits a Device CSR and receives a Device Certificate through the Ad Hoc Device CSR Web Service interface.

Objective	• To prove that the Party's system can submit a Device CSR through the Ad Hoc Device Web Service interface. • To prove that the Party can receive a Device Certificate issued in respect of the submitted Device CSR from the Ad Hoc Device Web Service. • To prove that the issued Device Certificate is lodged in the test SMKI Repository.

ID	SMKI 57[2]
Title:	Submit Batched Certificate Signing Requests and receive Device Certificates through the Batched Device CSR Web Service interface over a DCC Gateway Connection.
Description	A Party's system submits Batched Certificate Signing Requests and receives Device Certificates through the Batched Device CSR Web Service interface.
Objective	• To prove that the Party's system can use the Batched Device CSR Web Service interface to submit Batched Certificate Signing Requests. • To prove that Device CSRs are batched correctly by the Party. • To prove that Parties can download their Device Certificates issued in respect of Batched Certificate Signing Requests. • To prove that the issued Device Certificates are also lodged in the test SMKI Repository.

8.1.4 Download Certificates from the test SMKI Repository

ID	SMKI 29
Title:	Download a copy of all 'In Use' SMKI Test Certificates from the test SMKI Repository through the SFTP (SSH File Transfer Protocol) interface over a DCC Gateway Connection.
Description	Using a file transfer client the Party downloads a copy of all in use SMKI Certificates from the test SMKI Repository via SFTP (SSH File Transfer Protocol) interface.
Objective	• To prove that the Party / RDP can use a file transfer client that supports SFTP in accordance with the standards in the SMKI Repository Interface Design Specification to access the SFTP interface. • To prove that the Party / RDP's file transfer client can download a complete copy of all in use Certificates (including OCA and DCA Certificates).

ID	SMKI 30

[2] Subject to delivery of the Change Request to deliver this functionality.

Title:	Download a daily delta file of SMKI Test Certificates through the SFTP interface over a DCC Gateway Connection.

Description	Using a file transfer client the Party / RDP downloads a partial / daily ‘delta file’ copy of all SMKI Certificates issued in the preceding twenty four hours from the test SMKI Repository via SFTP (SSH File Transfer Protocol) interface.

Objective	• To prove that the Party / RDP’s file transfer client can download a partial/’Daily Delta File’ batch containing Certificates published to the test SMKI Repository during the preceding twenty four hours (including OCA and DCA Certificates).

8.1.5 Query the test SMKI Repository and Retrieve Certificates

ID	SMKI 31

Title:	Query the test SMKI Repository for Organisation Certificates through the SMKI Repository Portal interface over a DCC Gateway Connection.

Description	A Party / RDP’s SMKI ARO uses the SMKI Repository Portal Interface to query the test SMKI Repository for an Organisation Certificate and downloads the Organisation Certificate.

Objective	• To prove the Party / RDP’s ARO is able to use the SMKI Repository Portal Interface. • To prove that the Party / RDP’s ARO can query the test SMKI Repository using the SMKI Repository Portal interface to locate an Organisation Certificate in the test SMKI Repository. • To prove a Party / RDP’s ARO is able to download the located Organisation Certificate.

ID	SMKI 32

Title:	Query the test SMKI Repository for Organisation Certificates through the SMKI Repository Web Service interface over a DCC Gateway Connection.

Description	A Party / RDP’s system queries the test SMKI Repository for an Organisation Certificate via the SMKI Repository Web Service interface and retrieves the Organisation Certificate.

Objective	• To prove the Party / RDP's system is able to use the SMKI Repository Web Service interface. • To prove that the Party / RDP's system can query the test SMKI Repository using the SMKI Repository Web Service interface to locate an Organisation Certificate in the test SMKI Repository. • To prove the Party / RDP's system can receive the located Organisation Certificate.

ID	SMKI 33

Title:	Query the test SMKI Repository for Device Certificates through the SMKI Repository Portal interface over a DCC Gateway Connection.

Description	A Party's SMKI ARO uses the SMKI Repository Portal interface to query the test SMKI Repository for a Device Certificate and downloads the Device Certificate.

Objective	• To prove the Party's ARO is able to use the SMKI Repository Portal Interface (if not already done as part of SMKI 31). • To prove that the Party's ARO can query the test SMKI Repository using the SMKI Repository Portal interface to locate a Device Certificate in the test SMKI Repository. • To prove a Party's ARO is able to download the located Device Certificate.

ID	SMKI 34

Title:	Query test SMKI Repository for Device Certificates through the SMKI Repository Web Service interface over a DCC Gateway Connection.

Description	A Party's system queries the test SMKI Repository for a Device Certificate via the SMKI Repository Web Service interface and retrieves a Device Certificate.

Objective	• To prove the Party's system is able to query the test SMKI Repository to determine the presence of a Device Certificate in the test SMKI Repository. • To prove a Party's system can retrieve the located Device Certificate.

8.1.6 Obtain Organisation Certificate Revocation List and Organisation Authority Revocation List

ID	SMKI 48
Title:	Obtain the Organisation Certificate Revocation List (CRL) and Organisation Authority Revocation List (ARL) through the SMKI Repository Portal interface over a DCC Gateway Connection.
Description	A Party / RDP's SMKI ARO wishes to access the Organisation CRL and ARL using the SMKI Repository Portal interface via a DCC Gateway Connection.
Objective	• To prove that a Party / RDP's SMKI ARO can access and / or download the Organisation CRL and Organisation ARL using the SMKI Repository Portal interface via DCC Gateway Connection.

ID	SMKI 50
Title:	Obtain the latest Organisation CRL and Organisation ARL through using the URL to the SMKI Repository over a DCC Gateway Connection.
Description	The Party / RDP's system accesses the test SMKI Repository using URL to obtain the latest Organisation CRL and Organisation ARL.
Objective	• To prove that a Party / RDP's system can access and / or download the latest Organisation CRL and Organisation ARL using the URL to the SMKI Repository.

8.2. SMKI & Repository Entry Process Test Scenarios without DCC Gateway Connection

The following sub sections contain the SMKI & Repository Entry Process Test Scenarios that are applicable to each prospective user of SMKI & Repository Services that do not have access to a DCC Gateway Connection.

8.2.1 Security Credentials Access Tests to SMKI

ID	SMKI 04
Title:	Access the Test SMKI Service, through the SMKI Portal interface over the internet.

Description	For a Party without a DCC Gateway Connection, a SMKI ARO accesses the Test SMKI Service, through the SMKI Portal interface using the security credentials supplied by the DCC.

Objective	• To prove that the SafeNet Client Installed on the SMKI ARO's computer validates their security credentials. • To prove that a Party's ARO can use the FIPS Token which is registered to them and their organisation when accessing the SMKI Portal interface via the internet.

8.2.2 Submission of Organisation CSRs and Receipt of Organisation Certificates

ID	SMKI 26

Title:	Submit Organisation Certificate Signing Requests and receive Organisation Certificates through the SMKI Portal interface over the internet.

Description	For a Party without a DCC Gateway Connection, a SMKI ARO submits an Organisation CSR and receives an Organisation Certificate for that CSR through the SMKI Portal interface over the internet.

Objective	• To prove a Party can generate and submit an Organisation CSR in the format specified in the SMKI Interface Design Specification. • To prove that a Party can download Organisation Certificates issued in respect of the submitted CSRs, and to confirm the information contained in the issued Organisation Certificate is consistent with the information contained within the corresponding CSR. • To prove that an Organisation Certificate can be rejected by the Party (according to the mechanism set out in the RAPP and / or specified in the Portal specification.

8.2.3 Submit requests for SMKI Repository content and obtain Certificates

ID	SMKI 08

Title:	Submit requests for and receive SMKI Repository content using the SMKI Portal interface over the Internet.

Description	For a Party without a DCC Gateway Connection, an SMKI ARO accesses the SMKI Portal interface and makes a request for and receives content from the test SMKI Repository.

Objective	• To prove that a Party's SMKI ARO can use the SMKI Portal interface to request and receive the latest Organisation CRL and latest Organisation ARL.

ID	SMKI 38
Title:	Download Organisation Certificates and OCA Certificates through the SMKI Portal interface over the internet.
Description	For a Party without a DCC Gateway Connection, a SMKI ARO accesses the SMKI Portal interface over the Internet, locates and downloads Organisation Certificates that are required to be installed on Devices ahead of installation.
Objective	• To prove that the Party's ARO can locate and download the zip file of Organisation Certificates through the SMKI Portal over the internet.

9. Appendix D: Forms and Templates

Extant versions of templates for the following documents will be maintained on the DCC Website or SharePoint. The following templates are provided in this document to support the consultation process:

Section	Template
9.1	Party / RDP Notification of Intention to Undertake Testing Template
9.2	DCC Acknowledgement of Intention to Undertake Testing Template
9.3	Test Readiness Report Template
9.4	Test Plan Template
9.5	Test Execution Dashboard Template
9.6	Test Completion Report Template

9.1. Party / RDP Notification of Intention to Undertake Testing Template

To:[DCC]

From:[PARTY / RDP]

Date: [Date]

Dear Sir or Madam,

PARTY / RDP NOTIFICATION OF INTENTION TO UNDERTAKE TESTING

TEST: SMKI and REPOSITORY ENTRY PROCESS TESTS

We hereby give notice that we intend to undertake SMKI and Repository Entry Process Tests in accordance with the SMKI & Repository Test Scenarios Document.

The required information is provided in the table below:

Party / RPD	SEC Party / RDP ID	Test Start Date	Name, Email & Phone Number of Test Manager

Yours faithfully

[Name]

[Position]

Acting on behalf of [Party].

9.2. DCC Acknowledgement of Intention to Undertake Testing Template

To:[PARTY / RDP]

From:[DCC]

Date:[Date]

Dear Sir or Madam,

DCC ACKNOWLEDGEMENT OF INTENTION TO UNDERTAKE TESTING

TEST: SMKI & REPOSITORY ENTRY PROCESS TESTS

We hereby acknowledge your notification that you intend to undertake SMKI & Repository Entry Process Tests in accordance with the SMKI & Repository Test Scenarios Document.

The table below confirms the contact details of our Test Manager and the date of the SMKI & Repository Entry Process Test (SREPT) Initiation Meeting:

Party / RDP	SEC Party / RDP ID	Test Start Date	Name, Email & Phone Number of DCC User Entry Process Test Manager	Date of SREPT Initiation Meeting

Yours faithfully

[Name]

[Position]

Acting on behalf of the DCC.

9.3. Test Readiness Report Template

To:[DCC]

From:[PARTY / RDP]

Date:[Date]

Dear Sir or Madam,

TEST READINESS REPORT

TEST: SMKI & REPOSITORY ENTRY PROCESS TESTS

We hereby provide our current assessment of our readiness to conduct SMKI & Repository Entry Process Tests for:

Overview:

Party / RDP: [Party / RDP]

Test Start Date: [Test Start Date]

Report Information:

Date of Report: [Date]

Period Covered by Report: [From date to date]

Produced by: [Name of Reporter]

Readiness Information:

Overall RAG: [Red / Amber / Green]

Test Tool Selected & Available: [Y / N]

Party Test Plan produced: [Y/N]

Party Test Schedule produced: [Y/N]

Risks, Assumptions, Issues & Dependencies (RAID):

Please detail key RAID (Risk, Assumption, Issue and Dependency) items that have the potential to cause significant disruption to the commencement and / or completion of SMKI & Repository Entry Process Testing

RAID Description	Priority(H/M/L)	Action Taken	Target Close Date	RAG Status (R/A/G)

Requirements Traceability Matrix Progress:

RTM Information Required	Response
Requirements Traceability Matrix complete to date (%)	
Numbers of Requirements identified (number)	
Number of testable requirements in progress (number)	
Number of testable requirements not started (number)	
Number of Requirements deemed not testable (number)	

Test Script Development Progress:

Test Script Information Required	Response
Test Scripts complete to date (%)	
Planned number of Test Scripts (number)	
Number of Test Scripts produced to date (number)	
Number of Test Scripts in progress (number)	
Number of Test Scripts not started (number)	

Test Data readiness by Party against planned Test Scripts (%)	

Resources & Environments Progress:

Resources & Environments Information Required	Response
Test Resources & Technical (support) Resource Ready (Y/N if N, date expected to be ready)	
Environment Readiness:	
All interfaces required to support testing (Y/N)	

Environments information:

[Environment configuration approved as suitable – to include breakdown and description of hardware]

SREPT Entry Criteria (to be completed by final report):

Entry Criteria	Complete (Y/N)
Confirm that the person requesting to commence testing is a SEC Party / RDP	
Party / RDP has identified the SMKI Interfaces the Party or RDP will access and whether this is for Device or Organisation Certificates and whether access will be through a DCC Gateway Connection	
Party has produced relevant test artefacts in sections 5.3.1.1, 5.3.1.5, and 5.3.1.6 of the SMKI & Repository Test Scenarios Document:	
- Party Notification of Intention to Undertake Testing	
- Test Readiness Report (this document)	
- Test Plan incorporating the Test Schedule	
- Requirements Traceability Matrix	

- Test Scripts	

- Test Data Plan	

has complied with the procedural steps for initiating SREPT (as set out in Table 2 of the SRTSD	

Party has provided evidence to the DCC that a test environment capable of supporting the planned testing has been established and is available	

Party has provided evidence to the DCC that an appropriate level of resources are available to support the SREPT process	
Party has provided confirmation that the Security Requirements set out in the Enduring Testing Approach Document have been met	

Overall Status:

Overall Status (R/A/G)
R – testing start in line with planned date is not achievable
A – testing start in line with planned date is at risk
G – testing is expected to start on the planned date

End of report.

Yours faithfully

[Name]

[Position]

Acting on behalf of [Party / RDP].

9.4. Test Plan Template

To: [DCC]

From: [PARTY / RDP]

Date: [Date]

Dear Sir or Madam,

TEST PLAN INCLUDING TEST SCHEDULE

TEST: SMKI & REPOSITORY ENTRY PROCESS TESTS

We hereby provide our Test Plan, in accordance with the SMKI & Repository Test Scenarios Document.

Overview:

Party: [Party / RDP]

Test Start Date: [Test Start Date]

Scope

[Textual description of testing scope].

Scenarios to be Tested

See the matrices in section 5 to determine the scenarios to be tested.

Reference to Section 5 (List all scenarios to be tested, as determined by the privileges requested, or to be requested, via the SMKI RAPP.

Approach

[Textual description of the following:

- *Test Scenarios & Scripts*
- *Test Cycles*

- *Re-Testing*
- *Regression*
- *Defect Management*
- *Test Data*
- *Tools]*

Test Schedule

[Provide a schedule of the testing that you will undertake. This can be the form of a Project Plan, or Spreadsheet, or other format agreed with the DCC.]

Resources

[Provide details of the resources required to support the testing set out above. This can be included in the Project Plan or Spreadsheet.

This should consider roles such as Test Manager, Test Lead, Senior Test Analysts, Test Analysts, IS Support Requirements.]

End of report.

Yours faithfully

[Name]

[Position]

Acting on behalf of [Party / RDP].

9.5. Test Execution Dashboard Template

To: [DCC]

From: [PARTY / RDP]

Date: [Date]

Dear Sir or Madam,

TEST EXECUTION DASHBOARD

TEST: SMKI & REPOSITORY ENTRY PROCESS TESTS

We hereby provide our Test Execution Dashboard, in accordance with the SMKI & Repository Test Scenarios Document.

Overview:

Party / RDP: [Party / RDP] Party /RDP ID: [Party / RDP ID]

Location: [Location of Testing / Test Manager]

Test Start Date: [Test Start Date]

Report Information:

Date & Time of Report: [Date, Time]

Period Covered by Report: [Date (for daily reports) or from date to date (for other reporting frequency]

Produced by: [Name of Reporter]

Progress Information:

[Please provide a 'Glide Path' for the testing you are undertaking, showing progress toward execution of 100% of the tests planned. This can be in the form of a spreadsheet or other format agreed with the DCC.]

Test Script Information Required	Number
Total Planned number of Tests (Test Readiness Report)	
Number of Tests scheduled for execution by report date	
Number of Tests executed by report date	

Number of Test passed by report date	
Number of Test failed by report date	
Number of Test blocked by report date	
Number of Test not run by report date	

Test Issue Report Information:

Testing Issue Information Required	Number
Number of Testing Issues generated	
Number of Testing Issues closed	
Number of Testing Issues open	
Number of open Testing Issues, by severity:	
- Severity 1	
- Severity 2	
- Severity 3	
- Severity 4	
- Severity 5	

Progress Toward Exit Information:

[Textual description of progress made so far toward completion of testing]

Progress Toward Exit Required	Date
Anticipated Completion Date (Submission of Test Completion Report)	

Risk Information:

Risk	Description	Target Close Date	RAG Status (R/A/G)

1			
2			
3			
4			
5			

Overall Status:

Overall Status (R/A/G)
R – testing start in line with planned date is not achievable
A – testing start in line with planned date is at risk
G – testing is expected to start on the planned date

9.6. Test Completion Report Template

To: [DCC]

From: [PARTY / RDP]

Date: [Date]

Dear Sir or Madam,

TEST COMPLETION REPORT

TEST: SMKI & REPOSITORY ENTRY PROCESS TESTS

We hereby provide our Test Completion Report, in accordance with the SMKI & Repository Test Scenarios Document.

Overview:

Party / RDP: [Party / RDP]

Test Start Date: [Test Start Date]

Approach and Scope of Testing Undertaken:

[Per the Test Plan, noting any variations.]

Summary of Test Results:

Test Script Information Required	Number
Number of tests originally scheduled for execution	
Number of tests originally scheduled for execution	
Number of tests passed	
Number of tests failed	
Number of tests not run	
Number of tests blocked	

Detail of Tests Not Successfully Executed:

Test	Explanation

Summary of Testing Issues:

Testing Issue Information Required	Number
Number of Testing Issues generated	
Number of Testing Issues closed	
Number of Testing Issues open	
Number of open Testing Issues, by severity:	
- Severity 1	
- Severity 2	
- Severity 3	
- Severity 4	
- Severity 5	

SREPT Exit Criteria Checklist:

Entry Criteria	Complete (Y/N)
Test Results have been documented by the Party and evidence captured in the Party's Test Management Tool and are available to be provided to the DCC	
Testing issues identified during a Party's test execution have been recorded in the Test Management Tool (see note, below)	
Test Completion Report has been created by the Party and approved by the DCC	

Note: All testing issues must either:

- been fixed and verified by retest; or
- where outstanding, have been reviewed and documented, and been included as part of a remediation plan that outlines the next steps to be taken, including estimated timescales required to resolve each of their outstanding Testing Issues. The remediation plan must be agreed by the DCC

End of report.

Yours faithfully

[Name]

[Position]

Acting on behalf of [Party].

10. Appendix E: Test Completion Certificate

TEST COMPLETION CERTIFICATE

To: [Party / RDP] [SEC Party / RDP ID]

From: [DCC]

[Date]

Dear Sirs,

TEST COMPLETION CERTIFICATE

The relevant tests have been successfully completed to provide the following credentials:

Test Scenarios for Parties or RDPs with a DCC Gateway Connection
IKI credentials for submission of Organisation CSRs using SMKI Portal via DCC Gateway Connection
IKI credentials for submission of Device CSRs using SMKI Portal via DCC Gateway Connection
IKI credentials for Ad Hoc Device CSR Web Service
IKI credentials for Batched Device CSR Web Service
Credentials for SMKI Repository Portal
Credentials for SMKI Repository Web Service
Credentials for SMKI Repository Portal SFTP

Test Scenarios for Parties without a DCC Gateway Connection
IKI credentials for submission of Organisation CSRs using SMKI Portal via the Internet

We confirm that the relevant tests have been executed in accordance with the relevant Test Documents. We confirm that the relevant Exit Criteria have been achieved.

Yours faithfully

[Name]

[Position]

Acting on behalf of the DCC

11. Appendix F: Definitions

In this document, except where the context otherwise requires:

- expressions defined in Section A of the Code (Definitions and Interpretation) have the same meaning as is set out in that Section;
- the expressions in the left hand column below shall have the meanings given to them in the right hand column below; and
- where any expression is defined in Section A of the Code (Definitions and Interpretation) and in this document, the definition in this document shall take precedence for the purposes of this document.

Term	Definition
Ad Hoc Device CSR Web Service	Has the meaning given to that expression in the SMKI RAPP
Batched Device CSR Web Service	Has the meaning given to that expression in the SMKI RAPP
Daily Testing Issue Report	The document reporting on the status of any testing issues identified (part of the Test Execution Dashboard)
Device Certificate Signing Request (Device CSR)	Means a Certificate Signing Request in respect of a Device Certificate.
FIPS token	Cryptographic Credential Token issued in accordance with the SMKI RAPP
Organisation Certificate Signing Request (Organisation CSR)	Means a Certificate Signing Request in respect of an Organisation Certificate.
Regression Testing	Testing of a previously tested program following modification to ensure that defects have not been introduced or uncovered in unchanged areas of the software, as a result of the changes made (and Regression Test shall be construed accordingly)
Relevant Party	A Party which is undertaking SMKI and Repository Entry Process Tests
(Requirements) Traceability Matrix	A matrix of defined requirements that provides traceability (linkage) to Test Scripts for the purpose of providing a measurement of test coverage as intended in the relevant specification.
SMKI Authorised Responsible Officer (SMKI ARO)	Has the meaning given to the expression 'Authorised Responsible Officer' in the SMKI RAPP.

SMKI Senior Responsible Officer (SMKI SRO)	Has the meaning given to the expression 'Senior Responsible Officer' in the SMKI RAPP.
SMKI Repository Portal	Has the meaning given to that expression in the SMKI Repository Interface Design Specification.
SMKI Repository Web Service	Has the meaning given to that expression in the SMKI Repository Interface Design Specification.
SREPT	SMKI and Repository Entry Process Tests
SREPTS	SMKI and Repository Entry Process Test Scenarios
SRTSD	SMKI and Repository Test Scenarios Document (this document)
Test Completion Certificate	A certificate issued by the on successfully completes SREPT as set out in Appendix E: Test Completion Certificate
Test Completion Report	A document summarising testing activities and results. It also contains an evaluation of the corresponding test items against Exit Criteria
Test Completion Certificate	A certificate issued by the DCC to the Party when the Party has met the SREPT Exit Criteria
Test Data	Any data constructed for the purposes of undertaking SMKI and Repository Entry Process Testing
Test Data Plan	The document that sets out: the size and type/format of data, who is responsible for providing the data; and when the data is required to be available to support test activities in a Test Plan
Test Execution Dashboard	The document summarising testing activities and results, produced at regular intervals, to report progress of testing activities against a baseline (such as the original test plan) and to communicate risks and alternatives requiring a decision to management
Test Management Tool	A tool that has the ability to log and track Testing Issues
Test Plan	A document describing the scope, approach, resources and schedule of intended test activities within a Test Stage that will be produced as set out in Section 9.4.
Test Result	The consequence/outcome of the execution of a Test Script
Test Readiness Report	A report that when completed provides the capability to assess the status of test preparation and determine the readiness to proceed into test execution
Test Schedule	A list of test process activities, tasks or events identifying their intended start and finish dates and/or times and interdependencies
Test Script	A document specifying a sequence of actions for the execution of a test

Test SMKI Repository Services	Test versions of the SMKI Repository Services (see definition in SEC) provisioned for the purposes of SREPT
Test SMKI Services	Test versions of the SMKI Services (see definition in SEC) provisioned for the purposes of SREPT
Test Stage	A group of test activities that are organised and managed together
WD	Has the same meaning as the expression 'Working Day'.

12. Appendix G: Testing Issue Severity Descriptions

Severity	Description
Severity 1	An Issue which in relation to the Relevant Party or RDP: • would prevent user from using their systems • would have a critical adverse impact on business activities • would cause significant financial loss • would result in any material loss or corruption of Data. Non-exhaustive examples: • an Issue leading to non-availability of systems • all test progress is blocked.
Severity 2	An Issue which in relation to the Relevant Party or RDP: • would have a major (but not critical) adverse impact on use of systems • would cause limited financial loss Non-exhaustive examples: • an Issue leading to non-availability of or to loss of resilience of a material part of their systems • large areas of functionality will not be able to be tested • testing not completely blocked but has been significantly impacted.
Severity 3	An Issue which in relation to the Relevant Party or RDP: • would have a major adverse impact on business activities but which can be reduced to a moderate adverse impact through a work-around • would have a moderate adverse impact on the business activities Non-exhaustive examples: • testing can progress but the work-around will impact test progress.
Severity 4	An Issue which in relation to the Relevant Party or RDP: • would have a minor adverse impact on business activities Non-exhaustive examples: • minor service interruptions in the business process
Severity 5	An Issue which in relation to the Relevant Party or RDP: • would have minimal impact on business activities Non-exhaustive examples: • trivial Issues with work-arounds which are noted for future releases but minimal impact of running existing activities • tests can still pass but there are cosmetic issues.

Version: L7.0

Appendix L

SMKI Recovery Procedure

1. Introduction

1.1 Purpose & Interpretation

Section L10.4 of the Code sets out the principal rights and obligations for compliance with any requirements set out in the SMKI Recovery Procedure.

This document, the SMKI Recovery Procedure, sets out the procedural requirements and the rights and obligations in respect of the DCC, Parties and the SMKI PMA relating to recovery from the Compromise of a Relevant Private Key. The scope of the SMKI Recovery Procedure is as set out in Section L10 of the Code and is further set out in more detail in Section 1.2 of this document.

The procedures as set out in this document shall be executed in the event of a Compromise of a Relevant Private Key, other than as directed by the SMKI PMA, in accordance with the procedures set out in this document.

For the purposes of the SMKI Recovery Procedure defined terms shall have the meaning in SEC Section A (Definitions and Interpretations), SEC Appendix B (Organisation Certificate Policy), and Appendix F (Definitions) of this SEC Appendix L (SMKI Recovery Procedure). Additionally, the following shall apply:

a) notwithstanding the definition as set out in Section A of the Code, “Subscriber” means, in relation to any Organisation Certificate associated with a Relevant Private Key, a Party which has been Issued with and accepted that Organisation Certificate, acting in its capacity as the holder of the Organisation Certificate;

b) “M#N Share” means, in relation to a Private Key, that the key is split into N Key Components such that the Private Key may be recreated using any M or more Key Components, and the Private Key may not be recreated using fewer than M Key Components;

c) except where explicitly stated otherwise, or where it would be inappropriate within the context of its use, the term "Compromise" shall be interpreted to be a reference to a Compromise or a suspected Compromise.

d) “Contingency Symmetric Key” means, as defined in the SEC Section A, the Symmetric Key used to encrypt the Contingency Public Key;

e) Relevant Private Key has, as defined in the SEC Section A, the meaning set out in Section L10;

f) "Recovery Action Risks" has the meaning defined in section 3.5 of this document;

g) "Party" has the meaning set out in SEC Section A except for the DCC, which shall not be a Party for the purposes of this document;

h) "TADP" means the Threshold Anomaly Detection Procedures;

i) "XML Signing Private Key" means a Private Key for which an associated Organisation Certificate has been issued that would allow the Subscriber to sign XML documents pursuant to the SEC. For clarity, this includes private keys which are (1) used by the DSP, or by a provider of WAN services to the DCC, only to sign XML and (2) have a GBCS defined Remote Party Role.

j) where an obligation is expressed as being an obligation on a Key Custodian it shall be interpreted as being an obligation on:

i. in the case of a Key Custodian appointed by a Party or the DCC, that Party or the DCC as the context requires, and

ii. in the case of a Key Custodian appointed by the SMKI PMA or the Panel, the SMKI PMA or the Panel Member as the context requires;

k) except for a Root OCA Certificate, a Private Key is “associated” with an Organisation Certificate or OCA Certificate where that Private Key is associated with the Public Key contained within that Organisation Certificate or OCA Certificate. For a Root OCA Certificate, a Private Key is "associated" with that Root OCA Certificate if it is associated with the Public Key contained in unencrypted form within that Root OCA Certificate. Note that a Contingency Public Key will also be present in a Root OCA Certificate but that it will be presented in an encrypted form;

l) "CoS Certificate" means an Organisation Certificate issued to the DCC, acting in the role of the CoS Party, which has a Remote Party Role of 'transitionalCoS' with the meaning of SEC Section L, clause 3.18;

m) an Organisation Certificate or OCA Certificate is considered to be “stored” on a Device if information from that Organisation Certificate or OCA Certificate forms part of the Device Security Credentials of that Device; and

n) “Contingency Symmetric Key Splitting” means the splitting of the Contingency Symmetric Key into parts, each of which are securely retained by each of the “Symmetric Key Custodians”. “Symmetric Key Custodians” shall be interpreted accordingly with the roles being fulfilled by the DCC.

1.2 Scope

The SMKI Recovery Procedure sets out the detail of the arrangements between the DCC, Parties, the SMKI PMA and the Panel in respect of:

a) **Pre-Recovery:**

i. confirmation of a Compromise of a Relevant Private Key that the DCC becomes aware of, including where this is reported to the DCC by a Party, resulting in an Incident being raised in accordance with sections 2.1 and 2.2 of the Incident Management Policy;

ii. notification to the DCC of the Anomaly Detection Thresholds (or amendment of Anomaly Detection Thresholds by the DCC where necessary, including where the DCC will be originating Commands as part of the recovery procedure) that are required to support replacement of affected Organisation Certificates or OCA Certificates stored on Devices;

iii. where use of the Recovery Private Key or the Contingency Private Key would be required in order to recover, consultation by the DCC with the SMKI PMA to determine the extent to which the recovery procedure should be executed and the manner in which it should be executed;

iv. revocation of affected Organisation Certificates or OCA Certificates (where required); and

v. other steps as set out in this SMKI Recovery Procedure;

b) **Execution of Recovery:**

i. execution of activities to recover from a Compromise of a Relevant Private Key; and

c) **Post-Recovery:**

i. replacement of Organisation Certificates and OCA Certificates and Private Keys (where necessary);

ii. post-Incident review and reporting;

iii. provision to relevant parties of information intended to prevent reoccurrence of similar Incidents; and

iv. revocation of replaced Organisation Certificates and OCA Certificates (where necessary).

The SMKI Recovery Procedure addresses recovery from a Compromise in respect of any Relevant Private Key listed immediately below:

a) Pursuant to L10.30 (c) (ii) and (iii):

i. a Private Key which is associated with any Organisation Certificate, Data from which is used to populate the Device Security Credentials of a Device comprising part of an Enrolled Smart Metering System; or

ii. a Private Key which is associated with any Organisation Certificate, Data from which is used to populate part of any Device Security Credentials held by an S1SP;

b) Pursuant to L10.30 (c) (i), the Contingency Symmetric Key;

c) Pursuant to L10.30 (c) (ii), the Contingency Private Key;

d) Pursuant to L10.30 (c) (iv), the Private Key associated with an Issuing OCA Certificate;

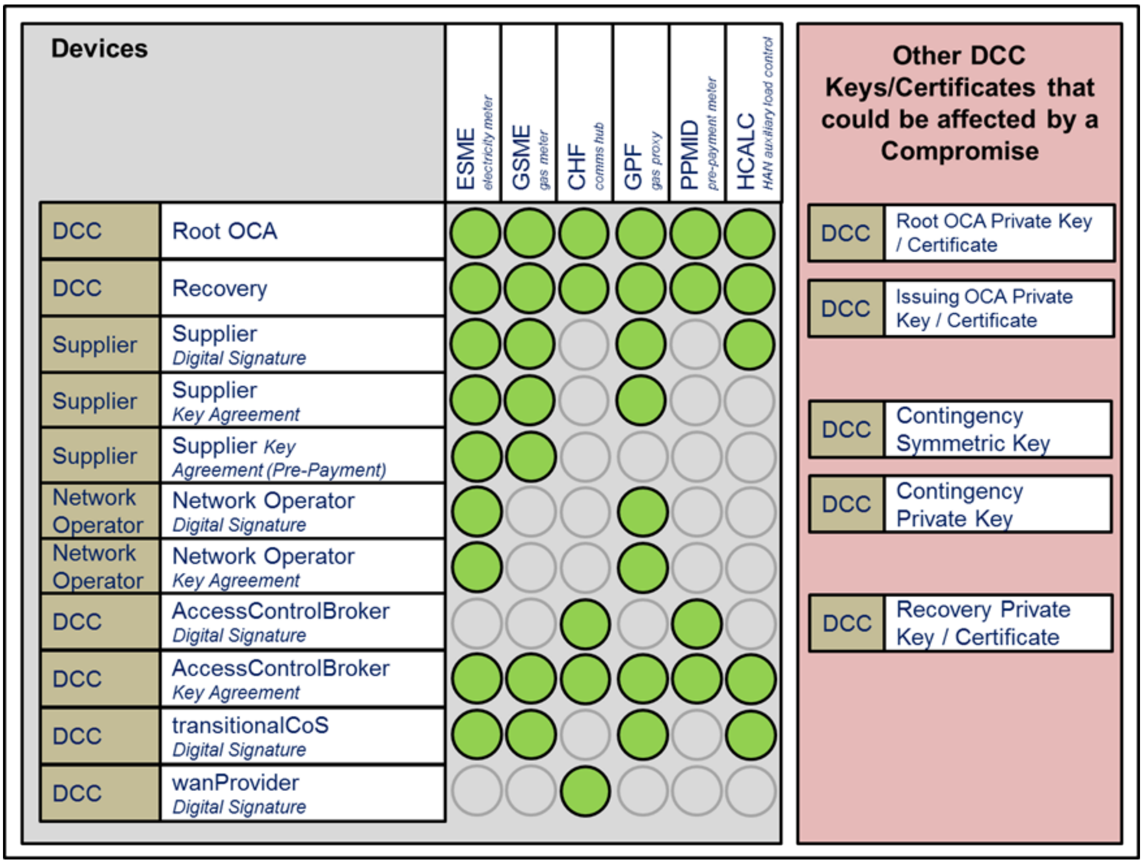
e) Pursuant to L10.30 (c) (ii) and (iv), the Private Key associated with a Root OCA Certificate;

f) Pursuant to L10.30 (c) (ii) the Private Key associated with a Recovery Certificate; and

g) Pursuant to L10.30 (c) (v), an XML Signing Private Key.

Pursuant to L10.30 (c) (vi, the relevant Certification Practice Statement (CPS) addresses recovery from a Compromise in respect of any Private Key which is associated with a Public Key contained in any certificate issued in accordance with an S1SPKI Certificate Policy, and which is determined by the SMKI PMA as being a Private Key requiring a recovery procedure.

Figure 1, immediately below, shows the relevant Organisation Certificates and OCA Certificates that are stored on applicable SMETS2+ Devices. The details listed in the column labelled 'ESME' apply both to Devices which are ESME and to Devices which are SAPC.



Devices		ESME *electricity meter*	GSME *gas meter*	CHF *comms hub*	GPF *gas proxy*	PPMID *pre-payment meter*	HCALC *HAN auxiliary load control*

Supplier	Notified Non-Critical Supplier Certificate	●	●		●	
Network Operator	Notified Critical Network Operator Certificate	●			●	
Network Operator	Notified Non-Critical Network Operator Certificate	●			●	

Other DCC Keys/Certificates that could be affected by a Compromise	
DCC	Root OCA Private Key
DCC	Issuing CA Private Key

Figure 2: Organisation Certificates used by SMETS1 Service Providers for security credentials for SMETS1 Devices

The Check Cryptographic Protection applied by a SMETS1 Service Provider and the DCC to a Critical Service Request targeting a SMETS1 CHF or SMETS1 PPMID is carried out using the Notified Critical Supplier ID for the corresponding SMETS1 ESME.

2. Overview of the SMKI Recovery Procedure

In the event of an incident which:

a) results in the Compromise of a Relevant Private Key; or

b) causes the Subscriber for the Certificate associated with any of the Keys in a) above to reasonably suspect that there has been a Compromise of any such Key,

the provisions of this SMKI Recovery Procedure shall apply.

The SMKI Recovery Procedure includes procedures which detail the obligations of the DCC, Subscribers and the SMKI PMA, in respect of recovery from Compromise of a Relevant Private Key as set out in Section 1.2 of this document.

The table as set out immediately below summarises the actions required and the section(s) of this document which contain the applicable recovery procedure(s). It should be noted that it is possible to handle only one scenario type at a time and that there is a logical order of Section 4 first, then Section 6 second and then Section 5 last. This is to address the increasing severity of scenarios, their impact on the DCC Total System and the nature of the recovery procedure required. However, the execution of the steps is subject to SMKI PMA direction.

Compromise or Suspected Compromise of:	Section(s) of this document containing the procedure(s)
A Private Key which is associated with any Organisation Certificate, Data from which is used to populate the Device Security Credentials of a Device comprising part of an Enrolled Smart Metering System; or a Private Key which is associated with any Organisation Certificate, Data from which is used to populate part of any Device Security Credentials held by an S1SP	**4.1 Method 1 – recovery by the affected Subscriber using the Compromised Private Key (or any other relevant key held by the Subscriber)** to replace the associated Organisation Certificates on SMETS2+Devices 4.1.1 Pre-Recovery 4.1.2 Execution of Recovery Procedure 4.1.3 Post-Recovery **4.1A Method 1A – replacement of an Organisation Certificate forming part of S1SP Held Device Security Credentials** 4.1A.1Pre-Recovery 4.1A.2 Execution of Recovery Procedure 4.1A.3Post-Recovery **4.2 Method2 – recovery by the DCC using the Recovery Private Key to place DCC Access Control Broker Certificates on affected SMETS2+** Devices **(only available to a Supplier Party)** 4.2.1 Pre-Recovery 4.2.2 Execution of Recovery Procedure 4.2.3 Post-Recovery **Method 3 – recovery by the DCC using the Recovery Private Key to place new Organisation Certificates on SMETS2+ Devices**

3. General obligations

3.1 DCC Obligations

The DCC shall:

a) conduct the procedures set out in this document;

b) comply with any decisions made by the SMKI PMA regarding whether or not to take certain steps in order to recover from a Compromise;

c) where the DCC attempts but fails to replace one or more Organisation Certificates or OCA Certificates as part of operating these procedures, execute as many retries to replace such Organisation Certificates or OCA Certificates as the DCC can reasonably accommodate given the circumstances of the Compromise and capability of the DCC Systems, prior to any deadline for recovery as approved by the SMKI PMA;

d) where the DCC consults with the SMKI PMA regarding whether or not to take certain steps in order to recover from a Compromise and the DCC is directed such that recovery using the Recovery Private Key or Contingency Private Key should not be performed, the DCC shall inform all affected Parties of the outcome and any reasons provided by the SMKI PMA, as soon as reasonably practicable following such instruction, via a secured electronic means;

e) maintain confidential, auditable and secured records relating to the recovery from a Compromise, and the Devices and Subscribers affected by such Compromise; and

f) within three Working Days of the recovery from a Compromise, prepare a report regarding execution of the recovery and provide such report to the SMKI PMA, where such report shall include:

i. the process steps executed and the timing of the procedure to recover from the Compromise;

ii. where possible, carry out an analysis of which communications have been submitted to, or in relation to, any relevant affected Devices and any anomalous activity that should be investigated further by the DCC and/or affected Subscribers, and/or addressed via remedial actions; and

iii. keep this document under review and following consultation with the SMKI PMA, propose modifications to the SMKI Recovery Procedure that the DCC believes are necessary for the SMKI Recovery Procedure to meet the objectives more effectively as set out in the SEC.

Where such adjustments are needed to allow the effective executions of the procedures in this document, the DCC shall, as provided for in SEC Section L 10.2 (c), adjust the Anomaly Detection Thresholds, which it sets in other situations only after they are agreed by the Security Sub-Committee, subject only to the agreement of the SMKI PMA.

3.2 Notification and confirmation of a suspected Compromise

Any person may notify the DCC that there is a Compromise Relevant Private Key.

Where the DCC is notified or becomes aware of a Compromise Relevant Private Key, the DCC shall raise an Incident in accordance with sections 2.1 and 2.2 of the Incident Management Policy and shall notify the SMKI PMA, via secured electronic means, that a Compromise has been notified. The DCC shall contact the Subscriber for the Organisation Certificate associated with that Private Key or Contingency Symmetric Key (which may include the DCC itself as the Subscriber), as soon as reasonably practicable, via telephone and email using the contact details held by the SMKI Registration Authority. The DCC shall provide the Subscriber, via secured electronic means, with the appropriate Incident reference number and information relating to the notified Compromise. The DCC shall request confirmation from the Subscriber as to whether the Subscriber reasonably believes that a Compromise has occurred, and wishes to proceed with one or more of the recovery processes, which shall be confirmed by:

a) A SMKI Senior Responsible Officer (SMKI SRO) on behalf of a Party; or

b) A SMKI SRO, SMKI Registration Authority Manager or a member of SMKI Registration Authority Personnel authorised to act on behalf of the DCC in this capacity.

The Subscriber shall take reasonable steps to ensure that confirmation of whether it reasonably believes that a Compromise has occurred is provided to the DCC by the representatives above, within 24 hours of the request for confirmation from the DCC, via secured electronic means. Where the Subscriber confirms that it does not reasonably believe that a Compromise has occurred, the DCC shall close the Incident in accordance with section 2.12 of the Incident Management Policy.

Where the DCC receives confirmation that the Subscriber reasonably believes that a Compromise has occurred, the DCC shall also identify any Responsible Supplier(s) that are affected by the confirmed Compromise, in accordance with the procedures as set out in this document.

Where the DCC receives multiple Compromise notifications, the DCC may execute a common set of procedural steps to address such multiple Compromises, where it reasonably believes that such an approach would achieve the required recovery in an efficient manner.

3.3 Permitted mechanisms for confirmation of suspected Compromise

The DCC shall only accept the confirmation of a Compromise from a representative of the Subscriber as is defined in section 3.2 of this document, for an Organisation Certificate associated with a Compromised Private Key or from the DCC in respect of a Compromised Contingency Symmetric Key or the Compromise of an Organisation Certificate or OCA Certificate for which the DCC is the Subscriber, using the mechanisms as defined in the DCC's SMKI operational recovery procedures, which shall be made available by the DCC to Parties via secured electronic means.

3.4 Appointment and responsibilities of Key Custodians

The Organisation Certification Practice Statement (Organisation CPS) requires the Contingency Private Key and Recovery Private Key to be split into M#N Shares and that such Private Keys may be activated only via collaboration between appointed Key Custodians. The procedure as set out in this section 3.4 shall be followed in order to appoint such Key Custodians as are required.

3.4.1. Responsibilities in respect of Key Custodians

Each Party, the DCC, the SMKI PMA or the Panel, on behalf of which an individual acting on behalf of that organisation becomes a Key Custodian, shall ensure that the Key Custodian:

a) does not seek to find out the identity of other Key Custodians or otherwise collude with other Key Custodians in relation to matters associated with this Recovery Procedure other than for the purposes as set out in this SMKI Recovery Procedure;

b) does not disclose the fact that they are a Key Custodian, other than:

   i. in the case of each Party, to a Director, Company Secretary, SMKI SRO or Chief Information Security Officer for the organisation they represent; or

   ii. in the case of the SMKI PMA or Panel, to other members of the SMKI PMA or Panel; and

   iii. to those other persons to whom the information reasonably needs to be disclosed for reasons of personnel management within the relevant organisation, and furthermore shall ensure that persons within their organisation who are aware of the identity of a Key Custodian shall not disclose the identity of a Key Custodian more widely;

c) takes all reasonable steps to protect and not to lose any safety deposit box key issued to them to secure any Cryptographic Module as part of the relevant Key Generation Ceremony, and which is used by the Key Custodian to secure the Cryptographic Module containing the Key Component issued to them, in accordance with any guidance documentation provided by the DCC to the Key Custodian via secured electronic means;

d) where the safety deposit box securing the Cryptographic Module containing a Key Component cannot be accessed, or the safety deposit key is lost or cannot be accessed, the DCC shall raise an Incident in accordance with sections 2.1 and 2.2 of the Incident Management Policy and shall take such steps as are necessary to resolve the Incident;

e) takes all reasonable steps to attend a Key Generation Ceremony or Key Activation Ceremony when requested by the DCC and, where they are to attend, to take all steps that are reasonably practical to attend at the time requested by the DCC; and

f) is, upon request to attend a Key Generation Ceremony or Key Activation Ceremony by the DCC, immediately released to perform the Key Custodian role unless it would be materially disruptive to the business of the relevant organisation for them not to be released at that time.

Where a Party is the Subscriber for an Organisation Certificate that is Compromised (or is suspected to be Compromised), the Subscriber is not the DCC and an individual acting on behalf of that Subscriber is a Key Custodian; the DCC may exclude that Key Custodian from attending any Key Generation Ceremony or Key Activation Ceremony required as part of the applicable recovery procedure, where the DCC considers such action to be appropriate to mitigate security risks. If such exclusion occurs, the DCC shall record the decision made, and shall notify that Key Custodian and a SMKI SRO for the Subscriber, via secured electronic means.

3.4.2. Ceasing to be a Key Custodian

In the event that a Party, the DCC, the SMKI PMA or the Panel wishes a particular individual to cease their role as a Key Custodian:

a) such Party, the SMKI PMA or the Panel shall notify the DCC in writing, at least one month in advance of the date on which that it wishes the individual acting as a Key Custodian to cease to be a Key Custodian;

b) the relevant Party, the DCC, the SMKI PMA or the Panel shall arrange for the Key Custodian to return the physical key for the corresponding safety deposit box in which the Cryptographic Module containing the relevant Key Component is held, to a Registration Authority Manager at the DCC's address as published on the DCC Website, by secure courier;

c) the DCC shall update its records of Key Custodians; and

d) the DCC shall conduct, insofar as necessary, the procedure as set out in section 3.4.3 immediately below.

3.4.3. Detailed procedure for appointment of Key Custodians

The procedure as set out immediately below shall be executed by the DCC, Parties, the SMKI PMA and the Panel in order to appoint Key Custodians.

Step	When	Obligation	Responsibility	Next Step
3.4.3.1	As identified by the DCC that Key Custodians are required	The DCC shall identify the need for Key Custodians in respect of a Recovery Private Key or Contingency Private Key.	DCC	3.4.3.2
3.4.3.2	As soon as reasonably practicable, following 3.4.3.1	The DCC shall issue a request for nominations, via a secured electronic means, to Parties, the DCC, the SMKI PMA and the Panel, for individuals to become Key Custodians for the Recovery Private Key or Contingency Private Key	DCC	3.4.3.3

		as identified in step 3.4.3.1. Such request for nominations shall: a. include the Key Custodian nomination form as published on the DCC Website; b. be marked as confidential; and c. detail the locations where each relevant Key Generation Ceremony and any corresponding Key Activation Ceremony will take place.		

3.4.3.3	Within 10 Working Days of the issuance of the request for nominations	Each Party, the DCC, the SMKI PMA or the Panel wishing to nominate an individual to become a Key Custodian in respect of a particular Private Key shall provide, via secured electronic means, to the DCC for each nominated individual, a completed Key Custodian nomination form using the pro-forma as published on the DCC Website. The nomination form should contain the following information: a. the full name of a Director, Company Secretary or SMKI Senior Responsible Officer who is nominating the individual to become a Key Custodian for a Party, the DCC, the SMKI PMA Chair for the SMKI PMA or the Panel Chair for the Panel; b. the full name of the nominated individual; c. contact telephone details for the nominated individual; d. the nominated individual's normal work location; e. the estimated time to travel to the location of the relevant Key Generation Ceremony and to the location of the corresponding Key Activation Ceremony, as notified in step 3.4.2; f. evidence that the individual is: i. for a Party, an employee or Director of the Party; ii. for the DCC, an employee of the DCC or a DCC Service Provider; iii. for the SMKI PMA, an appointed member of the SMKI PMA; or iv. for the Panel, an appointed member of the Panel; and g. evidence that the nominated individual has successfully completed security screening in a manner that is compliant with: i. British Standard BS 7858:2012 (Security Screening of Individuals Employed in a Security Environment –	Party, DCC, the SMKI PMA or the Panel	3.4.3.4

		Code of Practice); or ii. any equivalent to that British Standard which updates or replaces it from time to time. Where necessary in order to have a sufficient number of Key Custodians appointed, the SMKI PMA may direct any Party to nominate individuals to become Key Custodians. Where this occurs, the directed Party shall identify and nominate individuals in accordance with this step 3.4.3.3.		
3.4.3.4	As soon as reasonably practicable following 3.4.3.3	The DCC shall determine: a. using publicly available information, whether the Director, Company Secretary, SMKI Senior Responsible Officer, SMKI PMA Chair or Panel Chair who is nominating the individual to become a Key Custodian holds such a role on behalf of the organisation; and b. whether the information supplied in the Key Custodian nomination form is complete and accurate. Where there are omissions/discrepancies, agree actions with the nominating Director, Company Secretary, SMKI Senior Responsible Officer, SMKI PMA Chair or Panel Chair, via secured electronic means or in writing.	DCC	If complete, 3.4.3.5; if not complete, 3.4.3.3
3.4.3.5	As soon as reasonably practicable, following 10 Working Days after issuance of request for nominations	The DCC shall collate nominations received and shall provide to SMKI PMA: a. details of those nominated individuals and the organisation they are representing; and b. upon request from the SMKI PMA, details held by the DCC of all existing holders of Key Components.	DCC	3.4.3.6
3.4.3.6	As soon as reasonably practicable, following 3.4.3.5	The SMKI PMA shall determine the individuals that shall become Key Custodians, which shall take into account geographical location and how many Key Components are held by any particular organisation or individual (where relevant). The SMKI PMA shall inform the DCC of the individuals which shall become Key Custodians.	SMKI PMA	3.4.3.7 if sufficient Key Custodians can be appointed; if not, 3.4.3.3
3.4.3.7	As soon as reasonably	The DCC shall confirm that the individual has been	DCC	3.4.3.8

	practicable, following 3.4.3.6	selected by the SMKI PMA to become a Key Custodian and shall confirm the date and time for a verification meeting for the nominated individual at the DCC's offices, to the Director, Company Secretary, SMKI Senior Responsible Officer, SMKI PMA Chair or Panel Chair of the applicant organisation who nominated the individual to become a Key Custodian, via secured electronic means.		
3.4.3.8	At verification meeting	The DCC shall, in person, verify the individual identity of the nominated individual to the level pursuant to the SMKI PMA Guidance on 'Verifying Individual Identity' published on the Website.	DCC	If successful for all, 3.4.3.10; for unsuccessful, 3.4.3.9
3.4.3.9	As soon as reasonably practicable following rejection	The DCC shall notify the nominating Director, Company Secretary, SMKI PMA Chair or Panel Chair, in writing, that the nominated individual could not at that point be appointed as a Key Custodian.	DCC	3.4.3.6
3.4.3.10	As soon as reasonably practicable, following 3.4.3.8	The DCC shall notify, in writing via secured electronic means: a. the individual, in person, that they are eligible to become a Key Custodian; and	DCC	3.4.3.11

		b. the nominating Director, Company Secretary, SMKI PMA Chair or Panel Chair, that the nominated individual is eligible to become a Key Custodian.		
3.4.3.11	As soon as reasonably practicable, following 3.4.3.10	The DCC shall: a. update its records of eligible Key Custodians for Private Keys for which Key Components are issued and shall store such records in a secured manner; and b. inform the SMKI PMA Chair, in writing, that the nominated individual has become a Key Custodian	DCC	Relevant procedure to recover from a notified Compromise

3.5 Recovery Actions Risk

3.5.1 Actions to be taken only after considering Recovery Action Risks

The actions detailed in this section 3.5.1 shall only be taken when those identified, in this document, as responsible for decision making have considered the risks detailed in sections 3.5.2 and 3.5.3 ('Recovery Action Risks'), and either concluded that they are not relevant or that, on balance, the risks of taking the actions are less than the risks of not taking them, having factored in any mitigations that have been, or are being, put in place. The timing of any such actions may therefore be delayed to a later time, including to ensure that mitigations are in place.

Such consideration shall factor in the risk that a Compromised Private Key may, depending on the Compromise, be used to send unauthorised instructions to the corresponding fleet of Devices, until the associated Certificates on SMETS2+ Devices have been replaced and also revoked (so that DCC systems will no longer accept their use).

The actions to be considered prior to a decision to undertake SMKI Recovery are:

- Any action that would lead to one or more Devices having their SMI status set to 'Recovery';
- The revocation of a Certificate;
- The destruction of a Private Key (or any other action that would render it unusable); or
- The placing of Access Control Broker Certificates in Supplier Trust Anchor Cells on a SMETS2+ Device, and therefore any request to use 'Method 2', with its section 4.2 meaning.

3.5.2 Prepayment functionality and continuity of Supply to the Consumer

Where a capitalised term in this section is not defined either in this document or in SEC Section A, that term shall have its SMETS meaning.

All SMETS ESME and GSME have the ability to operate in Prepayment Mode, a feature of which is that, when there is insufficient credit, Supply to the Premises will be Disabled. To ensure continuity of supply in recovering from a Compromise, it is important either that supplier prepayment functions can continue to operate during the recovery, or that the potentially affected ESME and/or GSME are placed in a state where they will not Disable

Supply during the recovery. For example, this could be achieved by switching such Devices to Credit mode and then locking out supplier functionality until recovery is complete.

Whilst the technical security mechanisms (and so potential effects of recovery actions) vary somewhat between SMETS1 and SMETS2+, the recovery actions that may affect operation in Prepayment Mode include:

- Destruction of XML Signing Private Keys, where they are used to sign Service Requests for prepayment functions, or revocation of associated Certificates. In the absence of replacements, this would mean all prepayment functionality, other the locally entered SMETS2+ top ups, would be lost;

- Destruction of supplier Private Keys, where they are used to sign Commands to SMETS2+ Devices. In the absence of a replacement, this would mean all SMETS2+ prepayment functionality, other the locally entered SMETS2+ top ups, would be lost. It is important to note that revocation of the associated supplier Certificates does NOT stop the supplier Private Keys being used to instruct SMETS2+ Devices;

- Destruction of supplier Private Keys, where they are used to create SMETS2+ top ups. In the absence of a replacement, and the corresponding update of supplier related Device Security Credentials (i.e. certificate information) on SMETS2+ Devices, this would prevent SMETS 2+ top ups. It is important to note that revocation of the associated supplier Certificates does NOT stop the supplier Private Keys being used to instruct SMETS2+ Devices;

- Replacement of supplier credentials on SMETS2+ Devices with Access Control Broker credentials. This locks out all supplier prepayment functionality on the Device, until the Access Control Broker credentials have subsequently successfully been replaced with valid supplier credentials;

- Revocation of Certificates associated with XML Signing Private Keys, which means that those Private Keys can no longer be used to sign XML needed to deliver prepayment functionality; and

- Setting the SMI Status of a Smart Meter to 'Recovery' which blocks prepayment functionality delivered via the DCC.

An important factor to consider is therefore the number of ESME and/or GSME that could be affected by the Compromise and are understood to currently be in Prepayment mode. However, it is important to note that certain Compromises could, in theory, allow Devices to be switched to Prepayment Mode without supplier authorisation. In such cases, the speed at which that potential risk is removed should also be factored in.

3.5.3 Devices in the supply chain

Where a capitalised term in this section is not defined either in this document or in SEC Section A, that term shall have its GBCS meaning.

To enforce end-to-end security, the SEC requires that SMETS2+ Devices have the range of security credentials, detailed in Figure 1, recorded in the Device's Trust Anchor Cells before installation. To that end, the DCC makes available a set of the following Certificates for loading on to Devices before installation. The relevant Certificates must be recorded on Devices before they are installed, otherwise enduring communications will not be possible:

- Root Certificate;

- Recovery Certificate;

- CoS Certificate; and

- Access Control Broker Certificates (one with a key usage of key agreement, and the other with a key usage of digital signature).

Additionally:

- Communications Hub Functions must hold information from a WAN Provider Certificate.
- ESME and GSME may hold information from Supplier Certificates, although information from Access Control Broker Certificates can be used in the Supplier and Network Operator Trust Anchor Cells.

Should any of the associated Private Keys (including the Contingency Private Key) be destroyed or made unusable as part of a recovery process, then it may no longer be possible to Commission Devices still in the supply chain, or such Commissioning may require keeping the Recovery or Contingency Private Key in extended operation, with the risks that brings.

In light of the potential economic costs and logistical disruption to the maintenance of metering, careful consideration should therefore be given to the destruction, or making inoperable, of any such Private Keys.

After a Recovery Event as described in Section 6, all supply chain Devices will still be able to be Commissioned and used by being updated to the new Root OCA Certificate in a future Recovery Event to restore the capabilities described in Section 6.

4. Procedure to recover from the Compromise of a Private Key corresponding with a Public Key contained within an Organisation Certificate held on a SMETS2+ Device (other than the Recovery Private Key); or which forms part of any S1SP Held Device Security Credentials

This section sets out the procedures that may be used in order to recover from the Compromise of a Private Key associated with an Organisation Certificate held on a SMETS2+ Device (other than the Recovery Private Key), or to replace Organisation Certificates forming part of any S1SP Held Device Security Credentials where a Subscriber wishes to recover from the Compromise using this procedure.

Where a Subscriber wishes to recover from the Compromise of such a Private Key and its associated Public Key contained within the Organisation Certificate using any of the methods listed immediately below, it shall notify the DCC of which of the methods listed immediately below that it wishes to use, using the mechanisms as defined in the DCC's SMKI operational recovery procedures, which shall be made available by the DCC to Parties via secured electronic means. The DCC shall update the Incident Management Log to record such notification in accordance with H9.1(g).

a) **Method 1:** the Subscriber shall seek to recover using the Compromised (or one suspected of being Compromised) Private Key (or any other relevant key held by the Subscriber) to replace the associated Organisation Certificate to which the Relevant Private Key relates on all affected SMETS2+ Devices;

b) **Method 1A:** the Subscriber shall seek to recover using the Compromised (or one suspected of being Compromised) Private Key (or any other relevant key held by the Subscriber) to replace all affected S1SP Held Device Security Credentials to which the Relevant Private Key relates;

c) **Method 2:** (only applicable where the Subscriber is a Supplier Party), the DCC shall use the Recovery Private Key to replace affected Certificates on SMETS2+ Devices with a DCC Access Control Broker

Certificate. The Responsible Supplier shall then complete the recovery process by replacing the DCC Access Control Broker Certificate with new Organisation Certificates for which it is the Subscriber; or

d) **Method 3:** the DCC shall recover using the Recovery Private Key to replace affected Organisation Certificates on SMETS2+ Devices with new Organisation Certificates provided by the Subscriber.

Following the notification of the selected recovery method by the Subscriber, the DCC shall:

e) Where method 1 has been selected, perform the procedure as set out in Section 4.1 of this document;

f) Where method 1A is being used, perform the procedure as set out in Section 4.1A of this document;

g) Where method 2 has been selected, perform the procedure as set out in Section 4.2 of this document; or

h) Where method 3 has been selected, perform the procedure as set out in Section 4.3 of this document.

4.1 Method 1 - recovery by the affected Subscriber using the Compromised Private Key (or any other relevant key held by the Subscriber) to replace the associated Organisation Certificates on SMETS2+ Devices

4.1.1 Pre-Recovery

The DCC shall execute the procedure as set out immediately below, following notification of the Compromise of the Private Key associated with the Public Key contained within an Organisation Certificate held on a SMETS2+ Devices, in accordance with section 3.2 of this document and notification from the affected Subscriber that it wishes to recover from the Compromise using the procedure set out in this section.

Informative:

Where the Compromised Private Key is a supplier Private Key, there are two ways in which the Subscriber (the supplier) can, using Private Keys it controls, effect replacement of the associated Certificates. Specifically, it can use either of the two mechanisms provided for in DUIS:

- Update Security Credentials (KRP) (SRV 6.15.1) or

- Update Security Credentials (CoS) (SRV 6.23)

The ‘CoS’ mechanism will work regardless of the state of the supplier Digital Signature Private Key (so the key used to sign Commands to Devices), and so may have advantages in some scenarios, including in its allowing earlier destruction of any Compromised supplier Digital Signature Private Key.

Thus, in the scenario where the Compromised Private Key is a supplier Private Key, the Subscriber should always consider both DUIS options and factor that consideration in to assessing how best to recover from the Compromise.

- This section does not apply to XML Signing Private Keys. Please see Section 7 of this document for further guidance on the XML Signing Private Keys.
- This section is only applicable to Responsible Suppliers, Electricity Distributors, Gas Transporters and the DCC.

Step	When	Obligation	Responsibility	Next Step
4.1.1.1	As soon as possible, following notification that the Subscriber wishes to recover using its own Compromised (or one suspected of being Compromised) Private Key associated with the Public Key contained within an Organisation Certificate held on a SMETS2+ Device	The affected Subscriber shall consider the Recovery Action Risks before undertaking any of the associated actions. If the Private Key is not operable at this stage, the affected Subscriber should first consider using other Private Keys that it controls to affect the recovery. Specifically, if the Subscriber is a Supplier Party it should consider using other Private Keys to invoke Update Security Credentials (CoS) (SRV 6.23) Service Requests as the certificate replacement method (including factoring in that this would not block prepayment functionality and would allow certificate replacement to Devices in the supply chain). If such methods are considered not viable or sufficient, the Subscriber should follow the Recovery Procedure as laid out in Section 4.2, Method 2 - recovery by the DCC using the Recovery Private Key to place DCC Access Control Broker Certificates on affected SMETS2+ Devices.	Subscriber	4.1.1.2 or 4.2
4.1.1.2	As soon as reasonably practicable, following 4.1.1.1	A SMKI ARO acting on behalf of the affected Subscriber shall submit to the DCC, via secured electronic means, one or more files which shall be Organisation Compromise Notification Files as set out in Appendix B for Subscribers that are not the DCC, or Other Compromise Notification Files as set out in Appendix D where the Subscriber is the DCC. The affected Subscriber should ensure that such files together contain details of: a. the Incident to which the submission relates; b. the EUI-64 identifiers for the organisation that is the affected Subscriber to which the Compromise, or suspected Compromise of the Private Key relates; and c. for each Organisation Certificate that is affected by the Compromise of the associated Private Key, the serial number of the Organisation Certificate, the SMETS2+ Device IDs and the SMETS2+ Device Trust Anchor Cell which is populated with the affected Organisation Certificate related to the Compromised (or one suspected of being Compromised) Private Key.	Subscriber	4.1.1.3

		In addition, a SMKI ARO acting on behalf of the affected Subscriber shall, as soon as reasonably practicable, submit an Anomaly Detection Thresholds File to the DCC, which shall include amended Anomaly Detection Thresholds that they estimate will be required to replace all affected Organisation Certificates on SMETS2+ Devices. The affected Subscriber shall ensure that the Anomaly Detection Thresholds File is submitted in accordance with the provisions of the TADP.		

4.1.1.3	As soon as reasonably practicable, following 4.1.1.2	The DCC shall notify the SMKI PMA, via a secured electronic means, as soon as reasonably practicable: a. that a Compromise of an Organisation's Private Key has been notified; b. that the Subscriber intends to use method 1 (as set out in section 4.1 of this document) to recover; c. which of the two sub-options that the Subscriber intends to use (i.e. Update Security Credentials (KRP) (SRV 6.15.1) or Update Security Credentials (Co S) (SRV 6.23) or a combination of the two); d. of details relating to the Compromise, comprising the	DCC	4.1.1.4

		Subscriber and the number of SMETS2+ Devices affected, which will include the Organisation Compromise Notification Files as set out in Appendix B for Subscribers that are not the DCC, or Other Compromise Notification Files as set out in Appendix D where the Subscriber is the DCC; and e. of recommendations for any amendments to the Anomaly Detection Thresholds set by the DCC under SEC Section G6.		

4.1.1.4	As soon as reasonably practicable, following 4.1.1.3	Where the affected Subscriber is not the Responsible Supplier for a SMETS2+ Device that is notified in step 4.1.1.1, the DCC shall notify the Responsible Supplier, via secured electronic means, that a Subscriber wishes to recover from Compromise using its own Private Key. The DCC shall also provide to the Responsible Supplier, via a secured electronic means, one or more Organisation Compromise Notification Files as set out in Appendix B for Subscribers that are not the DCC, or Other Compromise Notification Files as set out in Appendix D where the Subscriber is the DCC, which together contain details of the SMETS2+ Device IDs to which the Compromise relates.	DCC	Procedure as set out in section 4.1.2 of this document

4.1.2 Execution of Recovery Procedure

The procedure as set out immediately below, amended as instructed by the SMKI PMA, shall be used following execution of the process as set out in section 4.1.1 of this document except for 4.1.2.6 which may be undertaken at any time that is decided in accordance with these.

Step	When	Obligation	Responsibility	Next Step
4.1.2.1	As soon as reasonably practicable, following procedure as set out in section 4.1.1	The DCC shall apply the amended Anomaly Detection Thresholds for the affected Subscriber in accordance with the TADP. The DCC shall inform, via a secured electronic means, a SMKI SRO and the SMKI ARO that provided the details in step 4.1.1.2, that the Anomaly Detection Threshold values have been successfully amended. In respect of the Anomaly Detection Thresholds set by the DCC under SEC Section G6, if amendments are agreed by the SMKI PMA, the DCC shall apply the amended Anomaly Detection Thresholds in accordance with the TADP.	DCC (DSP TAD)	4.1.2.2
4.1.2.2	As soon as reasonably practicable, following 4.1.2.1	The affected Subscriber shall either: a. identify replacement Organisation Certificates; or b. submit such Certificate Signing Requests (CSRs) that are required in order to acquire new Organisation Certificates.	Subscriber	4.1.2.3
4.1.2.3	As soon as reasonably practicable,	The affected Subscriber shall submit Service Requests as required, in accordance with the provisions of the DCC User Interface Specification,	Subscriber	4.1.2.4

	following 4.1.2.2	to replace affected Organisation Certificates on all relevant SMETS2+ Devices and shall, in doing so, monitor replacement of such affected Organisation Certificates.		
4.1.2.4	As soon as reasonably practicable, following 4.1.2.3	Upon completion of its activities to replace affected Organisation Certificates on affected SMETS2+ Devices, the affected Subscriber shall inform the DCC, via a secured electronic means: a. that its activities in respect of the replacement of Organisation Certificates have been completed; and b. of the SMETS2+ Devices for which replacement of affected Organisation Certificates has not been completed, which shall be submitted as one or more Organisation Compromise Recovery Progress Files as set out in Appendix C for Subscribers that are not the DCC, or Other Compromise Recovery Progress Files as set out in Appendix E.	Subscriber	4.1.2.6 or 4.1.2.5 if appropriate
4.1.2.5	As soon as reasonably practicable, following 4.1.2.4	Where the affected Subscriber is not the Responsible Supplier for a SMETS2+ Device that is notified in step 4.1.1.1, the DCC shall notify the Responsible Supplier for affected SMETS2+ Devices, via secured electronic means, which SMETS2+ Devices were not recovered successfully, in one or more Organisation Recovery Progress Files as set out in Appendix C for Subscribers that are not the DCC, or Other Compromise Recovery Progress Files as set out in Appendix E where the Subscriber is the DCC.	DCC	Procedure as set out in section 4.1.2.6 of this document
4.1.2.6	As decided after considering the Recovery Action Risks	The affected Subscriber shall consider the Recovery Action Risks before undertaking any of the associated actions. Where the Subscriber concludes that, at this time, Certificates should not be revoked and / or Private Keys not destroyed, the Subscriber shall inform the SMKI PMA as to the rationale. The affected Subscriber may, having considered the Recovery Action Risks, submit Certificate Revocation Requests (CRRs), as set out in the SMKI RAPP, in order to revoke affected Organisation Certificates. The DCC shall revoke Organisation Certificates in accordance with the provisions of Appendix B of the Code and the SMKI RAPP section 8.2. The affected Subscriber may, having considered the	Subscriber, DCC	Procedure as set out in section 4.1.3 of this document

		Recovery Action Risks, destroy the Private Key associated with the revoked Organisation Certificates.		

4.1.3 Post-Recovery

The procedure as set out immediately below shall be used following recovery from the Compromise of a Private Key associated with an Organisation Certificate using the procedures as set out in sections 4.1.1 and 4.1.2 of this document.

Step	When	Obligation	Responsibility	Next Step
4.1.3.1	As soon as reasonably practicable, following completion of the procedure as set out in Section 4.1.2 of this document	A SMKI ARO acting on behalf of the affected Subscriber shall, as soon as reasonably practicable, submit appropriate enduring Anomaly Detection Thresholds to the DCC, in accordance with the TADP. The DCC shall amend the relevant Anomaly Detection Thresholds in accordance with the TADP.	DCC (DSP TAD)	4.1.3.2
4.1.3.2	As soon as reasonably practicable, following 4.1.3.1	The DCC shall notify the SMKI PMA via a secured means of: a. the completion of the affected Subscriber's activities in respect of the procedure as set out in this section 4.1; and b. the SMETS2+ Devices for which recovery was not completed, which may be provided in one or more which shall be Organisation Compromise Recovery Progress Files as set out in Appendix C for Subscribers that are not the DCC, or Other Compromise Recovery Progress Files as set out in Appendix E where the Subscriber is the DCC.	DCC	End of procedure

4.1A Method 1A – replacement by the affected Subscriber using its Compromised Private Key of associated S1SP Held Device Security Credentials

4.1A.1 Pre-Recovery

The DCC shall execute the procedure as set out immediately below, following notification of the Compromise of the Private Key associated with the Public Key contained within an Organisation Certificate that forms a part of any S1SP Held Device Security Credentials, in accordance with section 3.2 of this document and notification from the affected Subscriber that it wishes to recover from the Compromise using the procedure set out in this section.

Informative:

- Please see Section 7 of this document for further guidance on the XML Signing Private Keys.
- This section is only applicable to Responsible Suppliers, Electricity Distributors and Gas Transporters.
- All S1SP Held Device Security Credentials are Organisation Certificates.
- S1SP Held Device Security Credentials are held by the SMETS1 Service Provider and not on the SMETS1 Device.

Step	When	Obligation	Responsibility	Next Step
4.1A. 1.1	As soon as possible, following notification that the Subscriber wishes to recover using its own Compromised (or one suspected of being Compromised) Private Key associated with the Public Key contained within an Organisation Certificate that forms part of any S1SP Held Device Security Credentials	The affected Subscriber shall consider the security risks arising from the Compromise of its Private Key and be aware that, until the Private Key is destroyed, there is a risk of the Private Key being used to achieve adverse consequences for the consumer. Revoking the Organisation Certificate (that forms part of any S1SP Held Device Security Credentials) containing the Public Key associated with the Compromised (or one suspected of being Compromised) Private Key will prevent the Private Key from being used to send authorised Commands to a SMETS1 Device. Due consideration should be given before destroying a Compromised (or one suspected of being Compromised) Private Key if the recovery steps detailed in 4.1A.2.1 to 4.1A.2.5 of this section have not yet been carried out. Destroying the Private Key prior to carrying out these steps may put pre-payment customers at risk. It would be advisable to conduct the replacement of Organisation Certificates that forms part of any S1SP Held Device Security Credentials as quickly as possible.	Subscriber	4.1A.1.2

4.1A.1.2	As soon as reasonably practicable, following 4.1A.1.1	A SMKI ARO acting on behalf of the affected Subscriber shall submit to the DCC, via secured electronic means, one or more files which shall be Organisation Compromise Notification Files as set out in Appendix B. The affected Subscriber should ensure that such files together contain details of: a. the Incident to which the submission relates; b. the EUI-64 identifiers for the organisation that is the affected Subscriber to which the Compromise, or suspected Compromise of the Private Key relates; and c. for each Organisation Certificate that forms part of any S1SP Held Device Security Credentials and is affected by the Compromise, the serial number of the Organisation Certificate, the SMETS1 Device IDs and the nature of the affected S1SP Held Device Security Credentials. In addition, a SMKI ARO acting on behalf of the affected Subscriber shall, as soon as reasonably practicable, submit an Anomaly Detection Thresholds File to the DCC, which shall include amended Anomaly Detection Thresholds that they estimate will be required to replace the affected Organisation Certificates that form a part of any S1SP Held Device Security Credentials. The affected Subscriber shall ensure that the Anomaly Detection Thresholds File submitted in accordance with the TADP.	Subscriber	4.1A.1.3
4.1A.1.3	As soon as reasonably practicable, following 4.1A.1.2	The DCC shall notify the SMKI PMA, via a secured electronic means, as soon as reasonably practicable: a. that a Compromise of an Organisation's Private Key has been notified; b. that the Subscriber intends to use method 1 (as set out in section 4.1A of this document) to recover; and c. of details relating to the Compromise, comprising the Subscriber and the number of Organisation Certificates that form a part of any S1SP Held Device Security Credentials affected, which will include the Organisation Compromise Notification Files as set out in Appendix B for Subscribers that are not the DCC, or Other	DCC	4.1A.1.4

		Compromise Notification Files as set out in Appendix D where the Subscriber is the DCC.		

4.1A.2 Execution of Recovery Procedure

The procedure as set out immediately below, amended as instructed by the SMKI PMA, shall be used following execution of the process as set out in section 4.1A.1 of this document, except for 4.1.A.2.6 which may be undertaken at any time that is decided in accordance with these.

Step	When	Obligation	Responsibility	Next Step
4.1A .2.1	As soon as reasonably practicable, following procedure as set out in section 4.1A.1	The DCC shall amend the Anomaly Detection Thresholds for the affected Subscriber in accordance with the TADP. The DCC shall inform, via a secured electronic means, a SMKI SRO and the SMKI ARO that provided the details in step 4.1A.1.2, that the Anomaly Detection Threshold values have been successfully amended.	DCC (DSP TAD)	4.1A.2.2
4.1A. 2.2	As soon as reasonably practicable, following 4.1A.2.1	The affected Subscriber shall either: a) identify replacement Organisation Certificates that form a part of any S1SP Held Device Security Credentials; or b) submit such Certificate Signing Requests (CSRs) that are required in order to acquire new Organisation Certificates that form a part of any S1SP Held Device Security Credentials.	Subscriber	4.1A.2.3
4.1A. 2.3	As soon as reasonably practicable, following 4.1A.2.2	The affected Subscriber shall submit Service Requests as required, in accordance with the provisions of the DCC User Interface Specification, to replace affected Organisation Certificates that form a part of any S1SP Held Device Security Credentials and shall, in doing so, monitor replacement of such affected Organisation Certificates.	Subscriber	4.1A.2.4
4.1A. 2.4	As soon as reasonably practicable, following 4.1A.2.3	Upon completion of its activities to replace affected Organisation Certificates that form a part of any S1SP Held Device Security Credentials, the affected Subscriber shall inform the DCC, via a secured electronic means: a) that its activities in respect of the replacement of Organisation Certificates that form a part of any S1SP Held Device Security Credentials have been completed; and b) of the Organisation Certificates that form a part	Subscriber	4.1A.2.6 or 4.1A.2.5 if appropriate

		of any S1SP Held Device Security Credentials for which replacement has not been completed, which shall be submitted as one or more Organisation Compromise Recovery Progress Files as set out in Appendix C for Subscribers that are not the DCC, or Other Compromise Recovery Progress Files as set out in Appendix E.		
4.1A. 2.5	As soon as reasonably practicable, following 4.1A.2.4	Where the affected Subscriber is not the Responsible Supplier for a SMETS1 Device that is notified in step 4.1A.1.1, the DCC shall notify the Responsible Supplier for affected SMETS1 Devices, via secured electronic means, which SMETS1 Devices were not recovered successfully, in one or more Organisation Recovery Progress Files as set out in Appendix C for Subscribers that are not the DCC, or Other Compromise Recovery Progress Files as set out in Appendix E where the Subscriber is the DCC.	DCC	Procedure as set out in section 4.1A.2.6 of this document
4.1 A.2. 6	As decided following consideration of the Recovery Action Risks, following 4.1A.2.4	The affected Subscriber shall consider the Recovery Action Risks before undertaking any of the associated actions. Where the Subscriber concludes that, at this time, Certificates should not be revoked and / or Private Keys not destroyed, the Subscriber shall inform the SMKI PMA as to the rationale. The affected Subscriber may, having considered the Recovery Action Risks, submit Certificate Revocation Requests (CRRs), as set out in the SMKI RAPP, in order to revoke affected Organisation Certificates that form a part of any S1SP Held Device Security Credentials. The DCC shall revoke Organisation Certificates that form a part of any S1SP Held Device Security Credentials in accordance with the provisions of Appendix B of the Code and the SMKI RAPP. The affected Subscriber may, having considered the Recovery Action Risks, destroy the Private Key associated with the revoked Organisation Certificate that forms a part of any S1SP Held Device Security Credentials.	Subscriber, DCC	Procedure as set out in section 4.1A.3 of this document

4.1A.3 Post-Recovery

The procedure as set out immediately below shall be used following recovery from the Compromise of a Private Key associated with an Organisation Certificate using the procedures as set out in sections 4.1A.1 and 4.1A.2 of this document.

Step	When	Obligation	Responsibility	Next step
4.1A.3.1	As soon as reasonably practicable, following completion of the procedure as set out in Section 4.1A.2 of this document	A SMKI ARO acting on behalf of the affected Subscriber shall, as soon as reasonably practicable, submit appropriate enduring Anomaly Detection Thresholds to the DCC, in accordance with the TADP. The DCC shall amend the relevant Anomaly Detection Thresholds in accordance with in the TADP.	DCC (DSP TAD)	4.1A.3.2
4.1A.3.2	As soon as reasonably practicable, following 4.1A.3.1	The DCC shall notify the SMKI PMA via a secured means of: a. the completion of the affected Subscriber's activities in respect of the procedure as set out in this section 4.1A; and b. the Organisation Certificates that form a part of any S1SP Held Device Security Credentials for which recovery was not completed, which may be provided in one or more which shall be Organisation Compromise Recovery Progress Files as set out in Appendix C for Subscribers that are not the DCC, or Other Compromise Recovery Progress Files as set out in Appendix E where the Subscriber is the DCC.	DCC	End of procedure

4.2. Method 2 - recovery by the DCC using the Recovery Private Key to place DCC Access Control Broker Certificates on affected SMETS2+ Devices

4.2.1 Pre-Recovery

The DCC shall execute the procedure as set out immediately below, following notification of the Compromise of the Private Key associated with the Public Key contained within an Organisation Certificate, in accordance with section 3.2 of this document, and notification from the affected Subscriber that it wishes to recover from the Compromise using the procedure set out in this section.

The affected Subscriber shall only request use of the procedure in this section having considered the Recovery Action Risks, including that section 4.2.1.3 requires the DCC to disable access, via the DCC, to affected Devices **before the SMKI PMA has reached a decision as to whether to proceed**. For clarity, this includes disablement of all prepayment functionality operated via the DCC.

Step	When	Obligation	Responsibility	Next Step
4.2.1.1	As soon as possible, following notification that the Subscriber wishes to recover using the procedure set out in section 4.2 of this document	The affected Subscriber should not take any action, prior to the SMKI PMA making a decision as to whether to use this procedure, that would prejudge that outcome unless they consider risks are sufficient to justify such advance actions. For clarity, this includes the actions to which Recovery Action Risks relate.	Subscriber, DCC	4.2.1.2
4.2.1.2	As soon as possible, following 4.2.1.1	A SMKI ARO acting on behalf of the affected Subscriber shall submit to the DCC, via secured electronic means, one or more Organisation Compromise Notification Files that each comply with Appendix B of this document and which together contain details of: a) the Incident to which the submission relates; b) the EUI-64 identifiers for the organisation that is the affected Subscriber to which the Compromise, or suspected Compromise relates; and c) for each Organisation Certificate that is affected by the Compromise, the serial number of the Organisation Certificate, the SMETS2+ Device IDs and the SMETS2+ Device Trust Anchor Cell which is populated with information from the affected Organisation Certificate. In addition, a SMKI ARO acting on behalf of the affected Subscriber shall, as soon as reasonably practicable, submit an Anomaly Detection Thresholds File to the DCC, which shall include amended Anomaly Detection Thresholds that they estimate will be required to resolve the Compromise. The affected Subscriber shall ensure that the Anomaly Detection Thresholds File is: a) submitted using the mechanism specified in the TADP; b) in the format as set out in section 5.3 of the TADP; and c) Digitally Signed using the Private Key	Subscriber	4.2.1.3

		corresponding with a File Signing Certificate issued to the Subscriber for the purpose of Digital Signing of files as set out in section 6 of the TADP.		
4.2.1.3	As soon as reasonably practicable, following 4.2.1.2	The DCC shall notify the SMKI PMA, via a secured electronic means, as soon as reasonably practicable, that a Subscriber wishes the DCC to recover from the Compromise of an Organisation Certificate or Organisation Certificates, using the procedure as set out in section 4.2.2 of this document (which requires use by the DCC of the Recovery Private Key to replace Certificates on SMETS2+ Devices). The DCC shall disable processing of communications destined for SMETS2+ Devices that it has been notified (in Step 4.2.1.2) are affected by the Compromise, for all Parties other than the DCC, by setting the SMI Status of those SMETS2+ Devices to 'recovery'. The DCC shall then request a decision from the SMKI PMA as to whether recovery should be carried out.	DCC	4.2.1.4
4.2.1.4	As soon as reasonably practicable, following 4.2.1.3	The DCC shall take all reasonable steps to provide information to the SMKI PMA to support the SMKI PMA's consideration of what procedural steps (if any) that should be taken in order to recover from the Compromise, where such information may include (but shall not be limited to): a) the number of affected SMETS2+ Devices, which may be provided in in one or more Organisation Compromise Notification Files that comply with Appendix B of this document; b) the extent to which the vulnerabilities that caused the Compromise have been addressed; c) the steps that DCC reasonably believes should be taken to recover from the Compromise; and d) anticipated timescales for recovery. The affected Subscriber shall take reasonable steps to provide information to the DCC in order for the DCC to provide such information to the SMKI PMA.	DCC, Subscriber	4.2.1.5
4.2.1.5	As soon as reasonably practicable, following 4.2.1.4	The DCC shall notify the relevant Network Parties via secured electronic means: a) that a Responsible Supplier wishes to recover using the procedure as set out in section 4.2.2 of this document; and b) the SMETS2+ Device IDs to which the Compromise relates, which shall be submitted in	DCC	4.2.1.6

		one or more Organisation Compromise Notification Files that comply with Appendix B of this document.		

4.2.1.6	As soon as reasonably practicable, following 4.2.1.5	Where the DCC believes that use of the Recovery Private Key is likely to be agreed by the SMKI PMA, the DCC shall identify such preparatory steps that it considers appropriate and either take such steps or instruct Parties to take steps as required, which may include (but shall not be limited to): a) determine the number of Key Custodians required to attend a Key Activation Ceremony for the Recovery Private Key (which may be greater than the minimum number required to activate the Recovery Private Key); b) inform such Key Custodians in respect of the Recovery Private Key, via a secured electronic means, of the date, time and location of a Key Activation Ceremony for the Recovery Private Key; c) notifying Key Custodians to attend the location at which a relevant Key Activation Ceremony may be required; and d) activities required to prepare such systems environments that are required to support activation and use of the Recovery Private Key.	DCC, Key Custodians	4.2.1.7

4.2.1.7	As soon as reasonably practicable, following 4.2.1.6	The SMKI PMA shall: a. determine which of the steps (if any) as set out in section 4.2.2 of this document should be executed, in order to recover from the Compromise; and b. confirm whether the timescales proposed	SMKI PMA, DCC	4.2.1.8

		by the DCC (following consultation with the affected Subscriber(s)) in step 4.2.1.4 for recovery, are approved or whether alternate timescales should apply; and c. if the SMKI PMA has determined that steps in this procedure should be undertaken, detail the timing of actions that the Subscriber is to undertake, in terms of Private Key destruction and Certificate revocations, pursuant to section 4.2.2.10. The SMKI PMA shall inform the DCC of its decision via a secured electronic means.		

4.2.1.8	As soon as reasonably practicable,	The DCC shall inform the affected Subscriber, of the SMKI PMA's decision whether or not to execute the procedure as set out in section 4.2.2,	DCC	If SMKI PMA determines that no

	following 4.2.1.7	and the timing of the section 4.2.2.10 actions that the Subscriber must undertake.		action is required, end of Procedure; otherwise procedure as set out in section 4.2.2 of this document

4.2.2 Execution of Recovery Procedure

The procedure as set out immediately below, amended as instructed by the SMKI PMA, shall be used following execution of the process as set out in section 4.2.1 of this document.

Step	When	Obligation	Responsibility	Next Step
4.2.2.1	As soon as possible, following notification from the SMKI PMA to the DCC that this procedure should be executed	Should the decision of the SMKI PMA be not to disable device communications, the DCC shall re-enable communications to any SMETS2+ Devices where communications have previously been disabled by setting the SMI Status of any SMETS2+ Device that had been set to "recovery" pursuant to Step 4.2.1.3 back to the SMI Status each such SMETS2+ Device held immediately prior to the execution of step 4.2.1.3 of this procedure.	DCC	4.2.2.2
4.2.2.2	As soon as reasonably practicable, following 4.2.2.1	Where: a. The DCC is to issue Commands using the Recovery Private Key, the DCC shall, where necessary, amend the relevant Anomaly Detection Thresholds; and b. the affected	DCC (DSP TAD)	4.1A.2.3

		Subscriber is to submit Service Requests to replace DCC Access Control Broker Certificates with Organisation Certificates, the Subscriber shall submit the necessary revised Anomaly Detection Thresholds in accordance with the TADP. The DCC shall inform, via secured electronic means, a SMKI SRO and the SMKI ARO that provided the details in step 4.2.1.2, that the Anomaly Detection Threshold values have been successfully amended.		
4.2.2.3	As soon as reasonably practicable, following 4.2.2.2	The DCC, in collaboration with Key Custodians, shall participate in a Key Activation Ceremony to activate the Recovery Private Key.	DCC	4.2.2.4

4.2.2.4	As soon as reasonably practicable, following 4.2.2.3	The DCC shall send Commands to each affected SMETS2+ Device, Digitally Signed using the Recovery Private Key, in order to replace Organisation Certificates in all of the Supplier Trust Anchor Cells on SMETS2+ Devices as notified in step 4.2.1.2, with a DCC Access Control Broker Certificate. In doing so, the DCC shall monitor its Command acknowledgement records, to determine the progress of recovery in respect of SMETS2+ Devices affected by the Compromise.	DCC	4.2.2.5
4.2.2.5	As soon as reasonably practicable, following 4.2.2.4	Upon completion of step 4.2.2.4 for each SMETS2+ Device, the DCC shall restore processing of communications destined for the affected SMETS2+ Device by setting the SMI Status to ‘recovered’.	DCC	4.2.2.6
4.2.2.6	As soon as reasonably practicable, following 4.2.2.5	The DCC shall notify the affected Subscriber of the replacement of Organisation Certificates on affected SMETS2+ Devices: a. upon replacement of affected Organisation Certificates on each SMETS2+ Device, using a DCC Alert issued via the DCC User Interface; and b. upon completion of attempts to replace all affected Organisation Certificates on relevant SMETS2+ Devices, in one or more Organisation Compromise Recovery Progress Files that comply with Appendix C of this document, provided via secured electronic means.	DCC	4.2.2.7
4.2.2.7	As soon as reasonably practicable, following 4.2.2.6	The affected Subscriber shall either: a. identify replacement Organisation Certificates; or b. submit such Certificate Signing Requests (CSRs) that are required in order to acquire new Organisation Certificates.	Subscriber	4.2.2.8
4.2.2.8	As soon as reasonably practicable, following 4.2.2.7	Where the DCC has recovered by replacing Organisation Certificates of the Responsible Supplier, with a DCC Access Control Broker Certificate, the Responsible Supplier shall submit Service Requests, in accordance with the provisions of the DCC User Interface Specification, to replace the DCC Access Control Broker Certificate in each Supplier SMETS2+ Device slot with a replacement Organisation Certificate, for	Responsible Supplier	4.2.2.9

		each SMETS2+ Device as established in step 4.2.1.1 within section 4.2 of this document. Upon successful completion of such replacement for a SMETS2+ Device, the DCC shall set the SMI Status for that SMETS2+ Device to the SMI Status that was in place immediately prior to the execution of step 4.2.2.1 of this procedure.		
4.2.2.9	As soon as reasonably practicable, following 4.2.2.8	The Responsible Supplier shall notify the DCC in respect of replacement of such DCC Access Control Broker Certificates with new Organisation Certificates, via secured electronic means and in one or more Organisation Compromise Recovery Progress Files that comply with Appendix C of this document.	DCC	Procedure as set out in Section 4.2.2.10 of this document.
4.2.2.10	As required by the SMKI PMA	Where required by the SMKI PMA, the affected Subscriber shall submit Certificate Revocation Requests (CRRs), as set out in the SMKI RAPP, in order to revoke affected Organisation Certificates. The DCC shall revoke Organisation Certificates in accordance with the provisions of the Appendix B of the Code and the SMKI RAPP. Where required by the SMKI PMA, the affected Subscriber shall destroy the Private Key associated with the revoked Organisation Certificate.	Subscriber, DCC	Procedure as set out in section 4.2.3 of this document

4.2.3 Post-Recovery

The procedure as set out immediately below shall be used following execution of the procedures as set out in sections 4.2.1 and 4.2.2 of this document.

Step	When	Obligation	Responsibility	Next Step
4.2.3.1	As soon as reasonably practicable, following completion of the procedure as set out in Section 4.2.2 of this document	A SMKI ARO acting on behalf of the affected Subscriber shall, as soon as reasonably practicable, submit appropriate enduring Anomaly Detection Thresholds to the DCC in accordance with the TADP. The DCC shall amend the relevant Anomaly Detection Thresholds to the values as submitted by the affected Subscriber, including performing the checks and validations set out in the TADP. The DCC shall reinstate its relevant Anomaly Detection Threshold values that were in place immediately prior to the temporary values used	DCC (DSP TAD)	4.2.3.2

		during the execution of the procedure set out in this Section 4.2 of this document.		

4.2.3.2	As soon as reasonably practicable, following 4.2.3.1	The DCC shall notify the SMKI PMA, via a secured means, of: a. whether the recovery from the Compromise has been successfully completed, which may be provided in one or more Organisation Compromise Recovery Progress Files that comply with Appendix C of this document; and b. the number of SMETS2+ Devices for which recovery was not successful.	DCC	End of procedure

4.3. Method 3 - recovery by the DCC using the Recovery Private Key to place new Organisation Certificates on SMETS2+ Devices

4.3.1 Pre-Recovery

The DCC shall execute the procedure as set out immediately below, following notification of the Compromise of the Private Key associated with the Public Key contained within an Organisation Certificate, in accordance with section 3.2 of this document, and notification from the relevant Subscriber that it wishes to recover from the Compromise using the procedure set out in this section.

The affected Subscriber shall only request use of the procedure in this section having considered the Recovery Action Risks, including that section 4.3.1.3 requires the DCC to disable access, via the DCC, to affected Devices **before the SMKI PMA has reached a decision as to whether to proceed**. For clarity, this includes all prepayment functionality operated via the DCC.

Step	When	Obligation	Responsibility	Next Step
4.3.1.1	As soon as possible, following notification that the Subscriber wishes to recover using the procedure set out in section 4.3.2 of this document	The affected Subscriber should not take any action, prior to the SMKI PMA making a decision as to whether to use this procedure, that would prejudge that outcome unless they consider risks are sufficient to justify such advance actions. For clarity, this includes the actions to which Recovery Action Risks relate.	Subscriber, DCC	4.3.1.2
4.3.1.2	As soon as reasonably practicable, following 4.3.1.1	A SMKI ARO acting on behalf of the affected Subscriber shall submit to the DCC, via secured electronic means, one or more files which shall be Organisation Compromise Notification Files as set out in Appendix B for Subscribers that are not the	Subscriber	4.3.1.3

		DCC, or Other Compromise Notification Files as set out in Appendix D where the Subscriber is the DCC. The affected Subscriber should ensure that such files together contain details of: a. the Incident to which the submission relates; b. the EUI-64 identifiers for the organisation that is the affected Subscriber to which the Compromise, or suspected Compromise relates; and c. for each Organisation Certificate that is affected by the Compromise, the serial number of the Organisation Certificate, the SMETS2+ Device IDs and the SMETS2+ Device Trust Anchor Cell which is populated with information from the affected Organisation Certificate.		

4.3.1.3	As soon as reasonably practicable, following 4.3.1.2	The DCC shall notify the SMKI PMA, via a secured electronic means, as soon as reasonably practicable, that a Subscriber wishes the DCC to recover from the Compromise of its Organisation Certificate using the procedure as set out in section 4.3.2 of this document (which requires use by the DCC of the Recovery Private Key to replace Organisation Certificates on SMETS2+ Devices). Where the Compromise affects Certificates where the Remote Party Role is supplier or wanProvider (with their GBCS meaning) the DCC shall disable processing of communications destined for those SMETS2+ Devices that it has been notified (in Step 4.3.1.2) that are affected by the Compromise, for all Parties other than the DCC, by setting the SMI Status of those SMETS2+ Devices to 'recovery'. The DCC shall request a decision from the SMKI PMA as to whether recovery should be carried out.	DCC	4.3.1.4

4.3.1.4	As soon as reasonably practicable, following 4.3.1.3	Where the affected Subscriber is not the Responsible Supplier for a SMETS2+ Device that is notified in step 4.3.1.2, the DCC shall notify the Responsible Supplier via secured electronic means: a. that a Subscriber wishes to recover using the procedure as set out in section 4.3.2 of this document; and b. the SMETS2+ Device IDs to which the Compromise relates, which shall be submitted in one or more one or more files which shall be Organisation Compromise Notification Files as set out	DCC	4.3.1.5

		in Appendix B for Subscribers that are not the DCC, or Other Compromise Notification Files as set out in Appendix D where the Subscriber is the DCC.		
4.3.1.5	As soon as reasonably practicable, following 4.3.1.4	The DCC shall take all reasonable steps to provide information to the SMKI PMA to support the SMKI PMA's consideration of what procedural steps (if any) that should be taken in order to recover from the Compromise, where such information may include (but shall not be limited to): a. the number of affected SMETS2+ Devices, which may be provided in one or more one or more files which shall be Organisation Compromise Notification Files as set out in Appendix B for Subscribers that are not the DCC, or Other Compromise Notification Files as set out in Appendix D where the Subscriber is the DCC; b. the extent to which the vulnerabilities that caused the Compromise have been addressed; c. the steps that DCC reasonably believes should be taken to recover from the Compromise; and d. anticipated timescales for recovery. The affected Subscriber shall take reasonable steps to provide information to the DCC in order for the DCC to provide such information to the SMKI PMA.	DCC, Subscriber	4.3.1.6
4.3.1.6	As soon as reasonably practicable, following 4.3.1.5	Where the DCC believes that use of the Recovery Private Key is likely to be required by the SMKI PMA, the DCC shall identify such preparatory steps that it considers appropriate and either take such steps or instruct Parties to take steps as required, which may include (but shall not be limited to): a. determine the number of Key Custodians required to attend a Key Activation Ceremony for the Recovery Private Key (which may be greater than the minimum number required to activate the Recovery Private Key); b. inform such Key Custodians in respect of the Recovery Private Key, via a secured electronic means, of the date, time and location of a Key Activation Ceremony for the Recovery Private Key; c. notifying Key Custodians to attend the	DCC, Key Custodians	4.3.1.7

		location at which a relevant Key Generation Ceremony or Key Activation Ceremony may be required; and d. activities required to prepare such systems environments that are required to support activation and use of the Recovery Private Key.		

4.3.1.7	As soon as reasonably practicable, following 4.3.1.6	The SMKI PMA shall: a. determine which of the steps (if any) as set out in section 4.2.2 of this document should be executed, in order to recover from the Compromise; b. confirm whether the timescales proposed by the DCC (following consultation with the affected Subscriber(s)) in step 4.3.1.5 for recovery, are approved or whether alternate timescales should apply; and c. if the SMKI PMA has determined that steps in this procedure should be undertaken, detail the actions that the Subscriber is to undertake, in	SMKI PMA, DCC	4.3.1.8

		terms of Private Key Destruction and Certificate revocations, including their timing. The SMKI PMA shall inform the DCC of its decision via a secured electronic means.		
4.3.1.8	As soon as reasonably practicable, following 4.3.1.7	The DCC shall notify the affected Subscriber, via secured electronic means, of the SMKI PMA's decision whether or not to execute the procedure (amended as directed by the SMKI PMA) as set out in section 4.3.2 and of the action the SMKI PMA requires the Subscriber to take in terms of Private Key destruction and Certificate revocation, and their timing. Where the affected Subscriber is not the Responsible Supplier for a SMETS2+ Device that is notified in step 4.3.1.2, the DCC shall notify the Responsible Supplier via secured electronic means, of the SMKI PMA's decision whether or not to execute the procedure (amended as directed by the SMKI PMA) as set out in section 4.3.2.	DCC	If SMKI PMA determines that no action is required, end of Procedure; otherwise procedure as set out in section 4.3.2 of this document

4.3.2 Execution of Recovery Procedure

The procedure as set out immediately below, amended as instructed by the SMKI PMA in accordance with section 4.3.1 of this document, shall be used, following execution of the process as set out in section 4.3.1 of this document.

Step	When	Obligation	Responsibility	Next Step
4.3.2.1	As soon as possible, following notification from the SMKI PMA to the DCC that this procedure should be executed	Should the decision of the SMKI PMA be not to disable device communications, the DCC shall re-enable communications to any devices where communications have previously been disabled by setting the SMI Status of any SMETS2+ Device that had been set to "recovery" pursuant to Step 4.3.1.3 back to the SMI Status each such SMETS2+ Device held immediately prior to the execution of step 4.3.1.3 of this procedure.	DCC	4.3.2.2

4.3.2.2	As soon as possible, following 4.3.2.1	Where necessary, the DCC shall temporarily amend the relevant Anomaly Detection Thresholds, for: a) the DCC that relate to the issuance of Commands to replace Organisation Certificates on SMETS2+ Devices, to enable replacement of affected Organisation Certificates as notified in section 4.3.1 of this document. The DCC shall inform, via secured electronic means, a SMKI SRO and the SMKI ARO that provided the details in step 4.3.1.2, that the Anomaly Detection Threshold values have been successfully amended.	DCC (DSP TAD)	4.3.2.3
4.3.2.3	As soon as reasonably practicable, following 4.3.2.2	The affected Subscriber shall either: a. identify replacement Organisation Certificates that are not Digitally Signed by the Compromised Private Key; or b. submit such Certificate Signing Requests (CSRs) that are required in order to acquire new Organisation Certificates that are not Digitally Signed by the Compromised Private Key. The affected Subscriber shall notify the DCC of the serial numbers of the replacement Organisation Certificates that should be used to populate a SMETS2+ Device and specify the SMETS2+ Device Trust Anchor Cell to which the replacement Organisation Certificate relates, which shall be provided via secured electronic means in one or more one or more files which shall be Organisation Compromise Notification Files as set out in Appendix B for Subscribers that are not the DCC, or Other Compromise Notification Files as set out in Appendix D where the Subscriber is the DCC.	Subscriber	4.3.2.4
4.3.2.4	As soon as reasonably practicable, following 4.3.2.3	The DCC, in collaboration with Key Custodians, shall participate in a Key Activation Ceremony to activate the Recovery Private Key.	DCC	4.3.2.5
4.3.2.5	As soon as reasonably practicable, following 4.3.2.4	The DCC shall send Commands to all SMETS2+ Devices, Digitally Signed using the Recovery Private Key, in order to replace affected Organisation Certificates on relevant SMETS2+ Devices as notified in step 4.3.1.1 with replacement Organisation Certificates as notified by the affected Subscriber. In doing so, the DCC	DCC	4.3.2.6

		shall monitor its Command acknowledgement records, to determine the progress of recovery in respect of SMETS2+ Devices affected by the Compromise.		
4.3.2.6	As soon as reasonably practicable, following 4.3.2.5	The DCC shall notify the affected Subscriber of the replacement of Organisation Certificates on affected SMETS2+ Devices: a. upon replacement of affected Organisation Certificates on each SMETS2+ Device, using a DCC Alert issued via the DCC User Interface; and b. upon completion of attempts to replace all affected Organisation Certificates on relevant SMETS2+ Devices, in one or more files which shall be Organisation Compromise Recovery Progress Files as set out in Appendix C for Subscribers that are not the DCC, or Other Compromise Recovery Progress Files as set out in Appendix E where the Subscriber is the DCC, provided by secured electronic means.	DCC	4.3.2.7
4.3.2.7	As soon as reasonably practicable, following 4.3.2.6	Upon completion of step 4.3.2.6 for each SMETS2+ Device, the DCC shall restore processing of communications destined for the affected SMETS2+ Device by setting the SMI Status for that SMETS2+ Device to the SMI Status that was in place immediately prior to the execution of step 4.3.2.1 of this procedure.	DCC	4.3.2.8
4.3.2.8	As soon as reasonably practicable, following 4.3.2.7	The DCC shall notify each Responsible Supplier for affected SMETS2+ Devices, by secured electronic means, which SMETS2+ Devices were not recovered successfully in one or more one or more files which shall be Organisation Compromise Recovery Progress Files as set out in Appendix C for Subscribers that are not the DCC, or Other Compromise Recovery Progress Files as set out in Appendix E where the Subscriber is the DCC.	DCC	Procedure as set out in Section 4.3.3 of this document.

4.3.3 Post-Recovery

The procedure as set out immediately below shall be used following execution of the procedures as set out in sections 4.3.1 and 4.3.2 of this document.

Step	When	Obligation	Responsibility	Next Step

4.3.3.1	As soon as reasonably practicable, following completion of the procedure as set out in Section 4.3.2 of this document	The DCC shall reinstate its relevant Anomaly Detection Threshold values that were in place immediately prior to the temporary values used during the execution of the procedure set out in this Section 4.3 of this document.	DCC (DSP TAD)	4.3.3.2
4.3.3.2	As soon as reasonably practicable, following 4.3.3.1	The DCC shall notify the SMKI PMA, via a secured electronic means, of: a. whether the recovery from the Compromise has been successfully completed, which may be provided in one or more files which shall be Organisation Compromise Recovery Progress Files as set out in Appendix C for Subscribers that are not the DCC, or Other Compromise Recovery Progress Files as set out in Appendix E where the Subscriber is the DCC; and b. the number of SMETS2+ Devices for which recovery was not successful.	DCC	End of procedure

5. Recovery using the Contingency Private Key

5.1 Pre-Recovery

The DCC shall execute the procedure as set out immediately below, following:

a) the notification of the Compromise of the Root OCA Private Key, in accordance with section 3.2 of this document; or

b) where the use of the Recovery Private Key has been unsuccessful (as set out in sections 4.2, 4.3, 6.2 and 6.3 of this document) and the DCC reasonably believes that the nature of the Compromise could require use of the Contingency Private Key.

The DCC shall only request use of the procedure in this section having considered the Recovery Action Risks, including that, for the time between the action in section 5.2.1 and those in section 5.3.2, access, via the DCC, to affected Devices will not be possible. For clarity, this includes all prepayment functionality operated via the DCC.

Step	When	Obligation	Responsibility	Next Step
5.1.1	As soon as reasonably practicable, following	The DCC shall notify the SMKI PMA and all affected Subscribers, via a secured electronic means, as soon as reasonably practicable, that a Compromise of the Root OCA Key has been	DCC	5.1.2

	notification of the Compromise of the Root OCA Private Key or escalation due to failure of recovery using the Recovery Private Key, in accordance with section 3.2 of this document	notified, or that use of the Recovery Private Key has been unsuccessful that the DCC reasonably believes that the nature of the Compromise could require use of the Contingency Private Key. The DCC shall also provide details to affected Subscribers of the affected SMETS2+ Devices and Organisation Certificates, in one or more Other Compromise Notification files which comply with Appendix D of this document. The DCC shall request a decision from the SMKI PMA as to whether recovery should be carried out.		
5.1.2	As soon as reasonably practicable, following 5.1.1	The DCC shall take all reasonable steps to provide information to the SMKI PMA to support the SMKI PMA's consideration of what procedural steps (if any) that should be taken in order to recover from the Compromise, where such information may include (but shall not be limited to): a. the affected SMETS2+ Devices and Subscribers, which may be provided in one or more Other Compromise Notification files which comply with Appendix D of this document; b. the extent to which DCC's monitoring indicates that there has been unauthorised use of the Root OCA Private Key; c. the extent to which the vulnerabilities that caused the Compromise have been addressed; d. information relevant to the SMKI PMA's consideration of the Recovery Action Risks; e. the steps that DCC reasonably believes should be taken to recover from the Compromise; and f. anticipated timescales for recovery.	DCC	5.1.3
5.1.3	As soon as reasonably practicable, following 5.1.2	Where the DCC believes that use of the Contingency Private Key is likely to be required by the SMKI PMA, it shall identify such preparatory steps that it considers appropriate and to either take such steps or instruct Parties to take steps as required, including (but not limited to): a. inform the requisite number of Key Custodians, via a secured electronic	DCC, Key Custodians	5.1.4

		means, that a Key Activation Ceremony for the Contingency Private Key is required (which may be greater than the minimum number required to activate the Contingency Private Key), and the date, time and location of each Key Activation Ceremony; b. notifying Key Custodians to attend the location at which a relevant Key Activation Ceremony may be required; and c. activities required to prepare the systems environment required to support activation and use of the Contingency Private Key.		
5.1.4	As soon as reasonably practicable, following 5.1.3	Having considered the Recovery Action Risks, the SMKI PMA shall: a. determine which of the steps (if any) as set out in section 4.2.2 of this document should be executed, in order to recover from the Compromise; b. confirm whether the timescales proposed by the DCC (following consultation with the affected Subscriber(s)) in step 5.1.2 for recovery, are	SMKI PMA, DCC	If SMKI PMA determines that no action is required, end of Procedure; otherwise 5.1.5

		approved or whether alternate timescales should apply; and c. for Certificates and Private Keys in the scope of section 5.1.6, determine which of the DCC controlled Private Keys are to be destroyed, and which of the DCC controlled Certificates are to be revoked and when. For clarity, the old Contingency Symmetric Key and old Contingency Private must not be destroyed until all Commands that are needed pursuant to section 5.2.8 (including for any		

		Device in the supply chain) have been created, since when they are destroyed, no further such Commands can be created. The SMKI PMA shall inform the DCC of its decision via a secured electronic means.		
5.1.5	As soon as reasonably practicable, following 5.1.4	The DCC shall notify affected Subscribers, via a secured electronic means, of the SMKI PMA's decision whether or not to execute the recovery procedure (amended as directed by the SMKI PMA) as set out in section 5.2.	DCC	Where required by SMKI PMA, 5.1.6; otherwise End of procedure
5.1.6	As directed by the SMKI PMA	The DCC shall execute steps in order, where applicable in accordance with the SMKI PMA's decision, to revoke: a. the Root OCA Certificate; b. the associated Issuing OCA Certificate(s) As described in section 5.1.4c, the DCC may be directed to update and lodge the relevant ARL in the SMKI Repository.	DCC	Procedure as set out in section 5.2 of this document

5.2 Execution of Recovery Procedure

The DCC shall execute the steps as notified by the SMKI PMA, in accordance with the procedure in section 5.1 of this document, which may include (but will not be limited to) some or all of the steps as set out in this section 5.2.

Step	When	Obligation	Responsibility	Next Step
5.2.1	As soon as reasonably practicable, following confirmation of Compromise and instruction from the SMKI PMA that recovery using the Contingency Private Key should be carried out	The DCC shall disable processing of communications destined for SMETS2+ Devices that are affected by the Compromise, for all Parties other than the DCC, by setting the SMI Status to 'recovery'.	DCC	5.2.2
5.2.2	As soon as possible, following 5.2.1	Where: a. The DCC is to issue Commands using the Contingency Private Key, the DCC shall, where necessary, amend the relevant Anomaly Detection Thresholds; and b. the affected Subscriber is to submit Service Requests to replace DCC Access Control	DCC (DSP TAD)	5.2.3

		Broker Certificates with Organisation Certificates, the Subscriber shall submit submit the necessary revised Anomaly Detection Thresholds in accordance with the TADP. The DCC shall inform, via secured electronic means, a SMKI SRO and the SMKI ARO that provided the details in step 5.2.2, that the Anomaly Detection Threshold values have been successfully amended.		
5.2.3	As soon as reasonably practicable, following 5.2.2	The DCC, shall conduct relevant Key Generation Ceremonies in accordance with the Organisation Certificate Policy and Organisation CPS and DCC local procedures, in order to generate: a. a new Root OCA Key Pair; and b. a new Issuing OCA Key Pair.	DCC	5.2.3a
5.2.3a	As soon as reasonably practicable, following 5.2.3	Where directed by the SMKI PMA, the DCC shall conduct relevant Key Generation Ceremonies in accordance with the	DCC (as DSP)	5.2.3b

		Organisation Certificate Policy and Organisation CPS, in order to generate a new Contingency Key Pair. The DCC shall make the public key available to the TSP.		
5.2.3b	As soon as reasonably practicable, following 5.2.3a	Where directed by the SMKI PMA, the DCC shall conduct relevant Key Generation Ceremonies in accordance with the Organisation Certificate Policy and Organisation CPS, in order to generate a new Contingency Symmetric Key. The DCC shall use the new Contingency Symmetric Key to encrypt the new Contingency Public Key to produce the value to be placed in the WrappedApexContingencyKey extension (with the meaning of IETF RFC 5934 section 9) in the new Root OCA Certificate.	DCC (as TSP)	5.2.4
5.2.4	As soon as reasonably practicable, following 5.2.3b	The DCC shall generate a new Root OCA Certificate, embedding the new wrappedApexContingencyKey that has been generated as part of the process as set out in step 5.2.4 of this document. The new Root OCA Certificate shall be Digitally	DCC (as TSP)	5.2.5

		Signed by the new Root OCA Private Key. The DCC shall generate a replacement Issuing OCA Certificate, signed by the new Root OCA Private Key.		
5.2.5	As soon as reasonably practicable, following 5.2.4	The DCC shall lodge the new Root OCA Certificate and Issuing OCA Certificate in the SMKI Repository.	DCC	5.2.6
5.2.6	As soon as reasonably practicable, following 5.2.5	The DCC, in collaboration with Key Custodians, shall participate in a Key Activation Ceremony to activate the old Contingency Private Key and the plain text version of the old Contingency Symmetric Key that were used to generate the wrappedApexContingencyKey that is stored within the old Root OCA Certificate that has been deployed to SMETS2+ Devices. To facilitate this, the DCC shall bring together all parts of the old Contingency Symmetric Key.	DCC (as DSP)	5.2.7
5.2.7	As soon as reasonably practicable, following 5.2.6	The DCC shall send Commands to all SMETS2+ Devices, Digitally Signed using the old Contingency Private Key and including the old Contingency Symmetric Key to	DCC	5.2.8

		enable activation, attaching the following Certificates (where applicable according to the SMETS2+ Device type) to the corresponding SMETS2+ Devices:
		a. a new Root OCA Certificate;
		b. a replacement new DCC Transitional CoS Certificate;
		c. a replacement new Recovery Certificate;
		d. a replacement new DCC Access Control Broker Certificate;
		e. a replacement new DCC WAN Provider Certificate; and
		f. a new DCC Access Control Broker Certificate which shall be placed in each Supplier SMETS2+ Device Trust Anchor Cell or Network Operator SMETS2+ Device Trust Anchor Cell in the corresponding SMETS2+ Device.		

5.2.8	As soon as reasonably practicable, following 5.2.7	Upon completion of step 5.2.7 for each SMETS2+ Device, the DCC shall restore processing of communications destined for the affected SMETS2+ Device by setting the SMI Status to 'recovered'.	DCC	5.2.9
5.2.9	As soon as reasonably practicable, following 5.2.8	The DCC shall monitor its Command acknowledgement records, to determine the progress of recovery in respect of SMETS2+ Devices affected by the Compromise.	DCC	5.2.10
5.2.10	As soon as reasonably practicable, following 5.2.9	The DCC shall notify the affected Subscriber of the replacement of Organisation Certificates on affected SMETS2+ Devices: a. upon replacement of affected Organisation Certificates on each SMETS2+ Device with a DCC Access Broker Certificate, via DCC Alert issued via the DCC User Interface to the affected Subscriber; and b. upon	DCC	5.2.11

		completion of attempts to replace all affected Organisation Certificates (for each affected Subscriber) on relevant SMETS2+ Devices, in one or more Other Compromise Recovery Progress Files that comply with Appendix E of this document, which shall be provided via secured electronic means.		
5.2.11	As soon as reasonably practicable, following 5.2.10	The DCC shall notify each Responsible Supplier for affected SMETS2+ Devices, via secured electronic means, in one or more Other Compromise Recovery Progress Files that comply with Appendix E of this document, which SMETS2+ Devices were not recovered successfully.	DCC	Procedure as set out in Section 5.3 of this document

5.3 Post Recovery

The procedure as set out immediately below shall be used following recovery from the Compromise of a Root OCA Private Key.

Step	When	Obligation	Responsibility	Next Step

5.3.1	As soon as reasonably practicable, following completion of the procedure as set out in Section 5.2 of this document	The affected Subscriber shall generate new Private Keys and Certificate Signing Requests (CSRs), and submit such CSRs that are required in order to acquire new associated Organisation Certificates.	Subscriber	5.3.2

5.3.2	As soon as reasonably practicable, following 5.3.1	The Responsible Supplier shall submit Service Requests, in accordance with the provisions of the DCC User Interface Specification, to replace: a. the DCC Access Control Broker Certificate in each Supplier SMETS2+ Device Trust Anchor Cell with a replacement Organisation Certificate that is Issued under the new Issuing OCA, for each SMETS2+ Device as established in step 5.2.2 within section 5.2 of this document; and b. the DCC Access Control Broker Certificate in each Network	Subscriber	5.3.3

		Operator SMETS2+ Device Trust Anchor Cell with an Organisation Certificate to which the Network Operator is the Subscriber that is Issued under the new Issuing OCA, for each SMETS2+ Device as established in step 5.2.2 within section 5.2 of this document. Upon successful completion of such replacement for a SMETS2+ Device, the DCC shall set the SMI Status for that SMETS2+ Device to the SMI Status that was in place immediately prior to the execution of step 5.2.1 of this procedure. The Responsible Supplier shall notify the DCC in respect of replacement of affected Organisation Certificates, via secured electronic means and in one or more Other Compromise Recovery Progress Files that comply with Appendix E of this document.		

5.3.3	As soon as reasonably practicable, following 5.3.2	A SMKI ARO acting on behalf of each affected Subscriber shall, as soon as reasonably practicable, submit appropriate enduring Anomaly Detection Thresholds to the DCC, which shall be submitted as a file as set out in section 5.1 of the TADP that is Digitally Signed using the Private Key corresponding with a File Signing Certificate issued to the Subscriber for the purpose of Digital Signing of files. The DCC shall amend the relevant Anomaly Detection Thresholds to the values as submitted by the affected Subscriber, including performing the checks and validations set out in the TADP. The DCC shall reinstate its relevant Anomaly Detection Threshold values that were in place immediately prior to the temporary values used during the execution of the procedure set out in this Section 5 of this document.	Subscriber, DCC (DSP TAD)	5.3.4

5.3.4	As soon as reasonably practicable, following 5.3.3	The DCC shall notify the SMKI PMA and affected Subscribers, via a secured means, of: a. whether the recovery from the Compromise has been successfully completed, which may be provided in one or more Other Compromise Recovery Progress Files that comply with Appendix E of this document.; and b. the number of	DCC	5.3.5

		SMETS2+ Devices for which recovery was not successful.		

5.3.5	As soon as reasonably practicable, following 5.3.4	If the compromised key material remains available to the DCC, then the DCC may be directed by the SMKI PMA to issue CRLs/ARLs for the impacted Organisation Certificates. The DCC may also be directed by the SMKI PMA to revoke and destroy affected Private Keys and Symmetric Keys, which may include: a. the old Root OCA Private Key; b. the old Issuing OCA Private Key(s); c. the old Contingency Private Key; and/or d. the old Contingency Symmetric Key.	DCC	End of procedure

6. Recovery from Compromise of a Contingency Private Key, Contingency Symmetric Key, Recovery Private Key or Issuing OCA Private Key

6.1 Recovery from Compromise of a Contingency Private Key or the Contingency Symmetric Key

This will replace only the Root OCA Certificate. All subordinate Certificates remain valid as the Root OCA Key Pair does not change.

6.1.1 Pre-Recovery

Where the DCC becomes aware that a Compromise to the Contingency Private Key or the Contingency Symmetric Key has occurred, the DCC shall raise an Incident in accordance with sections 2.1 and 2.2 of the Incident Management Policy and shall execute the procedure as set out immediately below.

Step	When	Obligation	Responsibility	Next Step
6.1.1.1	As soon as reasonably practicable, following notification of the Compromise of the Contingency Private Key or Contingency Symmetric Key, in accordance with section 3.2 of this document	The DCC shall notify the SMKI PMA, via a secured electronic means, as soon as reasonably practicable, that a Compromise, or suspected Compromise, of the Contingency Private Key or Contingency Symmetric Key has been notified. The DCC shall request a decision from the SMKI PMA as to whether recovery should be carried out.	DCC	6.1.1.2
6.1.1.2	As soon as reasonably practicable, following 6.1.1.1	The DCC shall take all reasonable steps to provide information to the SMKI PMA to support the SMKI PMA's consideration of what procedural steps (if any) that should be taken in order to recover from the Compromise, where such information may include (but shall not be limited to): a. the extent to which the vulnerabilities that caused the Compromise have been addressed; b. the extent to which DCC's monitoring indicates that there has been	DCC, SMKI PMA	6.1.1.3

		unauthorised use of the Contingency Private Key and/or Contingency Symmetric Key; c. the likely impact on Services if Recovery is carried out; d. the likely impact on Services if the Compromise were to be exploited; e. the steps that DCC reasonably believes should be taken to recover from the Compromise; and f. anticipated timescales for recovery.		

6.1.1.3	As soon as reasonably practicable, following 6.1.1.2	Where the DCC believes that replacement of the Contingency Key Pair and generation of a replacement Root OCA Certificate (and therefore a new Contingency Private Key and Contingency Symmetric Key) is likely to be required by the SMKI PMA, it shall identify such preparatory steps that it considers appropriate and to take steps as required, including (but not limited to): a. informing the requisite number of Key Custodians, via a secured electronic means, that a Key Generation Ceremony for the Contingency Key Pair, and for the Contingency Symmetric Key is required and the date, time and location of each such Key Generation Ceremony; b. notifying Key Custodians to attend the	DCC, Key Custodians	6.1.1.4

		relevant Key Generation Ceremony; and c. activities required to prepare such systems environment required to support: a. generation of a new Contingency Key Pair; b. creating a new M#N Share of the Contingency Private Key; c. generation of a new Contingency Symmetric Key; d. encryption of the new Contingency Public Key using the new Contingency Symmetric Key; e. for the new symmetric key, conducting Contingency Symmetric Key Splitting; f. generation of a replacement Root OCA Certificate, containing the Public Key from the current Root OCA Certificate and the new encrypted Contingency Public Key.		

6.1.1.4	As soon as reasonably practicable, following 6.1.1.3	The SMKI PMA shall: a. determine which of the steps (if any) as set out in section 5 4.2.2 of this document should be executed, in order to recover from the Compromise; b. confirm whether the timescales proposed by the DCC in step 6.1.1.3 for recovery, are approved or whether alternate timescales should apply; and c. consider preparing a communication for notifying Subscribers and instruct the DCC that the SMKI PMA will determine whether and, if so, what the timing of issue should be of any such a notification. The SMKI PMA shall inform the DCC of its decision via a secured electronic means.	SMKI PMA, DCC	If SMKI PMA determines that no action is required, end of procedure; otherwise 6.1.2

6.1.2 Execution of Recovery Procedure

The procedure as set out immediately below, amended as instructed by the SMKI PMA, shall be used following execution of the process as set out in section 6.1.1 of this document.

Step	When	Obligation	Responsibility	Next Step
6.1.2.1	As soon as reasonably practicable, following confirmation of Compromise and instruction from the SMKI PMA that this recovery procedure should be carried out	The DCC shall temporarily amend the Anomaly Detection Thresholds for the CS02b Update Security Credentials (anyExceptAbnormalRootByRecovery) Command (where those terms have their GBCS meaning) from 0 to the level required to instruct all affected SMETS2+ Devices. The DCC should perform the checks and validations set out in the TADP, for the DCC that relate to the issuance of recovery Commands to replace Root OCA Certificates on SMETS2+ Devices.	DCC	6.1.2.2
6.1.2.2	As soon as reasonably practicable, following 6.1.2.1	Where directed by the SMKI PMA, the DCC shall conduct relevant Key Generation Ceremonies in accordance with the Organisation Certificate Policy and Organisation CPS, in order to generate a new Contingency Key Pair. The DCC shall securely transport the new Contingency Public Key from DSP to TSP.	DCC (as DSP)	6.1.2.2a
6.1.2.2a	As soon as reasonably practicable, following 6.1.2.2	Where directed by the SMKI PMA, in accordance with 6.1.2.2, the DCC shall conduct relevant Key Generation Ceremonies in accordance with the Organisation Certificate Policy and Organisation CPS, in order to generate a new Contingency Symmetric Key. The DCC shall use the new Contingency Symmetric Key to encrypt the new Contingency Public Key to produce the value to be placed in the `WrappedApexContingencyKey` extension (with the meaning of IETF RFC 5934 section 9) in the new Root OCA Certificate.	DCC (as TSP)	6.1.2.3
6.1.2.3	As soon as reasonably practicable, following 6.1.2.2	The DCC shall generate a new Root OCA Certificate, embedding the new `WrappedApexContin`	DCC (as TSP)	6.1.2.4

		gencyKey that has been generated as part of the process as set out in step 6.1.2.2 of this document. The replacement Root OCA Certificate shall be Digitally Signed by the existing Root OCA Private Key.		
6.1.2.4	As soon as reasonably practicable, following 6.1.2.4	The DCC shall lodge the new Root OCA Certificate in the SMKI Repository.	DCC	6.1.2.5
6.1.2.5	As soon as reasonably practicable, following 6.1.2.4	The DCC shall: a. retrieve only the new Root OCA Certificate from the SMKI Repository; b. create the CS02b Update Security Credentials (anyExceptAbnormalRootByRecovery) Commands (where those terms have their GBCS meaning) as are required to replace the existing Root OCA Certificate alone on all SMETS2+ Devices (excluding IHDs) with the new Root OCA Certificate. c. In such Commands the DCC shall use the new Root OCA Certificate as both the NewWithOld and NewWithNew certificates (where those terms have their GBCS meaning); and d. Shall produce a list of the affected Devices by type in a proposed priority order of ESME, SAPC, HCALCS, GSME and PPMID and provide this to the SMKI PMA seeking guidance on any other prioritisation that might be needed.	DCC	6.1.2.6
6.1.2.6		On receipt of guidance from the SMKI PMA on any other priority order for recovery, the DCC shall send the resulting Commands to the target SMETS2+ Devices, undertaking retries where Responses indicate failure or Responses are not received.	DCC	6.1.2.7
6.1.2.7	As soon as reasonably	The DCC shall monitor Responses to the Commands sent pursuant to 6.1.2.5, to determine the progress of recovery in respect of replacement of the Root OCA Certificate on SMETS2+ Devices.	DCC	6.1.2.8

	practicable, following 6.1.2.6	The DCC shall also continue to monitor for any unauthorised use of the Contingency Private Key/Contingency Symmetric Key and shall take all reasonable steps to keep the SMKI PMA informed of progress throughout and of any such unauthorised use. Where directed by the SMKI PMA to amend the recovery steps as a result of unauthorised use, the DCC execute steps as notified by the SMKI PMA.		
6.1.2.8	As soon as reasonably practicable, following 6.1.2.6	The DCC shall update the SMKI PMA with regular progress reports throughout the Recovery process on the steps taken; on the volumes of SMETS2+ Devices that are satisfactorily updated; on the volumes remaining to be updated; and on the number, type and Responsible Supplier of failed retries and shall seek a direction on: a. when to stop further re-tries; b. if and when to notify Subscribers; and c. for details of any communication to be sent to Subscribers.	DCC	6.1.3
6.1.2.9	As soon as reasonably practicable, following 6.1.2.8	On receipt of notification from the SMKI PMA, the DCC shall follow the instruction to either: a. continue to make efforts to recover all or some of the affected SMETS2+ Devices; or b. cease the recovery action; and c. to notify Subscribers as required by the SMKI PMA.	DCC	6.1.3

6.1.3 Post-Recovery

The procedure as set out immediately below shall be used following recovery from the Compromise of a Contingency Private Key or the Contingency Symmetric Key.

Step	When	Obligation	Responsibility	Next Step
6.1.3.1	As soon as reasonably practicable, following completion of the procedure as set out in Section 6.1.2 of this document, as applicable	The DCC shall amend the Anomaly Detection Thresholds for the CS02b Update Security Credentials (anyExceptAbnormalRootByRecovery) Command (where those terms have their GBCS meaning) back to zero (0).	DCC	6.1.3.2

6.1.3.2	As soon as reasonably practicable, following 6.1.3.1	The DCC shall seek instruction from SMKI PMA as to whether to destroy the replaced Contingency Private Key and Contingency Symmetric Key.	DCC	6.1.3.3

6.1.3.3	As soon as reasonably practicable, following 6.1.3.2	The SMKI PMA shall consider the implications and handling instructions for unrecovered Devices and for Devices still in the supply chain. When SMKI PMA is satisfied that it is appropriate to destroy the replaced Contingency Private Key and Contingency Symmetric Key Pair, the SMKI PMA shall instruct the DCC to initiate the destruction process.	SMKI PMA	6.1.3.4

6.1.3.4	As soon as reasonably practicable, following 6.1.3.3	The DCC shall notify the SMKI PMA, via a secured means of: a. whether all the instructions from the SMKI PMA have been successfully completed; b. the number, type and Responsible Supplier associated with the SMETS2+ Devices for which recovery was not successful; c. confirmation that the replaced Contingency Private Key and Contingency Symmetric Key Pair have been destroyed; d. details of any communications received from Users in response to any communication provided by the SMKI PMA; e. details of any Lessons Learned by the DCC from the Recovery Event; and f. the estimated costs of the Recovery Event.	DCC	End of procedure

6.2 Recovery from Compromise of the Recovery Private Key

6.2.1 Pre-Recovery

The DCC shall execute the procedure as set out immediately below, following notification of the Compromise of the Recovery Private Key in accordance with section 3.2 of this document.

Step	When	Obligation	Responsibility	Next Step
6.2.1.1	As soon as reasonably practicable, following notification of the Compromise of the Recovery Private Key, in accordance with section 3.2 of this document	The DCC shall notify the SMKI PMA, via a secured electronic means, as soon as reasonably practicable, that a Compromise, or suspected Compromise, of the Recovery Private Key has been notified. The DCC shall request a decision from the SMKI PMA as to whether recovery should be carried out.	DCC	6.2.1.2
6.2.1.2	As soon as reasonably practicable, following 6.2.1.1	The DCC shall notify each Subscriber to Organisation Certificates, via secured electronic means that the Compromise of the Recovery Private Key has been notified and shall provide details of the affected SMETS2+ Devices and Organisation Certificates, in one or more Other Compromise Notification Files which comply with Appendix D of this document.	DCC	6.2.1.3
6.2.1.3	As soon as reasonably practicable, following 6.2.1.2	The DCC shall take all reasonable steps to provide information to the SMKI PMA to support the SMKI PMA's consideration of what procedural steps (if any) that should be taken in order to recover from the Compromise, where such information may include (but shall not be limited to): a. the number of affected SMETS2+ Devices and Subscribers, which may be provided in one or more Other Compromise Notification Files which comply with	DCC, SMKI PMA	6.2.1.4

		Appendix D of this document; b. the extent to which DCC's monitoring indicates that there has been unauthorised use of the Recovery Private Key; c. the extent to which the vulnerabilities that caused the Compromise have been addressed; d. the steps that DCC reasonably believes should be taken to recover from the Compromise; and e. anticipated timescales for recovery.		
6.2.1.4	As soon as reasonably practicable, following 6.2.1.3	Where the DCC believes that use of the Recovery Private Key is likely to be required by the SMKI PMA, it shall identify such preparatory steps that it considers appropriate and to either take such steps or instruct Parties to take steps as required, including (but not limited to): a. determine the number of Key Custodians required to attend a Key Activation Ceremony for the Recovery Private Key (which may be greater than the minimum number required to activate the Recovery Private Key); b. inform such Key Custodians in respect of the Recovery Private Key, via a secured electronic means, of the date, time and location of a Key Activation Ceremony for the Recovery Private Key; and c. notifying Key Custodians to attend the location at which a relevant Key Generation Ceremony or Key Activation Ceremony may be required; and d. activities required to prepare such systems environment required to support activation and use of the Recovery Private Key.	DCC, Key Custodians	6.2.1.5
6.2.1.5	As soon as reasonably practicable, following 6.2.1.4	The SMKI PMA shall: a. determine which of the steps (if any) as set out in section 4.2.2 of this document should be executed, in order to recover from the Compromise; and b. confirm whether the timescales proposed by the DCC (following consultation with the affected Subscriber(s)) in step 6.2.1.3 for recovery, are approved or whether alternate timescales should apply.	SMKI PMA, DCC	If SMKI PMA determines that no action is required, end of Procedure; otherwise 6.2.1.6

		The SMKI PMA shall inform the DCC of its decision via a secured electronic means.		
6.2.1.6	As soon as reasonably practicable, following 6.2.1.5	The DCC shall notify all Subscribers to Organisation Certificates, by secured electronic means, of the SMKI PMA's decision as to whether or not to execute the recovery procedure (amended as directed) as set out in section 6.2.2.	DCC	Procedure as set out in section 6.2.2 of this document

6.2.2 Execution of Recovery Procedure

The procedure as set out immediately below, amended as instructed by the SMKI PMA in accordance with section 6.2.1 of this document, shall be used when a Recovery Private Key has been Compromised.

Step	When	Obligation	Responsibility	Next Step
6.2.2.1	As soon as reasonably practicable, following confirmation of Compromise and instruction from the SMKI PMA that this recovery procedure should be carried out	Where necessary, the DCC shall temporarily amend the Anomaly Detection Thresholds for the DCC that relate to the issuance of Commands to replace Organisation Certificates on SMETS2+ Devices, to enable replacement of affected Organisation Certificates as notified in section 4.2.1 of this document.	DCC (DSP TAD)	6.2.2.2
6.2.2.2	As soon as reasonably practicable, following 6.2.2.1	The DCC shall: a. determine the number of Key Custodians required to attend a Key Activation Ceremony for the Recovery Private Key (which may be greater than the minimum number required to activate the Recovery Private Key); b. inform such Key Custodians in respect of the Recovery Private Key, via a secured electronic means, of the date, time and location of a Key Activation Ceremony for the Recovery Private Key; and c. participate in the Key Activation Ceremony, in accordance with the Organisation CPS, in order to activate the Recovery Private Key.	DCC, Key Custodians	6.2.2.3

6.2.2.3	As soon as reasonably practicable, following 6.2.2.2	The DCC shall: a. determine the number of Key Custodians required to attend a Key Generation Ceremony for the Recovery Private Key; b. inform such Key Custodians in respect of the Recovery Private Key, via a secured electronic means, of the date, time and location of a Key Generation Ceremony for the Recovery Private Key; and c. participate in the Key Generation Ceremony, as set out in the Organisation CPS, in order to generate a new Recovery Private Key and Recovery Certificate.	DCC, Key Custodians	6.2.2.4
6.2.2.4	As soon as reasonably practicable, following 6.2.2.3	The DCC shall send Commands to all SMETS2+ Devices to replace the Recovery Certificate held on such SMETS2+ Devices with the Recovery Certificate generated in step 6.2.2.3. Such Commands shall include the replacement Recovery Certificate and shall be Digitally Signed using the replaced Recovery Private Key. Once submitted, the DCC shall confirm for each affected SMETS2+ Device that the Command completed successfully and shall generate and maintain records of such confirmations, to support the DCC's confirmation of completion of the recovery procedure.	DCC (as DSP)	6.2.2.5
6.2.2.5	As soon as reasonably practicable, following 6.2.2.4	The DCC shall notify each Responsible Supplier for affected SMETS2+ Devices, by secured electronic means, which SMETS2+ Devices were not recovered successfully, in one or more Other Compromise Recovery Progress Files that comply with Appendix E of this document.	DCC	Procedure as set out in Section 6.2.3 of this document

6.2.3 Post-Recovery

The procedure as set out immediately below shall be used following recovery from the Compromise of a Recovery Private Key, as set out in section 6.2.2 of this document.

Step	When	Obligation	Responsibility	Next Step
6.2.3.1	As soon as reasonably practicable, following completion of the procedure	The DCC shall reinstate its relevant Anomaly Detection Threshold values that were in place immediately prior to the temporary values used during the execution of the procedure set out in this Section 6.2 of this document.	DCC (DSP TAD)	6.2.3.2

	as set out in Section 6.2.2 of this document, as applicable			

6.2.3.2	As soon as reasonably practicable, following 6.2.3.1	The DCC shall consider the Recovery Action Risks before undertaking any of the associated actions. Where the DCC concludes that, at this time, the Recovery Certificates should not be revoked and/or Private Keys not destroyed, the DCC shall inform the SMKI PMA as to the rationale. The DCC may, having considered the Recovery Action Risks, submit Certificate Revocation Requests (CRRs), as set out in the SMKI RAPP, in order to revoke affected Recovery Certificates. The DCC shall revoke Recovery Certificates in accordance with the provisions of Appendix B of the Code and the SMKI RAPP section 8.2. The DCC may, having considered the Recovery Action Risks, destroy the Recovery Private Key associated with the revoked Recovery Certificates.	DCC (as DSP)	6.2.3.3

6.2.3.3	As soon as reasonably practicable, following 6.2.3.2	The DCC shall notify the SMKI PMA, via secured electronic means of: a. whether the recovery from the Compromise has been successfully completed; and b. the number of SMETS2+ Devices for which recovery was not successful, which	DCC	End of procedure

		may be provided in one or more Other Compromise Recovery Progress Files that comply with Appendix E of this document.		

6.3 Recovery from Compromise of the Issuing OCA Private Key

6.3.1 Pre-Recovery

The DCC shall execute the procedure as set out immediately below, following notification of the Compromise of an Issuing OCA Private Key in accordance with section 3.2 of this document.

Step	When	Obligation	Responsibility	Next Step
6.3.1.1	As soon as reasonably practicable, following notification of the Compromise of an Issuing OCA Private Key, in accordance with section 3.2 of this document	The DCC shall notify the SMKI PMA and each Subscriber to affected Organisation Certificates, via a secured electronic means, as soon as reasonably practicable, that a Compromise of an Issuing OCA Private Key has been notified. The DCC shall request a decision from the SMKI PMA as to whether recovery should be carried out.	DCC	6.3.1.2
6.3.1.2	As soon as reasonably practicable, following 6.3.1.1	The DCC shall notify each Subscriber to Organisation Certificates, via secured electronic means, the Compromise of the Issuing OCA Private Key has been notified and shall provide details of the affected SMETS2+ Devices and Organisation Certificates, in one or more Other Compromise Notification files which comply with Appendix D of this document	DCC	6.3.1.3
6.3.1.3	As soon as reasonably practicable, following 6.3.1.2	The DCC shall take all reasonable steps to provide information to the SMKI PMA to support the SMKI PMA's consideration of what procedural steps (if any) that should be taken in order to recover from the Compromise, where such information may include (but shall not be limited to): a. the number of affected SMETS2+ Devices and Subscribers, which may be provided in one or more Other Compromise Notification files which comply with Appendix D of this document; b. the extent to which DCC's monitoring indicates that there has been	DCC, SMKI PMA	6.3.1.4

		unauthorised use of the Issuing OCA Private Key; c. the extent to which the vulnerabilities that caused the Compromise have been addressed; d. the steps that DCC reasonably believes should be taken to recover from the Compromise; e. anticipated timescales for recovery; and f. whether or not DCC is proposing to that multiple Compromises should be dealt with on a common basis and if so why the DCC proposes that they should be so treated.		
6.3.1.4	As soon as reasonably practicable, following 6.3.1.3	Where the DCC believes that use of the Recovery Private Key is likely to be required by the SMKI PMA, it shall identify such preparatory steps that it considers appropriate and to either take such steps or instruct Parties to take steps as required, including (but not limited to): a. determine the number of Key Custodians required to attend a Key Activation Ceremony for the Recovery Private Key (which may be greater than the minimum number required to activate the Recovery Private Key); b. inform such Key Custodians in respect of the Recovery Private Key, via a secured electronic means, of the date, time and location of a Key Activation Ceremony for the Recovery Private Key; c. notifying Key Custodians to attend the location at which a relevant Key Generation Ceremony or Key Activation Ceremony may be required; and d. activities required to prepare such systems environment required to support activation and use of the Recovery Private Key.	DCC, Key Custodians	6.3.1.5
6.3.1.5	As soon as reasonably practicable, following 6.3.1.4	The SMKI PMA shall: a. determine which of the steps (if any) as set out in section 4.2.2 of this document should be executed, in order to recover from the Compromise; and b. confirm whether the timescales proposed by the DCC (following consultation with the affected Subscriber(s)) in step 6.3.1.3	SMKI PMA, DCC	6.3.1.6

		for recovery, are approved or whether alternate timescales should apply. The SMKI PMA shall inform the DCC of its decision via a secured electronic means.		
6.3.1.6	As soon as reasonably practicable, following 6.3.1.5	The DCC shall notify all Subscribers to affected Organisation Certificates, via secured electronic means, of the SMKI PMA's decision as to whether or not to execute the recovery procedure (amended as directed) as set out in section 6.3.2.	DCC	If SMKI PMA determines that no action is required, end of Procedure; otherwise 6.3.1.7
6.3.1.7	As soon as reasonably practicable, following 6.3.1.6	The DCC shall consider the Recovery Action Risks before undertaking any of the associated actions. Where the DCC concludes that, at this time, the Recovery Certificates should not be revoked and / or Private Keys not destroyed, the DCC shall inform the SMKI PMA as to the rationale. Otherwise, the DCC shall revoke the Issuing OCA Certificate to which the affected Issuing OCA Private Key relates, and shall update and lodge the relevant Organisation ARL in the SMKI Repository. The DCC shall destroy the Issuing OCA Private Key that is Compromised or suspected to be Compromised.	DCC (as TSP)	Procedure as set out in Section 6.3.2 of this document

6.3.2 Execution of Recovery Procedure

The procedure as set out immediately below shall be executed in order to recover from the Compromise, or suspected Compromise of an Issuing OCA Private Key, following completion of the procedure as set out in section 6.3.1 of this document.

Step	When	Obligation	Responsibility	Next Step
6.3.2.1	As soon as reasonably practicable, following confirmation of Compromise and instruction from the SMKI PMA that this recovery procedure should be carried out	A SMKI ARO acting on behalf of each affected Subscribers shall, as soon as reasonably practicable, submit an Anomaly Detection Thresholds File to the DCC, which shall include amended Anomaly Detection Thresholds that they estimate will be required to resolve the Compromise. The affected Subscriber shall ensure that the Anomaly Detection Thresholds File is submitted in accordance with the requirements of TADP.	Subscriber	6.3.2.2
6.3.2.2	As soon as reasonably practicable, following 6.3.2.1	The DCC shall temporarily amend the Anomaly Detection Thresholds in accordance with the requirements of TADP, for affected Subscribers to allow submission of Service Requests to replace affected Organisation Certificates on SMETS2+ Devices. The DCC shall inform, via secured electronic means, a SMKI SRO acting and the SMKI ARO that provided the details in step 6.1.2.1, that the Anomaly Detection Threshold values have been successfully amended. The DCC shall amend its Anomaly Detection Thresholds that relate to the issuance of Commands to replace Organisation Certificates on SMETS2+ Devices, to enable replacement of the affected Recovery Certificate on SMETS2+ Devices.	DCC (DSP TAD)	6.3.2.3
6.3.2.3	As soon as reasonably practicable, following 6.3.2.2	The DCC shall generate a new Issuing OCA Key Pair and Issuing OCA Certificate, in accordance with the procedure as set out in the Organisation CPS.	DCC (as TSP)	6.3.2.4
6.3.2.4	As soon as reasonably	The DCC shall: a. determine the number of Key Custodians	DCC, Key Custodians	6.3.2.5

	practicable, following 6.3.2.3	required to attend a Key Generation Ceremony for the relevant Recovery Private Key; b. inform such Key Custodians in respect of the relevant Recovery Private Key, via a secured electronic means, of the date, time and location of a Key Generation Ceremony for the Recovery Private Key; and c. participate in the Key Generation Ceremony, as set out in the Organisation CPS, in order to generate a new Recovery Private Key and Recovery Certificate, Digitally Signed using the new Issuing OCA Private Key.		
6.3.2.5	As soon as reasonably practicable, following 6.3.2.4	The DCC shall: a. determine the number of Key Custodians required to attend a Key Activation Ceremony for the Recovery Private Key (which may be greater than the minimum number required to activate the Recovery Private Key); b. inform such Key Custodians in respect of the Recovery Private Key, via a secured electronic means, of the date, time and location of a Key Activation Ceremony for the Recovery Private Key; and c. participate in the Key Activation Ceremony, in accordance with the Organisation CPS, in order to activate the Recovery Private Key.	DCC, Key Custodians	6.3.2.6
6.3.2.6	As soon as reasonably practicable, following 6.3.2.5	The DCC shall send Commands to all SMETS2+ Devices to replace the Recovery Certificate held on such SMETS2+ Devices with the Recovery Certificate generated in step 6.3.2.4. Such Commands shall include the replacement Recovery Certificate and shall be Digitally Signed using the replaced Recovery Private Key. Once submitted, the DCC shall confirm for each affected SMETS2+ Device that the Command completed successfully and shall generate and maintain records of such confirmations, to support the DCC's confirmation of completion of the recovery procedure. The DCC shall notify each organisation as established in step 6.3.1.3, via a secured electronic means and using one or more Other Compromise Recovery Progress Files that	DCC (as DSP)	6.3.2.7

		comply with Appendix E of this document, of the list of SMETS2+ Devices where the replacement of the Recovery Certificate has been successfully completed.		
6.3.2.7	As soon as reasonably practicable, following 6.3.2.6	Each affected Subscriber shall either: a. identify replacement Organisation Certificates that are not Digitally Signed by the Compromised Issuing OCA Private Key; or b. submit such Certificate Signing Requests (CSRs) that are required in order to acquire new Organisation Certificates that are Digitally Signed by the new Issuing OCA Private Key.	Subscriber	6.3.2.8
6.3.2.8	As soon as reasonably practicable, following 6.3.2.7	Each affected Subscriber shall submit Service Requests, in accordance with the provisions of the DCC User Interface Specification, in order to replace all Organisation Certificates for which it is the Subscriber that are held on SMETS2+ Devices and are signed using the Compromised Issuing OCA Private Key, with new Organisation Certificate as identified in accordance with step 6.3.2.7 that are signed by the new Issuing OCA Private Key that is generated in accordance with step 6.3.2.3. Following attempts to replace affected Organisation Certificates on SMETS2+ Devices, each affected Subscriber shall notify the DCC in respect of replacement of affected Organisation Certificates with new Organisation Certificates, via secured electronic means and in one or more Other Compromise Recovery Progress Files that comply with Appendix E of this document.	Subscriber	6.3.2.9
6.3.2.9	As soon as reasonably practicable, following 6.3.2.8	The DCC shall: a. monitor its records of replacement by affected Subscribers against the list as has been compiled in step 6.3.1.2, to identify successful replacement; b. identify any failures to replace affected Organisation Certificates that have been Digitally Signed using the Issuing OCA Private Key that has been Compromised; and c. monitor revocation of Organisation Certificates that are Digitally Signed using the Compromised Issuing OCA Private Key.	DCC	6.3.2.10

6.3.2.10	As soon as reasonably practicable, following 6.3.2.9	The DCC shall notify each Responsible Supplier for affected SMETS2+ Devices, via secured electronic means and using one or more Other Compromise Recovery Progress Files that comply with Appendix E of this document, the SMETS2+ Devices for which replacement of the Recovery Certificate or affected Organisation Certificates was not successfully completed.	DCC	Procedure as set out in Section 1.1.1 of this document

6.3.3 Post-Recovery

The procedure as set out immediately below shall be used following recovery from the Compromise of an Issuing OCA Private Key.

Step	When	Obligation	Responsibility	Next Step
6.3.3.1	As soon as reasonably practicable, following completion of the procedure as set out in Section 6.3.2 of this document	A SMKI ARO acting on behalf of each affected Subscriber shall, as soon as reasonably practicable, submit appropriate enduring Anomaly Detection Thresholds to the DCC in accordance with the requirements of TADP. The DCC shall amend the relevant Anomaly Detection Thresholds in accordance with the requirements of TADP.	DCC (DSP TAD)	6.3.3.2
6.3.3.2	As soon as reasonably practicable, following 6.3.3.1	The DCC shall notify the SMKI PMA, via a secured electronic means of: a. whether the recovery from the Compromise has been successfully completed; and b. the number of SMETS2+ Devices for which recovery was not successful, which may be provided in one or more Other Compromise Recovery Progress Files that comply with Appendix E of this document.	DCC	End of procedure

7. Replacement of an XML Signing Private Key

The procedures for revoking an Organisation Certificate associated with an XML Signing Private Key that is Compromised is laid out in SEC Appendix D - SMKI RAPP section 8.2.

7.1 XML Signing Private Key destruction considerations

XML Signing Private Keys should not be capable of being used to sign any Commands pursuant to GBCS. In accordance with Section 3.3.1 of Appendix AD of the SEC, it is a requirement on Parties that each XML Signing Private Key must be a separate dedicated Key that is not be used for communication with Devices (i.e. different to that used to sign the GBCS Payload within Signed Pre-Commands). However, this separation is not currently a requirement in relation to DCC.

XML Signing Private Keys should also be different to any other Private Keys within the scope of this document. For Parties, such other Private Keys would have a key usage of key agreement only, as per the Organisation Certificate Policy, and so they cannot be used for any Digital Signature purpose.

Thus, recovery in relation to XML Signing Private Keys should be capable of being independent of other recovery methods. However, if the Compromise, or suspected Compromise, extends to Private Keys whose recovery is dealt with by other sections in this document, careful consideration should be given to the timing and sequencing of those other recovery steps, with steps to destroy XML Signing Private Keys and revoke associated Certificates.

To illustrate with the example of an XML Signing Private Key used by a Supplier Party to sign Service Requests:

Should the XML Signing Private Key be destroyed or the associated Organisation Certificate be revoked prior to either Method 1 or Method 2 recovery on a related Private Key being carried out, this would prevent the User from having Service Requests and Signed Pre-Commands successfully processed by the DCC until the XML Signing Private Key has been replaced and the corresponding replacement Organisation Certificate has been created by the DCC. This is the case even if the Private Key used to Digitally Sign the GBCS Payload held within Signed Pre-Commands has not been destroyed and the corresponding Organisation Certificate has not been revoked.

Therefore, it is important for Subscribers to consider the sequence of Private Key destruction and Organisation Certificate revocation when in such a recovery scenario. Specifically the Subscriber shall consider the Recovery Action Risks before undertaking such steps.

8. Periodic testing of the SMKI Recovery Procedure

8.1 Testing Arrangements

This section describes the DCC's obligations in respect of periodic testing of recovery procedures, in accordance with the provisions of Section L10.1(d) of the Code. At least once every year, the DCC shall:

a) develop a testing plan and a series of testing scenarios which the DCC will conduct in a systems environment which will only be accessible by the DCC, which are representative of the Enrolled Smart Metering Systems and shall take account of any lessons learned from each previous execution of the SMKI Recovery Procedure to recover from a Compromise. The testing plan and testing scenarios will be conducted by the DCC and may include (but shall not be limited to) the following:

i. the means by which Key Custodians are notified and participate in Key Generation Ceremonies and/or Key Activation Ceremonies;

ii. generation of new DCC Key Material, including the Contingency Key Pair, the Recovery Key Pair and the Contingency Symmetric Key used to encrypt the Contingency Public Key;

iii. processes relating to interactions between the DCC and the SMKI PMA in order to determine what steps (if any) should be taken when the use of the Recovery Private Key or Contingency Private Key would be required to recover from a Compromise;

iv. preparation of system environments required to support the SMKI Recovery Procedure;

v. issuance of Commands that are Digitally Signed using the Recovery Private Key and/or Contingency Private Key, and validation that such Commands are successful;

vi. testing of issuance of DCC Alerts following replacement of affected Organisation Certificates in accordance with the SMKI Recovery Procedure; and

vii. transfer of files between DCC and Subscribers to support the execution of the SMKI Recovery Procedure.

b) develop a testing plan and a series of testing scenarios, and conduct such testing scenarios in a systems environment that is available to all Subscribers, which may include (but is not limited to) scenarios a)(vi) and a)(vii) as set out immediately above, along with replacement of Organisation Certificates on SMETS2+ Devices or S1SP Held Device Security Credentials and that are initiated via Service Requests issued by Subscribers.

c) seek input from Subscribers to Organisation Certificates in relation to those testing scenarios that require participation by Subscribers, and take such input into account when proposing and agreeing the testing scenarios with the SMKI PMA;

d) agree such testing scenarios with the SMKI PMA;

e) create test data based upon data collected by the DCC and, where necessary, acquired from Parties;

f) maintain a test environment in order to carry out such periodic testing of the SMKI Recovery Procedure;

g) carry out testing of the SMKI Recovery Procedure for agreed scenarios; and

h) provide a report to the SMKI PMA and Subscribers to Organisation Certificates following periodic testing, which shall detail the success or otherwise of such testing, proposed amendments to the SMKI Recovery Procedure, and any issues arising that require PMA consideration.

In respect of periodic testing of the SMKI Recovery Procedure:

i) SMKI Users shall provide such reasonable assistance to the DCC as is required to support testing; and

j) The SMKI PMA shall review reports from periodic testing and shall direct the DCC, as necessary, to update the SMKI Recovery Procedure.

Appendix A: Communication Formats

In Appendices B to E of this document, each of the CSV files specified shall be encoded using the ASCII character set and:

- must have a comma "," as the field separator;
- must have a line feed character 0x0A as the record separator, which in this section is indicated by the " ▲" character; and

- may include consecutive comma separators to the left of a record separator to specify that a field has a null value. Where this is the case, DCC shall interpret consecutive commas within a record to indicate a null value.

Some spreadsheets output a carriage return line feed 0x0D0A as the record separator for CSV files and/or do not terminate CSV files with a record separator. Each User submitting a CSV file that is to be Digitally Signed using the Private Key associated with a File Signing Certificate shall, prior to Digitally Signing that file, ensure that:

- the CSV file is formatted to ensure that each record has a separator which is a 0x0A character and that any 0x0D character is removed from the file; and

- the CSV file is terminated with a 0x0A character.

Details of the function of the software utility and the method of Digital Signing of files to support the recovery procedures are contained within section 6 of the TADP.

Appendix B: Organisation Compromise Notification File

Due to the differences in the validation mechanisms in the SMETS1 and SMETS2+ system, the terminology used for Organisation Certificates is different. For the purposes of this Appendix, a SMETS1 Notified Critical Supplier/Network Operator Certificate is considered equivalent to a SMETS2+ Supplier/Network Operator Digital Signature Certificate. A Notified Non-Critical Supplier/Network Operator Certificate is equivalent to a Supplier/Network Operator Key Agreement Certificate. On compromise, these Organisation Certificates shall be included in the corresponding parameters in the Notification File. Pre-payment Key Agreement Certificates have no corresponding SMETS1 equivalent. A SMETS1 Supplier does not need to populate this field.

Each Organisation Compromise Notification File shall be in the format set out in this Appendix and shall have a filename of the form:

a) *OC_Priority_UserID_IncidentID_N_FileNum*.csv

Where:

a) *OC* denotes that the file relates an Organisation Compromise.

b) *Priority* contains an integer value which shall be set to a value of 1 or 2, where a lesser value denotes that the file has a higher priority than a file submitted in respect of the same Incident with a Priority field containing a higher value. Where the Subscriber submitting the Organisation Compromise Notification File wishes to apply a priority to Organisation Certificate replacement recovery activities, it shall determine such priority values and include the integer priority value within the filename for each Organisation Compromise Notification File submitted.

c) *UserID* contains the EUI-64 Compliant identifier for:

- the affected Subscriber submitting the file, where an affected Subscriber is submitting the file to the DCC; or

- the Subscriber to which the file is being provided, unless the file is being submitted to the SMKI PMA, where the file is being submitted to a Subscriber by the DCC; or

- the DCC, where the file is being submitted to the SMKI PMA by the DCC.

d) *IncidentID* contains the Incident reference number provided as set out in section 3.2 of this document.

e) *N* denotes that the file is a notification of affected Organisation Certificates and Devices.

f) *FileNum* is an integer value, used to distinguish between data that is split across multiple files due to exceeding the maximum permitted number records per file, which is set out immediately below.

Each Organisation Compromise Notification File shall be generated in accordance with the procedure set out immediately below:

a) an "initial" CSV file shall be created, which shall contain the following records:

- UserID ▲
- Device_ID, Affected_Certificate_Serial_Number_DS,

  Affected_Certificate_Serial_Number_KAK,

  Affected_Certificate_Serial_Number_KAKPP,

  Replacement_Certificate_Serial_Number_DS,

  Replacement_Certificate_Serial_Number_KAK,

  Replacement_Certificate_Serial_Number_KAKPP *(repeated for each affected Device, with no more than 1 million such records permitted within any file, or any larger number of records as directed by the SMKI PMA)* ▲

b) a File Signing Certificate_ID shall be appended to the end of the "initial" file, comprising:

- all of the attributes contained within the 'Issuer' field in the File Signing Certificate, including attribute names, equals signs and values, which shall be encoded in URL format such that it does not contain any special characters, followed by a comma; and
- the Certificate serial number obtained from the 'serialNumber' field in the File Signing Certificate, followed by a 0x0A character; and

c) a Digital_Signature shall be generated from the concatenation of the "initial" CSV file and the File Signing Certificate_ID and appended as a record to the end of the CSV file, in accordance with the procedure set out in Section 6 of the TADP.

Where:

a) The *UserID* field contains the EUI-64 Compliant identifier for:

- the affected Subscriber submitting the file, where an affected Subscriber is submitting the file to the DCC; or
- the Subscriber to which the file is being provided, unless the file is being submitted to the SMKI PMA, where the file is being submitted to a Subscriber by the DCC; or
- the DCC, where the file is being submitted to the SMKI PMA by the DCC.

b) The Device_ID field contains the Device ID.

c) The Affected_Certificate_Serial_Number_DS field contains the Organisation Certificate serial number of the Organisation Certificate affected by the Compromise that is used to populate the Digital Signing Trust Anchor Cell on affected Devices.

d) The Affected_Certificate_Serial_Number_KAK field contains the Organisation Certificate serial number of the Organisation Certificate affected by the Compromise that is used to populate the Key Agreement Key Trust Anchor Cell on affected Devices.

e) The Affected_Certificate_Serial_Number_KAKPP field contains the Organisation Certificate serial number of the Organisation Certificate affected by the Compromise that is used to populate the prepayment Key Agreement Key Trust Anchor Cell on affected Devices. Where the Subscriber that is submitting the file is a Network Party, the Affected_Certificate_Serial_Number_KAKPP field shall not be populated.

f) The Replacement_Certificate_Serial_Number_DS field contains the Organisation Certificate serial number for the Organisation Certificate to be used to populate the Digital Signing Device Trust Anchor Cell. This field shall not be populated where the relevant step of the SMKI Recovery Procedure does not require an affected Subscriber to provide replacement Organisation Certificates that the DCC will use to populate Devices' Trust Anchor Cells using the Recovery Private Key or Contingency Private Key.

g) The Replacement_Certificate_Serial_Number_KAK field contains the Organisation Certificate serial number for the Organisation Certificate to be used to populate the Key Agreement Key Device Trust Anchor Cell. This field shall not be populated where the relevant step of the SMKI Recovery Procedure does not require an affected Subscriber to provide replacement Organisation Certificates that the DCC will use to populate Devices' Trust Anchor Cells using the Recovery Private Key or Contingency Private Key.

h) The Replacement_Certificate_Serial_Number_KAKPP field contains the Organisation Certificate serial number for the Organisation Certificate to be used to populate the prepayment Key Agreement Key Device Trust Anchor Cell. This field shall not be populated where the relevant step of the SMKI Recovery Procedure does not require an affected Subscriber to provide replacement Organisation Certificates that the DCC will use to populate Devices' Trust Anchor Cells using the Recovery Private Key or Contingency Private Key.

i) The File_Signing Certificate_ID field contains the File Signing Certificate ID, which shall not contain a value when the file is issued by the DCC.

j) The Digital_Signature field contains the Digital Signature, which shall not contain a value when the file is issued by the DCC.

Where multiple Organisation Compromise Notification Files are submitted by an affected Subscriber to the DCC in respect of single IncidentID, the DCC shall process the files in order of Priority value, where files with a lower Priority value shall be processed first.

Appendix C: Organisation Compromise Recovery Progress File

Each Organisation Compromise Recovery Progress File shall be in the format set out in this Appendix and shall have a filename of the form:

k) *OC_Priority_UserID_IncidentID_P_FileNum*.csv

Where:

a) *OC* denotes that the file relates an Organisation Compromise.

b) *Priority* contains an integer value which shall be set to 1 or 2, where a lesser value denoting that the file has a higher priority than a file submitted in respect of the same Incident with a Priority field containing a higher value. Such priority values shall have the same value as the corresponding Organisation Compromise Notification File.

c) *UserID* contains the EUI-64 Compliant identifier for:

- the affected Subscriber submitting the file, where an affected Subscriber is submitting the file to the DCC; or

- the Subscriber to which the file is being provided, unless the file is being submitted to the SMKI PMA, where the file is being submitted to a Subscriber by the DCC; or

- the DCC, where the file is being submitted to the SMKI PMA by the DCC.

d) *IncidentID* contains the Incident reference number provided as set out in section 3.2 of this document.

e) *P* denotes that the file is a notification of progress in respect of replacement of affected Certificates and Devices.

f) *FileNum* is an integer value, used to distinguish between data that is split across multiple files due to exceeding the maximum permitted number records per file, which is set out immediately below.

Each Organisation Compromise Recovery Progress File shall be generated in accordance with the procedure set out immediately below:

a) an "initial" CSV file shall be created, which shall contain the following records:

- UserID ▲

- Device_ID, Overall_status, Overall_status_description,

  Affected_Certificate_Serial_Number_DS,

  Affected_Certificate_Serial_Number_KAK,

  Affected_Certificate_Serial_Number_KAKPP,

  Replacement_Certificate_Serial_Number_DS,

  Replacement_Certificate_Serial_Number_KAK,

  Replacement_Certificate_Serial_Number_KAKPP, Replacement_Status_DS, Replacement_Status_KAK, Replacement_Status_KAKPP *(repeated for each affected Device, with no more than 1 million such records permitted within any file, or any larger number of records as directed by the SMKI PMA)* ▲

b) a File Signing Certificate_ID shall be appended to the end of the "initial" CSV file, comprising:

- all of the attributes contained within the 'Issuer' field in the File Signing Certificate, including attribute names, equals signs and values, which shall be encoded in URL format such that it does not contain any special characters, followed by a comma; and

- the Certificate serial number obtained from the 'serialNumber' field in the File Signing Certificate, followed by a 0x0A character; and

c) a Digital_Signature shall be generated from the "initial" CSV file and appended as a record to the end of the CSV file, in accordance with the procedure set out in Section 6 of the TADP.

Where:

a) The UserID field contains the EUI-64 Compliant identifier for:

- the affected Subscriber submitting the file, where an affected Subscriber is submitting the file to the DCC; or

- the Subscriber to which the file is being provided, unless the file is being submitted to the SMKI PMA, where the file is being submitted to a Subscriber by the DCC; or

- the DCC, where the file is being submitted to the SMKI PMA by the DCC.

b) The Device_ID field contains the Device ID.

c) The Overall_status field indicates acceptance or rejection by the DCC of each device identified in the Compromise Notification form

d) The Overall_status_description field indicates the reason for any rejection

e) The Affected_Certificate_Serial_Number_DS field contains the Organisation Certificate serial number of the Organisation Certificate affected by the Compromise that is used to populate the Digital Signing Trust Anchor Cell on affected Devices, where applicable.

f) The Affected_Certificate_Serial_Number_KAK field contains the Organisation Certificate serial number of the Organisation Certificate affected by the Compromise that is used to populate the Key Agreement Key Trust Anchor Cell on affected Devices, where applicable.

g) The Affected_Certificate_Serial_Number_KAKPP field contains the Organisation Certificate serial number of the Organisation Certificate affected by the Compromise that is used to populate the pre-payment Key Agreement Key Trust Anchor Cell on affected Devices, where applicable.

h) The Replacement_Certificate_Serial_Number_DS field contains the Organisation Certificate serial number for the Organisation Certificate to be used to populate the Digital Signing Device Trust Anchor Cell. This field shall not be populated where the relevant step of the SMKI Recovery Procedure does not require an affected Subscriber to provide replacement Organisation Certificates that the DCC will use to populate Devices' Trust Anchor Cells using the Recovery Private Key or Contingency Private Key.

i) The Replacement_Certificate_Serial_Number_KAK field contains the Organisation Certificate serial number for the Organisation Certificate to be used to populate the Key Agreement Key Device Trust Anchor Cell. This field shall not be populated where the relevant step of the SMKI Recovery Procedure does not require an affected Subscriber to provide replacement Organisation Certificates that the DCC will use to populate Devices' Trust Anchor Cells using the Recovery Private Key or Contingency Private Key.

j) The Replacement_Certificate_Serial_Number_KAKPP field contains the Organisation Certificate serial number for the Organisation Certificate to be used to populate the prepayment Key Agreement Key Device Trust Anchor Cell. This field shall not be populated where the relevant step of the SMKI Recovery Procedure does not require an affected Subscriber to provide replacement Organisation Certificates that the DCC will use to populate Devices' Trust Anchor Cells using the Recovery Private Key or Contingency Private Key.

k) The Replacement_Status_DS field contains a value which is one of the permitted response code values for Service Request 6.15.1, as set out in the first column of Table 7 in section 4.1A.3.3 of the Message Mapping Catalogue, in relation to the replacement information from the affected Organisation Certificate in the Digital Signing Trust Anchor Cell on a Device.

l) The Replacement_Status_KAK field contains a value which is one of the permitted response code values for Service Request 6.15.1, as set out in the first column of Table 7 in section 4.1A.3.3 of the Message Mapping Catalogue, in relation to the replacement of information from the affected Organisation Certificate in the Key Agreement Key Trust Anchor Cell on a Device.

m) The Replacement_Status_KAKPP field contains a value which is one of the permitted response code values for Service Request 6.15.1, as set out in the first column of Table 7 in section 4.1A.3.3 of the Message Mapping Catalogue, in relation to the replacement of information from the affected Organisation Certificate in the prepayment Key Agreement Key Trust Anchor Cell on a Device.

n) The File_Signing Certificate_ID field contains the File Signing Certificate ID, which shall not contain a value when the file is issued by the DCC.

o) The Digital_Signature field contains the Digital Signature, which shall not contain a value when the file is issued by the DCC.

Appendix D: Other Compromise Notification File

Each Other Compromise Notification File shall be in the format set out in this Appendix and shall have a filename of the form:

p) *OTH_UserID_IncidentID_N_FileNum*.csv

Where:

a) *OTH* denotes that the file relates to notification of affected Devices for a Compromise not applicable to Appendices B or C of this document.

b) *UserID* contains the EUI-64 Compliant identifier for:

- the Subscriber to which the file is being provided unless the file is being submitted to the SMKI PMA; or

- the EUI-64 Compliant identifier for the DCC where the file is being submitted to the SMKI PMA.

c) *IncidentID* contains the Incident reference number provided as set out in section 3.2 of this document.

d) *N* denotes that the file is a notification of affected Organisation Certificates and Devices.

e) *FileNum* is an integer value, used to distinguish between data that is split across multiple files due to exceeding the maximum permitted number records per file, which is set out immediately below.

Each Other Compromise File shall contain the following records:

a) UserID ▲

b) Device_ID, Affected_Certificate_Serial_Number_Root,

Affected_Certificate_Serial_Number_Recovery,

Affected_Certificate_Serial_Number_Supplier_DS,

Affected_Certificate_Serial_Number_Supplier_KAK,

Affected_Certificate_Serial_Number_Supplier_KAKPP,

Affected_Certificate_Serial_Number_NetworkOperator_DS,

Affected_Certificate_Serial_Number_NetworkOperator_KAK,

Affected_Certificate_Serial_Number_COS_DS,

Affected_Certificate_Serial_Number_WAN_DS,

Replacement_Certificate_Serial_Number_Root,

Replacement_Certificate_Serial_Number_Recovery,

Replacement_Certificate_Serial_Number_Supplier_DS,

Replacement_Certificate_Serial_Number_Supplier_KAK,

Replacement_Certificate_Serial_Number_Supplier_KAKPP,

Replacement_Certificate_Serial_Number_NetworkOperator_DS,

Replacement_Certificate_Serial_Number_NetworkOperator_KAK,

Replacement_Certificate_Serial_Number_COS_DS,

Replacement_Certificate_Serial_Number_WAN_DS *(repeated for each affected Device, with no more than 1 million such records permitted within any file, or any larger number of records as directed by the SMKI PMA)* ▲

Where:

a) The UserID field contains the EUI-64 Compliant identifier for:

- the Subscriber to which the file is being provided unless the file is being submitted to the SMKI PMA; or
- the EUI-64 Compliant identifier for the DCC where the file is being submitted to the SMKI PMA.

b) The Device_ID field contains the Device ID.

c) The Affected_Certificate_Serial_Number_Root field contains the Root OCA Certificate serial number of the Root OCA Certificate affected by the Compromise that is used to populate the Root Trust Anchor Cell on affected Devices, where applicable.

d) The Affected_Certificate_Serial_Number_Recovery field contains the Recovery Certificate serial number of the Recovery Certificate affected by the Compromise that is used to populate the Recovery Trust Anchor Cell on affected Devices, where applicable.

e) The Affected_Certificate_Serial_Number_Supplier_DS field contains the Organisation Certificate serial number of the Organisation Certificate affected by the Compromise that is used to populate the Supplier Digital Signing Trust Anchor Cell on affected Devices, where applicable.

f) The Affected_Certificate_Serial_Number_Supplier_KAK field contains the Organisation Certificate serial number of the Organisation Certificate affected by the Compromise that is used to populate the Supplier Key Agreement Key Trust Anchor Cell on affected Devices, where applicable.

g) The Affected_Certificate_Serial_Number_Supplier_KAKPP field contains the Organisation Certificate serial number of the Organisation Certificate affected by the Compromise that is used to populate the Supplier pre-payment Key Agreement Key Trust Anchor Cell on affected Devices, where applicable.

h) The Affected_Certificate_Serial_Number_NetworkOperator_DS field contains the Organisation Certificate serial number of the Organisation Certificate affected by the Compromise that is used to populate the Network Operator Digital Signing Trust Anchor Cell on affected Devices, where applicable.

i) The Affected_Certificate_Serial_Number_NetworkOperator_KAK field contains the Organisation Certificate serial number of the Organisation Certificate affected by the Compromise that is used to populate the Network Operator Key Agreement Key Trust Anchor Cell on affected Devices, where applicable.

j) The Affected_Certificate_Serial_Number_COS_DS field contains the TCoS Certificate serial number of the TCoS Certificate affected by the Compromise that is used to populate the TCoS Trust Anchor Cell on affected Devices, where applicable.

k) The Affected_Certificate_Serial_Number_WAN_DS field contains the WAN Provider Certificate serial number of the WAN Provider Certificate affected by the Compromise that is used to populate the WAN Provider Trust Anchor Cell on affected Devices, where applicable.

l) The Replacement_Certificate_Serial_Number_Root field contains the Root OCA Certificate serial number for the Root OCA Certificate to be used to populate the Device Root Trust Anchor Cell, where applicable.

m) The Replacement_Certificate_Serial_Number_Recovery field contains the Recovery Certificate serial number for the Recovery Certificate to be used to populate the Device Recovery Trust Anchor Cell, where applicable.

n) The Replacement_Certificate_Serial_Number_Supplier_DS field contains the Organisation Certificate serial number for the Organisation Certificate to be used to populate the Supplier Digital Signing Device Trust Anchor Cell, where applicable.

o) The Replacement_Certificate_Serial_Number_Supplier_KAK field contains the Organisation Certificate serial number for the Organisation Certificate to be used to populate the Supplier Key Agreement Key Device Trust Anchor Cell, where applicable.

p) The Replacement_Certificate_Serial_Number_Supplier_KAKPP field contains the Organisation Certificate serial number for the Organisation Certificate to be used to populate the Supplier prepayment Key Agreement Key Device Trust Anchor Cell, where applicable.

q) The Replacement_Certificate_Serial_Number_NetworkOperator_DS field contains the Organisation Certificate serial number for the Organisation Certificate to be used to populate the Network Operator Digital Signing Device Trust Anchor Cell, where applicable.

r) The Replacement_Certificate_Serial_Number_NetworkOperator_KAK field contains the Organisation Certificate serial number for the Organisation Certificate to be used to populate the Network Operator Key Agreement Key Device Trust Anchor Cell, where applicable.

s) The Replacement_Certificate_Serial_Number_COS_DS field contains the TCoS Certificate serial number for the TCoS Certificate to be used to populate the Device TCoS Trust Anchor Cell, where applicable.

t) The Replacement_Certificate_Serial_Number_WAN_DS field contains the WAN Provider Certificate serial number for the WAN Provider Certificate to be used to populate the Device WAN Provider Trust Anchor Cell, where applicable.

Appendix E: Other Compromise Recovery Progress File

Each Other Compromise Recovery Progress File shall be in the format set out in this Appendix and shall have a filename of the form:

u) *OTH_UserID_IncidentID_P_FileNum*.csv

Where:

a) *OTH* denotes that the file relates to notification of affected Devices for a Compromise not applicable to Appendices B or C of this document.

b) *UserID* contains the EUI-64 Compliant identifier for:

- the Subscriber submitting the file, where a Subscriber is submitting the file to the DCC;
- the Subscriber to which the file is being provided, unless the file is being submitted to the SMKI PMA, where the file is being submitted to the Subscriber by the DCC; or
- the DCC, where the file is being submitted to the SMKI PMA by the DCC.

c) *IncidentID* contains the Incident reference number provided as set out in section 3.2 of this document.

d) *P* denotes that the file is a notification of progress in respect of replacement of affected Certificates and Devices.

e) *FileNum* is an integer value, used to distinguish between data that is split across multiple files due to exceeding the maximum permitted number records per file, which is set out immediately below.

Each Other Compromise File shall be generated in accordance with the procedure set out immediately below:

a) an "initial" CSV file shall be created, which shall contain the following records:

- UserID ▲

  Device_ID, Overall_status, Overall_status_description,

  Replacement_Certificate_Serial_Number_Root,

  Replacement_Certificate_Serial_Number_Recovery,

  Replacement_Certificate_Serial_Number_Supplier_DS,

  Replacement_Certificate_Serial_Number_Supplier_KAK,

  Replacement_Certificate_Serial_Number_Supplier_KAKPP,

  Replacement_Certificate_Serial_Number_NetworkOperator_DS,

  Replacement_Certificate_Serial_Number_NetworkOperator_KAK,

  Replacement_Certificate_Serial_Number_COS_DS,

  Replacement_Certificate_Serial_Number_WAN_DS, Replacement_Status_Root,

  Replacement_Status_Recovery, Replacement_Status_Supplier_DS,

  Replacement_Status_Supplier_KAK, Replacement_Status_Supplier_KAKPP,

  Replacement_Status_NetworkOperator_DS,

  Replacement_Status_NetworkOperator_KAK, Replacement_Status_COS_DS, Replacement_Status_WAN_DS *(repeated for each affected Device, with no more than 1 million such records permitted within any file, or any larger number of records as directed by the SMKI PMA)* ▲

b) a File Signing Certificate_ID shall be appended to the end of the "initial" CSV file, comprising:

- all of the attributes contained within the 'Issuer' field in the File Signing Certificate, including attribute names, equals signs and values, which shall be encoded in URL format such that it does not contain any special characters, followed by a comma; and
- the Certificate serial number obtained from the 'serialNumber' field in the File Signing Certificate, followed by a 0x0A character; and

c) a Digital_Signature shall be generated from the "initial” CSV file and appended as a record to the end of the CSV file, in accordance with the procedure set out in Section 6 of the TADP.

Where:

a) The UserID field contains the EUI-64 Compliant identifier for:

- the Subscriber submitting the file, where a Subscriber is submitting the file to the DCC;
- the Subscriber to which the file is being provided, unless the file is being submitted to the SMKI PMA, where the file is being submitted to the Subscriber by the DCC; or
- the DCC, where the file is being submitted to the SMKI PMA by the DCC.

b) The Device_ID field contains the Device ID.

c) The Overall_status field indicates acceptance or rejection by the DCC of each device identified in the Compromise Notification File

d) The Overall_status_description field indicates the reason for any rejection

e) The Replacement_Certificate_Serial_Number_Root field contains the Root OCA Certificate serial number for the Root OCA Certificate to be used to populate the Device Root Trust Anchor Cell.

f) The Replacement_Certificate_Serial_Number_Recovery field contains the Certificate serial number for the Certificate to be used to populate the Device Recovery Trust Anchor Cell.

g) The Replacement_Certificate_Serial_Number_Supplier_DS field contains the Certificate serial number for the Certificate to be used to populate the Supplier Digital Signing Device Trust Anchor Cell.

h) The Replacement_Certificate_Serial_Number_Supplier_KAK field contains the Certificate serial number for the Certificate to be used to populate the Supplier Key Agreement Key Device Trust Anchor Cell.

i) The Replacement_Certificate_Serial_Number_Supplier_KAKPP field contains the Certificate serial number for the Certificate to be used to populate the Supplier prepayment Key Agreement Key Device Trust Anchor Cell.

j) The Replacement_Certificate_Serial_Number_NetworkOperator_DS field contains the Certificate serial number for the Certificate to be used to populate the Network Operator Digital Signing Device Trust Anchor Cell.

k) The Replacement_Certificate_Serial_Number_NetworkOperator_KAK field contains the Certificate serial number for the Certificate to be used to populate the Network Operator Key Agreement Key Device Trust Anchor Cell.

l) The Replacement_Certificate_Serial_Number_COS_DS field contains the Certificate serial number for the Certificate to be used to populate the Device TCoS Trust Anchor Cell.

m) The Replacement_Certificate_Serial_Number_WAN_DS field contains the Certificate serial number for the Certificate to be used to populate the Device WAN Provider Trust Anchor Cell.

n) The Replacement_Status_Root field contains a value which is one of the permitted response code values for Service Request 6.15.1, as set out in the first column of Table 7 in section 4.1A.3.3 of the Message Mapping Catalogue, in relation to the replacement of information from the affected Certificate in the Root Trust Anchor Cell on a Device.

o) The Replacement_Status_Recovery field contains a value which is one of the permitted response code values for Service Request 6.15.1, as set out in the first column of Table 7 in section 4.1A.3.3 of the Message Mapping Catalogue, in relation to the replacement of information from the affected Certificate in the Recovery Trust Anchor Cell on a Device.

p) The Replacement_Status_Supplier_DS field contains a value which is one of the permitted response code values for Service Request 6.15.1, as set out in the first column of Table 7 in section 4.1A.3.3 of the Message Mapping Catalogue, in relation to the replacement of information from the affected Certificate in the Supplier Digital Signing Trust Anchor Cell on a Device.

q) The Replacement_Status_Supplier_KAK field contains a value which is one of the permitted response code values for Service Request 6.15.1, as set out in the first column of Table 7 in section 4.1A.3.3 of the Message Mapping Catalogue, in relation to the replacement of information from the affected Certificate in the Supplier Key Agreement Key Trust Anchor Cell on a Device.

r) The Replacement_Status_Supplier_KAKPP field contains a value which is one of the permitted response code values for Service Request 6.15.1, as set out in the first column of Table 7 in section 4.1A.3.3 of the Message Mapping Catalogue, in relation to the replacement of information from the affected Certificate in the Supplier prepayment Key Agreement Key Trust Anchor Cell on a Device.

s) The Replacement_Status_NetworkOperator_DS field contains a value which is one of the permitted response code values for Service Request 6.15.1, as set out in the first column of Table 7 in section 4.1A.3.3 of the Message Mapping Catalogue, in relation to the replacement of information from the affected Certificate in the Network Operator Digital Signing Trust Anchor Cell on a Device.

t) The Replacement_Status_NetworkOperator_KAK field contains a value which is one of the permitted response code values for Service Request 6.15.1, as set out in the first column of Table 7 in section 4.1A.3.3 of the Message Mapping Catalogue, in relation to the replacement of information from the affected Certificate in the Network Operator Key Agreement Key Trust Anchor Cell on a Device.

u) The Replacement_Status_COS_DS field contains a value which is one of the permitted response code values for Service Request 6.15.1, as set out in the first column of Table 7 in section 4.1A.3.3 of the Message Mapping Catalogue, in relation to the replacement of information from the affected Certificate in the TCoS Trust Anchor Cell on a Device.

v) The Replacement_Status_WAN_DS field contains a value which is one of the permitted response code values for Service Request 6.15.1, as set out in the first column of Table 7 in section 4.1A.3.3 of the Message Mapping Catalogue, in relation to the replacement of information from the affected Certificate in the WAN Provider Trust Anchor Cell on a Device.

w) The File_Signing Certificate_ID field contains the File Signing Certificate ID, which shall not contain a value when the file is issued by the DCC.

x) The Digital_Signature field contains the Digital Signature, which shall not contain a value when the file is issued by the DCC.

Appendix F: Definitions

Term	Definition
Chief Information Security Officer	Means a senior security officer within a Party who is responsible for activities including (but not limited to) establishing and maintaining the security vision, strategy, information security governance framework, secure asset and infrastructure control framework, and security risk management program
Data Services Provider, or DSP	Means the DCC acting from those systems identified in part a) of the definition of DCC Live Systems
DSP Threshold Anomaly Detection, or DSP TAD	Means the DCC acting using those systems identified in Part (b) of the definition of DCC Live Systems
Key Activation Ceremony	Means a meeting at which a Private Key or Symmetric Key is activated by the DCC and/or Key Custodians, such that the Private Key or Symmetric Key may be used
Key Generation Ceremony	Means a meeting at which a Private Key or Contingency Symmetric Key is generated by the DCC and Key Custodians
Key Component	Means part of a Key or part of Activation Data used to protect a Key.
Key Custodian	Means an individual, appointed in accordance with section 3.4 of the SMKI Recovery Procedure, to hold a key which may be used as part of the process to access a Key Component.
Organisation Compromise Notification File	A CSV file used to support recovery from a Compromise that is specified in Appendix B of the SMKI Recovery Procedure
Organisation Compromise Recovery Progress File	A CSV file used to support recovery from a Compromise that is specified in Appendix C of the SMKI Recovery Procedure
Other Compromise Notification File	Means a CSV file used to support recovery from a Compromise that is specified in Appendix D of the SMKI Recovery Procedure
Other Compromise Recovery Progress File	Means a CSV file used to support recovery from a Compromise that is specified in Appendix E of the SMKI Recovery Procedure
S1SP Held Device Security Credentials	Means, in relation to a SMETS1 Device and as the context requires, any or all of the Notified Critical Supplier Certificate, the Notified Non-Critical Supplier Certificate, the Notified Critical Network Operator Certificate and the Notified Non-Critical Network

	Operator Certificate, in each case as defined in Appendix AM of the SEC (SMETS1 Supporting Requirements).

Trust Anchor Cell	Shall have its GBCS meaning.

Trusted Service Provider, or TSP	Means the DCC acting using systems identified in part (d) of the definition of DCC Live Systems

wrappedApexContingency Key	Means the value used in the `WrappedApexContingencyKey` extension (with the meaning of IETF RFC 5934 section 9) in a Root OCA Certificate

Appendix G: SMKI Recovery Procedure Test Scenarios

Each scenario set out in this Appendix G can be tested in isolation, or combined as part of a more extensive test.

9.1 DCC and SMKI PMA Interactions

These scenarios cover the testing of interactions between the DCC Service Desk and the SMKI PMA in the event of a (suspected) Compromise.

ID	SMKI 200

Title:	Notification of (suspected) Compromise and SMKI PMA Response

Description	DCC service Desk completes Compromise Notification Report DCC service Desk communicates Compromise Notification Report DCC Service Desk requests SMKI PMA Decision (not applicable to the Method 1 of the Organisation Recovery process) SMKI PMA acknowledge receipt of Compromise Notification Report SMKI PMA provides instruction / guidance to the DCC through the DCC Service Desk in response to the Compromise Notification Report as to whether Recovery should be carried out and if so, which steps of the chosen approach

Objective	• To prove DCC processes in regard to the Compromise Notification Report preparation • To prove communication of (suspected) Compromise process to the SMKI PMA by the DCC Service Desk • To prove SMKI PMA instruction / guidance to the DCC Service Desk processes • To prove SMKI PMA decision making processes in response to the Compromise Notification Report and request for guidance / instruction

ID	SMKI 201

Title:	Notification of outcome of Recovery processes

Description	DCC Service Desk prepares Organisation Compromise Recovery Report for the SMKI PMA DCC Service Desk communicates Recovery Report to the SMKI PMA SMKI PMA acknowledges receipt of Organisation Compromise Recovery Report

Objective	• To prove DCC processes for the preparation of the Organisation Compromise Recovery Report • To prove communication of the Organisation Compromise Recovery Report to the SMKI PMA by the DCC Service Desk • To prove SMKI PMA processes in respect of receipt of the Organisation Compromise Recovery Report

9.2 DCC / Subscriber and DCC / Party Interactions and Processes

9.2.1 Organisation Certificate Revocation and Replacement

ID	SMKI 214

Title:	Organisation Certificate Revocation

Descriptio n	Subscriber submits Certificate Revocation Request(s) (CRR) through the DCC Service Desk DCC revokes Organisation Certificates identified in the CRR(s) DCC Service Desk communicates outcome of Revocation request to Subscriber

Objective	• To prove Subscriber processes in response to a (suspected) Compromise of one its Organisation Private Keys • To prove DCC and Subscriber interactions to revoke an Organisation Certificate

ID	SMKI 202

Title:	Replacement Organisation Certificates

Descriptio n	Subscriber obtains new or identifies existing Organisation Certificates to replace on affected Devices or those that form a part of any S1SP Held Device Security Credentials Subscriber communicates decision in the form of a Certificate ID to the DCC through the DCC Service Desk

Objective	• To prove, during the Recovery process, that the Subscriber can request new Organisation Certificates or identify and obtain existing Organisation Certificates to be placed on affected Devices, or the notification of the Certificate ID to the DCC where they form a part of any S1SP Held Device Security Credentials. • To prove Subscriber communications with the DCC Service Desk in respect of the replacement Organisation Certificates

9.2.2 Communication of SMKI PMA Decision to Subscriber

ID	SMKI 203

Title:	DCC Communicates SMKI PMA Recovery Decision to Subscriber

Descriptio n	DCC Service Desk communicates the decision of the SMKI PMA in respect of whether Recovery will be used and if so, which methods and steps are to be carried out

Objective	• To prove DCC Service Desk and Subscriber interactions in respect of SMKI PMA decisions

9.2.3 Subscriber notification of Compromise

ID	SMKI 215
Title:	Send DCC Organisation Notification and Anomaly Detection Threshold changes
Descriptio n	Subscriber / Supplier submits through the DCC Service Desk Organisation Compromise Notification Files or Other Compromise Notification Files and Anomaly Detection Thresholds amendments for the purposes of Recovery, in accordance with the TADP
Objective	• To prove Subscriber / Supplier processes and interactions with the DCC Service Desk in regard to the submission of information relating to impacted devices, incident • To prove Subscriber / Supplier processes and interactions with the DCC Service Desk in regard to the temporary amendment of Anomaly Detection Thresholds to support Recovery

ID	SMKI 216
Title:	Threshold Anomaly Detection – Post-recovery – applies to Method 1 of Organisation Certificate Recovery from Compromise only
Descriptio n	Subscriber / Supplier submits through the DCC Service Desk Anomaly Detection Thresholds for re-instatement following recovery
Objective	• To prove Subscriber / Supplier processes and interactions with the DCC Service Desk in regard to the re-instigation of Anomaly Detection Thresholds following Recovery

ID	SMKI 217
Title:	DCC amends Anomaly Detection Thresholds
Descriptio n	DCC amends Anomaly Detection Thresholds in response to Recovery process to enable communications to Devices to be processed by the DSP DCC informs Subscriber of Threshold Anomaly Detection value change
Objective	• To prove DCC processes in respect of Threshold Anomaly Detection value change during Recovery • To prove DCC and Subscriber interactions in respect of Threshold Anomaly Detection value change during Recovery

ID	SMKI 218

Title:	DCC re-instates Anomaly Detection Thresholds

Descriptio n	DCC Service Desk amends Anomaly Detection Thresholds to those set before the Recovery process commenced DCC Service Desk informs Anomaly Detection Thresholds change

Objective	• To prove DCC processes in respect of Anomaly Detection Thresholds reinstatement following Recovery • To prove DCC and Subscriber interactions in respect of Anomaly Detection Thresholds reinstatement during Recovery

9.2.4 DCC Notification to Parties other than the (suspected) Compromised Subscriber

ID	SMKI 204

Title:	Method 1, Method 1A and Method 3 – Responsible Supplier Notification of (suspected) Compromise

Descriptio n	DCC Service Desk identifies affected Devices for which the Subscriber is not the Responsible Supplier DCC Service Desk notifies Responsible Supplier(s) for those Devices using Organisation Compromise Notification file

Objective	• To prove DCC Service Desk and Responsible Supplier processes with regard to notification of (suspected) Compromise to Responsible Suppliers for Devices which are affected by the (suspected) Compromise

ID	SMKI 205

Title:	Method 1, Method 1A and Method 3 - Responsible Supplier Notification of Progress / Outcome of Recovery

Descriptio n	DCC Service Desk identifies affected Devices for which the Subscriber is not the Responsible Supplier DCC Service Desk notifies Responsible Supplier(s) for those Devices using Organisation Compromise Progress file and therefore the cessation of communications with affected Devices during Recovery

Objective	• To prove DCC Service Desk and Party processes with regard to notification of progress of Recovery to Responsible Suppliers for Devices which are affected by the (suspected) Compromise

ID	SMKI 206

Title:	Method 2 – Network Operator Notification of (suspected) Compromise

Descriptio n	DCC Service Desk identifies Network Operators for affected Devices reported by the Subscriber DCC Service Desk notifies using the Organisation Notification file Network Operators for those Devices of the Subscriber's intent to Recover using Method 2 and cessation of communications during Recovery

Objective	• To prove DCC Service Desk and Network Operator Party processes with regard to notification of (suspected) Compromise to Network Operators for Devices which are affected by the (suspected) Compromise

ID	SMKI 207

Title:	Method 2 – Network Operator Notification of Progress / Outcome of Recovery

Descriptio n	DCC Service Desk identifies Network Operators for affected Devices reported by the Subscriber DCC Service Desk notifies Network Operator(s) for those Devices of Recovery progress / outcome of Recovery using the Organisation Compromise Progress file

Objective	• To prove DCC Service Desk and Network Operator Party processes with regard to notification of progress of Recovery to Network Operators for Devices which are affected by the (suspected) Compromise

9.3 Method 1 - Subscriber Service Requests and Alert Responses

This scenario is applicable only to Method 1 of the Recovery of Organisation Certificate held on a Device (section 4.1 of the SMKI Recovery Procedures). Its execution will be through the combination of individual test scenarios as set out above in section 8.2 of this Appendix G.

ID	SMKI 208

Title:	Method 1 - Subscriber Recovers using own Private Key

Descriptio n	Subscriber sends Service Requests to replace Organisation Certificates on affected Devices, signed using its own private key which is the subject of the (suspected) Compromise Subscriber monitors progress of Recovery through Alerts received from affected Devices in response to the instruction to replace Organisation Certificates Subscriber informs DCC through DCC Service Desk of the progress of Recovery through an Organisation Compromise Progress Report File

Objective	• **To prove Subscriber processes in response to a (suspected) Compromise of one its Organisation Private Keys**

9.4 Method 1A Compromise of any S1SP Held Device Security Credentials

This scenario is applicable only to Method 1A to recover from a Compromise of the Private Key associated with the Public Key contained within an Organisation Certificate that forms part of any S1SP Held Device Security Credentials, in accordance with section 3.2 and 4.1A of this document.

ID	SMKI 208A

Title:	**Method 1A -Subscriber Recovers using own Private Key**

Description	**Subscriber sends Service Requests to replace Organisation Certificates that form a part of any S1SP Held Device Security Credentials, signed using its own private key which is the subject of the Compromise** **Subscriber monitors progress of Recovery through Alerts received from the SMETS1 Service Provider in response to the instruction to replace Organisation Certificates** **Subscriber informs DCC through DCC Service Desk of the progress of Recovery through an Organisation Compromise Progress Report File**

Objective	• **To prove Subscriber processes in response to a Compromise of one its Organisation Private Keys related to an Organisation Certificate that forms a part of any S1SP Held Device Security Credentials**

9.5 Methods 2 & 3 – Communications with affected Devices in Response to the Supplier / Subscribers Service Requests

These scenarios are applicable to Methods 2 and / or 3 of the Recovery of Organisation Certificate held on a Device (section 4.1A of the SMKI Recovery Procedures). Their execution will be through the combination of individual test scenarios as set out above in section 8.2 of this Appendix G.

ID	SMKI 209

Title:	**Suspension of Communications with Devices**

Descriptio n	**DCC suspends communications to Devices where the Compromise impacts Supplier and / or Communication Service Provider Certificates on those Devices** **DCC confirms decision of the SMKI PMA with regard to the suspension or if reinstates communication according to the decision of the SMKI PMA**

Objective	• **To prove DCC Service Desk and DCC processes with regard to the suspension of communications with affected Devices**

ID	SMKI 210

Title:	Set status of affected Devices to Recovery

Description	Where the affected Subscriber is not a Network Provider, DCC sets status in the Smart Metering Inventory of affected Devices to 'Recovery'

Objective	• To prove DCC Service Desk and DCC processes with regard to the SMI status change during Recovery processes

ID	SMKI 211

Title:	Commands sent to affected Devices to effect Recovery – Method 2 only

Description	DCC issues Commands as set out in the GBCS signed with the Recovery Private Key and containing ACB Certificates as the replacement Supplier Certificate DCC monitor for Alerts received from Devices and forwards the Alert to the affected Supplier DCC sets SMI status of affected Devices that have reported successful Recovery to 'Recovered' DCC notifies affected Subscriber of progress of the Recovery Processes using the DCC Alert and Organisation Recovery Progress file Supplier Issues Service Requests to replace the ACB Certificate in the Supplier slot with a new Supplier Certificate DCC processes these Service Requests Supplier notifies the outcome of Supplier Certificate Replacement using the Organisation Recovery Progress file DCC sets SMI status of the Device to the pre-Recovery State on receipt of the Response from the Device indicating successful Certificate Update

Objective	• To prove DCC and DCC Service Desk processes during Method 2 of Organisation Certificate Recovery • To prove Suppliers processes during Method 2 of Organisation Certificate Recovery • To prove interactions between Supplier and DCC Service Desk during Method 2 of Organisation Certificate Recovery

ID	SMKI 213

Title:	Commands sent to affected Devices to effect Recovery – Method 3 only

Description	DCC issues Commands as set out in the GBCS signed with the Recovery Private Key and containing the Certificate identified by the Subscriber as the replacement Certificate DCC monitor for Alerts received from Devices and forwards the Alert to the affected Subscriber DCC sets SMI status of affected Devices that have reported successful certificate replacement to the pre-recovery status DCC notifies affected Subscriber of progress of the Recovery Processes using the Organisation Recovery Progress file DCC notifies the Device's Responsible Supplier (if not the Subscriber) of failed certificate replacement events using the Organisation Recovery Progress file

Objective	• To prove DCC and DCC Service Desk processes during Method 3 of Organisation Certificate Recovery • To prove Subscribers processes during Method 3 of Organisation Certificate Recovery • To prove interactions between Subscribers and DCC Service Desk during Method 3of Organisation Certificate Recovery • To prove interactions between Responsible Suppliers and DCC Service Desk during Method 3 of Organisation Certificate Recovery

9.6 End to End Tests

These Test Scenarios constitute full Tests of each Recovery Process set out in the sections 4 and 6 of the SMKI Recovery Procedures. It is intended that these tests are carried out periodically as set out in section 7.1 of this SMKI Recovery Procedures.

ID	SMKI 101

Title:	Recovery from Compromise of an Organisation Private Key (other than the Recovery Private Key) – Method 1 and Method 1A

Descriptio n	As set out in section 4.1 and 4.1A of the SMKI Recovery Procedures (except for the standing-up of the Recovery Environment)

Objective	• To prove in an end to end test the processes to Recover from the Compromise of an Organisation Private Key (other than the Recovery Private Key) – Method 1 and Method 1A

ID	SMKI 102

Title:	Recovery from Compromise of an Organisation Private Key (other than the Recovery Private Key) – Method 2

Descriptio n	As set out in section 4.2 of the SMKI Recovery Procedures (except for the standing-up of the Recovery Environment)

Objective	• To prove in an end to end test the processes to recover from the Compromise of an Organisation Private Key (other than the Recovery Private Key) – Method 2

ID	SMKI 103

Title:	Recovery from Compromise of an Organisation Private Key (other than the Recovery Private Key) – Method 3

Descriptio n	As set out in section 4.3 of the SMKI Recovery Procedures (except for the standing-up of the Recovery Environment)

Objective	• To prove in an end to end test the processes to recover from the Compromise of an Organisation Private Key (other than the Recovery Private Key) – Method 3

ID	SMKI 104

Title:	Recovery from Compromise of a Recovery Private Key

Description	As set out in section 6.2 of the SMKI Recovery Procedures (except for the standing-up of the Recovery Environment)

Objective	• To prove in an end to end test the processes to recover from the Compromise of the Recovery Private Key

ID	SMKI 105

Title:	Recovery from Compromise of an Issuing OCA Private Key

Description	As set out in section 6.3 of the SMKI Recovery Procedures (except for the standing-up of the Recovery Environment)

Objective	• To prove in an end to end test the processes to recover from the Compromise of an Issuing OCA Private Key

ID	SMKI 106

Title:	Recovery from Compromise of a Contingency Private Key or the Contingency Symmetric Key

Description	As set out in section 6.1 of the SMKI Recovery Procedures

Objective	• To prove in an end to end test the processes to recover from the Compromise of a Contingency Private Key or Contingency Symmetric Key

Version: M6.0

Appendix M

SMKI Interface Design Specification

Contents

1 Introduction

1.1 Purpose

Section L4 of the Code sets out the obligation on the DCC to maintain the SMKI Service Interface in accordance with the SMKI Interface Design Specification. Section L4.4 sets out the content of the SMKI Interface Design Specification including the protocols and technical standards which are all based on open standards and defines the technical details of the interfaces to SMKI Services insofar as they relate to Authorised Subscribers.

1.2 Target Response Times

For the purposes of supporting the measurement of Target Response Times in accordance with Section L8.3 of the Code, the terms “sending” and “receipt” should be interpreted as follows:

a) for the Ad Hoc Device CSR Web Service interface:

   i. “receipt” means the receipt of a Device CSR in the DCC Systems that is submitted by an Authorised Subscriber via the Ad Hoc Device CSR Web Service interface, following successful completion by DCC of all verification and validation checks as set out in the SMKI Interface Design Specification in relation to ad hoc Device CSRs submitted through the Ad Hoc Device CSR Web Service interface; and

   ii. “sending” means the submission of a Device Certificate or CSR processing error messages from the DCC Systems to the Authorised Subscriber within the synchronous response to the corresponding request; or

b) for the Batched Device CSR Web Service interface:

   i. “receipt” means the receipt of a Batched Certificate Signing Request (Batched CSR) in the DCC Systems that is submitted by an Authorised Subscriber via the Batched Device CSR Web Service interface, following successful completion by DCC of all verification and validation checks as set out in the SMKI Interface Design Specification in relation to Batched CSRs submitted through the Batched Device CSR Web Service interface; and

   ii. “sending” means making available the files containing Device Certificates and/or CSR processing error messages via the Batched Device CSR Web Service interface, for download by the Authorised Subscriber; or

c) for a Batched CSR via the SMKI Portal interface (via DCC Gateway Connection):

i. “receipt” means the receipt of a Batched CSR in the DCC Systems that is submitted by an Authorised Subscriber via the SMKI Portal interface, following successful completion by DCC of all verification and validation checks as set out in the SMKI Interface Design Specification in relation to Batched CSRs submitted through the SMKI Portal interface; and

ii. “sending” means making available the files containing Device Certificates and/or CSR processing error messages on the SMKI Portal interface, for download by the Authorised Subscriber; or

d) for an ad hoc Device CSR via the SMKI Portal interface (via DCC Gateway Connection):

i. “receipt’ means the receipt of an ad hoc Device CSR in the DCC Systems that is submitted by an Authorised Subscriber via the SMKI Portal interface following successful completion by DCC of all validation and verification checks set out in the SMKI Interface Design Specification in relation to ad hoc Device CSRs submitted through the SMKI Portal interface; and

ii. “sending” means making available the Device Certificate or CSR processing error messages on the SMKI Portal interface, for download by the Authorised Subscriber.

e) for an Organisation CSR via the SMKI Portal interface (via DCC Gateway Connection or via the Internet):

i. “receipt’ means the receipt of an Organisation CSR in the DCC Systems that is submitted by an Authorised Subscriber via the SMKI Portal interface following successful completion by DCC of all validation and verification checks set out in the SMKI Interface Design Specification in relation to Organisation CSRs; and

ii. “sending” means making the Organisation Certificate or CSR processing error messages on the SMKI Portal interface, for download by the Authorised Subscriber.

2 SMKI interfaces

2.1 Interface Definition

The DCC shall make the following interfaces available, in order that Authorised Subscribers may access the SMKI Services.

In accordance with the SMKI Code of Connection, the DCC shall make four interfaces available to Parties and RDPs:

a) a SMKI Portal interface, accessed via an Authorised Subscriber’s web browser and only accessible via a DCC Gateway Connection (as set out in Section 2.3 of this document);

b) an Ad Hoc Device CSR Web Service interface, for the purposes of submitting single Device CSRs, that may be accessed by an Authorised Subscriber’s automated systems, and only accessible via the DCC Gateway Connection (as set out in Section 2.4 of this document);

c) a Batched Device CSR Web Service interface, for the purposes of submitting Batched CSRs for Device Certificates, that may be accessed by an Authorised Subscriber’s automated systems, and only accessible via the DCC Gateway Connection (as set out in Section 2.5 of this document); and

d) a SMKI Portal interface made available over a secured Internet connection and accessed through an Authorised Subscriber’s web browser that does not use a DCC Gateway Connection (as set out in Section 2.6 of this document).

2.2 General obligations

The DCC shall ensure that PKCS#10 certification request standard is used for the submission of Certificate Signing Requests (CSRs). Authorised Subscribers shall submit Certificate Signing Requests according to the CSR structures as defined in Appendix F of this document.

In accordance with Sections L11.5 - L11.7 of the SEC, unless an Authorised Subscriber immediately notifies the DCC of Certificate rejection, the Certificate shall be deemed to be accepted.

The DCC shall ensure that the URLs of the interfaces to SMKI Services shall remain unchanged in the event of the failure of a component of interfaces to the SMKI Services, or invocation of business continuity or disaster recovery measures. The DCC shall ensure that disaster recovery systems are functionally identical to the main interface.

Error codes and examples of error messages in relation to:

a) the SMKI Portal interface via DCC Gateway Connection and SMKI Portal interface via the Internet are set out in the SMKI User Guide;

b) the Ad Hoc Device CSR Web Service interface are set out in Appendix A of this document; and

c) the Batched Device CSR Web Service interface are set out in Appendix C and Appendix D of this document.

2.3 SMKI Portal interface via DCC Gateway Connection

General obligations

The SMKI Portal interface via DCC Gateway Connection provides an asynchronous mechanism for Authorised Responsible Officers (AROs) to submit Organisation CSRs, and Device CSRs in batch or ad-hoc form on behalf of their Authorised Subscriber.

The DCC shall ensure that the SMKI Portal interface via DCC Gateway Connection:

a) uses the HTTPS protocol, secured by mutually authenticated TLS in line with the cryptographic standards set out in Appendix G of this document;

b) uses Javascript, Cascading Style Sheets (CSS) and images;

c) is compliant with the W3C "Web Content Accessibility Guidelines" (v2) at "AA" level; and

d) is only accessible using a DCC Gateway Connection.

The process for obtaining a DCC Gateway Connection is detailed in Section H15 of the Code.

Establishing a secured web browser connection to the SMKI Portal interface via DCC Gateway Connection

In order to establish a secured web browser connection to the SMKI Portal interface via DCC Gateway Connection, an Authorised Subscriber shall:

a) access the SMKI Portal landing page via a defined URL (as set out in the SMKI User Guide), which shall be secured using HTTPS;

b) then select the relevant link to access the SMKI Portal page supplied to enable submission and retrieval of Organisation CSRs/Certificates or Device CSRs/Certificates; and

c) having selected the relevant link in b), ensure the web browser connection is secured by establishing a mutually authenticated TLS session by entering the PIN code used to enable use of the relevant Cryptographic Credential Token, and presenting the IKI Certificate (which has been Issued in accordance with the SMKI RAPP for the purposes of accessing the SMKI Portal via DCC Gateway Connection) to the DCC for either:

Authorised Subscribers for Organisation Certificates, for the purposes of submitting Organisation CSRs and retrieval of resulting Organisation Certificates; or

Authorised Subscribers for Device Certificates, for the purposes of submitting Device CSRs and retrieval of resulting Device Certificates.

In order for a secured web browser connection to the SMKI Portal interface via DCC Gateway Connection to be established, the DCC shall ensure that the SMKI Portal via DCC Gateway Connection presents to the user a x.509 v3 certificate that is recognised by the CA/Browser Forum for the purposes of allowing the Authorised Subscriber's web browser to validate and authenticate the DCC's server as part of establishing the mutually authenticated TLS session.

The DCC shall ensure that the SMKI Portal via DCC Gateway Connection denies access where the user does not present a valid IKI Certificate for authentication.

Submission of Organisation CSRs and retrieval of resulting Organisation Certificates

2.3.1.1 Submission of Organisation CSRs by Authorised Subscriber

Subject to the provisions of 2.3.1.1 A, Authorised Subscribers wishing to be issued with an Organisation Certificate shall ensure that they:

a) generate a relevant CSR in line with Appendix F of this document, and Appendix B of the Code; and

b) paste the CSR (formatted in line with Appendix F of this document) into the Certificate Signing Request form and then submit the CSR, via the SMKI Portal interface.

A. Network Parties who are Authorised Subscribers accessing the SMKI Portal via the Internet may optionally elect not to populate the value field of the "Subject Unique Identifier" with a 64 bit EUI-64 Compliant identifier, in which case:

a) they shall leave the value field of the "Subject Unique Identifier" blank, and otherwise proceed in accordance with the requirements of 2.3.1.1 (b);

b) a submission made in accordance with 2.3.1.1 A(a) shall be treated for the purposes of the Code (including this Appendix M) as a CSR and be processed accordingly by the DCC, provided that:

c) the Authorised Subscriber must subsequently provide a human readable hexadecimal representation of the EUI-64 value to be included within the Certificate (so using 0..9, a..f, A..F) to the DCC through the SMKI Portal interface via the Internet and re-submit the fully completed CSR via that interface;

d) the DCC shall ensure that a suitably authorised member of Registration Authority personnel confirms that:

i. the representation of the EUI-64 Compliant identifier that has been provided is a representation of an EUI-64 Compliant identifier that has been allocated by the SEC Panel to the Authorised Subscriber, and

ii. the Authorised Subscriber is a Network Party, and in either case, if not, the DCC shall not Issue an Organisation Certificate to the Authorised Subscriber.

B. The provisions of 2.3.1.1 A shall not apply until such time as the DCC notifies the Security Sub-Committee that the DCC Systems capability to support the provisions of 2.3.1.1 A has been adequately tested and is ready to be used.

C. Following a notification from the DCC to the Security Sub-Committee in accordance with the provisions of 2.3.1.1 B, sub-Clause 2.3.1.1 B and this sub-Clause 2.3.1.1 C shall automatically be deleted from this Appendix M.

2.3.1.2 Receipt and validation of Organisation CSRs by the DCC

Following receipt by the DCC of an Organisation CSR, the DCC shall:

a) validate the format, and verify the Digital Signature of the CSR in line with Appendix F of this document and PKCS#10; and

b) either accept, or reject the CSR;

i. where the CSR is accepted, return a notification via the SMKI Portal interface of acceptance to the Authorised Subscriber; or

ii. where the CSR is rejected, log an error and return an error message via the SMKI Portal interface to the Authorised Subscriber.

2.3.1.3 Actions following acceptance of Organisation CSRs by the DCC

Where an Organisation CSR is accepted, the DCC shall:

a) verify the content of the CSR, which shall include checking that the EUI-64 Compliant identifier contained in the CSR relates to an Authorised Subscriber on whose behalf the Authorised Responsible Officer submitting the CSR is authorised to submit CSRs; and

b) either approve the CSR for further processing or reject the CSR;

i. where the CSR is approved, return a notification via the SMKI Portal interface of acceptance to the Authorised Subscriber; or

ii. where the CSR is rejected, notify the Authorised Subscriber via the SMKI Portal interface of the errors and reasons for the rejection of that CSR.

If an Organisation CSR is rejected by the DCC, the Authorised Subscriber must, if they still wish to be issued with a relevant Organisation Certificate, correct the errors and re-submit the CSR. The Authorised Subscriber does not need to generate a new Key Pair in respect of the Organisation CSR.

2.3.1.4 Actions following approval of Organisation CSRs by the DCC

Where an Organisation CSR is approved by the DCC, the DCC shall:

a) Issue a corresponding Organisation Certificate;

b) lodge the resulting Organisation Certificate in the SMKI Repository; and

c) make the Organisation Certificate available for download via the SMKI Portal interface via DCC Gateway Connection and the SMKI Repository.

2.3.1.5 Actions following download of an Organisation Certificate by an Authorised Subscriber

Upon downloading the Issued Organisation Certificate, the Authorised Subscriber shall in accordance with L11.5 of the Code, establish that the information contained in the resulting Organisation Certificate is consistent with the information contained in the corresponding Organisation CSR.

Should there be an inconsistency, the Authorised Subscriber shall immediately reject the Organisation Certificate in accordance with L11.5 by notifying the DCC via the Service Desk, and inform the DCC of the inconsistency. Should the DCC be notified by an Authorised Subscriber of an inconsistency, the DCC shall log the event and investigate as appropriate.

Upon rejection of the Organisation Certificate by an Authorised Subscriber and subsequent notification to the DCC of such rejection, the DCC shall revoke the Organisation Certificate, place the Organisation Certificate on the Organisation CRL, and lodge the updated Organisation CRL in the SMKI Repository in accordance with Appendix B of the Code.

Submission of Device CSRs (Ad Hoc or Batched) and retrieval of resulting Device Certificates

A Device Certificate can be submitted through the SMKI Portal interface via DCC Gateway Connection in ad hoc Device CSR form or as a number in Batched CSR form.

2.3.1.6 Submission of an ad hoc Device CSR or Batched CSR by Authorised Subscriber

Authorised Subscribers wishing to be issued with a Device Certificate or Device Certificates shall ensure that they generate the relevant Device CSRs in line with Appendix F of this document, and Appendix A of the Code.

a) **Ad Hoc Device CSR submission** - where the Authorised Subscriber wishes to submit an ad hoc Device CSR, the Authorised Subscriber shall paste the CSR into the ad hoc Device CSR form (as set out in the SMKI User Guide) and then submit it to the SMKI Portal interface; or

b) **Batched CSR submission -** where the Authorised Subscriber wishes to submit a Batched CSR, the Authorised Subscriber shall:

   i. generate the relevant Device CSRs; and

ii. create a .zip file containing the individual Device CSRs, formatted in line with Appendix F of this document, then upload and submit the .zip file using the Batched CSR web form (as set out in the SMKI User Guide) to the SMKI Portal interface.

2.3.1.7 Receipt and validation of Device CSR (Ad Hoc or Batched) by the DCC

Following receipt by the DCC of an ad hoc Device CSR or Batched CSR to the SMKI Portal via DCC Gateway Connection, the DCC shall:

a) for an ad hoc Device CSR submission:

i. validate the format, and verify the Digital Signature of the CSR in line with Appendix F of this document and PKCS#10;

ii. apply the Eligible Subscriber checks as set out in Section L3.16 of the Code; and

iii. either accept, or reject the CSR; and

A. where the CSR is accepted, return a notification via the SMKI Portal interface of acceptance to the Authorised Subscriber; or

B. where the CSR is rejected, log an error and return an error message that is in accordance with “Response Status” table in Appendix A of this document, via the SMKI Portal interface to the Authorised Subscriber; or

b) for a Batched CSR submission:

i. validate that the structure of the submitted .zip file is in accordance with the format set out in Appendix F to this document;

ii. validate that the number of CSRs contained within the Batched CSR is less than or equal to 50,000;

A. should the Batched CSR contain more than 50,000 CSRs, the DCC shall reject the Batched CSR (including all of the Device CSRs contained within the Batched CSR); or

B. should the Batched CSR contain less than or equal to 50,000 CSRs, further validate the Batched CSR as set out below;

iii. either accept, or reject the Batched CSR and/or each constituent Device CSR, log relevant errors and return a synchronous response via the SMKI Portal interface to notify the Authorised Subscriber as to:

A. where the Batched CSR is accepted, acceptance of the Batched CSR and the number of Device CSRs submitted within the Batched CSR; or

B. where the Batched CSR is rejected, relevant error messages that are in accordance with "Response Status" table in Appendix C of this document.

2.3.1.8 Actions following acceptance of Device CSRs by the DCC

If a Device CSR is accepted, the DCC shall:

a) for an ad hoc Device CSR submission:

i. perform such additional checks as DCC determines is necessary on the Device CSR, which may include checking that all mandatory fields are present and conform to the requirements set out in the Device Certificate Policy;

ii. check that less than 100 Device Certificates have previously been Issued for the Device ID to which the Device CSR relates;

iii. either approve, or reject the Device CSR; and

A. where the CSR is accepted, return a notification via the SMKI Portal interface of acceptance to the Authorised Subscriber; or

B. where the CSR is rejected, log an error that is in accordance with "Response Status" table in Appendix A of this document, and return an error message via the SMKI Portal interface to the Authorised Subscriber; or

b) for a Batched CSR submission:

i. validate the format, and verify the signature of each Device CSR contained within the Batched CSR in line with Appendix F of this document and PKCS#10;

ii. perform such additional checks as DCC determines is necessary on one or more of the Device CSRs in the Batched CSR, which may include checking that all mandatory fields are present and conform to the requirements set out in the Device Certificate Policy;

iii. apply the Eligible Subscriber checks as set out in Section L3.16 of the Code;

iv. check that less than 100 Device Certificates have previously been Issued for the Device ID to which each Device CSR relates;

v. either approve, or reject each Device CSR in the Batched CSR; and

A. where the CSR is approved, include a notification in the Batched CSR response file, as set out in section 2.3.1.9d) of this document, to the Authorised Subscriber; or

B. where the CSR is rejected, log an error that is in accordance with "Response Status" table in Appendix C of this document, and include an error notification in the Batched CSR response file, as set out in section 2.3.1.9d) of this document.

Where a CSR has been rejected by the DCC because it would breach the 100 Device Certificate limit, the Authorised Subscriber should contact the Service Desk in order to review with the DCC the threshold applying in relation to the particular Device ID such that additional Device Certificates may be issued in relation to it.

If a Device CSR is rejected by the DCC, including where contained within a Batched CSR, the Authorised Subscriber must, if they still wish to be issued with a relevant Device Certificate, correct the errors and re-submit the CSR. The Authorised Subscriber may not need to instruct the Device to generate a new Key Pair for the subsequent CSR depending on the error condition.

2.3.1.9 Actions following approval of Device CSRs by the DCC

Where a Device CSR is approved by the DCC, the DCC shall:

a) Issue a corresponding Device Certificate;

b) lodge the resulting Device Certificate in the SMKI Repository; and

c) for ad hoc Device CSRs:

i. make the corresponding Device Certificate, for up to 30 days following provision by the DCC, available for download via the 'certificate pickup' page on the SMKI Portal interface via DCC Gateway Connection (as set out in the SMKI User Guide) and the SMKI Repository;

In order to retrieve the Device Certificate, the Authorised Subscriber will establish a connection to the SMKI Portal interface via DCC Gateway Connection using the IKI Certificate Issued for the purposes of submitting Device CSRs and retrieving Device Certificates; or

d) for Batched CSRs:

i. make available, for up to 30 days following provision by the DCC, two files for download via the 'certificate pickup' page on the SMKI Portal interface, comprising:

A. a .zip file containing the Certificates in Base64 encoded DER format resulting from successfully processed CSRs; and

B. a .txt file containing a report showing the processed status of each CSR in the Batched CSR, including errors.

In order to retrieve the response files (as set out above) which correspond with a Batched CSR submission, the Authorised Subscriber will establish a connection to the SMKI Portal interface via DCC Gateway Connection using the IKI Certificate Issued for the purposes of submitting Device CSRs and retrieving Device Certificates.

2.3.1.10 Actions following download of a Device Certificate by an Authorised Subscriber

Upon downloading the Issued Device Certificate, the Authorised Subscriber shall, in accordance with L11.6, take reasonable steps to establish that the information contained in the resulting Device Certificate is consistent with the information contained in the corresponding Device CSR.

Should there be an inconsistency, the Authorised Subscriber shall immediately reject the Device Certificate in accordance with L11.6 by notifying the DCC via the Service Desk, and inform the DCC of the inconsistency. Should the DCC be notified by an Authorised Subscriber of an inconsistency, the DCC shall log the event and investigate as appropriate.

2.4 Ad Hoc Device CSR Web Service interface

General obligations

The Ad Hoc Device CSR Web Service interface provides a synchronous mechanism for an Authorised Subscriber’s systems to submit individual Device CSRs.

The DCC shall ensure that the Ad Hoc Device CSR Web Service interface:

a) is only accessible to Authorised Subscribers for Device Certificates acting on behalf of Parties in the User Role of either Import Supplier or Gas Supplier, or the DCC;

b) uses the HTTPS protocol, secured by mutually authenticated TLS, in line with the cryptographic properties set out in Appendix G of this document;

c) uses Extensible Markup Language (XML) over REST for Device CSR message requests and responses;

d) provides message responses which are consistent with Appendix A of this document;

e) uses the XML schema for CSR message requests and responses defined in Appendix B of this document; and

f) is only accessible using a DCC Gateway Connection.

Prior to gaining access to the Ad Hoc Device CSR Web Service interface, Authorised Subscribers shall prepare and provide to the DCC a CSR, as set out in Appendix G, in electronic form in respect of an IKI Certificate in accordance with the procedures set out in the SMKI RAPP section 5.4 and as set out immediately below.

The DCC shall validate the format, and verify the signature of the CSR in line with Appendix G of this document and the IKI Certificate Policy. If accepted, the DCC shall process the CSR and shall, if accepted, provide the Authorised Subscriber with the following, in accordance with the SMKI RAPP section 5.4:

a) an IKI Certificate issued under the appropriate IKI Certification Authority for the purpose of enabling client authentication to the Ad Hoc Device CSR Web Service interface; and

b) a CA/Browser Forum recognised certification authority root certificate and all corresponding issuing authority certificates, for the purposes of enabling server authentication of the Ad Hoc Device CSR Web Service interface.

Establishing a secured connection to the Ad Hoc Device CSR Web Service interface

In order to establish a secured TLS connection to the Ad Hoc Device CSR Web Service interface, an Authorised Subscriber for Device Certificates acting as an Import Supplier or Gas Supplier, or the DCC, shall:

a) configure its system(s) to connect to the Ad Hoc Device CSR Web Service interface URL, as set out in the SMKI User Guide;

b) establish a TLS session by presenting the IKI Certificate which has been Issued in accordance with the SMKI RAPP for the purposes of TLS mutual authentication to secure access to the Ad Hoc Device CSR Web Service interface; and

c) configure its systems such that the TLS session renegotiation timeout is set to 5 minutes for each connection to the Ad Hoc Device CSR Web Service interface.

In order for a secured connection to the Ad Hoc Device CSR Web Service interface to be established, the DCC shall ensure that the Ad Hoc Device CSR Web Service presents the CA/Browser Forum certificate referenced in the ‘General obligations’ part of section 2.4 of this document, for the purposes of allowing the Authorised Subscriber’s systems to authenticate the server as part of establishing the mutually authenticated TLS session.

The DCC shall ensure that access to the Ad Hoc Device CSR Web Service interface is denied where the user does not present a valid IKI Certificate for authentication.

Submission of Device CSRs and retrieval of resulting Device Certificates

2.4.1.1 Submission of Device CSRs by Authorised Subscriber

Authorised Subscribers wishing to be Issued with a Device Certificate via the Ad Hoc Device CSR Web Service interface shall ensure that they:

a) generate a Device CSR in line with Appendix F of this document and Appendix A of the Code; and

b) include the Device CSR in the XML format defined in the XML schema set out in Appendix B of this document and submit the CSR via HTTP POST to the Ad Hoc Device CSR Web Service interface.

2.4.1.2 Receipt and validation of Device CSRs by the DCC

Following receipt of a Device CSR to the Ad Hoc Device CSR Web Service interface, the DCC shall:

a) validate that the format of the XML document complies with the XML schema as set out in Appendix B of this document;

b) validate the format, and verify the Digital Signature of the CSR in line with Appendix F of this document and PKCS#10;

c) either accept, or reject the CSR; and

   i. where the CSR is rejected, log an error and return an error message in the synchronous XML response, to the Authorised Subscriber's systems.

2.4.1.3 Actions following acceptance of Device CSRs by the DCC

If a Device CSR is accepted, the DCC shall:

a) check that at least one Key Agreement Certificate or Digital Signing Certificate has previously been Issued for the Device ID to which the Device CSR relates;

b) check that less than 100 Device Certificates have previously been Issued for the Device ID to which the Device CSR relates;

c) either approve, or reject the Device CSR; and

   i. where the CSR is approved, return a notification of acceptance in the synchronous XML response, to the Authorised Subscriber's systems; or

   ii. where the CSR is rejected, log an error and return an error message in the synchronous XML response, to the Authorised Subscriber's systems.

2.4.1.4 Actions following approval of Device CSRs by the DCC

Where a Device CSR submitted via the Ad Hoc Device CSR Web Service interface is approved, the DCC shall:

a) Issue a corresponding Device Certificate;

b) lodge the resulting Device Certificate in the SMKI Repository; and

c) return the Device Certificate to the Authorised Subscriber, as set out in Appendix A to this document, in the synchronous XML response to the submission of the Device CSR via the Ad Hoc Device CSR Web Service interface.

2.4.1.5 Actions following download of a Device Certificate by an Authorised Subscriber

Upon downloading or viewing the Issued Device Certificate, the Authorised Subscriber shall, in accordance with L11.6, take reasonable steps to establish that the information contained in the resulting Device Certificate is consistent with the information contained in the corresponding Device CSR.

Should there be an inconsistency, the Authorised Subscriber shall immediately reject the Device Certificate in accordance with L11.6 by notifying the DCC via the Service Desk, and inform the DCC of the inconsistency. Should the DCC be notified by an Authorised Subscriber of an inconsistency, the DCC shall log the event and investigate as appropriate.

2.5 Batched Device CSR Web Service interface

General obligations

The Batched Device CSR Web Service interface provides a synchronous mechanism for an Authorised Subscriber’s systems to submit Batched CSRs containing Device CSRs and subsequently a synchronous mechanism to retrieve the resulting Device Certificates.

The DCC shall ensure that the Batched Device CSR Web Service interface:

a) uses the HTTPS protocol, secured by mutually authenticated TLS, in line with the cryptographic properties set out in Appendix G of this document;

b) uses Extensible Markup Language (XML) over REST for Batched CSR message requests, Batched CSR responses and provision of Device Certificates;

c) provides message responses corresponding with submission of Batched CSRs which are consistent with Appendix C of this document;

d) provides message responses in relation to the processing of individual Device CSRs that are contained within a Batched CSR which are consistent with Appendix D of this document;

e) uses the XML schema for Batched CSR message requests and responses defined in Appendix E; and

f) is only accessible using a DCC Gateway Connection.

Prior to gaining access to the Batched Device CSR Web Service interface, an Authorised Subscriber for Device Certificates shall prepare and provide to the DCC a CSR, as set out in Appendix G, in electronic form in respect of an IKI Certificate in accordance with the procedures set out in the SMKI RAPP section 5.4.

The DCC shall validate the format, and verify the signature of the CSR in line with Appendix G of this document and the IKI Certificate Policy. If accepted, the DCC shall process the CSR and shall, if accepted, provide the following in accordance with the SMKI RAPP:

a) an IKI Certificate issued under the appropriate IKI Certification Authority enabling authentication to the Batched Device CSR Web Service interface; and

b) a CA/Browser Forum recognised certification authority root certificate and all corresponding issuing authority certificates for the purposes of enabling server authentication of the Batched Device CSR Web Service interface.

Establishing a secured connection to the Batched Device CSR Web Service interface

In order to establish a connection to the Batched Device CSR Web Service interface, an Authorised Subscriber for Device Certificates shall:

a) configure its system(s) to connect to the Batched Device CSR Web Service interface URL, as set out in the SMKI User Guide;

b) establish a TLS session by presenting an IKI Certificate Issued in accordance with the SMKI RAPP for the purposes of TLS mutual authentication in order to secure access to the Batched Device CSR Web Service interface; and

c) configure its system(s) such that the TLS session renegotiation timeout is set to 5 minutes.

The DCC shall ensure that the Batched Device CSR Web Service presents the CA/Browser Forum certificate referenced in the ‘General obligations’ part of section 2.5 of this document, for the purposes of allowing the Authorised Subscriber’s client to authenticate the DCC’s server as part of establishing the mutually authenticated TLS session.

The DCC shall ensure that access to the Batched Device CSR Web Service interface is denied where the user does not present a valid IKI Certificate for authentication.

Submission of Batched CSRs and retrieval of resulting Device Certificates

2.5.1.1 Submission of Batched CSRs by Authorised Subscriber

An Authorised Subscriber wishing to be Issued with Device Certificates in response to a Batched CSR submission via the Batched Device CSR Web Service interface shall ensure that it:

a) generates each CSR to be contained within the Batched CSR in line with Appendix F of this document and Appendix A of the Code;

b) include each Device CSR in the Batched CSR in the XML format defined in the XML schema set out in Appendix E of this document; and

c) submit the XML document containing the Batched CSR via HTTP POST to the Batched Device CSR Web Service interface.

2.5.1.2 Receipt and validation of Batched CSR by the DCC

On receipt of an XML document containing a Batched CSR to the Batched Device CSR Web Service interface from an Authorised Subscriber's system, the DCC shall:

a) validate that the format of the XML document complies with the XML schema as set out in Appendix E of this document;

b) validate that the number of CSRs contained within the Batched CSR is less than or equal to 50,000;

    i. should the Batched CSR contain more than 50,000 CSRs, the DCC shall reject the Batched CSR (including all of the Device CSRs contained within the Batched CSR); or

    ii. should the Batched CSR contain less than or equal to 50,000 CSRs, further validate the Batched CSR as set out below;

c) either accept, or reject the Batched CSR, log relevant errors and return in the synchronous XML response to the Authorised Subscriber's systems, to notify the Authorised Subscriber as to:

where the Batched CSR is accepted, acceptance of the Batched CSR;

where the Batched CSR is rejected, relevant error messages; and

a Batched CSR identifier that can be used to retrieve the Batched CSR XML response file as set out in section 2.5.1.4 of this document.

2.5.1.3 Actions following acceptance of Device CSRs in a Batched CSR by the DCC

Upon acceptance of a Batched CSR as set out immediately above, the DCC shall:

a) validate the format, and verify the Digital Signature of each CSR in line with Appendix F of this document and PKCS#10;

b) perform such additional checks as DCC determines is necessary on one or more of the Device CSRs in the Batched CSR, which may include checking that all mandatory fields are present and conform to the requirements set out in the Device Certificate Policy;

c) apply the Eligible Subscriber checks as set out in Section L3.16 of the Code;

d) check that less than 100 Device Certificates have previously been Issued for the Device ID to which each Device CSR relates;

e) either approve, or reject each Device CSR in the Batched CSR and include (where applicable) resulting Device Certificates, notifications and error messages in a Batched CSR XML response file that is separate from the synchronous response file described in section 2.5.1.2 of this document; and

   i. where the CSR is approved, include a notification in the Batched CSR XML response file, to the Authorised Subscriber; or

   ii. where the CSR is rejected, log an error and include an error notification in the Batched CSR XML response file.

Where a CSR has been rejected by the DCC because it would breach the 100 Device Certificate limit, the Authorised Subscriber should contact the Service Desk in order to review with the DCC the threshold applying in relation to the particular Device ID such that additional Device Certificates may be issued in relation to it.

If a Device CSR is rejected by the DCC, including where contained within a Batched CSR, the Authorised Subscriber must, if they still wish to be issued with a relevant Device Certificate, correct the errors and re-submit the CSR. The Authorised Subscriber may not need to instruct the Device to generate a new Key Pair for the subsequent CSR depending on the error condition.

2.5.1.4 Actions following approval of Device CSRs in a Batched CSR by the DCC

Where a Device CSR submitted via the Batched CSR Web Service interface is approved, the DCC shall:

a) Issue a corresponding Device Certificate;

b) lodge the resulting Device Certificate in the SMKI Repository;

c) make the Device Certificate available to the Authorised Subscriber for download in the Batched CSR XML response file, as described in section 2.5.1.3, Appendix D and Appendix E to this document; and

d) generate files for download via the ‘certificate pickup’ page on the SMKI Portal interface, as set out in section 2.3.1.9 of this document.

An Authorised Subscriber may, at any point up to 30 days following provision by the DCC, download the XML response file containing success and error information and Device Certificates Issued in response to Device CSRs in a Batched CSR, by:

a) establishing a TLS mutual authentication session to the Batched Device CSR Web Service interface; and

b) appending the Batched CSR identifier supplied in response to the Batched CSR submission to the URL as defined in the SMKI User Guide for the purposes of retrieving response XML files for Batched CSR submissions.

2.5.1.5 Actions following download of a Device Certificate by an Authorised Subscriber

Upon downloading or viewing the Issued Device Certificate, the Authorised Subscriber shall, in accordance with L11.6, take reasonable steps to establish that the information contained in the resulting Device Certificate is consistent with the information contained in the corresponding Device CSR.

Should there be an inconsistency, the Authorised Subscriber shall immediately reject the Device Certificate in accordance with L11.6 by notifying the DCC via the Service Desk, and inform the DCC of the inconsistency. Should the DCC be notified by an Authorised Subscriber of an inconsistency, the DCC shall log the event and investigate as appropriate.

2.6 SMKI Portal interface via the Internet

General obligations

The SMKI Portal interface via the Internet provides an asynchronous mechanism for Authorised Responsible Officers (AROs) not accessing the SMKI Service through a DCC Gateway Connection to submit Organisation CSRs and to retrieve resulting Certificates, on behalf of their Authorised Subscriber.

The SMKI Portal via the Internet also provides a mechanism by which Authorised Subscribers may access certain SMKI Repository content.

The DCC shall ensure that the SMKI Portal interface via the Internet:

a) uses the HTTPS protocol, secured by mutually authenticated TLS in line with the cryptographic standards set out in Appendix G of this document;

b) uses Javascript, Cascading Style Sheets (CSS) and images;

c) is compliant with the W3C “Web Content Accessibility Guidelines” (v2) at “AA” level;

d) provides a separate static URL, as set out in the SMKI User Guide, enabling SMKI Portal interface users to download a file in .zip format as defined in Appendix F to this document, updated as necessary, containing the base set of Organisation Certificates and OCA Certificates required to populate Device anchor slots prior to installation for the north Region;

e) provides a separate static URL, as set out in the SMKI User Guide, enabling SMKI Portal interface users to download a file in .zip format as defined in Appendix F to this document, updated as necessary, containing the base set of

Organisation Certificates and OCA Certificates required to populate Device anchor slots prior to installation for the central Region and south Region;

f) provides a static URL, as set out in the SMKI User Guide, enabling SMKI Portal interface users to download the latest IKI CRL;

g) provides a static URL, as set out in the SMKI User Guide, enabling SMKI Portal interface users to download the latest Organisation CRL;

h) provides a static URL, as set out in the SMKI User Guide, enabling SMKI Portal interface users to download the latest IKI ARL;

i) provides a static URL, as set out in the SMKI User Guide, enabling SMKI Portal interface users to download the latest Organisation ARL;

j) provides a web form, as set out in the SMKI User Guide, where persons with access to the SMKI Portal via the Internet can request information held within the SMKI Repository. The DCC shall process such requests and provide information via electronic means; and

k) is only accessible via the Internet.

Provision of a connection to the Internet is the responsibility of the Authorised Subscriber.

The DCC shall ensure that the Organisation Certificates and OCA Certificates contained within the two Device anchor slot Certificate files shall be the same, other than the Organisation Certificates required to populate the WAN provider Device anchor slot.

The DCC shall lodge a document in the SMKI Repository, which sets out details of which of the base set of Organisation Certificates and OCA Certificates may be placed in specific Device anchor slots.

Establishing a secured web browser connection to the SMKI Portal interface via the Internet

In order to establish a connection to the SMKI Portal interface via the Internet, an Authorised Subscriber shall:

access a SMKI Portal landing page via defined URL (as defined in the SMKI User Guide) which shall be secured using HTTPS;

then select the relevant link to access the SMKI Portal page supplied to enable submission and retrieval of Organisation CSRs/Certificates; and

having selected the relevant link in b), ensure the web browser connection is secured by establishing a mutually authenticated TLS session by entering the PIN code used to enable use of the relevant Cryptographic Credential Token, and presenting an IKI Certificate (which has been Issued in accordance with the SMKI RAPP for the purposes of accessing the SMKI Portal via the Internet) to the DCC for Authorised Subscribers for Organisation Certificates, for the purposes of submitting Organisation CSRs and retrieval of resulting Organisation Certificates.

In order for a secured web browser connection to the SMKI Portal interface via the Internet to be established, the DCC shall ensure that the SMKI Portal via the Internet presents to the user a x.509 v3 certificate that is recognised by the CA/Browser Forum for the purposes of allowing the Authorised Subscriber's systems to authenticate the server as part of establishing the mutually authenticated TLS session.

The DCC shall ensure that the SMKI Portal via the Internet denies access where the user does not present a valid IKI Certificate for authentication.

Submission of Organisation CSRs and retrieval of resulting Organisation Certificates

2.6.1.1 Submission of Organisation CSRs by Authorised Subscriber

Authorised Subscribers wishing to be issued with an Organisation Certificate shall ensure that they:

a) generate a relevant CSR in line with Appendix F of this document, and Appendix B of the Code; and

b) paste the CSR (formatted in line with Appendix F of this document) into the Certificate Signing Request form and then submit the CSR, via the SMKI Portal interface.

2.6.1.2 Receipt and validation of Organisation CSRs by the DCC

Following receipt of an Organisation CSR, the DCC shall:

a) validate the format, and verify the Digital Signature of the CSR in line with Appendix F of this document and PKCS#10;

b) either accept, or reject the CSR:

   i. where the CSR is accepted, return a notification via the SMKI Portal interface of acceptance to the Authorised Subscriber; or

   ii. where the CSR is rejected, log an error and return an error message via the SMKI Portal interface to the Authorised Subscriber.

2.6.1.3 Actions following acceptance of Organisation CSRs by the DCC

Where an Organisation CSR is accepted, the DCC shall:

a) verify the content of the CSR, which shall include checking that the EUI-64 Compliant identifier contained in the CSR relates to an Authorised Subscriber on whose behalf the Authorised Responsible Officer submitting the CSR is authorised to submit CSRs; and

b) either approve the CSR for further processing or reject the CSR;

i. where the CSR is approved, return a notification via the SMKI Portal interface of acceptance to the Authorised Subscriber; or

ii. where the CSR is rejected, notify the Authorised Subscriber via the SMKI Portal interface of the errors and reasons for the rejection of that CSR.

If an Organisation CSR is rejected by the DCC, the Authorised Subscriber must, if they still wish to be issued with a relevant Organisation Certificate, correct the errors and re-submit the CSR. The Authorised Subscriber does not need to generate a new Key Pair in respect of the Organisation CSR.

2.6.1.4 Actions following approval of Organisation CSRs by the DCC

Where an Organisation CSR is approved by the DCC, the DCC shall:

a) process the CSR;

b) Issue a corresponding Organisation Certificate;

c) lodge the resulting Organisation Certificate in the SMKI Repository; and

d) make the Organisation Certificate available for download via the SMKI Portal interface via the Internet and the SMKI Repository.

2.6.1.5 Actions following download of an Organisation Certificate by an Authorised Subscriber

Upon downloading the Issued Organisation Certificate, the Authorised Subscriber shall in accordance with L11.5 of the Code, establish that the information contained in the resulting Organisation Certificate is consistent with the information contained in the corresponding Organisation CSR.

Should there be an inconsistency, the Authorised Subscriber shall immediately reject the Organisation Certificate in accordance with L11.5 by notifying the DCC via the Service Desk, and inform the DCC of the inconsistency. Should the DCC be notified by an Authorised Subscriber of an inconsistency, the DCC shall log the event and investigate as appropriate.

Upon rejection of the Organisation Certificate by an Authorised Subscriber and subsequent notification to the DCC of such rejection, the DCC shall revoke the Organisation Certificate, place the Organisation Certificate on the Organisation CRL, and lodge the updated CRL in the SMKI Repository in accordance with Appendix B of the Code.

Appendix A Ad-Hoc Device CSR Web Service Messages

Example: Device Certificate Signing Request Message

The following message format is used to request a Device Certificate from SMKI via the Ad Hoc Device CSR Web Service interface.

```
Host: localhost:443
Content-Length: 439
User-Agent: Jakarta Commons-HttpClient/3.0.1
Content-Type: application/xml;charset=UTF-8

<?xml version="1.0” encoding=”utf-8”?>
 <DeviceCertificateSigningRequest ID="clientId1">
 <Version>1.0</Version>
<CertificateSigningRequest>MIIBDTC………HULdtQN</CertificateSigningRequest>
</DeviceCertificateSigningRequest>
```

Device Certificate Signing Request: Element Table

Element Name	*Description*
DeviceCertificateSigningRequest	*The root element*
Version	*This element contains the version of the Ad Hoc Device CSR Web Service interface. In the schema specified in Appendix B of this document, this value is set to “1.0”*
CertificateSigningRequest	*This element contains the ‘base64text’ field (as defined in RFC 7468 section 3) of the PKCS#10 Certificate Signing Request (CSR) without whitespace. The element shall NOT contain the ‘preeb’ and ‘posteb’ fields.*

Device Certificate Signing Request: Attribute Table

Attribute Name	*Description*
ID	*The client reference to the request. This value will be returned in the response unless the original request is incorrectly formed.*

Example: Response to Ad Hoc Device Certificate Signing Request – Success

The following message is returned in response to Device Certificate Signing Request when the DCC has successfully Issued a Device Certificate. The message includes the Device Certificate that was Issued.

```
HTTP/1.1 200 OK
Date: Tue, 13 May 2014 12:15:58 GMT
Content-Length: 362
Content-Type: application/xml;charset=UTF-8
Server: Apache-Coyote/1.1

<?xml version="1.0” encoding=”utf-8”?>
<DeviceCertificateSigningResponse ID="clientid1">
        <Version>1.0</Version>
        <Build>1.1.4</Build>
        <TransactionId>12345</TransactionId>
        <Status>SUCCESS</Status>
<Certificate>MIAGCSqGSIb3DQEHA………AAAAAA</Certificate>
</DeviceCertificateSigningResponse>
```

Example: Response to Ad Hoc Device Certificate Signing Request – Incorrect XML

The following message is returned in response to invalidly formed Device CSR. Where there is an invalidly formed Device CSR, the DCC may be unable to return the client supplied ID value.

```
HTTP/1.1 200 OK
Date: Tue, 13 May 2014 12:15:58 GMT
Content-Length: 362
Content-Type: application/xml;charset=UTF-8
Server: Apache-Coyote/1.1

<?xml version="1.0” encoding=”utf-8”?>
 <DeviceCertificateSigningResponse>
        <Version>1.0</Version>
        <Build>1.1.4</Build>
        <TransactionId>12344</TransactionId>
        <Status>FORMAT_ERROR</Status>
        <Error>
          <ErrorCode>FM:123</ErrorCode>
         <ErrorText>An XML format error</ErrorText>
       </Error>
 </DeviceCertificateSigningResponse>
```

Example: Response to Ad Hoc Device Certificate Signing Request – other error

The following message is returned in response to Device CSR when the DCC failed to issue a Device Certificate.

```
HTTP/1.1 200 OK
Date: Tue, 13 May 2014 12:15:58 GMT
Content-Length: 362
Content-Type: application/xml;charset=UTF-8
Server: Apache-Coyote/1.1

<?xml version="1.0” encoding=”utf-8”?>
<DeviceCertificateSigningResponse ID="clientid1">
        <Version>1.0</Version>
        <Build>1.1.4</Build>
        <TransactionId>12345</TransactionId>
        <Status>CSR_ERROR</Status>
        <Error>
          <ErrorCode>CR:9999</ErrorCode>
          <ErrorText>Request for duplicate certificate not permitted</ErrorText>
       </Error>
</DeviceCertificateSigningResponse>
```

Response to Ad Hoc Device Certificate Signing Request: Element Table

Element Name	***Description***
DeviceCertificateSigningResponse	*The root element*
Version	*This element contains the version of the web service interface. In the schema specified in Appendix B of this document, this value is set to "1.0"*
Build	*This element specifies the software build of the web service.*
TransactionId	*This is the SMKI internal reference to the request.*
Status	*This element reports on the condition of the response. See the section "*Response Status*"*
Certificate	*This element contains the 'base64text' field (as defined in RFC 7468 section 3) of a DER X509v3 certificate without whitespace. The element shall NOT contain the 'preeb' and 'posteb' fields.*
Error	*Container for ErrorCode and ErrorText*
ErrorCode	*This element holds an internal reference code to a specific error occurrence. See the section "*Response Status*"*
ErrorText	*This element holds a human readable error string corresponding to the ErrorCode. See the section "*Response Status*"*

Response to Ad Hoc Device Certificate Signing Request: Attribute Table

Attribute Name	***Description***
ID	*This holds the client reference to the original request.*

Response Status

Value	***Error Code***	***Description***
SUCCESS	*n/a*	*This value indicates a certificate has been generated and is returned in the response.*
UNKNOWN_DEVICE	*UD:<Value>*	*The request has been rejected. The device has not had a Device Certificate previously and hence the request to replace an existing certificate is not valid.*
ISSUANCE_ANOMALY	*CA:<Value>*	*The request has been rejected. A certificate issued from the submitted CSR would result in unexpected issuance behaviour. Manual action by the Registration Authority would need to be taken to allow a future submission of this CSR to result in a certificate.*
CSR_ERROR	*CR:<Value>*	*The request has failed. This is due to a corrupt CSR or incorrect CSR format. The client should correct the mistake and re-submit.*
CA_ERROR	*CA:<Value>*	*The request has failed. An internal error has prevented the CA from issuing the certificate. Re-submission may fix this issue.*
FORMAT_ERROR	*FM:<Value>*	*The request has failed. This is due to the request XML format error. The client should correct the mistake and re-submit.*
WORKFLOW_ERROR	*WF:<Value>*	*The request has failed. A workflow error has prevented to issuance of the certificate. Re-submission is unlikely to remedy this issue and should report the error code to the Service Desk.*

Appendix B Schema for Ad Hoc Device CSR Web Service interface

This section specifies the XML schema that will be used to verify the contents for the web service request and response messages relevant to the Ad Hoc Device CSR Web Service interface, as per the figure below.

The Ad Hoc Device CSR Web Service interface version will be specified in the URL, the schema filename and data contained in the XML requests and responses. The web service interface version allowed value will be hardcoded in the schema.

There will be different URL used when the XML schema for the Ad Hoc Device CSR Web Service interface changes.

```
<?xml version="1.0" encoding="UTF-8"?>
<xsd:schema xmlns:xsd="http://www.w3.org/2001/XMLSchema" elementFormDefault="qualified"
attributeFormDefault="unqualified">
  <xsd:element name="DeviceCertificateSigningResponse">
    <xsd:complexType>
      <xsd:sequence>
        <xsd:element name="Version">

         <xsd:attribute name="ID" use="required">
            <xsd:simpleType>
               <xsd:restriction base="xsd:string">
                  <xsd:minLength value="1"/>
                  <xsd:maxLength value="32"/>
               </xsd:restriction>
            </xsd:simpleType>
         </xsd:attribute>
      </xsd:complexType>
   </xsd:element>
</xsd:schema>
```

Appendix C Submission of Batched CSRs via the Batched Device CSR Web Service Interface

In order to submit the Device CSRs that are the subject of a Batched CSR via the Batched Device CSR Web Service interface, a request shall be sent by the requestor to SMKI using HTTP POST.

The batch submission response shall be returned by the DCC, providing the field “BatchId” upon successful submission. The value of “BatchId” shall be used in the retrieval of Device Certificates, as specified in Appendix D of this document.

The destination URL for the post will include the web service interface version and must match the version specified in the section of this Appendix C titled “**Batched CSR Response message: Element Table**” and will take the form as set out below:

a) https://example.com:443/1.0/PortalCSRBatch/SubmitCSRBatch

where “1.0” in the above URL is the web service interface version

Example: Submit Batched CSR Message

The following message is used to request Device Certificates from SMKI via the Batched Device CSR Web Service.

```
Host: localhost:443
Content-Length: 439
User-Agent: Jakarta Commons-HttpClient/3.0.1
Content-Type: application/xml;charset=UTF-8

<?xml version="1.0” encoding=”utf-8”?>
<SubmitCSRBatch ID="b1999">
        <Version>1.0</Version>
        <DeviceCSR ID="ID0">UjBsR09EbGhj………1tQ1p0dU1GUXhEUzhi</DeviceCSR>
        <DeviceCSR ID="ID1">UjBsR09EbGh……..U1GUXhEUzhi</DeviceCSR>
        <DeviceCSR ID="ID2">UjBsR09…..0dU1GUXhEUzhi</DeviceCSR>
</SubmitCSRBatch>
```

Submit Batched CSR Message: Element Table

Element Name	*Description*
SubmitCSRBatch	The root element
Version	This element contains the version of the web service interface. In the schema specified in Appendix E of this document, this value is set to “1.0”
DeviceCSR	This element contains the ‘base64text’ field (as defined in RFC 7468 section 3) of the PKCS#10 certificate signing request (CSR) without whitespace. The element shall NOT contain the ‘preeb’ and ‘posteb’ fields.

Submit Batched CSR Message: Attribute Table

Attribute Name	*Parent Element*	*Description*
ID	SubmitCSR Batch	The client reference to the batch request. This value will be returned in the completed batch result.

ID	DeviceCSR	The client reference to an individual CSR request within the batch request. This value will be returned in the completed batch result to help correlate the resulting certificate with the CSR request. This value MUST be unique within the batch. The format of the ID will be enforced by the associated field type defined in the schema.

Example: Response to Batched CSR – success

The following message is returned in response to the “SubmitCSRBatch” request when the submitted Batched CSR has been accepted.

```
HTTP/1.1 200 OK
Date: Tue, 13 May 2014 12:15:58 GMT
Content-Length: 362
Content-Type: application/xml;charset=UTF-8
Server: Apache-Coyote/1.1

<?xml version="1.0” encoding=”utf-8”?>
<SubmitCSRBatchStatus ID=”b1999”>
            <Version>1.0</Version>
            <Build>2.0.8</Build>
            <BatchStatus>PENDING</BatchStatus>
            <BatchId>1234</BatchId>
</SubmitCSRBatchStatus>
```

Example: Response to Batched CSR – Incorrect XML

The following message is returned in response to an invalidly formed “SubmitCSRBatch” request. In this scenario, DCC is unable to return the client supplied ID field.

```
HTTP/1.1 200 OK
Date: Tue, 13 May 2014 12:15:58 GMT
Content-Length: 362
Content-Type: application/xml;charset=UTF-8
Server: Apache-Coyote/1.1

<?xml version="1.0” encoding=”utf-8”?>
 <SubmitCSRBatchStatus>
            <Version>1.0</Version>
            <Build>2.0.8</Build>
            <BatchStatus>FORMAT_ERROR</BatchStatus>
            <Error>
                        <ErrorCode>FM:AA1</ErrorCode>
                        <ErrorText>Invalid XML in request</ErrorText>
            </Error>
</SubmitCSRBatchStatus>
```

Example: Response to Batched CSR– maximum batch size exceeded

The following message is returned in response to the “SubmitCSRBatch” request when the maximum number of certificate signing requests in the request is exceeded. The maximum batch size is 50,000 CSRs, this figure is detailed in SEC Section L8.2. The maximum batch size stated in SEC Section L8.2 takes precedence should the size differ from that stated in this document.

```
HTTP/1.1 200 OK

Content-Length: 362
Content-Type: application/xml;charset=UTF-8
Server: Apache-Coyote/1.1

<?xml version="1.0" encoding="UTF-8"?>
<SubmitCSRBatchStatus ID=”b1999”>
        <Version>1.0</Version>
        <Build>2.0.8</Build>
        <BatchStatus>FORMAT_ERROR</BatchStatus>
        <Error>
                <ErrorCode>FM:AA2</ErrorCode>
                <ErrorText>Number of submitted CSRs exceeds maximum volume</ErrorText>
        </Error>
</SubmitCSRBatchStatus>
```

Example: Response to Batched CSR response– other error

The following message is returned in response to the “SubmitCSRBatch” request when SMKI failed to accept the Batched CSR.

```
HTTP/1.1 200 OK
Date: Tue, 13 May 2014 12:15:58 GMT
Content-Length: 362
Content-Type: application/xml;charset=UTF-8
Server: Apache-Coyote/1.1

<?xml version="1.0” encoding=”utf-8”?>
<SubmitCSRBatchStatus ID=”b1999”>
        <Version>1.0</Version>
        <Build>2.0.8</Build>
        <BatchStatus>WORKFLOW_ERROR</BatchStatus>
        <Error>
                <ErrorCode>WF:BB2</ErrorCode>
                <ErrorText>An internal error.</ErrorText>
        </Error>
</SubmitCSRBatchStatus>
```

Batched CSR response message: element table

Element Name	*Description*
SubmitCSRBatchStatus	The root element
Version	This element contains the version of the web service interface. In the schema specified in Appendix E, this value is set to “1.0”
Build	This element specifies the software build of the web service.
BatchId	This is the SMKI internal reference to the batch request. This value should be used to query the CSRBatchResult.
BatchStatus	This element reports on the condition of the response, as set out below.
Error	Container for ErrorCode and ErrorText
ErrorCode	This element holds an internal reference code to a specific error occurrence, as set out below.

Element Name	*Description*
ErrorText	This element holds a human readable error string corresponding to the ErrorCode, as set out below

Batched CSR response message: attribute table

Attribute Name	Parent Element	Description
ID	SubmitCSRBatch Status	The client reference to the batch. This value corresponds to the SubmitCSRBatch ID attribute in the SubmitCSRBatch message.

Batched CSR response message: response status values

Value	*Error Code*	*Description*
PENDING	n/a	The Batched CSR has been uploaded, accepted and is awaiting approval.
FORMAT_ERROR	FM:<Value>	The request has failed. This is due to the request XML format error. The client should correct the mistake and re-submit the request.
WORKFLOW_ERROR	WF:<Value>	The request has failed. A workflow error has prevented acceptance of the batch request. Re-submission is unlikely to remedy this issue and should report the error code to the Service Desk.

Appendix D Retrieval of Device Certificates as a result of Batched CSR submission

In order to retrieve the Device Certificates that are the subject of a Batched CSR submitted via the Batched Device CSR Web Service interface, a batch result poll request shall be sent by the requestor to SMKI using HTTP GET.

The batch result shall be returned by the DCC using the form field “BatchId”, which will be encoded within the GET URL. The value of the “BatchId” field is returned to the requesting system in response to the initial successful “SubmitCSRBatch” web service message. Parties may query for batches they have submitted, however any other values of the “BatchId” field will be rejected.

The destination URL for the get will include the web service interface version and must match the version specified in the section of this Appendix D titled “**Batched CSR Result: Element Table**” and will take the form as set out below:

b) https://example.com:443/1.0/PortalCSRBatch/CSRBatchResult?BatchId=99, where “1.0” in the above URL is the web service interface version

Example: Batched CSR Result Message – Incomplete batch processing

The following message is returned in response to “CSRBatchResult” query and the corresponding batch processing has not been completed. The following batch status values may be returned in this message and where such values are defined in the section titled “Batched CSR Result: BatchStatus values” within this Appendix:

PENDING, REJECTED, PARSING, QUEUED, PROCESSING, PAUSED, TAMPERED

```
HTTP/1.1 200 OK
Date: Tue, 13 May 2014 12:15:58 GMT
Content-Length: 362
Content-Type: application/xml;charset=UTF-8
Server: Apache-Coyote/1.1

<?xml version="1.0" encoding="UTF-8"?>
<CSRBatchResult ID="b1999">
            <Version>1.0</Version>
            <Build>2.0.8</Build>
            <BatchStatus>PENDING</BatchStatus>
            <BatchId>1234</BatchId>
</CSRBatchResult>
```

Example: Batched CSR Result Message – Batch Completed

The following message is returned in response to a “CSRBatchResult” query when each Device CSR has been processed. This file shall contain, for all Device CSRs that were included in the corresponding Batched CSR, either a successfully generated Device Certificate or details of rejected Device CSR.

```
HTTP/1.1 200 OK
Date: Tue, 13 May 2014 12:15:58 GMT
Content-Length: 662
Content-Type: application/xml;charset=UTF-8
Server: Apache-Coyote/1.1

<?xml version="1.0" encoding="UTF-8"?>
<CSRBatchResult ID="b1999">
        <Version>1.0</Version>
        <Build>2.0.8</Build>
        <BatchStatus>COMPLETED</BatchStatus>
        <BatchId>1234</BatchId>
        <DeviceCertificate ID="ID000000">
                <Status>SUCCESS</Status>
                <Certificate>UjBsR09EbGhjZ0dTQUxNQUF………..Q1p0dU1GUXhEUzhi</Certificate>
        </DeviceCertificate>
        <DeviceCertificate ID="ID000001">
                <Status>CSR_ERROR</Status>
               <Error>
                        <ErrorCode>CR:CC1</ErrorCode>
                        <ErrorText>Wrong CSR OID</ErrorText>
                </Error>
        </DeviceCertificate>
        <DeviceCertificate ID="ID000002">
                <Status>SUCCESS</Status>
                <Certificate>UjBsR09EbGhjZ0d………..Q1p0dU1GUXhEUzhi</Certificate>
        </DeviceCertificate>
</CSRBatchResult>
```

Example: Batched CSR Result Message – Unknown BatchId

The following message is returned in response to a "CSRBatchResult" query where the supplied "BatchId" does not exist.

```
HTTP/1.1 200 OK
Date: Tue, 13 May 2014 12:15:58 GMT
Content-Length: 362
Content-Type: application/xml;charset=UTF-8
Server: Apache-Coyote/1.1

<?xml version="1.0" encoding="UTF-8"?>
<CSRBatchResult>
        <Version>1.0</Version>
        <Build>2.0.8</Build>
        <BatchStatus>FORMAT_ERROR</BatchStatus>
        <Error>
                <ErrorCode>FM:AA3</ErrorCode>
                <ErrorText>Unknown BatchId</ErrorText>
        </Error>
</CSRBatchResult>
```

Example: Batched CSR Result Message – Other Error

The following message is returned in response to a "CSRBatchResult" query when SMKI failed to interrogate the batch state.

```
HTTP/1.1 200 OK
Date: Tue, 13 May 2014 12:15:58 GMT
Content-Length: 362
Content-Type: application/xml;charset=UTF-8
Server: Apache-Coyote/1.1

<?xml version="1.0" encoding="UTF-8"?>
<CSRBatchResult>
        <Version>1.0</Version>
        <Build>2.0.8</Build>
        <BatchStatus>WORKFLOW_ERROR</BatchStatus>
        <Error>
                <ErrorCode>WF:BB1</ErrorCode>
                <ErrorText>An Internal Error</ErrorText>
        </Error>
</CSRBatchResult>
```

This element contains the 'base64text' field (as defined in RFC7468 section 3) of a DER X509v3 certificate without whitespace. The element shall NOT contain the 'preeb' and 'posteb' fields.

Batched CSR Result: Element Table

Element Name	Description
CSRBatchResult	The root element
Version	This element contains the version of the web service interface. In the schema specified in Appendix E, this value is set to "1.0"
Build	This element specifies the software build of the web service.
BatchId	This is the SMKI internal reference to the batch request.
BatchStatus	This element reports on the condition of the response. See the section "Batched CSR Result: BatchStatus values"
Error	Container for ErrorCode and ErrorText
ErrorCode	This element holds an internal reference code to a specific error occurrence. See the section "Response Status" and "Batched CSR Result: Status values".
ErrorText	This element holds a human readable error string corresponding to the ErrorCode.
DeviceCertificate	This element holds a response to a Certificate Signing Request.
Certificate	This element contains the 'base64text' field (as defined in RFC 7648 section 3) of a DER X509v3 certificate without whitespace. The element shall NOT contain the 'preeb' and 'posteb' fields.
Status	This element holds the outcome of processing the Certificate Signing Request. See the section "Batched CSR Result: Status values"

Batched CSR Result: Attribute Table

Attribute Name	Parent Element	Description
ID	CSRBatchResult	The client reference to the batch. This value corresponds to the SubmitCSRBatch ID attribute in the SubmitCSRBatch message.
ID	DeviceCertificate	The client reference to an individual certificate within the batch response. This value corresponds to the DeviceCSR ID attribute in the SubmitCSRBatch message

Batched CSR Result: BatchStatus values

Value	Error Code	Description
PENDING	n/a	The batch has been uploaded, accepted and is awaiting approval.
REJECTED	n/a	The batch has been rejected by the Registration Authority. The batch will not be processed further.
PARSING	n/a	The batch has been approved by the Registration Authority and the batch request and associated Certificate Signing Requests are being parsed
QUEUED	n/a	The batch request and associated Certificate Signing Requests have been parsed and are queued ready for processing.
PROCESSING	n/a	The batch request and associated Certificate Signing Requests are being processed.
PAUSED	n/a	The daily time window for processing batches is closed. The processing of the batch is suspended until the next processing time window.
COMPLETED	n/a	The processing of the batch is completed. The results of the batch processing are contained with the returned XML.
TAMPERED	n/a	The submitted batch contents has changed between upload and parsing. The batch will not be processed further.
FORMAT_ERROR	FM:<Value>	The query for the batch result has failed. This is due to the request format error. The client should correct the mistake and re-submit the request.
WORKFLOW_ERROR	WF:<Value>	The query for the batch result has failed. A workflow error has prevented construction of the batch result message. Re-submission is unlikely to remedy this issue. This issue should be reported, stating the error code, to the DCC helpdesk.

Batched CSR Result: Status values

Value	Error Code	Description
SUCCESS	n/a	This value indicates a Certificate has been generated and is returned in the response.
ISSUANCE_ANOMALY	CA:<Value>	The request has been rejected. A certificate issued from the submitted CSR would result in unexpected issuance behaviour. Manual action by the Registration Authority team would need to be taken to allow a future submission of this CSR to result in a certificate.
INELIGIBLE	IN:<Value>	This value indicates that the CSR has failed the eligibility check as set out in Section L3.16 of the Code. The Remote Party Role of the requester is limited to requesting certificates for meters in certain provisioning states. The Error Code will detail the reason that the eligibility check failed.
CSR_ERROR	CR:<Value>	The request has failed. This is due to a corrupt CSR or incorrect CSR format. The client should correct the mistake and re-submit the CSR.
CA_ERROR	CA:<Value>	The request has failed. An internal error has prevented the CA from issuing the certificate. Re-submission of the CSR may fix this issue.
WORKFLOW_ERROR	WF:<Value>	The request has failed. A workflow error has prevented issuance of the certificate. Re-submission is unlikely to remedy this issue. This issue should be reported, stating the error code, to the Service Desk.

Appendix E Schema for Batched Device CSR Web Service interface

Appendix F Certificate Signing Request Structure

Information to be contained within an Organisation CSR

Section	Attributes	Value
Version		Version 0
Subject	Common Name (id-at-commonName)	This field shall only be populated where, should it be placed in an Organisation Certificate produced using this CSR's details, it would comply with the requirements for the Subject X520 Common Name field in such Organisation Certificates, where those terms have their Appendix B Organisation Certificate Policy meaning.
	Organisational Unit (id-at-organizationalUnitName)	Remote Party Role Code of the Subject of the Certificate (2 character hexadecimal representation of the Remote Party Role Code). E.g. for supplier, value = '02'
	Subject Unique Identifier (id-at-uniqueIdentifier)	The 64 bit EUI-64 Compliant identifier of the subject of the Certificate
Subject Public Key Information	Public Key Algorithm	id-ecPublicKey
	Prime256r1 (256 bit)	Public Key Value
Key Usage	Criticality	True
	Key Usage	digitalSignature or keyAgreement
Signature Algorithm		ecdsa-with-SHA256

CSR forms submitted to the SMKI Portal via DCC Gateway Connection and the SMKI Portal via the Internet will be accepted in PKCS#10 format Base64 encoded. The standard format for CSR forms submitted to the SMKI Portal via DCC Gateway Connection and the SMKI Portal via the Internet will be ASN.1 DER, including either styles of PEM header (i.e. -----BEGIN CERTIFICATE REQUEST----- and -----END CERTIFICATE REQUEST----- or -----BEGIN NEW CERTIFICATE REQUEST----- and -----END NEW CERTIFICATE REQUEST-----). The following variants for CSR forms submitted to the SMKI Portal via DCC Gateway Connection or SMKI Portal via the Internet will also be accepted:

a) No PEM headers

b) Base64 all in one line

c) Base64 with line breaks at 64 or 76 characters

d) If line breaks are used the \n and \r\n are both acceptable

Information to be contained within a Device CSR

Section	Attributes				Value
Version					Version 0
Subject					Empty
Subject Public Key Information	Public Key Algorithm				id-ecPublicKey
	Prime256r1 (256 bit)				Public Key Data
Key Usage	Criticality				True
	Key Usage				digitalSignature or keyAgreement
Subject Alternative Name	General Name	Other Name	id-on-hardwareModuleName	hwType	Object Identifier, OID
				hwSerialNum	Device ID (EUI-64)
Signature Algorithm					ecdsa-with-SHA256

CSR forms submitted to the SMKI Portal via DCC Gateway Connection will be accepted in PKCS#10 format Base64 encoded. The standard format for CSR forms submitted to the SMKI Portal via DCC Gateway Connection will be ASN.1 DER, including either styles of PEM header (i.e. -----BEGIN CERTIFICATE REQUEST----- and -----END CERTIFICATE REQUEST----- or -----BEGIN NEW CERTIFICATE REQUEST----- and -----END NEW CERTIFICATE REQUEST-----). The following variants for Device CSRs submitted to the SMKI Portal via DCC Gateway Connection will also be accepted:

a) No PEM headers

b) Base64 all in one line

c) Base64 with line breaks at 64 or 76 characters

d) If line breaks are used the \n and \r\n are both acceptable

CSRs submitted via the Ad Hoc Device CSR Web Service interface or the Batched Device CSR Web Service interface shall not use PEM headers, as set out in Appendix A and Appendix C respectively.

Format of Batched Certificate Signing Requests via SMKI Portal interface

The format that shall be used for .zip files is defined in *info-zip.org/doc/appnote-19970311-iz.zip.*

Request File

a) The format of the batch request is a ZIP archive containing up to 50,000 individual files with a "csr" extension, which must be in the following format:

b) Each of these files must be uniquely named in the root level of the archive;

c) The individual files must contain a Base64 (as defined by RFC 7468 Section 3) encoded PKCS#10 CSR; and

d) The name of the each file with a 'csr' extension within the ZIP archive is preserved within the SMKI workflow, excluding the "csr" extension, so that the name of the corresponding Device Certificate file in the response ZIP archive will include the name supplied in the 'csr' file.

Response File

The "Response File" is a ZIP archive containing:

a) a text file record for each CSR contained within the Batched CSR, which shall contain the fields as set out immediately below:

   i. identifier for the CSR contained within the Batched CSR;

   ii. the file name for the CSR;

   iii. the status of the processing of the CSR, which shall have a value of one of 'success', 'error', 'anomaly' or 'ineligible'; and

   iv. where relevant, an error code associated with the processing of the CSR; and

b) a ZIP archive which contains all Certificates from the request which have been issued, in the following format:

   i. Certificates will be in Base64 encoded X.509 format;

   ii. The filename is that of the request ZIP file with "-response" appended, and issued certificates are stored in the root level of the archive; and

   iii. The Certificate names are the same as their corresponding request files, but with the "crt" rather than "csr" extension.

Appendix G Authentication Credentials

The SMKI Portal for Users, Ad-Hoc Device CSR Web Service interface and Batched Device CSR Web Service interface shall use server and client certificates with the following cryptographic properties:

Criteria	*Version*
Protocol	*TLS**
Protocol Cyphers	*ECDHE-RSA-AES256-GCM-SHA384*
	ECDHE-RSA-AES256-SHA384
	ECDHE-RSA-AES128-GCM-SHA256
	ECDHE-RSA-AES128-SHA256
Client Certificate Key	*RSA 2048 bit*
Client Certificate Hash Algorithm	*SHA256*
Server Certificate Key	*RSA 2048 bit*
Server Certificate Hash Algorithm	*SHA256*

* TLS should be implemented in accordance with Java and Apache standards and the SMKI PMA and SSC Guidance (Standards, Procedures and Guidelines) published on the SEC website. The TLS version is specified in the HTTP client protocol initialisation. To enable AES256, the Java runtime should be patched with “JCE Unlimited Strength Jurisdiction Policy Files” for the version of Java being used. This is obtained from the public Oracle Java download web pages.

Information to be contained within a CSR for IKI Certificates (client credentials) used to access the Ad Hoc Device CSR Web Service interface and/or the Batched Device CSR Web Service interface

Each CSR for an IKI Certificate used to access the Ad Hoc Device CSR Web Service interface and/or the Batched Device CSR Web Service interface shall comply with the format as set out immediately below. Each such CSR shall only apply to one of the interfaces listed immediately below:

a) Ad Hoc Device CSR Web Service interface; or

b) Batched Device CSR Web Service interface.

Section	**Attributes**	**Value**
Version		Version 0
Subject	Organisation (id-at-organizationName)	Organisation Trading Name
	Organisational Unit (id-at-organizationalUnitName)	Remote Party Role Code

Section	Attributes	Value
	Common Name (id-at-commonName)	Unique Name of the Authorised System, which the submitting Party must ensure is unique for: 1) multiple CSRs for the Ad Hoc Device CSR Web Service interface; or 2) multiple CSRs for the Batched Device CSR Web Service interface.
Subject Public Key Information	Public Key Algorithm	RSAPublicKey
	Key Size	2048
Key Usage	Criticality	True
	Key Usage	digitalSignature
Signature Algorithm		SHA256withRSAEncryption

Appendix H Definitions

Term	Meaning as defined in SEC
Ad Hoc Device CSR Web Service	Has the meaning given to that expression in the SMKI RAPP.
Authorised Responsible Officer	Has the meaning given to that expression in the SMKI RAPP.
AES	Advanced Encryption Standard
Batched Device CSR Web Service	Has the meaning given to that expression in the SMKI RAPP.
Device CSR	Means a CSR submitted in respect of a Device Certificate.
IKI Certification Authority	Has the meaning given to that expression in the IKI Certificate Policy.
Issue	Has the meaning given to that expression in SEC Section A and like terms shall be interpreted accordingly.
Organisation CSR	Means a CSR submitted in respect of an Organisation Certificate.
Portal	Portal is a generic term in the SMKI SEC Documents. It refers to a web-based interface, within which there may be multiple views, depending on the permissions of the individual accessing it.
SMKI Portal	‘Portal’ is a generic term in the SMKI environment: the portals for the OCA and DCA exist as separate URLs within the primary SMKI Portal with security applied in line with the ARO’s role.
SMKI User Guide	Means a user guide for the SMKI Services produced and maintained by the DCC.

Version: N3.0

Appendix N

SMKI Code of Connection

Purpose and Scope

This document is the SMKI Code of Connection produced pursuant to Section L4.5 of the Code.

For the purpose of the SMKI Code of Connection, defined terms shall have the meaning in SEC Section A (Definitions and Interpretation), SEC Appendix M (SMKI Interface Design Specification) and Appendix A of this document.

1. Connection Mechanism

The DCC shall ensure that only persons who are Authorised Responsible Officers (AROs) and have been issued with the appropriate IKI credentials used to access SMKI Services, as defined in the SMKI RAPP, shall be able to access the SMKI Services on behalf of their organisation. Prior to use any of the SMKI Interfaces, any person representing a Party or RDP shall first become an Authorised Responsible Officer, via the process as set out in the SMKI RAPP.

Any Party or RDP which has use of a DCC Gateway Connection may connect to the SMKI Services via that DCC Gateway Connection, and shall use this mechanism to connect to the service unless it is not reasonably practicable to do so. Any Party or RDP may connect to the SMKI Services via an Internet connection where such Party or RDP does not have a DCC Gateway Connection or where it is not reasonably practicable to use such a connection.

1.1. Browser Policy

The DCC shall publish and keep up to date the web browsers and versions which the SMKI Portal interface via a DCC Gateway Connection, and SMKI Portal interface via the Internet supports.

The DCC shall not be required to continue to support any browser versions from which the browser's vendor removes support.

Browsers other than those published may also be compatible, though they will not be supported.

The DCC shall ensure that the SMKI Portal interface via a DCC Gateway Connection and SMKI Portal interface via the Internet are tested with the published browsers on different operating systems. The DCC shall publish and keep up to date the list of operating systems that have been tested.

Operating systems other than those listed above may also be compatible, though they will not be supported.

The browsers (and versions) and operating systems supported by the DCC shall be reviewed from time to time. The DCC shall seek views from Parties and RDPs prior to the withdrawal of support for any version of a browser, a browser itself, or an operating system set out above.

2. SMKI Services interfaces

The DCC shall ensure that SMKI Services shall be made available via four interfaces, as set out in this document. The DCC shall provide relevant technical support information to persons in respect of the use of the SMKI interfaces, upon receipt of a request via the Service Desk.

2.1. SMKI Services interfaces via a DCC Gateway Connection

2.1.1 SMKI Portal interface via a DCC Gateway Connection

The DCC shall at all times (subject to Planned Maintenance) provide and maintain an interface where a Party or RDP may connect to the SMKI Portal interface using a compatible web browser via a DCC Gateway Connection.

The DCC shall ensure that the SMKI Portal interface via a DCC Gateway Connection enables Parties or RDPs with access to the interface to navigate to a landing page via a published URL and from there, further choose to:

(a) submit Organisation Certificate Signing Requests (CSR) and retrieve resulting Organisation Certificates;

(b) submit Ad Hoc Device CSRs and retrieve resulting Device Certificates; and

(c) submit Batched CSRs and retrieve resulting Device Certificates.

2.1.2 Ad Hoc Device CSR Web Service interface

The DCC shall at all times (subject to Planned Maintenance) provide and maintain an Ad Hoc Device CSR Web Service interface to which an Authorised Subscriber for Device Certificates, which is one of the DCC, Import Supplier, or Gas Supplier, may connect.

The DCC shall ensure that the Ad Hoc Device CSR Web Service interface supports submission of Ad Hoc Device CSRs to the DCC and the subsequent issuance of Device Certificates by the DCC, to support the replacement of a certificate on a Device.

2.1.3 Batched Device CSR Web Service interface

The DCC shall at all times (subject to Planned Maintenance) provide and maintain a Batched Device CSR Web Service interface to which an Authorised Subscriber for Device Certificates may connect.

The DCC shall ensure that the Batched Device CSR Web Service interface supports submission of Batched CSRs to the DCC and the subsequent issuance of Device Certificates by the DCC.

2.2. SMKI Portal interface via the Internet

The DCC shall at all times (subject to Planned Maintenance) provide and maintain an interface where a Party or RDP may connect to the SMKI Portal interface via the Internet using a compatible web browser.

The DCC shall enable Parties or RDPs with access to the SMKI Portal interface via the Internet to:

(a) submit Organisation CSRs and retrieve resulting Organisation Certificates.

2.3. Authentication to SMKI Services interfaces

2.3.1 Authentication to SMKI Portal interface via a DCC Gateway Connection or via the Internet

The DCC shall secure the SMKI Portal interface via a DCC Gateway Connection or SMKI Portal interface via the Internet through a mutually authenticated TLS session as set out in the SMKI Interface Design Specification.

The DCC shall publish to Parties and RDPs a 'SMKI User Guide' meeting the requirements of this document.

In order to authenticate to the SMKI Portal, Cryptographic Credential Tokens shall be issued in accordance with the procedures set out in the SMKI RAPP.

Each Party or RDP wishing to access the SMKI Portal interface shall install the Authentication Client software on each ARO's computer used to access the SMKI Portal interface.

The DCC shall make the Authentication Client software available to Parties and RDPs and ensure that the software:

(a) is accessible via a URL that shall be specified and updated from time to time in the SMKI User Guide, using One Way Authentication which can be validated using a 'CA Browser Forum 'server certificate that is signed by a 'Root CA' that is present in in the Windows 'Trusted Root Certification Authorities' certificate store';

(b) is compatible with published operating systems;

(c) is digitally signed using the private key associated with a code signing certificate that is signed by a root CA that is present in in the Windows 'Trusted Root Certification Authorities' certificate store'; and

(d) is supported by instructions as to how to install the Authentication Client software, as set out in the SMKI User Guide.

The Party or RDP may download, and verify the authenticity and integrity of, the Authentication Client software on first use by checking the digital signature used to sign the software and validating the 'CA Browser Forum'[1] server certificate using the certification authority certificates present in the Windows 'Trusted Root Certification Authorities' certificate store'. If such checks are successful, the Party or RDP may install the Authentication Client software on each computer that they wish to use to access the SMKI Portal. In Windows, "Administrator" privileges are required to install the Authentication Client software but are not required to run such software.

The DCC shall ensure that each Cryptographic Credential Token issued contains the appropriate IKI Certificate and Private Key for that Party or RDP, which is needed to authenticate the ARO to the SMKI Portal interface via the DCC Gateway Connection or the SMKI Portal via the Internet.

Furthermore, the DCC shall ensure that:

(a) access to the Cryptographic Credential Token is PIN-protected and the Private Key corresponding with the IKI Certificate used for authentication cannot be removed from the Cryptographic Credential Token;

(b) the Authentication Client software is made available for use by AROs to enable authentication to the SMKI Portal in conjunction with the Cryptographic Credential Token;

(c) it provides support for the Authentication Client software via the Service Desk;

(d) updates are made available to the Authentication Client software accessible via a URL, as set out in the SMKI User Guide; and

[1] https://cabforum.org/

(e) ensure that all browsers listed in section 1.1 of this document are capable of supporting the requirements set out in this section.

The process for TLS1.2 mutual authentication to the SMKI Portal interface via the DCC Gateway Connection or the SMKI Portal via the Internet is as set out in the SMKI Interface Design Specification.

2.3.2 Authentication to Ad Hoc Device CSR Web Service interface

The DCC shall secure the Ad Hoc Device CSR Web Service interface through a TLS1.2 mutual authenticated session to the SMKI Portal in accordance with the SMKI Interface Design Specification.

Parties require an appropriate IKI Certificate, in order to authenticate to the Ad Hoc Device CSR Web Service interface. This IKI Certificate shall be issued by the DCC on successful completion of the process as set out in the SMKI RAPP and in accordance with the SMKI Interface Design Specification.

2.3.3 Authentication to Batched Device CSR Web Service interface

The DCC shall secure the Batched Device CSR Web Service interface through a TLS1.2 mutually authenticated session to the SMKI Portal as set out in the SMKI Interface Design Specification.

Parties require an appropriate IKI Certificate in order to authenticate to the Batched Device CSR Web Service interface. This shall be issued by DCC on successful completion of the process as set out in the SMKI RAPP in accordance with the SMKI Interface Design Specification.

3. Managing Demand

3.1. Capacity Management

3.1.1 SMKI Portal via a DCC Gateway Connection and SMKI Portal via the Internet

Organisation CSRs

The Registration Authority shall process Organisation Certificate Signing Requests received via the DCC Gateway Connection or via the Internet in the same manner.

Batched CSRs

The Registration Authority shall process Batched CSRs received via either SMKI Portal interface in the same manner.

Batch CSRs are processed overnight, and the system is scaled to process a total, across all Authorised Subscribers, of 375,000 CSRs contained within Batched CSRs from 20:00 to 08:00 each day.

The DCC shall ensure that Batched CSRs submitted before 8:00pm are processed by 8:00am the following day. Batched CSRs received after 8:00pm may be delayed until the following night’s processing period.

In order to preserve the overall system capacity, should a Party foresee a need to submit in excess of 50,000 Device Certificate Signing Requests through the SMKI Portal interface in any 24 hour period, the Party shall take reasonable steps to inform the DCC of the potential additional load at least seven days in advance via the Service Desk. The Batched CSRs exceeding this number shall be queued for processing as soon as reasonably practicable.

Batched CSRs shall be processed by the Registration Authority in turn.

Ad Hoc Device CSRs

The Registration Authority shall process Ad Hoc Device CSRs received via the DCC Gateway Connection.

Each Party shall take reasonable steps not to submit more than 150 Ad Hoc Device CSRs in any 24 hour period without the prior agreement of DCC. Should a Party foresee a need to exceed this number the Party shall take reasonable steps to inform the DCC of the potential additional load at least seven days in advance via the DCC's Service Desk.

3.1.2 Ad Hoc Device CSR Web Service interface

Each Party shall take reasonable steps not to submit more than one Certificate Signing Request via the Ad Hoc Device CSR Web Service interface in any 0.8 second period during core service hours (07:00 to 20:00) and one Certificate Signing Request in any four second period outside of these hours.

Should a Party foresee a need to exceed either of these numbers, the Party shall take reasonable steps to inform the DCC of the potential additional load at least seven days in advance via the Service Desk.

3.1.3 Batched Device CSR Web Service interface

Each Party shall ensure that a synchronous response to the submission of a Batched CSR is received before an additional Batched CSR is submitted via the Batched CSR Web Service interface. Each Party may submit multiple Batched CSRs during the period of time between submission of a Batched CSR and downloading the response file containing the Device Certificates and success/error messages.

Each Party shall comply with the following restrictions in respect of retrieving such Device Certificates:

(a) where a Batched CSR is submitted before 20:00, the Party shall comply with the following restrictions in respect of accessing the response file corresponding with a particular Batched CSR:

i. the Party shall not seek to access the response file containing the Device Certificates prior to 08:00 on the day following the date of submission of the corresponding Batched CSR;

ii. the Party shall not seek to access the response file again via the Batched CSR Web Service interface, at any point once the response file has been successfully retrieved; and

iii. if the response indicates that the Batched CSR has been accepted and that the batch processing is not complete, the Party shall not seek to access the response file more than once each hour during the period from 22:00 and 08:00 on the following day.

(b) where a Batched CSR is submitted after 20:00, the Party shall comply with the following restrictions in respect of accessing the response file corresponding with a particular Batched CSR:

i. the Party shall not seek to access the response file containing the Device Certificates prior to 22:00 on the day after the submission of the corresponding Batched CSR; and

ii. the Party shall not seek to access the response file again via the Batched CSR Web Service interface, at any point once the response file has been successfully retrieved; and

iii. if the response indicates that the Batched CSR has been accepted and that the batch processing is not complete, the Party shall not seek to access the response file again more than once each hour during the period from 22:00 on the day after the submission of the corresponding Batched CSR and 08:00, two days after the date of submission of the corresponding Batched CSR.

Appendix A Definitions

Term	Meaning as defined in SEC
Ad Hoc Device CSR	Means a CSR submitted via the Ad Hoc Device CSR Web Service interface
Authentication Client	Means client software which supports authentication of Authorised Responsible Officers
Batched CSR	Means a Batched Certificate Signing Request with its SEC Section A definition.
One Way Authentication	Means the industry standard terminology for HTTPS whereby the client is not required to authenticate with a client credential
SMKI User Guide	Means the document published by the DCC pursuant to the requirement in section 2.3.1

Version: 7.0

APPENDIX O

SMKI Repository Interface Design Specification

Contents

1 Introduction

1.1 Purpose and Scope

The SMKI Repository Interface Design Specification is a document required by Section L6.4 of the SEC, in order to:

a) specify the technical details of the SMKI Repository Interface; and

b) set out the protocols and technical standards that apply to the SMKI Repository Interface.

1.2 Target Response Times

For the purposes of supporting the measurement of Target Response Times in accordance with Sections L8.4 and L8.5 of the SEC, the terms “sending” and “receipt” should be interpreted as follows:

a) “receipt” means, in relation to a request submitted over a DCC Gateway Connection to obtain any document lodged in the SMKI Repository, the successful completion by DCC of the validation checks in relation to such a request, as set out in the SMKI Repository Interface Design Specification; and

b) “sending” means, in relation to a document lodged in the SMKI Repository, the making available of an electronic copy of that document by the DCC Systems such that it is immediately available to be retrieved over a DCC Gateway Connection via the SMKI Repository Interface.

For the purposes of requests issued other than by a DCC Gateway Connection, the terms “sending” and “receipt” should be interpreted in accordance with the meaning as set out in section 1.2 of the SMKI Interface Design Specification.

2 Interface Definition

The DCC shall make three interfaces, collectively referred to as the SMKI Repository Interface, available via a DCC Gateway Connection through which Parties, RDPs, the SMKI PMA and the Panel (or the Code Administrator acting on their behalf) may access the SMKI Repository:

a) a SMKI Repository Portal interface accessed via a web browser (as set out in section 2.1 of this document);

b) a SMKI Repository Web Service interface that can be accessed by a Party's or an RDP's systems (as set out in section 2.2, Annex A and Annex B of this document); and

c) a SSH File Transfer Protocol Interface (the "SFTP Interface") via an SFTP client (as set out in section 2.3 of this document).

Any DCC Gateway Connection user wishing to manage its credentials used to access the SMKI Repository Web Service interface or SFTP Interface shall ensure that it has access to the SMKI Repository Portal interface, which allows management of such credentials.

The means by which Parties, RDPs, the SMKI PMA, and the Panel (or the Code Administrator acting on their behalf) may access SMKI Repository content without a DCC Gateway Connection, are set out in section 2.6 of the SMKI Interface Design Specification.

The SMKI Code of Connection sets out the methods by which such persons may, communicate over the SMKI Repository Interface, and the methods by which connections to the SMKI Repository interfaces are authenticated and communications taking place over them are secured.

The DCC shall ensure that the SMKI Repository Interface is available in line with Section L6.2 of the Code and shall notify Parties and RDPs in advance of any planned outages of the SMKI Repository Interface. The DCC shall ensure that failover between the live and disaster recovery (DR) environments will be achieved using dynamic routing and network address translation on the DCC Gateway Connection. The SMKI Repository interfaces will be accessed via the same Uniform Resource Locator (URL) in the event of a DR invocation; the traffic for this URL will be routed to the DR site and presented to the DR servers completely transparently to the user.

2.1 SMKI Repository Portal Interface via DCC Gateway Connection

2.1.1 General Obligations

The DCC shall ensure that the SMKI Repository Portal interface enables DCC Gateway Connection users to access the SMKI Repository Portal for the purposes:

a) of viewing, querying and / or obtaining a copy of those documents lodged in the SMKI Repository as set out in section 2.1.3 of this document; and

b) of updating password and user profile details in respect of authentication to the SMKI Repository Portal interface.

The DCC shall publish and make available to Parties, RDPs, the SMKI PMA, and the Panel a SMKI Repository User Guide meeting the requirements for that guide laid out in this document and in the SMKI Repository Code of Connection.

The DCC shall ensure that the SMKI Repository Portal interface available via a DCC Gateway Connection:

a) uses the HTTPS protocol, secured by TLS in line with the protocols set out in Annex C of this document;

b) is accessed via URLs that are set out in the SMKI Repository User Guide;

c) uses Javascript, Cascading Style Sheets (CSS) and images;

d) is compliant with the W3C Web Content Accessibility Guidelines (v2) at "AA" level; and

e) is only accessible using a DCC Gateway Connection.

The process for obtaining a DCC Gateway Connection is detailed in Section H3 of the Code.

The DCC shall ensure that all Organisation Certificates, OCA Certificates, Device Certificates, DCA Certificates, Organisation CRLs and Organisation ARLs lodged in the SMKI Repository are in Base64 DER format. Organisation CRL and Organisation ARL validity is as set out in Annex B to the Code.

2.1.2 Establishing connection to the SMKI Repository Portal interface via a DCC Gateway Connection

In order to establish a connection to the SMKI Repository Portal interface, a DCC Gateway Connection user shall:

a) ensure that their browsers have Javascript enabled;

b) verify the 'CA/Browser Forum' server certificate presented by the SMKI Repository Portal, as described below and, if successfully verified by the browser, accept the certificate;

c) enter a username and password that has been issued for the purpose of authenticating the user to the SMKI Repository Portal interface; and

d) establish a TLS session.

The DCC shall ensure that a username and initial password is provided as set out in the SMKI Registration Authority Policies and Procedures (SMKI RAPP). The DCC shall ensure that the initial password must be changed by the user upon first use, and maintenance of the username and password is detailed in the SMKI Repository Code of Connection.

The DCC shall ensure that users are provided with a profile page which enables users to view and update their SMKI Repository Portal username and password and to update contact information, as set out in the SMKI Repository Code of Connection.

The DCC shall ensure that the SMKI Repository Portal interface presents to the user an x.509 v3 certificate that is recognised by the 'CA/Browser Forum' for the purposes of allowing the DCC Gateway Connection user's systems to authenticate the server as part of establishing the TLS session.

The DCC shall ensure that the SMKI Repository Portal denies access where a user does not present a valid username and password for authentication.

2.1.3 Retrieval of SMKI Repository content

The DCC shall ensure that the SMKI Repository Portal interface enables DCC Gateway Connection users to search for and download via a web form the following files that are lodged in the SMKI Repository, where they have successfully established a secured TLS connection to the SMKI Repository Portal interface (as set out in the SMKI Repository User Guide):

a) Organisation Certificates and OCA Certificates;

b) Device Certificates and DCA Certificates;

c) the latest Organisation CRL and the latest Organisation ARL; and

d) other documents lodged in the SMKI Repository.

2.2 SMKI Repository Web Service interface

2.2.1 General Obligations

The DCC shall ensure that the SMKI Repository Web Service interface enables DCC Gateway Connection users' systems to search for and obtain content lodged in the SMKI Repository, as set out in section 2.2.3, Annex A and Annex B of this document.

The DCC shall ensure that the SMKI Repository Web Service interface via DCC Gateway Connection:

a) uses the HTTPS protocol, secured by TLS in line with the protocols set out in Annex C of this document;

b) is accessed via URLs that are set out in the SMKI Repository User Guide;

c) uses Extensible Markup Language (XML) over POST for message requests and responses;

d) provides XML message responses which conform with the details set out in Annex A of this document and the XML schema set out in Annex B of this document;

e) conforms with the XML schema set out in Annex B for message requests and responses; and

f) is only accessible using a DCC Gateway Connection.

Prior to gaining access to the SMKI Repository Web Service interface, a DCC Gateway Connection user shall access the profile page on the SMKI Repository Portal in order to obtain its credentials for the SMKI Repository Web Service interface, as set out in the SMKI RAPP. The DCC shall ensure that the credentials for the SMKI Repository Web Service interface shall be in the form of an API Key, which is generated by the DCC and is a 15 character UTF-8 case insensitive string.

The DCC shall, in accordance with the SMKI RAPP, provide the DCC Gateway Connection user with a 'CA/Browser Forum' recognised certificate authority root certificate and all corresponding issuing authority certificates, for the purposes of enabling server authentication of the SMKI Repository Web Service interface.

The DCC shall ensure that each API Key shall:

a) remain valid until manually replaced by the DCC Gateway Connection user using the SMKI Repository Portal interface; and

b) once replaced, be invalid for authentication to the SMKI Repository Web Service interface.

2.2.2 Establishing connection to the SMKI Repository Web Service interface via DCC Gateway Connection

In order to establish a connection to the SMKI Repository Web Service interface, a DCC Gateway Connection user shall submit a request to establish a secured TLS session which:

a) accesses a URL as set out in section 2.2.1 of this document; and

b) includes its API Key in the querystring, in order that the SMKI Repository Interface can authenticate the user before attempting to parse the XML request document in accordance with Annex A and Annex B of this document; and

c) configures its systems such that the TLS session renegotiation timeout is set to 5 minutes.

The DCC shall ensure that the SMKI Repository Web Service presents an x.509 v3 certificate that is recognised by the 'CA/Browser Forum' referenced in section 2.2.1 of this document, for the purposes of allowing the DCC Gateway Connection user's client to authenticate the server as part of establishing the TLS session. The DCC Gateway Connection user shall verify the 'CA/Browser Forum' certificate and, if successfully verified, accept the certificate.

The DCC shall ensure that access to the SMKI Repository Web Service interface is denied where the user does not present a valid API Key for authentication.

2.2.3 Retrieval of SMKI Repository content

The DCC shall ensure that the SMKI Repository Portal Web Service interface enables DCC Gateway Connection users to search for and download the following files that are lodged in the SMKI Repository, where they have successfully established a connection to the SMKI Repository Portal Web Service interface:

a) Organisation Certificates and OCA Certificates;

b) Device Certificates and DCA Certificates;

c) the latest Organisation CRL and the latest Organisation ARL.

2.3 SSH File Transfer Protocol (SFTP) Interface

2.3.1 General Obligations

The DCC shall ensure that the SFTP Interface to the SMKI Repository enables DCC Gateway Connection users' systems to download Organisation Certificates, OCA Certificates, Device Certificates, DCA Certificates, Organisation CRLs and Organisation ARLs lodged in the SMKI Repository, as set out this section and Annex C of this document. The recommended practices for management stated in NISTIR 7966 section 5 should be followed where RFC references are shown in this section.

The DCC shall ensure that the SFTP Interface to the SMKI Repository via a DCC Gateway Connection:

a) is accessed via URLs that are set out in the SMKI Repository User Guide;

b) is implemented in a standard format:

  i. conforming to Secure Shell (SSH-2) protocol, in accordance with RFC 4251, RFC 4252 and RFC 4253;

  ii. conforming to RFC 4251, RFC 4252, RFC 4253 and RFC 959 (File Transfer Protocol) for the purposes of error handling;

iii. where the Transport Layer implements encrypted communications using the AES (Advanced Encryption Standard) cipher (FIPS-197) with a 128-bit key length, in CBC mode (aes128-cbc);

iv. where the Transport Layer implements MAC communications using hmac in accordance with RFC2104, combined with sha1 (hmac-sha1); and

v. where the Transport Layer implements RAW DSS Keys in ssh-dss format;

c) is implemented such that 'Quality of Service' constraints (rate-limiting) are applied to the download of files via the SFTP Interface to protect other aspects of the overall DCC service;

d) provides access to the files specified in section 2.3.3 of this document; and

e) is only accessible using a DCC Gateway Connection.

Prior to gaining access to the SFTP Interface to the SMKI Repository, the DCC shall provide a username and initial password to the DCC Gateway Connection user as part of the process as set out in the SMKI RAPP. The DCC shall ensure that the initial password to authenticate to the SFTP Interface shall be provided to the DCC Gateway Connection user via the profile page on the SMKI Repository Portal.

The DCC shall ensure that the initial password must be changed by the DCC Gateway Connection user upon first use, using the profile page on the SMKI Repository Portal. The DCC shall ensure that a password used to authenticate to the SFTP Interface may be changed by the DCC Gateway Connection user at any time, via the profile page on the SMKI Repository Portal. The DCC shall ensure that each password used to authenticate to the SFTP Interface shall remain valid until replaced by the DCC Gateway Connection user via the SMKI Repository Portal interface and shall be invalid thereafter.

The DCC shall provide the DCC Gateway Connection user with the DCC SSH public key, which shall be available for download/viewing in the 'Help and Support' section of the SMKI Repository Portal.

2.3.2 Establishing connection to the SFTP Interface to the SMKI Repository

In order to establish a connection to the SFTP Interface, each DCC Gateway Connection user shall:

a) make use of a standard SFTP client that supports the configuration as detailed in section 2.3.1 of this document;

b) authenticate to the SFTP interface by using a valid combination of its username and password, in accordance with the 'password' method; and

c) verify that the DCC SSH public key, as provided by the DCC as set out in section 2.3.1 of this document, matches the details within the SMKI Repository Portal prior to using the SFTP Interface.

Details of how a DCC Gateway Connection user should configure its SFTP client are set out in the SMKI Repository User Guide.

2.3.3 Retrieval of SMKI Repository content

The DCC shall ensure that the SFTP interface enables DCC Gateway Connection users' systems to download the following files that are lodged in the SMKI Repository, where they have successfully established a connection to the SFTP Interface:

a) a file in .gz format and having a name of form *SMKIKR_FULL_YYYY-MM-DD.xml.gz*, updated weekly by the time set out in the SMKI Repository User Guide, containing:

   i. an XML file which complies with the SMKI Repository Web Service interface schema as set out in Annex B of this document, having a name of the form SMKIKR_FULL_YYYY-MM-DD.xml and which contains certificates, comprising OCA Certificates, DCA Certificates, Organisation Certificates and Device Certificates with a status of 'In-Use'.

b) seven files in .gz format and having names of the form *SMKIKR_DELT_YYYY-MM-DD.xml.gz*, updated daily, each of which contains:

   i. an XML file which complies with the SMKI Repository Web Service interface schema as set out in Annex B of this document, having a name of the form SMKIKR_DELT_YYYY-MM-DD.xml and which contains certificates comprising OCA Certificates, DCA Certificates, Organisation Certificates, and Device Certificates Issued and lodged in the SMKI Repository during the preceding twenty four hours or whose Certificate status has change. This will enable the user to maintain a daily synchronised copy of the certificates in the SMKI Repository. Each of the seven daily files shall be available for 7 days from publication and shall then be removed by the DCC from the SMKI Repository.

c) a file with extension 'gz' that is the latest Organisation ARL;

d) a file with extension 'gz' that is the latest Organisation CRL;

e) a file in .gz format, updated as necessary, containing the base set of Organisation Certificates and OCA Certificates required to populate Device anchor slots prior to installation for the North Region; and

f) a file in .gz format, updated as necessary, containing the base set of Organisation Certificates and OCA Certificates required to populate Device anchor slots prior to installation for the Central Region and South Region.

The DCC shall ensure that the files holding certificates are made available in .gz format, with all versions of .gz being supported. Each .gz file will contain a single XML file which complies with the XML schema as set out in Annex B, containing individual certificates, represented as Base64 encoded strings.

The DCC shall ensure that the Organisation Certificates and OCA Certificates contained within the two files at (e) and (f) above shall be the same, other than the Organisation Certificates for the Remote Party Role of wanProvider, with its GBCS meaning.

The DCC shall lodge a document in the SMKI Repository, which sets out details of which of the base set of Organisation Certificates and OCA Certificates may be placed in specific Device Trust Anchor Cells, where that term has its GBCS meaning.

Annex A: SMKI Repository Web Service interface specification

Response Codes

The DCC shall ensure that the following HTTP response codes are returned in the response to each attempted access to the SMKI Repository Web Service interface:

a) HTTP response code 200, where a request is successful;

b) HTTP response code 4xx (400-499) where there is an error that is anticipated;

c) HTTP response code 404, where a request is made but the User should not have access to the SMKI Repository Web Service interface; and

d) HTTP response code 5xx (500-599) for unanticipated error conditions.

Response codes are also replicated in the XML response body as **ResponseCode**, along with a human readable description as **ResponseMessage** as set out in the 'Service Specific Error Codes' sections within this Annex A.

Audit References

Each response shall include an **AuditReference** entity in each response body. This is a globally unique reference for the request served, and can be considered both as a receipt reference and a diagnostic tool in relation to the investigation of problems encountered in using the SMKI Repository Web Service.

HTTP POST Certificate Search

The table immediately below sets out the way in which a user may search the SMKI Repository by means of the SMKI Repository Web Service interface.

Web Service URL	**/services/certificatesearch**
Required Parameters	apikey=*<SRI User's API Key>*
Example URL	https://site.name.com/services/certificatesearch?apikey=u3bg9gt38htd0j2
Required POST	UTF8 encoded XML v1.0 document with a top level **CertificateSearchRequest** entity, containing search term entities from the following list: • **CertificateSubjectName** (23 character EUI-64 format in the case of it being the Unique Identifier for an organisation or other up to 23 character subject name in the case of it being the common name of an OCA or DCA Certificate) • **CertificateSubjectAltName** (23 character EUI-64 format) • **CertificateSerial** (Up to 50 character string) • **CertificateStatus** (1 character string) • **PubDateRangeStart** (yyyy-mm-dd) • **PubDateRangeEnd** (yyyy-mm-dd)

	• **ExpDateRangeStart** (yyyy-mm-dd) • **ExpDateRangeEnd** (yyyy-mm-dd) • **RevDateRangeStart** (yyyy-mm-dd) • **RevDateRangeEnd** (yyyy-mm-dd) • **InUseDateRangeStart** (yyyy-mm-dd) • **InUseDateRangeEnd** (yyyy-mm-dd) • **CertificateIssuer** (Up to 23 character string) • **CertificateRole** (Integer) • **ManufacturingFlag** (true/false) All search term entities are optional, but it is mandatory to provide either **CertificateSubjectName**, **CertificateSubjectAltName** or **CertificateSerial**

Example Request XML	`<?xml version="1.0" encoding="utf-8"?>`
	`<CertificateSearchRequest>`
	`<CertificateSubjectAltName>01-02-03-04-05-06-07-08</CertificateSubjectAltName>`
	`<PubDateRangeStart>2014-01-01</PubDateRangeStart>`
	`<PubDateRangeEnd>2018-01-01</PubDateRangeEnd>`
	`</CertificateSearchRequest>`

Response Format	UTF8 encoded XML v1.0 document with a top level **CertificateSearchResponse** entity, containing the following entities: • **ResponseCode** (up to 3 character string) • **ResponseMessage** (up to 50 character string) • **AuditReference** (up to 20 character string) Followed by a variable number of **Result** entities (in the case of a successful response), each comprising: • **CertificateSerial** (Up to 50 character string) • **CertificateSubjectAltName** (23 character EUI-64 format) • **CertificateSubjectName** (23 character EUI-64 format or other up to 23 character subject name in the case of a DCA or OCA Certificate common name) • **CertificateStatus** (1 character string) • **CertificateRole** (Integer) • **CertificateUsage** (2 character string) • **ManufacturingFlag** (true/false)

Example Response XML	`<?xml version="1.0" encoding="utf-8"?>`
	`<CertificateSearchResponse>`
	`<ResponseCode>200</ResponseCode>`
	`<ResponseMessage>Success</ResponseMessage>`
	`<AuditReference>1234567890-abc123456</AuditReference>`
	`<Result>`
	`<CertificateSerial>00926EAABE07B701DF</CertificateSerial>`

	<CertificateSubjectAltName>01-02-03-04-05-06-07-08</CertificateSubjectAltName> <CertificateStatus>I</CertificateStatus> <CertificateRole>2</CertificateRole> <CertificateUsage>DS</CertificateUsage> <ManufacturingFlag>false</ManufacturingFlag> </Result> <Result> <CertificateSerial>1234567890</CertificateSerial> <CertificateSubjectAltName>01-02-03-04-05-06-07-08</CertificateSubjectAltName> <CertificateStatus>P</CertificateStatus> <CertificateRole>2</CertificateRole> <CertificateUsage>DS</CertificateUsage> <ManufacturingFlag>false</ManufacturingFlag> </Result> </CertificateSearchResponse>
Service Specific Error Codes	**401** = Invalid Search Parameters **402** = No Certificates Match Search Parameters
Notes	

Retrieve Certificate

The table immediately below sets out the way in which a user may retrieve a certificate from the SMKI Repository by means of the SMKI Repository Web Service interface.

Web Service URL	*/services/retrievecertificate*
Required Parameters	apikey=<*SRI User's API Key*>
Example URL	https://site.name.com/services/retrievecertificate?apikey=u3bg9gt38htd0j2
Required POST	UTF8 encoded XML v1.0 document with a top level **CertificateDataRequest** entity, containing the following, mandatory, entity: - **CertificateSerial** (Up to 50 character string)
Example Request XML	<?xml version="1.0" encoding="utf-8"?> <CertificateDataRequest> <CertificateSerial>00926EAABE07B701DF</CertificateSerial> </CertificateDataRequest>
Response Format	UTF8 encoded XML v1.0 document with a top level **CertificateSearchResponse** entity, containing the following entities: - **ResponseCode** (up to 3 character string)

	• **ResponseMessage** (up to 50 character string) • **AuditReference** (up to 20 character string) • **CertificateResponse** (in the case of a successful response) consisting of: ○ **CertificateSubjectName** (23 character EUI-64 format in the case of it being the Unique Identifier for an organisation or other up to 23 character subject name in the case of the common name of a DCA or OCA Certificate) ○ **CertificateSubjectAltName** (23 character string) ○ **CertificateSerial** (Up to 50 character string) ○ **CertificateStatus** (1 character string) ○ **CertificateBody** (Base64 representation of the DER encoded ASN.1 notated certificate data) ○ **CertificateRole** (Integer) ○ **CertificateUsage** (2 character string) ○ **ManufacturingFlag** (true/false)

Example Response XML	<?xml version="1.0" encoding="utf-8"?>
	<CertificateDataResponse>
	  <ResponseCode>200</ResponseCode>
	  <ResponseMessage>Success</ResponseMessage>
	  <AuditReference>1234567890-abc123456</AuditReference>
	  <CertificateResponse>
	    <CertificateSubjectAltName>01-02-03-04-05-06-07-08</CertificateAltName>
	    <CertificateSerial>00926EAABE07B701DF</CertificateSerial>
	    <CertificateStatus>I</CertificateStatus>
	    <CertificateBody>
	      (base64 certificate data)
	    </CertificateBody>
	    <CertificateRole>2</CertificateRole>
	    <CertificateUsage>DS</CertificateUsage>
	    <ManufacturingFlag>false</ManufacturingFlag>
	  </CertificateResponse>
	</CertificateDataResponse>

Service Specific Error Codes	**401** = Invalid Input Parameters **402** = No Certificates Match Input Parameters **403** = No Matching Certificates Are Valid
Notes	Certificates are requested by serial number, and serial numbers are globally unique across the SMKI. Therefore only one certificate (i.e. one CertificateResponse entity) will be returned. The certificatesearch service should be used to determine the serial number for the certificate required.

Organisation CRL and Organisation ARL Retrieval

The latest version of the Organisation CRL and Organisation ARL shall be available from separate static URLs enabling the automation of the CRL or ARL download via the SMKI Repository Web Service interface. Informational text will be displayed on the Portal to inform the user how users may automate downloads of these files using URLs of the form /revocationlists/<common_name>?apikey=<user_api_key>. The actual URL shall be detailed in the SMKI Repository User Guide.

Meaning of XML schema codes

The table immediately below sets out the meaning of codified elements with the XML schema for the SMKI Repository Web Service Interface, where such XML schema is as set out in Annex B of this document.

XML Schema Element Name	Possible Values	Meaning
CertificateStatus	P I N E R	Pending In use Not In use Expired Revoked
ManufacturingFlag	true false	Can be used during manufacturing Cannot be used during manufacturing
CertificateUsage	DS KA CS	Digital Signing Key Agreement Certificate Signing
CertificateRole	See 'Remote Party Role Code' in Annex A of Section L	See corresponding 'Remote Party Role' in Annex A of Section L

Annex B: SMKI Repository Web Service interface schema

This section specifies the XML schema that must be used for the SMKI Repository Web Service, as set out immediately below.

The DCC shall ensure that the version number of the SMKI Repository Web Service interface is contained within the XML schema, as set out below. Each user of the SMKI Repository Web Service interface shall ensure that the version number is included within:

a) the URL used to access the SMKI Repository Web Service interface;

b) the schema filename; and

c) XML requests and responses.

There shall be a different end point for each version of the SMKI Repository Web Service interface. Different versions shall be supported on separate URLs.

```
<?xml version="1.0" encoding="UTF-8"?>
<xs:schema xmlns:xs="http://www.w3.org/2001/XMLSchema" elementFormDefault="qualified">

```

Annex C: Authentication Credentials

The SMKI Repository Portal Interface via DCC Gateway Connection, SMKI Repository Web Service interface and SFTP interface shall use server certificates with the following properties:

Criteria	***Version***
Protocol	*TLS**
Protocol Cyphers	*ECDHE-RSA-AES256-GCM-SHA384*
	ECDHE-RSA-AES128-GCM-SHA256
	ECDHE-RSA-AES128-SHA256
Client Certificate Key	*RSA 2048 bit*
Client Certificate Hash Algorithm	*SHA256*
Server Certificate Key	*RSA 2048 bit*
Server Certificate Hash Algorithm	*SHA256*

* TLS should be implemented in accordance with Java and Apache standards and the SMKI PMA and SSC Guidance (Standards, Procedures and Guidelines) published on the SEC website. The TLS version is specified in the HTTP client protocol initialisation. To enable AES256, the Java runtime should be patched with “JCE Unlimited Strength Jurisdiction Policy Files” for the version of Java being used. This is obtained from the public Oracle Java download web pages.

Annex D: Definitions

Term	Meaning as defined in SEC
In-Use	Means a valid Device Certificate that has not been operationally superseded and which the Device has acknowledged as being successful installed/updated
SMKI Repository Portal	Means an interface accessed via a web browser, as set out in section 2.1 of this document.
SMKI Repository User Guide	Means the document published pursuant to section 2.1 of this document.
SMKI Repository Web Service	Means an interface that can be accessed by a Party's or an RDP's systems, as set out in section 2.2, Annex A and Annex B of this document.
SSH File Transfer Protocol Interface (the "SFTP Interface")	Means an interface that can be accessed via an SFTP client, as set out in section 2.3 of this document.
Uniform Resource Locator (URL)	Has the meaning at https://en.wikipedia.org/wiki/URL

Version: P2.0

APPENDIX P

SMKI Repository Code of Connection

Purpose and Scope

This SMKI Repository Code of Connection is the document required by Section L6.5 of the SEC.

1. Connection Mechanism

1.1. Interface access

DCC Gateway Connection users may connect to the SMKI Repository interfaces as set out in sections 3.1 to 3.3 of this document, via that DCC Gateway Connection, and where they have been issued with credentials to authenticate to such SMKI Repository interfaces. The means by which a connection is made to the SMKI Repository interfaces is set out in the SMKI Repository Interface Design Specification.

Any Party or RDP without a DCC Gateway Connection may access SMKI Repository content as set out in section 2.2 of this document and the SMKI Repository Interface Design Specification.

1.2. Browser Policy

The DCC shall publish and keep up to date the web browsers and versions which the SMKI Repository Portal Interface supports.

Browsers and versions other than those published may also be compatible, though they will not be supported and access to the SMKI Repository Portal interface using other such browsers and versions cannot be guaranteed. No browsers shall be explicitly blocked or denied access to the SMKI Repository Portal interface, though there may be unexpected behaviour when a browser or version other than those published is used.

The browsers supported by the DCC shall be reviewed from time to time. Except as set out in the paragraph below, the DCC shall seek views from Parties or RDPs with access to the SMKI Repository Portal interface prior to the withdrawal of support for any browser or version previously published.

The DCC shall not be required to support browser versions that are not supported by that browser's vendor.

1.3. Lodging Information in the SMKI Repository

The DCC shall ensure that any persons as set out in Section L5.3 of the SEC may lodge information in the SMKI Repository. Such persons acting on behalf of the SMKI PMA or the Code Administrator must be an ARO and shall contact the Service Desk in order to lodge information into the SMKI Repository.

Prior to lodging any such information in the SMKI Repository on behalf of the SMKI PMA or the Code Administrator, the DCC shall authenticate the identity of the ARO wishing to lodge information in the SMKI Repository by confirming such information from the relevant ARO Nomination Form, in order to provide confidence that the request is from an authorised ARO.

The DCC shall lodge all information in the SMKI Repository as soon as is practicable upon receipt, subject to the above identity checks.

2. SMKI Repository interfaces

2.1. Not used

2.2. SMKI Repository content access for users without a DCC Gateway Connection

Parties, RDPs or representatives of the SMKI PMA, Panel or Code Administrator wishing to obtain information lodged in the SMKI Repository, other than via a DCC Gateway Connection, may do so by contacting the Service Desk as set out in the SMKI Repository User Guide, via personal visit, e-mail, signed fax, signed letter or telephone for the purposes of viewing, and/or obtaining a copy of a document lodged in the SMKI Repository. Following such contact, the DCC shall ensure that the relevant requested copies of Certificates or other information is provided via optical media such as CD, DVD or, where appropriate, email.

Parties or RDPs may also access the SMKI Portal via the Internet to retrieve SMKI Repository content, as set out in the SMKI Interface Design Specification.

3. Authentication

The DCC shall ensure that credentials to access the SMKI Repository interfaces are provided, following successful completion of the registration processes required to become an ARO, as set out in the SMKI RAPP.

Access to the SMKI Repository interfaces for persons who do not have access to a DCC Gateway Connection is set out in section 2.2 of this document.

3.1. Authentication to the SMKI Repository Portal interface

The DCC shall provide DCC Gateway Connection users with a username and password in accordance with the SMKI RAPP. Upon first login or after a password reset completed by the DCC, the DCC Gateway Connection user shall be required to ensure that the ARO's account password is changed via the SMKI Repository Portal, as set out in the SMKI Repository User Guide.

If the DCC Gateway Connection users enters an incorrect password five times within a one hour period, the DCC shall ensure that the account will automatically lock for one hour from the first failed authentication attempt, or until it is manually unlocked by an administrator on request by an ARO to the DCC Service Desk. Upon request from an ARO to unlock its SMKI Repository Portal interface password, the DCC shall authenticate the identity of the ARO by confirming such information from the relevant ARO Nomination Form, in order to provide confidence that the request is from an authorised ARO.

3.2. Not used

3.3. Not used

4. Managing Demand

Each DCC Gateway Connection user shall provide a forecast of the number of certificates that the DCC Gateway Connection user anticipates retrieving from any SMKI Repository Interface either individually or in bulk. Such forecasts shall be a reasonable estimate of the DCC Gateway Connection user's intended usage. The scope of requests in relation to which a forecast is required is set out in Appendix A of this document.

Each DCC Gateway Connection user shall take all reasonable steps to ensure that their usage does not exceed 120% of their forecast in Table 1.

When a DCC Gateway Connection user's actual number of requests for a particular type of access, as set out in Table 1, to the SMKI Repository exceeds 120% of its forecast, the DCC Service Desk may inform the DCC Gateway Connection user via secured electronic means as set out in the SMKI Repository User Guide.

Each DCC Gateway Connection user shall notify the DCC Service Desk of any short term or long term usage which is expected to exceed 120% of its forecast and the DCC shall make reasonable attempts to meet this additional demand which may include proposal of a schedule when this additional demand can be met without adversely affecting the provision of the service.

4.1. Error Responses

In cases where there is a failure of the service or infrastructure, or a delay in the processing of a request that causes the DCC Gateway Connection user's browser or a device upstream of the SMKI Repository Interface to abandon the request before the SMKI Repository Interface begins to execute the request, the generation or delivery of a SMKI Repository Interface error message may not be possible.

Appendix A Templates for Information to be supplied by Parties

Each DCC Gateway Connection user shall provide to the DCC via the DCC Service Desk, using the mechanism as set out in the SMKI Repository User Guide, the forecast information identified in this Appendix in regard to their proposed use of the DCC Gateway Connection user's connection to the SMKI Repository.

1. Usage Forecast

DCC Gateway Connection users shall forecast their usage of the SMKI Repository in relation to the request types in the table below.

The first table identifies the forecasts required of the number of requests for web services requests and SMKI Repository Portal requests.

Request type	Maximum Number of Requests per 24 hour period
SMKI Repository Web Service interface requests	< value >
SMKI Repository Portal interface requests	< value >

Table 1 Daily Usage Forecast

An assumption has been made that the daily delta file will be downloaded by each DCC Gateway Connection user each day and one download of the full database file per week. DCC Gateway Connection users shall enter the day of the week that they will download the full database file. All additional attempts to download the delta file or full database file or attempts to download the database file outside of the agreed day must be communicated and agreed with the DCC. The DCC shall make reasonable attempts to meet this additional demand, or change in schedule, which may include proposing a day and time frame when this will be possible without adversely affecting the provision of the service.

Request type	Download Day
SFTP Full Download	< Day >

Table 2 SFTP Full Download Forecast

The following table is provided for the DCC Gateway Connection users to set out their forecast of the reasonable maximum usage during any 24 hour period.

	Off Peak		Core	Non-Core (evening)
Mode of Operation	00:00 – 07:00	07:00 - 08:00	08:00 - 20:00	20:00 – 00:00
SMKI Repository Portal interface requests	< Percentage of total requests via SMKI Repository Portal interface>	< Percentage of total requests via SMKI Repository Portal interface>	< Percentage of total requests via SMKI Repository Portal interface>	< Percentage of total requests via SMKI Repository Portal interface>
SMKI Repository Web Service interface requests	< Percentage of total requests via SMKI Repository Web Service interface >	< Percentage of total requests via SMKI Repository Web Service interface >	< Percentage of total requests via SMKI Repository Web Service interface >	< Percentage of total requests via SMKI Repository Web Service interface >
SFTP interface daily delta file request	< Percentage of total requests to download delta files>	< Percentage of total requests to download delta files >	< Percentage of total requests to download delta files >	< Percentage of total requests to download delta files >
SFTP interface full file request	< Percentage of total requests to download full files>	< Percentage of total requests to download full files>	< Percentage of total requests to download full files>	< Percentage of total requests to download full files>

Appendix B Definitions

Term	Meaning as defined in SEC
API Key	Means an application programming interface key, used for the purposes of identifying the user of the SMKI Repository Web Service interface

Version Q7.0

APPENDIX Q

IKI Certificate Policy

(IKI CP)

CONTENTS

1 INTRODUCTION

The document comprising this Appendix Q (together with its Annexes A and B):

- shall be known as the "IKI Certificate Policy" (and in this document is referred to simply as the "Policy"); and
- is a SEC Subsidiary Document related to Section L9 of the Code (The SMKI Document Set).

1.1 OVERVIEW

(A) This Policy sets out the arrangements relating to:

(i) IKI Certificates; and

(ii) IKI Certificate Authority (ICA) Certificates.

(B) This Policy is structured according to the guidelines provided by IETF RFC 3647, with appropriate extensions, modifications and deletions.

(C) Except where the context otherwise requires, words or expressions used in this Policy shall have the meanings ascribed to them in IETF RFC 5280 where they:

(i) appear in `Courier New` font;

(ii) are accompanied by the descriptor 'field', 'type' or 'extension'; and/or

(iii) take the form of a conjoined string of two or more words, such as 'digitalSignature'.

1.2 DOCUMENT NAME AND IDENTIFICATION

(A) This Policy has been assigned an OID of 1.2.826.0.1.8641679.1.2.1.3

1.3 SMKI PARTICIPANTS

1.3.1 The IKI Root Certification Authority

(A) The definition of IKI Certification Authority is set out in Annex A.

1.3.2 Registration Authorities

(A) The definition of Registration Authority is set out in Annex A.

1.3.3 Subscribers

(A) In accordance with Section L3.20 of the Code (IKI Certificates), certain Parties, Manufacturers, RDPs and SECCo may become Authorised Subscribers.

(B) In accordance with Section L3 of the Code (The SMKI Services), an Authorised Subscriber shall be an Eligible Subscriber in relation to certain Certificates.

(C) The SMKI RAPP sets out the procedure to be followed by an Eligible Subscriber in order to become a Subscriber for one or more Certificates.

(D) Eligible Subscribers are subject to the applicable requirements of the SMKI RAPP and Section L11 of the Code (Subscriber Obligations).

(E) Obligations on the DCC acting in the capacity of an Eligible Subscriber are set out in Section L11 of the Code (Subscriber Obligations).

(F) The definitions of the following terms are set out in Section A of the Code (Definitions and Interpretation):

(i) Authorised Subscriber; and

(ii) Subscriber.

(G) Eligible Subscribers are defined in Annex A of this Policy.

1.3.4 Subjects

(A) The Subject of an IKI Certificate shall be an entity or object which may be an individual, organisation or System and must be identified in the `subject` field of the IKI Certificate Profile in accordance with Annex B.

(B) The Subject of an ICA Certificate must be the entity named in the `subject` field of the Root ICA Certificate Profile or Issuing ICA Certificate Profile (as the case may be) in accordance with Annex B.

(C) The definition of Subject is set out in Annex A.

1.3.5 Relying Parties

(A) In accordance with Section L12 of the Code, certain Parties may be Relying Parties.

(B) Relying Parties are subject to the applicable requirements of Section L12 of the Code (Relying Party Obligations).

(C) Obligations on the DCC acting in the capacity of a Relying Party are set out in Section L12 of the Code (Relying Party Obligations).

(D) The definition of Relying Party is set out in Annex A.

1.3.6 (E) The only Relying Party for IKI Certificates and ICA Certificates is the DCC.SMKI Policy Management Authority

(A) Provision in relation to the SMKI PMA is made in Section L1 of the Code (SMKI Policy Management Authority).

1.3.7 SMKI Repository Provider

(A) Provision in relation to the SMKI Repository Service is made in Section L5 of the Code (The SMKI Repository Service).

1.4 USAGE OF IKI CERTIFICATES AND ICA CERTIFICATES

1.4.1 Appropriate Certificate Uses

(A) The ICA shall ensure that IKI Certificates are Issued only:

(i) to Eligible Subscribers; and

(ii) for the purposes of either authenticating the Subject to the SMKI Services or signing files related to Threshold Anomaly Detection, the Certified Products List and the SMKI Recovery Procedure that are sent to the DCC.

(B) The ICA shall ensure that ICA Certificates are Issued only to the ICA:

(i) in its capacity as, and for the purposes of, exercising the functions of, the Root ICA; and

(ii) in its capacity as, and for the purposes of, exercising the functions of, an Issuing ICA.

(C) Further provision in relation to the use of Certificates is made in Section L11 (Subscriber Obligations) and Section L12 (Relying Party Obligations) of the Code.

1.4.2 Prohibited Certificate Uses

(i) No Party, Manufacturer, RDP or SECCo shall use a Certificate other than for the purposes specified in Part 1.4.1 of this Policy.

1.5 POLICY ADMINISTRATION

1.5.1 Organisation Administering the Document

(i) This Policy is a SEC Subsidiary Document and is administered as such in accordance with the provisions of the Code.

1.5.2 Contact Person

(i) Questions in relation to the content of this Policy should be addressed to the ICA or the SMKI PMA.

1.5.3 Person Determining IKI CPS Suitability for the Policy

(i) Provision is made in Section L9.21 of the Code for the SMKI PMA to approve the IKI CPS.

1.5.4 IKI CPS Approval Procedures

(i) Provision is made in Section L9.21 of the Code for the procedure by which the SMKI PMA may approve the IKI CPS.

1.5.5 Registration Authority Policies and Procedures

(i) The SMKI Registration Authority Policies and Procedures (the SMKI RAPP) are set out at Appendix D of the Code.

1.6 DEFINITIONS AND ACRONYMS

1.6.1 Definitions

(i) Definitions of the expressions used in this Policy are set out in Section A of the Code (Definitions and Interpretation) and Annex A.

1.6.2 Acronyms

(i) Any acronyms used for the purposes of this Policy are set out in Section A of the Code (Definitions and Interpretation) and Annex A.

2 PUBLICATION AND REPOSITORY RESPONSIBILITIES

2.1 REPOSITORIES

Provision is made in Section L5 of the Code (The SMKI Repository Service) for the establishment, operation and maintenance of the SMKI Repository.

2.2 PUBLICATION OF CERTIFICATION INFORMATION

(A) The ICA shall ensure that the following are lodged in the SMKI Repository:

(i) all IKI Certificates Issued by the IKI File Signing CA;

(ii) each version of this Policy; and

(iii) any other document or information that may from time to time be specified, for the purposes of this provision, by the SMKI PMA.

(B) The ICA may lodge in the SMKI Repository such other documents or information as it may from time to time consider appropriate.

2.3 TIME OR FREQUENCY OF PUBLICATION

(A) The ICA shall ensure that:

(i) each IKI Certificate Issued by the IKI File Signing CA is lodged in the SMKI Repository within 24 hours of its acceptance by a Subscriber; and

(ii) any other document that may from time to time be specified by the SMKI PMA is lodged in the SMKI Repository within such time as may be directed by the SMKI PMA.

2.4 ACCESS CONTROLS ON REPOSITORIES

(i) Provision in relation to access controls for the SMKI Repository is made in Sections L5.5, L5.6 and L5.6A of the Code.

3 IDENTIFICATION AND AUTHENTICATION

3.1 NAMING

3.1.1 Types of Names

(A) The ICA shall ensure that the IKI CPS contains provisions to ensure that the entity that is the Subject of each Certificate Issued to Eligible Subscribers is in accordance with the relevant Certificate Profile at Annex B.

3.1.2 Need for Names to be Meaningful

(A) The ICA shall ensure that the IKI CPS contains provisions to ensure that the name of the Subject of each IKI Certificate Issued to Eligible Subscribers is meaningful and consistent with the relevant Certificate Profile in Annex B.

3.1.3 Anonymity or Pseudonymity of Subscribers

(A) The ICA shall ensure that the IKI CPS contains provisions to:

(i) prohibit Eligible Subscribers from requesting the Issue of a Certificate anonymously or by means of a pseudonym; and

(ii) require the ICA to Authenticate Eligible Subscribers.

3.1.4 Rules for Interpreting Various Name Forms

(i) Provision in relation to name forms is made in Annex B.

3.1.5 Uniqueness of Names

(i) Provision in relation to the uniqueness of names is made in Annex B.

3.1.6 Recognition, Authentication, and Role of Trademarks

(i) Provision in relation to the use of trademarks, trade names and other restricted information in Certificates is made in Section L11 of the Code (Subscriber Obligations).

3.2 INITIAL IDENTITY VALIDATION

3.2.1 Method to Prove Possession of Private Key

(A) The ICA shall ensure that the IKI CPS contains provisions on:

(i) the procedure to be followed by an Eligible Subscriber in order to prove its possession of the Private Key which is associated with the Public Key contained in any Certificate that is the subject of a Certificate Signing Request; and

(ii) the procedure established for this purpose is in accordance with the procedure in PKCS#10.

3.2.2 Authentication of Organisation Identity

(A) Provision is made in the SMKI RAPP section 5.5 in relation to the:

(i) procedure to be followed by a Party, Manufacturer, RDP or SECCo in order to become an Authorised Subscriber;

(ii) criteria in accordance with which the ICA will determine whether a Party, Manufacturer, RDP or SECCo is entitled to become an Authorised Subscriber; and

(iii) requirement that the Party, Manufacturer, RDP or SECCo shall be Authenticated by the ICA for that purpose.

(B) Provision is made in the SMKI RAPP section 5 for the purpose of ensuring that the criteria in accordance with which the ICA shall Authenticate a Party, Manufacturer, RDP or SECCo shall be set to the level pursuant to the SMKI PMA Guidance on 'Verifying Organisation Identity' published on the Website.

3.2.3 Authentication of Individual Identity

(A) Provision is made in the SMKI RAPP in relation to the Authentication of persons engaged by Authorised Subscribers, which provides for all such persons to have their identity and authorisation verified to the level pursuant to the SMKI PMA Guidance on 'Verifying Individual Identity' published on the Website.

3.2.4 Non-verified Subscriber Information

(A) The ICA shall verify all information in relation to Certificates.

(B) Further provision on the content of ICA Certificates is made in Section L11 of the Code (Subscriber Obligations).

3.2.5 Validation of Authority

See Part 3.2.2 of this Policy.

3.2.6 Criteria for Interoperation

[Not applicable in this Policy]

3.3 IDENTIFICATION AND AUTHENTICATION FOR RE-KEY REQUESTS

3.3.1 Identification and Authentication for Routine Re-Key

(A) This Policy does not support Certificate Re-Key.

(B) The ICA shall not provide a Certificate Re-Key service.

3.3.2 Identification and Authentication for Re-Key after Revocation

[Not applicable in this Policy]

3.4 IDENTIFICATION AND AUTHENTICATION FOR REVOCATION REQUEST

3.4.1 Authentication for Certificate Revocation Requests

(A) Provision is made in the SMKI RAPP in relation to procedures designed to ensure the Authentication of persons who submit a Certificate Revocation Request and verify that they are authorised to submit that request.

4 CERTIFICATE AND LIFECYCLE OPERATIONAL REQUIREMENTS

4.1 CERTIFICATE APPLICATION

4.1.1 Submission of Certificate Applications

(A) Provision is made in the SMKI RAPP in relation to:

(i) in respect of an IKI Certificate:

(a) the circumstances in which a DCC RA Manager, DCC RA Personnel and ARO may submit a Certificate Signing Request; and

(b) the means by which it may do so, including through the use of an authorised System; and

(B) The ICA shall ensure that the IKI CPS contains provisions:

(i) in respect of an IKI Certificate:

(a) the circumstances in which Eligible Subscribers may submit a Certificate Signing Request; and

(b) the means by which it may do so, including through the use of an authorised System.

4.1.2 Enrolment Process and Responsibilities

(A) Provision is made in the SMKI RAPP sections 5 and 6 in relation to the:

(i) establishment of an enrolment process in respect of organisations, individuals and Systems in order to Authenticate them and verify that they are authorised to act on behalf of an Eligible Subscriber in its capacity as such; and

(ii) maintenance by the ICA of a list of organisations, individuals and Systems enrolled in accordance with that process.

4.1.3 Enrolment Process for the Registration Authority and its Representatives

(A) Provision is made in the SMKI RAPP section 6 in relation to the establishment of an enrolment process in respect of ICA Personnel and ICA Systems:

(i) in order to Authenticate them and verify that they are authorised to act on behalf of the ICA in its capacity as the Registration Authority; and

(ii) including in particular, for that purpose, provision:

(a) for the face-to-face or video link Authentication of all Registration Authority Personnel by a Registration Authority Manager; and

(b) for all Registration Authority Personnel to have their identify and authorisation verified to the level pursuant to the SMKI PMA Guidance on ‘Verifying Individual Identity’ published on the Website.

4.2 CERTIFICATE APPLICATION PROCESSING

4.2.1 Performing Identification and Authentication Functions

(A) Provision is made in the SMKI RAPP in relation to the Authentication by the ICA of DCC RA Managers, DCC RA Personnel and AROs which submit a Certificate Signing Request.

(B) The ICA shall ensure that the IKI CPS contains provisions in relation to the Authentication by the ICA of Eligible Subscribers which submit a Certificate Signing Request.

4.2.2 Approval or Rejection of Certificate Applications

(A) Where any Certificate Signing Request fails to satisfy the requirements set out in the SMKI RAPP, this Policy or any other provision of the Code, the ICA:

(i) shall reject it and refuse to Issue the Certificate which was the subject of the Certificate Signing Request; and

(ii) shall give notice to the Party, Manufacturer, RDP or SECCo which made the Certificate Signing Request of the reasons for its rejection.

(B) Where any Certificate Signing Request satisfies the requirements set out in the SMKI RAPP, this Policy or any other provision of the Code, the ICA shall Issue the Certificate which was the subject of the Certificate Signing Request.

4.2.3 Time to Process Certificate Applications

(A) The ICA shall ensure that it processes all Certificate Signing Requests relating to IKI Certificates promptly, and in any event in accordance with such time as is specified in the SMKI RAPP.

4.3 CERTIFICATE ISSUANCE

4.3.1 ICA Actions during Certificate Issuance

(A) The ICA may Issue a Certificate only:

(i) in accordance with the provisions of this Policy; and

(ii) in response to a Certificate Signing Request made by an Eligible Subscriber in accordance with this Policy.

(B) The ICA shall ensure that:

(i) each ICA Certificate Issued by it contains information that it has verified to be correct and complete; and

(ii) each IKI Certificate Issued by it contains information consistent with the information in the Certificate Signing Request.

(C) An ICA Certificate may only be:

(i) Issued by the ICA; and

(ii) for that purpose, signed using the Root ICA Private Key.

(D) An IKI Certificate may only be:

(i) Issued by the ICA; and

(ii) for that purpose, signed using an Issuing ICA Private Key.

(E) The ICA shall not Issue:

(i) an Issuing ICA Certificate using a Root ICA Private Key after the expiry of the Validity Period of a Root ICA Certificate containing the Public Key associated with that Private Key; or

(ii) an IKI Certificate using an Issuing ICA Private Key after the expiry of the Validity Period of an Issuing ICA Certificate containing the Public Key associated with that Private Key.

4.3.2 Notification to Eligible Subscriber by the ICA of Issuance of Certificate

(A) Provision is made in the SMKI RAPP for the ICA to notify DCC RA Manager, DCC RA Personnel and ARO where that DCC RA Manager, DCC RA Personnel or AROs is Issued with a Certificate which was the subject of a Certificate Signing Request made by them.

(B) The ICA shall ensure the IKI CPS includes provisions for the ICA to notify Eligible Subscribers where that Eligible Subscriber is Issued with a Certificate which was the subject of a Certificate Signing Request made by them.

4.4 CERTIFICATE ACCEPTANCE

4.4.1 Conduct Constituting Certificate Acceptance

(A) Provision is made in the SMKI RAPP to:

(i) specify a means by which the Eligible Subscriber may clearly indicate to the ICA its rejection of a Certificate which has been Issued to it; and

(ii) ensure that the Eligible Subscriber to which a Certificate has been Issued, and which has not been rejected, is treated as having accepted that Certificate.

(B) A Certificate which has been Issued by the ICA shall not be treated as valid for any purposes of this Policy or the Code until it is treated as having been accepted by the Eligible Subscriber to which it was Issued.

(C) The ICA shall maintain a record of all Certificates which have been Issued by it and are treated as accepted by a Subscriber.

(D) Further provision in relation to the rejection and acceptance of Certificates is made in Section L11.7 of the Code.

4.4.2 Publication of Certificates by the ICA

(A) Provision in relation to the publication of Certificates is made in Part 2 of this Policy.

4.4.3 Notification of Certificate Issuance by the ICA to Other Entities

(A) The ICA shall give notice of the Issue of a Certificate only to the Eligible Subscriber which submitted a Certificate Signing Request in respect of that Certificate.

4.5 KEY PAIR AND CERTIFICATE USAGE

4.5.1 Subscriber Private Key and Certificate Usage

(A) Provision for restrictions on the use by Subscribers of Private Keys in respect of Certificates is made in:

(i) Section L11.8 of the Code; and

(ii) this Policy.

4.5.2 Relying Party Public Key and Certificate Usage

(A) Provision in relation to reliance that may be placed on a Certificate is made in Section L12 of the Code (Relying Party Obligations).

4.6 CERTIFICATE RENEWAL

4.6.1 Circumstances of Certificate Renewal

(A) This Policy does not support the renewal of Certificates.

(B) The ICA may only replace, and shall not renew, any Certificate.

4.6.2 Circumstances of Certificate Replacement

(A) Where any ICA System or any ICA Private Key is (or is suspected by the ICA of being) Compromised, the ICA shall:

(i) immediately notify the SMKI PMA;

(ii) provide the SMKI PMA with all of the information known to it in relation to the nature and circumstances of the event of Compromise or suspected Compromise; and

(iii) where the Compromise or suspected Compromise relates to an ICA Private Key:

(a) ensure that the Private Key is no longer used;

(b) promptly notify each of the Subscribers for any IKI Certificates Issued using that Private Key; and

(c) promptly notify the SMKI PMA, verifiably destroy the ICA Private Key Material and revoke the corresponding ICA Certificate.

(B) Where the ICA Root Private Key is Compromised (or is suspected by the ICA of being Compromised), the ICA:

(i) may issue a replacement for any ICA Certificate that has been Issued using that Private Key; and

(ii) shall ensure that the Subscriber for that ICA Certificate both applies for the Issue of a new Certificate in accordance with this Policy and revokes that ICA Certificate.

(C) The ICA shall ensure that a replacement for each ICA Certificate is Issued prior to end of the Validity Period of that ICA Certificate.

(D) A Subscriber for an IKI Certificate may request a replacement for that Certificate at any time by applying for the Issue of a new IKI Certificate in accordance with this Policy and, where this replacement is for purposes other than to replace an expiring Certificate, shall submit a Certificate Revocation Request in respect of the replaced IKI Certificate.

4.6.3 Who May Request a Replacement Certificate

See Part 4.1 of this Policy.

4.6.4 Processing Replacement Certificate Requests

See Part 4.2 of this Policy.

4.6.5 Notification of Replacement Certificate Issuance to a Subscriber

See Part 4.3.2 of this Policy.

4.6.6 Conduct Constituting Acceptance of a Replacement Certificate

See Part 4.4.1 of this Policy.

4.6.7 Publication of a Replacement Certificate by the ICA

[Not applicable in this Policy]

4.6.8 Notification of Certificate Issuance by the ICA to Other Entities

[Not applicable in this Policy]

4.7 CERTIFICATE RE-KEY

4.7.1 Circumstances for Certificate Re-Key

(A) This Policy does not support Certificate Re-Key.

(B) The ICA shall not provide a Certificate Re-Key service.

(C) Where a new Key Pair has been generated, the Subscriber shall apply for a new Certificate in accordance with this Policy.

4.7.2 Who may Request Certification of a New Public Key

[Not applicable to this Policy]

4.7.3 Processing Certificate Re-Keying Requests

[Not applicable to this Policy]

4.7.4 Notification of New Certificate Issuance to Subscriber

[Not applicable to this Policy]

4.7.5 Conduct Constituting Acceptance of a Re-Keyed Certificate

[Not applicable to this Policy]

4.7.6 Publication of the Re-Keyed Certificate by the ICA

[Not applicable to this Policy]

4.7.7 Notification of Certificate Issuance by the ICA to Other Entities

[Not applicable to this Policy]

4.8 CERTIFICATE MODIFICATION

4.8.1 Circumstances for Certificate Modification

(A) This Policy does not support Certificate modification.

(B) Neither the ICA nor any Subscriber may modify a Certificate.

4.8.2 Who may request Certificate Modification

[Not applicable to this Policy]

4.8.3 Processing Certificate Modification Requests

[Not applicable to this Policy]

4.8.4 Notification of New Certificate Issuance to Subscriber

[Not applicable to this Policy]

4.8.5 Conduct Constituting Acceptance of Modified Certificate

[Not applicable to this Policy]

4.8.6 Publication of the Modified Certificate by the ICA

[Not applicable to this Policy]

4.8.7 Notification of Certificate Issuance by the ICA to Other Entities

[Not applicable to this Policy]

4.9 CERTIFICATE REVOCATION AND SUSPENSION

4.9.1 Circumstances for Revocation

(A) A Subscriber shall ensure that it submits a Certificate Revocation Request in relation to a Certificate:

(i) immediately upon becoming aware that the Certificate has been Compromised, or is suspected of having been Compromised, due to the Compromise of the Private Key associated with the Public Key contained within that Certificate;

(ii) when any of the permitted reasons for revocation of authentication credentials, as set out in the SMKI RAPP, are met; or

(iii) immediately upon ceasing to be an Eligible Subscriber in respect of that Certificate; provided that, where a Supplier of Last Resort has been appointed in relation to premises supplied by the Subscriber, the Subscriber shall not submit a Certificate Revocation Request.

(B) The ICA must revoke a Certificate upon:

(i) receiving a Certificate Revocation Request if the Certificate to which that request relates has been Authenticated in accordance with Part 3.4.1 of this Policy; or

(ii) being directed to do so by the SMKI PMA.

(C) The ICA must revoke a Certificate in relation to which it has not received a Certificate Revocation Request:

(i) where it becomes aware that the Certificate has been Compromised, or is suspected of having been Compromised, due to the Compromise of the Private Key associated with the Public Key contained within that Certificate; or

(ii) (subject to the Section L16.1 (Supplier of Last Resort) of the Code) where it becomes aware that the Subscriber for that Certificate has ceased to be an Eligible Subscriber in respect of the Certificate.

(D) In an extreme case, where it considers it necessary to do so for the purpose of preserving the integrity of the SMKI Services, the ICA may, on the receipt of a Certificate Revocation Request in relation to a Certificate which has not been Authenticated in accordance with Part 3.4.1 of this Policy, revoke that Certificate.

(E) Where the ICA revokes a Certificate in accordance with paragraph (D) it shall notify the SMKI PMA and provide a statement of its reasons for the revocation.

4.9.2 Who can Request Revocation

(A) Any Subscriber may submit a Certificate Revocation Request in relation to a Certificate for which it is the Subscriber, and shall on doing so:

(i) provide all the information specified in the SMKI RAPP (including all the information necessary for the Authentication of the Certificate); and

(ii) specify its reason for submitting the Certificate Revocation Request (which shall be a reason consistent with Part 4.9.1(A) of this Policy).

(B) The SMKI PMA may direct the ICA to revoke a Certificate.

(C) The ICA may elect to revoke a Certificate in accordance with Part 4.9.1(D) of this Policy.

4.9.3 Procedure for Revocation Request

(A) Provision is made in the SMKI RAPP in relation to the procedure for submitting and processing a Certificate Revocation Request associated with Certificates Issued to DCC Registration Authority (RA) Managers, DCC RA Personnel, Authorised Responsible Officers (AROs).

(B) The ICA shall ensure that the IKI CPS contains provisions in relation to the procedure for submitting and processing a Certificate Revocation Request associated with Certificates Issued to Eligible Subscribers.

(C) On receiving a Certificate Revocation Request, the ICA shall use its reasonable steps to:

(i) Authenticate the Subscriber making that request;

(ii) Authenticate the Certificate to which the request relates; and

(iii) confirm that a reason for the request has been specified in accordance with Part 4.9.2 of this Policy.

(D) Where the ICA, in accordance with Part 4.9.1(C) of this Policy, intends to revoke a Certificate in relation to which it has not received a Certificate Revocation Request, it shall use its best steps prior to revocation to confirm with the Subscriber for that Certificate the circumstances giving rise to the revocation.

(E) The ICA shall inform the Subscriber for a Certificate where that Certificate has been revoked.

4.9.4 Revocation Request Grace Period

[Not applicable in this Policy]

4.9.5 Time within which ICA must process the Revocation Request

(A) The ICA shall ensure that it processes all Certificate Revocation Requests as soon as reasonably practicable, and in any event in accordance with such time as is specified in the SMKI RAPP.

4.9.6 Revocation Checking Requirements for Relying Parties

(A) Provision in relation to the revocation checking requirements for Relying Parties is made in Section L12.3 of the Code.

4.9.7 CRL Issuance Frequency (if applicable)

(A) The ICA shall ensure that an up to date version of the IKI ARL is made available to Relying Parties set out in 1.3.5(E) of this Policy.

(i) at least once in every period of twelve months; and

(ii) promptly on the revocation of an ICA Certificate.

(B) Each version of the IKI ARL shall be valid until the date which is 12 months after the date on which that version of the IKI ARL is produced.

(C) Further provision in relation to the reliance that may be placed on the IKI ARL (and on versions of it) is set out in Section L12 of the Code (Relying Party Obligations).

(D) The ICA shall ensure that an up to date version of the IKI CRL is made available to Relying Parties set out in 1.3.5(E) of this Policy:

(i) at least once in every period of twelve hours; and

(ii) within one hour on the revocation of an IKI Certificate.

(E) Each version of the IKI CRL shall be valid until 48 hours from the time at which it is produced. (F) Further provision in relation to the reliance that may be placed on the IKI CRL (and on versions of it) is set out in Section L12 of the Code (Relying Party Obligations).

(G) The ICA shall ensure that each up to date version of the IKI ARL and IKI CRL:

(i) continues to include each relevant revoked Certificate until such time as the Validity Period of that Certificate has expired; and

(ii) does not include any revoked Certificate after the Validity Period of that Certificate has expired.

(H) The ICA shall ensure that the IKI CRL contains a non-critical entry extension which identifies the reason for the revocation of each Certificate listed on it in accordance with RFC 5280 (section 5.3.1).

(I) The ICA shall retain a copy of the information contained in all versions of the IKI CRL and IKI ARL, together with the dates and times between which each such version was valid. This information shall be made available as soon as is reasonably practicable, on receipt of a request, to the Panel, the SMKI PMA, any Subscriber or any Relying Party.

4.9.8 Maximum Latency for CRLs (if applicable)

See Part 4.9.7 of this Policy.

4.9.9 On-line Revocation/Status Checking Availability

(A) This Policy supports on-line revocation status checking.

(B) The ICA shall provide on-line revocation status checking service.

4.9.10 On-line Revocation Checking Requirements

[Not applicable in this Policy]

4.9.11 Other Forms of Revocation Advertisements Available

[Not applicable in this Policy]

4.9.12 Special Requirements in the Event of Key Compromise

See Part 4.6.2 of this Policy.

4.9.13 Circumstances for Suspension

[Not applicable in this Policy]

4.9.14 Who can Request Suspension

[Not applicable in this Policy]

4.9.15 Procedure for Suspension Request

[Not applicable in this Policy]

4.9.16 Limits on Suspension Period

[Not applicable in this Policy]

4.10 CERTIFICATE STATUS SERVICES

4.10.1 Operational Characteristics

[Not applicable in this Policy]

4.10.2 Service Availability

(A) In circumstances in which:

(i) an up to date version of the IKI ARL has not been made available to the DCC in accordance with Part 4.9.7(A) of this Policy,

the DCC shall be entitled to rely on the IKI ARL for the period during which it remains valid in accordance with the provisions of Part 4.9.7(B) of this Policy, but thereafter shall not rely on any Certificate.

(B) In circumstances in which:

(i) an up to date version of the IKI CRL has not been made available to the DCC in accordance with Part 4.9.7(C) of this Policy

the DCC shall be entitled to rely on the IKI CRL for the period during which it remains valid in accordance with the provisions of Part 4.9.7(D) of this Policy, but thereafter shall not rely on any IKI Certificate.

4.10.3 Optional Features

[Not applicable in this Policy]

4.11 END OF SUBSCRIPTION

[Not applicable in this Policy]

4.12 KEY ESCROW AND RECOVERY

4.12.1 Key Escrow and Recovery Policies and Practices

(A) This Policy does not support Key Escrow.

(B) The ICA shall not provide any Key Escrow service.

4.12.2 Session Key Encapsulation and Recovery Policy and Practices

[Not applicable in this Policy]

5 FACILITY MANAGEMENT AND OPERATIONAL CONTROLS

5.1 PHYSICAL CONTROLS

5.1.1 Site Location and Construction

(A) The ICA shall ensure that the ICA Systems are operated in a sufficiently secure environment, which shall at least satisfy the requirements set out at Section G2 (System Security: Obligations on the DCC) and Section G5 (Information Security: Obligations on the DCC and Users) of the Code.

(B) The ICA shall ensure that:

(i) all of the physical locations in which the ICA Systems are situated, operated, routed or directly accessed are in the United Kingdom;

(ii) all bespoke Security Related Functionality is developed, specified, designed, built and tested only within the United Kingdom; and

(iii) all Security Related Functionality is integrated, configured, tested in situ, implemented, operated and maintained only within the United Kingdom.

(C) The ICA shall ensure that the ICA Systems cannot be indirectly accessed from any location outside the United Kingdom.

(D) The ICA shall ensure that the IKI CPS incorporates provisions designed to ensure that all physical locations in which the manufacture of Certificates and Time-Stamping take place are at all times manually or electronically monitored for unauthorised intrusion in accordance with SMKI PMA Guidance on ‘Protective Monitoring’ published on the Website.

(E) The ICA shall ensure that the IKI CPS incorporates provisions designed to ensure that all PINs, pass-phrases and passwords used for the purposes of carrying out the functions of the ICA are stored in secure containers accessible only to appropriately authorised individuals.

(F) The ICA shall ensure that the ICA Systems are Separated from any DCA or OCA Systems, save that any Systems used for the purposes of the Registration Authority functions of the ICA and DCA or OCA shall not require to be Separated.

5.1.2 Physical Access

(A) The ICA shall ensure that the IKI CPS incorporates provisions in relation to access control, including in particular provisions designed to:

(i) establish controls such that only appropriately authorised personnel may have unescorted physical access to ICA Systems or any System used for the purposes of Time-Stamping;

(ii) ensure that any unauthorised personnel may have physical access to such Systems only if appropriately authorised and supervised;

(iii) ensure that a site access log is both maintained and periodically inspected for all locations at which such Systems are sited; and

(iv) ensure that all removable media which contain sensitive plain text Data and are kept at such locations are stored in secure containers accessible only to appropriately authorised individuals.

5.1.3 Power and Air Conditioning

(A) The ICA shall ensure that the IKI CPS incorporates provisions in relation to power and air conditioning at all physical locations in which the ICA Systems are situated.

5.1.4 Water Exposure

(A) The ICA shall ensure that the IKI CPS incorporates provisions in relation to water exposure at all physical locations in which the ICA Systems are situated.

5.1.5 Fire Prevention and Protection

(A) The ICA shall ensure that the IKI CPS incorporates provisions in relation to fire prevention and protection at all physical locations in which the ICA Systems are situated.

5.1.6 Media Storage

(A) The ICA shall ensure that the IKI CPS incorporates provisions designed to ensure that appropriate controls are placed on all media used for the storage of Data held by it for the purposes of carrying out its functions as the ICA.

5.1.7 Waste Disposal

(A) The ICA shall ensure that all media used to store Data held by it for the purposes of carrying out its functions as the ICA are disposed of only using secure methods of disposal in accordance with https://www.ncsc.gov.uk/guidance/secure-sanitisation-storage-media.

5.1.8 Off-Site Back-Up

(A) The ICA shall regularly carry out a Back-Up of:

(i) all Data held on the ICA Systems which are critical to the operation of those Systems or continuity in the provision of the SMKI Services; and

(ii) all other sensitive Data.

(B) For the purposes of paragraph (A), the ICA shall ensure that the IKI CPS incorporates provisions which identify the categories of critical and sensitive Data that are to be Backed-Up.

(C) The ICA shall ensure that Data which are Backed-Up in accordance with paragraph (A):

(i) are stored on media that are located in physically secure facilities in different locations to the sites at which the Data being Backed-Up are ordinarily held;

(ii) are protected in accordance with the outcome of a risk assessment which is documented in the IKI CPS, including when being transmitted for the purposes of Back-Up; and

(iii) to the extent to which they comprise ICA Private Key Material, are Backed-Up:

(a) using the proprietary Back-Up mechanisms specific to the relevant Cryptographic Module; and

(b) in a manner that is compliant with FIPS 140-2 Level 3 (or any equivalent to that Federal Information Processing Standard which updates or replaces it from time to time).

(D) The ICA shall ensure that, where any elements of the ICA Systems, any Data held for the purposes of providing the SMKI Services, or any items of ICA equipment are removed from their primary location, they continue to be protected in accordance with the security standard appropriate to the primary location.

5.2 PROCEDURAL CONTROLS

5.2.1 Trusted Roles

(A) The ICA shall ensure that:

(i) no individual may carry out any activity which involves access to resources, or Data held on, the ICA Systems unless that individual has been expressly authorised to have such access;

(ii) each member of ICA Personnel has a clearly defined level of access to the ICA Systems and the premises in which they are located;

(iii) no individual member of ICA Personnel is capable, by acting alone, of engaging in any action by means of which the ICA Systems may be Compromised to a material extent; and

(iv) the IKI CPS incorporates provisions designed to ensure that appropriate controls are in place for the purposes of compliance by the ICA with the requirements of this paragraph.

5.2.2 Number of Persons Required per Task

(A) The ICA shall ensure that the IKI CPS incorporates provisions designed to establish:

(i) the appropriate separation of roles between the different members of ICA Personnel; and

(ii) the application of controls to the actions of all members of ICA Personnel who are Privileged Persons, in particular:

(a) identifying any controls designed to ensure that the involvement of more than one individual is required for the performance of certain functions; and

(b) providing that the revocation of any ICA Certificate is one such function.

(B) The ICA shall ensure that the IKI CPS, as a minimum, makes provision for the purposes of paragraph (A) in relation to the following roles:

(i) ICA Systems administration;

(ii) ICA Systems operations;

(iii) ICA Systems security; and

(iv) ICA Systems auditing.

5.2.3 Identification and Authentication for Each Role

See Part 5.2.2 of this Policy.

5.2.4 Roles Requiring Separation of Duties

See Part 5.2.2 of this Policy.

5.3 PERSONNEL CONTROLS

5.3.1 Qualification, Experience and Clearance Requirements

(A) The ICA shall ensure that all ICA Personnel must:

(i) be appointed to their roles in writing;

(ii) be bound by contract to the terms and conditions relevant to their roles;

(iii) have received appropriate training with respect to their duties;

(iv) be bound by contract not to disclose any confidential, sensitive, personal or security-related Data except to the extent necessary for the performance of their duties or for the purposes of complying with any requirement of law; and

(v) in so far as can reasonably be ascertained by the ICA, not have been previously relieved of any past assignment (whether for the ICA or any other person) on the grounds of negligence or any other failure to perform a duty.

(B) The ICA shall ensure that all ICA Personnel have, as a minimum, passed a Security Check before commencing their roles.

5.3.2 Background Check Procedures

See Part 5.3.1 of this Policy.

5.3.3 Training Requirements

See Part 5.3.1 of this Policy.

5.3.4 Retraining Frequency and Requirements

(A) The ICA shall ensure that the IKI CPS incorporates appropriate provisions relating to the frequency and content of retraining and refresher training to be undertaken by members of ICA Personnel.

5.3.5 Job Rotation Frequency and Sequence

(A) The ICA shall ensure that the IKI CPS incorporates appropriate provisions relating to the frequency and sequence of job rotations to be undertaken by members of ICA Personnel.

5.3.6 Sanctions for Unauthorised Actions

(A) The ICA shall ensure that the IKI CPS incorporates appropriate provisions relating to sanctions for unauthorised actions undertaken by members of ICA Personnel.

5.3.7 Independent Contractor Requirements

(A) In accordance with the provisions of the Code, references to the ICA in this Policy include references to persons with whom the ICA contracts in order to secure performance of its obligations as the ICA.

5.3.8 Documentation Supplied to Personnel

(A) The ICA shall ensure that all ICA Personnel are provided with access to all documents relevant to their roles or necessary for the performance of their duties, including in particular:

(i) this Policy;

(ii) the IKI CPS; and

(iii) any supporting documentation, statutes, policies or contracts.

5.4 AUDIT LOGGING PROCEDURES

5.4.1 Types of Events Recorded

(A) The ICA shall ensure that:

(i) the ICA Systems record all systems activity in an audit log;

(ii) the IKI CPS incorporates a comprehensive list of all events that are to be recorded in an audit log in relation to:

(a) the activities of ICA Personnel;

(b) the use of ICA equipment;

(c) the use of (including both authorised and unauthorised access, and attempted access to) any premises at which functions of the ICA are carried out;

(d) communications and activities that are related to the Issue of Certificates (in so far as not captured by the ICA Systems audit log); and

(iii) it records in an audit log all the events specified in paragraph (ii).

5.4.2 Frequency of Processing Log

(A) The ICA shall ensure that:

(i) the audit logging functionality in the ICA Systems is fully enabled at all times;

(ii) all ICA Systems activity recorded in the Audit Log is recorded in a standard format that is compliant with:

(a) British Standard BS 10008:2014 (Evidential Weight and Legal Admissibility of Electronic Information); or

(b) any equivalent to that British Standard which updates or replaces it from time to time; and

(iii) it monitors the ICA Systems in compliance with the SMKI PMA Guidance on “Protective Monitoring” published on the Website.

;

(B) The ICA shall ensure that the IKI CPS incorporates provisions which specify:

(i) how regularly information recorded in the Audit Log is to be reviewed; and

(ii) what actions are to be taken by it in response to types of events recorded in the Audit Log.

(C) The ICA shall ensure that the IKI CPS incorporates provisions in relation to access to the Audit Log, providing in particular that:

(i) Data contained in the Audit Log must not be accessible other than on a read-only basis; and

(ii) access to those Data must be limited to those members of ICA Personnel who are performing a dedicated system audit role.

5.4.3 Retention Period for Audit Log

(A) The ICA shall:

(i) retain the Audit Log so that it incorporates, on any given date, a record of all system events occurring during a period of at least twelve months prior to that date; and

(ii) ensure that a copy of the Audit Log incorporating a record of all system events occurring prior to the beginning of that period is archived in accordance with the requirements of Part 5.5 of this Policy.

5.4.4 Protection of Audit Log

(A) The ICA shall ensure that:

(i) to the extent to which the Audit Log is retained electronically, the Data stored in it cannot be accessed other than on a read-only basis, and are protected from unauthorised viewing, modification and deletion in accordance with:

(a) British Standard BS 10008:2014 (Evidential Weight and Legal Admissibility of Electronic Information); or

(b) any equivalent to that British Standard which updates or replaces it from time to time; and

(ii) to the extent to which the Audit Log is retained in non-electronic form, the Data stored in it are appropriately protected from unauthorised viewing, modification and destruction in order to ensure that their integrity is maintained for evidential purposes.

5.4.5 Audit Log Back-Up Procedures

(A) The ICA shall ensure that the Data contained in the Audit Log are Backed-Up (or, to the extent that the Audit Log is retained in non-electronic form, are copied):

(i) on a daily basis; or

(ii) if activity has taken place on the ICA Systems only infrequently, in accordance with the schedule for the regular Back-Up of the Data held on those Systems.

(B) The ICA shall ensure that all Data contained in the Audit Log which are Backed-Up are, during Back-Up:

(i) held in accordance with the outcome of a risk assessment which is documented in the IKI CPS; and

(ii) protected to the same standard of protection as the primary copy of the Audit Log in accordance with Part 5.4.4 of this Policy.

5.4.6 Audit Collection System (Internal or External)

(A) The ICA shall ensure that the IKI CPS incorporates provisions in relation to its system for collecting Data for the purpose of populating the Audit Log.

5.4.7 Notification to Event-Causing Subject

(A) The ICA shall ensure that the IKI CPS incorporates provisions in relation to its notification of any person who is (or is responsible for any System which is) the direct cause of an event recorded in the Audit Log.

5.4.8 Vulnerability Assessments

(A) Provision is made in Sections G2.13 to G2.14 of the Code (Management of Vulnerabilities) in relation to the carrying out of vulnerability assessments in respect of the ICA Systems.

5.5 RECORDS ARCHIVAL

5.5.1 Types of Records Archived

(A) The ICA shall ensure that it archives:

(i) the Audit Log in accordance with Part 5.4.3 of this Policy;

(ii) its records of all Data submitted to it by Eligible Subscribers for the purposes of Certificate Signing Requests; and

(iii) any other Data specified in this Policy or the Code as requiring to be archived in accordance with this Part 5.5.

5.5.2 Retention Period for Archive

(A) The ICA shall ensure that all Data which are Archived are retained for a period of at least seven years from the date on which they were Archived.

5.5.3 Protection of Archive

(A) The ICA shall ensure that Data held in its Archive are:

(i) protected against any unauthorised access;

(ii) adequately protected against environmental threats such as temperature, humidity and magnetism; and

(iii) incapable of being modified or deleted.

5.5.4 Archive Back-Up Procedures

(A) The ICA shall ensure that the IKI CPS incorporates provisions in relation to its procedures for the Back-Up of its Archive.

5.5.5 Requirements for Time-Stamping of Records

(A) Provision in relation to Time-Stamping is made in Part 6.8 of this Policy.

5.5.6 Archive Collection System (Internal or External)

(A) The ICA shall ensure that the IKI CPS incorporates provisions in relation to its system for collecting Data for the purpose of populating the Archive.

5.5.7 Procedures to Obtain and Verify Archive Information

(A) The ICA shall ensure that:

(i) Data held in the Archive are stored in a readable format during their retention period; and

(ii) those Data remains accessible at all times during their retention period, including during any period of interruption, suspension or cessation of the ICA’s operations.

(B) The ICA shall ensure that the IKI CPS incorporates provisions in relation to the periodic verification by the ICA of the Data held in the Archive.

5.6 KEY CHANGEOVER

5.6.1 IKI Certificate Key Changeover

(A) The ICA shall Issue a new IKI Certificate in relation to a Subject where a new Certificate Signing Request is submitted by an Eligible Subscriber in accordance with the requirements of the SMKI RAPP and this Policy.

5.6.2 ICA Key Changeover

(A) Where the ICA ceases to use an ICA Private Key in accordance with the requirements of Part 4.3.1(E) of this Policy, it shall:

(i) either:

(a) verifiably destroy the ICA Private Key Material; or

(b) retain the ICA Private Key Material in such a manner that it is adequately protected against being put back into use;

(ii) generate a new Key Pair;

(iii) ensure that any relevant Certificate subsequently Issued by it is Issued using the ICA Private Key from the newly-generated Key Pair:

(a) until the time determined in accordance with Part 4.3.1(E) of this Policy; and

(b) subject to the provisions of Part 5.7.1(C) of this Policy; and

(iv) in its capacity as the Root ICA Issue a new relevant ICA Certificate.

(B) The ICA shall ensure that the actions taken by it in accordance with the requirements of paragraph (A) are managed so as to prevent any disruption to the provision of the SMKI Services.

5.6.3 Subscriber Key Changeover

(A) Where:

(i) a Certificate has been revoked in accordance with Part 4.9 of this Policy; and

(ii) the Subscriber for that Certificate submits to the ICA a Certificate Signing Request for the Issue of a replacement Certificate,

the ICA shall verify that the reasons for the revocation and replacement of the previous Certificate have been satisfactorily addressed, and may Issue a Certificate in accordance with the Certificate Signing Request only after it has done so.

5.7 COMPROMISE AND DISASTER RECOVERY

5.7.1 Incident and Compromise Handling Procedures

(A) The ICA shall ensure that the IKI CPS incorporates a business continuity plan which shall be designed to ensure:

(i) continuity in, or (where there has been unavoidable discontinuity) the recovery of, the provision of the SMKI Services in the event of any Compromise of the ICA Systems or major failure in the ICA processes; and

(ii) that priority is given to maintain continuity in, or to recovering the capacity for, the revocation of Certificates and the making available of an up to date IKI ARL and IKI CRL.

(B) The ICA shall ensure that the procedures set out in the business continuity plan are:

(i) compliant with ISO 22301 and ISO 27031 (or any equivalent to those standards which update or replace them from time to time); and

(ii) tested periodically, and in any event at least once in each year, in order to ensure that they are operationally effective.

(C) The ICA shall ensure that the IKI CPS incorporates provisions setting out the approach to be taken by it in circumstances in which it suspects (or has reason to suspect) that any ICA Private Key or any part of the ICA Systems is Compromised.

5.7.2 Computing Resources, Software and/or Data are Corrupted

(A) The ICA shall ensure that the business continuity plan established in accordance with Part 5.7.1 of this Policy incorporates provisions setting out the steps to be taken in the event of any loss of or corruption to computing resources, software or Data.

5.7.3 Entity Private Key Compromise Procedures

See Part 5.7.1 of this Policy.

5.7.4 Business Continuity Capabilities after a Disaster

(A) The ICA shall ensure that the business continuity plan established in accordance with Part 5.7.1 of this Policy is designed to ensure the recovery of the provision of the SMKI Services within not more than 12 hours of the occurrence of any event causing discontinuity.

5.8 CERTIFICATION AUTHORITY AND REGISTRATION AUTHORITY TERMINATION

[Not applicable in this Policy]

6 TECHNICAL SECURITY CONTROLS

The ICA shall ensure that the IKI CPS incorporates detailed provision in relation to the technical controls to be established and operated for the purposes of the exercise of its functions as the Root ICA the Issuing ICA and the Registration Authority.

6.1 KEY PAIR GENERATION AND INSTALLATION

6.1.1 Key Pair Generation

(A) The ICA shall ensure that all ICA Keys are generated:

(i) in a protected environment compliant with FIPS 140-2 Level 3 (or any equivalent to that Federal Information Processing Standard which updates or replaces it from time to time);

(ii) using multi-person control, such that no single Privileged Person is capable of generating any ICA Key; and

(iii) using random numbers of such length as to make it computationally infeasible to regenerate them even with knowledge of when and by means of which equipment they were generated.

(B) The ICA shall not generate any Private Key or Public Key other than an ICA Key.

6.1.2 Private Key Delivery to Subscriber

(A) In accordance with Part 6.1.1(B), the ICA shall not generate any Private Key for delivery to a Subscriber.

6.1.3 Public Key Delivery to Certificate Issuer

(A) The ICA shall ensure that the IKI CPS incorporates provisions:

(i) in relation to the mechanism by which Public Keys of Subscribers are delivered to it for the purpose of the exercise of its functions as the Root ICA and Issuing ICA; and

(ii) ensuring that the mechanism uses a recognised standard protocol such as PKCS#10.

6.1.4 ICA Public Key Delivery to Relying Parties

(A) The ICA shall ensure that the IKI CPS incorporates provisions:

(i) in relation to the manner by which each IKI Certificate Issued by the IKI File Signing CA is made available to Relying Parties;

(ii) designed to ensure that the IKI Certificates Issued by the IKI File Signing CA are made available to Relying Parties in such a manner as to guarantee that their integrity is maintained.

6.1.5 Key Sizes

(A) The ICA and every Subscriber shall ensure that all Private Keys and Public Keys which each of them may use for the purposes of this Policy are of the following size and characteristics

(i) 4096-bit RSA for the Root Certificate, or 2048-bit RSA for all subordinate Certificates including the Issuing ICA Certificate; and

(ii) SHA256-with-RSA Encryption as specified in RFC 4055.

6.1.6 Public Key Parameters Generation and Quality Checking

(A) The ICA shall ensure that any Public Key used by it for the purposes of this Policy shall be of values and lengths that make the success of known attacks infeasible.

(B) Each Subscriber shall ensure that any Public Key used by it for the purposes of this Policy shall be of values and lengths that make the success of known attacks infeasible.

6.1.7 Key Usage Purposes (as per X.509 v3 Key Usage Field)

(A) The ICA shall ensure that each Certificate that is Issued by it has a 'keyUsage' field in accordance with RFC 5280.

(B) The ICA shall ensure that each IKI Certificate that is Issued by it has a 'keyUsage' of 'digitalSignature'.

(C) The ICA shall ensure that each ICA Certificate that is Issued by it has a 'keyUsage' of either:

(i) 'keyCertSign'; or

(ii) 'CRLSign'.

(D) The ICA shall ensure that no 'keyUsage' values may be set in an IKI Certificate or ICA Certificate other than in accordance with this Part 6.1.7.

6.1.8 Extended Key Usage Purposes

(A) The ICA shall ensure that each Certificate that is Issued by the IKI Administrator CA, IKI Authorised Device Subscriber CA, IKI Authorised Organisation Subscriber CA, IKI Authorised Internet Organisation Subscriber CA, IKI Authorised Web Service Subscriber CA and IKI Registration Authority CA has an 'extendedkeyUsage' field in accordance with RFC 5280.

(B) The ICA shall ensure that each IKI Certificate that is Issued by the IKI Administrator CA, IKI Authorised Device Subscriber CA, IKI Authorised Organisation Subscriber CA, IKI Authorised Internet Organisation Subscriber CA, IKI Authorised Web Service Subscriber CA and IKI Registration Authority CA has an 'extendedKeyUsage' set to 'clientAuth'.

6.2 PRIVATE KEY PROTECTION AND CRYPTOGRAPHIC MODULE ENGINEERING CONTROLS

6.2.1 Cryptographic Module Standards and Controls

(A) The ICA shall ensure that all ICA Private Keys shall be:

(i) protected to a high standard of assurance by physical and logical security controls; and

(ii) stored in and operated from within a Cryptographic Module which is compliant with FIPS 140-2 Level 3 (or any equivalent to that Federal Information Processing Standard which updates or replaces it from time to time).

(B) The ICA shall ensure that all ICA Private Keys shall, where they affect the outcome of any Certificates Issued by it, be protected by, stored in and operated from within a Cryptographic Module which is compliant with FIPS 140-2 Level 3 (or any equivalent to that Federal Information Processing Standard which updates or replaces it from time to time).

(C) The ICA shall ensure that no ICA Private Key shall be made available in either complete or unencrypted form except in a Cryptographic Module which is compliant with FIPS 140-2 Level 3 (or any equivalent to that Federal Information Processing Standard which updates or replaces it from time to time).

(D) The ICA shall ensure that any Cryptographic Module which is used for any purpose related to Certificate life-cycle management shall:

(i) operate so as to block access to itself following a number of failed consecutive attempts to access it using Activation Data, where that number shall be set out in the IKI CPS; and

(ii) be required to be unblocked by an authorised member of ICA Personnel who has been Authenticated as such following a process which shall be set out in the IKI CPS.

6.2.2 Private Key (m out of n) Multi-Person Control

See Part 6.1.1 of this Policy.

6.2.3 Private Key Escrow

(A) This Policy does not support Key Escrow.

(B) The ICA shall not provide any Key Escrow service.

6.2.4 Private Key Back-Up

(A) The ICA may Back-Up ICA Private Keys insofar as:

(i) each Private Key is protected to a standard which is at least equivalent to that required in relation to the principal Private Key in accordance with this Policy; and

(ii) where more than one Private Key is Backed-Up within a single security environment, each of the Private Keys which is Backed-Up within that environment must be protected to a standard which is at least equivalent to that required in relation to an Issuing ICA Private Key in accordance with this Policy.

6.2.5 Private Key Archival

(A) The ICA shall ensure that no ICA Key which is a Private Key is archived.

6.2.6 Private Key Transfer into or from a Cryptographic Module

(A) The ICA shall ensure that no ICA Private Key is transferred or copied other than:

(i) for the purposes of:

(a) Back-Up;

(b) establishing an appropriate degree of resilience in relation to the provision of the SMKI Services; or

(c) in circumstances where the SMKI PMA has (following consultation with the Security Sub-Committee) given explicit approval to do so in order to maintain continuity of the provision of SMKI Services; and

(ii) in accordance with a level of protection which is compliant with FIPS 140-2 Level 3 (or any equivalent to that Federal Information Processing Standard which updates or replaces it from time to time).

6.2.7 Private Key Storage on Cryptographic Module

See Part 6.2.1 of this Policy.

6.2.8 Method of Activating Private Key

(A) The ICA shall ensure that the Cryptographic Module in which any ICA Private Key is stored may be accessed only by an authorised member of ICA Personnel who has been Authenticated following an Authentication process which:

(i) has an appropriate level of strength to ensure the protection of the Private Key; and

(ii) involves the use of Activation Data.

6.2.9 Method of Deactivating Private Key

(A) The ICA shall ensure that any ICA Private Key shall be capable of being de-activated by means of the ICA Systems, at least by:

(i) the actions of:

(a) turning off the power;

(b) logging off;

(c) carrying out a system reset; and

(ii) a period of inactivity of a length which shall be set out in the IKI CPS.

6.2.10 Method of Destroying Private Key

(A) The ICA shall ensure that the IKI CPS incorporates provisions for the exercise of strict controls in relation to the destruction of ICA Keys.

(B) The ICA shall ensure that no ICA Key (whether in active use, existing as a copy for the purposes of resilience, or Backed-Up) is destroyed except in accordance with a positive decision by the ICA to destroy it.

6.2.11 Cryptographic Module Rating

See Part 6.2.1 of this Policy.

6.3 OTHER ASPECTS OF KEY PAIR MANAGEMENT

6.3.1 Public Key Archival

(A) The ICA shall ensure that it archives ICA Public Keys in accordance with the requirements of Part 5.5 of this Policy.

6.3.2 Certificate Operational Periods and Key Pair Usage Periods

(A) The ICA shall ensure that the Validity Period of each Certificate Issued by it shall be as follows:

(i) in the case of an IKI Certificate, 10 years;

(ii) in the case of an Issuing ICA Certificate, 25 years; and

(iii) in the case of a Root ICA Certificate, 50 years.

(B) For the purposes of paragraph (A), the ICA shall set the ‘notAfter’ value specified in Annex B in accordance with that paragraph.

(C) The ICA shall ensure that no ICA Private Key is used after the end of the Validity Period of the Certificate containing the Public Key which is associated with that Private Key.

6.4 ACTIVATION DATA

6.4.1 Activation Data Generation and Installation

(A) The ICA shall ensure that any Cryptographic Module within which an ICA Key is held has Activation Data that are unique and unpredictable.

(B) The ICA shall ensure that:

(i) these Activation Data, in conjunction with any other access control, shall be of an appropriate level of strength for the purposes of protecting the ICA Keys; and

(ii) where the Activation Data comprise any PINs, passwords or pass-phrases, the ICA shall have the ability to change these at any time.

6.4.2 Activation Data Protection

(A) The ICA shall ensure that the IKI CPS incorporates provision for the use of such cryptographic protections and access controls as are appropriate to protect against the unauthorised use of Activation Data.

6.4.3 Other Aspects of Activation Data

[Not applicable in this Policy]

6.5 COMPUTER SECURITY CONTROLS

6.5.1 Specific Computer Security Technical Requirements

(A) The ICA shall ensure that the IKI CPS incorporates provisions in relation to the identification and implementation, following the conclusion of any threat assessment, of security measures which make provision for at least the following:

(i) the establishment of access controls in relation to the activities of the ICA;

(ii) the appropriate allocation of responsibilities to Privileged Persons;

(iii) the identification and Authentication of organisations, individuals and Systems involved in ICA activities;

(iv) the use of cryptography for communication and the protection of Data stored on the ICA Systems;

(v) the audit of security related events; and

(vi) the use of recovery mechanisms for ICA Keys.

6.5.2 Computer Security Rating

(A) The ICA shall ensure that the IKI CPS incorporates provisions relating to the appropriate security rating of the ICA Systems.

6.6 LIFE-CYCLE TECHNICAL CONTROLS

6.6.1 System Development Controls

(A) The ICA shall ensure that any software which is developed for the purpose of establishing a functionality of the ICA Systems shall:

(i) take place in a controlled environment that is sufficient to protect against the insertion into the software of malicious code;

(ii) be undertaken by a developer which has a quality system that is:

(a) compliant with recognised international standards (such as ISO 9001:2000 or an equivalent standard); or

(b) available for inspection and approval by the SMKI PMA, and has been so inspected and approved.

6.6.2 Security Management Controls

(A) The ICA shall ensure that the IKI CPS incorporates provisions which are designed to ensure that the ICA Systems satisfy the requirements of Section G2 (System Security: Obligations on the DCC) and Section G5 (Information Security: Obligations on the DCC and Users) of the Code.

6.6.3 Life-Cycle Security Controls

See Part 6.6.2 of this Policy.

6.7 NETWORK SECURITY CONTROLS

6.7.1 Use of Offline Root ICA

(A) The ICA shall ensure that its functions as the Root ICA are carried out on a part of the ICA Systems that is neither directly nor indirectly connected to any System which is not a part of the ICA Systems.

6.7.2 Protection Against Attack

(A) The ICA shall use its best endeavours to ensure that the ICA Systems are not Compromised, and in particular for this purpose that they are designed and operated so as to detect and prevent:

(i) any Denial of Service Event; and

(ii) any unauthorised attempt to connect to them.

(B) The ICA shall use its reasonable steps to ensure that the ICA Systems cause or permit to be open at any time only those network ports, and allow only those protocols, which are required at that time for the effective operation of those Systems, and block all network ports and protocols which are not so required.

6.7.3 Separation of Issuing ICA

(A) The DCC shall ensure that, where its functions as the Issuing ICA are carried out on a part of the ICA Systems that is connected to an external network, they are carried out on a System that is Separated from all other ICA Systems.

6.7.4 Health Check of ICA Systems

(A) The ICA shall ensure that, in relation to the ICA Systems, a vulnerability assessment in accordance with Sections G2.13 – G2.15 of the Code (Management of Vulnerabilities) is carried out with such frequency as may be specified from time to time by the Independent SMKI Assurance Service Provider.

6.8 TIME-STAMPING

6.8.1 Use of Time-Stamping

(A) The ICA shall ensure that Time-Stamping takes place in relation to all Certificates and all other ICA activities which require an accurate record of time.

(B) The ICA shall ensure that the ICA incorporates provisions in relation to the time source and mechanisms used by any Time-Stamping Authority which carries out Time-Stamping on behalf of the ICA.

7 CERTIFICATE CRL AND OCSP CONTROLS

7.1 CERTIFICATE PROFILES

The ICA shall use only the Certificate Profiles in Annex B.

7.1.1 Version Number(s)

[Not applicable in this Policy]

7.1.2 Certificate Extensions

[Not applicable in this Policy]

7.1.3 Algorithm Object Identifiers

[Not applicable in this Policy]

7.1.4 Name Forms

[Not applicable in this Policy]

7.1.5 Name Constraints

[Not applicable in this Policy]

7.1.6 Certificate Policy Object Identifier

[Not applicable in this Policy]

7.1.7 Usage of Policy Constraints Extension

[Not applicable in this Policy]

7.1.8 Policy Qualifiers Syntax and Semantics

[Not applicable in this Policy]

7.1.9 Processing Semantics for the Critical Certificate Policies Extension

[Not applicable in this Policy]

7.2 CRL PROFILE

7.2.1 Version Number(s)

(A) The ICA shall ensure that the IKI ARL and IKI CRL conform with X.509 v2 and IETF RFC 5280.

7.2.2 CRL and CRL Entry Extensions

(A) The ICA shall notify Parties of the profile of the IKI CRL and of any IKI CRL extensions.

7.3 OCSP PROFILE

7.3.1 Version Number(s)

[Not applicable in this Policy]

7.3.2 OCSP Extensions

[Not applicable in this Policy]

8 COMPLIANCE AUDIT AND OTHER ASSESSMENTS

8.1 FREQUENCY OR CIRCUMSTANCES OF ASSESSMENT

Provision in relation to this is made in Appendix C of the Code (SMKI Compliance Policy).

8.2 IDENTITY/QUALIFICATIONS OF ASSESSOR

Provision in relation to this is made in Appendix C of the Code (SMKI Compliance Policy).

8.3 ASSESSOR’S RELATIONSHIP TO ASSESSED ENTITY

Provision in relation to this is made in Appendix C of the Code (SMKI Compliance Policy).

8.4 TOPICS COVERED BY ASSESSMENT

Provision in relation to this is made in Appendix C of the Code (SMKI Compliance Policy).

8.5 ACTIONS TAKEN AS A RESULT OF DEFICIENCY

Provision in relation to this is made in Appendix C of the Code (SMKI Compliance Policy).

8.6 COMMUNICATION OF RESULTS

Provision in relation to this is made in Appendix C of the Code (SMKI Compliance Policy).

9 OTHER BUSINESS AND LEGAL MATTERS

In so far as provision is made in relation to all the matters referred to in this Part, it is found in the DCC Licence and the provisions of the Code (including in Section L11 (Subscriber Obligations) and Section L12 (Relying Party Obligations) of the Code).

9.1 FEES

See the statement at the beginning of this Part.

9.1.1 Certificate Issuance or Renewal Fees

See the statement at the beginning of this Part.

9.1.2 IKI Certificate Access Fees

See the statement at the beginning of this Part.

9.1.3 Revocation or Status Information Access Fees

See the statement at the beginning of this Part.

9.1.4 Fees for Other Services

See the statement at the beginning of this Part.

9.1.5 Refund Policy

See the statement at the beginning of this Part.

9.2 FINANCIAL RESPONSIBILITY

9.2.1 Insurance Coverage

See the statement at the beginning of this Part.

9.2.2 Other Assets

See the statement at the beginning of this Part.

9.2.3 Insurance or Warranty Coverage for Subscribers and Subjects

See the statement at the beginning of this Part.

9.3 CONFIDENTIALITY OF BUSINESS INFORMATION

9.3.1 Scope of Confidential Information

See the statement at the beginning of this Part.

9.3.2 Information not within the Scope of Confidential Information

See the statement at the beginning of this Part.

9.3.3 Responsibility to Protect Confidential Information

See the statement at the beginning of this Part.

9.4 PRIVACY OF PERSONAL INFORMATION

9.4.1 Privacy Plan

See the statement at the beginning of this Part.

9.4.2 Information Treated as Private

See the statement at the beginning of this Part.

9.4.3 Information not Deemed Private

See the statement at the beginning of this Part.

9.4.4 Responsibility to Protect Private Information

See the statement at the beginning of this Part.

9.4.5 Notice and Consent to Use Private Information

See the statement at the beginning of this Part.

9.4.6 Disclosure Pursuant to Judicial or Administrative Process

See the statement at the beginning of this Part.

9.4.7 Other Information Disclosure Circumstances

See the statement at the beginning of this Part.

9.5 INTELLECTUAL PROPERTY RIGHTS

See the statement at the beginning of this Part.

9.6 REPRESENTATIONS AND WARRANTIES

9.6.1 Certification Authority Representations and Warranties

See the statement at the beginning of this Part.

9.6.2 Registration Authority Representations and Warranties

See the statement at the beginning of this Part.

9.6.3 Subscriber Representations and Warranties

See the statement at the beginning of this Part.

9.6.4 Relying Party Representations and Warranties

See the statement at the beginning of this Part.

9.6.5 Representations and Warranties of Other Participants

See the statement at the beginning of this Part.

9.7 DISCLAIMERS OF WARRANTIES

See the statement at the beginning of this Part.

9.8 LIMITATIONS OF LIABILITY

See the statement at the beginning of this Part.

9.9 INDEMNITIES

See the statement at the beginning of this Part.

9.10 TERM AND TERMINATION

9.10.1 Term

See the statement at the beginning of this Part.

9.10.2 Termination of IKI Certificate Policy

See the statement at the beginning of this Part.

9.10.3 Effect of Termination and Survival

See the statement at the beginning of this Part.

9.11 INDIVIDUAL NOTICES AND COMMUNICATIONS WITH PARTICIPANTS

9.11.1 Subscribers

See the statement at the beginning of this Part.

9.11.2 IKI Certification Authority

See the statement at the beginning of this Part.

9.11.3 Notification

See the statement at the beginning of this Part.

9.12 AMENDMENTS

9.12.1 Procedure for Amendment

See the statement at the beginning of this Part.

9.12.2 Notification Mechanism and Period

See the statement at the beginning of this Part.

9.12.3 Circumstances under which OID Must be Changed

See the statement at the beginning of this Part.

9.13 DISPUTE RESOLUTION PROVISIONS

See the statement at the beginning of this Part.

9.14 GOVERNING LAW

See the statement at the beginning of this Part.

9.15 COMPLIANCE WITH APPLICABLE LAW

See the statement at the beginning of this Part.

9.16 MISCELLANEOUS PROVISIONS

9.16.1 Entire Agreement

See the statement at the beginning of this Part.

9.16.2 Assignment

See the statement at the beginning of this Part.

9.16.3 Severability

See the statement at the beginning of this Part.

9.16.4 Enforcement (Attorney’s Fees and Waiver of Rights)

See the statement at the beginning of this Part.

9.16.5 Force Majeure

See the statement at the beginning of this Part.

9.17 OTHER PROVISIONS

9.17.1 IKI Certificate Policy Content

See the statement at the beginning of this Part.

9.17.2 Third Party Rights

See the statement at the beginning of this Part.

Annex A: Definitions and Interpretation

In this Policy, except where the context otherwise requires -

- expressions defined in Section A of the Code (Definitions and Interpretation) have the same meaning as is set out in that Section,
- the expressions in the left hand column below shall have the meanings given to them in the right hand column below,
- where any expression is defined in Section A of the Code (Definitions and Interpretation) and in this Annex, the definition in this Annex shall take precedence for the purposes of the Policy.

Activation Data means any private Data (such as a password or the Data on a smartcard) which are used to access a Cryptographic Module.

Archive means the archive of Data created in accordance with Part 5.5.1 of this Policy (and "**Archives**" and "**Archived**" shall be interpreted accordingly).

Audit Log means the audit log created in accordance with Part 5.4.1 of this Policy.

Authentication means the process of establishing that an individual, Certificate, System or Organisation is what he or it claims to be (and "**Authenticate**" shall be interpreted accordingly).

Authorised Responsible Officer (ARO) means an individual that has successfully completed the process for becoming an ARO on behalf of a Party, Manufacturer, an RDP, a DCC Service Provider or SECCo in accordance with the SMKI RAPP.

Authorised Subscriber means a Party, Manufacturer, RDP or SECCo which has successfully completed the procedures set out in this Policy and has been authorised by the ICA to submit a Certificate Signing Request.

Certificate means either an IKI Certificate or an ICA Certificate.

Certificate Profile means a table bearing that title in Annex B and specifying certain parameters to be contained within a Certificate.

Certificate Re-Key means a change to the Public Key contained within a Certificate bearing a particular serial number.

Certificate Revocation Request means a request for the revocation of a Certificate by the ICA, submitted by the Subscriber for that Certificate to the ICA in accordance with the SMKI RAPP and this Policy.

Certificate Signing Request means a request for a Certificate submitted by an Eligible Subscriber in accordance with the SMKI RAPP.

Cryptographic Credential Token has the meaning set out in the SMKI RAPP

Eligible Subscriber Means an Authorised Subscriber and:

a) in respect of each IKI Certificate Issued by the IKI Administrator CA or the IKI Registration Authority CA, the DCC;
b) in respect of each IKI Certificate Issued by the IKI Authorised Organisation Subscriber CA, each Eligible Subscriber in respect of Organisation Certificates;
c) in respect of each IKI Certificate Issued by the IKI Authorised Device Subscriber CA, each Eligible Subscriber in respect of Device Certificates;
d) in respect of each IKI Certificate Issued by the IKI Authorised Web Service Subscriber CA, each Eligible Subscriber for Device Certificates that is the DCC or a Supplier; or
e) in respect of each ICA Certificate, the DCC;
f) in respect of each IKI Certificate Issued by the IKI File Signing Certification Authority, an Authorised Subscriber that is a Party, Manufacturer, RDP or SECCo.

File Signing Certificate means a Certificate Issued by the IKI File Signing Certification Authority.

ICA See IKI Certification Authority

ICA Certificate means either a Root ICA Certificate or an Issuing ICA Certificate.

ICA Key means any Private Key or a Public Key generated by the ICA for the purposes of complying with its obligations under the Code.

ICA Private Key means either a Root ICA Private Key or an Issuing ICA Private Key.

ICA Systems means the Systems used by the ICA in relation to the SMKI Services.

IKI Certification Authority (or ICA) means the DCC, acting in the capacity and exercising the functions of one or more of:

(a) the Root ICA;

(b) the Issuing ICA; and

(c) the Registration Authority.

IKI Administrator Certification Authority (or CA) means the Issuing ICA when performing the function of Issuing IKI Certificates to Registration Authority Personnel, Registration Authority Managers and Authorised Responsible Officers acting on behalf of DCC Service Providers for the purposes of Authenticating such persons to SMKI Services.

IKI Authorised Device Subscriber Certification Authority (or CA) means the Issuing ICA when performing the function of issuing an ICA Certificate for the purposes of authenticating Authorised Responsible Officers to SMKI Services for the purposes of submitting CSRs in respect of Device Certificates over a DCC Gateway Connection.

IKI Authorised Organisation Subscriber Certification Authority (or CA) means the Issuing ICA when performing the function of Issuing Certificates for the purposes of authenticating Authorised Responsible Officers to SMKI Services for the purposes of submitting Certificate Signing Requests (CSRs) and Certificate Revocation Requests (CRRs) in respect of Organisation Certificates over a DCC Gateway Connection.

IKI Authorised Internet Organisation Subscriber Certification Authority (or CA) means the Issuing ICA when performing the function of Issuing Certificates for the purposes of authenticating Authorised Responsible Officers to SMKI Services for the purposes of submitting CSRs and CRRs in respect of Organisation Certificates over the Internet.

IKI Authorised Web Service Subscriber Certification Authority (or CA) means the Issuing ICA when performing the function of Issuing Certificates to Authorised Subscribers for the purposes of authenticating a Subscriber's Systems to SMKI Services for the purposes of submission of CSRs in respect of Device Certificates via the web service interfaces.

IKI Authority Revocation List (or IKI ARL) means a list, produced by the ICA, of all ICA Certificates that have been revoked in accordance with this Policy.

IKI Certificate means a certificate in the form set out in the IKI Certificate Profile in accordance with Annex B and Issued by the Issuing ICA in accordance with this Policy.

IKI Certificate Revocation List (IKI CRL) Means a certificate revocation list issued by the Issuing ICA.

IKI File Signing Certification Authority (or CA) means the Issuing ICA when performing the function of Issuing Certificates to Authorised Responsible Officers for the purpose of signing files related to Threshold Anomaly Detection, SMKI Recovery Procedure and the Certified Products List sent to the DCC.

IKI Registration Authority Certification Authority (or CA) means the Issuing ICA when performing the function of Issuing Certificates to DCC in relation to DCC Systems for the purposes of authenticating such Systems to SMKI Services

Issue means the act of the ICA, in its capacity as the Root ICA or Issuing ICA, and acting in accordance with this Policy, of creating and signing a Certificate which is bound to both a Subject and a Subscriber (and "Issued" and "Issuing" shall be interpreted accordingly).

Issuing ICA Certificate means a certificate in the form set out in the Issuing ICA Certificate Profile in accordance with Annex B and Issued by the Root ICA to the Issuing ICAs in accordance with this Policy. The Issuing ICA may act in one of the following capacities:

a) IKI Administrator CA;

b) IKI Registration Authority CA;

c) IKI Authorised Organisation Subscriber CA;

d) IKI Authorised Device Subscriber CA;

e) IKI Authorised Internet Organisation Subscriber CA;

f) IKI Authorised Web Service Subscriber CA; and

g) IKI File Signing CA

Issuing ICA Private Key means a Private Key which is stored and managed by the ICA acting in its capacity as the Issuing ICA.

Issuing ICA Public Key means the Public Key which is part of a Key Pair with an Issuing ICA Private Key.

Issuing IKI Certification Authority (or Issuing ICA) means the DCC exercising the function of Issuing IKI Certificates to Eligible Subscribers and of storing and managing the Private Keys associated with that function.

Key Escrow means the storage of a Private Key by a person other than the Subscriber or Subject of the Certificate which contains the related Public Key.

Object Identifier (or OID) means an Object Identifier assigned by the Internet Address Naming Authority.

Private Key Material in relation to a Private Key, means that Private Key and the input parameters necessary to establish, use and maintain it.

Registration Authority (RA) means the DCC exercising the function of receiving and processing Certificate Signing Requests made in accordance with the SMKI RAPP.

Registration Authority Manager means either a director of the DCC or any other person who may be identified as such in accordance with the SMKI RAPP.

Registration Authority Personnel means those persons who are engaged by the DCC, in so far as such persons carry out, or are authorised to carry out, any function of the Registration Authority.

Relying Party means a person who, pursuant to the Code, receives and relies upon a Certificate.

Root ICA Private Key means a Private Key which is stored and managed by the ICA acting in its capacity as the Root ICA.

Root ICA Certificate means a certificate in the form set out in the Root ICA Certificate Profile in accordance with Annex B and self-signed by the Root ICA in accordance with this Policy.

Root IKI Certification Authority (or Root ICA) means the DCC exercising the function of Issuing ICA Certificates to the Issuing ICA and storing and managing Private Keys associated with that function.

Security Related Functionality means the functionality of the ICA Systems which is designed to detect, prevent or mitigate the adverse effect of any Compromise of that System.

Subject means:

- in relation to an IKI Certificate, the entity or object identified by the Distinguished Name in the ‘Subject field of the IKI Certificate Profile. The Distinguished Name of the subject of an IKI Certificate is as set out in Annex B; and
- in relation to an ICA Certificate, the globally unique name of the Root ICA or Issuing ICA as identified in the ‘Subject’ field of the relevant Certificate Profile in Annex B.

Subscriber means, in relation to any Certificate, a Party, Manufacturer, RDP or SECCo which has been Issued with and accepted that Certificate, acting in its capacity as the holder of the Certificate.

Time-Stamping means the act that takes place when a Time-Stamping Authority, in relation to a Certificate, stamps a particular datum with an accurate indicator of the time (in hours, minutes and seconds) at which the activity of stamping takes place.

Time-Stamping Authority means that part of the ICA that:

(a) where required, provides an appropriately precise time-stamp in the format required by this Policy; and

(b) relies on a time source that is:

(i) accurate;

(ii) determined in a manner that is independent of any other part of the ICA Systems; and

(iii) such that the time of any time-stamp can be verified to be that of the Independent Time Source at the time at which the time-stamp was applied.

Validity Period means, in respect of a Certificate, the period of time for which that Certificate is intended to be valid.

Annex B: ICA Certificate and IKI Certificate Profiles

Certificate Structure and Contents

This Annex lays out requirements as to structure and content with which ICA Certificates and IKI Certificates shall comply. All terms in this Annex shall, where not defined in the Code, this Policy, or the GB Companion Specification, have the meanings in IETF RFC 5280.

Common requirements applicable to Root ICA Certificates, Issuing ICA Certificates and IKI Certificates

All ICA Certificates and IKI Certificates that are validly authorised within the SMKI for use within the scope of GB Smart Metering:

- shall be compliant with IETF RFC 5280;
- contain the `authorityKeyIdentifier` extension, except where the Certificate is the Root ICA Certificate;
- contain the `keyUsage` extension which shall be marked as critical;
- be X.509 v3 certificates as defined in IETF RFC 5280, encoded using the ASN.1 Distinguished Encoding Rules;
- only contain Public Keys that are 4096-bit RSA Public Keys for the Root ICA Certificate or 2048-bit RSA Public Keys for all subordinate certificates which shall include Issuing OCA Certificates;
- only provide for signature methods that are RSA with SHA 256
- contain a `certificatePolicies` extension containing at least one PolicyIdentifier which shall be marked as critical. For clarity and in adherence with IETF RFC 5280, Certification Path Validation undertaken by Parties shall interpret this extension;
- contain a `serialNumber` of no more than 16 octets in length;
- contain a `subjectKeyIdentifier` which shall be marked as non-critical;
- contain an `authorityKeyIdentifier` in the form *option [0]* `KeyIdentifier` which shall be marked as non-critical, except where the Certificate is the Root ICA Certificate. Note this exception only applies where RemotePartyRole as specified in the `X520OrganizationalUnitName` field = root;
- only contain `keyIdentifiers` generated as per method (2) of Section 4.2.1.2 of IETF RFC 5280;

- contain an issuer name which MUST be identical to the signer's subject name; and
- have a valid notBefore field set to the time of issue and a valid notAfter field expiration date as per IETF RFC 5280 Section 4.1.2.5.

Requirements applicable to IKI Certificates only

All IKI Certificates that are Issued by an Issuing ICA shall:

- contain a non-empty subject field which for:
  - IKI Certificates issued by the IKI Administrator CA, shall contain an X520organisationalName attribute whose value shall be set to that of the Authorised Subscriber, an X520OrganizationalUnitName attribute whose value shall be set to ADMIN, a X520commonName attribute whose value shall be set to the individual’s name and an X520emailAddress attribute whose value shall be set to the individual’s email address;
  - IKI Certificates issued by the IKI Registration Authority CA, shall contain an organisationalName whose value shall be set to that of the Authorised Subscriber, an X520OrganizationalUnitName attribute whose value shall be set to one of ‘RA’, ‘MULTI_ALLOWED’ or ‘Super RA’ and a X520commonName attribute whose value shall be set to the individual’s name;
  - IKI Certificates issued by the IKI Authorised Organisation Subscriber CA, shall contain an X520OrganizationalName attribute whose value shall be set to that of the Authorised Subscriber, an X520OrganizationalUnitName attribute whose value shall be set to the two octet hexadecimal representation of the RemotePartyRole that this Certificate allows the subject of the certificate to request SMKI Organisation Certificates under and a X520 commonName attribute whose value shall be set to the ARO’s name;
  - IKI Certificates issued by the IKI Authorised Device Subscriber CA, shall contain an X520OrganizationalName attribute whose value shall be set to that of the Authorised Subscriber, an X520OrganizationalUnitName attribute whose value shall be set to the two octet hexadecimal representation of the RemotePartyRole that this Certificate allows the subject of the certificate to request SMKI Organisation Certificates under and a X520commonName attribute whose value shall be set to the ARO’s or system name
  - IKI Certificates issued by the IKI Authorised Web Service Subscriber CA, shall contain an X520OrganizationalName attribute whose value shall be set to that of

    the Authorised Subscriber, an X520OrganizationalUnitName attribute whose value shall be set to the two octet hexadecimal representation of the RemotePartyRole that this Certificate allows the subject of the certificate to request SMKI Organisation Certificates under and a X520commonName attribute whose value shall be set to the system's name.

  - IKI Certificates issued by the IKI Authorised Internet Organisation Subscriber CA, shall contain an X520OrganizationalName attribute whose value shall be set to that of the Authorised Subscriber, an X520OrganizationalUnitName attribute whose value shall be set to the two octet hexadecimal representation of the RemotePartyRole that this Certificate allows the subject of the certificate to request SMKI Organisation Certificates underand a X520commonName attribute whose value shall be set to the ARO's name;
  - IKI Certificates issued by the IKI File Signing CA, shall contain an X520organisationalName attribute whose value shall be set to that of the Authorised Subscriber, an X520OrganizationalUnitName attribute whose value shall be set to two octet hexadecimal representation of the RemotePartyRole that this Certificate allows the subject of the certificate to request SMKI Organisation Certificates under, a second X520OrganizationalUnitName attribute whose value should be set to the Party Signifier of the Authorised Subscriber and a X520commonName attribute whose value shall be set to the ARO's name.
- contain a single Public Key;
- contain a `keyUsage` extension marked as critical, with a value of:
  - `digitalSignature`;
- For Certificates Issued by the IKI Administrator CA, IKI Authorised Organisation Subscriber CA, IKI Authorised Internet Device Subscriber CA, IKI Authorised Internet Organisation Subscriber CA, IKI Authorised Wed Service Subscriber CA and IKI Registration Authority CA, contain a extKeyUsage extension marked critical, with a value of:
  - `clientAuth`.
- contain a single policyIdentifier in the `certificatePolicies` extension that refers to the OID of this Policy under which the Certificate is Issued.

Requirements applicable ICA Certificates only

All ICA Certificates Issued by the Root ICA shall:

- be such that, per RFC5280, the `IssuerName` is identical to the signer's SubjectName;

- have a subject name field unique within the Root ICA;
- contain a single public key;
- contain a keyUsage extension marked as critical and defined as:
    - keyCertSign; and
    - cRLSign;
- for Issuing ICA Certificates, contain at least one policyIdentifier in the certificatePolicies extension that refers to the OID of this Policy under which the Certificate is Issued;
- for the Root ICA Certificate, contain a single policyIdentifier in the certificatePolicies extension that refers to the OID for any Policy;
- for Issuing ICA Certificates, contain the basicConstraints extension, with values cA=True, and pathLen=0. This extension shall be marked as critical;
- for the Root ICA Certificate, contain the basicConstraints extension, with the value cA=True and pathLen absent (unlimited). This extension shall be marked as critical.

IKI Certificate Profile

Field Name	RFC 5759/5280 Type	Value	Reference
Version	Integer	V3	
serialNumber	Integer	Positive Integer of up to 16 Octets	
signature	AlgorithmIdentifier	SHA256 With RSA encryption	
issuer	Name	Globally unique name of Issuing ICA	
Authoritykeyidentifier	KeyIdentifier	A unique value that matches the subjectKeyIdentifier of the issuer's credential	

subjectKeyIdentifier	KeyIdentifier	Provides a means for identifying certificates containing the particular Public Key used in an application	
notBefore	Time	Creation time of the Certificate	
notAfter	Time	Expiry time of the Certificate	
subject	Name	Name of the Subject of the Certificate	
subjectPublicKeyInfo	SubjectPublicKeyInfo	The subject's Public Key	
extensions	Extensions	Critical and non-critical extensions	
signatureAlgorithm	AlgorithmIdentifier	2048 bit RSA and SHA256	
signatureValue	BIT STRING	Subject IKI Certificate signature	

Interpretation

`version`

The version of the X.509 IKI Certificate. Valid IKI Certificates shall identify themselves as version 3.

`serialNumber`

IKI Certificate serial number, a positive integer of up to 16 octets. The `serialNumber` identifies the IKI Certificate, and shall be created by the Issuing ICA that signs the IKI Certificate. The `serialNumber` shall be unique in the scope of IKI Certificate signed by the Issuing ICA.

`signature`

The identity of the signature algorithm used to sign the IKI Certificate. The field is identical to the value of the IKI Certificate 'signatureAlgorithm' field explained further under the next '**signatureAlgorithm**' heading below.

`issuer`

The name of the signer of the IKI Certificate. This will be the gloablly unique name of the Issuing ICA.

`authorityKeyIdentifier`

To optimize building the correct credential chain, the non-critical Authority Key Identifier extension shall be populated with a unique value as recommended by RFC 5280 and shall be included in all IKI Certificates. The IKI Certificate shall contain an `authorityKeyIdentifier` in the form *option [0]* `KeyIdentifier`.

`subjectKeyIdentifier`

The Subject Key Identifier extension shall be included and marked as non-critical in the IKI Certificate. The IKI Certificate shall contain a `subjectKeyIdentifier` with KeyIdentifier generated as per method (2) of Section 4.2.1.2 of IETF RFC 5280 and which shall always be 8 octets in length.

`validity`

The time period over which the Issuing ICA expects the IKI Certificate to be valid. The validity period is the period of time from `notBefore` through `notAfter`, inclusive.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Times up to and including 23:59:59 December 31, 2049 UTC shall be encoded as UTCTime as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as GeneralizedTime as YYYYMMDDHHmmssZ.

`notBefore`

The earliest time an IKI Certificate may be used. This shall be the time the IKI Certificate is created.

`notAfter`

The latest time an IKI Certificate is expected to be used. The value in a `notAfter` field shall be treated as specified in RFC 5280.

`subject`

The formatting of this field shall contain a unique X.500 Distinguished Name (DN) with the value as defined earlier in the Requirements Sections in Annex B to this IKI Certificate Policy.

`subjectPublicKeyInfo`

The IKI Certificate `subjectPublicKeyInfo` field shall indicate the Public Key algorithm identifier and the Public Key in the specified algorithm format as specified in RFC 5280.The object identifiers for the supported algorithms and the methods for encoding the Public Key materials (public key and parameters) are specified in RFC3279, RFC4055, and RFC4491.

The algorithm field shall use the following identifier:

```
rsaEncryption ::= {iso(1) member-body(2) us(840)
rsadsi(113549) pkcs(1) pkcs-1(1) rsaEncryption(1)}
```

The `rsaEncryption` OID is intended to be used in the algorithm field of a value of type AlgorithmIdentifier. The parameters field MUST have `ASN`.1 type NULL for this algorithm identifier.

The RSA public key MUST be encoded using the ASN.1 type RSAPublicKey:

```
RSAPublicKey ::= SEQUENCE {

          modulus              INTEGER,     -- n

          publicExponent       INTEGER  }   -- e
```

where `modulus` is the modulus n, and publicExponent is the public exponent e. The DER encoded `RSAPublicKey` is the value of the BIT STRING `subjectPublicKey`.

signatureAlgorithm

The `signatureAlgorithm` field shall indicate the Issuing ICA signature algorithm used to sign this IKI Certificate is as defined under the next '**Signature Method**' heading below.

signatureValue

The Issuing ICA's signature of the IKI Certificate is computed using the Issuing ICA's private RSA 2048-bit IKI Certificate signing key using the algorithm identified under the next '**Signature Method (RSA)**' heading below.

The IKI Certificates shall be signed by the Issuing ICA using the RSA algorithm identified under the next '**Signature Method (RSA)**' heading below. The structure for RSA signatures is as per RFC 5280.

extensions

IKI Certificates SHOULD contain the extensions described below. They SHOULD NOT contain any additional extensions:

- `certificatePolicy`: critical; OID as a policyIdentifier
- `keyUsage`: critical; digitalSignature.
- `extKeyUsage`: critical;clientAuth[1]

[1] The `extKeyUsage` extension is not used in IKI Certificates Issued by the IKI File Signing CA.

- `basicConstraints`: critical; cA=false.
- `authorityKeyIdentifier`.
- `subjectKeyIdentifier`.
- `cRLDistributionPoint`: non-critical; URI string, which shall identify the URL of the IKI CRL
- Private extensions used internally by the SMKI application with an extension OID of 2.16.840.1.113733.1.16.3, 2.16.840.1.113733.1.16.4, 2.16.840.1.113733.1.16.5 or 2.16.840.1.113733.1.16.11 where:
  - 2.16.840.1.113733.1.16.3 - Contains Cert Profile OID
  - 2.16.840.1.113733.1.16.4 - Contains Account ID
  - 2.16.840.1.113733.1.16.5 - Contains Base64 encoded URL for Symantec PKI Client web service.
  - 2.16.840.1.113733.1.6.11 - Containd Jurisdiction Hash of Symantec Master account

Cryptographic Primitives for Signature Method

Signature Method (RSA)

The RSA signature method is defined in NIST FIPS 186-4. When implementing RSA, the SHA-256 message digest algorithm choice is identified based on section 5 of SP 800-57part1.

The signature algorithm shall be `SHA256-with-RSA` Encryption as specified in RFC4055. The algorithm identifier is:

```
sha256WithRSAEncryption(11) ::= {iso(1) member-body(2)
us(840) rsadsi(113549) pkcs(1) pkcs-1(1)
sha256WithRSAEncryption(11)}
```

SHA-256 hash algorithm

The hash algorithm used by the IKI Certificate shall be the SHA-256 secure hash algorithm as defined in NIST FIPS 180-4.

Root ICA Certificate Profile

Field Name	RFC 5759/5280 Type	Value	Reference
`version`	`Integer`	V3	
`serialNumber`	`Integer`	Positive Integer of up to 16 Octets	

signature	AlgorithmIdentifier	SHA256 With RSA Encryption	
issuer	Name	Globally unique name of Root ICA	
subjectKeyIdentifier	KeyIdentifier	A unique value that matches the subjectKeyIdentifier of the issuer's credential	
notBefore	Time	Creation time of the Certificate	
notAfter	Time	Expiry time of the Certificate	
subject	Name	Unique name of Root ICA (same as issuer name)	
subjectPublicKeyInfo	SubjectPublicKeyInfo	The subject's Public Key	
extensions	Extensions	Critical and non-critical extensions	
signatureAlgorithm	AlgorithmIdentifier	4096 bit RSA and SHA256	
signatureValue	BIT STRING	Subject Certificate signature	

These certificates are the root of trust for the IKI

version

The version of the X.509 Certificate. Valid Certificates shall identify themselves as version 3.

serialNumber

Certificate serial number, a positive integer of up to 16 octets. The serialNumber identifies the Certificate, and shall be created by the ICA Certificate that signs the Certificate (self-signed by Root ICA). The `serialNumber` shall be unique in the scope of Certificates signed by the ICA Certificate.

`signature`

The identity of the signature algorithm used to sign the Certificate. The field is identical to the value of the Root CA Certificate's `signatureAlgorithm` field explained further under the next '**Signature Method'** heading below.

`issuer`

The name of the signer of the Certificate. This will be the gloablly unique name of the Root ICA. This will be the same as the `subject` as it is self-signed by the Root ICA.

`subjectKeyIdentifier`

The Root ICA credentials contain the `subjectKeyIdentifier` extension. Adding `subjectKeyIdentifer` facilitates certificate path building, which is necessary to validate credentials.

The Subject Key Identifier extension shall be included and marked as non-critical in the Certificate. The Certificate shall contain a `subjectKeyIdentifier` with `KeyIdentifier` generated as per method (2) of Section 4.2.1.2 of IETF RFC 5280.

`validity`

The time period over which the issuer expects the Certificate to be valid for. The validity period is the period of time from `notBefore` through `notAfter`, inclusive.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Times up to and including 23:59:59 December 31, 2049 UTC shall be encoded as UTCTime as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as `GeneralizedTime` as YYYYMMDDHHmmssZ.

`notBefore`

The earliest time a Certificate may be used. This shall be the time the Certificate is created.

notAfter

The latest time a Certificate is expected to be used. The value in a `notAfter` field shall be treated as specified in RFC 5280.

subject

This field must be populated with the globally unique name of the Root ICA.

subjectPublicKeyInfo

The Root ICA Certificate `subjectPublicKeyInfo` field shall indicate the Public Key algorithm identifier and the Public Key in the specified algorithm format as specified in RFC 5280, where the key size shall be 4096-bit RSA. The object identifiers for the supported algorithms and the methods for encoding the public key materials (public key and parameters) are specified in RFC3279, RFC4055, and RFC4491.

The algorithm field shall use the following identifier:

```
rsaEncryption ::= {iso(1) member-body(2) us(840)
rsadsi(113549) pkcs(1) pkcs-1(1) rsaEncryption(1)}
```

The `rsaEncryption` OID is intended to be used in the algorithm field of a value of type `algorithmIdentifier`. The parameters field MUST have ASN.1 type NULL for this algorithm identifier.

The RSA public key MUST be encoded using the ASN.1 type RSAPublicKey:

```
RSAPublicKey ::= SEQUENCE {

    modulus             INTEGER,    -- n

    publicExponent      INTEGER  }  -- e
```

where modulus is the modulus n, and `publicExponent` is the public exponent e. The DER encoded `RSAPublicKey` is the value of the BIT STRING `subjectPublicKey`.

signatureAlgorithm

The `signatureAlgorithm` field shall indicate the Root ICA signature algorithm used to sign this Certificate as defined in section under the next '**Signature Method**' heading below.

`signatureValue`

The Root ICA's signature of the Certificate is computed using the Root ICA's private RSA 4096-bit Certificate signing key using the algorithm identified under the next '**Signature Method (RSA)**' heading below.

The Root ICA Certificates shall be signed by the Root ICA using the RSA algorithm identified under the next '**Signature Method (RSA)**' heading below. The structure for RSA signatures is as per RFC 5280.

`extensions`

Certificates MUST contain the extensions described below and MUST have the name form as described. They SHOULD NOT contain any additional extensions:

`extensions`

- o `certificatePolicy`: critical; OID as a policyIdentifier
- o `keyUsage`: critical; keyCertSign, crlSign
- o `basicConstraints`: critical; cA=true, pathLen absent (unlimited)
- o `subjectKeyIdentifer`: non-critical; Method 2

Cryptographic Primitives for Signature Method

Signature Method (RSA)

The RSA signature method is defined in NIST FIPS 186-4. When implementing RSA, the SHA-256 message digest algorithm choice is identified based on section 5 of SP 800-57part1.

The signature algorithm shall be `SHA256-with-RSA` Encryption as specified in RFC4055. The algorithm identifier is:

```
sha256WithRSAEncryption(11) ::= {iso(1) member-body(2)
us(840) rsadsi(113549) pkcs(1) pkcs-1(1)
sha256WithRSAEncryption(11)}
```

SHA-256 hash algorithm

The hash algorithm used by the Certificate shall be the SHA-256 secure hash algorithm as defined in NIST FIPS 180-4.

Issuing ICA Certificate Profile

Field Name	**RFC 5759/5280 Type**	**Value**	**Reference**
version	Integer	V3	
serialNumber	Integer	Positive Integer of up to 16 Octets	
signature	AlgorithmIdentifier	SHA256 With RSA Encryption.	
issuer	Name	Unique name of Root ICA	
subjectKeyIdentifier	KeyIdentifier	A unique value that matches the subjectKeyIdentifier of the issuer's credential	
authorityKeyIdentifier	KeyIdentifier	A unique value that matches the subjectKeyIdentifier of the issuer's credential	
notBefore	Time	Creation time of the certificate	
notAfter	Time	Expiry time of the Certificate	
subject	Name	Unique name of Issuing ICA within the Root ICA	

subjectPublicKeyInfo	SubjectPublicKeyInfo	The subject's Public Key	
extensions	Extensions	Critical and non-critical extensions	
signatureAlgorithm	AlgorithmIdentifier	2048-bit RSA and SHA256	
signatureValue	BIT STRING	Subject certificate signature	

version

The version of the X.509 Certificate. Valid Certificates shall identify themselves as version 3.

serialNumber

Certificate serial number, a positive integer of up to 16 octets. The serialNumber identifies the Certificate, and shall be created by the Root ICA that signs the Certificate. The serialNumber shall be unique in the scope of Certificates signed by the Root ICA.

signature

The identity of the signature algorithm used to sign the Certificate. The field is identical to the value of the Issuing ICA Certificate's signatureAlgorithm field explained further under the next '**signatureAlgorithm**' heading below.

issuer

The name of the signer of the Certificate. This will be the gloablly unique name of the Root ICA.

subjectKeyIdentifier

The Issued credentials contain the subjectKeyIdentifier extension. Adding subjectKeyIdentifer facilitates certificate path building, which is necessary to validate credentials.

The Subject Key Identifier extension shall be included and marked as non-critical in the Certificate. The Certificate shall contain a subjectKeyIdentifier with KeyIdentifier generated as per method (2) of Section 4.2.1.2 of IETF RFC 5280 and which shall always be 8 octets in length.

`authorityKeyIdentifier`

To optimize building the correct credential chain, the non-critical Authority Key Identifier extension shall be populated with a unique value as recommended by RFC 5280 and shall be included in all IKI Certificates. The Certificates shall contain a `authorityKeyIdentifier` in the form *option [0]* `KeyIdentifier`.

`validity`

The time period over which the issuer expects the Certificate to be valid for. The validity period is the period of time from `notBefore` through `notAfter`, inclusive.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Times up to and including 23:59:59 December 31, 2049 UTC shall be encoded as `UTCTime` as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as `GeneralizedTime` as YYYYMMDDHHmmssZ.

`notBefore`

The earliest time a Certificate may be used. This shall be the time the Certificate is created.

`notAfter`

The latest time a Certificate is expected to be used. The value in a `notAfter` field shall be treated as specified in RFC 5280.

`subject`

This field must be populated with the globally unique name of the Issuing ICA.

`subjectPublicKeyInfo` (RSA)

The Issuing ICA Certificate `subjectPublicKeyInfo` field shall indicate the Public Key algorithm identifier and the Public Key in the specified algorithm format as specified in RFC 5280, where the key size shall be 2048-bit RSA. The object identifiers for the supported algorithms and the methods for encoding the public key materials (public key and parameters) are specified in RFC3279, RFC4055, and RFC4491.

The algorithm field shall use the following identifier:

```
rsaEncryption ::= {iso(1) member-body(2) us(840)
rsadsi(113549) pkcs(1) pkcs-1(1) rsaEncryption(1)}
```

The `rsaEncryption` OID is intended to be used in the algorithm field of a value of type `AlgorithmIdentifier`. The parameters field MUST have `ASN`.1 type `NULL` for this algorithm identifier.

The RSA public key MUST be encoded using the `ASN`.1 type `RSAPublicKey`:

```
      RSAPublicKey ::= SEQUENCE {

         modulus            INTEGER,    -- n

         publicExponent     INTEGER  }  -- e
```

where `modulus` is the modulus n, and `publicExponent` is the public exponent e. The DER encoded `RSAPublicKey` is the value of the BIT STRING `subjectPublicKey`.

`signatureAlgorithm`

The `signatureAlgorithm` field shall indicate the Root ICA signature algorithm used to sign this Certificate as defined under the next '**Signature Method**' heading below.

`signatureValue`

The Root ICA's signature of the Certificate is computed using the Root ICA's private RSA 4096-bit private signing key using the algorithm identified under the next '**Signature Method (RSA)**' heading below.

The Certificates shall be signed by the Root ICA using the `RSA` algorithm identified under the next '**Signature Method (RSA)**' heading below. The structure for RSA signatures is as per RFC 5280.

`extensions`

Issuing ICA certificates MUST contain the extensions described below and MUST have the name form as described. They SHOULD NOT contain any additional extensions:

- o `certificatePolicy`: critical; OID as a policyIdentifier
- o `keyUsage`: critical; keyCertSign, crlSign

- `basicConstraints`: critical; cA=true, pathLen=0
- `subjectKeyIdentifer`: non-critical; Method 2
- `authorityKeyIdentifier`: non-critical; Option [0]
- `subjectAltName`: non-critical; pointer in the form of an X500 directory name for the associated Private Key on the relevant Cryptographic Module in which the Private Key is stored.
- `cRLDistributionPoint`: non-critical; URI string

Cryptographic Primitives for Signature Method

Signature Method (RSA)

The RSA signature method is defined in NIST FIPS 186-4. When implementing RSA, the SHA-256 message digest algorithm choice is identified based on section 5 of SP 800-57 part1.

The signature algorithm shall be `SHA256-with-RSA` Encryption as specified in RFC4055. The algorithm identifier is:

```
sha256WithRSAEncryption(11) ::= {iso(1) member-body(2)
us(840) rsadsi(113549) pkcs(1) pkcs-1(1)
sha256WithRSAEncryption(11)}
```

SHA-256 hash algorithm

The hash algorithm used by the Certificate shall be the SHA-256 secure hash algorithm as defined in NIST FIPS 180-4.

Version R5.0

Appendix R

Common Test Scenarios Document

Contents

1. Introduction

1.1. Purpose

1.1.1 The purpose of this document is to:

a) Define the procedural steps to be undertaken by a Party wishing to complete User Entry Process Tests (UEPT) in accordance with SEC Section H14;

b) Set out the User Entry Process Tests that must be conducted by the Relevant Party with regard to each User Role that it may want to fulfil; and

c) Describe the role and responsibilities with regard to the conduct of UEPT, including;

- Entry and exit requirements
- Defining Test Scripts
- Defining Test Data

- Planning the manner in which tests will be undertaken
- Executing the tests
- Reporting the results of those tests to the Data Communications Company (DCC) for approval.

1.1.2 Additionally, this document sets out the above for a Testing Participant wishing to complete Testing in respect of additional Service Requests post completion of UEPT ("Additional SR Testing").

1.2. Types of Testing Required

1.2.1 Clause 8 Annex C sets out:

a) the specific tests that are required to be performed for a new Party seeking to undertake User Entry Process Testing;

b) A complete list of Service Requests that shall be required to be tested prior to being sent to DCC Live Systems.

1.3. Not Used

1.4. Additional SR Testing

1.4.1 Where a Party has completed UEPT for a User Role and is looking to become:

a) An Eligible User for Service Requests that were previously excluded from that Party's scope for UEPT; and/or

b) An Eligible User for any Service Requests that have been introduced since the Party completed UEPT for a User Role in which they operate,

and is seeking to complete Additional SR Testing, then all clauses of this CTSD shall apply to the undertaking of Additional SR Testing, except for Clause 5.3 (Self Service Interface testing) and Clause 8.1.27 which shall not apply.

2. Scope

2.1.1. Section 8 Annex C: Test Scenarios of this document sets out:

a) The User Entry Process Tests as required by SEC Section H14; and

b) A complete list of Service Requests that shall be required to be tested prior to being sent to DCC Live Systems.

3. Test Sequence

3.1.1. The Relevant Party may undertake the test scenarios that are set out in this document in any sequence. The testing of the constituent Service Requests that comprise the SMETS2+ Install and Commission test scenario shall be undertaken in a sequence that is set out in Section C clause 8.1.2.

4. Test Certificates & Security Requirements

4.1.1. For the purposes of gaining IKI, SMKI and DCCKI Test Certificates Testing Participants should refer to the Enduring Testing Approach Document.

4.1.2. Each Testing Participant must comply with the Security Requirements set out in the Enduring Testing Approach Document.

5. UEPT and Additional SR Testing Procedure

This section describes the procedure that must be completed in order for Parties to complete UEPT or Additional SR Testing.

5.1. SMETS2+ Install and Commission

5.1.1 The SMETS2+ Install and Commission test scenario tests the Relevant Party's ability to send Service Requests to support the installation and commissioning of SMETS2+ Devices, and to receive the consequential communications and alerts. Service Requests are set out in a specific order within the test scenarios for this purpose and the Relevant Party must execute Test Scripts in the order set out in the test scenario in Section C clause 8.1.2.

5.2. DUIS Service Requests

5.2.1 Clause 8.1.4 sets out the Service Requests that a Party is required to have tested prior to it being eligible to send those Service Requests in a particular User Role. The full list of Service Requests is set out in Clause 8.1.4 (8.1.4 DUIS Matrix) together with the type of testing that they apply to.

Descoping of DUIS Service Requests

5.2.2 Excluding the Self-Service Interface test set out in Clause 5.3, a Test Participant may request to descope Service Request(s) (including descoping of a Command Variant), Device Alert(s), DCC Alert(s) or a Response Code(s) from UEPT as set out in Clause 8.1.4 where:

a) the Testing Participant will not use this functionality in the DCC Live Systems and therefore does not wish to become an Eligible User for the relevant Service Requests; or

b) the Testing Participant is unable to produce a Response Code due to their internal system's error handling.

5.2.3 Descoping a Service Request would mean that a Testing Participant would not become eligible to send that Service Request in a particular User Role in DCC Live Systems

5.2.4 Each request by a Testing Participant to descope a Service Request, Device Alert, DCC Alert or a Response Code is subject to DCC's agreement or, where referred pursuant to Clause 5.2.7, a Panel determination

5.2.5 Anything that a Testing Participant wishes to descope, must be submitted to DCC via their notification of intent to undertake UEPT and via their UEPT Test Plan. As part of this submission the Testing Participant must set out their rationale for the descoping.

5.2.6 DCC will review any submission pursuant to Clause 5.2.5 and shall confirm to the Testing Participant in writing if DCC agrees with this descoping or not in line with the timelines set out in Table 1of this document. In the case of UEPT, where the DCC reasonably considers that the proposed descoping set out by the Testing Participant does not fulfil the minimum set of Service Requests that would be required for that Testing Participant to operate in its User Role, the DCC will not agree to the proposed descoping.

5.2.7 Where the DCC and the Testing Participant do not agree on any individual or group of tests proposed for descoping, as requested by the Testing Participant, the Testing Participant may refer the matter to the Panel for its determination whose decision on which tests may be descoped shall be final and binding.

5.2.8 Where:

a) the Testing Participant is in agreement with the DCC on the tests that may be de-scoped, then the Testing Participant must undertake any tests that DCC does not agree to descope in addition to those that were not proposed for de-scoping; or

b) the Testing Participant has referred the matter to the Panel for determination pursuant to Clade 5.2.7, the Testing Participant must undertake any tests that the Panel has decided should not be de-scoped in addition to those that were not proposed for de-scoping

5.2.9 Should a referral be made to the Panel pursuant to Clause 5.2.7, then the Testing Participant may continue with the UEPT procedural steps for those tests that are not being disputed.

5.2.10 Where a Testing Participant subsequently wishes to be eligible to send a Service Request in the DCC Live Systems for which it has not yet undertaken either UEPT or Additional SR Testing then it must, prior to sending that Service Request in DCC Live Systems, successfully test this either via the UEPT procedural steps (as documented in Table 1, Table 3 and Table 5) or the Additional SR Testing procedural steps (as documented in Table 2, Table 4 and Table 6).

5.3. Self-Service Interface (SSI)

5.3.1 For the purpose of UEPT a Relevant Party must produce and execute Test Scripts that demonstrate that the Relevant Party can access the SSI system to the extent permitted by its User Role and to the extent set out in the SSI Interface Specification as defined in SEC Section H8.15.

5.4. Additional SR Testing

5.4.1 A Testing Participant who has completed UEPT for a User Role and is seeking to become:

a) An Eligible User for Service Requests that were previously descoped from their prior completion of UEPT; or

b) An Eligible User for any Service Requests that have been introduced since the Party completed UEPT for a User Role in which they operate,

will not be an Eligible User for any descoped or newly introduced Service Requests in a particular User Role until they have completed testing of the descoped or newly introduced Service Requests in respect of that User Role.

5.4.2 Additional SR Testing may be completed by the following routes:

a) Via the process as documented in Table 1, Table 3 and Table 5.

b) Via Device and User System Testing (DUST) as documented in Table 2, Table 4 and Table 6, where the Testing Participant is already actively participating in DUST.

If a Testing Participant that has previously completed UEPT in a particular User Role is not currently active in DUST, but wishes to use the process in Tables 2, 4 and 6 for Additional SR Testing in respect of that User Role, they must complete the entry process into the test environment used for DUST, as set out in Table 1 of the Enduring Test Approach Document, prior to being able to carry out such testing. The Testing Participant must receive confirmation from DCC of successful completion of Additional SR Testing of the Service Request(s) being tested prior to carrying out further testing of such Service Request(s) in DUST.

5.5. User Entry Process Tests Initiation

5.5.1 The Relevant Party and the DCC shall each use reasonable steps to comply with the timescales that are defined within the procedures in Table 1, Table 4 & Table 7.

5.5.2 In the event that the Relevant Party or the DCC does not comply with the timescales in Table 1, Table 4 & Table 7, the DCC will reschedule subsequent activities to occur as soon as reasonably practicable and the DCC may reschedule that Party's test execution date.

5.6. Procedural Steps for Initiation of User Entry Process Tests

5.6.1 The table below sets out the steps that must be undertaken during Initiation of the UEPT by both the DCC and the Relevant Party seeking to undertake UEPT and the timeframes within which such steps must be complete.

Ref	When	Action	From	To	Information Required	Method
5.6.1.1	60 Working Days (WD) prior to commencement of User Entry Process Tests	Notify DCC of intention to undertake User Entry Process Tests	Relevant Party	DCC	Party notification of intention to undertake testing, including • Name of Party • Confirmation that notification provided to the Code Administrator, User Role(s) • Test start date • Identity of test manager and contact details • if applicable, Services Requests, Device Alerts, DCC Alerts and Response Codes to be descoped	By email as attachment
5.6.1.2	Within 2 WD of receipt of the notification 5.6.1.1	Acknowledge request	DCC	Relevant Party	Confirmation of Party notification including: • Name of Party • User Roles and test start date • DCC User Entry Process Tests test manager contact • Date for User Entry Process Tests initiation meeting	By email as attachment
5.6.1.3	Within 5 WD of receipt of the notification 5.6.1.2	Conduct User Entry Process Tests Initiation Meeting	DCC	Relevant Party	DCC to provide guidance information on conducting User Entry Process Tests, including clarification of test artefacts requirements and access to test environments and if applicable feedback	Meeting

					on descoping of Service Requests, Device Alerts, DCC Alerts and Response Codes.	
5.6.1.4	In each week occurring within the period from 40 WD prior to start of testing	Provide progress report, demonstrating readiness to begin tests	Relevant Party	DCC	Test Readiness Report	By email as attachment
5.6.1.5	25 WD prior to start of testing	Provide test artefacts to support conduct of User Entry Process Tests	Relevant Party	DCC	Test Plan incorporating the Test Schedule and, if applicable, Services Requests, Device Alerts, DCC Alerts and Response Codes to be descoped Requirements Traceability Matrix (see clause 6. 7) Test Scripts (see clause 6.8) Test Data Plan (see clause 7)	By email as attachments
5.6.1.6	By 20 WD prior to start of testing	DCC complete review of test artefacts	DCC	Relevant Party	Details regarding any deficiencies in the test artefacts provided including feedback on descoping of Service Requests, Device Alerts, DCC Alerts and Response Codes, if applicable, and a revised start date for testing, where necessary – continue from 5. 6.1.7. Or confirmation that test artefacts accepted including agreement to descope Service Requests, if applicable – continue from 5. 6.1.9.	By email as attachments
5.6.1.7	By 10 WD prior to start of testing	Relevant Party to provide revised documents	Relevant Party	DCC	Revised documents	By email as attachments
5.6.1.8	By 7 WD prior to start of testing	DCC complete review of revised test artefacts	DCC	Relevant Party	Details regarding any deficiencies in the test artefacts and a revised start date for testing provided where necessary – Regress and continue from 5. 6.1.7. Or confirmation that test artefacts accepted –continue from 5. 6.1.9.	By email as attachments
5.6.1.9	By 5 WD prior to start of testing	Review Test Readiness Report and confirm the Entry Criteria for commencing testing in relation to the relevant User Role has been met Confirm Start Date and Test Schedule for execution of tests by Relevant Party	DCC Quality Gate meeting	Relevant Party	**Source:** Test Readiness Report, Test Schedule **Output:** Confirmation of Relevant party readiness to proceed	Quality Gate review meeting Published via secure communications
	If there is any outstanding documentation presented at the Quality Gate Review the DCC shall assess it as part of its assessment of the entry criteria under clause 5.8.					

Table 1 UEPT Initiation: Procedural Steps

5.7. Procedural Steps for Initiation of Additional SR Testing via DUST

5.7.1 The table below sets out the steps that must be undertaken during initiation of the Additional SR Testing by both the DCC and the Testing Participant seeking to undertake such testing via DUST and the timeframes within which such steps must be complete.

5.7.2 For Testing Participants wishing to carry out Additional SR Testing via the UEPT process, DCC and Testing Participant should follow the steps and timeframes as set out in Table 1 in Clause 5.6.1.

Ref	When	Action	From	To	Information Required	Method
5.7.2.1	At least 15 Working Days (WD) prior to commencement of Additional SR Tests	Notify DCC of intention to undertake Additional SR Tests	Relevant Party	DCC	Party notification of intention to undertake testing, including Name of Party User Role(s) The Service Reference Variant(s) of the additional Service Requests(s) to be tested Test start date Identity of test manager and contact details	By email as attachment
5.72.2	Within 2 WD of receipt of the notification 5.7.2.1	Acknowledge request	DCC	Relevant Party	Confirmation of Party notification including: Name of Party User Roles and test start date The Service Reference Variant(s) of the additional Service Requests(s) to be tested Provide any applicable User Guidance	By email as attachment

Table 2 Additional SR Testing Initiation: Procedural Steps

5.8. UEPT Entry Criteria

5.8.1 Each Party wishing to undertake UEPT must comply with (and, where specified below, provide evidence of complying with) the following criteria prior to entry into UEPT:

a) Prior to start of test execution, the DCC must confirm with the Code Administrator that the person requesting to commence testing has acceded to the SEC;

b) The Relevant Party must have identified the User Roles for which it wishes to undertake UEPT;

c) All relevant test artefacts (as agreed with the DCC and set out in clause 5.6, 5.9, and 5.17) must have been produced by the Relevant Party and approved by the DCC. This includes:

- Party Notification of Intention to Undertake Testing
- Test Readiness Report
- Test Plan incorporating the Test Schedule
- Requirements Traceability Matrix
- Test Scripts

- Test Data Plan;

d) The Relevant Party has provided evidence to the DCC that a test environment capable of supporting the planned testing has been established and is available;

e) The Relevant Party has provided evidence to the DCC that an appropriate level of resources are available to support the UEPT process; and

f) The Relevant Party has provided confirmation that the Security Requirements set out in the Enduring Testing Approach Document have been met.

5.8.2 Pursuant to H14.15 where the DCC considers that the Relevant Party has not met the Entry Criteria for the User Role for which it is seeking to undertake testing, the DCC may:

a) Prevent the Relevant Party from undertaking UEPT for a particular User Role until such time as the DCC is satisfied that the Relevant Party meets the Entry Criteria; and

b) Reschedule the test start date for the Relevant Party for that particular User Role. In so doing, the DCC shall provide the earliest practicable alternative date; or

c) Provide provisional approval of the Test Readiness Report (and approval to proceed) with an understanding that the outstanding documentation would be provided before the start of testing otherwise testing will not commence.

5.8.3 Where the DCC is not satisfied that a Relevant Party meets the Entry Criteria to commence testing, the Relevant Party may refer the matter to the Panel, pursuant to SEC Section H14.16. Where the Panel determines that the Relevant Party has met the entry criteria the DCC shall schedule the start of testing as soon as reasonably practical.

5.9. User Entry Process Tests Execution

5.10. Procedural Steps for User Entry Process Tests Execution

5.10.1 The table below sets out the steps that must be undertaken during test execution by either the DCC or Relevant Party seeking to undertake User Entry Process Tests and the timeframes within which such steps must be complete as set out in the Test Schedule which will be updated by the Relevant Party from time to time to reflect test progress.

Ref	When	Action	From	To	Information Required	Method
5.10.1.1	User Entry Process Tests Start Date	Confirm connectivity (of Relevant Party's test environment) to DCC test environment where this has not already happened as a result of earlier testing.	Relevant Party	DCC	Test Results achieved	As directed by DCC
5.10.1.2	In accordance with Test Schedule and completion of 5.6.5.1	Conduct User Entry Process Tests	Relevant Party		Approved test artefacts.	As per test artefacts
5.10.1.3	Daily Basis, or alternative schedule agreed with DCC	Provide progress report to DCC	Relevant Party	DCC	Test Execution Dashboard, including details of testing issues identified	By email as attachment
5.10.1.4	User Entry Process Tests execution complete	Provide Test Completion report	Relevant Party	DCC	User Entry Process Tests completion report including details of Test Scripts executed and testing issues	By email as attachment

					resolved and Test Evidence for all tests completed	

Table 3 UEPT Execution: Procedural Steps

5.10.2 Note: Confirming connectivity is to verify that the Testing Participant's system can connect to the DCC test environment and that the Testing Participant's system is capable of successfully sending Service Requests to and receiving Acknowledgements from the DCC System. The DUIS Connectivity Test consists of up to three test scenarios: one for each test webservice available to the Testing Participant*. This comprises:

a) Sending a DCC-only Service Request and receiving an Acknowledgement/Response;

b) Sending a Critical pre-command and receiving the Transformed message; and

c) Sending a Non-Critical Service Request and receiving an Acknowledgement.

d) This test does not need to be repeated as a subsequent part of UEPT.

5.10.3 Note: If the Testing Participant would not have access to a particular webservice once it has qualified in the User Role for which it is undertaking UEPT the test will not be required.

5.11. Procedural Steps for the Execution of Additional SR Testing via DUST

5.11.1 The table below sets out the steps that must be undertaken during execution of the Additional SR Testing by both the DCC and the Testing Participant seeking to undertake Additional SR Testing via DUST and the timeframes within which such steps must be complete.

5.11.2 For Testing Participant wishing to carry Additional SR Testing via the UEPT process, DCC and Testing Participant should follow the steps and timeframes as set out in Table 3 in Clause 5.10.1.

Ref	When	Action	From	To	Information Required	Method
5.11.2.1	User Entry Process Tests Start Date	Confirm Test execution has started	Relevant Party	DCC		Email
5.11.2.2	In accordance with the Testing Participant's test schedule	Conduct Additional SR Testing	Relevant Party			
5.11.2.3	Daily Basis, or alternative schedule agreed with DCC	Provide progress report to DCC	Relevant Party	DCC	Test Execution Dashboard, including details of testing issues identified	By email as attachment
5.11.2.4	Additional SR Testing execution complete	Provide completed Test Execution Dashboard and Test Evidence	Relevant Party	DCC	Test Execution Dashboard, including details of testing issues identified and Test Evidence for all test completed	By email as attachment

Table 4 Additional SR Testing Execution: Procedural Steps

5.12. Test Suspension/Resumption in UEPT and Additional SR Testing

5.12.1 During the execution of tests, the DCC or the Relevant Party each have the right to suspend testing where it considers that this is reasonably necessary.

5.12.2 Testing will only recommence when agreed by both the DCC and the Relevant Party.

5.13. Possible Suspension Criteria

5.13.1 Reasonable grounds for suspending testing may include any of the following:

a) Application components are not available as scheduled;

b) A Testing Issue prevents further useful testing from proceeding;

c) A significant percentage of planned Test Scripts for a given day fail, taking Testing Issue severity and volume of tests into consideration which would generate root cause analysis to be undertaken to establish the cause. Testing Issues trending should also be used to determine any recommendation. The outcome of any root cause analysis activity may result in testing being suspended;

d) Test Scripts to be executed are in a “blocked” status due to an identified Testing Issue; or

e) The Relevant Party has failed to comply with the procedural steps in Table 3 for executing UEPT or Table 4 for executing Additional SR Testing.

5.14. Test Resumption Criteria

5.14.1 Where testing has been suspended, either the DCC or the Relevant Party as appropriate shall produce a test suspension report reflecting the cause of the suspension, and what actions are to be taken by whom and when in order for testing to resume – the Test Resumption Criteria. The DCC and the Relevant Party shall take reasonable steps to support each other to achieve the Test Resumption Criteria.

5.14.2 Testing will only resume once the DCC or Relevant Party has demonstrated to the other Party’s satisfaction that the Test Resumption Criteria have been met.

5.15. Disputes regarding Test Suspension/Resumption

5.15.1 Any dispute regarding the suspension or resumption of UEPT shall be heard in accordance with Section H14.18A of the SEC. Any dispute regarding the suspension or resumption of Additional SR Testing shall follow the same procedure as that set out in H14.18A Where a dispute regarding the suspension/resumption of testing is made, testing will not resume whilst the dispute is being heard, or until the Test Resumption Criteria are met by the DCC or the Relevant Party

5.16. User Entry Process Tests Completion

5.17. Procedural Steps for User Entry Process Tests Completion

5.17.1 The table below sets out the steps that must be undertaken during test completion by either the DCC or Relevant Party and the timeframes within which such steps must be complete.

Ref	When	Action	From	To	Information Required	Method

5.17.1.1	Within 2 WD of receipt of the report in 5.10.1.4	Confirm receipt of notification of Test complete (Test Completion Report)	DCC	Relevant Party	User Entry Process Tests Test Completion Report	By email
5.17.1.2	Within 5 WD of receipt of the notification 5.17.1.1	DCC review completion report and confirm that User Entry Process Tests concluded, or further testing required	DCC	Relevant Party	User Entry Process Tests completion report and supporting artefacts as requested by DCC set out in 5.10.1.1 refers	Quality Gate review meeting (see clause 5.20)
5.17.1.3	Within 2 WD of successful quality gate review meeting	Confirm Test Complete	DCC	Relevant Party	Issue Test Completion Certificate (see clause 10)	By email as attachment

Table 5 UEPT Completion: Procedural Steps

5.17.2 Notwithstanding 5.17.1.2 above pursuant to H14.19 the DCC shall confirm on request by the Relevant Party whether or not it considers that the Relevant Party has successfully completed UEPT.

5.18. Procedural Steps for Additional SR Testing Completion

5.18.1 The table below sets out the steps that must be undertaken during test completion by either the DCC or Relevant Party and the timeframes within which such steps must be complete.

5.18.2 For Testing Participant wishing to carry Additional SR Testing via the UEPT process, DCC and Testing Participant should follow the steps and timeframes as set out in Table 5 in Clause 5.17.1.

Ref	When	Action	From	To	Information Required	Method
5.18.1.1	Within 2 WD of receipt of 5.11.2.4	Confirm receipt of notification of Test complete	DCC	Relevant Party	Completed Test Execution Dashboard and Test Evidence	By email
5.18.1.2	Within 5 WD of receipt of the notification 5.18.1.1	DCC review test evidence and execution dashboard and confirm that Additional SR Testing concluded, or further testing required	DCC	Relevant Party	Completed Test Execution Dashboard and Test Evidence	By email
5.18.1.3	Within 2 WD of successful review of Test Evidence	Confirm Test Complete	DCC	Relevant Party	Issue Authority to Proceed into Production Certificate	By email as attachment

Table 6 Additional SR Testing Completion: Procedural Steps

5.19. UEPT or Additional SR Testing Exit Criteria

5.19.1 The following Exit Criteria are to be met prior to a Relevant Party's completion of and exit from UEPT or from Additional SR Testing, unless stated otherwise:

a) All Tests have been executed and results have been documented by the Relevant Party and evidence captured in the Relevant Party's Test Management Tool and is available to be provided to the DCC;

b) All testing issues identified during a Relevant Party's test execution have been recorded in the Test Management Tool, of those Testing Issues either:

- the Testing Issue generated by the Relevant Party has been fixed and verified by retest; or
- Where outstanding, the Testing Issue has been reviewed and documented, and been included as part of a remediation plan that outlines the next steps to be taken, including estimated timescales required to resolve each of their outstanding Testing Issues. The remediation plan must be agreed by the DCC;

c) any outstanding Testing Issue count must not exceed those defined in Table 7, below:

Severity***	Threshold for Outstanding Testing Issues for UEPT	Threshold for Outstanding Testing Issues for Additional SR Testing
1	0	0
2	0	0
3	5*	3*
4	10*	5*
5	As agreed**	As agreed**

Table 7 Testing Issue Threshold

* - Work around and remediation plan to be agreed with the DCC for each issue that ensures no impact on other Users or the DCC

** - As agreed with the DCC,

*** - Refer to Annex G for definitions of Issue severities.

d) A Test Completion Report has been created by the Relevant Party and approved by the DCC. If the Relevant Party is conducting Additional SR Testing via DUST this exit criterion does not apply.

e) A Quality Gate Review meeting has been held between the Relevant Party, if the Relevant Party is undertaking either UEPT or Additional SR Testing via UEPT, and the DCC, with progress approved by the DCC. If the Relevant Party is conducting Additional SR Testing via DUST this exit criterion does not apply.

5.19.2 Upon completion of the criteria above a Test Completion Certificate will be issued to the Relevant Party by the DCC. Where test completion criteria have not been met the Relevant Party will need to reschedule testing with the DCC subject to the availability of the DCC test environment.

5.19.3 In the case of UEPT, pursuant to SEC Section H14.21, where the DCC considers that a Party has not met the Exit Criteria, that Party may refer the matter to the Panel. In the case of Additional SR Testing, where the DCC is not satisfied that a Party has successfully completed Additional SR Testing (for a particular User Role), that Party may refer the matter to the Panel for its determination. Where the Party disagrees with any such determination of the Panel, then the Party may refer the matter to the Authority for its determination (which shall be final and binding for the purposes of this Code).

5.19.4 Where a dispute regarding whether a Party has met either the UEPT or the Additional SR Testing Exit Criteria occurs, the completion process will not resume whilst the dispute is being heard by the Panel, or until the relevant Exit Criteria are met by the Relevant Party.

5.19.5 Where the Panel decided that the Exit Criteria have been met the DCC shall supply a Test Completion Certificate to the Relevant Party.

5.20. Quality Gate Review

5.20.1 A final decision regarding whether a Party has successfully completed UEPT or Additional SR Testing will be provided to the Relevant Party no later than 2 Working Days after the date on which a quality gate review meeting is held.

5.20.2 In addition, pursuant to H14.19, the DCC shall confirm on request by the Relevant Party whether or not it considers that the Relevant Party has successfully completed UEPT.

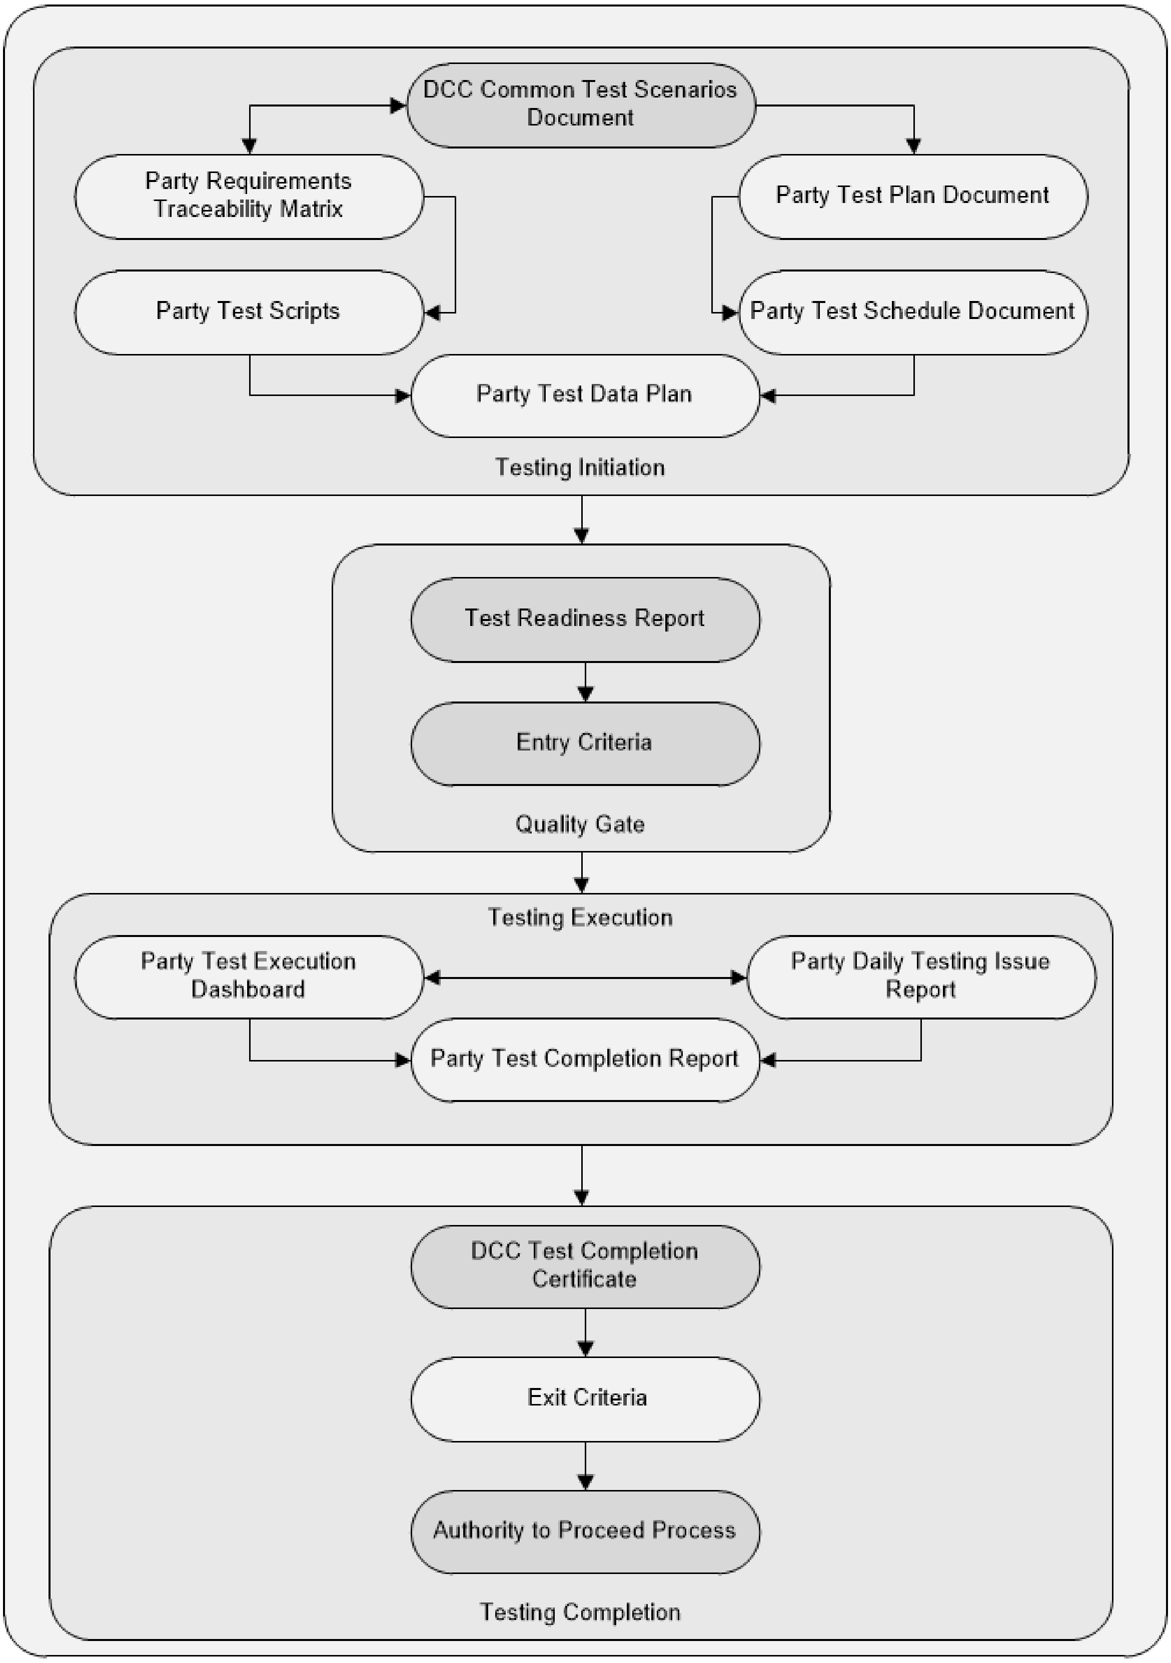
5.21. UEPT and Additional SR Test Completion Certificate

5.21.1 The UEPT and Additional SR Test Completion Certificate shall be issued by the DCC to the Relevant Party for a specified User Role once the quality gate review has concluded that the Relevant Party has met the UEPT Exit Criteria for the specified User Role. This Certificate shall identify the Service Requests in respect of which the Relevant Party successfully executed UEPT and for which the Relevant Party is now an Eligible User in the specified User Role.

5.21.2 The UEPT and Additional SR Test Completion Certificate shall be updated and re-issued by the DCC to the Relevant Party once the quality gate review or review of test evidence, as specified in Clause 5.17.1.2, has concluded that the Relevant Party has met the Additional SR Testing Exit Criteria for those Service Requests for the specified User Role. This Certificate shall identify the additional Service Requests that have been successfully executed in Additional SR Testing, in addition to those for which the Relevant Party has previously completed testing, and for which the Relevant Party is an Eligible User in the specified User Role.

6. Annex A: Test Artefacts

The DCC and each Relevant Party will be required to produce and maintain a number of documents, dashboards and reports during the testing lifecycle as depicted in Figure 1 Test Documentation Hierarchy, below.



DCC Common Test Scenarios Document
Party Requirements Traceability Matrix
Party Test Plan Document
Party Test Scripts
Party Test Schedule Document
Party Test Data Plan
Testing Initiation
Test Readiness Report
Entry Criteria
Quality Gate
Testing Execution
Party Test Execution Dashboard
Party Daily Testing Issue Report
Party Test Completion Report
DCC Test Completion Certificate
Exit Criteria
Authority to Proceed Process
Testing Completion

Figure 1 Test Documentation Hierarchy

Party Documents & Reports

6.1. Test Preparation Document Set

6.1.1 The following documentation must be produced by a Relevant Party before Testing commences:

a) Test Plan including Test Schedule;

b) Test Data (see clause 7/Annex B);

c) Requirements Traceability Matrix (see clause 6.7); and

d) Test Scripts (see clause 6.8).

6.2. Reports and Dashboard

6.2.1 Table 8 Test Stage Supporting Documentation Set sets out the Reports and Dashboard that a Party must produce to demonstrate progress in preparing for and executing testing.

6.3. Test Readiness Report (TRR)

6.3.1 The Test Readiness Report shall be produced by the Relevant Party if they are conducting either UEPT or Additional SR Testing via UEPT.

6.3.2 A Test Readiness Report template shall be provided by the DCC.

6.3.3 The report must be provided to the DCC by the Relevant Party on a weekly basis, commencing 40 Working Days prior to the start of Testing and must indicate progress against the following criteria:

a) Previous Test Stage Exit Criteria (if appropriate);

b) Relevant Party Test tool selected and available;

c) Relevant Party key RAID (Risk, Assumption, Issue and Dependency) items, including, for each key item that has the potential to cause significant disruption to the commencement and / or completion of User Entry Process Tests or Additional SR Testing via UEPT:

- Priority (High, Medium, Low)
- Severities of open issues
- Action taken
- Target close date
- Overall RAG status (based on progress to plan)

d) Relevant Party Test Plan produced;

e) Relevant Party Test Schedule produced;

f) Relevant Party Requirements Traceability Matrix % complete to date

- Total numbers of requirements identified
- Actual number of testable requirements in progress
- Actual number of testable requirements not started
- Actual number of requirements deemed not testable;

g) Relevant Party Test Script % complete to date – to reflect the following breakdown

- Planned number of Test Scripts
- Actual number of Test Scripts produced to date
- Actual number of Test Scripts in progress
- Actual number of Test Scripts not started;

h) % Test Data readiness by Relevant Party against planned Test Scripts;

i) Readiness of Relevant Party test resources and technical (support) resource;

j) Relevant Party test environment readiness – to include

- User Roles identified;
- Environment configuration approved as suitable – to include;
- Breakdown and description of hardware.

6.4. Test Plan

6.4.1 The Test Plan shall be produced by the Relevant Party if they are conducting either UEPT or Additional SR Testing via UEPT

6.4.2 A Test Plan template shall be provided by the DCC.

6.4.3 The report must be provided to the DCC by the Relevant Party 25 Working Days prior to the start of Testing and will include:

a) Scope of testing, including any Service Requests, Device Alerts, DCC Alerts and/or Response Code the Testing Participant wishes to descope along with rationale for the request to descope;

b) Any items out of scope of testing

c) Features to be tested (referencing relevant sub-clauses within clause 8 of the Common Test Scenarios Document);

d) Approach to testing;

e) Test Schedule to include tests planned for each day; and

f) Resources.

6.5. Test Execution Dashboard

6.5.1 The Test Execution Dashboard will identify the Relevant Party's progress when executing UEPT or Additional SR Testing and will be provided in a reasonable format specified by the DCC. The dashboard must be updated by the Party and provided to the DCC on a daily basis once testing commences, or per an alternative schedule agreed with the DCC.

6.5.2 The dashboard will include the following details:

a) Name of Relevant Party under test;

b) Relevant Party Location of testing;

c) Date and time test execution dashboard updated by Relevant Party;

d) Total number of tests Relevant Party scheduled for execution and projected as a test execution glide path;

e) Actual number of tests executed by Relevant Party (by test run) to date reflected on an incremental daily count including Test Results (passed, failed, blocked, not run, ready for test);

f) Relevant Party summary of Testing Issues to include;

- Total number of Testing Issues generated
- Counts by status Open, Fixed, Closed etc
- Counts by Severity 1, 2, 3 etc

g) Relevant Party Regression Test execution results;

h) Relevant Party summary progress against Exit Criteria;

i) Relevant Party Top 5 risks and issues - to include any environment concerns; and

j) Relevant Party Overall RAG status (based on progress against test schedule).

6.6. Test Completion Report

6.6.1 The Relevant Party, who is conducting either UEPT or Additional SR Testing via UEPT, shall produce a Test Completion Report and submit the draft to the DCC 10 Working Days prior to the test completion date. The finalised version of the Test Completion Report will be submitted to the DCC on completion of each test execution activity.

6.6.2 A Test Completion Report template shall be provided by the DCC to ensure that all Party reports contain the same level of detail. The report will include:

a) Relevant Party Test approach and Scope of Testing Undertaken;

b) Details of updates made to the test environment during the course of testing;

c) Relevant Party Summary of the Test Results

- Total number of tests originally scheduled for execution
- Total number of tests executed (Displayed by test run to include Overall results achieved Passed, Failed, Blocked, Not Run);
- Relevant Party Summary of Testing Issues
- Total number of Testing Issues generated
- Total counts by status Open, Fixed, Closed etc
- Total counts by Severity.

6.6.3 Any tests not run, blocked or not successfully executed must be supported by an explanation.

6.7. Test Traceability

6.7.1 To provide the DCC with a sufficient level of test assurance, all tests executed by each Party undertaking either UEPT or Additional SR Testing via UEPT will be required to demonstrate full traceability as follows:

a) Each requirement captured in the Requirements Traceability Matrix that can be tested must be linked to one or many Test Scripts;

b) Each Test Script executed must be reflected in one or many test execution cycles;

c) A record of each test executed and the results of that test;

d) Where an executed test generates a Testing Issue;

- Each Testing Issue must be linked to the test that generated the Testing Issue
- Any subsequent retesting to validate a fix of Testing Issue carried out must be linked to the Testing Issue
- Each retest executed must reflect a result achieved as a result of execution.

6.8. Test Scripts

6.8.1 A Relevant Party shall develop its own test scripts and demonstrate how those test scripts meet the requirements in accordance with SEC Section H14.17.

	Test Stage Supporting Documentation Set							
No	Phase	Description	DCC Responsibility	Party Responsibility	When/Frequency	Entry Criteria	Exit Criteria	Sign-Off Authority
1	Initiation	Test Plan including Test Schedule	Review and Approve	Produce and maintain	Test Stage Entry Quality Gate and updated during execution as required in preparation for Test Stage Exit Quality Gate	Y	Y	DCC
2	Initiation	Requirements Traceability Matrix	Review and Approve	Produce and maintain	Test Stage Entry Quality Gate and updated during execution as required in	Y	Y	DCC

					preparation for Test Stage Exit Quality Gate			
3	Initiation	Test Scripts	Review and Approve	Produce and maintain	Test Stage Entry Quality Gate and updated during execution as required in preparation for Test Stage Exit Quality Gate	Y	Y	DCC
4	Initiation	Test Data Plan	Review	Produce and maintain	Test Stage Entry Quality Gate and updated during execution as required in preparation for Test Stage Exit Quality Gate	Y	N	DCC
5	Initiation	Test Readiness Review Report	Provide Template Review and Approve	Produce and maintain	Test Stage Entry Quality Gate	Y	N	DCC
6	Initiation	Test Stage Entry Criteria (part of final Test Readiness Report)	Review and Approve	Produce	Test Stage Entry Quality Gate	Y	N	DCC

8	Execution	Test Completion Report	Provide Template Review and Approve	Produce and file	Test Stage during execution in preparation for Test Stage Exit Quality Gate	N	Y	DCC
9	Execution	Test Stage Quality Gate Exit Criteria (part of Test Completion Report)	Review and Approve	Produce	Test Stage Exit Quality Gate	N	Y	DCC

Table 8 Test Stage Supporting Documentation Set

Once these steps are complete the DCC will issue a Test Completion Certificate (see clause 10).

7. Annex B: Test Data

A Test Data Plan will be developed by the Relevant Party and coordinated with DCC in accordance with clause 5.6.1.5. The DCC and Relevant Party will be responsible for set up of Test Data on their respective system which must be defined in the Relevant Party Test Data Plan. The Data defined will be based on the following principles:

No personal data which identifies any individual will be used for testing, but anonymised live Data is acceptable;

Test Data will be representative of data likely to be used in the live environment once the Relevant Party is eligible to send the Service Request in the relevant User Role;

A full range of Test Data covering all services to be tested will be used.

Co-ordination/Segregation of data usage between Relevant Parties testing during the same period will be managed by the DCC.

Table 9 Test Data Responsibilities below outlines the responsibilities in regard to preparing Test Data required to support UEPT.

Deliverable / Activity	Accountable / Responsible	Support
Test Data Preparation	DCC Licensee, Relevant Party	DSP

Table 9 Test Data Responsibilities

8. Annex C: Test Scenarios

8.1.1. Test Scenarios

The following sub clauses contain the test scenarios that reflect the Service Requests applicable to each prospective User Role.

8.1.2. SMETS2+ Install and Commission

ID	IC01*
Title:	Install & Commission the following devices, when the Relevant Party will be supplying Gas: • Communication Hub specified for Region • Gas Meter
Prerequisite:	• Relevant Party holds a Gas Supply Licence • Connection to DCC Test Laboratory • Appropriate data • Available Meter and Communication Hubs • SM WAN Available • Appropriate Security Keys have been installed in the available metering equipment • Required security credentials are present on the Communications Hub

Note: the scope of this test is intentionally limited to only those activities where there is a prescribed order for the submission Service Requests and where failure to follow this order will lead to a failed installation.

Steps	Description	Objective	Actions	Acceptance Criteria
1	Pre-Installation	Notify DCC of Device ID and device details Ascertain the security credentials are installed on the devices	The following Service Requests have been designed to support Pre-Installation: DUIS SR 12.2 – Device Pre-notification * (n) devices	The DCC has received notification of the Device ID Acknowledgement received for relevant Service Request sent
2	White List Device	Identify the Communication Hub to Meter device relationship by: Add the HAN device to HAN device log, by including the MAC addresses and the install codes	Complete the following Service Request to support white listing of device: DUIS SR 8.11- Update HAN Device Log * (n) devices	Service Responses received for all Service Requests sent Service User will receive the following Alert code when the device has been added to the white list: DCC Alert N24

3	Commission	Send response to commission device service request to Service User Update inventory status Configure the Meter: Set Time	Complete the following Service Request to support device commission: DUIS SR 8.1.1 – Commission Device * (n) devices	Acknowledgement received for all Service Requests sent
4	Commission Gas Proxy	To hand over Gas Proxy Function from DSP to the Relevant Party, complete the following: Send Service Request to change credentials to Relevant Party's credentials Ensure Relevant Party can update other credentials as required	Complete the following Service Request to support Commission Gas Proxy Function: DUIS SR 6.21 – Request Handover of DCC Controlled Device * (n) devices	Relevant Party receives an Service Response to confirm the credentials have been changed from the DSP to Relevant Party
5	Join Device	Join Gas meter to GPF	The following Service Requests have been designed to support joining HAN devices: DUIS SR 8.7.2 – Join Service (Non-Critical) **Note:** The following DUIS SRs can be sent during this step, should they not have been sent during steps 1 to 3: DUIS SR 12.2 – Device Pre-notification * (n) devices DUIS SR 8.11- Update HAN Device Log * (n) devices	Relevant Party receives acknowledgement to confirm the HAN devices are joined Acknowledgement received for all Service Requests sent
6	Set MPxN on GSME for display purposes	Set MPxN on GSME for display purposes	Complete the following Service Request to support setting the MPxN on the GSME for display purposes DUIS SR 6.20.1 – Set Device Configuration (Import MPxN)	Relevant party receives a service response to confirm successful execution of the Service Request.

ID	IC02*
Title:	Install & Commission the following devices, when the Relevant Party will be supplying Electricity: Communication Hub specified for Region Electricity Meter
Prerequisite:	Relevant Party holds an Electricity Supply Licence Connection to DCC Test Laboratory Appropriate data Available Meter and Communication Hubs SM WAN Available Appropriate Security Keys have been installed in the available metering equipment Required security credentials are present on the Communications Hub

Note: the scope of this test is intentionally limited to only those activities where there is a prescribed order for the submission Service Requests and where failure to follow this order will lead to a failed installation.

Steps	Description	Objective	Actions	Acceptance Criteria
1	Pre-Installation	Notify DCC of Device ID and device details	The following Service Requests and Self-Service Interface Use Cases have been designed to support Pre-Installation:	The DCC has received notification of the Device ID

		Ascertain the security credentials are installed on the devices	DUIS SR 12.2 – Device Pre-notification * (n) devices	Acknowledgement received for relevant Service Requests sent
2	White List Device	Identify the Communication Hub to Meter device relationship by: Add the HAN device to HAN device log, by including the MAC addresses and the install codes	Complete the following Service Request to support white listing of device: DUIS SR 8.11 - Update HAN Device Log * (n) devices	Service Responses received for all Service Requests sent Service User will receive the following Alert code when the device has been added to the white list: DCC Alert N24
3	Commission	Send response to commission device Service Request to Service User Update Smart Metering Inventory status Configure the Meter: Set Time	Complete the following Service Request to support device commission: DUIS SR 8.1.1 – Commission Device * (n) devices	Acknowledgement received for all Service Requests sent
4	Set MPxN on ESME for display purposes	Set MPxN on ESME for display purposes	Complete the following Service Request to support setting the MPxN on the ESME for display purposes DUIS SR 6.20.1 – Set Device Configuration (Import MPxN)	Relevant party receives a service response to confirm successful execution of the Service Request.

8.1.3. DUIS

The scenarios outlined in this clause are the high-level Test scenarios which are supported by the DUIS Test Matrix in clause 8.1.4. For example, Scenario SR01 refers to all Tests mandated in column CV1 – On Demand in the DUIS Matrix.

ID	SR01
Title:	Non-Critical Command with a command variant of CV1 and a Mode of Operation of On Demand
Scenario	Exercise Non-Critical On Demand Service Requests using Command Variant CV1 applicable to the User Role

ID	SR02
Title:	Non-Critical Command with a command variant of CV1 and a Mode of Operation of Future Dated (either DCC or Device, as determined by DUIS)
Scenario	Exercise Non-Critical Future Dated Service Requests using Command Variant CV1 applicable to the User Role

ID	SR03
Title:	Non-Critical Command with a command variant of CV2 and a Mode of Operation of On Demand
Scenario	Exercise Non-Critical On Demand Service Requests using Command Variant CV2 applicable to the User Role

ID	SR04
Title:	Non-Critical Command with a command variant of CV3 and a Mode of Operation of On Demand
Scenario	Exercise Non-Critical On Demand Service Requests using Command Variant CV3 applicable to the User Role

ID	SR05
Title:	Critical Command with a command variant of CV4 and a Mode of Operation of On Demand
Scenario	Exercise Critical On Demand Service Requests using Command Variant CV4 applicable to the User Role

ID	SR06
Title:	Critical Command with a command variant of CV5 and a Mode of Operation of On Demand
Scenario	Exercise Critical On Demand Service Requests using Command Variant CV5 applicable to the User Role

ID	SR07
Title:	Critical Command with a command variant of CV5 and a Mode of Operation of Future Dated (either DCC or Device, as determined by DUIS)
Scenario	Exercise Critical Future Dated Service Request using Command Variant CV5 applicable to the User Role

ID	SR08
Title:	Critical Command with a command variant of CV6 and a Mode of Operation of On Demand
Scenario	Exercise Critical On Demand Service Request using Command Variant CV6 applicable to the User Role

ID	SR09
Title:	Critical Command with a command variant of CV7 and a Mode of Operation of On Demand
Scenario	Exercise Critical On Demand Service Request using Command Variant CV7 applicable to the User Role

ID	SR010
Title:	Service Requests with a command variant of CV8
Scenario	Exercise Service Request using Command Variant CV8 applicable to the User Role

8.1.4. DUIS Matrix

New User

The following User Role tables reflect the test Service Requests that must be executed by a new Party seeking to undertake UEPT, unless the Testing Participant has descoped a subset of Service Requests and this subset has been agreed with DCC or, where referred to the Panel, has been determined by the Panel. The tests are those indicated as ‘Mandatory, Mandatory SMETS1 and Mandatory SMETS2+’ in the CV column, for which they must be executed for each specific User Role. Those indicated as ‘Mandatory’ must be executed in respect of a SMETS1 Device and a SMETS2+ Device. Those indicated as ‘Mandatory SMETS1’ must be executed in respect of a SMETS1 Device. Those indicated as ‘Mandatory SMETS2+’ must be executed in respect of a SMETS2+ Device. Where the test Service Requests are indicated as N/A there is no requirement to test during execution of the test scenarios.

Additional SR Testing

Where a Party is seeking to become an Eligible User for Service Request(s) that they have not successfully previously completed UEPT for in that same User Role, then they must be executed where indicated by User Role and ‘Mandatory’, ‘Mandatory SMETS1’ or ‘Mandatory SMETS2+’ in the CV column in the table below. Those indicated as

‘Mandatory’ must be executed in respect of a SMETS1 Device and a SMETS2+ Device. Those indicated as ‘Mandatory SMETS1’ must be executed in respect of a SMETS1 Device. Those indicated as ‘Mandatory SMETS2+’ must be executed in respect of a SMETS2+ Device. Where the test Service Requests are indicated as N/A there is no requirement to test during execution of the test scenarios:

8.1.5. Import Supplier (IS) User Role

Service Reference	Service Reference Variant	Name	Critical	CV1 – On Demand	CV1 – Future Dated	CV2 – On Demand	CV3 – On Demand	CV4 – On Demand	CV5 – On Demand	CV5 – Future Dated	CV6 – On Demand	CV7 – On Demand	CV8 – DCC Only	IS
1.1	1.1.1	Update Import Tariff (Primary Element)	Y	N/A	N/A	N/A	N/A	Mandatory	Mandatory SMETS 2	N/A	N/A	N/A	N/A	IS
1.1	1.1.2	Update Import Tariff (Secondary Element)	Y	N/A	N/A	N/A	N/A	Mandatory SMETS 2	N/A	Mandatory SMETS 2	N/A	N/A	N/A	IS
1.2	1.2.1	Update Price (Primary Element)	Y	N/A	N/A	N/A	N/A	Mandatory	Mandatory SMETS 2	N/A	N/A	N/A	N/A	IS
1.2	1.2.2	Update Price (Secondary Element)	Y	N/A	N/A	N/A	N/A	Mandatory SMETS 2	N/A	Mandatory SMETS 2	N/A	N/A	N/A	IS
1.5	1.5	Update Meter Balance	Y	N/A	N/A	N/A	N/A	Mandatory	N/A	N/A	N/A	Mandatory SMETS 2	N/A	IS
1.6	1.6	Update Payment Mode	Y	N/A	N/A	N/A	N/A	Mandatory	N/A	Mandatory SMETS 2	N/A	N/A	N/A	IS

8.1.12. Device Alert Tests

The following table outlines the Device Alert tests required to be executed by User Role. The purpose of these tests is to prove that a party can receive a subset of Device Alerts based on the differing types of Alerts that can be received.

New User

The following User Role tables reflect the Device Alerts that must be executed by a new Party seeking to undertake UEPT, unless the Testing Participant has descoped a subset of Device Alert Tests and this has been agreed with DCC or, where referred to the Panel, has been determined by the Panel. The tests are those indicated as 'Mandatory, Mandatory SMETS1 and Mandatory SMETS2+ ' in the test scenario column, for which they must be executed for each specific User Role. Those indicated as 'Mandatory' must be executed in respect of a SMETS1 Device and a SMETS2+ Device. Those indicated as 'Mandatory SMETS1' must be executed in respect of a SMETS1 Device. Those indicated as 'Mandatory SMETS2+' must be executed in respect of a SMETS2+ Device. Where the Device Alert tests are indicated as N/A there is no requirement to test during execution of the test scenarios.

8.1.13. Device Alert Tests – IS

Event / Alert Code	Event / Alert Code Meaning	Device Alert Variant	Critical	Test Scenario	User Role
0x8F32**	Supply Armed	Device Alert – Type 1 (Alert Code and Timestamp) DLMS	Y	Mandatory	IS
0x8183	Device joined SMHAN	Device Alert – Type 1 (Alert Code and Timestamp) DLMS	N	Mandatory SMETS2+	IS
0x8F66	Future – date HAN Interface Command Successfully Actioned	Device Alert – Type 2 (Alert Code, Timestamp and Specific Data) DLMS	Y	Mandatory SMETS2+	IS

**Where the Device being used in testing is not able to support the generation of this Alert, the DCC shall notify the Testing Participant of a different Alert that needs to be tested.

8.1.14. Device Alert Tests – GS

Event / Alert Code	Event / Alert Code Meaning	Device Alert Variant	Critical	Test Scenario	User Role
0x8F32**	Supply Armed	Device Alert – Type 1 (Alert Code and Timestamp) Zigbee	Y	Mandatory	GS
0x8183	Device joined SMHAN	Device Alert – Type 1 (Alert Code and Timestamp) Zigbee	N	Mandatory SMETS2+	GS
0x8F66	Future – date HAN Interface Command Successfully Actioned	Device Alert – Type 2 (Alert Code, Timestamp and -Specific Data) Zigbee	Y	Mandatory SMETS2+	-GS

**Where the Device being used in testing is not able to support the generation of this Alert, the DCC shall notify the Testing Participant of a different Alert that needs to be tested.

8.1.15. Device Alert Tests – ES

Event / Alert Code	Event / Alert Code Meaning	Device Alert Variant	Critical	CTS Test Scenario	User Role
No alerts identified from Device to Export Supplier					

8.1.16. Device Alert Tests – ED

Event / Alert Code	Event / Alert Code Meaning	Device Alert Variant	Critical	Test Scenario	User Role
0x8002	Average RMS Voltage above Average RMS Over Voltage Threshold (current value above threshold; previous value below threshold)	Device Alert – Type 1 (Alert Code and Timestamp) DLMS	N	Mandatory SMETS2+	-ED
0x8F35	Supply Outage Restored	Device Alert – Type 2 (Alert Code, Timestamp and Specific Data) DLMS	Y	Mandatory SMETS2+	ED
0x8F36	Supply Outage Restored - Outage >= 3 minutes	Device Alert – Type 2 (Alert Code, Timestamp and Specific Data) DLMS	Y	Mandatory SMETS2+	ED
0x8F40	Average RMS Voltage above Average RMS Over Voltage Threshold (current value above threshold; previous value below threshold)	Device Alert – Type 1 (Alert Code and Timestamp) DLMS	N	Mandatory SMETS1	-ED
0x8F411	SMETS1 Average RMS Voltage below Average RMS Under Voltage Threshold	Device Alert – Type 1 (Alert Code and Timestamp) DLMS	N	Mandatory SMETS1	ED

	(current value below threshold; previous value above threshold)				

8.1.17. Device Alert Tests – GT

Event / Alert Code	Event / Alert Code Meaning	Device Alert Variant	Critical	Test Scenario	User Role
No alerts identified from Device to Gas Transporter					

8.1.18. DCC Alert Tests

The following table outlines the DCC Alert tests required to be executed by User Role. The purpose of these tests is to prove that a party can receive a subset of DCC Alerts based on the differing types of Alerts that can be received.

New User

The following User Role tables reflect the DCC Alert Tests that must be executed by a new Party seeking to undertake UEPT unless the Testing Participant has descoped a subset of DCC Alert Tests and this have been agreed with DCC or, where referred to the Panel, has been determined by the Panel. The tests are those indicated as ‘Mandatory, Mandatory SMETS1 and Mandatory SMETS2+‘ in the test scenario column, for which they must be executed for each specific User Role. Those indicated as ‘Mandatory’ must be executed in respect of a SMETS1 Device and a SMETS2+ Device. Those indicated as ‘Mandatory SMETS1’ must be executed in respect of a SMETS1 Device. Those indicated as ‘Mandatory SMETS2+’ must be executed in respect of a SMETS2+ Device. Where the DCC Alert Tests are indicated as N/A there is no requirement to test during execution of the test scenarios.

The Alerts highlighted in Blue are Device Alert Tests to be executed against Dual Band Communications Hub by User Role.

8.1.19. DCC Alert Tests – IS

Reference	Name	Test Scenario	Applicable User Role
N17	DSP Schedule Removal – Schedule removal due to Change of Supplier	Mandatory	Previously Registered IS
N24	Update HAN Device Log Result – Successful Communications Hub Function Whitelist Update	Mandatory SMETS2+	IS
N27	Change of Supplier – Device Change of Supplier	Mandatory	Previously Registered IS
N49, N50, N51, N52	Firmware Version Mismatch	Optional	IS
N53	Command Not Delivered To ESME	Mandatory SMETS2+	IS
N54	Dual Band CH Sub GHz Alert	Mandatory SMETS2+	IS

N55	SMETS1 Service Provider Alert	Mandatory SMETS1	IS
N56	SMETS1 Service Provider Provision of prepayment top-up UTRN	Mandatory SMETS1	IS

8.1.20. DCC Alert Tests – GS

Reference	Name	Test Scenario	Applicable User Role
N17	DSP Schedule Removal – Schedule removal due to Change of Supplier	Mandatory	Previously Registered GS
N24	Update HAN Device Log Result – Successful Communications Hub Function Whitelist Update	Mandatory SMETS2+	GS
N27	Change of Supplier – Device Change of Supplier	Mandatory SMETS2+	Previously Registered GS
N49, N50, N51, N52	Firmware Version Mismatch	Optional SMETS2+	GS
N54	Dual Band CH Sub GHz Alert	Mandatory SMETS2+	GS

N16	Device Identity Confirmation	Mandatory SMETS2+	Registered ED
N53	Command Not Delivered To ESME	Mandatory SMETS2+	Registered ED
N55	SMETS1 Service Provider Alert	Mandatory SMETS1	Registered ED

8.1.23. DCC Alert Tests – GT

Reference	Name	Test Scenario	Applicable User Role
AD1	Power Outage Event	Mandatory SMETS2+	Registered GT
N2	Device Status Change - Gas Smart Meter Decommission or Withdrawal	Mandatory SMETS2+	Registered GT
N16	Device Identity Confirmation	Mandatory SMETS2+	Registered GT
N55	SMETS1 Service Provider Alert	Mandatory SMETS1	Registered GT

8.1.24. DCC Alert Tests - RSA

Reference	Name	Test Scenario	Applicable User Role
N55	SMETS1 Service Provider Alert	Mandatory SMETS1	RSA

8.1.25. DCC Alert Tests - OU

Reference	Name	Test Scenario	Applicable User Role
N24	Update HAN Device Log Result - Successful Communications Hub Function Whitelist Update	Mandatory SMETS2+	OU
N55	SMETS1 Service Provider Alert	Mandatory SMETS1	OU

8.1.26. Response Code Tests

The following table outlines the Response Code Tests required to be executed by User Role. The purpose of these tests is to prove that a party can receive a subset of Response Code messages based on the differing types of response codes that can be received.

New User

The following User Role tables reflect the test Response Codes that must be executed by a new Party seeking to undertake UEPT, unless the Testing Participant has descoped a subset of Service Requests and this have been agreed with DCC or, where referred to the Panel, has been determined by the Panel. The tests are those indicated as 'Mandatory, Mandatory SMETS1 and Mandatory SMETS2+ ' in the test scenario column, for which they must be executed for each specific User Role. Those indicated as 'Mandatory' must be executed in respect of a SMETS1 Device and a SMETS2+ Device. Those indicated as 'Mandatory SMETS1' must be executed in respect of a SMETS1 Device. Those indicated as 'Mandatory SMETS2+' must be executed in respect of a SMETS2+ Device. Where the Response Code Tests are indicated as N/A there is no requirement to test during execution of the test scenarios.

Reference	Name	Test Scenario	User Role
E11	Failed Validation - Invalid Service Request / Device Type combination	Mandatory	IS ES GS ED GT RSA MDR OU
E13	Failed Validation – Invalid Request Type for URL	Mandatory	IS ES GS ED GT RSA MDR OU
E19	Failed Validation – Device doesn't exist	Mandatory	IS ES GS ED GT RSA MDR OU
E60	Failed Validation – Invalid Service Request for SMETS1 Devices	Mandatory SMETS1	IS ES GS ED GT RSA MDR OU
E61	Failed Validation – Invalid Command Variant for SMETS1 Service Request	Mandatory SMETS1	IS ES GS ED GT RSA MDR OU

8.1.27. Self Service Interface Test

The following tables outline the test required to be executed by a Testing Participant to determine whether the prospective User can access the SSI.

	Test Scenario
Title:	Testing Participant can successfully log into and access the Self Service Interface.
Prerequisite:	• Testing Participant holds the role of IS, IS, ES, ED, GT, RSA, MDR or OU for testing purposes. • Connection to DCC System. • Party SSI login authentication via DCC or own IDP.

Steps	Description	Objective	Actions	Acceptance Criteria
1	Login via IDP	Authenticate via IDP	Party to open the web service for SSI logon and complete Party login via DCC or own IDP.	Login success and the authenticating SEC Party will be presented with Self Service Interface.

9. Annex D: Forms and Templates

Extant versions of templates for the following documents will be maintained on the DCC Website or SharePoint.

Forms and Templates
Party Notification of Intention to Undertake Testing Template
DCC Acknowledgement of Intention to Undertake Testing template
Test Readiness Report template
Test Plan template
Test Execution Dashboard template
Test Completion Report template

10. Annex E: UEPT AND ADDITIONAL SR TEST COMPLETION CERTIFICATE

UEPT AND ADDITIONAL SR TEST COMPLETION CERTIFICATE

To:[Party]

From:[DCC]

[Date]

Dear Sir or Madam,

TEST COMPLETION CERTIFICATE UEPT OR ADDITIONAL SR TESTING

We confirm that the relevant Exit Criteria have been achieved in respect of UEPT or Additional SR Testing

Party: [Party]

SEC Party Signifier: [Signifier]

User Role: [User Role]

The table, below, includes all SRs the Party has completed either UEPT or Additional SR Testing to date as indicated by the Date Test Completion Certificate issued column.

Service Request Variant	Tested as part of UEPT or Additional SR Testing	Date Test Completion Certificate issued

Yours faithfully

[Name]

[Position]

Acting on behalf of the DCC

11. Annex F: DEFINITIONS

Term	Definition	Source
Entry Criteria	The criteria that must be satisfied before testing can commence	Clause 5.8 of this document
Exit Criteria	The criteria that must be satisfied before testing can be considered complete	Clause 5.19 of this document
SMETS2+ Install and Commission	The process of installing and commissioning a SMEST2+ Communications Hub Function, a SMETS+ Gas Proxy Function (in the case of Gas Smart Meters) and SMETS2+ Smart Meters with the DCC.	Clause 5.1 of this document
Regression Testing	Testing of a previously tested programme following modification of that programme to ensure that defects have not been introduced or uncovered in unchanged areas of the software, as a result of the changes made (and Regression Test shall be construed accordingly)	International Software Testing Qualifications Board
Relevant Party	The Party which is undertaking the necessary steps for the purposes of User Entry Process Tests	This document
(Requirements) Traceability Matrix	A matrix of defined requirements that provides traceability (linkage) to Test Scripts for the purpose of providing a measurement of test coverage.	International Software Testing Qualifications Board
Test Completion Certificate	A certificate issued by the DCC to a Party in a particular User Role upon request and in any event in accordance with 5.6.1.3 when that Party successfully completes UEPT.	Clause 10 of this document
Test Completion Report	A document summarising testing activities and results. It also contains an evaluation against Exit Criteria.	Clause 6.6 of this document
Test Data	The data constructed for the purposes of undertaking User Entry Process Tests	Clause 7 of this document
Test Data Plan	The document that sets out: the size and type/format of data, who is responsible for providing the data; and when the data is required to be available to support test activities in a Test Plan	Clause 7 of this document
Test Execution Dashboard	The document summarising testing activities and results, produced at regular intervals, to report progress of testing activities against a baseline (such as the original test plan) and to communicate risks.	Clause 6.5 of this document

Test Management Tool	A tool that has the ability to log and track Testing Issues.	Clause 5.19.1 of this document
Test Plan	A document describing the scope, approach, resources and schedule of intended test activities within a Test Stage that will be produced as set out in clause 6.1.4	Clause 6.4 of this document
Test Result	The consequence/outcome of the execution of a test script	Clause 6.4 of this document
Test Readiness Report	A report that when completed provides the capability to assess the status of test preparation and determine the readiness to proceed into test execution	Clause 6.3 of this document
Test Schedule	A list of test process activities, tasks or events identifying their intended start and finish dates and/or times and interdependencies.	Clause 6.4 of this document
Test Script	A document specifying a sequence of actions for the execution of a test	Clause 6.8 of this document

12. Annex G: Testing Issue Severity Descriptions

Severity	Description
Severity 1	An Issue which in relation to the Relevant Party: • would prevent user from using their systems • would have a critical adverse impact on business activities • would cause significant financial loss • would result in any material loss or corruption of Data. Non-exhaustive examples: • an Issue leading to non-availability of systems • all test progress is blocked.
Severity 2	An Issue which in relation to the Relevant Party: • would have a major (but not critical) adverse impact on use of systems • would cause limited financial loss Non-exhaustive examples: • an Issue leading to non-availability of or to loss of resilience of a material part of their systems • large areas of functionality will not be able to be tested • testing not completely blocked but has been significantly impacted.
Severity 3	An Issue which in relation to the Relevant Party: • would have a major adverse impact on business activities but which can be reduced to a moderate adverse impact through a work-around • would have a moderate adverse impact on the business activities Non-exhaustive examples: • testing can progress but the work-around will impact test progress.
Severity 4	An Issue which in relation to the Relevant Party: • would have a minor adverse impact on business activities Non-exhaustive examples: • minor service interruptions in the business process
Severity 5	An Issue which in relation to the Relevant Party: • would have minimal impact on business activities Non-exhaustive examples: • trivial Issues with work-arounds which are noted for future releases but minimal impact of running existing activities • tests can still pass but there are cosmetic issues.

Version: 7.0

Appendix S

DCCKI Certificate Policy

Contents

1 INTRODUCTION

(a) The document (together with its Annexes A and B):

(i) shall be known as the "DCCKI Certificate Policy" (and in this document is referred to simply as the "Policy"); and

(ii) is a SEC Subsidiary Document related to Section L13.34(a)(i) (The DCCKI SEC Documents) of the Code.

1.1 Overview

(a) This Policy sets out the arrangements relating to:

(i) The Root DCCKICA Certificate;

(ii) EII DCCKICA Certificates; and

(iii) UI DCCKICA Certificates;

together referred to as the "**DCCKICA Certificates"** and

(iv) DCCKI Infrastructure Certificates; and

(v) Personnel Authentication Certificates,

together with the DCCKICA Certificates referred to as the "**DCCKI Certificates**".

(b) This Policy is structured according to the guidelines provided by IETF RFC 3647, with appropriate extensions, modifications and deletions.

1.2 Document Name and Identification

(a) This Policy has been registered with the Internet Address Naming Authority and assigned an OID of 1.2.826.0.1.8641679.1.2.1.11.

1.3 DCCKI Participants

1.3.1 The DCCKI Certification Authority

(a) The definition of the DCCKI Certification Authority is set out in Annex A.

1.3.2 DCCKI Registration Authority

(a) The definition of the DCCKI Registration Authority is set out in Annex A.

1.3.3 DCCKI Subscribers

(a) In accordance with Section L13.2 of the Code (DCCKI Authorised Subscribers) Parties and Registration Data Providers (RDPs) may become DCCKI Authorised Subscribers.

(b) The DCCKI RAPP section 3 sets out the procedure to be followed by Parties and RDPs in order to become a DCCKI Authorised Subscriber for one or more DCCKI Certificates.

(c) The DCC (acting in its capacity as the Root DCCKICA, EII DCCKICA or UI DCCKICA) shall be a DCCKI Authorised Subscriber and:

(i) it (and only it) shall be a DCCKI Eligible Subscriber in respect of DCCKICA Certificates; and

(ii) (save for the purpose of replacement of the Root DCCKICA), it shall be a DCCKI Eligible Subscriber only in respect of a single Root DCCKICA Certificate.

(d) Where a person is a DCCKI Authorised Subscriber in accordance with this Policy and the DCCKI RAPP, that person shall be a DCCKI Eligible Subscriber in respect of DCCKI Infrastructure Certificates where the purpose of that DCCKI Certificate is:

(i) establishing TLS communications with the DCC over a DCC Gateway Connection, and that person is a Party or RDP; or

(ii) the signing of SAML assertions in order to Authenticate its User Personnel to the Self Service Interface using an Identity Provider Service that is not the DCC Identity Provider Service, and that person is a User.

(e) A Party that is a DCCKI Authorised Subscriber shall be a DCCKI Eligible Subscriber in respect of Personnel Authentication Certificates only in the circumstance where that DCCKI Authorised Subscriber is a User, intending to use the Identity Provider Service provided by the DCC for the purpose of Authenticating its User Personnel to the Self Service Interface as set out in Part 1.4.1 of this Policy.

(f) DCCKI Eligible Subscribers and DCCKI Subscribers are subject to the applicable requirements of this Policy, the DCCKI RAPP and Sections L13.43 to L13.47 (The DCCKI Subscriber Obligations) of the Code.

(g) The definitions of the following terms are set out in Section A of the Code (Definitions and Interpretations):

(i) DCCKI Subscriber; and

(ii) DCCKI Eligible Subscriber.

(h) The definition of a DCCKI Authorised Subscriber is set out in Annex A to this Policy.

1.3.4 DCCKI Relying Parties

(a) The definition of a DCCKI Relying Party is set out in Section A of the Code (Definitions and Interpretations).

(b) DCCKI Relying Parties shall be subject to the applicable requirements of Sections L13.48 to L13.52 (The DCCKI Relying Party Obligations) of the Code.

1.3.5 DCCKI Policy Management Authority

(a) The DCC shall fulfil the functions of the DCCKI PMA in accordance with the provisions set out in Sections L13.53 to L13.57 (The DCCKI PMA Functions) of the Code.

1.3.6 DCCKI Repository Provider

(a) Provision in relation to the DCCKI Repository Service is made in Section L13.18 (The DCCKI Repository Service) of the Code.

1.4 USAGE OF DCCKI CERTIFICATES

1.4.1 Appropriate Certificate Uses

(a) The DCCKICA shall ensure that DCCKICA Certificates are Issued only to:

(i) the Root DCCKICA for use in its capacity as, and for the purposes of, exercising its functions as the Root DCCKICA; and

(ii) the EII DCCKICA and the UI DCCKICA, in their capacity as, and for the purposes of exercising the functions of, issuing authorities.

(b) Subject to 1.4.1 (e), the DCCKICA shall ensure that DCCKI Infrastructure Certificates are Issued only:

(i) by the EII DCCKICA, and to DCCKI Eligible Subscribers; and

(ii) for the purposes of:

(1) establishing TLS communications with the DCC over a DCC Gateway Connection; or

(2) the signing of SAML assertions of a User that chooses to Authenticate its User Personnel to the Self Service Interface using an Identity Provider Service that is not provided by the DCC; or

(3) supporting the Transfer of Secret Key Material as defined in Section G2.22F to G2.22I.

(c) Subject to 1.4.1 (e), the DCCKICA shall ensure that Personnel Authentication Certificates are Issued only:

(i) by the UI DCCKICA, and to DCCKI Eligible Subscribers; and

(ii) for the purpose of Authenticating User Personnel of Users intending to use the Identity Provider Service provided by the DCC to the Self Service Interface.

(d) Further provision in relation to Parties and RDPs obligations in respect of the use of DCCKI Certificates is made in Sections L13.43 to L13.47 (The DCCKI Subscriber Obligations) of the Code and Sections L13.48 to L13.52 (The DCCKI Relying Party Obligations) of the Code.

(e) Nothing in this DCCKI Certificate Policy shall prevent DCC from:

(i) using the Root DCCKICA Certificate for the purposes of issuing additional issuing authority certificates;

(ii) using those issuing authorities to issue additional end entity certificates; or

(iii) issuing DCCKI Infrastructure Certificates or Personnel Authentication Certificates to DCC or DCC Service Providers other than in accordance with this Policy;

provided that in any of the above cases DCC may only do so:

(iv) for the purposes of issuing DCCKI Certificates or other certificates as may be required to establish secure communications between DCC and DCC Service Providers, or to secure communications and data within DCC Service Providers, but not between either DCC or a DCC Service Provider and any other Party or RDP;

(v) to the extent set out in the DCCKI Certification Practice Statement; and

(vi) other than in the cases specified in 1.4.1(a) to (c) above, subject to SMKI PMA approval.

1.4.2 Prohibited Certificate Uses

(a) No Party or Registration Data Provider shall use a DCCKI Certificate other than for the purposes permitted in Part 1.4.1 of this Policy.

1.5 Policy Administration

1.5.1 Organisation Administering the Document

(a) This Policy is a SEC Subsidiary Document and shall be maintained in accordance with the provisions of the Code.

1.5.2 Contact Person

(a) Questions in relation to the content of this Policy should be addressed to the DCCKI PMA or the Service Desk.

1.5.3 Person determining Certification Practice Statement suitability for the Policy

(a) Provision is made in Section L13.38 (the DCCKI Certification Practice Statement) of the Code in relation to the suitability of the DCCKI CPS for the Policy.

1.5.4 CPS Approval Procedures

(a) Provision is made in Section L13.54 (the DCCKI PMA Functions) of the Code for the procedure by which the DCCKI PMA may approve the DCCKI CPS.

1.5.5 Registration Authority Policies and Procedures

(a) The DCCKI Registration Authority Policies and Procedures are set out at Appendix W of the Code.

2 PUBLICATION AND REPOSITORY RESPONSIBILITIES

2.1 Repositories

(a) Provision is made in Section L13.18 (the DCCKI Repository Service) of the Code for the establishment, operation and maintenance of the DCCKI Repository.

2.2 Publication of Certification Information

(a) Section L13.19 (the DCCKI Repository Service) of the Code makes provision for the lodging of documents and information in the DCCKI Repository.

2.3 Time or Frequency of Publication

(a) The DCCKICA shall ensure that:

(i) Root DCCKICA Certificate and EII DCCKICA Certificate are lodged promptly in the DCCKI Repository on Issuance;

(ii) each new version of the EII DCCKICA Certificate Revocation List is lodged in the DCCKI Repository following its production as is specified in Part 4.9.7 of this Policy;

(iii) each new version of the DCCKI Authority Revocation List is lodged in the DCCKI Repository following its production as is specified in Part 4.9.7 of this Policy;

(iv) DCCKI Infrastructure Certificates are lodged promptly in the DCCKI Repository on Issuance; and

(v) a revised version of the DCCKI RAPP is lodged promptly in the DCCKI Repository following each modification.

2.4 Access Control on Repositories

(a) Provision in relation to access controls for the DCCKI Repository is made in Section L13.21 (the DCCKI Repository Service) of the Code and the DCCKI Interface Design Specification and the DCCKI Certification Practice Statement.

3 IDENTIFICATION AND AUTHENTICATION

3.1 Naming

3.1.1 Types of Names

(a) Provision is made in the DCCKI RAPP section 5.1 to ensure that the name of the Subject of each DCCKI Certificate is in accordance with the relevant DCCKI Certificate Profile in Annex B to this document.

3.1.2 Need for Names to be Meaningful

(a) Provision is made in the DCCKI RAPP section 5.1 to ensure that the name of the Subject of each DCCKI Infrastructure Certificate is meaningful and consistent with the relevant DCCKI Certificate Profile in Annex B to this document.

3.1.3 Anonymity or Pseudonymity of Subscribers

(a) Provision is made in the DCCKI RAPP section 5.5 to prohibit DCCKI Eligible Subscribers from requesting the Issue of a DCCKI Certificate anonymously or by means of a pseudonym.

3.1.4 Rules for Interpreting Various Name Forms

(a) Provision in relation to name forms is made in Annex B to this document.

3.1.5 Uniqueness of Names

(a) Provision in relation to the uniqueness of names is made in Annex B to this document.

3.1.6 Recognition, Authentication, and Role of Trademarks

(a) Provision in relation to the use of trademarks, trade names and other restricted information in DCCKI Certificates is made in Section L13.44 (DCCKI Certificate Signing Requests and Personnel Authentication Certificate Applications) of the Code.

3.2 Initial Identity Validation

3.2.1 Method to Prove Possession of Private Key

(a) Provision is made in the DCCKI RAPP section 5.6 in relation to:

(i) the procedure to be followed by a DCCKI Eligible Subscriber in order to prove its possession of the Private Key that is associated with the Public Key to be contained in any DCCKI Infrastructure Certificate that is the subject of a DCCKI Certificate Signing Request which has been submitted by that Eligible Subscriber; and

(ii) that the procedure established for this purpose is in accordance with the procedure in PKCS#10 or an equivalent cryptographic mechanism as agreed by the DCCKI PMA function.

(b) Provision is made in the DCCKI CPS in relation to:

(i) the procedure to be followed by the DCCKICA in order to prove its possession of the Private Key that is associated with the Public Key to be contained in any DCCKICA Certificate that is the subject of a DCCKI Certificate Signing Request; and

(ii) the procedure to be followed by the DCCKICA in order to prove its possession of the Private Key that is associated with the Public Key to be contained in any Personnel Authentication Certificate that is the subject of a DCCKI Certificate Signing Request pursuant to a Personnel Authentication Certificate Application from an Eligible Subscriber.

3.2.2 Authentication of Organisation Identity

(a) Provision is made in the DCCKI RAPP section 3 in relation to:

(i) The procedure to be followed by a Party or RDP in order to become a DCCKI Authorised Subscriber;

(ii) The criteria in accordance with which the DCCKI Registration Authority shall determine whether a Party or RDP is entitled to become a DCCKI Authorised Subscriber;

(iii) The requirement that the Party or RDP shall be Authenticated by the DCCKICA for that purpose; and

(iv) The criteria in accordance with which the DCCKICA shall determine whether a Party or RDP is Authenticated.

3.2.3 Authentication of Individual Identity

(a) Provision is made in the DCCKI RAPP in relation to the Authentication of individuals engaged by DCCKI Authorised Subscribers to fulfil roles defined in this Policy.

3.2.4 Non-verified Subscriber Information

(a) The DCCKICA shall verify all information in relation to DCCKI Certificates, save that the Subject name for Personnel Authentication Certificates is derived from the information input by DCCKI Eligible Subscriber for the purposes of populating fields in those Personnel Authentication Certificates and need not be verified by the DCCKICA.

3.2.5 Validation of Authority

See Part 3.2.2 of this Policy.

3.2.6 Criteria for Interoperation

[Not applicable]

3.3 Identification and Authentication for re-key Requests

3.3.1 Identification and Authentication for Routine Re-Key

(a) This Policy does not support Certificate Re-Key.

(b) The DCCKICA shall not provide a Certificate Re-Key service.

3.3.2 Identification and Authentication for Re-Key after Revocation

[Not applicable]

3.4 Identification and Authentication for Revocation Requests

3.4.1 Authentication for Certificate Revocation Requests

(a) Provision is made in the DCCKI RAPP section 6.10 in relation to procedures designed to ensure the Authentication of persons who submit a DCCKI Certificate Revocation Request and to verify that they are authorised to submit that request.

4 CERTIFICATE LIFE-CYCLE OPERATIONAL REQUIREMENTS

4.1 Certificate Applications

4.1.1 Submission of Certificate Applications

(a) Provision is made in the DCCKI RAPP section 5 with respect to the circumstances in which an DCCKI Eligible Subscriber may:

(i) submit a DCCKI Certificate Signing Request in relation to a DCCKI Infrastructure Certificate;

(ii) submit a Personnel Authentication Certificate Application in relation to a Personnel Authentication Certificate; and

(iii) submit a DCCKI Certificate Signing Request in relation to a DCCKICA Certificate,

and, in each case, the means by which that DCCKI Eligible Subscriber may do so.

4.1.2 Enrolment Process for the Subscriber and its Representatives

(a) Provision is made in the DCCKI RAPP section 3 in relation to the:

(i) establishment of an enrolment process in relation to Parties and RDPs in order to Authenticate them and verify that they are authorised to act as DCCKI Authorised Subscribers;

(ii) establishment of an enrolment process in relation to individuals nominated to act on behalf of DCCKI Authorised Subscribers as DCCKI Senior Responsible Officers or DCCKI Authorised Responsible Officers, in order to Authenticate them and verify that they are authorised to act on behalf of (and, in the case of Personnel Authentication Certificate Applications, go on to authorise others to act on behalf of) those DCCKI Authorised Subscribers; and

(iii) maintenance by the DCCKICA of a list of Parties, RDPs, and individuals enrolled in accordance with those enrolment processes.

4.1.3 Enrolment Process for the Registration Authority and its Representatives

(a) Provision is made in the DCCKI RAPP section 4 in relation to the establishment of an enrolment process in respect of DCCKICA Personnel and DCCKICA Systems for the purpose of Authentication and to verify that they are authorised to act on behalf of the DCCKICA in its capacity as the DCCKI Registration Authority; including in particular, for that purpose, provision for:

(i) the Authentication of all DCCKI Registration Authority Personnel by a DCCKI Registration Authority Manager; and

(ii) all DCCKI Registration Authority Personnel to have their identity and authorisation verified prior to being provided these roles.

4.2 Certificate Application Processing

4.2.1 Performing Identification and Authentication Functions

(a) Provision is made in the DCCKI RAPP in relation to the Authentication by the DCCKICA of a DCCKI Eligible Subscriber which submits:

(i) a DCCKI Certificate Signing Request in relation to a DCCKI Infrastructure Certificate; or

(ii) a Personnel Authentication Certificate Application in relation to a Personnel Authentication Certificate.

4.2.2 Approval or Rejection of Certificate Applications

(a) Where any DCCKI Certificate Signing Request made in relation to a DCCKI Infrastructure Certificate fails to satisfy the requirements set out in the DCCKI RAPP, this Policy or any other provisions of the Code, the DCCKICA:

(i) shall reject it and refuse to Issue the DCCKI Infrastructure Certificate which was the subject of that DCCKI Certificate Signing Request, and

(ii) shall give notice to the person that made the DCCKI Certificate Signing Request of the reasons for its rejection.

(b) Where the failure results from a failure of Authentication of the DCCKI Eligible Subscriber, then an Incident shall be raised by DCCKICA Personnel.

(c) Where any DCCKI Certificate Signing Request satisfies the requirements set out in the DCCKI RAPP, this Policy, and any other provision of the Code, the DCCKICA shall Issue the DCCKI Certificate that was the subject of that DCCKI Certificate Signing Request.

4.2.3 Time to Process Certificate Applications

(a) Provision is made in the DCCKI RAPP in relation to the agreed elapsed time for the processing of DCCKI Certificate Signing Requests and Personnel Authentication Certificate Applications made in accordance with this Policy.

4.3 DCCKI Certificate Issuance

4.3.1 DCCKICA actions during certificate Issuance

(a) The Root DCCKICA shall Issue a DCCKICA Certificate only in accordance with the provisions of this Policy and the DCCKI CPS.

(b) The DCCKICA shall Issue a DCCKI Infrastructure Certificate or a Personnel Authentication Certificate only in accordance with the provisions of this Policy and the DCCKI RAPP and:

(i) in the case of DCCKI Infrastructure Certificates, only in response to a DCCKI Certificate Signing Request made by a DCCKI Eligible Subscriber; and

(ii) in the case of Personnel Authentication Certificates, only following the creation of a DCCKI Certificate Signing Request by the DCCKICA in response to a Personnel Authentication

Certificate Application made by a member of User Personnel of a DCCKI Eligible Subscriber via the Personnel Credentials Interface.

(c) The DCCKICA shall ensure that each DCCKI Certificate that is Issued by it contains information that:

(i) it has verified to be correct and complete; and

(ii) is consistent with the information in the DCCKI Certificate Signing Request.

4.3.2 Notification to DCCKI Eligible Subscriber by the DCCKICA of Issuance of Certificate

(a) Provision is made in the DCCKI RAPP for the DCCKICA to notify a DCCKI Eligible Subscriber of the Issuance of a DCCKI Certificate which was the subject of a DCCKI Certificate Signing Request or Personnel Authentication Certificate Application made by it.

4.4 Certificate Acceptance

4.4.1 Conduct Constituting Certificate Acceptance

(a) Provision is made in the DCCKI RAPP to:

(i) specify the means by which an DCCKI Eligible Subscriber may clearly indicate to the DCCKICA its rejection of a DCCKI Certificate which has been Issued to it; and

(ii) specify the circumstances in which a DCCKI Eligible Subscriber is treated as a DCCKI Subscriber in relation to a DCCKI Certificate.

(b) Further provision in relation to subscribing for or rejecting DCCKI Certificates is made in Section L13.45 (Subscribing for or Rejecting DCCKI Certificates) of the Code.

4.4.2 Publication of Certificates by the DCCKICA

(a) Following Issuance, the DCCKICA shall lodge a copy of each Root DCCKICA Certificate, each EII DCCKICA Certificate and each DCCKI Infrastructure Certificate in the DCCKI Repository.

(b) Further provision in relation to the publication of DCCKI Certificates is made in Part 2 of this Policy and in Section L13.17 (the DCCKI Repository Service) of the Code.

4.4.3 Notification of Certificate Issuance by the DCCKICA to Other Entities

(a) The DCCKICA shall give explicit notice of the Issue of a DCCKI Certificate only to the DCCKI Eligible Subscriber who submitted the DCCKI Certificate Signing Request or Personnel Authentication Certificate Application.

4.5 Key Pair and Certificate Usage

4.5.1 DCCKI Authorised Subscriber Private Key and Certificate Usage

(a) Provision for restrictions on the use by DCCKI Authorised Subscribers of Private Keys in respect of DCCKI Certificates is made in:

(i) Section G5.24 (the User Information Security Management System) of the Code;

(ii) Section L13 (DCC Key Infrastructure) of the Code;

(iii) this Policy; and

(iv) the DCCKI Certification Practice Statement.

4.5.2 DCCKI Relying Party Public Key and Certificate Usage

(a) Provision in relation to reliance that may be placed on a DCCKI Certificate is made in Section L13.48 to L13.52 (the DCCKI Relying Party Obligations) of the Code.

4.6 Certificate Renewal

4.6.1 Circumstances of Certificate Renewal

(a) This Policy does not support the renewal of DCCKI Certificates.

(b) The DCCKICA may only replace, and shall not renew, any DCCKI Certificate.

4.6.2 Circumstances of Certificate Replacement

(a) A DCCKI Certificate replacement may occur:

(i) where the request for DCCKI Certificate replacement relates to normal business activity, in which case the process set out in the DCCKI RAPP shall apply;

(ii) where suspicion of Compromise or Compromise is reported for a DCCKI Certificate that has been issued; in which case the matter shall be managed through the Incident Management Policy and in accordance with the DCCKI RAPP.

4.6.3 Who May Request a Replacement Certificate

See Part 4.1 of this Policy.

4.6.4 Processing Replacement Certificate Requests

See Part 4.2 of this Policy.

4.6.5 Notification of Replacement Certificate Issuance to a Subscriber

See Part 4.3 of this Policy.

4.6.6 Conduct Constituting Acceptance of a Replacement Certificate

See Part 4.4 of this Policy.

4.6.7 Publication of a Replacement Certificate by the DCCKICA

See Part 4.4.2 of this Policy.

4.6.8 Notification of Certificate Issuance by the DCCKICA to Other Entities

See Part 4.4.3 of this Policy.

4.7 Certificate Re-Key

(a) This Policy does not support Certificate Re-Key.

4.7.1 Circumstances for Certificate Re-Key

[Not applicable]

4.7.2 Who may request Certificate re-key

[Not applicable]

4.7.3 Processing Certificate Re-Keying Requests

[Not applicable]

4.7.4 Notification of New Certificate Issuance to Subscriber

[Not applicable]

4.7.5 Conduct Constituting Acceptance of a Re-Keyed Certificate

[Not applicable]

4.7.6 Publication of the Re-Keyed Certificate by the DCCKICA

[Not applicable]

4.7.7 Notification of Certificate Issuance by the DCCKICA to Other Entities

[Not applicable]

4.8 Certificate Modification

(a) This Policy does not support DCCKI Certificate modification.

4.8.1 Circumstances for Certificate Modification

[Not applicable]

4.8.2 Who may request Certificate Modification

[Not applicable]

4.8.3 Processing Certificate Modification Requests

[Not applicable]

4.8.4 Notification of New Certificate Issuance to Subscriber

[Not applicable]

4.8.5 Conduct Constituting Acceptance of Modified Certificate

[Not applicable]

4.8.6 Publication of the Modified Certificate by the DCCKICA

[Not applicable]

4.8.7 Notification of Certificate Issuance by the DCCKICA to Other Entities

[Not applicable]

4.9 Certificate Revocation and Suspension

4.9.1 Circumstances for Revocation

(a) In accordance with the DCCKI RAPP, the DCCKICA may revoke DCCKI Certificates that have been Issued to a DCCKI Subscriber:

(i) at that DCCKI Subscriber's request, as described in the DCCKI RAPP;

(ii) in accordance with Incident Management processes or, in the event of a Major Security Incident, where DCC reasonably believes that Compromise of that DCCKI Subscriber's Private Key has occurred;

(iii) (subject to the Section L16.1 (Supplier of Last Resort) of the Code) where an organisation ceases to be a DCCKI Eligible Subscriber in relation to that DCCKI Certificate;

(iv) in the circumstances described in Section H10.1 (Emergency Suspension of Services) of the Code; and

(v) (subject to the Section L16.1 (Supplier of Last Resort) of the Code) where a request is received by DCC from the Panel in the circumstances set out in Section M8 (Suspension, Expulsion, and Withdrawal) of the Code that would result in a requirement to revoke one or more DCCKI Certificates that have been Issued to that DCCKI Subscriber.

4.9.2 Who can Request Revocation

(a) In accordance with the DCCKI RAPP and Part 4.9.1 of this Policy, the following may request the revocation of DCCKI Certificates:

(i) a DCCKI Authorised Subscriber in relation to DCCKI Infrastructure Certificates for which it is a DCCKI Subscriber; and

(ii) the DCC.

4.9.3 Procedure for Revocation Request

(a) Provision is made in the DCCKI RAPP in relation to the procedure for submitting and processing a DCCKI Certificate Revocation Request.

4.9.4 Revocation Request Grace Period

(a) Provision is made in the DCCKI RAPP in relation to the grace period for requesting a DCCKI Certificate revocation.

4.9.5 Time within which the DCCKICA must process the Revocation Request

(a) The DCCKICA shall ensure that it processes all DCCKI Certificate Revocation Requests as soon as reasonably practicable following receipt and in accordance with the procedures set out in the DCCKI RAPP.

4.9.6 Revocation Checking Requirements for Relying Parties

(a) Provision in relation to the revocation checking requirements for DCCKI Relying Parties is made in Section L13 (DCC Key Infrastructure) of the Code.

4.9.7 CRL Issuance Frequency

(a) The DCCKICA shall ensure that an up to date version of any DCCKI ARL is lodged in the DCCKI Repository:

(i) at least once in every period of twelve months; and

(ii) promptly on the revocation of a EII DCCKICA Certificate or UI DCCKICA Certificate.

(b) Each version of the DCCKI ARL shall be valid until the date which is up to 13 months after the date on which that version is lodged in the DCCKI Repository or until it is subsequently replaced with an updated version.

(c) The DCCKICA shall ensure that each up to date version of the DCCKI ARL:

(i) continues to include each relevant revoked EII DCCKICA Certificate and relevant revoked UI DCCKICA Certificate until such time as the Validity Period of that EII DCCKICA Certificate or UI DCCKICA Certificate has expired; and

(ii) does not include any revoked EII DCCKICA Certificate or revoked UI DCCKICA Certificate after the Validity Period of that EII DCCKICA Certificate or UI DCCKICA Certificate has expired.

(d) The EII DCCKICA shall ensure that an up to date version of the EII DCCKICA CRL is lodged in the DCCKI Repository:

(i) at least once in every period of 30 days; and

(ii) within one hour on the revocation of a DCCKI Infrastructure Certificate.

(e) The EII DCCKICA shall ensure that each up to date version of the EII DCCKICA CRL:

(i) continues to include each relevant revoked DCCKI Infrastructure Certificate until such time as the Validity Period of that DCCKI Infrastructure Certificate has expired; and

(ii) does not include any revoked DCCKI Infrastructure Certificate after the Validity Period of that DCCKI Infrastructure Certificate has expired.

(f) The EII DCCKICA shall ensure that the EII DCCKICA CRL contains a non-critical entry extension which identifies the reason for the revocation of each DCCKI Infrastructure Certificate listed on it in accordance with RFC 5280 or an equivalent cryptographic standard.

(g) The UI DCCKICA shall not lodge a version of the UI DCCKICA CRL in the repository.

4.9.8 Maximum Latency for DCCKI CRLs (if applicable)

(a) In accordance with Part 4.9.7.

4.9.9 On-line Revocation/Status Checking Availability

[Not applicable]

4.9.10 On-line Revocation Checking Requirements

[Not applicable]

4.9.11 Other Forms of Revocation Advertisements Available

[Not applicable]

4.9.12 Special Requirements in the Event of Key Compromise

(a) See Part 4.6.2 of this Policy.

4.9.13 Circumstances for Suspension

(a) This Policy does not support suspension of DCCKI Certificates.

4.9.14 Who can Request Suspension

[Not Applicable]

4.9.15 Procedure for Suspension Request

[Not Applicable]

4.9.16 Limits on Suspension Period

[Not Applicable]

4.10 Certificate Status Services

4.10.1 Operational Characteristics

[Not applicable]

4.10.2 Service Availability

[Not applicable]

4.10.3 Optional Features

[Not applicable]

4.11 End of Subscription

(a) Provision is made in the DCCKI RAPP in relation to end of subscription.

4.12 KEY ESCROW AND RECOVERY

(a) This Policy does not support Key Escrow.

(b) The DCCKICA shall not provide a Key Escrow service.

4.12.1 Key Escrow and Recovery Policies and Practices

[Not applicable]

4.12.2 Session Key Encapsulation and Recovery Policy and Practices

[Not applicable]

5 FACILITY, MANAGEMENT, AND OPERATIONAL CONTROLS

5.1 Physical Controls

5.1.1 Site location and construction

(a) The DCCKICA shall ensure that the DCCKICA Systems are operated in a sufficiently secure environment which shall at least satisfy the requirements set out in Section G2 (System Security: Obligations on the DCC) and Section G5 (Information Security: Obligations on the DCC and Users) of the Code.

(b) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to physical controls including in particular provisions designed to ensure that:

(i) all of the physical locations in which the DCCKICA Systems are situated, operated, routed or directly accessed are in the United Kingdom;

(ii) all bespoke Security Related Functionality is developed, specified, designed, built and tested only within the United Kingdom;

(iii) all Security Related Functionality is integrated, configured, tested in situ, implemented, operated and maintained only within the United Kingdom;

(iv) the DCCKICA Systems cannot be indirectly accessed from any location outside the United Kingdom;

(v) the Root DCCKICA shall operate as a secure offline entity that is Separate from the rest of the DCC Systems; and

(vi) all Private Keys used to support the DCCKICA are generated, stored and processed within the cryptographic envelope of a Cryptographic Module which meets the FIPS 140-2 Level 3or equivalent cryptographic standard.

(c) The functions of the DCCKI Registration Authority shall securely interoperate with the other operational elements of the DCCKICA, as detailed in the DCCKI CPS.

5.1.2 Physical access

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to access control including in particular provisions designed to:

(i) establish and maintain controls such that only appropriately authorised personnel may have unescorted physical access to DCCKICA Systems;

(ii) ensure that any unauthorised personnel may have physical access to DCCKICA Systems only if appropriately authorised and supervised;

(iii) ensure that site access procedures are audited as part of both internal audits and third party audits carried out in accordance with ISO/IEC 27001;

(iv) ensure that all material in relation to cryptographic operation is securely managed; and

(v) ensure that removable media which contain sensitive data are kept in secure locations, managed through life and disposal and, accessible only to appropriately authorised individuals.

5.1.3 Power and air conditioning

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to power and air conditioning at all physical locations in which the DCCKICA Systems are situated.

5.1.4 Water exposure

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to water exposure at all physical locations in which the DCCKICA Systems are situated.

5.1.5 Fire prevention and protection

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to fire prevention and protection at all physical locations in which the DCCKICA Systems are situated.

5.1.6 Media storage

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to media storage at all physical locations in which the DCCKICA Systems are situated.

5.1.7 Waste disposal

(a) The DCCKICA shall ensure that all media used to store Data held by it for the purposes of carrying out its functions is securely disposed of in accordance with https://www.ncsc.gov.uk/guidance/secure-sanitisation-storage-media.

5.1.8 Off-site backup

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to off-site back up and data management of data held in the DCCKICA Systems.

(b) The DCCKICA shall ensure that backups shall be made to support disaster recovery models as defined within the DCCKI CPS.

(c) The DCCKICA shall ensure that:

(i) regular backups of critical DCCKICA and DCCKI Registration Authority operational data relating to the Issuing of DCCKI Certificates are made;

(ii) appropriate backups of the Root DCCKICA are made on a periodic basis;

(iii) backup of cryptographic material used in support of the Root DCCKICA, EII DCCKICA and the UI DCCKICA shall be in line with manufacturer procedures and FIPS 140-2 Level 3 or an equivalent cryptographic standard; and

(iv) security of off-site storage shall be managed and implemented in alignment with security in place at the main locations.

5.2 Procedural controls

5.2.1 Trusted roles

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions designed to ensure that:

(i) Persons with trusted roles are given only the access rights that are commensurate with their role and each has a clearly defined role and access level;

(ii) allocated roles are pertinent to the required task;

(iii) roles and responsibilities are documented;

(iv) no individual member of DCCKICA Personnel is capable, by acting alone, of engaging in any action by means of which the DCCKICA Systems may be Compromised to a material extent;

(v) roles are implemented in line with best practice for a certification authority; and

(vi) multi-person controls are applied with respect to Root DCCKICA Private Key management.

5.2.2 Number of persons required per task

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions designed to establish:

(i) the appropriate separation of roles between the different members of DCCKICA Personnel;

(ii) the application of controls to the actions of all members of DCCKICA Personnel who are Privileged Persons, in particular:

(1) identifying any controls designed to ensure that the involvement of more than one individual is required for the performance of certain functions;

(2) identifying the number of roles that an individual may hold; and

(3) providing that the revocation of any DCCKICA Certificate is one such function; and

(iii) the DCCKICA shall apply such multi-person controls:

(1) in accordance with the operation and risk as identified with within the DCC Information Security Management System;

(2) in accordance with best practice in the case of management of cryptographic material; and

(3) with respect to Root DCCKICA Private Key management.

5.2.3 Identification and authentication for each role

(a) All DCCKICA Personnel shall be required to authenticate via a strong two factor Authentication in accordance with the SMKI PMA Guidance on "Verifying Individual Identity" published on the Website before they can access any facilities.

5.2.4 Roles requiring separation of duties

(a) The DCCKICA shall identify roles that require separation of duties for DCCKICA functions in line with industry best practice.

(b) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions that ensure separation of duties in roles requiring separation of duties.

5.3 Personnel controls

5.3.1 Qualification, experience and clearance requirements

(a) The DCCKICA shall ensure that all DCCKICA Personnel must:

(i) be appointed to their roles in writing;

(ii) be bound by contract to the terms and conditions and non-disclosure agreements relevant to their roles;

(iii) have received appropriate training with respect to their duties; and

(iv) have, as a minimum, passed a Security Check level of vetting, before commencing their roles.

5.3.2 Background check procedures

(a) The DCCKICA shall ensure that all DCCKICA Personnel with access to DCCKICA operations shall undergo formal security checks, as set out within the DCCKI CPS.

5.3.3 Training requirements

(a) See Part 5.3.1 of this Policy.

5.3.4 Retraining frequency and requirements

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates appropriate provisions relating to the frequency and content of retraining and refresher training to be undertaken by DCCKICA Personnel.

5.3.5 Job rotation frequency and sequence

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates appropriate provisions relating to the frequency and sequence of job rotations to be undertaken by DCCKICA Personnel.

5.3.6 Sanctions for unauthorised actions

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates appropriate provisions relating to sanctions for unauthorised actions undertaken by DCCKICA Personnel.

5.3.7 Independent contractor requirements

(a) The DCCKICA shall ensure that all contractors engaged by it adhere to requirements laid out in this Part 5.3.

5.3.8 Documentation supplied to personnel

(a) The DCCKICA shall ensure that all DCCKICA Personnel are provided with access to all documents relevant to their roles or necessary for the performance of their duties, including in particular:

(i) this Policy;

(ii) the DCCKI CPS; and

(iii) any supporting documentation, statutes, policies or contracts.

5.4 Audit logging procedures

5.4.1 Types of events recorded

(a) The DCCKICA shall ensure that:

(i) the DCCKICA Systems record all relevant systems activity in Audit Logs;

(ii) the DCCKI CPS incorporates a comprehensive list of all events that are to be recorded in an Audit Log in relation to the activities of DCCKICA Personnel and the use of DCCKICA equipment which shall include access, both authorised and violations; and

(iii) activities in relation to the DCCKI Registration Authority, are logged in an appropriate manner by the DCCKICA.

5.4.2 Frequency of processing log

(a) DCCKICA audit logging shall:

(i) operate at all times within the DCCKICA Systems; and

(ii) ensure that audit monitoring of the DCCKICA Systems is in compliance with the protective monitoring requirements of DCC Systems.

(b) The DCCKI CPS shall incorporate provisions which specify:

(i) how regularly information recorded in the Audit Log is to be reviewed; and

(ii) what actions are to be taken by the DCCKICA in response to types of events recorded in the Audit Log.

5.4.3 Retention period for Audit Log

(a) The DCCKICA shall retain an Audit Log that incorporates, on any given date, a record of all DCCKICA System events occurring during a period of at least twelve months prior to that date.

(b) A copy of the Audit Log incorporating a record of all system events occurring prior to the beginning of that period shall be archived in accordance with the requirements of Part 5.5 of this Policy.

(c) The DCCKICA shall ensure that the DCCKI CPS makes provision for the specification of the Audit Log record.

5.4.4 Protection of audit log

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to access to the Audit Log, providing, in particular, that:

(i) access to those DCCKICA Audit Log Data (other than those relating to protective monitoring) must be limited to those members of DCCKICA Personnel who are specifically responsible for performing a system audit role in accordance with the DCCKI CPS;

(ii) to the extent to which the Audit Log is retained electronically, the DCCKICA event log Data stored in it cannot be accessed other than on a read-only basis, and are protected from unauthorised viewing, modification and deletion in accordance with British Standard BS 10008:2014 (Evidential weight and legal admissibility of electronic information) or an equivalent standard; and

(iii) to the extent which the Audit Log is retained in non-electronic form, the Data stored in it are appropriately protected from unauthorised viewing, modification and destruction in order to ensure that their integrity is maintained for evidential purposes.

5.4.5 Audit Log backup procedures

(a) The DCCKICA shall ensure that the Data contained in the Audit Log are backed up on a daily basis or, if activity has taken place on the DCCKICA Systems only infrequently, such as in relation to the Root DCCKICA, in accordance with the schedule for the regular backup of the Data held on those DCCKICA Systems.

(b) The DCCKICA shall ensure that all DCCKI Data contained in the Audit Logs that are backed up are, during backup, held in accordance with the DCC Information Security Management System and protected to the same standard of protection as the primary copy of the Audit Log in accordance with Part 5.4.4 of this Policy.

5.4.6 Audit collection system (internal or external)

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to its system for collecting Data for the purpose of populating the Audit Log.

5.4.7 Notification to event-causing subject

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to its notification of any person who is (or is responsible for any DCCKICA System which is) the direct cause of an event recorded in the Audit Log.

5.4.8 Vulnerability assessments

(a) The DCCKICA shall carry out periodic vulnerability assessments covering the DCCKICA Systems with recorded corrective action.

5.5 Records archival

5.5.1 Types of records archived

(a) The DCCKICA shall ensure that it archives:

(i) relevant Audit Data in accordance with Part 5.4 of this Policy;

(ii) records of all Data submitted to it by DCCKI Eligible Subscribers for the purposes of DCCKI Certificate Signing Requests and Personnel Authentication Certificate Applications;

(iii) records of all Data submitted to it by DCCKI Subscribers for the purposes of revocation or suspension of DCCKI Certificates; and

(iv) any other data specified in this Policy as requiring to be archived in accordance with this Part 5.5 of this Policy.

(b) The DCCKICA shall ensure that all DCCKICA audit data are recorded in a standard format that is compliant with British Standard BS 10008:2014 (Evidential Weight and Legal Admissibility of Electronic Information) or an equivalent standard.

(c) The DCCKICA shall ensure that provision is made in the DCCKI CPS in relation to the specification of data to be archived.

5.5.2 Retention period for archive

(a) The DCCKICA shall ensure that all Data, excluding audit data, which are Archived are retained for a period of at least seven years from the date on which they were Archived.

5.5.3 Protection of archive

(a) The DCCKICA shall ensure that Data held in its Archive are protected against any unauthorised access, adequately protected against environmental threats such as temperature, humidity and magnetism and incapable of being modified or deleted.

5.5.4 Archive backup procedures

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to its procedures for the backup of its Archive.

5.5.5 Requirements for Time-Stamping of records

(a) Provision in relation to Time-Stamping is made in Part 6.8 of this Policy.

5.5.6 Archive collection system (internal or external)

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to maintaining internal and external archives.

5.5.7 Procedures to obtain and verify archive information

(a) The DCCKICA shall ensure that Data held in the Archive are stored in a readable format during their retention period and that the Data remain accessible at all times during the retention period.

(b) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to the periodic verification by the DCCKICA of the Data held in the Archive.

5.6 Key changeover

5.6.1 EII DCCKICA key changeover

(a) Where the DCCKICA ceases to use a EII DCCKICA Private Key after the expiry of the Validity Period of a EII DCCKICA Certificate, it shall:

(i) not revoke the related EII DCCKICA Public Key (which may continue to be used for the purpose of checking Digital Signatures generated using the EII DCCKICA Private Key);

(ii) generate a new Key Pair following key generation procedures, generate a DCCKI Certificate Signing Request in relation to the EII DCCKICA Certificate and submit to the Root DCCKICA for signing and Issuance;

(iii) in its role as the DCCKICA:

(1) Issue a new relevant EII DCCKICA Certificate;

(2) confirm acceptance of the EII DCCKICA Certificate once Issued; and

(3) promptly lodge that EII DCCKICA Certificate in the DCCKI Repository;

(iv) ensure that any relevant DCCKI Infrastructure Certificate subsequently Issued by the EII DCCKICA is Issued using the EII DCCKICA Private Key from the newly-generated Key Pair until the expiry of the Validity Period of the newly Issued EII DCCKICA Certificate; and

(v) verifiably destroy the Private Key Material relating to the previous EII DCCKICA Private Key; or retain such Private Key Material in such a manner that it is adequately protected against being put back into use.

5.6.2 UI DCCKICA key changeover

(a) Where the DCCKICA ceases to use a UI DCCKICA Private Key after the expiry of the Validity Period of a UI DCCKICA Certificate, it shall:

(i) not revoke the related UI DCCKICA Public Key (which may continue to be used for the purpose of checking Digital Signatures generated using the UI DCCKICA Private Key);

(ii) generate a new Key Pair following key generation procedures, generate a DCCKI Certificate Signing Request in relation to the UI DCCKICA Certificate, and submit to the Root DCCKICA for signing and Issuance;

(iii) Issue a new relevant UI DCCKICA Certificate in its role as the Root DCCKICA;

(iv) confirm acceptance of the UI DCCKICA Certificate once Issued;

(v) ensure that any relevant Personnel Authentication Certificate subsequently Issued by the UI DCCKICA is Issued using the UI DCCKICA Private Key from the newly-generated Key Pair until the expiry of the Validity Period of the newly Issued UI DCCKICA Certificate; and

(vi) verifiably destroy the Private Key Material relating to the previous UI DCCKICA Private Key; or retain such Private Key Material in such a manner that it is adequately protected against being put back into use.

5.6.3 DCCKI Root Key changeover

(a) Where the Root DCCKICA ceases to use a Root DCCKICA Private Key after the expiry of the Validity Period of a Root DCCKICA Certificate, it shall:

(i) not revoke the related Root DCCKICA Public Key (which may continue to be used for the purpose of checking Digital Signatures generated using the Root DCCKICA Private Key);

(ii) generate a DCCKI Certificate Signing Request for the new Root DCCKICA Certificate and submit it for signing and Issuance;

(iii) issue to itself a new relevant Root DCCKICA Certificate;

(iv) ensure that any relevant EII DCCKICA Certificate or UI DCCKICA Certificate subsequently Issued by the Root DCCKICA is Issued using the Root DCCKICA Private Key from the newly-generated Key Pair until the expiry of the Validity Period of the newly Issued Root DCCKICA Certificate; and

(v) verifiably destroy the Private Key Material relating to the previous Root DCCKICA Private Key; or retain such Private Key Material in such a manner that it is adequately protected against being put back into use.

5.7 Compromise and disaster recovery

5.7.1 Incident and compromise handling procedures

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates Business Continuity and Disaster Recovery Procedures which shall be designed to ensure the continuity or (where there has been unavoidable discontinuity) the recovery of the provision of the DCCKI Services in the event of any Compromise of the DCCKICA Systems or major failure in the DCCKI processes.

(b) In the event of an Incident involving Compromise of the DCCKICA Systems, the DCCKICA shall:

(i) ensure that the Incident Management Policy is invoked;

(ii) not request revocation of any DCCKICA Certificate in the first instance but follow procedures defined in the DCCKI CPS;

(iii) not revoke Issued DCCKI Certificates in the first instance but follow procedures defined in the DCCKI CPS; and

(iv) treat the event as a Major Security Incident.

(c) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions setting out the approach to be taken by it in circumstances in which it suspects (or has reason to suspect) that any EII DCCKICA Private Key or any UI DCCKICA Private Key or any part of the DCCKICA Systems is Compromised.

5.7.2 Computing resources, software and/or data are corrupted

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to the steps to take to manage computing resources and software, and to deal with corrupted data.

5.7.3 Entity private key compromise procedures

(a) See Part 5.7.1 of this Policy.

5.7.4 Business continuity capabilities after a disaster

(a) The DCCKICA shall ensure that Business Continuity and Disaster Recovery Procedures are invoked in accordance with Part 5.7 of this Policy and the DCCKI CPS.

5.7.5 DCCKICA and DCCKI Registration Authority termination

(a) DCC shall at all times fulfil the functions of the DCCKICA and DCCKI Registration Authority.

6 TECHNICAL SECURITY CONTROLS

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates detailed provision in relation to technical security controls so that such technical security controls are defined, documented and managed for the purpose of exercising its functions as Root DCCKICA, EII DCCKICA, UI DCCKICA and DCCKI Registration Authority.

6.1 Key pair generation and installation

6.1.1 Key pair generation

(a) The DCCKICA shall ensure that all DCCKICA Key Pairs are generated:

(i) in a protected environment to be compliant with FIPS 140-2 Level 3 or an equivalent cryptographic standard;

(ii) using multi-person control, such that no single person is capable of generating any DCCKICA Private Key; and

(iii) in accordance with the DCCKI CPS, with records from the event to be held as archive.

(b) The DCCKICA shall ensure that Key Pairs associated with Personnel Authentication Certificates are generated in accordance with the DCCKI CPS.

(c) The DCCKICA shall not generate any Key Pairs other than a Key Pair associated with a DCCKICA Certificate or a Key Pair associated with a Personnel Authentication Certificate.

6.1.2 Private Key delivery to DCCKI Subscriber

(a) The DCCKICA shall ensure that the DCCKI RAPP makes provision for the generation of a Key Pair associated with a Personnel Authentication Certificate for delivery to a DCCKI Eligible Subscriber by the UI DCCKICA.

6.1.3 Public Key delivery to certificate issuer

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to the mechanism by which Public Keys of DCCKI Eligible Subscribers are delivered to or generated by, the DCCKICA for the purpose of the exercise of its functions as the Root DCCKICA, EII DCCKICA and UI DCCKICA.

6.1.4 DCCKICA Public Key delivery to Relying Parties

(a) The DCCKICA shall ensure that the DCCKI RAPP incorporates provisions in relation to how Root DCCKICA Public Keys and EII DCCKICA Public Keys shall be delivered to Relying Parties, and in particular that these are placed in the DCCKI Repository following Issuance.

(b) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to how UI DCCKICA Public Keys shall be delivered to Relying Parties, and in particular that UI DCCKICA Public Keys:

(i) are delivered in a secure fashion and in a manner that precludes substitution attacks;

(ii) may be delivered as specified in a certificate validation or path discovery policy file; and

(iii) that are part of an updated Key Pair may be distributed as a self - signed certificate, and as a new DCCKICA Certificate.

6.1.5 Key sizes

(a) The Root DCCKICA shall employ RSA 4096 bit Private Keys, with a SHA256 hashing algorithm.

(b) The EII DCCKICA shall employ RSA 2048 bit Private Keys, with a SHA256 hashing algorithm.

(c) The UI DCCKICA shall employ RSA 2048 bit Private Keys, with a SHA256 hashing algorithm.

6.1.6 Public Key parameters generation and quality checking

(a) The DCCKICA shall ensure that any Public Key used for the purposes of this Policy shall:

(i) be generated using the required key parameters, as defined in the DCCKI Certificate Profiles in Annex B to this policy, which are in accordance with FIPS 186-4 or an equivalent cryptographic standard; and

(ii) ensure that the quality of the generated key parameters is verified in accordance with FIPS 186-4 or an equivalent cryptographic standard.

6.1.7 Key usage purposes (as per X.509 v3 key usage field)

(a) The DCCKICA shall ensure that each DCCKI Certificate that is Issued by it shall include key usage extension fields that specify the intended use of that DCCKI Certificate and technically limit the certificate's functionality in X.509v3 compliant software.

(b) The DCCKICA shall set key usage bits or assert extended key usage OIDs for each DCCKI Certificate type in accordance with the relevant DCCKI Certificate Profile defined in Annex B to this Policy.

6.2 Private Key Protection and Cryptographic Module Engineering Controls

6.2.1 Cryptographic module standards and controls

(a) The DCCKICA shall ensure that all DCCKICA Private Keys are protected within the cryptographic boundary of a Cryptographic Module configured to be complaint with FIPS 140-2 Level 3 or an equivalent cryptographic standard at all times.

(b) The DCCKICA shall ensure that the key encryption key used to protect the DCCKICA Private Keys is only stored within the cryptographic boundary of a Cryptographic Module configured to be complaint with FIPS 140-2 Level 3 or an equivalent cryptographic standard.

(c) DCCKI Authorised Subscribers shall ensure that all Private Keys provided to them by the DCCKICA or generated by them are protected in accordance with and subject to any conditions specified within Sections G (Security) and L (Smart Metering Key Infrastructure and DCC Key Infrastructure) of the Code, the DCCKI Interface Design Specification and the DCCKI Code of Connection.

6.2.2 Private Key (key (m out of n) multi-person control

(a) The DCCKICA shall ensure that multi-person controls are applied for the generation and management of DCCKICA Private Keys.

(b) DCCKI Authorised Subscribers shall implement multi-person control, where applicable, in accordance with their Information Security Management System.

(c) Private Keys associated with Personnel Authentication Certificates shall not be subject to multi-person control.

6.2.3 Private Key escrow

(a) Key Escrow shall not be used for the DCCKICA.

6.2.4 Private Key backup

(a) The DCCKICA shall back up the DCCKICA Private Keys using multi-person control and shall protect all copies in the same manner as the originals, and in accordance with provisions set out within the DCCKI CPS.

(b) The backup shall be available for use during disaster recovery as described within the DCCKI CPS.

6.2.5 Private Key archival

(a) Private Key archival shall not be implemented for the DCCKICA.

6.2.6 Private Key transfer into or from a Cryptographic Module

(a) The DCCKICA shall ensure that no DCCKICA Private Key is transferred or copied other than:

(i) for the purposes of:

(1) backup;

(2) restoration; or

(3) addition of new hardware, software, or firmware to a Cryptographic Module; and

(ii) in any event, in accordance a level of protection that is compliant with FIPS 140-2 Level 3 or an equivalent cryptographic standard.

(b) The DCCKICA shall ensure that Private Keys associated with Personnel Authentication Certificates:

i. are transferred from the DCCKICA Systems to the systems of DCCKI Eligible Subscribers in a PKCS#12 format and protected with a password; and

ii. following such transfer, that any copies held are verifiably destroyed by the DCCKICA.

(c) The DCCKICA shall ensure that Private Keys associated with Personnel Authentication Certificates for use by Administration Users are generated on a Personal Identity Verification (PIV) compliant Smart Card Token.

6.2.7 Private Key Storage on Cryptographic Module

(a) The DCCKICA shall ensure that DCCKICA Private Keys are stored within the cryptographic boundary of a Cryptographic Module configured to be complaint with FIPS 140-2 Level 3 or an equivalent cryptographic standard.

6.2.8 Method of Activating Private Key

(a) The DCCKICA shall ensure that:

(i) the Cryptographic Module in which any DCCKICA Private Key is stored may be accessed only by an authorised member of DCCKICA Personnel; and

(ii) the requirements of the Cryptographic Module, including switching on and authenticating themselves to the Cryptographic Module shall be undertaken by the DCCKICA Personnel.

6.2.9 Method of deactivating Private Key

(a) The DCCKICA shall ensure that any DCCKICA Private Keys shall be capable of being deactivated by means of the DCCKICA Systems, at least by:

(i) the actions of:

(1) turning off the power;

(2) logging off; or

(3) carrying out a system reset;

or;

(ii) following key changeover in accordance with procedures defined in Part 5.6 of this Policy.

6.2.10 Method of destroying Private Key

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions for a set of procedures covering the destruction of DCCKICA Private Keys and Private Keys associated with Personnel Authentication Certificates delivered to User Personnel of DCCKI Eligible Subscribers. These shall be in accordance with the guidelines provided by the cryptographic manufacturer and compliant with UK Government publication 'IS4 - Management of Cryptographic Systems' or an equivalent cryptographic standard.

(b) The DCCKI CPS shall incorporate provisions for procedures for secure back up of cryptographic material.

(c) Positive decisions on significant key management life cycle events shall be managed directly by the DCCKI PMA.

(d) DCCKI Subscribers shall ensure that their User Information Security Management System includes procedures in relation to the secure management of all Secret Key Material provided to them by the DCCKICA in relation to this Policy. Such procedures shall in particular make provision for:

(i) the security of that Secret Key Material throughout the whole of its lifecycle from its generation to the revocation of the DCCKI Certificate associated with the Secret Key Material; and

(ii) the destruction of any Smart Card Token beyond reasonable use once it is no longer to be used, in accordance with this Policy or as otherwise set out in the Code.

6.2.11 Cryptographic module rating

(a) Any Cryptographic Module used in support of the DCCKICA Systems shall meet the module rating specified within Parts 6.2.1 and 6.2.7 of this Policy.

6.3 Other aspects of Key Pair management

6.3.1 Public Key archival

(a) Public Key archival shall be managed in accordance with Part 5.5 of this Policy and in line with DCCKI Repository management requirements as detailed within the DCCKI CPS.

6.3.2 Certificate operational periods and Key Pair usage periods

(a) Annex B to this Policy specifies the detail for Key Pair usage, Validity Period and categories.

(b) The DCCKICA shall ensure that the Validity Period of each DCCKI Certificate Issued by it shall be as follows:

(i) in the case of a Root DCCKICA Certificate, 20 years;

(ii) in the case of a EII DCCKICA Certificate, or UI DCCKICA Certificate, 10 years; and

(iii) in the case of a DCCKI Infrastructure Certificate or Personnel Authentication Certificate, 3 years.

(c) The DCCKICA shall ensure that no DCCKICA Private Key can be used after the end of the Validity Period of the DCCKICA Certificate containing the Public Key which is associated with that Private Key.

6.4 Activation Data

6.4.1 Activation data generation and installation

(a) The DCCKICA shall ensure that any Cryptographic Module within which a DCCKICA Private Key is held has Activation Data that apply sufficient security protection to protect that DCCKICA Private Key.

(b) Activation Data pertaining to the DCCKICA Private Key Material shall:

(i) have access controls applied as defined within the DCCKI CPS;

(ii) have key management lifecycle procedures applied as defined within the DCCKI CPS; and

(iii) have records generated, logged and archived on generation and each invocation.

6.4.2 Activation data protection

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to the physical and logical controls to be employed to protect activation data.

6.5 Computer security controls

6.5.1 Specific computer security technical requirements

(a) The DCC Information Security Management System shall define security technical requirements according to a risk assessment and risk treatment plan, or following corrective action that may result from an audit or IT health check service, which shall be undertaken by a CESG CHECK service provider.

6.5.2 Computer security rating

(a) This Policy makes no stipulation in relation to computer security rating.

6.6 Life cycle technical controls

6.6.1 System development controls

(a) The DCCKICA shall ensure that the DCCKI CPS makes provision regarding controls in relation to development of the DCCKICA Systems; and

(b) any such development of the DCCKICA Systems shall be made in accordance with DCC secure development policy as defined within the DCC Information Security Management System.

6.6.2 Security management controls

(a) The DCCKICA shall ensure that the DCCKI CPS, incorporates provisions which are designed to ensure that the DCCKICA Systems satisfy the requirements of Section G2 (System Security: Obligations on the DCC) and Section G5 (Information Security: Obligations on the DCC and Users) of the Code.

6.6.3 Life cycle security controls

(a) See Part 6.6.2 of this Policy.

6.7 Network security controls

6.7.1 Protection against attack

(a) The DCCKICA shall ensure that the DCCKICA systems are protected against attack in accordance with provisions made in the DCCKI CPS and by at least the following means:

(i) continual protective monitoring shall be enforced; and

(ii) access to the systems shall be on a least privilege principle for access.

(b) The DCCKICA Systems shall be designed and operated so as to detect and prevent:

(i) Denial of Service Events; and

(ii) unauthorised attempts to connect to them.

6.7.2 Health Check of DCCKICA Systems

(a) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions for periodically scheduled assessments of the DCCKICA Systems by a CESG CHECK service provider to form part of the input to the risk management process.

6.8 Time-stamping

6.8.1 Use of time-stamping

(a) The DCCKICA shall ensure Time-Stamping takes place in relation to all DCCKI Certificates and other DCCKI activities that require an accurate record of time.

(b) The DCCKICA shall ensure that the DCCKI CPS incorporates provisions in relation to the time source and mechanisms used by any Time-Stamping Authority in relation to any Time-Stamping on behalf of the DCCKICA.

7 CERTIFICATE, CRL, AND OCSP PROFILES

7.1 Certificate profile

(a) The DCCKICA shall only issue certificates in accordance with the DCCKI Certificate Profiles in Annex B of this Policy for Service Users and the DCCKI Certificate Profiles in Annex C of the DCCKI CPS for Service Providers.

7.1.1 Version number(s)

(a) The version field in the DCCKI Certificates shall have a value of 2, indicating X.509v3 certificates.

7.1.2 Certificate extensions

(a) In compliance with RFC 5280, the inclusion of the following certificate extensions shall be utilised:

(i) authorityKeyIdentifier NOT CRITICAL;

(ii) authorityInfoAccess NOT CRITICAL, for EII DCCKICA Certificates, DCCKI Infrastructure Certificates and Personnel Authentication Certificates only;

(iii) basicConstraints CRITICAL;

(iv) extKeyUsage NOT CRITICAL;

(v) keyUsage CRITICAL;

(vi) certificatePolicies NOT CRITICAL;

(vii) cRLDistributionPoints NOT CRITICAL;

(viii) subjectAltName NOT CRITICAL;

(ix) subjectKeyIdentifier NOT CRITICAL.

7.1.3 Algorithm object identifiers

(a) No stipulation.

7.1.4 Name forms

(a) The DCCKI CPS sets out the name forms utilised.

7.1.5 Name constraints

(a) The DCCKI CPS sets out the applicable Name Constraints.

7.1.6 Certificate policy object identifier

(a) No stipulation.

7.1.7 Usage of Policy Constraints extension

[Not applicable].

7.1.8 Policy qualifiers syntax and semantics

[Not applicable].

7.1.9 Processing semantics for the critical Certificate Policies extension

[Not applicable].

7.2 CRL profile

7.2.1 Version number(s)

(a) The version field in the certificate shall state 1, indicating X.509v2 CRL.

7.2.2 CRL and CRL entry extensions

(a) No stipulation.

7.3 OCSP profile

(a) The DCCKICA shall not employ an OCSP.

7.3.1 Version number(s)

[Not applicable].

7.3.2 OCSP extensions

[Not applicable].

8 COMPLIANCE AUDIT AND OTHER ASSESSMENTS

(a) The DCC Information Security Management System shall include provisions relating to the compliance and audit of the DCCKICA, and DCCKICA Systems that shall be in accordance with relevant provisions made in Section G (Security) of the Code.

8.1 Frequency or circumstances of assessment

(a) The DCCKICA shall be subject to assessment schedules set out in the DCC Information Security Management System, with such assessments taking place at least annually.

8.2 Identify/qualifications of assessor

(a) In accordance with the DCC Information Security Management System, the DCCKICA shall be subject to independent assessment by a UKAS approved certification body whose qualifications shall include ISO/IEC 27001 Lead Audit and IRCA Registration.

8.3 Assessor's relationship to assessed entity

(a) Any UKAS approved certification body carrying out independent assessments shall be subject to UKAS scrutiny with regards to independence of the chosen assessor.

8.4 Topics covered by assessment

(a) The DCC Information Security Management System shall cover all aspects of the DCCKI Service and the DCCKI Repository Service, including but not limited to:

(i) the DCCKI Repository;

(ii) the Root DCCKICA;

(iii) the UI DCCKICA;

(iv) the EII DCCKICA;

(v) The DCCCKI Registration Authority;

(vi) Cryptographic Modules relied upon in support of the service; and

(vii) this Policy and its supporting DCCKI RAPP and DCCKI CPS.

8.5 Actions taken as a result of deficiency

(a) Any deficiencies identified through third party assessment, internal audit or IT health check shall be raised by DCC as non-conformances and be processed through risk assessment and processes defined within the DCC Information Security Management System.

8.6 Communication of results

(a) The DCCKICA shall make the results of corrective action available to the DCCKI PMA.

9 OTHER BUSINESS AND LEGAL MATTERS

(a) In so far as provision is made in relation to all the matters referred to in this Part, it is found in the DCC Licence and the provisions of the Code.

9.1 Fees

[Not applicable].

9.1.1 Certificate Issuance or renewal fees

[Not applicable].

9.1.2 Device certificate access fees

[Not applicable].

9.1.3 Revocation or status information access fees

[Not applicable].

9.1.4 Fees for other services

[Not applicable].

9.1.5 Refund policy

[Not applicable].

9.2 Financial responsibility

9.2.1 Insurance coverage

(a) See the statement at the beginning of this Part.

9.2.2 Other assets

(a) See the statement at the beginning of this Part.

9.2.3 Insurance or warranty coverage for subscribers and subjects

(a) See the statement at the beginning of this Part.

9.3 Confidentiality of business information

9.3.1 Scope of confidential information

(a) See the statement at the beginning of this Part.

9.3.2 Information not within the scope of confidential information

(a) See the statement at the beginning of this Part.

9.3.3 Responsibility to protect confidential information

(a) See the statement at the beginning of this Part.

9.4 Privacy of personal information

9.4.1 Privacy plan

(a) See the statement at the beginning of this Part.

9.4.2 Information treated as private

(a) See the statement at the beginning of this Part.

9.4.3 Information not deemed private

(a) See the statement at the beginning of this Part.

9.4.4 Responsibility to protect private information

(a) See the statement at the beginning of this Part.

9.4.5 Notice and consent to use private information

(a) See the statement at the beginning of this Part.

9.4.6 Disclosure pursuant to judicial or administrative process

(a) See the statement at the beginning of this Part.

9.4.7 Other information disclosure circumstances

(a) See the statement at the beginning of this Part.

9.5 Intellectual property rights

(a) See the statement at the beginning of this Part.

9.6 Representations and warranties

9.6.1 CA representations and warranties

(a) See the statement at the beginning of this Part.

9.6.2 RA representation and warranties

(a) See the statement at the beginning of this Part.

9.6.3 Subscriber representations and warranties

(a) See the statement at the beginning of this Part.

9.6.4 Relying party representations and warranties

(a) See the statement at the beginning of this Part.

9.7 Representations and warranties of other participants

(a) See the statement at the beginning of this Part.

9.8 Disclaimers of warranties

(a) See the statement at the beginning of this Part.

9.9 Limitations of liability

(a) See the statement at the beginning of this Part.

9.10 Indemnities

(a) See the statement at the beginning of this Part.

9.11 Term and termination

9.11.1 Term

(a) See the statement at the beginning of this Part.

9.11.2 Termination

(a) See the statement at the beginning of this Part.

9.11.3 Effect of termination and survival

(a) See the statement at the beginning of this Part.

9.12 Individual notices and communications with participants

(a) See the statement at the beginning of this Part.

9.13 Amendments

9.13.1 Procedure for amendment

(a) See the statement at the beginning of this Part.

9.13.2 Notification mechanism and period

(a) See the statement at the beginning of this Part.

9.13.3 Circumstances under which OID must be changed

(a) See the statement at the beginning of this Part.

9.14 Dispute resolution provisions

(a) See the statement at the beginning of this Part.

9.15 Governing law

(a) See the statement at the beginning of this Part.

9.16 Compliance with applicable law

(a) See the statement at the beginning of this Part.

9.17 Miscellaneous provisions

9.17.1 Entire agreement

(a) See the statement at the beginning of this Part.

9.17.2 Assignment

(a) See the statement at the beginning of this Part.

9.17.3 Severability

(a) See the statement at the beginning of this Part.

9.17.4 Enforcement (attorneys' fees and waiver of rights)

(a) See the statement at the beginning of this Part.

9.17.5 Force Majeure

[Not applicable].

9.18 Other provisions

(a) See the statement at the beginning of this Part.

ANNEX A

DEFINED TERMS

In this Policy, except where the context otherwise requires:

- expressions defined in Section A (Definitions and Interpretation) of the Code have the same meaning as is set out in that section;
- the expressions in the left hand column below shall have the meanings given to them in the right hand column below; and
- where any expression is defined in Section A (Definitions and Interpretation) of the Code and in this Annex, the definition in this Annex shall take precedence for the purposes of the Policy.

Definitions for this Policy

Administration User	has the meaning given to the term Administration User in Appendix AI of the Code (Self Service Interface Code of Connection)
Archive	means the archive of Data created in accordance with Part 5.5.1 of this Policy (and "Archives" and "Archived" shall be interpreted accordingly)
Audit Log	means the audit log created in accordance with Part 5.4.1 of this Policy
Authentication	means the process of establishing that an individual, DCCKI Certificate, system or organisation is who or what they or it claims or is claimed to be (and “Authenticate” shall be interpreted accordingly)
Business Continuity and Disaster Recovery Procedure	means that part of the Incident Management Policy which describes the business continuity and disaster recovery procedures applicable to the DCCKI Services.
Certificate Re-Key	means a change to the Public Key contained within a Certificate bearing a particular serial number.
DCCKI Authorised Responsible Officer (or **DCCKI ARO)**	means an individual that has successfully completed the process for becoming (and remains) a DCCKI ARO on behalf of a Party or RDP in accordance with the DCCKI RAPP.
DCCKI Authorised Subscriber	means (in relation to DCCKICA Certificates), the DCC or (in relation to DCCKI Infrastructure Certificates and Personnel Authentication Certificates), a Party or Registration Data Provider that: i. has successfully completed the enrolment procedures to become a DCCKI Authorised Subscriber as set out in the DCCKI RAPP; ii. continues to have at least one (1) DCCKI SRO currently appointed in accordance with the procedures set out in the DCCKI RAPP; iii. continues to have at least one (1) DCCKI ARO currently appointed in accordance with the procedures set out in the DCCKI RAPP; iv. has not ceased to be a DCCKI Authorised Subscriber in accordance with any other provision of the Code and in the case of the DCC only, subject to any alternative provisions in the DCCKI CPS.
DCCKI Authority Revocation List (or DCCKI ARL)	means a list, produced by the Root DCCKICA, of all EII DCCKICA Certificates that have been revoked in accordance with this Policy.
DCCKI Certificate	has the meaning given to that expression in Part 1.1 of this Policy
DCCKI Certificate Profile	means a table bearing that title in Annex B to this Policy and specifying the parameters to be contained within a DCCKI Certificate

DCCKI Certificate Revocation Request	means a request for the revocation of a DCCKI Certificate by the DCCKICA, submitted by the DCCKI Subscriber for that DCCKI Certificate to the DCCKICA in accordance with the DCCKI RAPP and this Policy.
DCCKI Certification Authority (or DCCKICA)	means the Certification Authority for the DCCKI, meaning the DCC, acting in this capacity and exercising the functions of a. the Root DCCKICA; b. the EI DCCKICA; c. the UI DCCKICA; and d. the DCCKI Registration Authority.
DCCKI Infrastructure Certificate	means a certificate in the form set out in the DCCKI Infrastructure certificate profile in accordance with Annex B to this Policy, and Issued by the EII DCCKICA in accordance with this Policy or the DCCKI CPS for the purposes set out in Part 1.4.1 (e) of this Policy.
DCCKI Policy Management Authority (or DCCKI PMA)	means the DCC acting in this capacity for the purposes of administering this Policy and related matters.
DCCKI Registration Authority	means the DCCKI CA exercising the function of receiving and processing DCCKI Certificate Signing Requests and Personnel Authentication Certificate Applications made in accordance with the DCCKI RAPP.
DCCKI Registration Authority Manager	means any person who may be identified as such in accordance with the DCCKI RAPP.
DCCKI Registration Authority Personnel	means those persons who are engaged by the DCC, in so far as such persons carry out, or are authorised to carry out, any function of the DCCKI Registration Authority.
DCCKI Senior Responsible Officer (or **DCCKI SRO)**	means an individual that has successfully completed the process for becoming (and remains) a DCCKI SRO on behalf of a Party, or RDP in accordance with the DCCKI RAPP.
DCCKICA Certificate	means, as the context requires, either: (a) the Root DCCKICA Certificate; (b) an EII DCCKICA Certificate; or (c) an UI DCCKICA Certificate.
DCCKICA Personnel	means those persons who are engaged by the DCC, in so far as such persons carry out, or are authorised to carry out, any function of the DCCKICA.
DCCKICA Private Key	means a Private Key which is stored by the DCCKICA acting in its capacity as either the Root DCCKICA, the EII DCCKICA or the UI DCCKICA.
DCCKICA Systems	means the Systems used by the DCCKICA in relation to the DCCKI Services.

EII DCCKICA	means the External Infrastructure Issuing Authority, being a subordinate Issuing Authority for the DCCKICA whose functions are carried out by the DCCKICA.
EII DCCKICA Certificate	means a certificate of the form set out in the EII DCCKICA Certificate DCCKI Certificate Profile in accordance with Annex B to this Policy, and Issued by the Root DCCKICA to the EII DCCKICA in accordance with this Policy.
EII DCCKICA Certificate Revocation List (or EII DCCKICA CRL)	means a list, produced by the EII DCCKICA, of all DCCKI Infrastructure Certificates that have been revoked in accordance with this Policy.
EII DCCKICA Private Key	means a Private Key which is stored and managed by the DCCKICA acting in its capacity as the EII DCCKICA.
EII DCCKICA Public Key	means the Public Key of a Key Pair related to a EII DCCKICA Certificate.
Identity Provider Service	has the meaning given to that term in the Self Service Interface Code of Connection.
IRCA	International Register of Certificated Auditors, a professional body for management system auditors.
Issue	means the act of the DCCKICA acting in accordance with this Policy, and in its capacity as the Root DCCKICA, the EII DCCKICA or the UI DCCKICA as the context requires, of creating and signing a Certificate which contains the information set out in the relevant DCCKI Certificate Profile in Annex B to this Policy (and “Issuance”, “Issued” and “Issuing” shall be interpreted accordingly).
Key Escrow	means the storage of a Private Key by a person other than the Subscriber or Subject of the Certificate which contains the related Public Key.
Object Identifier (or **OID**)	means an object identifier assigned by the Internet Address Naming Authority.
Personal Identity Verification	a Smart Card Token compliant with Federal Information Processing Standard (FIPS) 201.
Personnel Authentication Certificate	means a certificate in the form set out in the Personnel Authentication Certificate DCCKI Certificate Profile in Annex B to this Policy, and Issued by the UI DCCKICA in accordance with this Policy.
Personnel Authentication Certificate Application	means an application for a Personnel Authentication Certificate made via the Personnel Credentials Interface.

Personnel Credentials Interface	means the interface that allows for the activation of user accounts, the submission of Personnel Authentication Certificate Applications, and the provision of Personnel Authentication Certificates to persons.
Private Key Material	in relation to a Private Key, means that Private Key and the input parameters necessary to establish, use and maintain it.
Root DCCKICA	means the DCC exercising the function of Issuing the Root DCCKI Certificate and other DCCKI CA Certificates to the EI DCCKICA and UIDCCKI, and storing and managing Private Keys associated with that function.
Root DCCKICA Certificate	means a certificate of the form set out in the Root DCCKI Certificate DCCKI Certificate Profile in accordance with Annex A of this Policy and self-signed, and Issued, by the Root DCCKICA in accordance with this Policy.
Root DCCKICA Private Key	means the Private Key which is stored and managed by the DCCKICA acting in its capacity as the Root DCCKICA.
Root DCCKICA Public Key	means the Public Key of a Key Pair related to the Root DCCKICA Certificate.
SAML	means Security Assertion Markup Language, being a standard that allows secure web domains to exchange user authentication and authorisation data.
Security Related Functionality	means the functionality of the DCCKICA Systems which is designed to detect, prevent or mitigate the adverse effect of any Compromise of those Systems.
Smart Card Token	a physical security device used to assist authentication of User Personnel
Subject	means: a. in relation to a DCCKI Infrastructure Certificate, the Organisation identified in the 'Subject Name' field of the DCCKI Infrastructure Certificate DCCKI Certificate Profiles in Annex B to this Policy; b. in relation to a Personnel Authentication Certificate, the person identified in the 'Subject Name' field of the Personnel Authentication Certificate DCCKI Certificate profile in Annex B to this Policy; or c. in relation to an DCCKICA Certificate, the globally unique name of the Root DCCKICA, EII DCCKICA, or UI DCCKICA as identified in the 'Subject' field of the relevant DCCKI Certificate Profile in Annex B to this Policy.
Time-Stamping	means the act that takes place when a Time-Stamping Authority, in relation to a DCCKI Certificate, stamps a particular datum with an accurate indicator of the time (in hours, minutes and seconds) at which the activity of stamping takes place.

Time-Stamping Authority	means that part of the DCCKICA that: a. where required, provides an appropriately precise time-stamp in the format required by this Policy; and b. relies on a time source that is: i. accurate; ii. determined in a manner that is independent of any other part of the DCCKICA Systems; and iii. such that the time of any time-stamp can be verified to be that of the Independent Time Source at the time at which the time-stamp was applied.
Transport Layer Security (or TLS)	means TLS in accordance with the relevant SMKI PMA and SSC Guidance (Standards, Procedures and Guidelines) published on the SEC website
UI DCCKICA	means the User Issuing Authority, being a subordinate Issuing Authority for the DCCKICA whose functions are carried out by the DCCKICA.
UI DCCKICA Certificate	means a certificate in the form set out in the UI DCCKICA Certificate DCCKI Certificate Profile in accordance with Annex B to this Policy, and Issued by the Root DCCKICA to the UI DCCKICA in accordance with this Policy.
UI DCCKICA Private Key	means a Private Key which is stored and managed by the DCCKICA acting in its capacity as the UI DCCKICA.
UI DCCKICA Public Key	means the Public Key of a Key Pair related to a UI DCCKICA Certificate.
Validity Period	means, in respect of a DCCKI Certificate, the period of time for which that DCCKI Certificate is intended to be valid.

ANNEX B

DCCKI CERTIFICATE PROFILES

End Entity Certificate Structure and Contents

This Annex B sets out requirements as to structure and content with which DCCKICA Certificates, DCCKI Infrastructure Certificates, and Personnel Authentication Certificates shall comply. All terms in this Annex shall, where not defined in the Code, this Policy, or the GB Companion Specification, have the meanings in and IETF RFC 5280.

Common Requirements applicable to all DCCKI Certificates

All DCCKI Certificates that are validly authorised within the DCCKI shall:

- Be an X.509 v3 certificate;

- Have a Serial number of no more than 20 octets;
- have a valid notBefore field consisting of the time of issue, encoded as in section 4.1.2.5 of RFC 5280;
- have a fixed expiration date in the notAfter field, encoded as in section 4.1.2.5 of RFC 5280; and
- Contain an authorityKeyIdentifier and subjectKeyIdentifier in the form [0] KeyIdentifier. This extension shall be marked as non-critical, and calculated using method 2 of section 4.2.1.2 of RFC 5280.

Requirements applicable to DCCKI Infrastructure Certificates only

A DCCKI Infrastructure Certificate that is Issued by the EII DCCKICA for the purposes of establishing Transport Layer Security (TLS) and File Transfer Protocol over TLS (FTPS) communications over a DCC Gateway Connection shall:

- have a keyUsage extension (as per section 4.2.1.3 of RFC 5280) with a value of digitalSignature, and keyEncipherment. This extension shall be marked as critical (as per section 4.2.1.3 of RFC 5280);
- have an extendedKeyUsage extension (as per section 4.2.1.12 of RFC 5280) with a value of id-kp-serverAuth and id-kp-clientAuth. This extension shall be marked as non-critical;
- contain a single policyIdentifier in the certificatePolicies extension that refers to the OID for the DCCKI Certificate Policy; and
- have a Validity Period of 3 years.

A DCCKI Infrastructure Certificate that is Issued by the EII DCCKICA for the purposes of establishing SAML assertions to the DCC shall:

- have a keyUsage extension (as per section 4.2.1.3 of RFC 5280) with a value of digitalSignature, this extension shall be marked as critical (as per section 4.2.1.3 of RFC 5280);
- contain a single policyIdentifier in the certificatePolicies extension that refers to the OID for the DCCKI Certificate Policy; and
- have a Validity Period of 3 years.

Requirements Applicable to Personnel Authentication Certificates (ordinary users) only

Personnel Authentication Certificates that are issued by the UI DCCKICA for the purposes of Authenticating User Personnel to the Self Service Interface shall:

- have a keyUsage extension (as per section 4.2.1.3 of RFC 5280) with a value of digitalSignature. This extension shall be marked as critical (as per section 4.2.1.3 of RFC 5280);
- contain a single policyIdentifier in the certificatePolicies extension that refers to the OID for the DCCKI Certificate Policy;
- contain an authorityKeyIdentifier in the form [0] KeyIdentifier. This shall be generated using method (2) of section 4.2.1.2 of RFC 5280. This extension shall be marked as non-critical;

- include the Subject name as a meaningful name or other means of identifying an individual as provided by the DCCKI Eligible Subscriber; and
- have a Validity Period of 3 years.

Requirements Applicable to Personnel Authentication Certificates only

Personnel Authentication Certificates that are issued by the UI DCCKICA for the purposes of Authenticating Administration Users to the Self Service Interface shall:

- have a keyUsage extension (as per section 4.2.1.3 of RFC 5280) with a value of digitalSignature. This extension shall be marked as critical (as per section 4.2.1.3 of RFC 5280);
- contain a two policyIdentifier in the certificatePolicies extension that refers to the OID for the DCCKI Certificate Policy and the OID for validation policy of the Smart Card Token PIV Authentication Key;
- contain an authorityKeyIdentifier in the form [0] KeyIdentifier. This shall be generated using method (2) of section 4.2.1.2 of RFC 5280. This extension shall be marked as non-critical;
- include the Subject name as a meaningful name or other means of identifying an individual as provided by the DCCKI Eligible Subscriber; and
- have a Validity Period of 3 years.

Requirements Applicable to EII DCCKICA and UI DCCKICA Certificates only

An EII DCCKICA Certificate or UI DCCKICA Certificate issued by the Root DCCKICA shall:

- have a keyUsage extension (as per section 4.2.1.3 of RFC 5280) with a value of keyCertSign, Offline CRL Signing and cRLSign. This extension shall be marked as critical (as per section 4.2.1.3 of RFC 5280);
- contain at least one policyIdentifier in the certificatePolicies extension that refers to the OID for the DCCKI Certificate Policy;
- contain the basicConstraints extension, with values cA=True, and pathLen=0. This extension shall be marked as critical; and
- have a Validity Period of 10 years.

Requirements Applicable to Root DCCKICA Certificates only

Root DCCKICA Certificates that are issued by the Root DCCKICA shall:

- have a keyUsage extension (as per section 4.2.1.3 of RFC 5280) with a value of keyCertSign, Offline CRL Signing and cRLSign. This extension shall be marked as critical (as per section 4.2.1.3 of RFC 5280);
- contain a single policyIdentifier in the certificatePolicies extension that refers to the OID for anyPolicy;

- contain the basicConstraints extension, with values cA=True, and pathLen absent (unlimited). This extension shall be marked as critical; and
- have a Validity Period of 20 years.

DCCKI Infrastructure Certificate DCCKI Certificate Profile for the purposes of establishing TLS Communications

Field Name	RFC 5759/5280 Type	Value	Reference
Version	Integer	V3	
serialNumber	Integer	calculated by CA	
signatureAlgorithm		rsa-withSHA256	
Issuer	Name	CN= EII DCCKICA, O=DCC, C=UK	
notBefore	Time	Calculated by CA as time of issue	
notAfter	Time	Calculated by CA as not before + 3 years	
Subject	Name	CN=<FQDN>, O= Party or RDP Signifier, C=UK	
subjectPublicKeyInfo		RSA	
keyLength		2048 bits

Interpretation

Version

The version of the X.509 DCCKI Infrastructure Certificate. DCCKI Infrastructure Certificates shall identify themselves as version 3.

serialNumber

DCCKI Infrastructure Certificate serial number, a positive integer of no more than 20 octets. The Serial Number identifies the DCCKI Infrastructure Certificate, and shall be created by the Issuing EII DCCKICA that signs the DCCKI Infrastructure Certificate. The Serial Number shall be unique in the scope of DCCKI Infrastructure Certificates signed by the Issuing EII DCCKICA.

signatureAlgorithm

The identity of the signature algorithm used to sign the DCCKI Infrastructure Certificate. The field shall be rsa-with-SHA256 as defined in NIST FIPS 180-4.

Issuer

The name of the signer of the DCCKI Infrastructure Certificate. This will consist of the Country (C), Organisation Name (O) which will be DCC and a Common Name (CN) which will be EII DCCKICA (as defined in the EII DCCKICA Certificate profile).

Validity

The time period over which the EII DCCKICA expects the DCCKI Infrastructure Certificate to be valid. The validity period is the period of time from notBefore through notAfter, inclusive.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Time up to and including 23:59:59 December 31, 2049 UTC shall be encoded as UTCTime as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as GeneralizedTime as YYYYMMDDHHmmssZ.

notBefore

The earliest time a DCCKI Infrastructure Certificate may be used. This shall be the time the DCCKI Infrastructure Certificate is created.

notAfter

The latest time a DCCKI Infrastructure Certificate is expected to be used. The value in a notAfter field shall be treated as specified in RFC 5280.

Subject

The formatting of this field shall contain a unique X.500 Distinguished Name (DN). This shall consist of the Country (C), the Organisation Name (O) which will be the Party Signifier or RDP Signifier of the DCCKI Subscriber who is also a SMKI Subscriber and a Common Name (CN) which will be the Fully Qualified Domain Name of the DCCKI Subscriber.

subjectKeyPublicInfo

The Key Algorithm shall be RSA as defined in NIST FIPS 186-4.

keyLength

The Key length shall be RSA 2048 bits.

Extensions

DCCKI Infrastructure Certificates MUST contain the extensions described below. They SHOULD NOT contain any additional extensions:

- authorityKeyIdentifier
- subjectKeyIdentifier
- applicationPolicies
- keyUsage: critical
- certificatePolicies: non critical
- extendedKeyUsage: non-critical
- cRLDistributionPoint
- authorityInfoAccess

authorityKeyIdentifier

A key identifier calculated using method 2 of section 4.2.1.2 of RFC 5280.

subjectKeyIdentifier

Calculated using method 2of section 4.2.1.2 of RFC 5280.

keyUsage

As per RFC 5280 section 4.2.1.3 with a value of digitalSignature, and keyEncipherment.

certificatePolicies

Contain a single policyIdentifier in the certificatePolicies extension that refers to the OID for the DCCKI Certificate Policy.

extendedKeyUsage

This shall be an extendedKeyUsage extension (as per section 4.2.1.12 of RFC 5280) with a value of id-kp-serverAuth and id-kp-clientAuth. This extension shall be marked as non-critical.

applicationPolicies

This shall be populated with the following policy identifies, Server Authentication and Client Authentication. This extension shall be marked as non-critical.

cRLDistributionPoint

URI string, which shall identify the URL of the EII DCCKICA CRL within the DCCKI Repository. This extension shall be marked as non-critical.

authorityInfoAccess

URI string, which shall identify where to access information and services for the EII DCCKICA within the DCCKI Repository. This extension will be marked as non-critical.

Interpretation

Version

The version of the X.509 DCCKI Infrastructure Certificate. DCCKI Infrastructure Certificates shall identify themselves as version 3.

serialNumber

DCCKI Infrastructure Certificate serial number, a positive integer of no more than 20 octets. The Serial Number identifies the DCCKI Infrastructure Certificate, and shall be created by the Issuing EII DCCKICA that signs the DCCKI Infrastructure Certificate. The Serial Number shall be unique in the scope of DCCKI Infrastructure Certificates signed by the Issuing EII DCCKICA.

signatureAlgorithm

The identity of the signature algorithm used to sign the DCCKI Infrastructure Certificate. The field shall be rsa-with-SHA256 as defined in NIST FIPS 180-4.

Issuer

The name of the signer of the DCCKI Infrastructure Certificate. This will consist of the Country (C), Organisation Name (O) which will be DCC and a Common Name (CN) which will be EII DCCKICA (as defined in the EII DCCKICA Certificate profile).

Validity

The time period over which the EII DCCKICA expects the DCCKI Infrastructure Certificate to be valid. The validity period is the period of time from notBefore through notAfter, inclusive.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Time up to and including 23:59:59 December 31, 2049 UTC shall be encoded as UTC Time as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as Generalized Time as YYYYMMDDHHmmssZ.

notBefore

The earliest time a DCCKI Infrastructure Certificate may be used. This shall be the time the DCCKI Infrastructure Certificate is created.

notAfter

The latest time a DCCKI Infrastructure Certificate is expected to be used. The value in a notAfter field shall be treated as specified in RFC 5280.

Subject

The formatting of this field shall contain a unique X.500 Distinguished Name (DN). This shall consist of a Common Name (CN) shall be populated with the Party Signifier or RDP Signifier of the DCCKI Subscriber.

subjectKeyPublicInfo

The Key Algorithm shall be RSA as defined in NIST FIPS 186-4.

keyLength

The Key length shall be RSA 2048 bits.

Extensions

DCCKI Infrastructure Certificates MUST contain the extensions described below. They SHOULD NOT contain any additional extensions:

- authorityKeyIdentifier
- subjectKeyIdentifier
- applicationPolicies
- keyUsage: critical
- certificatePolicies: non critical
- subjectAltName: non-critical
- extendedKeyUsage: non-critical
- cRLDistributionPoint
- authorityInfoAccess

authorityKeyIdentifier

A key identifier calculated using method 2 of section 4.2.1.2 of RFC 5280.

subjectKeyIdentifier

Calculated using method 2of section 4.2.1.2 of RFC 5280.

keyUsage

As per RFC 5280 section 4.2.1.3 with a value of digitalSignature and keyEncipherment.

certificatePolicies

Contain a single policyIdentifier in the certificatePolicies extension that refers to the OID for the DCCKI Certificate Policy.

subjectAltName

Subject Alternative Name (SAN) shall be populated with the Fully Qualified Domain Name (FQDN) of the DCCKI Subscriber pertaining to the service for which the DCCKI Infrastructure Certificate will be used.

extendedKeyUsage

This shall be an extendedKeyUsage extension (as per section 4.2.1.12 of RFC 5280) with a value of id-kp-serverAuth and id-kp-clientAuth. This extension shall be marked as non-critical.

applicationPolicies

This shall be populated with the following policy identifies, Server Authentication and Client Authentication. This extension shall be marked as non-critical

cRLDistributionPoint

URI string, which shall identify the URL of the EII DCCKICA CRL within the DCCKI Repository. This extension shall be marked as non-critical.

authorityInfoAccess

URI string, which shall identify where to access information and services for the EII DCCKICA within the DCCKI Repository. This extension will be marked as non-critical.

DCCKI Infrastructure Certificate DCCKI Certificate Profile for the purposes of establishing SAML assertions

Interpretation

Version

The version of the X.509 DCCKI Infrastructure Certificate. DCCKI Infrastructure Certificates shall identify themselves as version 3.

serialNumber

DCCKI Infrastructure Certificate serial number, a positive integer of no more than 20 octets. The Serial Number identifies the DCCKI Infrastructure Certificate, and shall be created by the Issuing EII DCCKICA that signs the DCCKI Infrastructure Certificate. The Serial Number shall be unique in the scope of DCCKI Infrastructure Certificates signed by the Issuing EII DCCKICA.

signatureAlgorithm

The identity of the signature algorithm used to sign the DCCKI Infrastructure Certificate. The field shall be rsa-with-SHA256 as defined in NIST FIPS 180-4.

Issuer

The name of the signer of the DCCKI Infrastructure Certificate. This will consist of the Country (C), Organisation Name (O) which will be DCC and a Common Name (CN) which will be EII DCCKICA (as defined in the EII DCCKICA Certificate certificate profile).

Validity

The time period over which the EII DCCKICA expects the DCCKI Infrastructure Certificate to be valid. The validity period is the period of time from notBefore through notAfter, inclusive.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Time up to and including 23:59:59 December 31, 2049 UTC shall be encoded as UTCTime as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as GeneralizedTime as YYYYMMDDHHmmssZ.

notBefore

The earliest time a DCCKI Infrastructure Certificate may be used. This shall be the time the DCCKI Infrastructure Certificate is created.

notAfter

The latest time a DCCKI Infrastructure Certificate is expected to be used. The value in a notAfter field shall be treated as specified in RFC 5280.

Subject

The formatting of this field shall contain a unique X.500 Distinguished Name (DN). This shall consist of a Common Name (CN) shall be populated with the Party Signifier of the DCCKI Subscriber.

subjectPublicKeyInfo

The Key Algorithm shall be RSA as defined in NIST FIPS 186-4.

keyLength

The Key length shall be RSA 2048 bits.

Extensions

DCCKI Infrastructure Certificates MUST contain the extensions described below. They SHOULD NOT contain any additional extensions:

- authorityKeyIdentifier.
- subjectKeyIdentifier
- keyUsage: critical
- certificatePolicies: non critical
- cRLDistributionPoint
- authorityInfoAccess

authorityKeyIdentifier

A key identifier calculated using method 2 of section 4.2.1.2 of RFC 5280.

subjectKeyIdentifier

Calculated using method 2 of section 4.2.1.2 of RFC 5280.

keyUsage

As per RFC 5280 section 4.2.1.3 with a value of digitalSignature.

certificatePolicies

Contain a single policyIdentifier in the certificatePolicies extension that refers to the OID for the DCCKI Certificate Policy.

cRLDistributionPoint

URI string, which shall identify the URL of the EII DCCKICA CRL within the DCCKI Repository. This extension shall be marked as non-critical.

authorityInfoAccess

URI string, which shall identify where to access information and services for the EII DCCKICA within the DCCKI Repository. This extension will be marked as non-critical.

		Directory Address: CN=UI DCCKICA
		O=DCC
		C=UK	

Interpretation

Version

The version of the X.509 Personnel Authentication Certificate. Personnel Authentication Certificates shall identify themselves as version 3.

serialNumber

Personnel Authentication Certificate serial number, a positive integer of no more than 20 octets. The Serial Number identifies the Personnel Authentication Certificate, and shall be created by the Issuing UI DCCKICA that signs the Personnel Authentication Certificate. The Serial Number shall be unique in the scope of Personnel Authentication Certificates signed by the Issuing UI DCCKICA.

signatureAlgorithm

The identity of the signature algorithm used to sign the Personnel Authentication Certificate. The field shall be rsa-with-SHA256 as defined in NIST FIPS 180-4.

Issuer

The name of the signer of the Personnel Authentication Certificate. This will consist of the Country (C), Organisation Name (O) which will be DCC and a Common Name (CN) which will be UI DCCKICA (as defined in the UI DCCKICA Certificate certificate profile).

Validity

The time period over which the UI DCCKICA expects the Personnel Authentication Certificate to be valid. The validity period is the period of time from notBefore through notAfter, inclusive.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Time up to and including 23:59:59 December 31, 2049 UTC shall be encoded as UTCTime as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as GeneralizedTime as YYYYMMDDHHmmssZ.

notBefore

The earliest time a Personnel Authentication Certificate may be used. This shall be the time the Personnel Authentication Certificate is created.

notAfter

The latest time a Personnel Authentication Certificate is expected to be used. The value in a notAfter field shall be treated as specified in RFC 5280.

Subject

The formatting of this field shall contain a unique X.500 Distinguished Name (DN). This shall consist of a Common Name (CN) which shall uniquely identify the DCCKI Eligible Subscriber who is the subject of this account and must be consistent with the information held in the User Personnel's SSI account.

subjectKeyPublicInfo

The Public Key algorithm shall be RSA as defined in NIST FIPS 186-4.

keyLength

The Key length shall be RSA 2048 bits.

Extensions

Personnel Authentication Certificates MUST contain the extensions described below. They SHOULD NOT contain any additional extensions:

- authorityKeyIdentifier
- subjectKeyIdentifier
- keyUsage: critical
- certificatePolicies: non critical
- subjectAltName: non-critical
- extendedKeyUsage: non critical
- cRLDistributionPoint
- AuthorityInformationAccess

authorityKeyIdentifier

This shall be in the form [0] KeyIdentifier. This shall be generated using method (2) of section 4.2.1.2 of RFC 5280. This extension shall be marked as non-critical.

subjectKeyIdentifier

Calculated using method 2 of section 4.2.1.2 of RFC 5280.

keyUsage

As per RFC 5280 section 4.2.1.3 with a value of digitalSignature. This extension shall be marked as critical.

certificatePolicies

Contain a single policyIdentifier in the certificatePolicies extension that refers to the OID for the DCCKI Certificate Policy.

subjectAltName

The Personnel Authentication Certificate shall contain a single GeneralName of type OtherName. The OtherName shall be the SSI username of the User Personnel of the DCCKI Eligible Subscriber.

extendedKeyUsage

This shall be an extendedKeyUsage extension (as per RFC 5280 section 4.2.1.12) with a value id-kp-clientAuth. This extension shall be marked as non-critical.

cRLDistributionPoint

This shall identify the directory address of the UI DCCKICA CRL. This extension shall be marked as non-critical.

AuthorityInformationAccess

This shall identify the directory address of the UK DCCKICA Certificate. This extension shall be marked as non-critical.

Interpretation

Version

The version of the X.509 Personnel Authentication Certificate. Personnel Authentication Certificates shall identify themselves as version 3.

serialNumber

Personnel Authentication Certificate serial number, a positive integer of no more than 20 octets. The Serial Number identifies the Personnel Authentication Certificate, and shall be created by the Issuing UI DCCKICA that signs the Personnel Authentication Certificate. The Serial Number shall be unique in the scope of Personnel Authentication Certificates signed by the Issuing UI DCCKICA.

signatureAlgorithm

The identity of the signature algorithm used to sign the Personnel Authentication Certificate. The field shall be rsa-with-SHA256 as defined in NIST FIPS 180-4.

Issuer

The name of the signer of the Personnel Authentication Certificate. This will consist of the Country (C), Organisation Name (O) which will be DCC and a Common Name (CN) which will be UI DCCKICA (as defined in the UI DCCKICA Certificate certificate profile).

Validity

The time period over which the UI DCCKICA expects the Personnel Authentication Certificate to be valid. The validity period is the period of time from notBefore through notAfter, inclusive.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Time up to and including 23:59:59 December 31, 2049 UTC shall be encoded as UTCTime as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as GeneralizedTime as YYYYMMDDHHmmssZ.

notBefore

The earliest time a Personnel Authentication Certificate may be used. This shall be the time the Personnel Authentication Certificate is created.

notAfter

The latest time a Personnel Authentication Certificate is expected to be used. The value in a notAfter field shall be treated as specified in RFC 5280.

Subject

The formatting of this field shall contain a unique X.500 Distinguished Name (DN). This shall consist of a Common Name (CN) which shall be the First and Last name and FQDN to identify the users account of the Eligible DCCKI Subscribe this shall be consistent with the information held in the Administration User's SSI account.

subjectKeyPublicInfo

The Public Key algorithm shall be RSA as defined in NIST FIPS 186-4.

keyLength

The Key length shall be RSA 2048 bits.

Extensions

Personnel Authentication Certificates MUST contain the extensions described below. They SHOULD NOT contain any additional extensions:

- authorityKeyIdentifier
- subjectKeyIdentifier
- keyUsage: critical
- certificatePolicies: non-critical
- subjectAltName: non-critical
- extendedKeyUsage: non-critical
- cRLDistributionPoint
- AuthorityInformationAccess
- 2.16.840.1.101.3.6.9.1 PIV Authentication Identifier

authorityKeyIdentifier

This shall be in the form [0] KeyIdentifier. This shall be generated using method (2) of section 4.2.1.2 of RFC 5280. This extension shall be marked as non-critical.

subjectKeyIdentifier

Calculated using method 2 of section 4.2.1.2 of RFC 5280.

keyUsage

As per RFC 5280 section 4.2.1.3 with a value of digitalSignature. This extension shall be marked as critical (as per RFC 5280 section 4.2.1.3).

certificatePolicies

Contain a policyIdentifier in the certificatePolicies extension that refers to the OID for the DCCKI Certificate Policy and a policyIdentifier with PIV Authentication Key OID.

subjectAltName

The Personnel Authentication Certificate shall contain 2 GeneralName entries of type OtherName. The first OtherName shall be consistent with the SSI username of the Administration User. The second OtherName entry shall contain a UUID which uniquely identifies the DCCKI Eligible Subscriber.

extendedKeyUsage

This shall be an extendedKeyUsage extension (as per RFC 5280 section 4.2.1.12) with a value id-kp-clientAuth and a value of "Smart Card Logon". This extension shall be marked as non-critical.

cRLDistributionPoint

This shall identify the directory address of the UI DCCKICA CRL. This extension shall be marked as non-critical.

AuthorityInformationAccess

This shall identify the directory address of the UI DCCKICA Certificate. This extension shall be marked as non-critical.

2.16.840.1.101.3.6.9.1 PIV Authentication Identifier

Personal Identity Verification (PIV) identifier included in all Personnel Authentication Certificate issued to Administration User.

Interpretation

Version

The version of the X.509 EII DCCKICA Certificate. EII DCCKICA Certificates shall identify themselves as version 3.

serialNumber

EII DCCKICA Certificate serial number, a positive integer of no more than 20 octets. The Serial Number identifies the EII DCCKICA Certificate, and shall be created by the Root DCCKICA that signs the EII DCCKICA Certificate. The Serial Number shall be unique in the scope of DCCKICA Certificates signed by the Root DCCKICA.

signatureAlgorithm

The identity of the signature algorithm used to sign the EII DCCKICA Certificate. The field shall be rsa-with-SHA256 as defined in NIST FIPS 180-4.

Issuer

The name of the signer of the EII DCCKICA Certificate. This will consist of the Country (C), Organisation Name (O) which will be DCC and a Common Name (CN) which will be Root DCCKICA (as defined in the Root DCCKICA Certificate profile).

Validity

The time period over which the Root DCCKICA expects the EII DCCKICA Certificate to be valid. The validity period is the period of time from notBefore through notAfter, inclusive.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Time up to and including 23:59:59 December 31, 2049 UTC shall be encoded as UTCTime as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as GeneralizedTime as YYYYMMDDHHmmssZ.

notBefore

The earliest time an EII DCCKICA Certificate may be used. This shall be the time the EII DCCKICA Certificate is created.

notAfter

The latest time an EII DCCKICA Certificate is expected to be used. The value in a notAfter field shall be treated as specified in RFC 5280.

Subject

The formatting of this field shall contain a unique X.500 Distinguished Name (DN). This shall consist of the Country (C), the Organisation Name (O) which will be DCC and a Common Name (CN) which will be EII DCCKICA.

subjectKeyPublicInfo.

The Public Key algorithm shall be RSA as defined in NIST FIPS 186-4.

keyLength

The keyLength shall be RSA 2048 bits.

Extensions

EII DCCKICA Certificates MUST contain the extensions described below. They SHOULD NOT contain any additional extensions:

- authorityKeyIdentifier.
- subjectKeyIdentifier
- keyUsage: critical

- certificatePolicies: non critical
- basicConstraints: critical.
- cRLDistributionPoint
- authorityInfoAccess

authorityKeyIdentifier

A key identifier calculated using method 2 of section 4.2.1.2 of RFC 5280.

subjectKeyIdentifier

Calculated using method 2 of section 4.2.1.2 of RFC 5280.

keyUsage

The EII DCCKICA Certificate shall have a keyUsage extension (as per section 4.2.1.3 of RFC 5280) with a value of Certificate Signing, Off-line CRL Signing and CRL Signing. This extension shall be marked as critical (as per RFC 5280 section 4.2.1.3).

certificatePolicies

The EII DCCKICA Certificate shall contain at least one policyIdentifier in the certificatePolicies extension that refers to the OID for the DCCKI Certificate Policy.

basicConstraints

The basicConstraints extension shall have the values cA=True, and pathLen=0. This extension shall be marked as critical.

cRLDistributionPoint

URI string, which shall identify the URL of the DCCK ARL within the DCCKI Repository. This extension shall be marked as non-critical.

authorityInfoAccess

URI string, which shall identify where to access information and services for the Root DCCKICA within the DCCKI Repository. This extension will be marked as non-critical.

Interpretation

Version

The version of the X.509 UI DCCKICA Certificate. UI DCCKICA Certificates shall identify themselves as version 3.

serialNumber

UI DCCKICA Certificate serial number, a positive integer of no more than 20 octets. The Serial Number identifies the UI DCCKICA Certificate, and shall be created by the Root DCCKICA that signs the UI DCCKICA Certificate. The Serial Number shall be unique in the scope of DCCKICA Certificates signed by the Root DCCKICA.

signatureAlgorithm

The identity of the signature algorithm used to sign the UI DCCKICA Certificate. The field shall be rsa-with-SHA256 as defined in NIST FIPS 180-4.

Issuer

The name of the signer of the UI DCCKICA Certificate. This will consist of the Country (C), Organisation Name (O) which will be DCC and a Common Name (CN) which will be Root DCCKICA (as defined in the Root DCCKICA Certificate profile).

Validity

The time period over which the Root DCCKICA expects the UI DCCKICA Certificate to be valid. The validity period is the period of time from notBefore through notAfter, inclusive.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Time up to and including 23:59:59 December 31, 2049 UTC shall be encoded as UTCTime as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as GeneralizedTime as YYYYMMDDHHmmssZ.

notBefore

The earliest time a UI DCCKICA Certificate may be used. This shall be the time the UI DCCKICA Certificate is created.

notAfter

The latest time a UI DCCKICA Certificate is expected to be used. The value in a notAfter field shall be treated as specified in RFC 5280.

Subject

The formatting of this field shall contain a unique X.500 Distinguished Name (DN). This shall consist of the Country (C), the Organisation Name (O) which will be DCC and a Common Name (CN) which will be UI DCCKICA.

subjectPublicKeyInfo

The Public Key algorithm shall be RSA as defined in NIST FIPS 186-4.

keyLength

The Key length shall be RSA 2048 bits.

Extensions

UI DCCKICA Certificates MUST contain the extensions described below. They SHOULD NOT contain any additional extensions:

- authorityKeyIdentifier.
- subjectKeyIdentifier
- keyUsage: critical
- certificatePolicies: non critical
- basicConstraints: critical.
- cRLDistributionPoint

authorityKeyIdentifier

A key identifier calculated using method 2 of section 4.2.1.2 of RFC 5280.

subjectKeyIdentifier

Calculated using method 2 of section 4.2.1.2 of RFC 5280.

keyUsage

The UI DCCKICA Certificate shall have a keyUsage extension (as per section 4.2.1.3 of RFC 5280) with a value of Certificate Signing, Off-line CRL Signing and CRL Signing. This extension shall be marked as critical (as per section 4.2.1.3 of RFC 5280).

certificatePolicies

The UI DCCKICA Certificate shall contain at least one policyIdentifier in the certificatePolicies extension that refers to the OID for the DCCKI Certificate Policy.

basicConstraints

The basicConstraints extension shall have the values cA=True, and pathLen=0. This extension shall be marked as critical.

cRLDistributionPoint

LDAP string, which shall refer to the Root DCCKICA ARL. This extension shall be marked as non-critical.

Field Name	RFC 5759/5280 Type	Value	Reference
Version	Integer	V3	

serialNumber	Integer	calculated by CA	
signatureAlgorithm	AlgortithmIdentifier	rsa-with-SHA256	
Issuer	Name	CN= Root DCCKICA, O=DCC, C=UK	
notBefore	Time	Calculated by CA as time of issue	
notAfter	Time	Calculated by CA as not before + 20 years	
Subject	Name	CN=Root DCCKICA, O=DCC, C=UK	
subjectPublicKeyInfo		RSA	
keyLength		4096 bits	
Extensions	Extensions	Critical and non-critical extensions	
authorityKeyIdentifier	KeyIdentifier	Calculated by CA	
subjectKeyIdentifier	KeyIdentifier	Calculated by CA	
keyUsage		Certificate Signing, Off-line CRL Signing and CRL Signing	
certificatePolicies		anyPolicy	
basicConstraints		CA=True, path Length= None	

Interpretation

These certificates are the root of trust for the DCCKI.

Version

The version of the X.509 Root DCCKICA Certificate. Valid Root DCCKICA Certificates shall identify themselves as version 3.

Serial Number

Root DCCKICA Certificate serial number, a positive integer of no more than 20 octets. The Serial Number identifies the Root DCCKICA Certificate, and shall be created by the Root DCCKICA that signs the Root DCCKICA Certificate (self-signed by the Root DCCKICA). The Serial Number shall be unique in the scope of DCCKICA Certificate signed by the Root DCCKICA.

signatureAlgorithm

The identity of the signature algorithm used to sign the Root DCCKICA Certificate. The field shall be rsa-with-SHA256 as defined in NIST FIPS 180-4.

Issuer

The name of the signer of the Root DCCKICA Certificate. This will consist of the Country (C), Organisation Name (O) which will be DCC and a Common Name (CN) which will be Root DCCKICA which will be the same as the Subject Name as it is self-signed by the Root DCCKICA.

Validity

The time period over which the Root DCCKICA expects the Root DCCKICA Certificate to be valid. The validity period is the period of time from notBefore through notAfter, inclusive.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Times up to and including 23:59:59 December 31, 2049 UTC shall be encoded as UTCTime as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as GeneralizedTime as YYYYMMDDHHmmssZ

notBefore

The earliest time a Root DCCKICA Certificate may be used. This shall be the time the Root DCCKICA Certificate is created.

notAfter

The latest time a Root DCCKICA Certificate is expected to be used. The value in a notAfter field shall be treated as specified in RFC 5280.

Subject

The formatting of this field shall contain a unique X.500 Distinguished Name (DN). This shall consist of the Country (C), the Organisation Name (O) which will be DCC and a Common Name (CN) which will be Root DCCKICA.

subjectPublicKeyInfo.

The Public Key algorithm shall be RSA as defined in NIST FIPS 180-6.

keyLength

The keyLength shall be RSA 4096 bits.

Extensions

Root DCCKICA Certificate MUST contain the extensions described below. They SHOULD NOT contain any additional extensions:

- authorityKeyIdentifier.
- subjectKeyIdentifier
- keyUsage: critical
- certificatePolicies: non critical
- basicConstraints: critical.

authorityKeyIdentifier

A keyIdentifier calculated using method 2 of section 4.2.1.2 of RFC 5280.

subjectKeyIdentifier

Calculated using method 2 of section 4.2.1.2 of RFC 5280.

keyUsage

The Root DCCKICA Certificate shall have a keyUsage extension (as per RFC 5280 section 4.2.1.3) with a value of Certificate Signing, Off-line CRL Signing and CRL Signing. This extension shall be marked as critical (as per RFC 5280 section 4.2.1.3).

certificatePolicies

The RootDCCKICA Certificate shall contain only one policyIdentifier which shall be any Policy.

basicConstraints

The basicConstraints extension shall have the values cA=True, and pathLen absent (unlimited). This extension shall be marked as critical.

Version: T3.0

Appendix T

DCCKI Interface Design Specification

Contents

1. INTRODUCTION

Document Purpose

1.1 Pursuant to Section L13.13 of the Code (DCCKI Interface Design Specification), this document is the DCCKI Interface Design Specification (DCCKI IDS).

2. DCCKI SERVICE INTERFACE

Submission of DCCKI Certificate Signing Requests and Issuance of DCCKI Infrastructure Certificates

2.1 In order to request Issuance of a DCCKI Infrastructure Certificate, a Party or RDP that is a DCCKI Eligible Subscriber shall follow the processes defined in the DCCKI RAPP.

2.2 The DCC shall ensure that all DCCKI Certificate Signing Requests are required to be formatted in accordance with the PKCS#10 standard as set out in the DCCKI RAPP. The structure of a DCCKI Certificate Signing Request is defined in section 3 of this DCCKI IDS.

2.3 No further provision is made in this document in relation to requesting and obtaining DCCKI Infrastructure Certificates.

Submission of Personnel Authentication Certificate Applications and Issuance of Personnel Authentication Certificates

2.4 Prior to submitting an initial Personnel Authentication Certificate Application, (but not for any subsequent application), a Party that is a DCCKI Eligible Subscriber in respect of Personnel Authentication Certificates shall submit an Administration User Credentials Request via the approved mechanisms set out in the DCCKI RAPP section 3.19.

2.5 The DCC shall make a Personnel Credentials Interface accessible via the Self Service Interface for the purpose of accessing DCCKI Services in order to obtain a Personnel Authentication Certificate. The DCC shall ensure that:

(a) the Personnel Credentials Interface uses the HTTPS protocol;

(b) the Personnel Credentials Interface uses Java 7, update 6 (or greater);

(c) the Personnel Credentials Interface supports JavaScript, CSS and images;

(d) initial access to the Personnel Credentials Interface will be authorised through use of username and single use password, the provision of which shall be detailed in the DCCKI RAPP and shall be secured by server side authentication using TLS;

(e) subsequent access to the Personnel Credentials Interface is secured by mutual authentication using TLS between the supported browser being used by the DCCKI Eligible Subscriber and the Personnel Credentials Interface;

(f) DCCKI Certificates are used for the TLS authentication and shall support the following cipher suites:

i. ECDHE-RSA-AES256-GCM-SHA384

ii. ECDHE-RSA-AES128-GCM-SHA256

iii. ECDHE-RSA-AES256-SHA384

iv. ECDHE-RSA-AES128-SHA256;

(g) access to the Personnel Credentials Interface is denied without a valid credential for Authentication; and

(h) User Personnel are provided with the means to view and update their password and user account information as set out in the Self Service Interface Access Control Specification.

Issuance of Personnel Authentication Certificates to Administration Users

Initial Issuance of a Personnel Authentication Certificate to Administration Users

2.6 In order to obtain an initial Personnel Authentication Certificate, an Administration User shall log onto the Personnel Credentials Interface via the Self Service Interface using the supplied username, and single use password as provided in accordance with the DCCKI RAPP.

2.7 Upon initial login, the SSI Administration User shall be required to:

(a) change the password for the user account from that provided; and

(b) provide answers to security questions that will subsequently be used to confirm the identity of that Administration User if their password is forgotten, their Personnel Authentication Certificate has expired or the Smart Card Token provided to that Administration User is lost or stolen.

2.8 On successful change of the user account password, the Administration User shall be able to request initialisation of the Smart Card Token which will result in a Personnel Authentication Certificate Application.

2.9 In order to initialise the Smart Card Token, the Administration User shall:

(a) connect the Smart Card Token to the system that the Administration User is using to access the Personnel Credentials Interface. The system shall be configured in accordance with sections 2.5 (b) and (c) of this DCCKI IDS; and

(b) request initialisation of the Smart Card Token by following the instructions displayed on the Personnel Credentials Interface.

2.10 Following a successful request for initialisation of the Smart Card Token the DCC shall ensure that, where the Smart Card Token generates a Personnel Authentication Certificate Application, this shall automatically be submitted to the UI DCCKICA.

2.11 The Administration User shall be notified via the Personnel Credentials Interface as soon as reasonably practicable of the Issuance of a Personnel Authentication Certificate for that Administration User.

Subsequent Issuance of a Personnel Authentication Certificate to Administration Users

2.12 Prior to the expiry of a Personnel Authentication Certificate Issued to an Administration User, that Administration User may:

(a) log onto the Personnel Credentials Interface via the Self Service Interface, using their Smart Card Token, username and password; and

(b) reinitialise the Smart Card Token by following the steps set out in section 2.9 of this DCCKI IDS, which will result in the Issuance of a new Personnel Authentication Certificate.

2.13 In the event that a Personnel Authentication Certificate Issued to an Administration User has expired prior to their obtaining a new Personnel Authentication Certificate, that Administration User may:

(a) log onto the Personnel Credentials Interface via the Self Service Interface and obtain a new Personnel Authentication Certificate by:

(i) using their Administration User username and password; and

(ii) providing answers to the security questions as selected when obtaining their initial Personnel Authentication Certificate; and

(b) reinitialise the Smart Card Token by following the steps outlined in section 2.9 above which will result in the Issuance of a new Personnel Authentication Certificate.

2.14 In the event that the Smart Card Token is lost or stolen, an Administration User may:

(a) obtain a new Smart Card Token from their DCCKI ARO in accordance with the DCCKI Code of Connection;

(b) log onto the Personnel Credentials Interface via the Self Service Interface:

(i) using the Administration User's username and password; and

(ii) providing answers to the security questions as selected when obtaining their initial Personnel Authentication Certificate; and

(c) initialise the Smart Card Token by following the steps outlined in section 2.9 of this DCCKI IDS which will result in the Issuance of a new Personnel Authentication Certificate.

Issuance of Personnel Authentication Certificates to other User Personnel

Initial Issuance of a Personnel Authentication Certificate to other User Personnel

2.15 The initial Issuance of a Personnel Authentication Certificate to a User Personnel shall be via the Personnel Credentials Interface following the creation of an account for that User Personnel by an Administration User.

2.16 In order to provide Authentication credentials to User Personnel, (which shall comprise a single use password and a username) an Administration User may:

(a) log onto the Self Service Interface using their Smart Card Token, username and password in accordance with the Self Service Interface Access Control Specification and Self Service Interface Code of Connection;

(b) create additional user accounts for other User Personnel; and

(c) provide details to those User Personnel including a username and single use password that allows them to log onto the Personnel Credentials Interface via the Self Service Interface.

2.17 In order to obtain an initial Personnel Authentication Certificate, User Personnel of a DCCKI Eligible Subscriber, shall log onto the Personnel Credentials Interface via the Self Service Interface using the agreed username and single use password, as established by the relevant Administration User.

2.18 Upon first login, those User Personnel shall be required to:

(a) change the password for their account; and

(b) provide answers to security questions that will subsequently be used to confirm the identity of that individual if the password is forgotten, their Personnel Authentication Certificate has expired or their Personnel Authentication Certificate is destroyed or, no longer has access to their Personnel Authentication Certificate or Private Key associated with their Personnel Authentication Certificate.

2.19 Upon successful login, the User Personnel shall be able to submit a Personnel Authentication Certificate Application by following the instruction displayed on the Personnel Credentials Interface.

2.20 Following a Personnel Authentication Certificate Application request:

(a) the User Personnel shall be requested to create a password in accordance with the instruction displayed on the Personnel Credentials Interface, to protect the credentials to be generated by the DCCKICA and transferred to the User Personnel's browser;

(b) the DCCKI Eligible Subscriber shall ensure that the systems of its User Personnel are configured to allow the credentials to be transferred to the User Personnel's browser and in accordance with sections 2.5 (b) and (c) of this DCCKI IDS;

(c) the DCCKICA shall generate the credentials consisting of a Key Pair along with a Personnel Authentication Certificate that is specific to that User Personnel and the systems that User Personnel is using to access the Personnel Credentials Interface and shall make it available to the browser in the form of a PKCS#12 file protected using the password created by the User Personnel;

(d) the User Personnel shall unprotect the PKCS#12 file using the password created by that User Personnel; and

(e) the User Personnel shall download, verify and install the PKCS#12 file in a location accessible to a supported web browser, when requested by the Authentication Credentials Interface.

Subsequent Issuance of a Personnel Authentication Certificate to other User Personnel

2.21 Prior to the expiry of a Personnel Authentication Certificate assigned to a member of User Personnel, in order to obtain a new Personnel Authentication Certificate, that individual:

(a) may log onto the Personnel Credentials Interface via the Self Service Interface, using their existing Personnel Authentication Certificate, username and password; and

(b) follow the steps outlined in sections 2.19 and 2.20 of this DCCKI IDS.

2.22 In the event that their Personnel Authentication Certificate has expired prior to obtaining a new Personnel Authentication Certificate, a member of User Personnel may:

(a) Log onto the Personnel Credentials Interface via the Self Service Interface:

(i) using their username and password; and

(ii) provide answers to the security questions as selected when obtaining their initial Personnel Authentication Certificate; and

(b) follow the steps outlined in sections 2.19 and 2.20 of this DCCKI IDS.

3. DCCKI CERTIFICATE SIGNING REQUEST

Information to be contained within DCCKI Certificate Signing Requests

3.1 A DCCKI Certificate Signing Request in respect of a DCCKI Infrastructure Certificate for the purpose of signing SAML assertions to the DCC shall contain the information set out in the table immediately below:

Subject	Attributes	Values
Version		V3 (as per RFC 2986)
Subject	Common Name	<Party Signifier>

Subject Public Key Info	Public Key Algorithm	RSA
	Subject Public Key (2048 bits)	Public Key value
Key Usage	Criticality	True
	Key Usage	digitalSignature
Signature Algorithm		rsa-with-SHA256

3.2 A DCCKI Certificate Signing Request in respect of a DCCKI Infrastructure Certificate for the purpose of establishing TLS communications to the DCC shall contain the information set out in the table immediately below:

Subject	**Attributes**	**Values**
Version		V3 (as per RFC 2986)
Subject	Common Name	Fully Qualified Domain Name configured on the Policy Enforcement Point
	Organisation Identifier	Party Signifier or RDP Signifier
Subject Public Key Info	Public Key Algorithm	RSA
	Subject Public Key (2048 bits)	Public Key Value
Key Usage	Criticality	True
	Key Usage	digitalSignature keyEncipherment
Signature Algorithm		rsa-with-SHA256

3.3 A DCCKI Certificate Signing Request in respect of a DCCKI Infrastructure Certificate for the purpose of establishing FTPS communications to the DCC shall contain the information set out in the table immediately below:

Subject	**Attributes**	**Values**
Version		V3 (as per RFC 2986)
Subject	Common Name	Party Signifier or RDP Signifier
Subject Alt Name		<Fully Qualified Domain Name>

Subject Public Key Info	Public Key Algorithm	RSA
	Subject Public Key (2048 bits)	Public Key value

Key Usage	Criticality	True
	Key Usage	digitalSignature keyEncipherment

Signature Algorithm		rsa-with-SHA256

DCCKI Certificate Signing Request format

3.4 DCCKI Certificate Signing Request requests shall be formatted according to PKCS#10, Base64 encoded.

3.5 The standard format shall be ASN.1 DER, including one of the immediately following two styles of PEM header:

(a) -----BEGIN CERTIFICATE REQUEST----- and -----END CERTIFICATE REQUEST-----; or

(b) -----BEGIN NEW CERTIFICATE REQUEST----- and -----END NEW CERTIFICATE REQUEST-----

Acceptable DCCKI Certificate Signing Request variants

3.6 The DCC shall accept the following PKCS#10 variants:

(a) Base64 all in one line;

(b) Base64 with line breaks at 64 or 76 characters; and

(c) if line breaks are used the \n and \r\n are both acceptable.

Signing the DCCKI Certificate Signing Request using a Private Key associated with an Organisation Certificate

3.7 Following the creation of the DCCKI Certificate Signing Request in accordance with section 3.4 of this DCCKI IDS, the DCCKI Eligible Subscriber shall Digitally Sign the DCCKI Certificate Signing Request with a Private Key associated with an Organisation Certificate for which it is a Subscriber.

3.8 The DCCKI Eligible Subscriber shall ensure that the Digital Signature shall:

(a) use, as the digital signature technique, Elliptic Curve Digital Signature Algorithm (ECDSA) (as specified in Federal Information Processing Standards Publications (FIPS PUB) 186-4) in combination with the curve P- 256 (as specified in FIPS PUB 186-4 at section D.1.2.3) and SHA-256 as the Hash function;

(b) be applied to the entirety of the PKCS#10 file, including header and footer; and

(c) be converted to Base64 and appended to the footer within the PKCS#10 file itself with a preceding "," separator.

3.9 Prior to Digitally Signing the DCCKI Certificate Signing Request, the DCCKI Eligible Subscriber shall append to the footer of the PKCS#10 file, the Issuer which shall be URL encoded (as specified in the IETF RFC 1) and serial number of the Organisation Certificate with preceding "," separators.

Availability and Service Continuity

3.10 The DCC shall ensure that the DCCKI Service Interface is available, in accordance with Section L13.12 (the DCCKI Service Interface) of the Code.

3.11 The DCC shall notify Parties and RDPs in advance of any planned outages of the DCCKI Service Interface.

ANNEX A

DEFINITIONS

In this document, except where the context otherwise requires:

- expressions defined in Section A of the Code (Definitions and Interpretation) have the same meaning as is set out in that section; and
- any expressions not defined here or in Section A of the Code have the meaning given to them in the DCCKI Certificate Policy, the DCCKI Registration Authority Policies and Procedures or the Self Service Interface Access Control Specification.

Issuer	The name of the signer of the DCCKI Infrastructure Certificate as described in the DCCKI Certificate Policy.

Version: U2.0

Appendix U

DCCKI Repository Interface Design Specification

1. INTRODUCTION

Document Purpose

1.1 This DCCKI Repository Interface Design Specification is the document required by Section L13.27 of the SEC.

2. DCCKI REPOSITORY INTERFACE

2.1 Pursuant to Section L13.27 (DCCKI Repository Interface Design Specification) of the Code, the DCCKI Repository Interface is a web portal interface designed to allow communications with the DCC for the purposes of the DCCKI Repository Service.

2.2 The DCCKI Repository shall only be accessible via a DCC Gateway Connection.

2.3 The DCC shall make the DCCKI Repository Interface available to:

(a) all Parties which are Users; and

(b) RDPs,

using a DCC Gateway Connection via anonymous access (that is, without requiring authentication).

2.4 A Party which is a User or an RDP shall access the DCCKI Repository via a supported web browser.

2.5 The DCC shall ensure that the DCCKI Repository Interface:

(a) uses the HTTP protocol;

(b) supports JavaScript, Cascading Style Sheets and images; and

(c) is provided at Uniform Resource Locators in accordance with the DCCKI Repository Code of Connection.

2.6 A Party or RDP shall:

(a) use the DCCKI Repository Interface to access the DCCKI Repository, in order to obtain the information listed in Section L13.17 (The DCCKI Repository) of the Code; and

(b) in accessing the DCCKI Repository, ensure that their supported web browser has JavaScript enabled.

Availability and Service Continuity

2.7 The DCC shall ensure that the DCCKI Repository Interface is available in accordance with Section L13.25 (the DCCKI Repository Interface) of the Code.

2.8 The DCC shall notify Parties and RDPs in advance of any planned outages of the DCCKI Repository Interface.

ANNEX A

DEFINITIONS

In this document, except where the context otherwise requires:

- expressions defined in Section A of the Code (Definitions and Interpretation) have the same meaning as is set out in that section; and

- any expressions not defined here or in Section A of the Code have the meaning given to them in the DCCKI Certificate Policy, the DCCKI Registration Authority Policies and Procedures or the Self Service Interface Access Control Specification.

Version: V2.0

Appendix V

DCCKI Code of Connection and DCCKI Repository Code of Connection

1. INTRODUCTION

1.1 This DCCKI Code of Connection and DCCKI Repository Code of Connection is the document required by Section L13.14 and Section L13.28 of the Code.

2. GENERAL OBLIGATIONS

2.1 Each DCCKI Authorised Subscriber may connect to the DCCKI Service Interface or the DCCKI Repository Interface only via a DCC Gateway Connection and for the purposes set out in the Code and this DCCKI Code of Connection.

2.2 The DCC shall ensure that the any URL and IP address of the DCCKI Service Interface remains constant.

2.3 The DCC shall ensure that the URL and the IP address of the DCCKI Repository Interface remains constant.

3. THE DCCKI INTERFACE CODE OF CONNECTION

Connection Mechanism

3.1 Parties that are DCCKI Eligible Subscribers in relation to Personnel Authentication Certificates may connect to the DCCKI Service Interface in accordance with the DCCKI Interface Design Specification.

3.2 Access to the DCCKI Service Interface for such Parties shall be via the Personnel Credentials Interface and shall be in accordance with the Self Service Interface Code of Connection.

3.3 The Party shall use a Supported Web Browser to access the DCCKI Service Interface.

3.4 DCC shall provide Parties' DCCKI AROs with the required URL to allow User Personnel within their organisations to access the DCCKI Service Interface via the Personnel Credentials Interface.

Management of Smart Card Tokens

3.5 Parties shall physically protect the Smart Card Token from unauthorised access and shall ensure the Smart Card Token is only used for the purpose for which it is intended.

3.6 In the event that an Administration User loses a Smart Card Token, that Administration User shall notify a DCCKI ARO for the DCCKI Subscriber. That DCCKI Subscriber shall ensure that the notified DCCKI ARO notifies the Service Desk.

3.7 DCC shall provide a replacement Smart Card Token where it receives a reasonable request for such replacement from a DCCKI ARO.

3.8 Where a Smart Card Token is no longer required, DCCKI Subscribers shall destroy that Smart Card Token beyond use and may subsequently discard it. DCCKI Subscribers shall notify the DCC of any such destruction.

3.9 Where an Administration User no longer requires access to the Self Service Interface, the DCCKI ARO shall raise an Incident in accordance with the Incident Management Policy in order to request retirement of the Self Service Interface account for that Administration User. The DCC shall ensure that this results in the revocation of the Personnel Authentication Certificate previously Issued to that Administration User.

Interface Usage

Administration Users

3.10 Administration Users shall utilise the Personnel Credentials Interface to access the DCCKI Service Interface for the purpose of obtaining a Personnel Authentication Certificate using the username and single use password provided by the DCCKI Registration Authority in accordance with the DCCKI RAPP and in accordance with the Self Service Interface Code of Connection.

User Personnel other than Administration Users

3.11 User Personnel who have accounts created for them by Administration Users shall utilise the Personnel Credentials Interface to access the DCCKI Service Interface for the purpose of obtaining a Personnel Authentication Certificate using the username and single use password provided by an Administration User in accordance with the DCCKI RAPP, and in accordance with the Self Service Interface Code of Connection.

Use of a DCCKI Infrastructure Certificate on a shared DCC Gateway Connection

3.12 DCCKI Subscribers shall notify the DCC, via the means set out on the DCC Website, of each other Party or RDP that is entitled to share (or no longer entitled to share) use of a TLS connection established using a DCCKI Infrastructure Certificate that has been Issued to that DCCKI Subscriber.

3.13 The DCC shall restrict access to the relevant DCC Interfaces, as documented in the appropriate interface specification, to DCCKI Subscribers and Parties or RDPs who have been notified to the DCC as having the entitlement to use a TLS connection established using a DCCKI Infrastructure Certificate Issued to a DCCKI Subscriber.

4. THE DCCKI REPOSITORY INTERFACE CODE OF CONNECTION

Connection Mechanism

4.1 Each Party and RDP may connect to the DCCKI Repository Interface in accordance with the DCCKI Repository Interface Design Specification.

4.2 Parties and RDPs shall use a Supported Web Browser to access the DCCKI Repository Interface.

4.3 The DCC shall provide the URL and IP address for the DCCKI Repository Interface to the DCCKI ARO of each DCCKI Authorised Subscriber.

ANNEX A

DEFINITIONS

In this document, except where the context otherwise requires:

- expressions defined in Section A of the Code (Definitions and Interpretation) have the same meaning as is set out in that section; and
- any expressions not defined here or in Section A of the Code have the meaning given to them in the DCCKI Certificate Policy, the DCCKI Registration Authority Policies and Procedures or the Self Service Access Control Interface Specification.

Smart Card Token	a physical security device used to assist authentication of User Personnel

Supported Web Browser	a web browser version that the DCC supports for use with the Self-Service Interface as listed, and as updated from time to time, in the browser policy section of the DCC Website

Version: W4.0

Appendix W

DCCKI Registration Authority Policies and Procedures (DCCKI RAPP)

Contents

1. INTRODUCTION

1.1 This DCC Key Infrastructure Registration Authority Policies and Procedures (DCCKI RAPP) sets out the activities undertaken by the DCC as the DCCKI Registration Authority in accordance with Section L of the Code, and DCCKI Certificate Policy.

1.2 This DCCKI RAPP is a SEC Subsidiary Document and is one of the DCCKI SEC Documents as set out in section L13.34 (The DCCKI SEC Documents) of the Code.

2. DCCKI ROLES

2.1 The roles of RDPs, Parties and their User Personnel in the context of access to DCCKI Services and the DCCKI Repository Service as DCCKI Authorised Subscribers, DCCKI Eligible Subscribers, and DCCKI Subscribers are set out in the Code, the DCCKI Certificate Policy (DCCKI CP), this DCCKI RAPP, and the DCCKI Code of Connection.

2.2 This DCCKI RAPP details the procedures to be followed by Parties and RDPs in respect of permitting individuals to act as DCCKI Senior Responsible Officers (DCCKI SROs) or DCCKI Authorised Responsible Officers (DCCKI AROs) on behalf of a Party or RDP.

2.3 This DCCKI RAPP also details the procedures to be followed by the DCCKI Registration Authority including in relation to the individuals acting on its behalf as DCCKI Registration Authority Managers or DCCKI Registration Authority Personnel.

2.4 Where in accordance with Section L13.22 (The DCCKI Repository Service) of the Code, the SMKI PMA makes a request for provision of a copy of any documents or information stored on the DCCKI Repository, such requests shall be made via the Service Desk. Where appropriate, the DCCKI Registration Authority shall provide the requested document(s) or information as soon as is reasonably practicable following receipt of such request.

Party and Registration Data Provider representatives

2.5 Individuals shall be permitted to act as representatives of a Party or RDP in relation to the DCCKI via the DCCKI SRO and DCCKI ARO roles as set out below.

DCCKI Senior Responsible Officer (DCCKI SRO)

2.6 In order to become and continue to be a DCCKI Authorised Subscriber each Party or RDP must have at least one individual undertaking the role of a DCCKI SRO on that organisation's behalf. A DCCKI SRO shall be an individual that:

(a) is generally authorised by the Party or RDP to fulfil the functions of a DCCKI SRO as set out in this DCCKI RAPP and elsewhere in the DCCKI SEC Documents;

(b) is specifically authorised by the Party or RDP to nominate, and de-nominate, individuals to become DCCKI AROs who may access the DCCKI Services; and

(c) has:

(i) successfully had their identity verified by the SMKI Registration Authority in accordance with the SMKI RAPP; and

(ii) successfully completed the process for becoming a DCCKI SRO on behalf of that Party or RDP in accordance with this DCCKI RAPP.

2.7 The process by which an individual is nominated, their authorisation is checked and their identity verified by the DCCKI Registration Authority, so as to be a DCCKI SRO and act on behalf of a Party or RDP, is set out in sections 3.8 to 3.11 of this DCCKI RAPP.

2.8 A DCCKI SRO may also nominate themselves to become a DCCKI ARO in accordance with section 2.9 of this DCCKI RAPP.

DCCKI Authorised Responsible Officer (DCCKI ARO)

2.9 In order to become and continue to be a DCCKI Authorised Subscriber each Party or RDP must have at least one individual undertaking the role of a DCCKI ARO on that organisation's behalf. The DCCKI SRO for a Party or RDP shall nominate at least one individual to be a DCCKI ARO in respect of that organisation, where each DCCKI ARO shall be an individual that:

(a) is generally authorised by the Party or RDP to fulfil the functions of a DCCKI ARO as set out in this DCCKI RAPP and elsewhere in the DCCKI SEC Documents;

(b) is specifically authorised to act on behalf of the Party or RDP in its capacity as a DCCKI Authorised Subscriber; and

(c) has:

(i) successfully had their identity verified by the SMKI Registration Authority in accordance with the SMKI RAPP; and

(ii) successfully completed the process for becoming a DCCKI ARO on behalf of that Party or RDP in accordance with this DCCKI RAPP.

2.10 All DCCKI AROs are also permitted to access certain DCCKI Services on behalf of the organisation that they represent.

2.11 The process by which an individual is nominated, their authorisation is checked and their identity verified by the DCCKI Registration Authority, so as to be a DCCKI ARO and act on behalf of a Party or RDP, is set out in sections 3.12 to 3.15 of this DCCKI RAPP.

The DCCKI Registration Authority

2.12 The DCC shall ensure that only individuals duly authorised to act in the role of DCCKI Registration Authority Manager or as DCCKI Registration Authority Personnel in accordance with this DCCKI RAPP shall act on behalf of the DCC in respect of matters relating to the DCCKI Registration Authority.

DCCKI Registration Authority Manager

2.13 The DCC shall nominate one or more individuals to become a DCCKI Registration Authority Manager who shall have responsibility for:

(a) management of the DCCKI Registration Authority functions, and DCCKI Registration Authority Personnel;

(b) nomination, verification, authorisation, and provision of the means for authenticating individuals to become DCCKI Registration Authority Personnel;

(c) provision of the means to authenticate access to the DCCKI Services for DCCKI Registration Authority Personnel;

(d) managing the process by which documents and information are lodged in the DCCKI Repository;

(e) approval of DCCKI Certificate Revocation Requests; and

(f) revocation of DCCKI Registration Authority Personnel credentials.

2.14 The process by which an individual is nominated, their authorisation is checked and their identity verified, so as to be a DCCKI Registration Authority Manager is set out in section 4 of this DCCKI RAPP.

DCCKI Registration Authority Personnel

2.15 A DCCKI Registration Authority Manager may nominate individuals to become DCCKI Registration Authority Personnel and to act on behalf of the DCCKI Registration Authority as set out in this DCCKI RAPP. These DCCKI Registration Authority Personnel shall, in accordance with the processes and procedures set out in this DCCKI RAPP:

(a) conduct enrolment processes in relation to Parties and RDPs, and individuals nominated to act on behalf of those Parties or RDPs, as set out in this DCCKI RAPP, incorporating assessment of whether:

(i) a nominated individual qualifies to become a DCCKI SRO or DCCKI ARO on behalf of that Party or RDP; and

(ii) a Party or RDP qualifies to become an DCCKI Authorised Subscriber.

(b) undertake the processing of:

(i) DCCKI Certificate Signing Requests;

(ii) DCCKI Certificate Revocation Requests; and

(iii) Administration User Credentials Requests; and

(c) manage the processes relating to:

(i) Parties or RDPs ceasing to be DCCKI Authorised Subscribers; and

(ii) revocation of access to the DCCKI Services by DCCKI SROs or DCCKI AROs.

2.16 The process by which an individual is nominated, their authorisation is checked and their identity verified, so as to become DCCKI Registration Authority Personnel is set out in section 4 of this DCCKI RAPP.

3. PARTY AND REGISTRATION DATA PROVIDER ENROLMENT

General enrolment obligations

Party and Registration Data Provider obligations

3.1 Each Party or RDP that wishes to use the DCCKI Services is required to become a DCCKI Authorised Subscriber.

3.2 In order to become a DCCKI Authorised Subscriber, a Party or RDP must:

(a) be an Authorised Subscriber under the Organisation Certificate Policy;

(b) submit a DCCKI Authorised Subscriber application in accordance with this DCCKI RAPP via the means set out on the DCC Website and the guidance on DCC Sharepoint;

(c) have at least one individual who is a DCCKI SRO for that Party or RDP; and

(d) have at least one individual who is a DCCKI ARO for that Party or RDP.

3.3 Each Party or RDP may:

(a) nominate multiple DCCKI SROs and multiple DCCKI AROs when requesting enrolment as a DCCKI Authorised Subscriber; and

(b) nominate additional individuals to be DCCKI SROs or DCCKI AROs at any time.

3.4 Where the information provided to the DCCKI Registration Authority in relation to:

(a) the Party or RDP being a DCCKI Authorised Subscriber;

(b) individuals who are acting in the role of DCCKI SRO for that Party or RDP; or

(c) individuals who are acting in the role of DCCKI ARO for that Party or RDP;

changes, that Party or RDP shall:

(d) advise the Service Centre, via email of such change; and

(e) ensure that the procedures as set out in section 3.27 of this DCCKI RAPP are undertaken in respect of providing revised information to the DCCKI Registration Authority, as soon as reasonably practicable thereafter.

3.5 Where a Party or RDP becomes aware that any individual ceases to be entitled to act on its behalf as either a DCCKI SRO or a DCCKI ARO in accordance with the provisions of the Code, that Party or RDP shall, as soon as reasonably practicable, follow the procedures set out in sections 3.27 to 3.30 of this DCCKI RAPP such that the DCCKI Registration Authority is able to remove the individual from its list of current DCCKI SROs and DCCKI AROs.

3.6 The DCC and any Party or RDP may agree that any action taken by either of them prior to the date of the designation of this DCCKI RAPP shall, if the equivalent action taken after that date would have satisfied a requirement of this DCCKI RAPP for the purposes of appointing a DCCKI ARO or DCCKI SRO or the Party or RDP becoming a DCCKI Authorised Subscriber, be treated as if it had taken place after that date.

DCCKI Registration Authority obligations

3.7 The DCCKI Registration Authority shall:

(a) ensure that forms that are substantively the same as those set out in Annex A to this DCCKI RAPP are made available to Parties and RDPs via the DCC Website for the purposes set out herein;

(b) provide reasonable support and advice to each Party and RDP in relation to the procedures as set out in this DCCKI RAPP, including via the DCC Website;

(c) obtain confirmation from the Registration Authority for the SMKI Services that each Party or RDP applying to be a DCCKI Authorised Subscriber is a SMKI Authorised Subscriber for Organisation Certificates;

(d) in all cases satisfy itself, via confirmation from the SMKI Registration Authority, that:

(i) any individual nominated to become a DCCKI SRO has had their identity verified in accordance with the SMKI RAPP; and

(ii) any individual nominated to become a DCCKI ARO has had their identity verified in accordance with the SMKI RAPP;

(e) where it receives a nomination for an individual to become a DCCKI SRO or a DCCKI ARO, and that individual has not had their identity verified by the SMKI Registration Authority:

(i) refer the nominated individual to the SMKI Registration Authority to allow such identity verification to be undertaken; and

(ii) provide the SMKI Registration Authority with all relevant information supplied by the nominating Party or RDP to support the identity verification;

(f) place no restriction on the number of individuals that can be nominated as DCCKI SROs or DCCKI AROs in respect of any Party or RDP;

(g) permit an individual to become a DCCKI SRO or ARO to represent multiple Parties or RDPs, by successfully completing the procedures in section 3 of this DCCKI RAPP as necessary in relation to each;

(h) not permit any individual to become a DCCKI SRO or DCCKI ARO in respect of any Party or RDP where it reasonably believes that the individual presents a material risk to DCCKICA Systems which may result in Compromise;

(i) store and maintain records relating to the nomination, verification and authorisation of individuals and organisations as set out in this DCCKI RAPP, and in accordance with the Code and the DCC's data retention policy and data protection policy;

(j) not permit any nominated individual to access the DCCKI Services on behalf of a DCCKI Authorised Subscriber until they have become a DCCKI ARO; and

(k) on successful completion of the enrolment process, provide DCCKI Authorised Subscribers and DCCKI AROs with access to the DCCKI Services in accordance with the provisions of the Code, the DCCKI CP and the DCCKI Code of Connection.

Procedure for becoming a DCCKI Senior Responsible Officer

3.8 Individuals that are an SRO in relation to SMKI Services may be nominated by the organisation that they act in that role for to become a DCCKI SRO for that same organisation.

3.9 Individuals that are not an SRO in relation to SMKI Services may be nominated to become a DCCKI SRO subject to having their identity verified by the SMKI Registration Authority in accordance with section 3.7 (e) of this DCCKI RAPP.

Submission of application

3.10 Nomination of an individual to become a DCCKI Senior Responsible Officer shall be made by a Director, Company Secretary or existing DCCKI SRO on behalf of the Party or RDP or to the level pursuant to the SMKI PMA Guidance on 'Verifying Organisation Identity'. Nomination of an individual to become a DCCKI Authorised Responsible Officer shall be made by a DCCKI Senior Responsible Officer on behalf of the Party or RDP.

(a) a DCCKI SRO Nomination Form is completed in accordance with this DCCKI RAPP and any instructions, help or advice provided by the DCCKI Registration Authority from time to time, including via the DCC Website;

(b) the information provided is complete and accurate;

(c) the DCCKI SRO Nomination Form is authorised by a Director, or Company Secretary of that Party or RDP; and

(d) the completed DCCKI SRO Nomination Form is submitted to the DCCKI Registration Authority via the means set out on the DCC Website.

DCCKI Registration Authority processing of DCCKI SRO nominations

3.11 On receipt of a duly completed DCCKI SRO Nomination Form, the DCCKI Registration Authority shall, as soon as is reasonably practicable:

(a) acknowledge receipt via the Service Desk to the individual who submitted the DCCKI SRO Nomination Form via telephone or in writing, using the contact details provided on that form;

(b) satisfy itself that:

(i) the Party or RDP has provided all required information to allow the application to be progressed; and

(ii) the individual nominated to become a DCCKI SRO is an SRO in relation to SMKI Services in respect of the nominating Party or RDP or has had their identity verified by the SMKI Registration Authority, as evidenced by confirmation of this fact by the SMKI Registration Authority;

(c) contact the individual via the Service Desk who submitted the DCCKI SRO Nomination Form, via telephone or in writing, using contact details as provided, to confirm whether the application has been successful or unsuccessful;

(d) either:

(i) notify the Director or Company Secretary via the Service Desk that authorised the DCCKI SRO Nomination Form that the application has been unsuccessful, in writing; or

(ii) notify the Director or Company Secretary via the Service Desk that authorised the DCCKI SRO Nomination Form that the application has been successful, in writing; and

(e) where the application has been successful, add the relevant individual to the DCCKI Registration Authority list of DCCKI SROs maintained in accordance with the DCCKI CPS.

Procedure for becoming a DCCKI Authorised Responsible Officer

3.12 Individuals that are AROs in relation to SMKI Services may be nominated by the organisation that they act in that role for to become a DCCKI ARO for that same organisation.

3.13 Individuals that are not an ARO in relation to SMKI Services may be nominated to become a DCCKI ARO subject to having their identity verified by the SMKI Registration Authority in accordance with section 3.7 (e) of this DCCKI RAPP.

Submission of DCCKI ARO nomination

3.14 Where a Party or RDP wishes to nominate an individual to become a DCCKI ARO, a DCCKI SRO, Director or Company Secretary of that Party or RDP shall ensure that:

(a) a DCCKI ARO Nomination Form is completed in accordance with this DCCKI RAPP and any instructions, help or advice provided by the DCCKI Registration Authority from time to time, including via the DCC Website;

(b) the information provided is complete and accurate;

(c) the DCCKI ARO Nomination Form is authorised by a DCCKI SRO, Director or Company Secretary; and

(d) the completed DCCKI ARO Nomination Form in submitted to the DCCKI Registration Authority via the means set out on the DCC Website.

DCCKI Registration Authority processing of DCCKI ARO nominations

3.15 On receipt of a duly completed DCCKI ARO Nomination Form, the DCCKI Registration Authority shall, as soon as is reasonably practicable:

(a) acknowledge receipt via the Service Desk to the DCCKI SRO, Director or Company Secretary who submitted the DCCKI ARO Nomination Form via telephone or in writing, using the contact details provided on that form;

(b) satisfy itself that:

(i) the Party or RDP has provided all required information to allow the application to be progressed; and

(ii) the individual nominated to become an DCCKI ARO is an ARO in relation to SMKI Services in respect of the nominating Party or RDP or has had their identity verified by the SMKI Registration Authority, as evidenced by confirmation of this fact by the SMKI Registration Authority;

(c) contact the DCCKI SRO, Director or Company Secretary via the Service Desk who submitted the DCCKI ARO Nomination Form, via telephone or in writing, using contact details as provided, to confirm whether the application has been successful;

(d) either:

(i) notify the DCCKI SRO, Director or Company Secretary via the Service Desk that authorised the DCCKI ARO Nomination Form that the application has been unsuccessful, in writing; or

(ii) notify the DCCKI SRO, Director or Company Secretary via the Service Desk that authorised the DCCKI ARO Nomination Form that the application has been successful, in writing; and

(e) where the application has been successful, add the relevant individual to the DCCKI Registration Authority list of DCCKI AROs maintained in accordance with the DCCKI CPS.

Procedure for becoming a DCCKI Authorised Subscriber

Submission of request

3.16 Where a Party or RDP wishes to become a DCCKI Authorised Subscriber, a Director, Company Secretary or DCCKI SRO of that Party or RDP shall ensure that:

(a) a DCCKI Authorised Subscriber Application is submitted in accordance with this DCCKI RAPP and any instructions, help or advice provided by the DCCKI Registration Authority from time to time, including via the DCC Website, and including the provision of such information as is set out in the form contained in Annex A (A3) to this DCCKI RAPP;

(b) the information provided is complete and accurate;

(c) the DCCKI Authorised Subscriber Application is authorised by a Director or Company Secretary of that Party or RDP, or DCCKI SRO; and

(d) the DCCKI Authorised Subscriber Application is submitted to the DCCKI Registration Authority via the means set out on the DCC Website.

DCCKI Registration Authority processing of DCCKI Authorised Subscriber Applications

3.17 On receipt of a DCCKI Authorised Subscriber Application, the DCCKI Registration Authority shall, as soon as is reasonably practicable thereafter:

(a) acknowledge receipt via the Service Desk to the individual who submitted that DCCKI Authorised Subscriber Application via telephone or in writing, using the contact details provided as part of the submission;

(b) satisfy itself that the Party or RDP:

(i) has provided all required information to allow the DCCKI Authorised Subscriber Application to be progressed; and

(ii) is an Authorised Subscriber in relation to Organisation Certificates, as evidenced by confirmation of this fact by the SMKI Registration Authority;

(c) satisfy itself that no material risk of Compromise to any part of the DCC Systems would result from permitting the Party or RDP to become a DCCKI Authorised Subscriber;

(d) contact the individual who submitted the DCCKI Authorised Subscriber Application, via telephone or in writing, using contact details as provided, to confirm whether the application has been successful;

(e) either:

(i) notify the Director, Company Secretary or DCCKI SRO via the Service Desk that authorised the DCCKI Authorised Subscriber Application that the application has been unsuccessful, in writing; or

(ii) notify the Director, Company Secretary or DCCKI SRO via the Service Desk that authorised the DCCKI Authorised Subscriber Application that the application has been successful, in writing;

(f) where the application has been successful, enable access to the DCCKI Services for the relevant Party or RDP in accordance the provisions of the Code, the DCCKI CP and the DCCKI Code of Connection; and

(g) add the relevant Party or RDP to the DCCKI Registration Authority list of DCCKI Authorised Subscribers maintained in accordance with the DCCKI CPS.

Procedure for providing credentials to DCCKI AROs in order to allow Administration Users to use the Self Service Interface

3.18 In order to obtain access to the Self Service Interface (SSI) in accordance with the Self Service Interface Access Control Specification, each DCCKI Authorised Subscriber that is a DCCKI Eligible Subscriber in relation to Personnel Authentication Certificates may submit an Administration User Credentials Request in order to obtain credentials for a member of the User Personnel of that organisation nominated to become an Administration User via the procedures set out immediately below.

Submission of Administration User Credentials Requests

3.19 A DCCKI ARO of a DCCKI Authorised Subscriber that meets the conditions set out in section 3.18 of this DCCKI RAPP may submit an Administration User Credentials Request to the DCCKI Registration Authority using the form provided for the purpose on the DCC Website, which shall be substantively in the form set out in Annex A (A5) to this DCCKI RAPP.

3.20 In submitting an Administration User Credentials Request, a DCCKI ARO of a DCCKI Subscriber shall provide the required details of the User Personnel who are to be provided with Smart Card Tokens, single use passwords and usernames for the purposes of establishing access to the Personnel Credentials Interface, and submitting a Personnel Authentication Certificate Application as Administration Users.

DCCKI Registration Authority processing of Administration User Credentials Requests

3.21 On receipt of an Administration User Credentials Request, DCCKI Registration Authority Personnel shall;

(a) confirm via the Service Desk to the DCCKI ARO that submitted the request that such request has been received, where this notification may be made via telephone or in writing using the contact details established as part of enrolment to the DCCKI Services;

(b) ensure that the submitting organisation meets the conditions set out in section 3.18 of this DCCKI RAPP; and

(c) ensure that all required information has been provided.

3.22 Where the Administration User Credentials Request is valid, the DCCKI Registration Authority shall in relation to that request:

(a) ensure that single use passwords and usernames are generated for each member of User Personnel whose details are provided;

(b) provide, via a secured electronic means as set out on the DCC Website, the usernames to be associated with those User Personnel for the purpose of accessing the Personnel Credentials Interface;

(c) provide, via secure post, the single use passwords to be associated with those User Personnel for the purpose of accessing the Personnel Credentials Interface; and

(d) provide one Smart Card Token for each member of User Personnel identified:

(i) to the DCCKI ARO that submitted the request or their named alternative, whose details have been provided by that DCCKI ARO at the time the request was made. This delivery may be in person, via a nominated employee, or via a commercial courier service. (Any person delivering the materials shall have information that enables verification of the materials and the sending organisation, and allows authentication of that person's identity); and

(ii) ensure that the DCCKI ARO that submitted the request (or their named alternative) is advised in advance of any such delivery, including the means of delivery, and the name of the person that shall be making that delivery. This notification may be made via telephone or in writing using the contact details established as part of enrolment to the DCCKI Services.

3.23 If the Administration User Credentials Request is not valid, the DCCKI Registration Authority Manager shall ensure that a DCCKI SRO of the submitting organisation and the DCCKI ARO who submitted that request is notified of the reasons for its rejection.

Establishment of Administration User credentials

3.24 On receipt of the Smart Card Tokens, usernames and single use passwords from the DCCKI Registration Authority, the DCCKI ARO shall ensure the distribution of the required materials to the relevant User Personnel within their organisation. Those User Personnel may then use the materials to access the Personnel Credentials Interface for the purposes of submitting a Personnel Authentication Certificate Application and obtaining a Personnel Authentication Certificate in accordance with the procedures set out in the DCCKI Interface Design Specification.

3.25 Following successfully obtaining a Personnel Authentication Certificate, the User Personnel nominated by that DCCKI ARO shall be an enabled Administration User who may then create usernames and single use passwords for other User Personnel within their organisation in accordance with the DCCKI Interface Design Specification.

3.26 In the event that, following provision of Smart Card Tokens, usernames and single use passwords by a DCCKI ARO, relevant User Personnel are unable to successfully obtain a Personnel Authentication Certificate, that DCCKI ARO shall raise an Incident in accordance with the Incident Management Policy, in order to resolve the matter.

Maintenance of information relating to DCCKI SROs and DCCKI AROs

Procedures for providing changes in information relating to DCCKI SROs and DCCKI AROs

3.27 Where either:

(a) the contact details provided to the DCCKI Registration Authority for a DCCKI SRO or DCCKI ARO change; or

(b) a Party or RDP determines that a DCCKI SRO or DCCKI ARO is no longer entitled to act as such in relation to that organisation;

a DCCKI SRO, a Director or Company Secretary of that Party or RDP shall notify the DCCKI Registration Authority in accordance with section 3.28 below.

3.28 The Party or RDP making the notification shall contact the DCCKI Registration Authority via the means set out on the Website, and provide the following information:

(a) the name of the person making the notification, their contact details and the name of the organisation that they represent;

(b) the name of the DCCKI SRO or DCCKI ARO whose details require amendment; and

(c) whether that DCCKI SRO or DCCKI ARO is still entitled to act as such on behalf of the notifying Party or RDP.

3.29 On receipt of updated information from a Party or RDP, the DCCKI Registration Authority shall, as soon as is reasonably practicable:

(a) acknowledge receipt in writing via the Service Desk to the person making the notification;

(b) verify the completeness of the information contained in the notification;

(c) contact the DCCKI SRO, a Director or Company Secretary via the Service Desk of that Party making the notification by telephone or in writing using the registered contact details for the DCCKI SRO, a Director or Company Secretary of that Party as held by the DCCKI Registration Authority to confirm the notification is authorised;

(d) amend its records in accordance with the information received; and

(e) provide confirmation in writing via the Service Desk to both the individual who made the notification, and the relevant DCCKI SRO or DCCKI ARO that the DCCKI Registration Authority has made the requested updates, and what those updates are.

DCCKI Registration Authority Amendments to DCCKI SRO or DCCKI ARO Information

3.30 In circumstances where:

(a) the DCCKI Registration Authority reasonably believes that a DCCKI SRO or DCCKI ARO has materially failed to comply with the DCCKI policies as set out in the DCCKI Certificate Policy, this DCCKI RAPP, or the Code; and

(b) that individual has been notified of the fact by the DCCKI Registration Authority including the nature of the non-compliance;

the DCCKI Registration Authority may amend its records such that the individual is no longer authorised to act in the role of a DCCKI SRO or DCCKI ARO for a Party or RDP as the case may apply.

3.31 Where the DCCKI Registration Authority has amended its records in accordance with section 3.30 of this DCCKI RAPP, it shall inform the relevant individual of the fact, and:

(a) in the case of a DCCKI SRO, inform a Director or Company Secretary of the relevant DCCKI Authorised Subscriber using the registered contact details of the Director or Company Secretary of that Party as held by the DCCKI Registration Authority; or

(b) in the case of a DCCKI ARO, inform a DCCKI SRO of the relevant DCCKI Authorised Subscriber.

Reapplying to be a DCCKI SRO or DCCKI ARO

3.32 In circumstances where an individual has ceased to be a DCCKI SRO or a DCCKI ARO for a Party or RDP, nothing shall preclude them from re-applying to become a DCCKI SRO or DCCKI ARO on behalf of that or another Party or RDP by following the procedures set out in this DCCKI RAPP.

4. DCCKI REGISTRATION AUTHORITY ENROLMENT PROCEDURES

4.1 The procedures set out in this section 4 shall be undertaken in order for nominated individuals to act on behalf of the DCCKI Registration Authority as either a DCCKI Registration Authority Manager or a member of DCCKI Registration Authority Personnel.

General registration obligations

4.2 The DCC shall be responsible for ensuring that only those individuals authorised in accordance with the DCCKI CP, the DCCKI CPS, and this DCCKI RAPP are appointed to the roles of DCCKI Registration Authority Manager and DCCKI Registration Authority Personnel. The DCC shall ensure that its CISO ensures that such authorisations are made in accordance with the procedures set out in this DCCKI RAPP.

4.3 In respect of DCCKI Registration Authority Managers and DCCKI Registration Authority Personnel, the DCCKI Registration Authority shall:

(a) not permit any individual to access DCCKICA Systems used to provide DCCKI Services or DCCKI Repository Services as a DCCKI Registration Authority Manager or member of DCCKI Registration Authority Personnel until the procedures in this section 4 of this DCCKI RAPP are successfully completed;

(b) store and maintain records relating to individuals becoming DCCKI Registration Authority Managers and DCCKI Registration Authority Personnel, in accordance with the Code and DCC data retention policy;

(c) ensure that there is at least one DCCKI Registration Authority Manager at all times;

(d) if there is a change to any of the information used to verify the identity of any DCCKI Registration Authority Manager or member of DCCKI Registration Authority Personnel, ensure that the relevant DCCKI Registration Authority Manager or member of DCCKI Registration Authority Personnel undertakes the procedures as set out in this DCCKI RAPP in respect of the revised evidence of identity; and

(e) ensure that authentication credentials provided to DCCKI Registration Authority Managers and DCCKI Registration Authority Personnel in accordance with section 4.12 of this DCCKI RAPP shall expire three years following issuance of such authentication credentials.

Procedure for becoming a Registration Authority Manager

4.4 The DCC CISO, or an individual they have authorised on their behalf to act in this capacity, shall be responsible for:

(a) nomination of individuals to fulfil the role of DCCKI Registration Authority Manager;

(b) confirmation to each nominated individual of a location, date and time for a verification meeting, to be held at DCC premises; and

(c) advising each nominated individual of the evidence to be provided in order to verify their identity.

4.5 At the verification meeting, DCC shall:

(a) check proof of identity provided against the information provided by the nominated individual; and

(b) verify the identity of the nominated individual in accordance with the provisions of Section G4.6 (Obligations on the DCC) of the Code.

4.6 Where the identity of the nominated individual is not successfully verified, DCC shall:

(a) provide reasons for the failure to the individual and the DCC CISO; and

(b) notify the individual that a further verification meeting is required to remedy the unsuccessful elements of the verification.

4.7 Where the identity of the nominated individual is successfully verified, DCC shall:

(a) notify the individual verbally and subsequently make notification in writing to both the individual and the DCC CISO that the individual has become a DCCKI Registration Authority Manager;

(b) record the details of the individual that has become a DCCKI Registration Authority Manager; and

(c) provide the DCCKI Registration Authority Manager with credentials as defined in the DCCKI CPS to be used to perform activities on behalf of the DCCKI Registration Authority.

Procedure for becoming a member of Registration Authority Personnel

4.8 The DCCKI Registration Authority Manager, acting on behalf of the DCCKI Registration Authority, shall:

(a) nominate individuals to become members of DCCKI Registration Authority Personnel;

(b) confirm a location date and time for a verification meeting, to be held at DCC premises to each nominated individual; and

(c) advise each nominated individual of the evidence to be provided in order to verify their identity.

4.9 At the agreed verification meeting, the DCCKI Registration Authority Manager shall:

(a) check proof of identity provided against the information provided by the nominated individual; and

(b) verify the identity of the nominated individual in accordance with the provisions of Section G4.6 (Obligations on the DCC) of the Code.

4.10 Where the identity of the nominated individual is not successfully verified, the DCCKI Registration Authority Manager shall:

(a) provide reasons for the failure to the individual; and

(b) notify the individual that a further verification meeting is required to remedy the unsuccessful elements of the verification.

4.11 Where the identity of the nominated individual is successfully verified, the DCCKI Registration Authority Manager shall:

(a) notify the individual verbally and subsequently in writing that they have become a member of DCCKI Registration Authority Personnel;

(b) record the details of the individual that has become a member of DCCKI Registration Authority Personnel; and

(c) provide the member of DCCKI Registration Authority Personnel with credentials as defined in the DCCKI CPS to be used to perform activities on behalf of the DCCKI Registration Authority.

Procedure for provision of credentials to a Registration Authority Manager or a Registration Authority Personnel

4.12 The DCC shall ensure that the DCCKI CPS details the procedure for provision of credentials to a DCCKI Registration Authority Manager or DCCKI Registration Authority Personnel.

5. SUBMISSION OF REQUESTS FOR AND ISSUANCE OF DCCKI CERTIFICATES

General DCCKI Registration Authority Obligations

5.1 The DCCKI Registration Authority shall ensure that:

(a) no DCCKICA Certificates are signed using a Root DCCKICA Private Key after the expiry of the Validity Period of the corresponding Root DCCKICA Certificate;

(b) no DCCKI Infrastructure Certificates are Issued using a EII DCCKICA Private Key after the expiry of the Validity Period of the corresponding EII DCCKICA Certificate;

(c) no Personnel Authentication Certificates are Issued using a UI DCCKICA Private Key after the expiry of the Validity Period of the corresponding UI DCCKICA Certificate;

(d) DCCKI Certificates are Issued only in accordance with the provisions set out in this DCCKI RAPP, the DCCKI Certificate Policy, and the DCCKI Interface Design Specification;

(e) each EII DCCKICA Certificate and UI DCCKICA Certificate that is Issued by the Root DCCKI CA has been verified to be correct and complete;

(f) each DCCKI Infrastructure Certificate that is Issued by the EII DCCKICA has been verified to be correct and complete and complies with the DCCKI Certificate Signing Request received;

(g) each Personnel Authentication Certificate that is Issued by the UI DCCKICA has been verified to be correct and complies with the Personnel Certificate Application received via the Personnel Credentials Interface;

(h) all DCCKI Infrastructure Certificates shall be Issued within one (1) Working Day of receipt of a valid DCCKI Certificate Signing Request from a DCCKI Eligible Subscriber;

(i) all Personnel Authentication Certificates shall be Issued as soon as is reasonably possible following the receipt of a valid Personnel Authentication Certificate Application;

(j) a record of all DCCKI Certificates which have been Issued by the DCCKICA and accepted by a DCCKI Eligible Subscriber is maintained;

(k) the Root DCCKICA Certificate and EII DCCKICA Certificate are made available to DCCKI Relying Parties via the DCCKI Repository; and

(l) the name of the subject of each DCCKI Certificate that is Issued is consistent with the information provided via the DCCKI Certificate Signing Request or Personnel Authentication Application received via the Personnel Credentials Interface as the case may be.

General DCCKI Eligible Subscriber Obligations

5.2 DCCKI Authorised Subscribers that are DCCKI Eligible Subscribers in respect of DCCKI Infrastructure Certificates as set out in the DCCKI CP may submit DCCKI Certificate Signing Requests in accordance with the procedures set out in this DCCKI RAPP, the DCCKI Interface Design Specification and the DCCKI Code of Connection.

5.3 In the case of DCCKI Infrastructure Certificates, a DCCKI Eligible Subscriber may only request Issuance via submission of a DCCKI Certificate Signing Request and where that DCCKI Eligible Subscriber is a SMKI Subscriber in relation to an Organisation Certificate in accordance with section 5.6 of this DCCKI RAPP.

5.4 In the case of Personnel Authentication Certificates, a DCCKI Eligible Subscriber may only submit a Personnel Authentication Certificate Application via the Personnel Credentials Interface in accordance with the provisions of the DCCKI Interface Design Specification.

DCCKI Certificate Signing Requests

5.5 DCCKI Certificate Signing Requests may only be submitted by a DCCKI ARO of the DCCKI Eligible Subscriber, and in relation to DCCKI Infrastructure Certificates.

5.6 In submitting a DCCKI Certificate Signing Request, a DCCKI ARO of a DCCKI Eligible Subscriber shall:

(a) generate a Key Pair within a Cryptographic Module;

(b) generate a DCCKI Certificate Signing Request, containing the attributes and format defined within the DCCKI Interface Design Specification, and in accordance with the DCCKI CP;

(c) ensure that the DCCKI Certificate Signing Request is Digitally Signed using the Private Key associated with the Public Key contained in the DCCKI Certificate Signing Request in accordance with PKCS#10;

(d) verify the accuracy of details contained within the DCCKI Certificate Signing Request and on success, shall use the Private Key associated with the corresponding Public Key in an Organisation Certificate for which it is a Subscriber to Digitally Sign the DCCKI Certificate Signing Request as set out in the DCCKI Interface Design Specification; and

(e) send the DCCKI Certificate Signing Request to the DCCKI Registration Authority via secured electronic means as set out on the DCC Website.

5.7 As soon as reasonably practicable following receipt of the DCCKI Certificate Signing Request, the DCCKI Registration Authority Personnel shall acknowledge receipt in writing via the Service Desk to the DCCKI ARO who submitted the DCCKI Certificate Signing Request, using the contact details established as part of enrolment to the DCCKI Services.

Authentication of DCCKI Certificate Signing Requests

5.8 DCCKI Registration Authority Personnel shall validate that for each DCCKI Certificate Signing Request submitted:

(a) the organisation submitting the DCCKI Certificate Signing Request is a DCCKI Eligible Subscriber in relation to DCCKI Infrastructure Certificates in accordance with the DCCKI CP;

(b) the format of the DCCKI Certificate Signing Request is valid in relation to requests for DCCKI Certificates as specified in the DCCKI Interface Design Specification; and

(c) the DCCKI Certificate Signing Request is correctly signed in accordance with section 5.6 of this DCCKI RAPP.

5.9 If a DCCKI Certificate Signing Request so submitted is not valid, the DCCKI Registration Authority shall reject the DCCKI Certificate Signing Request, and shall follow the process for the rejection of DCCKI Certificate Signing Request set out in this DCCKI RAPP.

5.10 Where the DCCKI Certificate Signing Request is valid, the DCCKI Registration Authority shall submit it to the EII DCCKICA.

Rejection of DCCKI Certificate Signing Requests

5.11 Rejection of a DCCKI Certificate Signing Request may occur where:

(a) the DCCKI Certificate Signing Request cannot be validated in accordance with section 5.8 of this DCCKI RAPP; or

(b) the DCCKI Certificate Signing Request is not compliant with the DCCKI CP, the DCCKI Interface Design Specification or other provisions of the Code.

5.12 In the event of a DCCKI Certificate Signing Request being rejected, the DCCKI Registration Authority shall:

(a) create a record of the rejection on the DCCKI Certificate Signing Request Rejection Form, which shall contain the information and be substantively as set out in Annex A (A4) to this DCCKI RAPP;

(b) notify a DCCKI ARO of the organisation via the Service Desk that submitted the DCCKI Certificate Signing Request of its rejection, this may be via telephone or in writing, using the contact details established as part of enrolment for the DCCKI Services; and

(c) provide a copy of the DCCKI Certificate Signing Request Rejection Form via secured electronic means as set out on the DCC Website.

Certificate Issuance in response to a DCCKI Certificate Signing Request

5.13 Upon successful validation of the information provided in the DCCKI Certificate Signing Request by the DCCKI Registration Authority, the EII DCCKICA, shall generate the DCCKI Infrastructure Certificate based on the information contained within the DCCKI Certificate Signing Request.

5.14 Following Issuance of the DCCKI Infrastructure Certificate, the DCCKI Registration Authority shall:

(a) publish the DCCKI Infrastructure Certificate to the DCCKI Repository in accordance with the DCCKI CP; and

(b) notify the DCCKI ARO via the Service Desk that submitted the DCCKI Certificate Signing Request of its Issuance, in writing, using the contact details established as part of enrolment for the DCCKI Services.

Acceptance or Rejection of DCCKI Certificates Issued following a DCCKI Certificate Signing Request submission

5.15 As soon as is reasonably practicable following notification of Issuance of a DCCKI Infrastructure Certificate as set out in section 5.14 above, the DCCKI Eligible Subscriber that submitted the DCCKI Certificate Signing Request shall:

(a) validate the DCCKI Infrastructure Certificate published on the DCCKI Repository; and

(b) notify the DCCKI Registration Authority if the DCCKI Infrastructure Certificate is rejected, in writing, using the contact details established as part of the enrolment of the DCCKI Services.

5.16 Where the DCCKI Registration Authority receives a valid notification of the rejection of a DCCKI Infrastructure Certificate, it shall revoke that DCCKI Infrastructure Certificate in accordance with the procedures set out in section 6 of this DCCKI RAPP.

5.17 Not In Use.

Personnel Authentication Certificate Application

5.18 Provision is made in the DCCKI Interface Design Specification in relation to the mechanism by which a DCCKI Eligible Subscriber may request a Personnel Authentication Certificate Application. Prior to requesting a Personnel Authentication Certificate Application, DCCKI Eligible Subscribers shall follow the procedures set out in sections 3.18 to 3.26 of this DCCKI RAPP.

Issuance of User Personnel Authentication Certificates

5.19 Personnel Authentication Certificates shall be Issued to User Personnel following a Personnel Authentication Certificate Application via the Personnel Credentials Interface.

5.20 User Personnel of DCCKI Eligible Subscribers who are not Administration Users shall have the Private Key associated with the Personnel Authentication Certificate delivered to them along with the Personnel Authentication Certificate in accordance with the DCCKI Interface Design Specification.

5.21 The DCCKI Interface Design Specification sets out further provisions in respect of the circumstances in which the UI DCCKICA shall Issue Personnel Authentication Certificates.

Rejection and Acceptance of a Personnel Authentication Certificate

5.22 Use of the Private Key associated with a Personnel Authentication Certificate to Authenticate to the SSI shall be deemed to constitute acceptance of the Personnel Authentication Certificate by the DCCKI Eligible Subscriber.

5.23 To reject a Personnel Authentication Certificate, a DCCKI Eligible Subscriber shall raise an Incident in accordance with the Incident Management Process.

5.24 Where the DCCKI Registration Authority receives a valid notification of the rejection of a Personnel Authentication Certificate, it shall revoke that Personnel Authentication Certificate in accordance with the procedures set out in section 6 of this DCCKI RAPP.

6. REVOCATION

DCCKI Certificate Revocation

6.1 The circumstances under which DCCKI Subscribers and the DCC may request revocation of a DCCKI Certificate are set out in the DCCKI CP. In all cases, the procedures set out in this DCCKI RAPP shall be followed in respect of DCCKI Certificate revocation.

6.2 Where DCC reasonably believes that there has been a material breach of obligations under the Code that could lead to a material Compromise of DCC Systems, it may request revocation of the DCCKI Certificates issued to the relevant Party or RDP. This revocation shall not preclude the affected Party or RDP from applying for further DCCKI Certificates once any material breach has been remedied, or following any determination to the contrary by the Panel.

Revocation of DCCKI Infrastructure Certificate

6.3 Each DCCKI Relying Party shall raise an Incident as soon as possible following awareness of Compromise or suspected Compromise of any DCCKI Infrastructure Certificate.

6.4 On notification of an Incident, the DCC may raise a DCCKI Certificate Revocation Request via the procedure set out in section 6.8 and 6.9 below in response to the Incident. Any grace period during which the relevant DCCKI Infrastructure Certificates are not revoked shall be agreed at the time that the DCCKI Certificate Revocation Request is made.

6.5 Where a DCCKI Subscriber is aware of Compromise or suspected Compromise of a DCCKI Infrastructure Certificate Issued to it, the DCCKI Subscriber shall request revocation of that DCCKI Infrastructure Certificate in accordance with sections 8 and 9 of this DCCKI RAPP, and raise an Incident as soon as reasonably practicable.

6.6 Where the DCCKI Registration Authority Personnel has issued a DCCKI Infrastructure Certificate incorrectly the DCCKI Infrastructure Certificate may be revoked provided;

(a) the certificate has not been issued to an DCCKI ARO; and

(b) the revocation request is approved by a the DCCKI Registration Authority Manager.

6.7 Where the DCCKI Registration Authority Personnel has issued a DCCKI Infrastructure Certificate incorrectly and it has been issued to the DCCKI ARO the DCCKI Infrastructure Certificate may be revoked provided:

(a) an incident is raised; and

(b) the requesting DCCKI ARO is notified and a new Certificate Signing Request is submitted;

Procedure for DCCKI Certificate Revocation Requests

6.8 DCCKI Certificate Revocation Requests shall be made in writing, via the means set out on the DCC Website, to the DCCKI Registration Authority.

6.9 A DCCKI Certificate Revocation Request shall:

(a) identify the DCCKI Subscriber;

(b) identify the individual making the request, and their role, which shall be:

(i) in the case of a DCCKI Subscriber, a DCCKI SRO of that organisation; or

(ii) in the case of the DCC, the DCC CISO, or an individual that they have authorised to act on their behalf in this capacity;

(c) identify the DCCKI Certificate to be revoked; and

(d) state the criteria for the revocation.

6.10 On receipt of a valid DCCKI Certificate Revocation Request, the DCCKI Registration Authority shall:

(a) validate the revocation request by contacting:

(i) in the case of a DCCKI Subscriber, the DCCKI SRO, using the contact details of the DCCKI SRO as provided in the original application to become a DCCKI SRO; or

(ii) in the case of the DCC, the DCC CISO, using the registered contact details for the DCC CISO as held by the DCCKI Registration Authority

to confirm that the DCCKI Certificate Revocation Request is authentic;

(b) where the validation is unsuccessful, reject the DCCKI Certificate Revocation Request and notify the DCCKI SRO or the DCC CISO via the Service Desk of the rejection;

(c) where the validation is successful, notify the DCCKI SRO or the DCC CISO via the Service Desk of the acceptance of the DCCKI Certificate Revocation Request, and then:

(i) revoke the DCCKI Infrastructure Certificate;

(ii) update the EII DCCKICA CRL and lodge the updated EII DCCKICA CRL in the DCCKI Repository; and

notify the DCCKI SRO or the DCC CISO of the revocation via the Service Desk.

Revocation of Personnel Authentication Certificates

6.11 If a Personnel Authentication Certificate is suspected of Compromise, the DCCKI Subscriber shall request a new Personnel Authentication Certificate in accordance with this DCCKI RAPP and the DCCKI Interface Design Specification.

6.12 On receipt of a new Personnel Authentication Certificate Application for a User Personnel already Issued with a Personnel Authentication Certificate, the UI DCCKICA shall revoke the existing Personnel Authentication Certificate.

6.13 Retirement of an SSI account for a member of a Party's User Personnel shall result in the revocation of the Personnel Authentication Certificate associated with that SSI account.

Ceasing to be a DCCKI Authorised Subscriber

6.14 A Party or RDP shall cease to be a DCCKI Authorised Subscriber where:

(a) that Party or RDP makes a request to the DCCKI Registration Authority to cease to be a DCCKI Authorised Subscriber;

(b) the DCC reasonably believes that Party or RDP, or any of its DCCKI SROs or DCCKI AROs as individuals, have failed or are failing materially to comply with the DCCKI policies as set out in the DCCKI Certificate Policy, this DCCKI RAPP, or any other provision of the Code such that there is a material risk of Compromise to the DCC Systems; or

(c) they fail to have in place at any time at least one DCCKI SRO and at least one DCCKI ARO.

6.15 Where a Party or RDP ceases to be a DCCKI Authorised Subscriber, the DCCKI Registration Authority shall:

(a) notify the Party or RDP via the Service Desk, giving reasons for why it has ceased to be a DCCKI Authorised Subscriber;

(b) update its list of DCCKI Authorised Subscribers; and

(c) revoke all DCCKI Certificates that have been Issued to that Party or RDP, in accordance with this DCCKI RAPP.

ANNEX A – FORM TEMPLATES

The Form Templates listed in Appendix A are available from the DCC Website or via SharePoint as provided by the DCC.

The DCC may, subject to the approval of the SMKI PMA, modify the form templates from time to time.

A1. DCCKI SRO NOMINATION FORM

A2. DCCKI ARO NOMINATION FORM

A3. DCCKI AUTHORISED SUBSCRIBER APPLICATION FORM

A4. DCCKI CERTIFICATE SIGNING REQUEST REJECTION FORM

A5. ADMINISTRATION USER CREDENTIALS REQUEST FORM

A6. DCCKI CERTIFICATE REVOCATION REQUEST FORM

ANNEX B DEFINED TERMS

In this DCCKI RAPP, except where the context otherwise requires:

- expressions defined in Section A of the Code (Definitions and Interpretation) have the same meaning as is set out in that Section;
- the expressions in the left hand column below shall have the meanings given to them in the right hand column below; and
- where any expression is defined in Section A of the Code (Definitions and Interpretation) and in this Annex, the definition in this Annex shall take precedence for the purposes of this document.

Definitions for this DCCKI RAPP

Administration User Credentials Request	means a request submitted by a DCCKI ARO for the provision of Smart Card Tokens, usernames and single use passwords to be utilised by User Personnel nominated to be an Administration User.
Authorised Responsible Officer	has the meaning given to that expression in the SMKI RAPP.
Authenticate	has the meaning given to that term in the DCCKI Certificate Policy.
CISO	means chief information security officer
DCCKI Authorised Responsible Officer (DCCKI ARO)	means an individual that has successfully completed the process for becoming a DCCKI ARO on behalf of a party or RDP in accordance with this DCCKI RAPP.
DCCKI ARO Nomination Form	means the form of that name as provided via the DCC Website which shall be used by Parties and RDPs wishing to nominate individuals to act as a DCCKI ARO on their behalf.
DCCKI Authorised Subscriber Application	means a request to become a DCCKI Authorised Subscriber submitted by a Party or RDP in accordance with the procedures set out in the DCCKI RAPP.

DCCKICA Systems	has the meaning given to that expression in the DCCKI Certificate Policy.
DCCKI Certificate Revocation Request	has the meaning given to that expression in the DCCKI Certificate Policy.
DCCKI Certificate Signing Request Rejection Form	means the form of that name as set out in Annex A (A6) to the DCCKI RAPP and used by the DCCKI Registration Authority to inform a DCCKI Authorised Subscriber for the reasons for rejection of a DCCKI Certificate Signing Request or DCCKI Certificate Application.
DCCKI Registration Authority Manager	means an individual who acts on behalf of the DCCKI Registration Authority to perform tasks relating to the management of the DCCKI Registration Authority, as set out in the DCCKI RAPP.
DCCKI Registration Authority Personnel	means those persons who are engaged by DCC, in so far as such persons carry out functions of the DCCKI Registration Authority as set out in the DCCKI RAPP.
DCCKI Senior Responsible Officer (DCCKI SRO)	means an individual that has successfully completed the process for becoming a DCCKI SRO on behalf of a Party or RDP in accordance with this DCCKI RAPP.
DCCKI SRO Nomination Form	means the form of that name as provided via the DCC Website which shall be used by Parties and RDPs wishing to nominate individuals to act as a DCCKI SRO on their behalf.
EII DCCKICA	has the meaning given to that expression in the DCCKI Certificate Policy.
EII DCCKICA Private Key	has the meaning given to that expression in the DCCKI Certificate Policy.
Personnel Credentials Interface	means the interface that allows for the activation of user accounts, the submission of Personnel Authentication Certificate Applications, and the provision of Personnel Authentication Certificates to persons.
Root DCCKICA	has the meaning given to that expression in the DCCKI Certificate Policy.
Root DCCKICA Private Key	has the meaning given to that expression in the DCCKI Certificate Policy.
Smart Card Token	a physical security device used to assist authentication of User Personnel
Senior Responsible Officer (SRO)	has the meaning given to that expression in the SMKI RAPP.
SMKI Registration Authority	has the meaning given to that expression in the SMKI RAPP.

UI DCCKICA	has the meaning given to that expression in the DCCKI Certificate Policy.

UI DCCKICA Private Key	has the meaning given to that expression in the DCCKI Certificate Policy.

Version X 7.0

APPENDIX X

Registration Data Interface Specification

(REGIS)

Contents

DEFINITIONS

In this document, except where the context otherwise requires:

- expressions defined in section A of the Code (Definitions and Interpretation) have the same meaning as is set out in that section; and
- the expressions in the left hand column below shall have the meanings given to them in the right hand column below.

DCC Service Flag	means a flag used to indicate the status recorded by DCC of each MPAN or Supply Meter Point with respect to whether a Smart Metering System is Active, Non-Active or Installed but not Commissioned.
DCC Status File	means the file produced by DCC and transferred to each Network Party's Registration Data Provider detailing the DCC Service Flag of each MPAN or Supply Meter Point registered to that Network Party.
Electricity Registration Data Provider	means a Registration Data Provider appointed by an Electricity Network Party.
Energy Market Data Specification	means the Data Specification which forms part of the REC.
FTP	means file transfer protocol, a standard protocol for transmitting files between computers on a network.
FTPS	means FTP with Transport Layer Security.
Gas Registration Data Provider	means a Registration Data Provider appointed by a Gas Network Party.

Internet Protocol (or IP)	means the commonly used communications protocol enabling the delivery of data packets based on the IP addresses in the packet headers, used in establishing internet communications.
Issuer	has the meaning given to that term in the DCCKI Interface Design Specification.
Network Address Translation	means the standard methodology of remapping one IP address space into another by modifying network address information in Internet Protocol (IP) headers while they are in transit across a traffic routing device.
Policy Enforcement Point (or PEP)	a logical entity that enforces policies for admission control and policy decisions in response to a request for access. It is the logical boundary between the DCC Systems and connecting systems, namely User Systems and RDP Systems. The PEP ensures that: a. the policies in the applicable Code of Connection relevant to the applicable party are being enforced; b. there is appropriate separation of the DCC Systems from the connecting systems of the applicable party; and c. all the connections to the User Systems, RDP Systems, or DCC Systems are compliant with the same applicable Code of Connection .
Response File	means a file produced whilst processing a DCC Status File. For each record in the file being processed, the Response File contains either an acknowledgement that the record has been processed successfully or in the case of a failure in processing the record, the validation errors found.
Supported Version	means the latest version of the Energy Market Data Specification data flow that the DCC supports for use with the Registration Data Interface as listed and as updated from time to time on the Website.
Transport Layer Security (or TLS)	means a protocol that provides for the privacy and integrity of data transferred between communicating applications and their users.

1. INTRODUCTION

Document Purpose

1.1 Pursuant to Section E2 (Registration Data) of the Code, this document is the Registration Data Interface Specification.

2. REGISTRATION DATA INTERFACE

Establishment of the REGIS logical connection

2.1 The DCC shall make the Registration Data Interface available on an Internet Protocol version 4 (IPv4) address range.

2.2 Each Registration Data Provider shall use Network Address Translation to remap their internal Internet Protocol addresses to the DCC provided Internet Protocol addresses at the Registration Data Provider's firewall prior to accessing the Registration Data Interface.

2.3 Each Registration Data Provider shall use Network Address Translation to remap incoming DCC traffic Internet Protocol addresses from the published Internet Protocol addresses at the Registration Data Provider's firewall to the Internet Protocol addresses the Registration Data Provider has reserved within their subnet.

2.4 The DCC shall specify a range of ports and the DCC and each Registration Data Provider shall configure these ports to be open for the FTPS connection.

File Exchange Mechanism

2.5 The Registration Data Interface shall utilise FTPS following the list of recommended tasks for implementing an information exchange stated in NIST SP 800-47 revision 1 Section 3.2.2.

2.6 The DCC and each Registration Data Provider shall implement FTP, in a standard format conforming to the following internet standards as defined in the referenced Request for Comments (RFC) as published by the Internet Engineering Task Force (IETF) and the Internet Society:

(a) RFC 959 - FTP; and

(b) RFC 2228 – FTP security extensions.

2.7 The DCC and each Registration Data Provider shall secure the FTP session using TLS, in a standard format conforming to the following internet standards as defined in the referenced RFC as published by the IETF and the Internet Society:

(a) RFC 4217 - Securing FTP with TLS

2.8 In accordance with RFC 4217:

(a) each Registration Data Provider shall populate the "USER command" (as defined in RFC 4217) with the RDP Signifier issued to it by the Panel, in lower case; and

(b) the DCC shall populate the "USER command" with the Party Signifier issued to it by the Panel, in lower case.

2.9 The DCC and each Registration Data Provider shall ensure the session Transport Layer Security is achieved utilising:

(a) the cipher suite TLS_RSA_WITH_AES_128_GCM_SHA256 as catalogued and further defined by the Internet Assigned Numbers Authority within the Cipher Suite Registry; and

(b) DCCKI Certificates for mutual authentication.

2.10 The DCC and each Registration Data Provider shall ensure that the FTPS session is routed via the DCC's Policy Enforcement Point and the Policy Enforcement Point used by the Registration Data Provider.

2.11 When sending a DCC Status File, the DCC shall follow steps (a) to (d) below, and when receiving a DCC Status File each Registration Data Provider shall follow steps (e) to (K) below:

(a) structure data files provided under Section E2.4 of the Code, in accordance with the structures defined in clause 3.9 of this document;

(b) Digitally Sign the file in accordance with clause 2.12 of this document;

(c) connect to the recipient's FTPS server in accordance with clauses 2.7 to 2.9 of this document using a DCC Gateway Connection;

(d) initiate the transfer of the file to the relevant delivery directory on the recipient's FTPS server utilising FTP push mechanisms for all file exchanges;

(e) authenticate the source of the file through verifying that the file has been Digitally Signed in accordance with clause 2.12 of this document, and validate the file structure against the structure as defined in clause 3.9 of this document;

(f) raise an Incident in accordance with the Incident Management Policy, where the recipient is unable to authenticate the file pursuant to clause 2.16 of this document;

(g) in the case of Electricity Registration Data Providers only, raise an Incident in accordance with the Incident Management Policy, where the Electricity Registration Data Provider is unable to confirm that the file conforms with clause 3.9 of this document;

(h) in the case of Registration Data Providers only, generate a Response File as defined in clause 3.10(a) or 3.13(g) of this document, where the Registration Data Provider is unable to validate the file structure pursuant to clauses 3.11 or 3.14 of this document. The Registration Data Provider shall send the Response File to the DCC using the steps outlined in clauses 2.11(b) to (d) immediately above and on receipt of the Response File containing validation errors the DCC shall raise an Incident as defined in the Incident Management Policy;

(i) process each record within the file and perform record level validation, where the Registration Data Provider or DCC is able to successfully authenticate and validate the file pursuant to clause 2.11(e) of this document;

(j) in the case of Registration Data Providers only, generate a Response File as defined in clauses 3.10(a) and 3.13(g) of this document, where the Registration Data Provider is unable to successfully validate and process each record within the file pursuant to clause 2.11(i) of this document. The Registration Data Provider shall send the Response File to the DCC using the steps outlined in clauses 2.11(b) to (d) and on receipt of the Response File containing validation errors the DCC shall raise an Incident in accordance with the Incident Management Policy; and

(k) in the case of the DCC only, raise an Incident in accordance with the Incident Management Policy, where the DCC is unable to successfully validate and process each record within the file pursuant to clause 2.11(i) of this document.

Security Requirements

2.12 The DCC shall Digitally Sign each file sent via the Registration Data Interface with a Private Key.

2.13 The DCC shall ensure that the Digital Signature shall:

a) use, as the digital signature technique, Elliptic Curve Digital Signature Algorithm (ECDSA) (as specified in Federal Information Processing Standards Publications (FIPS PUB) 186-4) in combination with the curve P-256 (as specified in FIPS PUB 186-4 at Section D.1.2.3) and SHA-256 as the hash function;

b) be applied to the entirety of the file including header and trailer; and

c) be converted to Base64 and appended within the file itself to the trailer with a preceding "," separator.

2.14 Prior to Digitally Signing each file, the DCC shall append to the trailer of the file the Issuer, which shall be URL encoded (as specified in the IETF RFC 2253), and serial number of the SMKI Organisation Certificate with preceding "," separators.

2.15 Each Registration Data Provider may use the organisation identifier in the header of the file and the Issuer and serial number in the trailer of the file to retrieve the appropriate public key.

2.16 Each Registration Data Provider shall Check Cryptographic Protection on a file using ECDSA (as specified in FIPS PUB 186-4) in combination with the curve P-256 (as specified in FIPS PUB 186-4 at Section D.1.2.3) and SHA-256 as the hash function, and Confirm Validity of the Certificate used to Check Cryptographic Protection.

2.17 Each Registration Data Provider shall ensure that the Digital Signature calculation shall:

(a) be performed on the entire file including header and trailer except the Digital Signature and preceding field separator appended to the trailer;

(b) ensure that all line termination characters read from the file, except any termination characters in the trailer, shall be normalised to 0x0A; and

(c) exclude any line termination characters in the trailer.

2.18 Prior to verifying the Digital Signature, each Registration Data Provider shall ensure that all line termination characters in the file, except the line termination characters in the trailer, shall be normalised to 0x0A.

Interface Error Handling

Data files not being received when expected

2.19 Identification of an Anomalous Event:

(a) in the event of the DCC or a Registration Data Provider identifying an exception to the agreed schedules, either organisation may raise an Incident in accordance with the Incident Management Policy.

2.20 Connection & Transfer Failures:

(a) in the event of connection failures or file transfer failures from the DCC to a Registration Data Provider, the DCC shall attempt to reconnect and/or resend the file on 3 further occasions at 5 minute intervals; and

(b) if the DCC cannot establish a connection with the Registration Data Provider after such number of retries, the DCC shall raise an Incident in accordance with the Incident Management Policy.

2.21 Authentication Failure:

(a) In the event of a transport authentication failure where the DCC is trying to send a DCC Status File to a Registration Data Provider, a transport authentication failure will result in no connection or transmission of Registration Data. In such circumstances, the DCC shall raise an Incident in accordance with the Incident Management Policy.

Data files not conforming to the Registration Interface Specification

2.22 Identification of an Anomalous Event:

(a) The Registration Data Provider shall perform a check of the conformity of files against the agreed standards set out in clause 3 of this Registration Data Interface Specification; or

(b) In the event of either the DCC or a Registration Data Provider being in receipt of a non-conforming file it shall raise an Incident in accordance with the Incident Management Policy.

2.23 Validation Failure:

(a) where a validation failure is identified as a result of a DCC file that has been sent to the Registration Data Provider, the Registration Data Provider shall raise an Incident in accordance with the Incident Management Policy.

2.24 Other Circumstances:

(a) in the event of an Incident arising that is not covered by clauses 2.19 to 2.23 above, a Registration Data Provider shall review its business processes; and

(b) following compliance with clause 2.23(a) above, and in the event a Registration Data Provider has reasonable grounds to expect the issue to reside within the DCC, the Registration Data Provider shall raise an Incident in accordance with the Incident Management Policy.

Notification of Delays

2.25 In the event that the DCC has a planned or unplanned delay to a DCC Status File transfer, the DCC shall raise an Incident in accordance with the Incident Management Policy.

3. <u>INTERFACE FILES</u>

General Obligations

3.1 The DCC shall maintain a separate unique reference number for each Network Party that it shall apply to all files corresponding to that Network Party that it sends through the Registration Data Interface to that Network Party's Registration Data Provider.

3.2 In the event that a file is suspected of being lost, each Registration Data Provider may raise an Incident in accordance with the Incident Management Policy.

3.3 Each Electricity Registration Data Provider shall, pursuant to clause 2.11(j), reject a record with a DCC Service Flag 'effective from date' for a Smart Metering System that is earlier than the DCC Service Flag 'effective from date' previously provided by the DCC for that Smart Metering System.

3.4 Each Gas Registration Data Provider shall detect duplicate files and where detected shall not process duplicate files.

3.5 Each Gas Registration Data Provider shall process files in the order they are received.

3.6 Each Registration Data Provider and the DCC shall not use file compression on files transferred through the Registration Data Interface.

3.7 The DCC shall provide any DCC Status Files utilising the FTPS connection or via an alternative means as agreed between the DCC and the Gas Registration Data Provider or Electricity Registration Data Provider to whom the file is being sent, (provided that any such alternative means must incorporate the use of security controls that are at least as robust as those that apply to the FTPS connection).

Electricity Registration Data File Structure and Data Formats

3.8 The DCC shall use variable length delimited file format for sending files, which meet the following requirements:

(a) fields shall be separated with "|" (ASCII 124) characters

(b) only use ASCII characters;

(c) not exceed the field lengths shown in the flow definitions referenced in clause 3.9 of this document;

(d) values shall not be padded (with leading zeroes or trailing spaces) where less than the maximum field length;

(e) fields shall not be enclosed in double quotes;

(f) no characters shall be entered into fields that are intended to be blank; and

(g) records shall be terminated with a line feed (ASCII 10) character.

3.9 The DCC shall ensure that all files contain header and trailer records that conform to the formats as specified below:

(a) File Header

Data Item	Format	Optionality	Comment
Group Header	CHAR(3)	Mandatory	'ZHV'
File Identifier	CHAR(10)	Mandatory	File identifier - unique within market participant
Data flow and Version Number	CHAR(8)	Mandatory	Dxxxxnnn Consists of 5 char data flow reference followed by 3 char flow version number - where 'n' has a range of 0-9 e.g. 001, 105....
From Market Participant Role Code	CHAR(1)	Mandatory	e.g. Registration systems have value P
From Market Participant Id	CHAR(4)	Mandatory	e.g. DCC has value DCCO
To Market Participant Role Code	CHAR(1)	Mandatory	e.g. DCC has value Z
To Market Participant Id	CHAR(4)	Mandatory	e.g. DCC has value DCCO
File creation timestamp	CHAR(14)	Mandatory	DATETIME (GMT) DCC is using UTC Formatted: YYYYMMDDHHMMSS
Sending Application Id	CHAR(5)	Optional	Application identifier. For possible future use
Receiving Application Id	CHAR(5)	Optional	Application identifier. For possible future use
Broadcast	CHAR(1)	Optional	For possible future use.
Test data flag	CHAR(4)	Optional	Indicates whether or not this file contains test data. All operational (non-test) files shall contain the value OPER

(b) File Trailer

Data Item	Format	Optionality	Comment
Group Name	CHAR(3)	Mandatory	'ZPT'

File identifier	CHAR(10)	Mandatory	File identifier - unique within market participant
Total Group Count	INT (10)	Mandatory	Total number of groups in file excluding header/trailer
Checksum	INT (10)	Optional	Checksum
Flow count	INT (8)	Mandatory	Number of flow instances excluding file header/trailer
File completion timestamp	CHAR(14)	Optional	DATETIME (GMT) DCC is using UTC Formatted: YYYYMMDDHHMMSS

3.10 Each Electricity Registration Data Provider shall provide the following files, which shall conform to the latest Supported Version of the specified data flow structures as defined in the Energy Market Data Specification:

(a) Response File - DCC Service Flag update rejections

To notify the DCC of any data records rejected during processing of a DCC Status File due to validation errors, each Electricity Registration Data Provider shall send a Response File as specified in the Energy Market Data Specification D0351 data flow; and

(b) Response File - DCC Service Flag update acknowledgement

To notify the DCC of successful processing of the DCC Status File, each Electricity Registration Data Provider shall send a Response File as specified in the Energy Market Data Specification D0172 data flow.

3.11 The DCC shall provide the following files to each Electricity Registration Data Provider conforming to the data flow structures as defined in the Energy Market Data Specification:

(a) DCC Status File

To notify Electricity Network Parties of DCC Service Flag updates and the identity of the person that the DCC believes to be registered in relation to an MPAN as set out in Section E2.4 of the Code, the DCC shall send a DCC Status File as specified in the Energy Market Data Specification D0350 data flow.

3.12 Clause 3.11 constitutes the data that is to be provided by the DCC to Registration Data Providers under Section E2.4 (a) of the Code.

Gas Registration Data File Structure and Data Formats

3.13 The DCC shall use comma separated file format for sending files to Registration Data Providers of Gas Transporters, and each shall ensure that all of the files that it sends meet the following requirements:

(a) fields shall be comma-separated;

(b) only use ASCII characters;

(c) do not exceed the field lengths shown below at clause 3.28 of this document and exclude any opening and closing double quotation marks or comma separators;

(d) values shall not be padded where less than the maximum field length;

(e) text fields shall be enclosed with opening and closing double quotation marks, but no quotation marks shall be used in date and numeric fields; and

(f) blank fields shall not contain characters other than opening and closing double quotation marks for text fields.

3.14 Each Gas Registration Data Provider shall employ the file naming convention described below, ensuring that each file sent through the DCC Gateway Connection has a unique name. Within the names shown in clauses (a) and (b) below: 'PN' indicates that the files are production (will be 'TN' for test); nnnnnn is the sequence number of the file in question; and xxx is the file type (ERR, FRJ or DXR) as detailed in clause 3.16:

(a) Daily DCC Status Files:
DCC01.PNnnnnnn.DXI

(b) Response Files from Daily DCC Status File processing will be:
XOS01.PNnnnnnn.xxx

(c) Response File - DCC Service Flag update responses

Following the processing of the DCC Status File (file format described in clause 3.29(a) of this document) each Gas Registration Data Provider shall provide a Response File indicating whether each of the DCC Service Flag update records (record reference 'E45') was accepted or rejected. For each E45 record in the incoming "DXI" DCC Status File there will be a corresponding E46 record (as described immediately below) in the "DXR" Response File. If the E45 record is processed successfully, the outcome code in the E46 record will be "AC" and if unsuccessful the outcome code is "RJ".

Where the outcome is "RJ" the rejection reason will be notified to the DCC through an S72 record or records directly following the E46.

(i) The format of an E46 record is as follows:

Field Name	Optionality	Type	Length	Description
Transaction Type	Mandatory	Text	3	Value: E46
Outcome Code	Mandatory	Text	2	Details whether the request has been accepted or rejected. AC – Accepted RJ – Rejected.
Meter Point Reference	Mandatory	Number	10	
DCC Service Flag	Mandatory	Text	1	Service flag provided by the DCC. The allowable values are: • A – Active • N – Non-Active • I – InstalledNotCommissioned
DCC Service Effective From Date	Mandatory	Date	8	The date the DCC Service Flag (provided above) is effective from. Format : YYYYMMDD

Service Flag	Description
Active	DCC Service Flag 'A' requires at least one of the associated Smart Meters at an SMS to have the 'Commissioned' Device status in the SMI.

Non-Active	DCC Service Flag 'N' indicates that an SMS is not associated with a Device with an 'InstalledNotCommissioned' or 'Commissioned' Device status, but has been previously.
InstalledNotCommissioned	DCC Service Flag 'I' requires all the associated Smart Meters at an SMS to have the 'InstalledNotCommissioned' Device status in the SMI.

(ii) The format of an S72 record is as follows:

Field Name	**Optionality**	**Type**	**Length**	**Description**
Transaction Type	Mandatory	Text	3	Value: S72
Rejection Code	Mandatory	Text	8	The unique reference number identifying the reason for the validation failure. One of the following two values: 'MPO00001' Supply Meter Point does not exist 'DCC00001' DCC Service Flag value is not recognised

3.15 The DCC shall provide files to each Gas Registration Data Provider conforming to the following data flow structure:

(a) DCC Status File

To notify each Gas Registration Data Provider of DCC Service Flag updates the DCC shall send a single DCC Status File (Ref DXI) that shall consist of a single data record per update (Ref. E45). The format of an E45 record is as follows:

Field Name	**Optionality**	**Type**	**Length**	**Description**	**SEC reference**
Transaction Type	Mandatory	Text	3	Value: E45	Not applicable
Meter Point Reference	Mandatory	Number	10		Section E2.4 (b)
DCC Service Flag	Mandatory	Text	1	Service flag provided by the DCC. The allowable flags are: • A – Active • N – Non-Active • I – InstalledNotCommissioned	Section E2.4(b)
DCC Service Effective From Date	Mandatory	Date	8	The date the DCC Service Flag (provided above) is effective from. Format : YYYYMMDD	Section E2.4 (b)

3.16 Each Gas Registration Data Provider shall create and send the Response Files as defined in clause 3.16 (a) and (b) below, in response to failures in validation of the DCC Status File. On receipt of the Response File DCC shall raise an Incident as defined in the Data Incident Management Policy.

(a) Record level format failure Response File

To record any record level format validation errors found in processing the DCC Status File, the Gas Registration Data Provider shall create a Response File with header and trailer as defined in clause 3.14 of this document and one or more record level error records as detailed below. The file name will be as defined in clause 3.14(b) of this document with suffix 'ERR'.

Field Name	Optionality	Type	Length	Description
Transaction Type	Mandatory	Text	3	Value: E01
Rejection Code	Mandatory	Text	8	The unique reference number identifying the reason for the validation failure as defined in the Error Code under clause 3.30(c)
File Reference	Mandatory	Number	10	The unique reference number of the file that was received and processed.
Rejection Description	Mandatory	Text	250	Description of the error found and which record/field it occurred as defined in the Rejection Reason under clause 3.30(c).

(b) Response File - File level rejection

To record any file level format validation errors found in processing the DCC Status File, the Registration Data Provider shall create a Response File with header and trailer as defined in clause 3.26 of this document and the file name will be as defined in clause 3.24(d) of this document with suffix 'FRJ'. File level validation failures will be contained within a single file and will consist of 2 different types of data record per file – Rejected File (record reference S71) and Rejection Details (record reference S72). There will be one S71 record followed by one or more S72 records.

(i) The format of an S71 record is as follows:

Field Name	Optionality	Type	Length	Description
Transaction Type	Mandatory	Text	3	Value: S71
File Reference	Mandatory	Text	30	The unique reference number of the file that was received and processed.

(ii) The format of an S72 record is as follows:

Field Name	Optionality	Type	Length	Description
Transaction Type	Mandatory	Text	3	Value: S72

Rejection Code	Mandatory	Text	8	The unique reference number identifying the reason for the validation failure as defined in the Error Code under clause 3.30(d)

(c) Record level - Error codes

Error Code	
CSV00010	Transaction type not recognized - <*Record identifier*>
CSV00011	Invalid character - <*Record identifier*>, <*Field number*>
CSV00012	Invalid numeric field , <*Record identifier*>, <*Field number*>
CSV00013	Premature end of record - <*Record identifier*>
CSV00014	Invalid record termination - <*Record identifier*>
CSV00015	Invalid text field - <*Record identifier*>, <*Field number*>
CSV00019	Record too short - <*Record identifier*>
CSV00020	Mandatory field expected - <*Record identifier*>, <*Field number*>
CSV00021	Invalid Date/Time field - <*Record identifier*>, <*Field number*>
CHK00036	Mandatory record not supplied - <*Record identifier*>

(d) File level - Error codes

FIL00013	Organisation ID on header cannot be found
FIL00014	Organisation ID on the header does not match the sender's ID
FIL00015	File type on the header is not the same as that in file name
FIL00016	Generation number on the header is not the same as that in file name
FIL00017	A file has previously been received & processed with this generation number
FIL00018	A count of detail records in the file does not match that held on the trailer
FIL00019	Invalid record type found

Version Y 3.0

APPENDIX Y

Registration Data Interface Code of Connection

(REGICoCo)

DEFINITIONS

In this document, except where the context otherwise requires:

- expressions defined in Section A of the Code (Definitions and Interpretation) have the same meaning as is set out in that Section;
- the expressions in the left hand column below shall have the meanings given to them in the right hand column below; and
- any expressions not defined here or in Section A of the Code have the meaning given to them in the Registration Data Interface Specification.

Security Patch	means a software change intended to address a particular vulnerability or weakness in the security of a system.

1. REGISTRATION DATA INTERFACE CODE OF CONNECTION

1.1 These provisions apply to the DCC and any Registration Data Provider seeking to receive communications via the Registration Data Interface.

General Obligations

1.2 The DCC and each Registration Data Provider shall inform each other of the contact details of one or more persons working for their respective organisations for the purposes of managing arrangements associated with the use of the Registration Data Interface. The following information shall be provided in relation to each such person (and subsequently kept up to date by the providing organisation):

(a) contact name;

(b) contact email;

(c) contact telephone number; and

(d) contact address.

and any other contact details as may be reasonably required by the DCC or the Registration Data Provider from time to time.

Restrictions on the use of DCC Gateway Connections

1.3 The DCC shall use a DCC Gateway Connection for the purpose of sending data to the Registration Data Provider pursuant to Section E2 of the Code, except where an alternative means of transfer has been agreed pursuant to clause 3.7 of the Registration Data Interface Specification.

Establishment of Transport Layer Security

1.4 The DCC and each Registration Data Provider:

(a) shall establish a TLS session to secure the transport layer connection to the Registration Data Provider's FTPS server and the DCC's FTPS server respectively and shall do so in accordance with the Registration Data Interface Specification;

(b) shall use a DCCKI Infrastructure Certificate to establish the TLS session; and

(c) in the case of a Registration Data Provider only, may obtain a DCCKI Infrastructure Certificate in accordance with the DCCKI RAPP.

DCC Status Files

1.5 The DCC shall produce a DCC Status File showing the changes to the DCC Service Flag for each MPAN or Supply Meter Point that occurred since the last update, provided that where no such changes have occurred, the DCC Status File shall record zero changes.

1.6 The DCC shall send a DCC Status File by 18:00 hours every day. In the case of Gas Smart Metering Systems, the DCC shall send one DCC Status File per Registration Data Provider. In the case of Electricity Smart Metering Systems, the DCC shall send one DCC Status File per Electricity Network Party.

Technical Infrastructure

1.7 Each Registration Data Provider shall provide and configure its own FTPS servers for use in receipt of data from the DCC as set out in Section E2.4 and shall be responsible for operation and maintenance of its FTPS platform used to receive files from the DCC.

1.8 Each Registration Data Provider and the DCC shall inform each other of information relating to its FTPS servers that is reasonably required by the DCC and each Registration Data Provider in relation to any DCC Gateway Connection that it is using to access the Registration Data Interface.

1.9 The DCC shall ensure that the URLs and/or the IP addresses of the Registration Data Interface remain constant.

Security Obligations

1.10 Each Registration Data Provider shall test the installation of Security Patches to be applied to its RDP Systems prior to their application.

1.11 Prior to using the Registration Data Interface, each Registration Data Provider shall provide a report to the DCC that details the following:

(a) the scope of its RDP Systems;

(b) the number of connections between its RDP Systems and any System that does not form part of the RDP Systems; and

(c) the means by which the Registration Data Provider has achieved Separation between its RDP Systems and each other System to which they connect.

and;
thereafter, the Registration Data Provider shall ensure that the DCC is provided with a revised report whenever there is a change to the information in its previous report.

1.12 Where, based upon the report provided by the Registration Data Provider in clause 1.24 of this document the DCC considers that the Registration Data Provider has not adequately Separated its RDP Systems from other systems to which those RDP Systems connect, then to the extent that the failure to adequately Separate poses a threat of Compromise to DCC's Systems, the DCC shall notify the Registration Data Provider, the relevant Network Party, and the Panel and provide an associated explanation.

Version Z 8.0

APPENDIX Z

CPL Requirements Document

1. Overview

1.1 This Appendix supplements Section F2 (Central Products List).

2. Central Products List Contents

2.1 The Panel shall ensure that the Central Products List identifies each Device Model by Physical Device Type, and lists the following matters in respect of each Device Model:

(a) Manufacturer and model;

(b) hardware version;

(c) firmware version;

(d) for SMETS2+ Device Models, the version of the SMETS or CHTS (as applicable) and (in each case) the GBCS version for which the Device Model has one or more Assurance Certificates;

(e) for SMETS1 Device Models, Version 1.2 of SMETS;

(f) for SMETS2+ Device Models, the identification numbers for each of the Device Model's Assurance Certificates (including the version of the relevant standard against which each Assurance Certificate was issued);

(g) where the Device Model is required to have an associated CPA Certificate, the expiry or renewal date of the Device Model's CPA Certificate and the associated version of the Security Characteristics (as defined in the relevant Technical Specification);

(h) where there is an associated Manufacturer Image:

(i) the relevant identity of the person who created the Manufacturer Image;

(ii) a descriptor of the Manufacturer Image;

(iii) the Hash of the Manufacturer Image (to be provided pursuant to Clause 4); and

(i) Zigbee band, which is a mandatory field.

3. Addition of Device Models to the List

3.1 For SMETS2+ Device Models, the Panel shall only add Device Models to the Central Products List once the Panel has received all the Assurance Certificates required (under the Technical Specifications) to be obtained in respect of Device Models of the relevant Physical Device Type (which Assurance Certificates may be provided to the Panel by a Party or any other person).

3.2 For SMETS1 Device Models, the Panel shall only add a Device Model to the Central Products List once the Panel has received a notification from the DCC or, subject to Clause 3.5, from a Supplier Party. Clauses 3.3 to 3.13 (inclusive) set out the process for adding SMETS1 Device Models to the Central Products List.

3.3 The DCC shall only send a notification to the Panel in respect of a SMETS1 Device Model (as referred to in Clause 3.2) once the Device Model has been included as part of at least one entry on the SMETS1 Eligible Products Combinations list.

3.4 A Supplier Party may only send a notification to the Panel in respect of a SMETS1 Device Model (as referred to in Clause 3.2) if:

(a) that SMETS1 Device Model has not been included as part of at least one entry on the SMETS1 Eligible Product Combinations list; and

(b) that Supplier Party reasonably believes that the addition of the SMETS1 Device Model to the Central Products List is required in order to facilitate the urgent resolution of a material security vulnerability relating to Commissioned Devices for which it is the Responsible Supplier.

3.5 As soon as reasonably practicable after sending a notification to the Panel in accordance with Clause 3.2, the relevant Supplier Party shall notify the DCC via the Notification Interface that it has sent such a notification to the Panel and, in doing so, shall inform the DCC of the Device Model notified to the Panel.

3.6 The Panel shall only accept and process a notification from a Supplier Party under Clause 3.2 if the notification has been made in accordance with the requirements of the Supplier Party CPL Notification Procedures and where the Panel has successfully confirmed that the notification was from a Supplier Party and has not been modified since its creation.

3.7 For the purposes of Clause 3.6, the Supplier Party CPL Notification Procedures are procedures that provide for a Device Model to be notified to the Panel by a Supplier Party in a manner that allows the Panel to confirm that:

(a) any such notification has originated from a Supplier Party; and

(b) any such notification from a Supplier Party has not been modified since its creation.

3.8 The Panel shall develop the Supplier Party CPL Notification Procedures and any subsequent modification to them in consultation with the Security Sub-Committee and publish the Supplier Party CPL Notification Procedures on the Website.

3.9 Where the DCC has received a notification via the Notification Interface from a Supplier Party pursuant to Clause 3.5, the DCC shall, as soon as reasonably practical after uploading into the DCC Systems a revised version of the Central Products List that additionally includes the Device Model notified to the Panel by the Supplier Party, inform that Supplier Party via the Notification Interface that the upload has taken place.

3.10 For the purposes of Clauses 3.5 and 3.9, the Notification Interface is an appropriately secure interface, the identity of which the DCC shall communicate to Supplier Parties, for the purposes of making the notifications between Supplier Parties and the DCC referred to in those Clauses.

3.11 After the addition of a Non-EPCL Device Model to the Central Products List, the Supplier Party that notified the Non-EPCL Device Model to the Panel shall take all reasonable steps to ensure that each Device Model Combination:

(a) of which any Commissioned Device of that Non-EPCL Device Model forms part; and

(b) for which Commissioned Device it is the Responsible Supplier, is added to the SMETS1 Eligible Product Combinations List as soon as reasonably practicable.

3.12 After the Commissioning of a Device that is of a Non-EPCL Device Model, the Responsible Supplier for that Device shall take all reasonable steps to ensure that that the Device Model Combination of which that Device forms part is added to the SMETS1 Eligible Product Combinations List as soon as reasonably practicable.

3.13 Where a PPMID of a particular type is capable of forming part of either a SMETS1 Smart Metering System or a SMETS2+ Smart Metering System, any Device Model added to the Central Products List shall:

(a) insofar as it relates to PPMIDs of that type forming part of SMETS2+ Smart Metering Systems, be the Manufacturer of the PPMID, its model, its hardware version and its firmware version; and

(b) insofar as it relates to PPMIDs of that type forming part of SMETS1 Smart Metering Systems, be the Manufacturer of the PPMID, its model, its hardware version and a value representing its firmware version that is different to the firmware version of the PPMID of that type that forms part of a SMETS2+ Smart Metering System.

4. Association of Hashes with Device Models on the CPL

4.1 Where the DCC, a Supplier Party or a Manufacturer which is a Party wishes the Panel to associate the Hash of a Manufacturer Image with a Device Model on the Central Products List, that Party shall provide the Hash and the identity of the person who created the Manufacturer Image in a communication to the Panel which has been Digitally Signed by the person who created the Manufacturer Image in a manner that reasonably enables the Panel to check that the communication originates from the person who created the Manufacturer Image.

4.2 The Panel may specify the format which the communication referred to in Clause 4.1 must take (in which case Parties sending such communications must use such format). The Panel shall notify the relevant Parties of any such required format and of any changes to such required format that the Panel may make from time to time.

4.3 The Panel shall only associate a Hash provided under Clause 4.1 with a Device Model on the Central Products List where:

(a) the Panel has successfully confirmed that the Digital Signature referred to in Clause 4.1 is that of the person who created the Manufacturer Image (validated as necessary by reference to a trusted party);

(b) there is no Hash currently associated with the Device Model; provided that, if there is a Hash currently associated with the Device Model, the Panel shall investigate the matter with the relevant Parties to identify whether it is appropriate to replace the associated Hash (and shall, where it is appropriate to do so, update the Central Products List accordingly); and

(c) if the Device Model is a SMETS1 Device Model, the communication to the Panel referred to in Clause 4.1 is from the DCC.

5. Adding Device Models to CPA Certificates

5.1 An existing CPA Certificate for a Device Model may allow one or more additional Device Models to be added under that existing CPA Certificate, provided that any additional Device Model differs from the Device Model for which the CPA Certificate was originally issued only by virtue of having different versions of hardware and/or firmware that do not have a significant impact on the security functions of the Device Model (as set out in the CPA Assurance Maintenance Plan). Where this is the case, the following persons may notify the Panel of one or more additional Device Models to be added to the CPA Certificate:

(a) the DCC for Communications Hubs; or

(b) a Supplier Party or a Manufacturer which is a Party for Device Models of all other Physical Device Types.

5.2 Where the DCC, a Supplier Party or a Manufacturer which is a Party notifies the Panel of an additional Device Model pursuant to Clause 5.1, the DCC, Supplier Party or Manufacturer shall:

(a) only do so in accordance with the terms of the relevant CPA Assurance Maintenance Plan; and

(b) retain evidence that it has acted in accordance with the terms of the relevant CPA Assurance Maintenance Plan, such evidence to be provided to the Panel or the Authority on request.

5.3 The Panel shall not be required to check whether the DCC, a Supplier Party or Manufacturer (as applicable) is entitled to add a Device Model under the terms of the CPA Certificate and the CPA Assurance Maintenance Plan (as described in Clause 5.1).

5.4 [NOT IN USE]

6. Removal of Device Models from the List

6.1 Where an Assurance Certificate for a Device Model which was issued by the ZigBee Alliance or the DLMS User Association is withdrawn or cancelled by the ZigBee Alliance or the DLMS User Association (as applicable), then the Panel shall remove that Device Model from the Central Products List.

6.2 Where a CPA Certificate for a Device Model expires or is not renewed or is withdrawn or cancelled by NCSC or a Trial Device Certificate for a Trial Device Model expires or is withdrawn or cancelled by the Security Sub-Committee, then the Security Sub-Committee shall determine whether the Device Model is to be removed from the Central Products List, and the Panel shall remove the Device Model (or not) as determined by the Security Sub-Committee. In reaching such a determination, the Security Sub-Committee:

(a) shall consider the security implications of such circumstances, and weigh them against the consequences for Energy Consumers of Devices of the relevant Device Model being Suspended as a result of removing the Device Model from the Central Products List;

(b) shall take into account any relevant information provided to it by NCSC concerning the risks associated with the cancellation, withdrawal or expiry without renewal of the CPA Certificate;

(c) may determine, whether or not the Device Model is to be removed from the Central Product List, that a CPA Certificate Remedial Plan or a Trial Device Remedial Plan (as relevant) is to be imposed (for SMETS2+ Communications Hubs) on the DCC or (for all other Device Models) on the Import Suppliers (for Devices of that Device Model forming part of a Smart Metering System for which they are the Import Supplier) and/or the Gas Suppliers (for Devices of that Device Model forming part of a Smart Metering System for which they are the Gas Supplier); and

(d) shall reach a determination as soon as reasonably practicable taking into account the seriousness of the potential security consequences.

6.3 Where the Security Sub-Committee determines under Clause 6.2 that a CPA Certificate Remedial Plan or a Trial Device Remedial Plan (as relevant) is to be imposed on one or more Parties, then the Security Sub-Committee shall notify those Parties and each of those Parties shall:

(a) (within such period as the Security Sub-Committee may require) propose a plan to the Security Sub-Committee setting out how the Party intends to remedy the security issue or issues that have resulted in or arise from the cancellation, withdrawal or expiry without renewal of the CPA Certificate or Trial Device Certificate, and within what time period;

(b) (within such period as the Security Sub-Committee may require) take into account any and all comments on the proposed plan raised by the Security Sub- Committee, and obtain the Security Sub-Committee's approval of the plan (the approved plan for each such Party, as modified from time to time with the approval of the Security Sub-Committee, being that Party's "**CPA Certificate Remedial Plan**" or, in the case of a Trial Device Certificate, its "**Trial Device Remedial Plan**");

(c) comply in all material respects with the CPA Certificate Remedial Plan or Trial Device Remedial Plan (as relevant); and

(d) (where requested by the Security Sub-Committee) report to the Security Sub-Committee on progress in respect of the CPA Certificate Remedial Plan or Trial Device Remedial Plan (as relevant).

6.4 Where the Security Sub-Committee initially determines under Clause 6.2 that a CPA Certificate Remedial Plan or Trial Device Remedial Plan (as relevant) is to be imposed as an alternative to removing a Device Model from the Central Products List, then the Security Sub-Committee may at any time determine that the Device Model in question is to be removed from the Central Products List, in which case the Panel shall remove the Device Model from the Central Products List.

6.5 For the purposes of Section M8.1(g) (Events of Default), the obligations of a Party under Clause 6.3 are material obligations. Accordingly, failure by a Party to gain approval for, or failure by a Party to comply in all material respects with, a CPA Certificate Remedial Plan shall be an Event of Default if not remedied within 20 Working Days after notice from the Security Sub-Committee requiring remedy.

6.6 The DCC, each Supplier Party and each Manufacturer which is a Party shall provide such relevant information as the Security Sub-Committee may reasonably request to assist it in reaching a determination under Clause 6.2 or 6.4.

6.7 The DCC, each Supplier Party and each Manufacturer which is a Party shall notify the Panel of any withdrawal, expiry or cancellation of an Assurance Certificate of which the DCC, Supplier Party or Manufacturer becomes aware. Where removal occurs as a result of the withdrawal, expiry or cancellation of an Assurance Certificate, the Panel shall only remove a Device Model from the Central Products List after the Panel has confirmed with the relevant Assurance Certification Body that the Assurance Certificate for that Device Model has expired or has been withdrawn or cancelled (and no new Assurance Certificate has been provided to the Panel under Clause 3).

6.8 The Panel may also remove a SMETS1 Device Model from the Central Products List where either:

(a) the Security Sub Committee advises that the Device Model should be removed from the Central Products List; or

(b) it is determined by the Authority or by the Panel under Section F3 (Panel Dispute Resolution Role) that Devices of the relevant Device Model are not compliant with SMETS1 (either on their own or in combination with Devices of other Device Models listed on the Central Products List).

6.9 The Panel may reinstate to the Central Products List a SMETS1 Device Model that it has removed pursuant to Clause 6.8; provided that the Panel may only reinstate a Device Model that has been removed pursuant to Clause 6.2A(b) where it determines that the issue that gave rise to the removal of the Device Model has been rectified.

6.10 For the purposes of this Code, a Communications Hub Function or a Gas Proxy Function shall be considered to be on (or not on) the Central Products List if the Communications Hub of which it forms part is on (or not on) the Central Products List.

6.11 The Panel may provide for the removal of a Device Model from the Central Products List by marking that Device Model as 'removed'. All references in this Code to the removal of a Device Model from the Central Products List (and similar expressions) shall be interpreted accordingly.

7. Digital Signatures on CPL

7.1 When providing an updated Central Products List (or extract of it) to the DCC, the Panel shall provide a copy of the Central Products List (or of that extract) that is Digitally Signed so as to reasonably enable the DCC to check that the updates to the Central Product List originate from the Panel.

7.2 The DCC shall, before using and relying upon the Central Products List received by the DCC from the Panel, first confirm that the Digital Signature referred to in Clause 7.1 is that of the Panel (validated as necessary by reference to a trusted party).

7.3 Following receipt by the DCC of an updated Central Products List from the Panel, the DCC shall take all reasonable steps to establish whether the update included the removal of one or more Device Models from the Central Products List. Where the DCC establishes that an update did include the removal of one or more Device Models from the Central Products List, then:

(a) the DCC shall take all reasonable steps to confirm that it was the intention of the Panel to remove such Device Models from the Central Products List; and

(b) where the DCC reasonably believes that it was not the intention of the Panel to remove such Device Models from the Central Products List, the DCC shall notify the Panel that this is the case and (notwithstanding Section F2.9) shall ignore the updated Central Products List.

Version AA 4.0

Appendix AA

Threshold Anomaly Detection Procedures

Contents

DEFINITIONS

In this document, except where the context otherwise requires:

- expressions defined in section A of the Code (Definitions and Interpretation) have the same meaning as is set out in that section; and
- the expressions in the left hand column below shall have the meanings given to them in the right hand column below.

Anomaly Detection Thresholds File	means a CSV file submitted by a User for the purposes of notification of ADT and Warning Thresholds to be applied by the DCC.
Authorised Responsible Officer (ARO)	means an individual that has successfully completed the process for becoming an ARO on behalf of a Party, RDP, SECCo or a DCC Service Provider in accordance with the SMKI RAPP.
Comma Separated Values (CSV)	means a tabular set of data records in text format in which the data fields within each data record are delimited using commas, and where data fields are not

	enclosed with opening and closing double quotation marks.
DCC Service Management System (DSMS)	means the Service Desk system used to manage Incidents and Service Management Service Requests.
Fast-Track Notification	means submission from a User to the DCC of an Anomaly Detection Thresholds File that is submitted with the intention of being applied in shorter timescales than standard processing timescales, where such timescales are set out in clause 3 of this document.
File Signing Certificate	means an IKI Certificate issued to a Party in accordance with the SMKI RAPP and associated with a Private Key that is used for the purposes of Digital Signing of CSV files.
Functional Component	has the meaning ascribed to this term in the Self Service Interface Access Control Specification.
Quarantined Communications Action File	means a CSV file submitted by a User for the purposes of notifying the DCC of the actions to be taken by DCC in respect of quarantined communications.
Quarantined Communications Report File	means a CSV file issued by the DCC to notify a User that communications have been quarantined.
Senior Responsible Officer (SRO)	means an individual that has successfully completed the process for becoming an SRO on behalf of a Party, RDP, SECCo or a DCC Service Provider in accordance with the SMKI RAPP.
Service Management Service Request (SMSR)	means the request raised by the User to facilitate management of a Service Desk call.
Warning Threshold	in respect of a User, a number of communications within a period of time which, if exceeded, will result in the DCC notifying the User. Where both that number and the period of time are set by the User.

1. Introduction

1.1 The Threshold Anomaly Detection Procedures (TADP) document makes provision for such matters as are described in Section G6.1 and G6.4 (b) (i) of the Code, and provides further processes and detail required to facilitate those matters.

2. DCC Anomaly Detection Threshold Guidance

2.1 Pursuant to Section G6.4 (b) of the Code, each User shall take into account any guidance issued by the DCC as to the appropriate level for their Anomaly Detection Thresholds (ADTs) giving regard to their Service Request forecast and expected pattern of demand for each Service Request.

2.2 DCC shall:

(a) provide guidance to support Users in setting appropriate ADT and Warning Thresholds;

(b) provide a template for the User to provide its ADT and Warning Thresholds in the format set out in clause 6.3 of this document;

(c) provide guidance to support Users in submitting ADT submissions to the DCC via the DCC's secure delivery method of choice; and

(d) provide the guidance and template referred to above via the Self Service Interface (SSI).

3. Notification of Anomaly Detection Thresholds

User and DCC Responsibilities: ADT submissions

3.1 Prior to sending the DCC any Anomaly Detection Thresholds File, the User shall raise a DCC Service Management Service Request (SMSR) via the SSI to obtain a reference number for use in its submission to DCC, where such reference number will be generated by the SSI automatically.

3.2 Each User shall use reasonable steps to organise its business processes in such a manner that obviates the need for it to rely on the use of Fast-Track Notifications.

3.3 Where a User wishes to submit a Fast-Track Notification it shall, prior to doing so, contact the DCC and provide a justification for why it is necessary for them to do so.

3.4 A User shall, in each User Role in relation to which it is required (or elects) to set ADTs, provide an Anomaly Detection Thresholds File to the DCC via the DCC's secure delivery method of choice (as from time to time specified on the SSI). The User shall include in such submission:

(a) the SMSR reference number in the subject line of the submission; and

(b) the Anomaly Detection Thresholds File (of the form set out in clause 6.3 of this document), Digitally Signed by a Private Key associated with a File Signing Certificate and provided to an Authorised Responsible Officer (ARO) in accordance with the SMKI RAPP.

3.5 The User shall update the SMSR corresponding to the Anomaly Detection Thresholds File submission on the SSI. On receipt of an SMSR and accompanying Anomaly Detection Thresholds File, the DCC shall:

(a) Check Cryptographic Protection applied to the CSV file, Confirm Validity of the Certificate used to Check Cryptographic Protection for the CSV file;

(b) confirm that the sequence number contained within the Anomaly Detection Thresholds File is greater than the sequence number contained within any previous Anomaly Detection Thresholds File that the

DCC has successfully validated and processed in relation to the User ID specified within that Anomaly Detection Thresholds File;

(c) check that the format of the Anomaly Detection Thresholds File is correct;

(d) confirm that the Anomaly Detection Thresholds File does not contain two or more entries which specify both the same value for the Service Reference Variant and the same value for the Time Period Applicable; and

(e) for Fast-Track Notifications, assess whether the justification provided is valid.

3.6 Following the checks above the DCC shall verify that the ADT and Warning Threshold values provided are consistent with guidance issued by DCC. Where the DCC considers this not to be the case it shall contact a Senior Responsible Officer (SRO) acting on behalf of the User, by telephone using the contact details held by the DCC. The DCC shall request confirmation from the SRO as to whether the submitted Anomaly Detection Thresholds File should be applied. The SRO shall either:

(a) provide confirmation to the DCC to apply the ADT and Warning Thresholds that it has submitted in which case the DCC shall apply the ADT and Warning Thresholds included within the Anomaly Detection Thresholds File and close the relevant SMSR; or

(b) resubmit Anomaly Detection Thresholds File having had further regard to the guidance.

3.7 The DCC shall validate and process Anomaly Detection Thresholds File submissions and shall either apply the ADT and Warning Thresholds in accordance with the manner as is set out in Clause 3.8 or in the event that any of the checks set out in Clause 3.5 (a) to (e) above are not successfully applied, reject the submission, in accordance with the timescales set out immediately below:

(a) for a notification of an Anomaly Detection Thresholds File that is not a Fast-Track Notification, within 72 hours of receipt of an Anomaly Detection Thresholds File by the DCC; or

(b) for a Fast-Track Notification, within 24 hours of receipt of an Anomaly Detection Thresholds File by the DCC.

3.8 Where the DCC successfully validates and processes an Anomaly Detection Thresholds File submission from a User using a particular User ID then, the following provisions shall apply to the application of ADT and Warning Thresholds for that User and that User ID:

(a) in relation to each Service Request that would, were it to be targeted at a SMETS2+ Device, result in the sending of a Critical Command to that Device, but for which there is no entry with the Anomaly Detection Thresholds File, the ADT and Warning Threshold shall each be set to zero with a Time Period Applicable value of 1440;

(b) in relation to Service Reference Variant 6.23, if there is no entry that specifies a Time Period Applicable value of 1440, create an entry with a Time Period Applicable value of 1440 and with an ADT and Warning Threshold each set to zero;

(c) in relation to each other Service Request for which there is no entry within the Anomaly Detection Thresholds File, no value for the ADT or Warning Threshold shall be set; and

(d) in relation to each Service Request for which there is an entry in the Anomaly Detection Thresholds File the ADT, Warning Threshold and Time Period Applicable values shall be set to be equal to the values specified within the Anomaly Detection Thresholds File.

3.9 Where the ADT and Warning Thresholds have been successfully applied, the DCC shall update and close the relevant SMSR. Where any of the checks outlined at clause 3.5 fail, the DCC shall not amend the existing ADT and Warning Thresholds for that User and that User ID and shall update the SMSR to reflect this and notify the User of the reason for the failure.

3.10 Where the DCC has never successfully validated and processed an Anomaly Detection Thresholds File for a particular User in relation to a particular User ID then, for each Service Request that would, were it to be targeted at a SMETS2+ Device, result in the sending of a Critical Command to that Device, the DCC shall set each of the ADT and Warning Threshold to be zero with a Time Period Applicable value of 1440 for the relevant User and User ID.

4. Exceeding Anomaly Detection or Warning Thresholds

User and DCC Responsibilities: User Warning Threshold

4.1 Where the number of communications has exceeded the Warning Threshold, the DCC shall raise an Incident and send an email notification to the User's registered contact address on the DSMS.

4.2 Following any such notification, a User shall use the "View Service Management Incident" Functional Component within the SSI to obtain details on the Warning Threshold exceeded using the SMSR reference number provided within the email notification.

4.3 Each User shall investigate, and then update and assign the Incident to the DCC using the "Update Service Management Incident" Functional Component within the SSI.

User and DCC Responsibilities: User Set Anomaly Detection Threshold

4.4 Where the DCC has quarantined communications in accordance with the Service Request Processing Document the DCC shall raise an Incident and send an email notification to the affected User's registered contact address on the DSMS to inform the User of the ADT that has been exceeded.

4.4A In respect of each quarantined communication, the DCC shall also send a DCC Alert to the User who sent the communication to inform then that the communication has been quarantined.

4.5 The DCC shall make all such quarantined communications available to Users to whom they relate to download for a period of 120 hours from the point at which the communication was quarantined. At this point the DCC will immediately initiate the automated email notification process to notify the User that the communication has been quarantined. After this 120 hour time period has elapsed, the DCC shall archive all quarantined communications relating to the event for audit purposes and permanently delete them after 30 days. During the 30 day archive period, Users can access these archived communications only for the purposes of investigating a Major Security Incident.

4.6 Each User shall use the "View Service Management Incident" Functional Component within the SSI to obtain details on the ADT exceeded using the Incident reference number provided within the email notification. The User shall download a configurable report, as set out in clause 6.4 of this document, from the "reporting" Functional Component within the SSI, which shall include the list of quarantined communications in a CSV format.

4.7 Each User shall investigate and resolve the ADT exceeded event. Each User shall make a submission to the DCC (via its secure delivery method of choice, as from time to time specified on the SSI) indicating the action to be taken on each of the quarantined communications. The User shall include in such submission:

(a) the Incident reference number in the title of the submission; and

(b) a valid CSV file, updated with the required action for each communication ("Release" or "Delete"), Digitally Signed with a Private Key issued to the ARO for the purposes of CSV file signing, as set out in clause 6.5 of this document.

4.8 Each User shall update the Incident using the "Update Service Management Incident" Functional Component within the SSI and assign to the DCC for further action. The DCC shall:

(a) Check Cryptographic Protection applied to the CSV file, Confirm Validity of the Certificate used to Check Cryptographic Protection for the CSV file; and

(b) check that the format of the data is correct.

4.9 Upon successful validation of all of the above checks the DCC shall perform the actions on the quarantined communications, notify the User, update and close the Incident.

4.10 Where any of the above validation steps fail the DCC shall update the Incident, reassign it to the User and notify the User of the reason for the failure.

User and DCC Responsibilities: DCC Set Anomaly Detection Threshold

4.11 Pursuant to Section G6.6 of the Code the DCC shall set ADTs. Where a DCC set ADT has been exceeded, the DCC shall (subject to the provisions of clause 22.2 of the SMETS1 Supporting Requirements):

(a) quarantine the communication(s) that have exceeded the ADT;

(b) raise an Incident in accordance with the Incident Management Policy;

(c) determine the reasons for the Incident and take appropriate remedial action; and

(d) in respect of each quarantined communication, send a DCC Alert to the User who sent the communication to inform them that the communication has been quarantined.

4.12 DCC shall contact the User(s) impacted by the event by raising an Incident to notify them that their communication(s) have been quarantined. At an appropriate point during the investigation, DCC shall advise Users of the action that should be taken in respect of quarantined communications, which will be one of the following:

(a) that quarantined communications must be deleted;

(b) that the User may decide whether quarantined communications should be processed or deleted; or

(c) that no action should be taken by the User in respect of quarantined communications, which will result in the quarantined communications being archived for 30 days and subsequently deleted by the DCC.

4.13 Upon being advised of the action to be taken, the User shall raise a DCC Service Management Service Request (SMSR) via the SSI to obtain a reference number for use in its submission to DCC (which reference number will be generated by the SSI automatically). The User shall then send the DCC a Quarantined

Communications Action File which specifies actions in respect of each quarantined communication (which actions must, where relevant, correspond with the actions advised by the DCC). The submission of such file shall be made via the DCC's secure delivery method of choice (as from time to time specified on the SSI), and shall include:

(a) the DSMS Incident reference number notified in the title of the submission; and

(b) a valid CSV file, updated with the required action for each communication ("Release" or "Delete"), Digitally Signed with a Private Key issued to the ARO for the purposes of CSV file signing, as set out in clause 6.5 of this document.

4.14 The DCC shall make all such quarantined communications available to Users to whom they relate to download for a period of 120 hours from the point at which the communication was quarantined. At this point the DCC will immediately initiate the automated email notification process to notify the User that the communication has been quarantined. After this 120 hour time period has elapsed, the DCC shall archive all quarantined communications relating to the event and permanently delete them after 30 days. During the 30 day archive period, Users can access these archived communications only for the purposes of investigating a Major Security Incident.

4.15 The User shall download a configurable report, as set out in clause 6.4 of this document, from the "reporting" Functional Component within the SSI which shall include the quarantined communications(s) in a CSV format. Each User shall update the Incident using the "Update Service Management Incident" Functional Component within the SSI and assign the Incident to DCC for further action. The DCC shall:

(a) Check Cryptographic Protection applied to the CSV file, Confirm Validity of the Certificate used to Check Cryptographic Protection for the CSV file; and

(b) check that the format of the data is correct.

4.16 Within 24 hours of receipt of a Quarantined Communications Action File, the DCC shall validate that Quarantined Communications Action File and shall either:

(a) where the checks are successful, perform the actions on the quarantined communications and notify the User of successful completion of the notified actions once completed, via the SSI; or

(b) where the checks are unsuccessful, update and reassign the Incident and notify the User of the reason for the failure.

5. Exceptions Process

5.1 There are no exceptions to the process.

6. Communication Formats

6.1 All data sent to the DCC for use in the DCC Systems for the purposes of these Threshold Anomaly Detection Procedures shall be in the form of a Digitally Signed CSV file. The field separator shall be a comma "," and the record separator shall be a line feed character 0x0A. In the file descriptions set out in clause 6.3 to 6.5 of this document, the character "▲" indicates the record separator. Users may include, within such CSV files, consecutive comma separators to the left of a record separator to specify that a field has a null value. DCC shall interpret consecutive commas within a record to identify a null value.

6.2 Each User submitting a CSV file that is to be Digitally Signed using the Private Key associated with a File Signing Certificate shall, prior to Digitally Signing that file, ensure that:

(a) the CSV file is formatted to ensure that each record has a separator which is a 0x0A character and that any 0x0D character is removed from the file; and

(b) the last record in the CSV file is terminated with a 0x0A character.

Anomaly Detection Thresholds File

6.3 Each Anomaly Detection Thresholds File shall be generated in accordance with the procedure set out immediately below.

(a) (a) an "initial" CSV file shall be created, which shall contain the following records:

(i) UserID ▲

(ii) Sequence_Number ▲

(iii) Service_Reference_Variant, Warning_Threshold, Quarantine_Threshold, Time_Period_Applicable, (repeated for each applicable Service Reference Variant to be used) ▲

(b) a File Signing Certificate_ID shall be appended as a record to the end of the "initial" CSV file, comprising:

(i) all of the attributes contained within the 'Issuer' field in the File Signing Certificate, including attribute names, equals signs and values, which shall be encoded in URL format such that it does not contain any special characters, followed by a comma; and

(ii) the Certificate serial number obtained from the 'serialNumber' field in the File Signing Certificate, followed by a 0x0A character;

(c) a Digital Signature shall be generated from the "initial" CSV file and appended as a record to the end of the CSV file, in accordance with the procedure set out in clause 6 of this document; and

(d) where the fields are defined as follows:

(i) The UserID is the EUI-64 identifier obtained as part of the ID Allocation Procedure.

(ii) The Sequence_Number is a positive integer that is greater than zero and which is greater than the Sequence_number included within any prior Anomaly Detection Thresholds File containing the same UserID submitted by the relevant User.

(iii) The Service Reference Variant is the number set out in the DCC User Interface Specification (DUIS) for the Service Request.

(iv) The warning threshold field shall be populated with an integer value that is greater than or equal to zero.

(v) The quarantine threshold field shall be populated with an integer value that is greater than or equal to zero.

(vi) The Time Period Applicable is populated with a number that represents the measurement interval for the threshold in minutes, which shall be an integer value that is greater than or equal to one and less than or equal to 43200.

Quarantined Communications Report File

6.4 Each Quarantined Communications Report File shall contain the following fields:

(a) Event_Reference, Service_Reference_Variant, Critical_Indicator, Date/time, Originator_ID, Target_ID, Counter, (repeated for each quarantined communication uploaded by the User) ▲; and

(b) where the fields are defined as follows:

(i) The Event Reference is generated by the DCC for a particular instance of an ADT or Warning Threshold being exceeded.

(ii) The Service Reference Variant is the number set out in DUIS for the Service Request.

(iii) The Critical Indicator indicates whether the Service Request is Critical or Non-Critical, which shall be set to 'C' or 'NC'.

(iv) The Date/time field is the date and time when the communication was placed in quarantine, which will be of the format *DD/MM/YYYY hh:mm:ss*.

(v) Originator ID, Target ID and Counter fields are equivalent to the "RequestID", as set out in DUIS, for each quarantined communication.

Quarantined Communications Action File

6.5 Each Quarantined Communications Action File shall be generated in accordance with the procedure set out immediately below.

(a) an "initial" CSV file shall be created, which shall contain the following records:

(i) UserID ▲

(ii) Event_Reference, Service_Reference_Variant, Critical_Indicator, Date/time, Originator_ID, Target_ID, Counter, Action (repeated for each quarantined communication uploaded by the User) ▲

(b) a File Signing Certificate_ID shall be appended as a record to the end of the "initial" CSV file, comprising:

(i) all of the attributes contained within the 'Issuer' field in the File Signing Certificate, including attribute names, equals signs and values, which shall be encoded in URL format such that it does not contain any special characters, followed by a comma;

(ii) the Certificate serial number obtained from the 'serialNumber' field in the File Signing Certificate, followed by a 0x0A character; and

(c) a Digital Signature shall be generated from the "initial" CSV file and appended as a record to the end of the CSV file, in accordance with the procedure set out in clause 6 of this document; and

(d) where the fields are defined as follows:

(i) The UserID is the EUI-64 obtained as part of the ID Allocation Procedure.

(ii) The Event Reference is generated by the DCC for a particular instance of an ADT or Warning Threshold being exceeded.

(iii) The Service Reference Variant is the number set out in DUIS for the Service Request.

(iv) The Critical Indicator indicates whether the Service Request is Critical or Non-Critical, which shall be set to 'C' or 'NC'.

(v) The Date/time field is the date and time when the communication was placed in quarantine, which will be of the format DD/MM/YYYY hh:mm:ss.

(vi) Originator ID, Target ID and Counter fields are equivalent to the "RequestID", as set out in DUIS, for each quarantined communication.

(vii) The Action field shall be created and populated by the User for each quarantined communication with the required action, which shall have a value of "Delete" or "Release".

7. File Signing the "input" CSV File

7.1 An "input" CSV file will be finalised for communication by applying a Digital Signature to the end of the file.

7.2 The Private Key corresponding with the File Signing Certificate used for Digitally Signing the "input" CSV file shall be stored on a cryptographic token, supplied by the DCC in accordance with the SMKI RAPP.

7.3 Each User wishing to use the Private Key corresponding with a File Signing Certificate to apply a Digital Signature to an "input" CSV file and to append such Digital Signature record to the end of the "input" CSV file shall:

(a) Digitally Sign the content in the "input" CSV file, using a Private Key corresponding with the File Signing Certificate in accordance with the FIPS 186-4 Digital Signature Standard and using the parameters for signing as set out in clause 7.4; and

(b) convert the Digital Signature to Base64 format and append the Base64 encoded Digital Signature, as a record, to the end of the "input" file, followed by a 0x0A character, to create the "finalised" CSV file.

7.4 The parameters used for signing will be:

(a) Hashing algorithm: SHA-256, as specified in FIPS 180-4;

(b) Signing Method: The RSASSA – PKCS - v1.5 Digital Signature Algorithm specified in Section 5.5 of FIPS 186-4; and

(c) Key Length: 2048.

7.5 The DCC shall provide a software utility for the purposes of Digitally Signing files, which a User may choose to utilise in order to meet its obligations:

(a) to format such files so that the correct field separators and record separators are used;

(b) in respect of obligations to append a File Signing Certificate_ID to CSV files where required; and

(c) to Digitally Sign the “finalised” CSV file as set out in clause 7.3.

Version AB 9.0

APPENDIX AB

Service Request Processing Document

Contents

1 Introduction

1.1 This Appendix supplements Section H4 (Processing Service Requests) and sets out the obligations of the DCC and of each User in respect of communications via the DCC User Interface in respect of the following Services:

(a) Enrolment Services;

(b) Local Command Services;

(c) Core Communication Services; and

(d) Elective Communication Services.

2 Obligations of Users: Suspended Devices and Firmware

2.1 A User shall take all reasonable steps to ensure that it does not send Service Requests in relation to Devices that have an SMI Status of 'suspended', other than where:

(a) the Service Requests will (if Successfully Executed) result in the Device's Device Model becoming one that is listed on the Central Products List;

(b) it is necessary to do so in order to update the Device Security Credentials following a change of Responsible Supplier; or

(c) for SMETS1 Devices only, the User is requesting only the production of UTRNs for return to that User.

2.2 A User shall only send an 'Update Firmware' Service Request or an 'Update PPMID Firmware' Service Request in respect of a Device or a SMETS1 CH if:

(a) the User has received the following information:

(i) the OTA Header and the associated replacement Manufacturer Image;

(ii) a Digital Signature, created by the person who created the Manufacturer Image, across the concatenation of the OTA Header and the associated replacement Manufacturer Image; and

(iii) the Hash of the replacement Manufacturer Image;

(b) the User has successfully confirmed that the Digital Signature across the concatenation is that of the person who created the replacement Manufacturer Image (validated as necessary by reference to a trusted party);

(c) the User has generated its own Hash from the replacement Manufacturer Image, and confirmed that the Hash that the User has generated is the same as the Hash provided; and

(d) the User has confirmed that a Device Model associated with the replacement Manufacturer Image (as determined by the Hash and the information in the OTA Header) is currently on the Central Products List.

3 Obligations of Users: Pre-Commands and Signed Pre-Commands

3.1 Where a User receives a Pre-Command from the DCC, the User shall:

(a) Check Cryptographic Protection for the Pre-Command;

(b) Confirm Validity of the Certificate used to Check Cryptographic Protection for the Pre-Command; and

(c) subject to the requirements of Clause 3.1(a) and (b) being satisfied, Correlate the Pre-Command.

3.2 Where Correlation of the Pre-Command demonstrates that it is substantively identical to the Service Request that led to the Pre-Command, the User may:

(a) Digitally Sign the GBCS Payload of the Pre-Command to create the GBCS Payload of an associated Signed Pre-Command; and

(b) send the associated Signed Pre-Command with its appropriate wrapper and Digital Signature to the DCC.

3.3 Where applicable, Users must comply with their obligations under Section G3.25 (Supply Sensitive Check).

4 Obligations of the User: Communications Received in Error

4.1 Where a User receives a communication via the DCC User Interface which that User was not entitled to receive in accordance with this Code, the User shall notify the DCC in accordance with the Incident Management Policy.

5 Obligations of the DCC: SMETS2+ Communications Hub firmware

5.1 The DCC shall only send a communication to distribute different firmware to a SMETS2+ Communications Hub if:

(a) the DCC has received the replacement Manufacturer Image and a Digital Signature, created by the person who created the Manufacturer Image, across that Manufacturer Image;

(b) the DCC has received information about the Manufacturer Image sufficient to determine whether it is on the Central Products List;

(c) the DCC has successfully confirmed that the Digital Signature across the replacement Manufacturer Image is that of the person who created the replacement Manufacturer Image (validated as necessary by reference to a trusted party); and

(d) a Device Model associated with the replacement Manufacturer Image is currently on the Certified Product List, as determined by:

(i) the Hash the DCC calculates over the Manufacturer Image; and

(ii) the information about the Manufacturer Image provided pursuant to Clause 5.1(b).

5.2 The DCC shall notify relevant Users of its intention to activate replacement Manufacturer Images in relation to Communications Hubs at least 7 days in advance of doing so; provided that DCC need not notify Users in advance if the activation of the replacement Manufacturer Images is required for urgent security related reasons (and in such circumstances the DCC shall take reasonable steps to notify Users in advance of activating replacement Manufacturer Images or, where it has not notified them in advance, shall notify them of having done so as soon as is reasonably practicable after the event).

6 Obligations of the DCC: Processing Service Requests

6.1 Subject to Clause 18 (Obligations of the DCC: Non-Device Service Requests), where the DCC receives a Service Request from a User, the DCC shall send an Acknowledgement to the User, and (whether before or after such Acknowledgement is sent) apply the following checks:

(a) Verify the Service Request;

(b) confirm that the Service Request has been sent by a User whose right to send that Service Request has not been suspended in accordance with Section M8.5 (Suspension of Rights), and that such User is acting in a User Role which is an Eligible User Role for that Service Request;

(c) in the case of Non-Critical Service Requests (other than an 'Update Firmware' Service Request, an 'Update PPMID Firmware' Service Request, a 'CoS Update Security Credentials' Service Request or a 'Top Up Device' SMETS1 Service Request with a Command Variant value of 2) and SMETS1 Critical Service Requests, confirm that the SMI Status of the Device identified in the Service Request is: (i) 'commissioned'; (ii) 'installed not commissioned'; (iii) 'whitelisted'; or (iv) 'pending';

(d) Check Cryptographic Protection for the Service Request;

(e) Confirm Validity of the Certificate used to Check Cryptographic Protection for the Service Request, and confirm that the Certificate used to Check Cryptographic Protection for the Service Request has a Remote Party Role of “xmlSign”;

(f) subject to Clause 6.2, in the case of Non-Critical Service Requests and SMETS1 Critical Service Requests, confirm (using the Registration Data, the Device ID within the Service Request, and the relationship between the Device IDs and the MPRNs or MPANs in the Smart Metering Inventory) that the User sending the Service Request is a User that is or will be an Eligible User for that Service Request:

(i) for all times within any date range requested;

(ii) where there is no such date range, at the specified time for execution; or

(iii) where there is no date range and no date for execution is specified, at the time at which the check is being carried out;

(g) in the case of a 'CoS Update Security Credentials' Service Request:

(i) confirm that the User ID in the Certificate used to Check Cryptographic Protection of the Service Request is the same as the User ID in the Service Request;

(ii) confirm that the MPID that is used in the carrying out of the check referred to in Clause 6.1(f) above is the same as an MPID that is contained within the Subject X520 Organizational Unit Name field (as described in the Organisation Certificate Policy) of the Certificate used to Check Cryptographic Protection for the Service Request; and

(iii) confirm that the MPAN or MPRN (as relevant) associated with the target Device in the Smart Metering Inventory is the same as the MPAN or MPRN included within the ‘CoS Update Security Credentials' Service Request;

(iv) confirm that the number of Organisation Certificates contained within the Service Request is necessary and sufficient for the target Device;

(v) confirm that all of the replacement Organisation Certificates have a Remote Party Role of “supplier”;

(vi) confirm that the Key Usage of each such Organisation Certificate is compatible with the Trust Anchor Cell in relation to which the relevant Device Security Credentials are to be replaced;

(vii) where relevant, confirm that the SupplierPrepaymentTopUpFloorSeqNumber data item has been included within the Service Request;

(viii) confirm that the User ID contained within each of the Organisation Certificates included within the Service Request is associated with the User submitting the Service Request; and

(ix) confirm that the MPRN or MPAN included within the Service Request is Associated with the Device identified within the Service Request;

(h) in the case of a 'Restore HAN Device Log' or a 'Restore Gas Proxy Function Device Log' Service Request, confirm that the Device Log Data to be restored originates from a Communications Hub Function or Gas Proxy Function that forms (or formed immediately prior to its replacement) part of a Smart Metering System for which the User making such Service Request is (or, immediately prior to its replacement, was) the Responsible Supplier;

(i) in the case of an 'Update Firmware' Service Request or an 'Update PPMID Firmware' Service Request, confirm that the Hash calculated across the Manufacturer Image contained within the Service Request is the same as the entry within the Central Products List (as identified by the Device ID, information in the Smart Metering Inventory and the firmware version specified in the Service Request);

(j) in the case of any Service Request that contains any Certificates, Confirm Validity of those Certificates;

(k) in the case of any Service Request that is seeking to replace any part of the Device Security Credentials held on or in relation to a Device with information from an Organisation Certificate contained within that Service Request, confirm that:

(i) the Issuing OCA Certificate for each such Organisation Certificate is also contained within that Service Request; and

(ii) each Issuing OCA Certificate contained within that Service Request has been used to Issue at least one of the Organisation Certificates contained within that Service Request;

(l) in the case of an 'Update HAN Device Log' Service Request requesting the addition of a Smart Meter or a Standalone Auxiliary Proportional Controller to the Device Log of a Communications Hub Function confirm (using the Registration Data and the MPRN or MPAN in the Service Request) that the User sending the Service Request is a Responsible Supplier in respect of that MPRN or MPAN;

(m) in the case of a ‘Set CHF Sub GHz Configuration’ Service Request, that the settings requested would only allow a CHF to use Sub GHz Available Channels (as defined in the GBCS);

(n) in respect of a SMETS1 Critical Service Request, a 'Request Handover of DCC Controlled Device' SMETS1 Service Request, a ‘Top Up Device’ SMETS1 Service Request, or a 'CoS Update Security Credentials' Service Request relating to either a SMETS1 or SMETS2+ Device, confirm that the Service Request is not a Replay; and

(o) in the case of SMETS1 ‘Activate Firmware’ Service Requests, where the target Device is a SMETS1 CHF or a SMETS1 PPMID, confirm (using the Registration Data, the Device ID within the Service Request, and the relationship between the Device IDs and the MPANs in the Smart Metering Inventory) that the User sending the Service Request is the Import Supplier for the ESME on the same home area network.

6.2 The step set out at Clause 6.1(f) shall not apply in the following circumstances (and, where it is necessary to identify a Responsible Supplier, the DCC shall do so using the Registration Data, the Device ID within the Service Request, and the relationship between the Device IDs and the MPRNs or MPANs in the Smart Metering Inventory):

(a) an Import Supplier that is the Responsible Supplier for a Smart Metering System that shares a Communications Hub Function with a Smart Metering System that includes a Gas Smart Meter sends a 'Join Service' Service Request to join that Gas Smart Meter to a Gas Proxy Function;

(b) an Import Supplier that is the Responsible Supplier for a Smart Metering System that shares a Communications Hub Function with a Smart Metering System that includes a Gas Proxy Function sends a 'Restore GPF Device Log' Service Request to restore the Device Log of that Gas Proxy Function; or

(c) the Service Request has been sent by a User acting in the User Role of 'Other User'.

6.3 Where any of the checks in Clause 6.1 are not satisfied in respect of a Service Request, the DCC shall not be obliged to undertake any of the other checks that remain to be undertaken, and the DCC shall reject the Service Request (and, save where Clause 6.1(d) is not satisfied, notify the User of such rejection and of the reasons for such rejection via the DCC User Interface).

6.4 Clause 6.5 shall apply subject to:

(a) (in relation to SMETS2+ Service Requests only) Clauses 9 (Obligations of the DCC: 'Request Handover of DCC Controlled Device' Service Requests), and 11 (User and DCC Obligations: 'Join Service' and 'Unjoin' Service Requests for Pre-Payment Meter Interface Devices and Gas Smart Meters); and

(b) (for all Service Requests) Clauses 8 (Obligations of the DCC: 'CoS Update Security Credentials' Service Requests and (where relevant) Corresponding Pre-Commands), and 18 (Obligations of the DCC: Non-Device Service Requests).

6.5 Subject to Clause 6.4, where all of the requirements of Clause 6.1 are satisfied in respect of a Service Request, the DCC shall:

(a) where the Service Request is not a SMETS1 Service Request, Transform the Service Request and:

(i) in the case of a Non-Critical Service Request, send the associated Command in accordance with Clause 13 (DCC Obligations: Sending Commands); or

(ii) in the case of a Critical Service Request, send the Transformed Service Request to the User who submitted the Service Request;

(b) where the Service Request is a SMETS1 Service Request and the DCC is holding a stored SMETS1 Future Dated Critical Service Request which:

(i) is addressed to the same Device; and

(ii) has the same Service Reference Variant,

delete the stored SMETS1 Future Dated Critical Service Request;

(c) where the Service Request is a SMETS1 Service Request but is not a SMETS1 Future Dated Critical Service Request:

(i) identify the relevant SMETS1 Service Provider using the target Device ID within the Service Request;

(ii) create the contents of a Countersigned Service Request and Countersign it; and

(iii) send the Countersigned Service Request to the relevant SMETS1 Service Provider; and

(d) where the Service Request is a SMETS1 Future Dated Critical Service Request:

(i) create a stored SMETS1 Future Dated Critical Service Request (unless the execution date/time has been set by the User to Never); and

(ii) unless removed in the interim in accordance with Clause 6.5(b), at the execution date/time specified in the stored SMETS1 Future Dated Critical Service Request, re-apply all requirements of Clause 6.1 except for Clause 6.1(m) and, where all of the requirements of Clause 6.1 (other than 6.1(m)) are met:

(A) create the contents of a Countersigned Service Request and Countersign it;

(B) send the Countersigned Service Request to the relevant SMETS1 Service Provider; and

(C) once the DCC (including, where relevant, the SMETS1 Service Provider) has completed its processing in relation to the Countersigned Service Request, delete the stored SMETS1 Future Dated Critical Service Request.

7 Obligations of the DCC: Processing Signed Pre-Commands

7.1 Where the DCC receives a Signed Pre-Command from a User, the DCC shall provide an Acknowledgement to the User and (whether before or after such Acknowledgement is sent) apply the following checks:

(a) Verify the Signed Pre-Command;

(b) confirm that the Signed Pre-Command has been sent by a User whose right to send that message has not been suspended in accordance with Section M8.5 (Suspension of Rights), and that such User is acting in a User Role which is an Eligible User Role for a Service Request of the type corresponding with the Signed Pre-Command;

(c) Check Cryptographic Protection for the Signed Pre-Command;

(d) Confirm Validity of the Certificate used to Check Cryptographic Protection for the Signed Pre-Command;

(e) confirm that the Certificate used to Check Cryptographic Protection for the Signed Pre-Command has a Remote Party Role of “xmlSign”; and

(f) in the case of any Signed Pre-Command that is seeking to replace any part of the Device Security Credentials held on or in relation to a Device with information from an Organisation Certificate contained within that Signed Pre-Command, confirm that:

(i) the Issuing OCA Certificate for each such Organisation Certificate is also contained within that Signed Pre-Command; and

(ii) each Issuing OCA Certificate contained within that Signed Pre-Command has been used to Issue at least one of the Organisation Certificates contained within that Signed Pre-Command.

7.2 Subject to Clauses 14 (Obligations of the DCC: Orchestration of Service Requests), where all of the requirements of Clause 7.1 are satisfied, the DCC shall send the associated Command in accordance with Clause 13 (DCC Obligations: Sending Commands).

7.3 Where any of the checks in Clause 7.1 are not satisfied in respect of a Signed Pre- Command, the DCC shall not be obliged to undertake any of the other checks that remain to be undertaken, and the DCC shall:

(a) reject the Signed Pre-Command; and

(b) save where Clause 7.1(c) is not satisfied, notify the User of such rejection and of the reasons for such rejection via the DCC User Interface.

8 Obligations of the DCC: 'CoS Update Security Credentials' Service Requests and (where relevant) Corresponding Pre-Commands

8.1 The following shall apply in respect of each 'CoS Update Security Credentials' Service Request which is not a SMETS1 Service Request:

(a) where all of the requirements of Clause 6.1 are satisfied in respect of such a Service Request, the DCC shall send a Digitally Signed communication containing the 'CoS Update Security Credentials' Service Request (a Countersigned Cos Service Request) to the CoS Party; and

(b) following receipt of the Countersigned CoS Service Request, and immediately prior to creating any corresponding Update Security Credentials Signed Pre-Command referred to in Clause 8.2, the CoS Party shall:

(i) Check Cryptographic Protection for the Countersigned CoS Service Request received;

(ii) Confirm Validity of the Certificates used to Check Cryptographic Protection;

(iii) apply the checks set out in Clauses 6.1(a), 6.1(d), 6.1(e.), 6.1(f), 6.1(g), 6.1(j) and 6.1(k) to the Service Request included within the Countersigned CoS Service Request; and

(iv) confirm that the Service Request is not a Replay.

8.2 Where, in respect of the communication received in relation to a 'CoS Update Security Credentials' Service Request, the requirements of Clause 8.1(b) are satisfied, the CoS Party shall:

(a) apply CoS Party Threshold Anomaly Detection in accordance with the requirements of Clause 20 (CoS Party Threshold Anomaly Detection), which may result in a cessation of processing of the Service Request by the CoS Party, but otherwise either;

(i) where the target Device of the original ‘Cos Update Security Credentials Service Request is a SMETS2+ Device,

(A) generate the GBCS Payload of an 'Update Security Credentials' Signed Pre- Command that is substantively identical to the 'CoS Update Security Credentials' Service Request;

(B) Digitally Sign the GBCS Payload;

(C) incorporate the Digitally Signed GBCS Payload and the original Service Request into a single communication and Digitally Sign the communication with a CoS Party XML Signing Key to create a CoS Authorisation Response; and

(D) send the signed CoS Authorisation Response to the DCC, or

(ii) where the target Device of the original ‘Cos Update Security Credentials Service Request is a SMETS1 Device:

(A) Digitally Sign the communication with a CoS Party XML Signing Key to create a CoS Authorisation Response; and

(B) send the signed CoS Authorisation Response to the DCC.

8.3 Where, in respect of a communication received in relation to a 'CoS Update Security Credentials' Service Request, the requirements of Clause 8.1(a) are not satisfied:

(a) the CoS Party shall not undertake any further processing of the communication, and shall notify the DCC; and

(b) the DCC shall notify the User that sent the original Service Request that the Service Request cannot be processed (such notification to be sent via the DCC User Interface).

8.4 Where the DCC receives a CoS Authorisation Response from the CoS Party, the DCC shall apply the following checks:

(a) check Cryptographic Protection for the CoS Authorisation Response;

(b) Confirm Validity of the Certificates used to Check Cryptographic Protection for the CoS Authorisation Response;

(c) confirm that the Remote Party Role of the Certificate used to Check Cryptographic Protection for the CoS Authorisation Response is ‘coSPartyXmlSign’;

(d) confirm that the CoS Authorisation Response is valid and well formed;

(e) confirm that the CoS Authorisation Response maps to a Countersigned CoS Service Request that was previously sent to the CoS Party;

(f) apply the checks set out in Clauses 6.1(a), 6.1(d), 6.1(e.), 6.1(f), 6.1(g), 6.1(j) and 6.1(k) to the Service Request contained within the CoS Authorisation Response;

(g) (in the circumstances where the target Device of the original ‘CoS Update Security Credentials Service Request is a SMETS2+ Device only) confirm that the Signed Pre-Command contained within the CoS Authorisation Response is substantively identical to the Service Request contained within the CoS Authorisation Response; and

(h) confirm that neither the CoS Authorisation Response, nor the Service Request contained within it is a Replay.

8.5 Subject to Clause 14 (Orchestration of Service Requests), where all of the requirements of Clause 8.4 are satisfied in respect of a CoS Authorisation Response received from the CoS Party, the DCC shall:

(a) (in the circumstances where the target Device of the original ‘CoS Update Security Credentials Service Request is a SMETS2+ Device) send a Command associated with the Signed Pre-Command contained within the CoS Authorisation Response in accordance with Clause 13 (DCC Obligations: Sending Commands); or

(b) (in the circumstances where the target Device of the original ‘CoS Update Security Credentials Service Request is a SMETS1 Device) Countersign the CoS Update Security Credentials Service Request and send the Countersigned Service Request to the relevant SMETS1 Service Provider in accordance with the requirements of Clause 14.

8.6 Where any of the checks in Clause 8.4 are not satisfied in respect of a CoS Authorisation Response received from the CoS Party, the DCC shall:

(a) not be obliged to undertake any of the other checks that remain to be undertaken, and the DCC shall reject the CoS Authorisation Response;

(b) save where Clause 8.4(c) is not satisfied, notify the CoS Party of such rejection and of the reasons for such rejection; and

(c) notify the User that sent the original 'CoS Update Security Credentials' Service Request.

9 Obligations of the DCC: 'Request Handover of DCC Controlled Device' Service Requests

9.1 This Clause 9 only applies to 'Request Handover of DCC Controlled Device' Service Requests that are not SMETS1 Service Requests. Where all of the requirements of Clause 6.1 are satisfied in relation to such a Service Request, the DCC shall:

(a) generate the corresponding GBCS Payload (corresponding in this case meaning that the Service Request and the GBCS Payload request the replacement of the same Device Security Credentials on the same Device at the same time);

(b) Digitally Sign the GBCS Payload; and

(c) Confirm Validity of any Certificates contained within the communication.

9.2 Where all of the requirements of Clause 9.1 are satisfied in respect of such a communication, the DCC shall send the associated Command in accordance with Clause 13 (DCC Obligations: Sending Commands).

9.3 Where any of the checks in Clause 9.1 are not satisfied in respect of such a communication, the DCC shall not undertake any of the other checks that remain to be undertaken, and the DCC shall reject the communication and notify the User that sent the original 'Request Handover of DCC Controlled Device' Service Request (such notification to be sent via the DCC User Interface).

10 User and DCC Obligations: 'Restore HAN Device Log' Service Requests

10.1 Where a Supplier Party replaces a Communications Hub (other than a SMETS1 CH) in a premises then that Supplier Party must, as soon as reasonable practicable after the replacement, send the necessary Service Requests to the DCC to ensure that:

(a) the Device Log of the new Communications Hub Function replicates that of the old Communications Hub Function;

(b) the Device Log of the new Gas Proxy Function is replaced with that of the old Gas Proxy Function (or replicates that of the old Gas Proxy Function);

(c) following steps (a) and (b) above, the new Gas Proxy Function is added to the Device Log of the Gas Smart Meter; and

(d) following the step set out in (c) above, the Communications Hub Function and the Gas Proxy Function comprising the Communications Hub that has been replaced are decommissioned (through the sending of a 'Decommission Device' Service Request).

10.2 An Import Supplier shall not send a Service Request to add or remove a Gas Proxy Function to or from the Device Log of a Gas Smart Meter other than as part of managing the replacement of a Communications Hub (by it or another Responsible Supplier) pursuant to Clause 10.1.

10.3 The DCC shall, following the decommissioning of a Communications Hub Function and the associated Gas Proxy Function (arising as a consequence of the processing of a 'Decommission Device' Service Request), send a DCC Alert to all Responsible Suppliers and Network Parties for Smart Metering Systems which incorporated either or both of those Devices, notifying them of the decommissioning (other than to the Responsible Supplier which sent the 'Decommission Device' Service Request).

10.4 The DCC shall, where it has processed a Service Request which successfully replaces the Device Log of a Communications Hub Function, send a DCC Alert to all Responsible Suppliers for that Communications Hub Function (other than the Responsible Supplier which sent the original Service Request) notifying them of the replacement.

10.5 The DCC shall, where it has processed a Service Request to successfully replace the Device Log of a Gas Proxy Function, send a DCC Alert to the Gas Supplier who is the Responsible Supplier for that Gas Proxy Function (save where it is the Gas Supplier that has sent the Service Request).

11 Obligations of the DCC: 'Join Service' and 'Unjoin' Service Requests for Pre- Payment Meter Interface Devices and Gas Smart Meters

11.1 Where all of the requirements of Clause 6.1 are satisfied in respect of a 'Join Service' or 'Unjoin Service' Service Request for a Pre-Payment Meter Interface Device, or a Gas Smart Meter and where the Service Request is not a SMETS1 Service Request, the DCC shall:

(a) Transform the Service Request;

(b) where a Pre-Payment Meter Interface Device is to be joined to a Gas Smart Meter, include within the resultant communication the Device Certificate of the relevant Gas Smart Meter that has a key usage of 'keyAgreement';

(c) where a Gas Smart Meter is to be joined to a Pre-Payment Meter Interface Device, include within the resultant communication the Device Certificate of the relevant Pre-Payment Meter Interface Device that has a key usage of 'keyAgreement';

(d) where the resultant communication is destined for a Pre-Payment Meter Interface Device, Digitally Sign the Communication and send the associated Command in accordance with Clause 13 (Obligations of the DCC: Sending Commands); and

(e) where the resultant communication is ultimately destined for a Gas Smart Meter, send the resultant communication as a Pre-Command to the User that sent the original Service Request.

11.2 Where the DCC receives a Response in respect of a Command sent to join or unjoin a Pre-Payment Meter Interface Device, the DCC shall send the Response (as a Service Response) to the User that sent the corresponding Service Request.

12 Threshold Anomaly Detection

12.1 The DCC shall apply Threshold Anomaly Detection where an Anomaly Detection Threshold has been established under Section G6 (Anomaly Detection Thresholds) in respect of the SMETS1 Service Request, Transformed Service Request or Signed Pre- Command.

12.2 Where the DCC applies Threshold Anomaly Detection to either a SMETS1 Service Request, a Transformed Service Request or a Signed Pre-Command and the check is failed, the DCC shall, subject to Clause 22 (Anomaly Detection) of the SMETS1 Supporting Requirements, notify the User and quarantine the SMETS1 Service Request, Transformed Service Request or Signed Pre-Command.

12.3 Where the DCC has quarantined a SMETS1 Service Request, Transformed Service Request or Signed Pre-Command it shall maintain such quarantine until:

(a) such time as the relevant User instructs the DCC to process the Service Request or Signed Pre-Command, in which case the DCC shall continue to process the Service Request or Signed Pre-Command in accordance with the provisions of this Service Request Processing document;

(b) the Service Request or Signed Pre-Command is confirmed by the User to be anomalous or to otherwise require deletion, in which case the DCC shall delete it from the DCC Systems; or

(c) the Service Request or Signed Pre-Command is required to be deleted in accordance with the Threshold Anomaly Detection Procedures, in which case the DCC shall delete it from the DCC Systems.

12.4 Where the DCC applies Threshold Anomaly Detection (other than in relation to a value of the type referred to in (b)(ii) of the definition of Anomaly Detection Threshold) to a Signed Pre-Command, Transformed Service Request or SMETS1 Service Request (for the purposes of this Clause, each being a "**Relevant Communication**"), the DCC shall:

(a) determine the Service Reference Variant of the Service Request that pertains to the Relevant Communication;

(b) determine the cumulative number of all other Relevant Communications to which that Service Reference Variant pertains that it has processed over the period of time to which the Anomaly Detection Threshold relates;

(c) increment the cumulative number by 1; and

(d) compare that incremented cumulative number to the relevant Anomaly Detection Threshold.

13 DCC Obligations: Sending Commands

13.1 Where the DCC is required to send a Command (other than an Instruction), it shall only apply any necessary Message Authentication Code to the relevant communication and send the resulting Command if:

(a) Threshold Anomaly Detection has been applied to the associated Transformed Service Request or Signed Pre-Command (or, where in response to a Service Request from an Eligible User a Command is to be Digitally Signed by the DCC, that Command prior to the addition of a Message Authentication Code); and

(b) either (i) the Threshold Anomaly Detection check is passed; or (ii) the User that sent the original Service Request or Signed Pre-Command has instructed DCC to process a quarantined Service Request or Signed Pre-Command in accordance with Clause 12.3(a).

13.2 Where the requirements of Clause 13.1 are met, the DCC shall apply the required Message Authentication Code (as required by the GB Companion Specification) to the relevant communication to create a Command and send that Command to (as specified in the originating Service Request):

(a) the relevant Device (provided that this option is only available in respect of Devices associated with Commissioned Communications Hub Functions); and/or

(b) the User who sent the originating Service Request via the DCC User Interface.

14 DCC Obligations: Sending Countersigned Service Requests

14.1 Where the DCC is required to send a Countersigned Service Request, it shall only Countersign the relevant communication and send the resulting Countersigned Service Request to the relevant SMETS1 Service Provider if:

(a) Threshold Anomaly Detection has been applied to the Service Request (provided that the DCC shall not be required to apply Threshold Anomaly Detection in relation to Anomaly Detection Thresholds of the type referred to in Sub-Paragraph (b)(ii) of the definition of Anomaly Detection Threshold; and

(b) either (i) the Threshold Anomaly Detection check is passed; or (ii) the User that sent the original Service Request has instructed DCC to process the quarantined Service Request in accordance with Clause 12.3(a).

15 Orchestration of Service Requests

15.1 In the case of a Service Request for a Sequenced Service, the DCC shall:

(a) where the Service Request is not a SMETS1 Service Request, only send the Command following the Successful Execution of the Command resulting from the Service Request upon which such Sequenced Service is dependent; and

(b) where the Service Request is a SMETS1 Service Request, only send the Countersigned Service Request to the relevant SMETS1 Service Provider following the Successful Execution of the Equivalent Step(s) resulting from the Service Request upon which such Sequenced Service is dependent.

15.2 The DCC shall ensure that it sends each 'Update Security Credentials' Command resulting from a 'CoS Update Security Credentials' Service Request as close to the specified execution time as is reasonably practicable whilst still allowing time for the Command to be received and executed by the relevant Device.

15.3 The DCC shall not continue to process any Service Requests (or associated Pre- Commands or Signed Pre-Commands) where the services have been cancelled in accordance with Sections H3.18 to H3.20 (Cancellation of Future-Dated or Scheduled Services).

16 Obligations of a SMETS1 Service Provider: Countersigned Service Request Processing

16.1 Where a SMETS1 Service Provider receives a Countersigned Service Request from the DCC, the SMETS1 Service Provider shall apply the following checks:

(a) Check Cryptographic Protection for both the Countersigned Service Request and, if it does not contain a message derived from an 'Update Firmware' Service Request, for the Service Request included within it;

(b) Confirm Validity of all Certificates used to Check Cryptographic Protection for both the Countersigned Service Request and, if it does not contain a message derived from an 'Update Firmware' Service Request, for the Service Request included within it;

(c) confirm it is the relevant SMETS1 Service Provider for the Device(s) identified in the Countersigned Service Request;

(d) if the Countersigned Service Request contains a Critical Service Request, a 'CoS Update Security Credentials' SMETS1 Service Request or a 'Request Handover of DCC Controlled Device' SMETS1 Service Request, apply the checks at Clause 6.1, except for those at Clauses 6.1 (d) and (e), to the Service Request contained within the Countersigned Service Request; and

(e) if the Countersigned Service Request contains a message derived from an 'Update Firmware' Service Request, then:

(i) if it is destined for a Communications Hub Function or a PPMID, Check Cryptographic Protection for the Upgrade Image contained within Countersigned the Service Request using the relevant Device Security Credentials that relate to the Import Supplier for the ESME which is on the same home area network as the relevant SMETS1 CHF or PPMID (as the context requires) and Confirm Validity for all of the Certificates used to Check Cryptographic Protection; or

(ii) if it is destined for a Smart Meter, Check Cryptographic Protection for the Upgrade Image contained within the Countersigned Service Request using the relevant Device Security Credentials held that relate to the Responsible Supplier for the Device and Confirm Validity for all of the Certificates used to Check Cryptographic Protection.

16.2 Only where all of the requirements of Clause 16.1 are satisfied, the SMETS1 Service Provider shall:

(a) in the case of a Countersigned Service Request that contains a Service Request with Service Reference Variant 2.2 (Top Up Device):

(i) apply Threshold Anomaly Detection in the circumstances where a relevant Anomaly Detection Threshold of the type referred to in Sub-Paragraph (b)(ii) of the definition of Anomaly Detection Threshold has been set; and

(ii) if the checks in Sub-Clause (a)(i) are passed, undertake further processing as required by the SMETS1 Supporting Requirements;

(b) in relation to any other Service Request, and any message derived from an 'Update Firmware' Service Request, contained within a Countersigned Service Request, for the target Device identified within the Service Request:

(i) apply Threshold Anomaly Detection in the circumstances where a relevant Anomaly Detection Threshold has been set pursuant to Section G6.6(b); and

(ii) if the checks in Sub-Clause (b)(i) are passed, ensure that the Equivalent Steps are taken and that either the resultant SMETS1 Response or a SMETS1 Service Provider Alert is generated; and

(c) ensure that any resulting SMETS1 Response or SMETS1 Alert is Digitally Signed, and send any such SMETS1 Response or SMETS1 Alert to the DCC.

17 Obligations of the DCC: Service Responses and Alerts

17.1 Where the DCC receives an Alert from a Communications Hub Function, the DCC shall Digitally Sign the Alert, and send it as a DCC Alert to (as specified in the DCC User Interface Specification) the Responsible Supplier(s), the Electricity Distributor and/or the Gas Transporter for the Smart Metering Systems of which the Communications Hub Function forms part (as identified in the Registration Data).

17.2 Where the DCC receives from a Device either a Response that is destined for a Remote Party or an Alert which is destined for one or more Remote Parties and/or Supplementary Remote Parties, then the DCC shall send the Response (as a Service Response) or the Alert (as a DCC Alert or Device Alert) to those Remote Parties and/or Supplementary Remote Parties as prescribed by the DCC User Interface Specification.

17.3 Where the DCC receives from an SMETS1 Service Provider:

(a) a SMETS1Response;

(b) a SMETS1 Alert; or

(c) a S1SP Alert,

which is destined for one or more Remote Parties and/or Supplementary Remote Parties, then the DCC shall Countersign the relevant communication and send it to those Remote Parties and/or Supplementary Remote Parties as prescribed by the DCC User Interface Specification as a Countersigned SMETS1 Response, a Countersigned SMETS1 Alert or Countersigned SISP Alert.

17.4 Where the DCC successfully processes a Service Request to replace the Security Credentials of a User that are held on a Device, or to place a User's Security Credentials on to a Device, then (other than to the extent that the User is notified via a Service Response) the DCC shall send a DCC Alert to the relevant User informing it of the change.

17.5 Where the DCC successfully processes a Service Request that changes the Security Credentials of a User that are held by a SMETS1 Service Provider in relation to a Device then (other than to the extent that the User is notified via a Countersigned SMETS1 Response) the DCC shall send a DCC Alert to the relevant User informing it of the change.

17.6 Where the DCC receives a Response or an Alert from a Device which is destined for an Unknown Remote Party, the DCC shall:

(a) Check Cryptographic Protection for the Response or Alert;

(b) Confirm Validity of the Certificate used to Check Cryptographic Protection for the Response or Alert; and

(c) subject to (a) and (b) being successful, send the Response (as a Service Response) or the Alert (as a Device Alert or DCC Alert) to the recipient(s) identified in the Response or Alert.

17.7 Where the DCC receives a Sub GHz Alert (as defined in the GBCS) from a Communications Hub Function, the DCC shall:

(a) Check Cryptographic Protection for the Sub GHz Alert;

(b) Confirm Validity of the Certificate used to Check Cryptographic Protection for the Sub GHz Alert; and

(c) subject to (a) and (b) being successful, create a DCC Alert containing the Sub GHz Alert, Digitally Sign the DCC Alert, and send the signed DCC Alert to the Responsible Supplier(s) for the Smart Metering System(s) of which the Communications Hub Function forms part (as identified using the Registration Data).

17.8 Where the DCC receives an Alert, the Alert shall be subject to the following Alert Management Mechanism:

(a) When the number of Alerts from a given Device within a defined rolling time window [T] exceeds the defined red threshold value [A] the system will begin to count the number of Alerts from that Device on a per Alert Code basis.

(b) If any individual Alert Code count within a defined rolling time window [R] exceeds the defined configured threshold value [B] then that originating Device/Alert Code combination will be labelled with 'HighAlertRate'.

(c) If an Alert Code is marked as 'HighAlertRate' for a Device, then only one in a defined number of such Alerts [N] will be processed. All other Alerts with that same Alert Code from the same Device will be consolidated.

(d) If within a period of the Alert storm protection maximum time limit [P] the Alert Code fails to reach [N], an Alert will be sent to the User. All other Alerts with that same Alert Code from the same Device will be consolidated.

(e) Once the rate of Alerts for the Device/Alert Code combination falls below the defined threshold [B] in the defined rolling period [R] then the Alert consolidation will stop and the recipient(s) identified in the Response or Alert informed.

17.9 Where the DCC receives an Alert subject to the process described in Section 17.8, the Alert will be subject to the following configuration parameters:

(a) When the number of Alerts from a given Device within the defined rolling time window [T] exceeds a defined amber threshold [M], an incident will be raised to notify the User.

(b) If a Device/Alert Code combination has been labelled 'HighAlertRate' and an incident has been raised to notify the User, a new incident will not be created until the rolling deadband time period [D] has elapsed.

(c) Where [M] or [A] have been exceeded within the defined rolling time period [R], the DCC will only create incidents when the amber threshold incident creation [MIC], red threshold incident creation [AIC] and Alert storm protection incident creation [PIC] parameters have been set to 'on'. When these values are set to 'off', no incident or accompanying notification will be created.

17.10 The defined parameters used in the Alert Management Mechanism detailed in Section 17.8, the configuration parameters detailed in Section 17.9 and the Alerts that are to be exempt from this mechanism are specified in the Traffic Management Mechanism Document. Any changes to this document shall be prepared and consulted upon by the DCC and approved by the Panel.

18 Obligations of the DCC: Non-Device Service Requests

18.1 Where the DCC receives a Non-Device Service Request from a User, the obligations of the DCC under this Appendix shall be modified as follows (and where a Non-Device Service Request is not specifically identified below, they shall be applied un-modified):

(a) the DCC shall not send an Acknowledgement in respect of the Service Request;

(b) the checks set out in Clause 6.1 shall be modified as follows:

(i) the check set out in Clause 6.1(c) does not apply to the following Service Requests:

(A) 'Update Inventory';

(B) 'Read Inventory';

(C) 'Request WAN Matrix';

(D) 'Device Pre-notification';

(E) 'Communications Hub Status Update- Install Success';

(F) 'Communications Hub Status Update - Install No SM WAN';

(G) 'Communications Hub Status Update – Fault Return'; and

(H) 'Communications Hub Status Update – No Fault Return'; and

(ii) the check set out in the Clause 6.1(f) does not apply to the following Service Requests:

(A) 'Read Inventory';

(B) 'Request WAN Matrix';

(C) 'Device Pre-notification';

(D) 'Communications Hub Status Update- Install Success';

(E) 'Communications Hub Status Update - Install No SM WAN';

(F) 'Communications Hub Status Update – Fault Return'; and

(G) 'Communications Hub Status Update – No Fault Return';

(c) the DCC shall not, in any event, be required to apply Threshold Anomaly Detection in relation to Non-Device Service Requests;

(d) where the checks set out in Clause 6.1 (as modified by this Clause 18) are satisfied, the DCC shall not Transform the Service Request or Countersign a Countersigned Service Request (as would otherwise be required by Clause 6) and shall instead send the User a Service Response notifying the User whether or not the Non-Device Service Request has been successful, and where successful:

(i) in the case of any Non-Device Service Request that changes or creates information held (or intended to be reflected) on the DCC Systems (including the Smart Metering Inventory), update the information held on DCC Systems accordingly; and/or

(ii) in the case of a 'Read Inventory' or 'Request WAN Matrix' Service Request, include within the Service Response the relevant information requested by the Service Request;

(iii) in the case of a 'Device Pre-Notification' Service Request, add the relevant Device to the Smart Metering Inventory with an SMI Status of 'pending';

(iv) in the case of a 'Create Schedule' Service Request,

(A) create a schedule of the Service Request type identified in the 'Create Schedule' Service Request;

(B) include within the Service Response the identifier of any schedule that has been successfully created;

(C) at each point in time set out in the schedule (and subject to the further arrangements set out in the DCC User Interface Specification), create a Service Request (without a Digital Signature from the User) of the appropriate type and in relation to the relevant Device (in each case as specified in the original 'Create Schedule' Service Request);

(D) process the Service Requests referred to in (C) above in accordance with Clause 6 as if they had been received from the User that sent the original 'Create Schedule' Service Request, provided that the checks identified under Clause 6.1(c) and 6.1(d) do not apply;

(v) in the case of a 'Read Schedule' Service Request, where it is received from the same User that sent the originating 'Create Schedule' Service Request for all schedules identified within it, include within the Service Response details of the relevant schedule(s) so identified (and otherwise reject the 'Read Schedule' Service Request, and notify (via the Service Response) the User that sent the Service Request of such rejection);

(vi) in the case of a 'Delete Schedule' Service Request, where it is received from the same User that sent the originating 'Create Schedule' Service Request for all schedules identified within it, delete the relevant schedule(s) so identified (and otherwise reject the 'Delete Schedule' Service Request, and notify (via the Service Response) the User that sent the Service Request of such rejection);

(vii) in the case of a 'Decommission Device' Service Request:

(A) set the SMI Status of the relevant Device to 'decommissioned';

(B) where the relevant Device is a Smart Meter or a Standalone Auxiliary Proportional Controller, disassociate the Device in the Smart Metering Inventory from any MPRN or MPAN with which it is associated; and

(C) where the relevant Device is a Communications Hub Function, set the SMI status of the associated Gas Proxy Function to 'decommissioned'; or

(viii) in the case of an 'Update Firmware' Service Request:

(A) include within the Service Response the details of any Devices that were listed within the Service Request to which, by virtue of the checks DCC has carried out, DCC does not propose to send a communication to update the firmware; and

(B) to all other Devices so listed, send a communication to update the firmware of those Devices ensuring that the communication reaches the SMETS1 CHF (in the case of updates to a SMETS1 CHF) or (in the case of updates to all other Devices) the Communications Hub Functions associated with all such Devices (in each case, within the timescales specified in the DCC User Interface Services Schedule). Where the Service Request relates to SMETS1 Devices, the DCC shall Digitally Sign the resulting communication that it sends to the SMETS1 Service Provider; or

(ix) in the case of an 'Update PPMID Firmware' Service Request:

(A) include within the Service Response the details of any Devices that were listed within the Service Request to which, by virtue of the checks DCC has carried out, DCC does not propose to send a communication to update the firmware; and

(B) to all other Devices so listed, send a communication to update the firmware of those Devices ensuring that the communication reaches the Communications Hub Functions associated with all such Devices (in each case, within the timescales specified in the DCC User Interface Services Schedule).

19 Incident Management

19.1 Where the Device Security Credentials of a Device erroneously include Data from one or more of a Party's Organisation Certificates, that Party shall cooperate with other Parties in order to rectify the position (including, were necessary, by sending Service Requests to update the Device Security Credentials).

20 CoS Party Threshold Anomaly Detection

20.1 For each User ID that each Supplier Party uses in relation to submitting CoS Update Security Credentials Service Requests, the CoS Party shall apply Threshold Anomaly Detection in accordance with the requirements of the Anomaly Detection Procedures (provided that the provisions relating to quarantining of Service Requests shall not apply) and Clauses 20.2 to 20.5.

20.2 For each such User ID, the Anomaly Detection Threshold used by the CoS Party shall be that most recently set by the relevant User in accordance with the Threshold Anomaly Detection Procedures and which applies to a 24 hour period for each calendar day for CoS Update Security Credentials Service Requests.

20.3 A ‘CoS Update Security Credentials’ Service Request shall be considered to ‘apply’ to a particular day if:

(a) The Service Request has been submitted as a Future Dated Service Request and the relevant execution time falls on that day; or

(b) The Service Request has been submitted as an On-Demand Service Request and the relevant Service Request has been received by the CoS Party on that day.

20.4 The CoS Party shall cease the processing of any ‘CoS Update Security Service Requests’ applying to a particular day, and submitted by a Supplier Party Using a particular User ID if the number of such Service

Requests applying in relation to that day exceeds the Anomaly Detection Threshold for that User ID (and a DCC Alert shall be sent to the User in such circumstances).

20.5 For the avoidance of doubt, Threshold Anomaly Detection applied by the CoS Party shall be applied across the sum of both SMETS1 and SMETS2+ Service Requests applying to a particular day.

21 Definitions and Interpretation

21.1 For the purposes of this Servicing Request Processing Document, the term:

(a) "CoS Authorisation Response" means a communication that, where it relates to a SMETS2+ Device, contains a 'CoS Update Security Credentials Service Request and an associated 'Update Security Credentials' Signed Pre-Command that has been Digitally Signed by the CoS Party or, where it relates to a SMETS1 Device, contains a 'CoS Update Security Credentials Service Request and has been Digitally Signed by the CoS Party.

(b) "CoS Party XML Signing Key", means a Private Key that has an associated Public Key that is contained within an Organisation Certificate that has a Remote Party Role of 'coSPartyXmlSign';

(c) "Countersigned CoS Service Request" has the meaning given to that term in Clause 8.1(a);

(d) "MPID" means one of the unique identifiers by which the eligible subscriber may be identified in the Party Details;

(e) "Key Usage" has the meaning ascribed to that term in the Organisation Certificate Policy;

(f) "SupplierPrepaymentTopUpFloorSeqNumber" has the meaning ascribed to that term in the DCC User Interface Specification; and

(g) Trust Anchor Cell has the meaning ascribed to that term in the GB Companion Specification.

Version AC 7.0

APPENDIX AC

Inventory Enrolment and Decommissioning Procedures

Contents

1. Overview

1.1 This Appendix supplements Sections H5 (Smart Metering Inventory and Enrolment Services) and H6 (Decommissioning and Suspension of Devices).

2. Smart Metering Inventory

2.1 The DCC shall establish and maintain the Smart Metering Inventory.

2.2 The DCC shall ensure that the Smart Metering Inventory reflects the most up-to-date information provided (or made available) to it from time to time in accordance with this Code (subject to Section F2.9 (Publication and Use by the DCC)).

2.3 Parties shall not seek to add Devices to the Smart Metering Inventory (and the DCC shall not add Devices to the Smart Metering Inventory) otherwise than in compliance with this Appendix.

2.4 Prior to delivering a Communication Hub to a Party pursuant to the Communications Hub Service, the DCC shall add the Communications Hub Function and Gas Proxy Function that comprise that Communications Hub to the Smart Metering Inventory (to be identified with an SMI Status of 'pending'); provided that such Devices may only be added to the Smart Metering Inventory where the Communications Hub is of a Device Model identified in the Central Products List.

2.5 No Party shall add Communications Hub Functions to the Smart Metering Inventory without also adding the Gas Proxy Function that forms part of the same Communications Hub (and vice versa).

2.6 Any User may send a Service Request requesting that the DCC adds a Device to the Smart Metering Inventory (to be identified with an SMI Status of 'pending'); provided that only Devices of (or forming part of) a Device Model that is identified in the Central Products List are eligible to be added to the Smart Metering Inventory. This Clause 2.6 does not apply to Type 2 Devices (which are covered in Clause 2.9).

2.7 The DCC shall not send any communication to a Device unless the Device is listed in the Smart Metering Inventory; save for communications sent for the purposes of testing under Section H14 (Testing Services).

2.8 In the case of Communications Hub Functions and Gas Proxy Functions, the only Communications Hubs that may be added to the Smart Metering Inventory (subject to Clause 12.3) are those that comprise either a SMETS1 CH or a Communications Hub that is to be provided by the DCC pursuant to the Communications Hub Service.

2.9 Any User may send a Service Request requesting that the DCC adds a Type 2 Device to the Smart Metering Inventory. For the avoidance of doubt, a Type 2 Device shall not be identified in the Central Products List, and shall have no SMI Status.

2.10 The Responsible Supplier for each Smart Metering System shall keep under review the information recorded in the Smart Metering Inventory in respect of the Devices that comprise that Smart Metering System. Where circumstances change or the Responsible Supplier identifies an error in such information, the Responsible Supplier shall submit Service Requests requesting that the DCC updates the Smart Metering Inventory (or, where it is not possible to do so, shall raise an Incident in accordance with the Incident Management Policy). Where a correction is made in respect of the relationship between one or more Smart Meters / Standalone Auxiliary Proportional Controllers and an MPAN and/or MPRN, then the DCC shall notify the Electricity Distributor and/or Gas Transporter for the affected MPANs and/or MPRNs.

2.11 Where a User other than the Responsible Supplier for a Smart Metering System becomes aware of an error in the information recorded within the Smart Metering Inventory in respect of a Device that comprises that Smart Metering System, it shall raise an Incident in accordance with the Incident Management Policy.

2.12 Where a User receives a Response or Alert other than via the SM WAN, the User shall, where the Response or Alert is listed in the DCC User Interface Specification as one that is required to be returned to the DCC, send a 'Return Local Command Response' Service Request containing the Response or Alert to the DCC.

3. Pre-Commissioning Obligations

Pre-Commissioning obligations in relation to SMETS2+ Devices

3.1 Where the relevant Device is a SMETS2+ Device, before:

(a) a Responsible Supplier sends a Service Request which may result in the sending of a Command to a Smart Meter, Standalone Auxiliary Proportional Controller, Gas Proxy Function or Type 1 Device; or

(b) the DCC delivers a Communications Hub (comprising a Communications Hub Function and a Gas Proxy Function) to a Party in accordance with the Communications Hub Service,

the Responsible Supplier or DCC (as the case may be) shall ensure that each Trust Anchor Cell on that Device which is required by the GB Companion Specification to be populated with credentials is populated with credentials in accordance with the requirements of Clause 3.2.

3.2 The requirements of this Clause 3.2 are that:

(a) each Trust Anchor Cell with the Remote Party Role listed in the table immediately below shall be populated with the Security Credentials from the Certificate (or, as indicated, one of the Certificates) identified in relation to that Remote Party Role in the second column of that table; and

(b) in each case the relevant Certificate shall have a keyUsage value which is the same as that of the Trust Anchor Cell it populates.

Remote Party Role	Certificate
Root	a Root OCA Certificate
Recovery	a DCC Recovery Certificate
AccessControlBroker	a DCC Access Control Broker Certificate
transitionalCoS	a DCC CoS Certificate
Supplier	one of the following: a. one of the relevant Supplier Party's Organisation Certificates; b. a DCC Access Control Broker Certificate; c. (where the consent of that other Supplier Party has been given) one of that other Supplier Party's Organisation Certificates.
networkOperator	one of the following: a. one of the relevant Network Operator's Organisation Certificates; b. one of the relevant Supplier Party's Organisation Certificates; c. (where the consent of that other Supplier Party has been given) one of that other Supplier Party's Organisation Certificates; d. a DCC Access Control Broker Certificate.
wanProvider	a DCC WAN Provider Certificate
loadController	one of the following: a. one of the relevant Supplier Party's Organisation Certificates; b. a DCC Access Control Broker Certificate; c. (where the consent of that other Supplier Party has been given) one of that other Supplier Party's Organisation Certificates.

Where 'DCC Recovery Certificate', 'DCC CoS Certificate', 'DCC Access Control Broker Certificate' and 'DCC WAN Provider Certificate' are each Organisation Certificates created by the DCC for the purposes of occupying the relevant Trust Anchor Cells on Devices in accordance with the above table and used by those

DCC Systems described in (respectively) sub-paragraphs (f), (c), (b) and (a) of the definition of DCC Live Systems.

3.3 Where and to the extent that the Electricity Distributor or Gas Transporter for a SMETS2+ Device has notified the Responsible Supplier for the Device of the values for the 'NP Configurable Data Items' that the Electricity Distributor or Gas Transporter (as applicable) wishes to have configured on the Device at the time of its Commissioning, the Responsible Supplier shall take all reasonable steps to ensure that those data items are so configured on the Device at the time of its Commissioning, including where the Device is a Standalone Auxiliary Proportional Controller, those items which are both included in the ‘NP Configurable Data Items’ and are supported by the Device. In this Clause 3.3, 'NP Configurable Data Items' means those data items held on Devices that are capable of being configured via Services Requests for which the User Role of 'Electricity Distributors' or 'Gas Transporter' (as applicable) is an Eligible User Role.

Pre-Commissioning obligations in relation to SMETS1 Devices

3.4 Prior to adding a SMETS1 Device (other than a SMETS1 IHD, SMETS1 PPMID or a SMETS1 CAD) to the Smart Metering Inventory, the relevant User shall contact the Service Desk to provide the following information in relation to the Device:

(a) the Device ID; and

(b) any information the DCC reasonably requires in relation to SMETS1 Devices of that Device's Device Model (as made available by the DCC from time to time via the Self-Service Interface).

3.5 The DCC shall not add a SMETS1 Device (other than a SMETS1 IHD or a SMETS1 PPMID) to the Smart Metering Inventory in circumstances where it has not been provided with the information referred to in Clause 3.4 in relation to that Device.

3.6 Where a User has notified the DCC of the Device’s details for recording in the Smart Metering Inventory, before attempting to communicate with the Device via the DCC, the User shall comply with the provisions of Clause 13.1 of the SMETS1 Supporting Requirements.

4. Commissioning

Commissioning of Communications Hub Functions

4.1 Subject to Clause 4.2, where the DCC receives a communication originating from a Communications Hub Function which does not have an SMI Status of 'commissioned' confirming that it has connected to the SM WAN, the DCC shall update the SMI Status of that Communications Hub Function to 'commissioned'.

4.2 Before taking the step set out in Clause 4.1, the DCC shall confirm whether the communication originates from the Communications Hub Function that is identified within the communication. The DCC shall not take the step set out in Clause 4.1 in respect of a Communications Hub Function where:

(a) the Communications Hub Function is not listed within the Smart Metering Inventory;

(b) the Communications Hub Function is not identified in the Smart Metering Inventory as having an SMI Status of 'pending' or 'installed not commissioned'; and/or

(c) the communication may have changed in transit or does not originate from the Communications Hub Function that is identified within the communication.

Adding Devices to Communication Hub Functions' Device Logs

4.3 Following the Successful Execution of an 'Update HAN Device Log' Service Request requesting the addition of a Device to the Device Log of a Communications Hub Function, the DCC shall:

(a) update the Smart Metering Inventory to Associate the Device with the applicable Communications Hub Function;

(b) in the case of Smart Meters and Standalone Auxiliary Proportional Controllers only, record the MPAN(s) or MPRN (as applicable) provided within the Service Request against that Device and notify the Electricity Distributor or Gas Transporter (as applicable) of the MPAN(s) and/or MPRN and of the Device's Device ID and Device Type; and

(c) other than in the case of a Type 2 Device, set the SMI Status of the Device to 'whitelisted'.

4.4 Following the receipt of an Alert from a Communications Hub Function informing the DCC that the Communications Hub Function is able to communicate over the HAN with a Device, the DCC shall (other than in the case of a Type 2 Device, or where the relevant Device already has an SMI Status of 'commissioned') set the SMI Status of the Device to 'installed not commissioned'.

Joining Devices to Smart Meters, Standalone Auxiliary Proportional Controllers or Gas Proxy Functions

4.5 Where a Responsible Supplier wishes to join any Device (other than a Type 2 Device) to a Smart Meter, a Standalone Auxiliary Proportional Controller or a Gas Proxy Function, the Responsible Supplier shall send the DCC a 'Join Service' Service Request to add the relevant Device to the Device Log of the relevant Smart Meter, Standalone Auxiliary Proportional Controller or Gas Proxy Function.

4.6 The DCC shall not send a Command to join a Device to a Smart Meter, Standalone Auxiliary Proportional Controller or Gas Proxy Function in response to a Service Request under Clause 4.5 where:

(a) the Device to be joined is not listed within the Smart Metering Inventory with an SMI Status of 'pending', 'installed not commissioned' or 'commissioned';

(b) the Communications Hub Function that is to form part of the same Smart Metering System is not listed in the Smart Metering Inventory with an SMI Status of 'pending', 'installed not commissioned' or 'commissioned'; and/or

(c) the Smart Meter, Standalone Auxiliary Proportional Controller or Gas Proxy Function with which the Device is to be joined is not listed in the Smart Metering Inventory with an SMI Status of 'pending', 'installed not commissioned' or 'commissioned'.

4.7 On the Successful Execution of a 'Join Service' Service Request to add a Device to the Device Log of a Smart Meter, Standalone Auxiliary Proportional Controller or Gas Proxy Function in accordance with Clauses 4.5 and 4.6, the DCC shall Associate that Device with the applicable Smart Meter, Standalone Auxiliary Proportional Controller or Gas Proxy Function (as applicable), and either:

(a) where the Smart Meter, Standalone Auxiliary Proportional Controller or Gas Proxy Function (as applicable) has an SMI Status of 'installed not commissioned', set the SMI Status of the Device to 'installed not commissioned'; or

(b) where the Smart Meter, Standalone Auxiliary Proportional Controller or Gas Proxy Function (as applicable) has an SMI Status of 'commissioned', set the SMI Status of the Device to 'commissioned'.

4.8 In respect of Type 2 Devices:

(a) where the Responsible Supplier or an Other User wishes to add a Type 2 Device to the Device Log of an Electricity Smart Meter, a Standalone Auxiliary Proportional Controller or a Gas Proxy Function, it shall send a 'Join Service' Service Request in order to do so;

(b) the DCC shall not send a Command to join a Type 2 Device to a Smart Meter, Standalone Auxiliary Proportional Controller or Gas Proxy Function in response to a Service Request under Clause 4.8(a) where the Electricity Smart Meter or Standalone Auxiliary Proportional Controller or Gas Proxy Function with which the Type 2 Device is to be Associated is not listed in the Smart Metering Inventory with an SMI Status of 'pending', 'installed not commissioned' or 'commissioned'; and

(c) on the Successful Execution of a 'Join Service' Service Request to add a Type 2 Device to the Device Log of a Smart Meter, Standalone Auxiliary Proportional Controller or Gas Proxy Function in accordance with (a) and (b) above, the DCC shall Associate that Device with the applicable Smart Meter, Standalone Auxiliary Proportional Controller or Gas Proxy Function (as applicable).

Commissioning of Devices other than Communications Hub Functions

4.9 Where a Responsible Supplier wishes to Commission a Type 1 Device, it shall send (under Clause 4.5) a 'Join Service' Service Request to add the Type 1 Device to the Device Log of a Commissioned Electricity Smart Meter, a Commissioned Standalone Auxiliary Proportional Controller or a Commissioned Gas Proxy Function (as applicable).

4.10 Where a Responsible Supplier wishes to Commission a Gas Proxy Function, it shall send (under Clause 4.5) a 'Join Service' Service Request to add the Gas Proxy Function to the Device Log of a Commissioned Gas Smart Meter.

4.11 Where a Responsible Supplier wishes to Commission a Smart Meter or Standalone Auxiliary Proportional Controller, the Responsible Supplier shall send the DCC a 'Commission Device' Service Request in respect of that Device.

4.12 The DCC shall not send a Command to a Device in response to a Service Request under Clause 4.11 where:

(a) the Device is not listed within the Smart Metering Inventory;

(b) the Device has an SMI Status of 'commissioned', 'decommissioned' or 'suspended'; and/or

(c) the Communications Hub Function that is to form part of the same Smart Metering System is not listed in the Smart Metering Inventory with an SMI Status of 'commissioned'.

4.13 Following the receipt of a Response, over the SM WAN, that indicates the Successful Execution of a 'Commission Device' Service Request in accordance with Clauses 4.11 and 4.12 in respect of a Device, the DCC shall update the SMI Status of the Device to 'commissioned'.

4.14 In respect of SMETS2+ Devices only, as soon as reasonably practicable after the Successful Execution of a 'Commission Device' Service Request which relates to a Smart Meter, the Responsible Supplier shall send a 'Set Device Configuration (Import MPxN)' Service Request to ensure that the relevant MPAN or MPRN (as applicable) is available for display upon the Smart Meter.

4.15 For the avoidance of doubt, there is no concept of commissioning a Type 2 Device.

4.16 Where, following the fitting and activation procedure, the installing Supplier Party wishes to leave a Smart Metering System installed without establishing a connection to the SM WAN, then following any subsequent change of supplier:

(a) the gaining Supplier Party may contact the losing Supplier Party (and/or one or more former suppliers) by email requesting the installation codes for the Devices which comprise that Smart Metering System; and

(b) the installing Supplier Party shall, within ten (10) Working Days of receiving such a request, provide the relevant installation codes to the gaining Supplier Party by email (or, if the Supplier Party which is contacted is not the installing Supplier Party, confirm the same to the gaining Supplier Party by email).

5. Post-Commissioning Obligations in relation to SMETS2+ Devices

5.1 This Clause 5 applies only to SMETS2+ Devices.

5.2 As soon as reasonably practicable (and in any event within 7 days) following the Commissioning of a Communications Hub Function, the DCC shall ensure that:

(a) the Communications Hub Function re-generates its Private Keys, and that Device Certificates containing the associated new Public Keys are stored on the Device; and

(b) the information from at least one of the Organisation Certificates that comprise the Communications Hub Function's Device Security Credentials is replaced (provided that for such purposes the information from an Organisation Certificate may be replaced with that from the same Organisation Certificate).

5.3 As soon as reasonably practicable (and in any event within 7 days) following the Commissioning of a Smart Meter, a Standalone Auxiliary Proportional Controller or a Gas Proxy Function, the Responsible Supplier shall, in relation to each such Device, ensure that:

(a) the Device Security Credentials which pertain to the Network Parties are:

(i) in the case of those which pertain to the Electricity Network Party, those of the Electricity Distributor; and

(ii) in the case of those which pertain to the Gas Network Party, those of the Gas Transporter (or, if they are not available in the SMKI Repository, the Device Security Credentials which pertain to the Gas Network Party shall be populated with information from the Organisation Certificates Issued to the DCC and referred to in Sections L3.23(f) (the DCC (access-Control-Broker) – digitalSignature Certificate) and L3.23(g) (the DCC (access-Control-Broker) – keyAgreement Certificate));

(b) the Device re-generates its Private Keys, and that the Device Certificates containing the associated new Public Keys are stored on the Device; and

(c) in the case of a Smart Meter and a Standalone Auxiliary Proportional Controller, information from at least one of the Organisation Certificates that comprise the Device's Device Security Credentials is replaced (provided that for such purposes the information from an Organisation Certificate may be replaced with that from the same Organisation Certificate).

5.4 As soon as reasonably practicable (and in any event within 7 days) following the Commissioning of a Communications Hub Function, Gas Proxy Function, Standalone Auxiliary Proportional Controller or Smart Meter, the DCC shall interrogate the Device to ascertain whether the Device's recovery Trust Anchor Cell is populated with Device Security Credentials that pertain to a DCC Recovery Certificate. For Devices Commissioned before Service Release 1.3 (or such later date as may be directed by the SofS for the purposes of this Clause 5.4), the reference to the period of 7 days following Commissioning shall apply as 7 days following Service Release 1.3 (or 7 days following any later date directed by the SofS).

5.5 The DCC shall monitor Commands sent to Devices and the associated Responses from Devices and, based on the information available to it, record the information set out in Clause 5.8 in relation to each Device identified in Clause 5.7 (the "**Post Commissioning Information**").

5.6 The DCC shall ensure that the Post Commissioning Information is updated on a daily basis to reflect the most accurate and up-to-date information available to the DCC at the time of the update.

5.7 For the purposes of Clause 5.5, the relevant Devices include any Communications Hub Function, Gas Proxy Function, a Standalone Auxiliary Proportional Controller or Smart Meter which has an SMI Status of 'commissioned', has been Commissioned for a period of 7 days or more, and in relation to which one or both of the following applies:

(a) the DCC has failed successfully to carry out the interrogation of the Device pursuant to Clause 5.4; and/or

(b) the DCC has successfully carried out the interrogation of the Device pursuant to Clause 5.4 and has identified that the Device's recovery Trust Anchor Cell is not populated with Device Security Credentials that pertain to a DCC Recovery Certificate.

5.8 For the purposes of Clause 5.5, the Post Commissioning Information to be recorded in relation to each relevant Device shall include:

(a) the Device ID and Device Type;

(b) the date upon which the Device was Commissioned;

(c) which of Clauses 5.7 (a) and/or (b) applies;

(d) other than in the case of Communications Hub Functions, the Responsible Supplier at the time the Post Commissioning Information for the Device was most recently updated;

(e) other than in the case of Communications Hub Functions, the Supplier Party that sent the Service Request that resulted in the Commissioning of the Device; and

(f) the date on which the Post Commissioning Information for the Device was most recently updated.

5.9 As soon as reasonably practicable following the end of each month, the DCC shall, based upon the Post Commissioning Information prevailing at the end of that month, compile and provide (in an electronic format) to the Panel, the Security Sub-Committee and the Authority a report which includes the following information:

(a) the month to which the report relates;

(b) for each Party that is the Responsible Supplier for any Smart Meter or Gas Proxy Function that is listed in the Post Commissioning Information for that month (or was listed in the information for the previous month):

(i) the total number of Devices of each Device Type listed in the Post Commissioning Information for that month for which that Party is the Responsible Supplier;

(ii) the number of such Devices of each Device Type that have been added since the last monthly report;

(iii) the number of such Devices of each Device Type that have been removed since the last monthly report;

(iv) the number of such Devices of each Device Type that were listed in the Post Commissioning Information for the previous month and remain listed in the information for the month to which the report relates;

(v) the number of such Devices of each Device Type that were listed in the Post Commissioning Information for the previous three months and remain listed in the information for the month to which the report relates; and

(vi) the number of such Devices of each Device Type that were listed in the Post Commissioning Information for the previous six months and remain listed in the information for the month to which the report relates; and

(c) in respect of Communications Hub Functions:

(i) the total number of Communications Hub Functions listed in the Post Commissioning Information;

(ii) the number of Communications Hub Functions that have been added since the last monthly report;

(iii) the number of Communications Hub Functions that have been removed since the last monthly report;

(iv) the number of Communications Hub Functions that were listed in the Post Commissioning Information for the previous month and remain listed in the information for the month to which the report relates;

(v) the number of Communications Hub Functions that were listed in the Post Commissioning Information for the previous three months and remain listed in the information for the month to which the report relates; and

(vi) the number of Communications Hub Functions that were listed in the Post Commissioning Information for the previous six months and remain listed in the information for the month to which the report relates.

5.10 As soon as reasonably practicable following the end of each day, the DCC shall, based upon the Post Commissioning Information prevailing at the end of that day, compile and make available to each Supplier Party (via a secure electronic means for a period of at least 30 days following the day to which the report relates) a report which includes the following information in relation to Devices (other than Communications Hub Functions) listed in the Post Commissioning Information for which that Supplier Party was the Responsible Supplier on that day:

(a) the Device ID and Device Type of each such Device;

(b) the date on which the Post Commissioning Information for each such Device was most recently updated;

(c) the date upon which each such Device was Commissioned; and

(d) which of Clause 5.7 (a) and/or (b) applies in relation to each such Device.

5.11 Where requested by the Panel or the Authority, the DCC shall, as soon as reasonably practicable following any such request, provide to the Panel and/or the Authority (in an electronic format) copies of the reports referred to in Clause 5.10. Where requested by the Panel or the Authority, DCC shall additionally include in any such report the information referred to in Clause 5.8(e) in relation to each Device included in any such report.

5.12 The DCC shall ensure that each report provided under Clause 5.9, 5.10 or 5.11 is clearly marked as being "confidential".

5.13 Where the DCC is aware that:

(a) either or both of the steps in Clauses 5.2 (a) and/or (b) have not been carried out within 7 days following the Commissioning of a Communications Hub Function; and/or

(b) either of Clause 5.7(a) or (b) applies in relation to a Communications Hub Function,

then the DCC shall raise an Incident in accordance with the Incident Management Policy.

5.14 Where, in relation to a Gas Proxy Function, Standalone Auxiliary Proportional Controller or a Smart Meter, a Supplier Party is aware that:

(a) either or both of the steps in Clauses 5.3 (b) and/or (in the case of Smart Meters and Standalone Auxiliary Proportional Controllers only) 5.3(c) have not been carried out within 7 days following the Commissioning of the Device; and/or

(b) the DCC has failed successfully to carry out the interrogation of the Device pursuant to Clause 5.4, and the Supplier has (within a period of 14 days following the Commissioning of the Device) also failed to successfully carry out the relevant interrogation,

then the Supplier Party shall not send Service Requests requesting that the DCC sends communications to that Device other than for the purposes of: (i) completing those steps; (ii) replacing the Device Security Credentials held on the Device in response to a change of supplier; or (iii) maintaining an energy supply to the relevant premises.

5.15 Where the Responsible Supplier for a Gas Proxy Function, Standalone Auxiliary Proportional Controller or Smart Meter becomes aware that the Device does not have a recovery Trust Anchor Cell that is populated with Device Security Credentials that pertain to a DCC Recovery Certificate, then that Responsible Supplier shall (subject to Clause 5.17), as soon as reasonably practicable thereafter: other than in the case of a Gas Proxy Function, replace the Device; or, in the case of a Gas Proxy Function, replace the Communications Hub of which that Gas Proxy Function forms part.

5.16 Where a Communications Hub is returned to the DCC:

(a) following its replacement pursuant to Clause 5.13 or 5.15; or

(b) a Communications Hub is returned following replacement because it was not possible to interrogate the Gas Proxy Function pursuant to Clause 5.14(b),

then the Supplier Party returning the Communications Hub may (under and subject to Section F9 (Categories of Communications Hub Responsibility)) specify the reason for return as being a CH Defect.

5.17 A Responsible Supplier shall not replace a Device under Clause 5.15 where the reason that the relevant steps cannot be completed is an inability to communicate with a Device as a result of the SM WAN being unavailable.

General Obligations on DCC

5.18 The DCC shall monitor Responses it receives from Devices in order to determine whether any of the Device Certificates held on each Device have been successfully replaced. On the basis of this information the DCC shall establish and maintain a record of the most up-to-date active Device Certificates for each Device.

5.19 Where, following the addition of a Device to the Device Log of a Communications Hub Function, the DCC identifies that a Trust Anchor Cell of that Device has been populated with Security Credentials derived from a DCC CoS Certificate that has a subject field that is populated with an identifier of a DCC Service Provider that does not provide services to the CoS Party, the DCC shall send a DCC Alert to the Responsible Supplier for the Device, notifying them of the situation.

6. Post-Commissioning Obligations in relation to SMETS1 Devices

6.1 This Clause 6 applies only to SMETS1 Devices.

6.2 As soon as reasonably practicable (and in any event within 7 days) following the Commissioning of a SMETS1 Device, the Responsible Supplier shall ensure that:

(a) the Device Security Credentials which pertain to the Responsible Supplier are those of the Import Supplier or Gas Supplier (as applicable);

(b) the Device Security Credentials which pertain to the Electricity Network Party are those of the Electricity Distributor; and

(c) the Device Security Credentials which pertain to the Gas Network Party are those of the Gas Transporter (or, if they are not available in the SMKI Repository, the Device Security Credentials which pertain to the Gas Network Party shall be populated with information from the Organisation Certificates Issued to the DCC and referred to in Sections L3.23(f) (the DCC (access-Control-Broker) – digitalSignature Certificate) and L3.23(g) (the DCC (access-Control-Broker) – keyAgreement Certificate)).

6.3 Where any Party takes an action that results in a change to the information provided under Clause 3.4 it must (prior to doing so, or as soon as reasonably practicable thereafter) contact the Service Desk and notify the DCC of the updated information.

6.4 Where a Responsible Supplier for a SMETS1 CHF replaces the Device (or any component part of the Device that affects the means by which the DCC communicates with it), the Responsible Supplier must ensure that the replacement Device (or replacement parts) are such that that the DCC remains capable of communicating with that Device (where necessary after updating the information referred to in Clause 6.3 in relation to that Device).

6.5 As soon as reasonably practicable (and in any event within 7 days) following the Commissioning of a SMETS1 Device and thereafter at the frequency specified in the SMETS1 Supporting Requirements for the relevant Device Model, the DCC shall ensure that the Private Keys and / or Symmetric Keys, identified as being required by the SMETS1 Supporting Requirements to be replaced for such Device Models, are so replaced.

7. Unjoining

7.1 In the case of any Device other than a Standalone Auxiliary Proportional Controller or a Smart Meter, on the Successful Execution of an 'UnJoin Service' Service Request to remove that Device from the Device Log of an other Device, the DCC shall terminate the Association between that Device and the other Device.

8. Reactivating Decommissioned or Suspended Devices

8.1 Where the Responsible Supplier wishes to change the SMI Status of any Device (other than a Type 2 Device) from 'decommissioned' or 'whitelisted' to 'pending', then the Responsible Supplier shall send the DCC a Service Request to that effect. Provided the Device in question is of (or is part of) a Device Model that is identified in the Central Products List, the DCC shall change the SMI Status to 'pending'.

8.2 Where the SMI Status of a Device has remained as 'pending' for 36 months, then the DCC shall remove the Device from the Smart Metering Inventory.

8.3 Where a Device ceases to be Suspended (either as a result of the Device Model being added to the Central Product List, or the Device's Device Model being modified such that it is on the Central Product List), the DCC shall change the SMI Status of that Device to the status it held immediately prior to its Suspension.

9. Replacement of SMETS2+ Communications Hub Functions

9.1 This Clause 9 only applies to SMETS2+ Devices.

9.2 The DCC shall monitor Alerts and Responses sent from each Communications Hub Function and Gas Proxy Function in order to establish and maintain an up-to-date electronic record of the most recent information stored in the Device Log of each such Device.

9.3 Where DCC receives a 'Restore HAN Device Log' or 'Restore Gas Proxy Function Device Log' Service Request, the DCC shall use the up-to-date electronic record referred to in Clause 9.2 in relation to the relevant Device for the purposes of determining the information to be used to restore the Device Log of the relevant Device.

9.4 Where a Communications Hub is replaced and the Communications Hub Function and Gas Proxy Function that comprise the replacement Communications Hub are Commissioned, such Devices shall (for the avoidance of doubt) be considered to be newly Commissioned and any provisions of the Code which require steps to be taken by any Party in relation to a newly Commissioned Device shall apply.

10. Removal of SMETS1 Communications Hub

10.1 Where practicable, prior to, and if not as soon as possible after, removing a SMETS1 Communications Hub, the Lead Supplier for that Communications Hub shall ensure the SMI Status for the relevant SMETS1 CHF is set to ‘decommissioned’.

11. Notification of Decommissioning and Suspension of Devices

11.1 As soon as reasonably practicable following the Decommissioning or Suspension of a Smart Meter or Standalone Auxiliary Proportional Controller, the DCC shall notify the Electricity Distributor or Gas

Transporter for that Device of such Decommissioning or Suspension, such notification to be made via the DCC User Interface.

11.2 As soon as reasonably practicable following the Suspension of a Device, the DCC shall notify the Responsible Supplier(s) for that Device of such Suspension, such notification to be made via the DCC User Interface.

12. CH Production Proving

12.1 The purpose of CH Production Proving is to provide assurance on the operation of the DCC Total System.

12.2 CH Production Proving entails the Commissioning of Communications Hub Functions and the sending and receiving of communications by the DCC to and from those Communications Hub Functions over the SM WAN. CH Production Proving is to be undertaken within the DCC Live Systems.

12.3 In order that the DCC can undertake CH Production Proving using particular Communications Hub Functions, those Communications Hub Functions will need to be included within the Smart Metering Inventory. The DCC shall only be entitled to include Communications Hub Functions (and the associated Gas Proxy Functions) within the Smart Metering Inventory for the purpose of CH Production Proving where the Security Sub-Committee has approved the inclusion of those Communications Hub Functions (and the associated Gas Proxy Functions) for such purpose.

12.4 The DCC shall, from time to time, be entitled to undertake CH Production Proving (and the other provisions of this Code shall be interpreted accordingly).

12.5 The DCC shall undertake CH Production Proving in accordance with Good Industry Practice, in a manner that does not adversely affect the provision of the Services, and in accordance with any conditions imposed by the Security Sub-Committee in respect of its approval pursuant to Clause 12.3.

13. Definitions

13.1 For the purposes of this Appendix:

(a) "**Trust Anchor Cell**", in relation to any Device, has the meaning given to it in the GB Companion Specification;

(b) "**keyUsage**", in relation to any Certificate, means the field referred to as such in the Organisation Certificate Policy;

(c) "**Service Release 1.3**" means, where the Secretary of State makes directions pursuant to Section X3 (Provisions to Become Effective Following Designation) whereby the DCC User Interface Services Schedule is varied on it first becoming effective so that there are Service Requests that are deemed to be omitted from the document, the date on which one or more of those variations are cancelled; and

(d) "**CH Production Proving**" is the activity described in Clause 12.

Version AE 1.0

APPENDIX AE

DCC User Interface Code of Connection

DEFINITIONS

DUIS XML Schema	has the meaning set out in the DCC User Interface Specification.
Receive Response Service	has the meaning set out in the DCC User Interface Specification.
Security Patch	has the meaning set out in the Registration Data Interface Code of Connection.
Transport Layer Security (TLS)	has the meaning set out in the DCC User Interface Specification.

1. DCC USER INTERFACE CODE OF CONNECTION

1.1 These provisions apply to the DCC and any User seeking to send or receive the communications listed in Section H3.3.

General Obligations

1.2 The DCC and each User shall inform each other of the contact details of one or more persons working for their respective organisations for the purposes of managing arrangements associated with the use of the DCC User Interface. The following information shall be provided in relation to each such person (and subsequently kept up to date by the User or the DCC):

(a) contact name;

(b) contact email;

(c) contact telephone number; and

(d) contact address.

and any other contact details as may be reasonably required by the DCC or the User from time to time.

Restrictions on Access to DCC User Interface

1.3 Each User shall only access the DCC User Interface via a DCC Gateway Connection.

Establishment of Transport Layer Security

1.4 The DCC and each User:

(a) shall establish a TLS session to secure the transport layer connection to the User’s Receive Response Service or the DCC User Interface respectively and shall do so in accordance with the DCC User Interface Specification;

(b) shall use a DCCKI Infrastructure Certificate to establish the TLS session; and

(c) in the case of a User only, may obtain a DCCKI Infrastructure Certificate in accordance with the DCCKI RAPP.

Technical Infrastructure

1.5 Each User shall only send Service Requests or Signed Pre-Commands where they have successfully validated those Service Requests or Signed Pre-Commands against the DUIS XML Schema.

1.6 Each User shall inform the DCC of the following information relating to its Receive Response Service in relation to any DCC Gateway Connection that it is using to access the DCC User Interface:

(a) primary URL and/or IP address for its Receive Response Service; and

(b) alternate URL and/or IP address for its Receive Response Service (if required for secondary location).

and shall inform the DCC if there are any changes to such information.

1.7 Each User shall provide the DCC with reasonable advance notice of any expected outages in the availability of its Receive Response Service that may impact the DCC's ability to send information to the User.

1.8 The DCC shall ensure that the URL and/or the IP address of the DCC User Interface remain constant.

1.9 The DCC shall use UTC (Coordinated Universal Time) for all messages sent over the DCC User Interface.

Security Obligations

1.10 Each User shall test the installation of Security Patches to be applied to its User Systems prior to their application.

1.11 Prior to first using the DCC User Interface, each User shall provide a report to the DCC that details the following:

(a) the scope of its User Systems;

(b) the number of connections between its User Systems and any system that does not form part of the User Systems; and

(c) the means by which the User has achieved Separation between its User Systems and each other system to which they connect.

and;

thereafter, the User shall ensure that the DCC is provided with a revised report whenever there is a change to the underlying information used to compile its previous report.

1.12 Where the DCC considers that:

(a). the User Systems are at risk of Compromise as a consequence of one or more features of a System which has not been Separated from (and therefore forms part of) those User Systems; and

(b). the User Systems are at risk of Compromise to such an extent that the User is likely to be non-compliant with Section G; and (c). that risk of Compromise (and therefore of non-compliance with Section G) could be appropriately mitigated by means of the Separation of the System which gives rise to the risk from the other Systems which are comprised in the User Systems; and

(d). that the non-compliance with Section G poses a threat of Compromise of DCC Systems,

the DCC shall notify the User and the Panel and provide an associated explanation.

Incident Management Policy

Contents

Definitions

In this document, except where the context otherwise requires:

- Expressions defined in section A of the Code (Definitions and Interpretation) have the same meaning as is set out in that section;
- The expressions in the left hand column below shall have the meaning given to them in the right hand column below; and
- References throughout to Service Desk mean the DCC via the Service Desk.

Business Continuity Event	An Event, other than a Disaster, that causes one or more of the 'DCC BC Impacts' listed in Table 4 of this document.
CPNI	Centre for the Protection of National Infrastructure
Code of Connection	One of the following Subsidiary Documents: DCC Gateway Connection Code of Connection; DCC User Interface Code of Connection; Registration Data Interface Code of Connection; Self-Service Interface Code of Connection; SMKI Code of Connection; SMKI Repository Code of Connection; DCCKI Code of Connection; DCCKI Repository Code of Connection.
Error Handling Strategy	The procedures to be followed and actions to be taken where a Service Request or the commands or responses related to it fail to provide the result expected from that type or category of Service Request as further described in clause 4
HMG	Her Majesty's Government
Interested Party	A Party or Registration Data Provider that is or has the potential to be affected by a Problem or Incident
Known Error	A fault in a component of the DCC Total System which is used for the provision of Live Services, identified by the successful diagnosis of an Incident or Problem and for which both Root Cause and a temporary work-around or a permanent solution have been identified

Live Service	Means 1) any of the Services that the DCC is obliged to provide to a User, an Authorised Subscriber, a DCC Gateway Party (once its connection is capable of operation), but excluding Testing Services as set out in H14, and 2) the exchange of data pursuant to Section E2.
Nominated Individual	means an individual who has been nominated by an Incident Party in accordance with clause 1.4.5 of this Incident Management Policy
Normal Business Day	means the period starting 08:00 and finishing at 18:00 on a Working Day.
Normal Business Hours	means hours during a Normal Business Day.
Root Cause	is the ultimate cause of an Incident or Problem
Root Cause Analysis	a class of problem solving methods aimed at identifying the Root Cause of a Problem or Incident
Service Alert	An alert notifying Interested Parties of a current issue which may impact the provision of Services
Target Initial Response Time	The time period within which an Incident within each Category should be recorded on the Incident Management Log and assigned to a resolver

1. Introduction

1.1. Purpose

1.1.1 This document details the Incident Management Policy in accordance with the requirements of Section H9. It deals with the management of Incidents, including those related to Registration Data.

1.1.2 Additionally, Clauses 4 and 5 cover the Error Handling Strategy and Business Continuity and Disaster Recovery respectively.

1.2. Background

1.2.1 The subject matter of this document is closely related to that of the Incident Management aspects of the Registration Data Interface Specification. In order to ensure an integrated solution to managing Incidents, certain common aspects of Incident Management are set out in this document and cross-referred to in the Registration Data Interface Specification.

1.2.2 The Registration Data Incident types are set out in the Registration Data Interface Specification.

1.2.3 Error conditions and how they should be handled are covered in Clause 4, the Error Handling Strategy.

1.3. Scope

1.3.1 The Incident Management Policy details the full Incident Management lifecycle including management and declaration of Major Incidents, Problems and escalations.

1.4. General Provisions

1.4.1 Incidents may be raised only by the DCC or an Incident Party and in accordance with this Incident Management Policy.

1.4.2 Incidents raised and managed under this Incident Management Policy may relate to any Live Service. The Testing Issue Resolution Process set out in H14.37- H14.45 shall apply for the purpose of resolving Testing Issues.

1.4.3 In the event that an Incident Party considers it necessary to raise an issue relating to the provision of Services but which it considers outside the scope of Live Services or Testing Services, it shall contact the DCC directly and each of that Party and the DCC shall, acting reasonably, agree between them responsibility for resolution of the issue, which shall be resolved by the responsible Party as soon as reasonably practicable.

1.4.4 Incidents shall be raised and recorded in the Incident Management Log in accordance with Clause 2.

1.4.5 Each Incident Party shall provide the DCC with, and shall subsequently provide the DCC with any changes to, a list of Nominated Individuals from their organisation who are authorised to:

(a) contact the DCC to raise and record in the Incident Management Log an Incident and communicate with the DCC regarding the Incident; and/or

(b) perform the roles identified in the escalation process defined in Clause 2.9.

1.4.6 Each Registration Data Provider, when providing the DCC with a list of Nominated Individuals, shall provide details of both the core operating hours for the Registration Data Provider and the Registration Data Provider’s out-of-hours facility.

1.4.7 Each Incident Party shall ensure that only its Nominated Individuals shall contact the DCC to raise an Incident.

1.4.8 The DCC shall ensure that only those Nominated Individuals pursuant to Clause 1.4.5(a) shall raise an Incident.

1.4.9 The DCC shall implement an authentication procedure for confirming that a communication is from an Incident Party’s Nominated Individual, and such procedure shall be commensurate with the risk to the Services and Data that would arise were someone other than a Nominated Individual to raise an Incident or obtain information from the Service Desk. Incident Parties shall comply with this procedure.

1.4.10 The DCC and each Incident Party shall each ensure that information regarding Incidents and Problems is recorded and kept up to date in the Incident Management Log as follows:

(a) for Major Incidents, the Incident Party shall comply with Clause 2.2.2;

(b) except in the case of Clause 1.4.10 (a), the Incident Party shall use the Self-Service Interface where it is able to do so and the DCC shall ensure that information provided in this way is automatically added to the Incident Management Log;

(c) where the Incident Party is unable to use the Self-Service Interface, it shall provide information to the Service Desk by email or by phone and the Service Desk shall ensure that this information is entered into the Incident Management Log;

(d) when an Incident is submitted by email and the Incident Party does not provide the required information as detailed in Clause 2.3, the Service Desk shall return an email to the Incident Party requesting the missing information and the Incident shall not be recorded in the Incident Management Log until the required information has been received by the Service Desk;

(e) the Service Desk shall enter information that the DCC originates into the Incident Management Log;

(f) the resolver shall ensure all actions to resolve the Incident are recorded in the Incident Management Log; and

(g) In regard to items a) – f) above, the DCC and each Incident Party shall each ensure that information is as complete as is possible and is entered into the Incident Management Log as soon as is reasonably practicable.

2. INCIDENT MANAGEMENT

2.1. Pre-requisites to Raising an Incident

DCC

2.1.1 Before raising an Incident the DCC shall take all reasonable steps to ensure an Incident does not already exist for the issue.

2.1.2 Not used.

Incident Parties other than Registration Data Providers

2.1.3 For the purposes of this clause 2.1.3 and clause 2.1.4, references to “Incident Party” do not include Registration Data Providers.

Before raising an Incident with the DCC the Incident Party shall take all reasonable steps to:

(a) where appropriate, confirm that the issue does not reside within the HAN, or the Smart Meter, or other Devices which the Incident Party is responsible for operating;

(b) confirm that the issue does not reside within the Incident Party’s own systems and processes;

(c) follow the guidance set out in the self-help material made available by the DCC, including checking for Known Errors and the application of any workarounds specified; and

(d) where the party is a User and to the extent that this is possible, use the SSI or submit a Service Request to resolve the Incident in accordance with Section H9.2.

2.1.4 In the event that the activities in clause 2.1.3 have been completed and an Incident is to be raised with the DCC, where it has access to the Self-Service Interface, the Incident Party shall check on the Self-Service Interface to establish whether an Incident has already been raised or a Service Alert issued for this issue and:

(a) in the event that the Incident Party can reasonably determine that an Incident or Service Alert for this issue exists, the Incident Party shall notify the Service Desk who shall register the Incident Party as an Interested Party within the Incident Management Log;

(b) in the event that the Incident Party cannot identify an existing Incident or Service Alert they shall progress to clause 2.2 to raise an Incident.

Registration Data Provider

2.1.5 Prior to raising an Incident regarding the provision of data by the DCC, the Registration Data Provider shall take all reasonable steps to confirm that the issue does not reside within the Registration Data Provider’s systems and processes.

2.2. Raising an Incident

2.2.1 Incidents can be raised at any time as set out in in clause 2.2.3, but only once the steps in clause 2.1 have been followed.

2.2.2 Where an Incident Party believes that an Incident meets the criteria of a Category 1 Incident (see clause 2.4.4), the Incident Party shall call the Service Desk as soon as reasonably practicable.

2.2.3 An Incident Party shall raise what it considers to be Category 2, 3, 4 and 5 Incidents as set out in clause 1.4.10 and provide information as set out in clause 2.3.1.

2.3. Required Information

2.3.1 When raising an Incident, the DCC or Incident Party shall provide the following information:

(a) Contact name;

(b) Contact Organisation;

(c) Contact details;

(d) Organisation’s Incident reference number (where available);

(e) Date and time of occurrence;

(f) MPxN or Device ID (where appropriate);

(g) Summary of Incident;

(h) Business impact; and

(i) Results of initial triage and diagnosis including references to existing Incidents, where appropriate, and details of investigations performed to satisfy pre-requisites set out in clause 2.1.

2.4. Incident Prioritisation and Categorisation

2.4.1 The DCC shall assign an Incident Category to an Incident raised by an Incident Party based on the information available at the time the Incident is recorded in the Incident Management Log.

2.4.2 The DCC shall assign an Incident Category to an Incident raised by the DCC using information available to the DCC at the time the Incident is recorded in the Incident Management Log.

2.4.3 The DCC shall progress the resolution of Incidents in priority order. The DCC shall determine the priority of an Incident by considering the Incident Category and the time remaining until the Target Resolution Time, as defined in clause 2.4.4.

Categorisation Matrix

2.4.4 The DCC shall, acting reasonably, assign a Category to an Incident, having regard to the table below. The table further details the Target Resolution Time in accordance with Section H9.1(c). If there is an Incident which is caused in whole or in part by the SMETS1 SM WAN and if Telefonica UK Limited or Vodafone Global Enterprise Limited is the relevant DCC Service Provider then the Target Initial Response Time and Target Resolution Time data set out in the table are non-binding on the DCC.

Incident Category	Description	All Incidents except those caused in whole or in part by the SMETS1 SM WAN if Vodafone Global Enterprise Limited or Telefonica UK Limited is the relevant DCC Service Provider		Incidents caused in whole or in part by the SMETS1 SM WAN if Vodafone Global Enterprise Limited is the relevant DCC Service Provider		Incidents caused in whole or in part by the SMETS1 SM WAN if Telefonica UK Limited is the relevant DCC Service Provider	
		Target Initial Response Time	Target Resolution Time	Target Initial Response Time	Target Resolution Time	Target Initial Response Time	Target Resolution Time
1	A Category 1 Incident (Major Incident) is an Incident which, in the reasonable opinion of the DCC: • prevents a large group of Incident Parties from using the Live Services; • has a critical adverse impact on the activities of the Incident Parties using the Live Services of the DCC; • causes significant financial loss and/or disruption to the Incident Parties; or • results in any material loss or	10 minutes	4 hours	N/A	7 hours	2 hours	5 hours

	corruption of DCC Data. For a Major Security Incident there are additional considerations: • HMG, through CPNI, have declared a Major Incident based on their procedures; • a pattern has been seen across the DCC Total System that in total would have a significant security impact; or • Data covered by the Data Protection Act has either been lost or obtained by an unauthorised party, or is seriously threatened.						
2	An Incident which in the reasonable opinion of the DCC: • has a non-critical adverse impact on the activities of Incident Parties, but the Live Service is still working at a reduced capacity; or • causes financial loss and/or disruption to other Incident Parties which is more than trivial but less severe than the significant financial loss described in the definition of a	20 minutes	24 hours	N/A	17 hours	4 Normal Business Hours or 2 hours if raised outside a Normal Business Day	12 Normal Business Hours or 5 hours if raised outside a Normal Business Day

	Category 1 Incident.						
3	An Incident which, in the reasonable opinion of the DCC: • has an adverse impact on the activities of an Incident Party but which can be reduced to a moderate adverse impact due to the availability of a workaround; or • has a moderate adverse impact on the activities of an Incident Party.	45 minutes	72 hours	N/A	17 hours	9 Normal Business Hours	48 Normal Business Hours
4	An Incident which, in the reasonable opinion of the DCC has a minor adverse impact on the activities of an Incident Party.	3 hours	5 days	N/A	9 days	9 Normal Business Hours	48 Normal Business Hours
5	An Incident which, in the reasonable opinion of the DCC has minimal impact on the activities of Incident Party.	1 day	10 days	N/A	9 days	90 Normal Business Hours	90 Normal Business Hours

Table 1 - This table covers all Incident categories including Security Incidents.

2.4.5 If an Incident Party believes an Incident has been allocated an incorrect Incident Category by the DCC or has been subsequently updated to an incorrect Incident Category by the DCC, it may invoke the escalation process set out in clause 2.9.

2.4.6 The DCC may change the Incident Category of an Incident if more information becomes available. The DCC shall provide to Interested Parties, through a Nominated Individual, details of why the Incident Category has been changed. The DCC shall update the Incident Management Log with the revised Incident Category.

2.5. Incident Assignment

2.5.1 The Service Desk shall manage Incidents recorded in the Incident Management Log through the Incident lifecycle.

2.5.2 The Service Desk shall assess the Incident and assign resolution activities to the appropriate resolver in accordance with Section H9.2, and the resolver may be the DCC or an Incident Party.

2.5.3 In the event that Incident resolution activities are assigned to a Registration Data Provider at a time which falls outside of the Registration Data Provider's hours of operation, and where the DCC has classified the Incident as a Category 1 or 2, the DCC shall contact the Registration Data Provider via its out-of-hours facility as provided in accordance with the clause 1.4.6.

2.5.4 In the event that Incident resolution activities are assigned to a Registration Data Provider at a time which falls outside of the Registration Data Provider's hours of operation and the DCC has classified the Incident as a Category 3, 4 or 5, the DCC shall contact the Registration Data Provider when their business operations commence on the next Working Day. In such instances the time during which the Registration Data Provider was not able to be contacted shall be disregarded for the purpose of calculating the resolution time for the Incident.

2.5.5 Pursuant to H9.8 the resolver assigned to an Incident shall perform the appropriate steps to resolve the Incident in accordance with Section H9.8, and shall record information as set out in clause 1.4.10.

2.5.6 When assigning an Incident to an Incident Party where the DCC requires the Incident Party to diagnose or confirm resolution of an Incident, the DCC shall:

(a) engage with the Incident Party through a Nominated Individual;

(b) set the Incident status to pending; and

(c) assign the activity to the Incident Party, and the resolution time shall not include the period of time during which the Incident is assigned to the Incident Party.

2.5.7 The Incident Party shall, using a reasonable mechanism, confirm to the DCC when all activities requested pursuant to clauses 2.5.5 are complete, providing details of steps taken, which the Service Desk shall ensure are included in the Incident Management Log. The DCC shall then reassign the Incident or update the status in the Incident Management Log to resolved, as appropriate, based on the information received.

2.5.8 Where an Incident has been investigated but has subsequently been determined not to be an Incident:

(a) the Service Desk shall contact the Incident Party that raised the Incident through a Nominated Individual and provide the relevant information that the DCC holds to enable the Incident Party to raise and manage the Incident within its own system; and

(b) the Service Desk shall set the status of the Incident in the Incident Management Log to closed.

2.5.9 If an Incident Party identifies that an Incident has been assigned to it but it should not be responsible for resolving it, the Incident Party shall advise the Service Desk, providing supporting information, and the DCC shall investigate and re-assign as appropriate.

2.5.10 The DCC shall collate and make available to Network Parties and the Panel data related to the time taken to resolve Incidents associated with the exchange of data pursuant to Section E of the Code, where the DCC is responsible for resolving the Incident but in order to do so, activity must be undertaken by a Registration Data Provider.

2.6. Identifying Interested Parties

2.6.1 The Service Desk shall take all reasonable steps using information available from the Live Services including Incident data, as appropriate, to identify Interested Parties for an Incident.

2.6.2 The DCC shall inform the Interested Parties identified by the DCC of the Incident through a Nominated Individual.

2.7. Communications

2.7.1 Throughout the lifecycle of the Incident, the DCC, via the Service Desk, shall communicate updates to the Incident Party or other identified Interested Parties. These communications may be via email, phone call and/or via updates to the Incident Management Log.

2.8. Incident Escalation

2.8.1 The rules and process for the escalation of an Incident are detailed in this clause and clause 2.9.

2.8.2 The DCC and Incident Party shall adopt the escalation process as defined in clause 2.9 to ensure that Nominated Individuals and DCC representatives with the necessary authority and the appropriate resources are applied to resolving the Incident.

2.8.3 The Service Desk shall monitor Incidents throughout their lifecycle and automatic reminder notifications shall be sent to appropriate resolvers based on Incident Category, Target Initial Response Time and Target Resolution Time.

2.8.4 Subject to clause 2.8.5, the Incident Party that raised an Incident with the Service Desk, an Interested Party, or an Incident Party to which the Incident has been subsequently reassigned by the DCC, may request that the Incident is escalated.

2.8.5 Incidents may be escalated under the following circumstances:

(a) disagreement with categorisation;

(b) Target Initial Response Time has not been met;

(c) Target Resolution Time about to be exceeded;

(d) lack of appropriate response;

(e) dissatisfaction with the progress of an assigned activity;

(f) dissatisfaction with the progress of an Incident; or

(g) dissatisfaction with the resolution of an Incident.

2.8.6 The Service Desk shall include full details of the escalation in the Incident Management Log.

2.9. Escalation Process

2.9.1 Escalated Incidents shall be progressed in accordance with the table below. All escalations shall follow the process and adhere to the sequential order.

Level	DCC		Incident Party
L1 Escalation		Service Desk	Individual nominated to act in the role of service desk operator in accordance with clause 1.4.5
L2 Escalation		Service Desk Manager	Individual nominated to act in the role of service desk manager in accordance with clause 1.4.5
L3 Escalation		Service Manager	Individual nominated to act in the role of Service Manager in accordance with clause 1.4.5
L4 Escalation		Head of Service	Individual nominated to act in the role of Head of Service in accordance with clause 1.4.5
L5 Escalation		Operations Director	Individual nominated to act in the role of Operations Director in accordance with clause 1.4.5

Table 2 – Escalation Process

2.9.2 If, following a Level 5 escalation, a resolution cannot be satisfactorily agreed between the DCC and the escalating organisation, the Incident may be escalated by any Interested Party to the Panel and Section H9.16 shall apply.

2.9.3 The DCC and escalating Incident Party shall provide appropriate evidence to the Panel that it has been through all earlier escalation levels before escalating an Incident to the Panel.

2.10. DCC Major Incidents and Major Security Incidents

2.10.1 All Category 1 Incidents shall also be treated as Major Incidents. Major Security Incidents shall also be treated as Category 1 Incidents.

2.10.2 Once an Incident has been reported to the Service Desk pursuant to clause 2.2.2, the Service Desk shall perform initial triage on the Incident. The Major Incident management process and/or the DCC security team shall be engaged to progress and resolve the Incident where triage confirms that the DCC believes that the Incident should be treated as a Category 1 Incident, unless the circumstances set out in 2.10.7 apply.

2.10.3 If an Incident is updated to become a Category 1 Incident the provisions of this clause 2.10 will also apply.

2.10.4 The DCC shall notify all Incident Parties that are likely to be affected by such Major Incident by a reasonable means in accordance with Section H9.11.

2.10.5 On resolution of the Major Incident, the DCC shall raise a Problem to confirm the Root Cause.

2.10.6 The DCC shall make the details from the Problem available to Interested Parties.

2.10.7 Where a Major Incident has been investigated but then turns out to be an Incident which the DCC is not responsible for resolving (as set out in H9.2(b)) then the Service Desk shall:

(a) Contact the appropriate Incident Party through a Nominated Individual;

(b) assign the Incident to the Incident Party; and

(c) set the Incident status to pending.

2.10.8 Where a Major Incident has been investigated but turns out not to be an Incident:

(a) the Service Desk shall contact the Incident Party that raised the Incident through a Nominated Individual and provide the details to enable the Incident Party to raise and manage the incident within their own system; and

(b) the Service Desk shall set the status of the Incident to closed.

2.10.9 [NOT USED]

Major Security Incidents

2.10.10 Clauses 2.10.11 and 2.10.12 shall apply for a Major Security Incident.

2.10.11 The Incident Party shall notify the Panel, the Security Sub-Committee, in accordance with Section G3, and, pursuant to section H9, the DCC if:

(a) it detects a security Incident within its environment of which the DCC needs to be informed; or

(b) any potential Security Incident it detects appears to relate to the DCC Total System.

2.10.12 The DCC shall notify the Panel and the Security Sub- Committee, in accordance with Section G2, and, pursuant to Section H9, shall inform an Incident Party by an appropriate mechanism if:

(a) any Security Incident occurs that is identified in the Code as requiring notification to the Incident Party or the Panel and Security Subcommittee; or

(b) a Security Incident indicates a breach of the provisions of a Code of Connection.

2.11. Major Incidents not Assigned to the DCC

2.11.1 In the event that a Major Incident is assigned to an Incident Party other than the DCC:

(a) the Incident Party may request that the DCC provides reasonable assistance. When this is requested the DCC shall provide all reasonable assistance to the Incident Party responsible for resolving the Incident in accordance with Section H9.12(b); and

(b) as part of such reasonable assistance, the DCC may disseminate the information to Incident Parties if requested by the Incident Party, using the Self-Service Interface and other mechanisms as appropriate.

2.12. Incident Closure

2.12.1 The rules for the closure of Incidents are detailed below.

2.12.2 An Incident that the DCC is responsible for resolving shall be resolved by the DCC in accordance with the Target Resolution Times set out in the categorisation matrix in clause 2.4.

2.12.3 The Service Desk and the resolver shall each record details of all steps they have each taken to resolve the Incident in the Incident Management Log, as set out in clause 1.4.10.

2.12.4 The Service Desk shall notify the Incident Party and/or other Interested Parties and the resolver via email when the DCC sets the Incident status to resolved.

2.12.5 If the Incident is resolved through the application of a workaround, the Service Desk shall either raise a new Problem or the Incident shall be associated with an existing Problem where one exists.

2.12.6 If it does not consider that the Incident is resolved, the Incident Party, resolver or an Interested Party shall respond to the Service Desk via email or phone call within 3 Working Days, unless a longer period has been agreed by the Service Desk, such agreement to not be unreasonably withheld. In so doing, the relevant party shall provide supporting information as to why they consider the Incident not to be resolved. Then:

(a) If the Service Desk receives, with supporting information, a response detailing that the Incident is not resolved, the Service Desk will change the status from resolved and reassign the Incident for investigation in accordance with Section H9; or

(b) If a response is not received from the Incident Party within the aforementioned timeframe the Service Desk shall close the Incident.

2.12.7 In the event that the Incident Party requires subject matter expert advice before confirming closure and the subject matter expert is unavailable, the Incident Party may contact the Service Desk via email or phone call to request that the closure period be extended.

2.12.8 In the event that the Incident is the result of an intermittent issue the Service Desk shall apply what it reasonably deems to be an appropriate closure period based on the frequency of the occurrences of the issue, and shall close the Incident after this period has elapsed without any further occurrences. The Service Desk shall record this in the Incident Management Log.

2.12.9 After the Incident has been resolved, the Service Desk may raise a Problem and link it to the Incident.

2.13. Re-opening Closed Incidents

2.13.1 The Incident Party that originally raised an Incident may only re-open it if it was closed with a workaround and one of the following circumstances occurs:

(a) the workaround fails; or

(b) the workaround deteriorates to a point that it affects normal business operations.

2.13.2 If a Problem associated with an Incident has been closed, it shall not be possible to re-open the Incident. In this case, the Incident Party shall raise a new Incident.

2.14. Re-occurring Incidents

2.14.1 If a previous Incident reoccurs after it has been closed in line with the procedures in this Incident Management Policy, the Incident Party shall raise a new Incident, in accordance with the provisions set out above.

2.14.2 The DCC may identify re-occurring Incidents by performing trending, correlation and incident matching. Confirmed re-occurrences may be progressed through Problem management.

2.14.3 An Incident Party may identify a re-occurring incident and may notify the DCC. In so doing, the Incident Party shall provide all related Incident reference numbers to the DCC who may progress the issue through Problem management, as set out in clause 3.

3. PROBLEM MANAGEMENT

3.1. Opening a Problem

3.1.1 The DCC shall open a Problem in the Incident Management Log in the following circumstances:

(a) when a Major Incident has been resolved;

(b) when an Incident is closed with a workaround applied; or

(c) when the DCC has identified a re-occurring Incident.

3.1.2 The DCC shall allocate a reasonable initial timescale for carrying out the Root Cause Analysis to enable the re-classification of the Problem as a Known Error.

3.2. Prioritisation and Timescale for Closure of Problems

3.2.1 The DCC shall periodically issue and make available a report listing open Problems to Incident Parties and the Panel.

3.2.2 The report shall set out for each open Problem:

(a) date opened;

(b) Problem classification;

(c) Problem status;

(d) the target closure date;

(e) the anticipated costs (in DCC's reasonable opinion) for the investigation and resolution of the Problem, where appropriate;

(f) the anticipated timescales for the closure of a Problem;

(g) the likely impact on the DCC's business, and its effects on Incident Parties of closing a Problem and continuing with a workaround, highlighting instances where implementing a permanent solution may not be the recommended approach; and

(h) the reason for any target closure date change.

3.2.3 Following the issuing of such a report, the DCC shall discuss with Incident Parties the prioritisation and preferred timescales for the progression of each Problem. Following discussion, and taking respondents' views into account, the DCC shall determine the prioritisation and preferred timescales for the progression of each Problem.

3.2.4 If a Problem investigation or resolution requires a change to the Code a Draft Proposal shall be submitted by the DCC.

3.3. Closing a Problem

3.3.1 The rules for closure of a Problem are detailed below, as required by Section H9.1(k).

3.3.2 Following the application of a permanent fix, the DCC shall discuss the outcome with Interested Parties before closing the Problem.

3.3.3 Details of all steps taken to close the Problem shall be recorded, as set out in Clause 1.4.10.

3.3.4 The DCC shall only close a Problem once one of the following conditions has been met and the DCC has discussed this with Interested Parties that:

(a) the permanent fix has been applied; or

(b) an enhanced and acceptable workaround is in place; or

(c) the DCC will not continue investigations.

3.4. Problem Management for Telefonica UK Limited

3.4.1 The provisions of this Clause 3 shall not apply to matters solely related to Services supported by the SMETS1 SM WAN for which Telefonica UK Limited is the DCC Service Provider.

4. ERROR HANDLING STRATEGY

4.1. The first version of the contents of the Error Handling Strategy will be the 'Error Handling Strategy – DCC Guidance Document' as published by the DCC in June 2016.

4.2. The DCC shall make the Error Handling Strategy available to Users through the Self-Service Interface.

4.3. The DCC may update the Error Handling Strategy from time to time. The DCC shall ensure that Parties are consulted prior to making any changes to the Error Handling Strategy and take into account any relevant views expressed by Parties in making any changes to it.

5. BUSINESS CONTINUITY AND DISASTER RECOVERY

5.1. BCDR General Provisions

5.1.1 Users, Other Parties and Registration Data Providers shall ensure that the contact details provided to the DCC for the purposes of Incident notifications are up to date.

5.1.2 The DCC shall record and treat any Disaster as a Major Incident.

5.1.3 The DCC shall coordinate recovery actions for any Disaster in order to minimise the impact on Services.

5.1.4 The DCC shall notify Incident Parties of a Disaster, with details of the Major Incident and the expected duration of the outage, if any. The DCC shall further inform Incident Parties when Services are restored.

5.1.5 The DCC shall notify Incident Parties of any event that results in a disruption to the Services as set out in Table 4 of this document, with details of the expected duration of the outage, if any. The DCC shall further inform Incident Parties when Services are restored.

5.1.6 The DCC shall implement the processes and arrangements outlined in the tables in clause 5.2 in order to meet the requirements as detailed in Section H10.13.

5.1.7 When requested by the DCC, upon restoration of Services, Incident Parties shall confirm that Services are fully restored.

5.1.8 Upon restoration of Services, if an Incident Party continues to have loss of Services they shall follow the incident management process steps outlined in clause 2.1.

5.2. Business Continuity and Disaster Recovery Procedures

Disaster Recovery

5.2.1 Pursuant to the requirements of Section H10.9:

(a) the DCC shall implement the measures in the table below under 'DCC Mitigation' to reduce the likelihood of the Disaster occurring and limit the impact in the event that a Disaster has occurred;

(b) in the event of a Disaster, the DCC shall follow the actions in the table below detailed under 'DCC Recovery Action'; and

(c) Incident Parties may experience the impact set out in the table below under 'Incident Party Impact' and shall follow the actions as detailed under 'Incident Party Actions on failure, failover or failback'.

Disaster ID	DCC Disaster Impact	DCC Mitigation	DCC Recovery Action	Incident Party Impact	Incident Party Actions on failure, failover or failback	Applicable to SMETS1 or SMETS2+?
D1(a)	The DCC loses the primary data centre provided pursuant to the (data services) contract referred to in paragraph 1.2(a) of Schedule 1 of the DCC Licence.	The DCC shall provide primary and secondary data centres providing data services for the DCC Live Systems, with a resilient server configuration in the primary data centre with an active-passive configuration between data centres. All configurations and data are backed up and backups are stored offsite. There	The DCC shall do one of the following: a. fail over to the secondary data centre; or b. recover Services at the primary data centre.	Incident Parties may experience a loss of all Services on failover to the secondary data centre and on failback to the primary data centre, with the exception of some Testing Services which operate from the secondary data centre.	1. When requested by the DCC, Incident Parties shall suspend submission of Service Requests and Signed Pre-Commands until notified that Services have been restored. 2. Upon restoration of impacted Services, Incident Parties may recommence submission of Service Requests and Signed Pre-Commands (including submitting any that have failed). 3. When requested by the DCC, the Incident Party	SMETS2+

		are resilient network links to the data centres providing communication services.			shall take each of the actions identified in column 6, of rows D5, D8, D9, D10, D11 and D16 of this table 3 and B6, B7 and B12 of table 4 below, as relevant, when DCC fails over from or fails back to the primary data centre.	
D1(b)	The DCC loses the primary data centre provided pursuant to the SMETS1 Data Services contract(s).	The DCC shall provide primary and secondary data centres in order to provide data services for the DCC Live Systems, with a resilient server configuration in the primary data centre with an active-passive configuration between data centres. All configurations and data are backed up and backups are stored offsite. There are resilient network links to the data centres providing communication services.	The DCC shall do one of the following: a. fail over to the secondary data centre; or b. recover Services at the primary data centre.	Incident Parties may experience a partial loss of SMETS1 Services on failover to the secondary data centre and on failback to the primary data centre.	Upon restoration of impacted Services, Incident Parties may recommence submission of SMETS1 Service Requests (including submitting any that have failed).	SMETS1
D2	The DCC loses the secondary data centre provided pursuant to the (data services) contract referred to in paragraph 1.2(a) of Schedule 1 of the DCC Licence.	The DCC shall provide the ability to deliver Testing Services from either the secondary or primary data centres. All configurations & data are backed up & backups are stored offsite. There are resilient network links to the data centres providing communication services.	The DCC shall do one of the following: a. recover Services at the primary data centre; or b. recover Services at the secondary data centre.	Incident Parties will experience a loss of some Testing Services. Incident Parties may experience a loss of some data within Testing Services.	1. When requested by the DCC, Incident Parties shall suspend the use of Testing Services until notified that Services have been restored. 2. Upon Services restoration, Incident Parties may resubmit failed test messages.	SMETS2+
D3(a)	The DCC loses both the primary and secondary data centres provided pursuant to the (data services) contract referred to in paragraph 1.2(a) of Schedule 1 of the DCC Licence.	The DCC shall ensure that all configurations & data are backed up & backups are stored offsite.	The DCC shall do one or more of the following: a. recover Services at the primary data centre; b. recover Services at the secondary data centre; c. restore Services to new infrastructure at an alternative data centre; d. set up network links to the new data centre.	Incident Parties may experience a loss of all Services. Incident Parties may experience a loss of some transactions. Some information related to billing and Service Levels may be lost. On restart the DCC may impose systems-driven Restrictions on transaction volumes/types.	1. When requested by the DCC, Incident Parties shall suspend submission of Service Requests and Signed Pre-Commands until notified that Services have been restored. 2. Upon Services restoration, Incident Parties may resubmit failed messages.	SMETS2+
D3(b)	The DCC loses both the primary and secondary data centres	The DCC shall ensure that all configurations & data are backed up	The DCC shall do one or more of the following: a. recover Services at the primary	Incident Parties may experience a partial loss of all SMETS1 Services. Incident Parties may	Upon restoration of impacted Services, Incident Parties shall resubmit any that have failed SMETS1 Service Requests.	SMETS1

	provided pursuant to the SMETS1 Data Services.	& backups are stored offsite.	data centre; b. recover Services at the secondary data centre; c. restore Services to new infrastructure at an alternative data centre; d. set up network links to the new data centre.	experience a loss of some SMETS1 transactions to a particular S1SP. On restart the DCC may impose systems-driven Restrictions on transaction volumes/types.		
D4	DCC Services are impacted by a virus or malware	The DCC constantly monitors its environments and networks to ensure the integrity of firewalls and anti-virus measures.	The DCC shall do one or more of the following: a. halt processing and clear the virus or malware; b. failover to a secondary data centre (or primary data centre) in the case of Testing Services; c. isolate the affected system and clear the virus or malware; d. cease to process transactions from Incident Parties impacted by the virus or malware until confirmation is received that they have applied necessary measures; e. apply any software patches to its Services; or f. recover from backup.	Incident Parties may experience a loss or interruption to affected Services. The DCC may impose systems-driven restrictions on transaction volumes/types on restart. Additional impacts are detailed in column 5 of rows D2, D5 to D12 and D15 of this table.	1. When requested by the DCC, Incident Parties shall suspend use of any affected Services. 2. Prior to re-commencement of Service provision, the DCC may request that each Incident Party confirms that it has cleaned its User Systems and applied necessary measures to prevent the virus or malware reoccurring. 3. When requested by the DCC, the Incident Party shall take each of the actions identified in column 6, of rows D5, D8, D9, D10, D11 and D16 of this table 3 and B6, B7 and B12 of table 4 below, as relevant, when DCC fails over from or fails back to the primary data centre.	SMETS1 and SMETS2+
D5	The DCC's experiences a failure of the part of the DCC Systems responsible for delivering Service Requests, Commands, Responses & Alerts	The DCC shall provide primary & secondary data centres providing data services for the DCC Live Systems, with resilient server configuration in the primary data centre with an active-passive configuration between data centres. All configurations & data are backed up & backups are stored offsite. There are resilient network links to the data centres providing communication services.	The DCC shall do one of the following: a. fail over to the secondary data centre; or b. recover Services at the primary data centre.	Incident Parties may experience a loss of Communication, Enrolment and Local Command Services. Incident Parties may experience a loss of all Services, with the exception of some Testing services which operate from the secondary data centre, during failover to the secondary data centre and failback to the primary data centre.	1. When requested by the DCC, Incident Parties shall suspend until notified that Services have been restored: • in respect of SMETS2+, the submission of Service Requests and Signed Pre-Commands; and • in respect of SMETS1, the submission of SMETS1 Service Requests. 2. Upon restoration of impacted Services, Incident Parties may recommence submission (including submitting any that have failed) of: • in respect of SMETS2+, Service Requests and	SMETS1 and SMETS2+

					Signed Pre-Commands; and • in respect of SMETS1, SMETS1 Service Requests. 3. When requested by the DCC, the Incident Party shall take each of the actions identified in column 6, of rows D8, D9, D10, D11 and D16 of this table 3 and B6, B7 and B12 of table 4 below, as relevant, when DCC fails over from or fails back to the primary data centre.	
D6	Intentionally Blank					
D7	Intentionally Blank					
D8	The DCC experiences a failure of the systems used to support the operation of the CoS Party.	The DCC shall provide primary & secondary data centres providing data services for the DCC Live Systems, with resilient server configuration in the primary data centre with an active-passive configuration between data centres. All configurations & data are backed up & backups are stored offsite. There are resilient network links to the data centres providing communication services.	The DCC shall do one of the following: a. fail over to the secondary data centre; or b. recover Services at the primary data centre.	Incident Parties would be unable to successfully send CoS Update Security Credentials Service Requests. Incident Parties may experience a loss of all Services during the failover to the secondary data centre. Incident Parties would also experience a loss of all Services on failback to the primary data centre.	1. When requested by the DCC, Incident Parties shall suspend until notified that Services have been restored: • in respect of SMETS2+, the submission of Service Requests and Signed Pre-Commands; and • in respect of SMETS1, the submission of SMETS1 Service Requests. 2. Upon restoration of impacted Services, Incident Parties may recommence submission (including submitting any that have failed) of: • in respect of SMETS2+, Service Requests and Signed Pre-Commands; and • in respect of SMETS1, SMETS1 Service Requests. 3. When requested by the DCC, the Incident Party shall take each of the actions identified in column 6, of rows D5, D9, D10, D11 and D16 of this table 3 and B6, B7 and B12 of table 4 below, as relevant, when DCC fails over from or fails back to the primary data centre.	SMETS1 and SMETS2+
D9	The DCC experiences a loss of connectivity to one or more Incident Parties	The DCC shall provide primary & secondary data centres providing data services for the DCC Live Systems, with resilient server	The DCC shall do one or more of the following: a. recover connection at the primary data centre; b. recover	Incident Parties will experience loss of connectivity to Services via the DCC User Gateway Connection.	1. In the event of a Services interruption, when advised by the DCC, Incident Parties shall suspend submission via the DCC User Gateway Connection until Services are restored	SMETS1 and SMETS2+

		configuration in the primary data centre with an active-passive configuration between data centres. There are resilient network links to the DCC User Gateway Connection with automatic rerouting between both data centres.	connection at the secondary data centre; c. recover User connection.		of: • In respect of SMETS2+, Service Requests and Signed Pre-Commands; and • in respect of SMETS1, SMETS1 Service Requests. 2. In the event of a Services interruption, when requested by the DCC, Incident Parties shall only submit Category 1 Incidents. 3. Upon restoration of impacted Services, Incident Parties may recommence submission (including submitting any that have failed) of: • In respect of SMETS2+, Service Requests and Signed Pre-Commands; and • in respect of SMETS1, SMETS1 Service Requests.	
D10	The DCC experiences a failure of the systems used to support the Self-Service Interface	The DCC shall provide primary & secondary data centres providing data services for the DCC Live Systems, with resilient server configuration in the primary data centre with an active-passive configuration between data centres. All configurations & data shall be backed up & backups are stored offsite. There are resilient network links to the DCC User Gateway Connection with automatic rerouting between both data centres.	The DCC shall do one of the following: a. fail over to the secondary data centre; or b. recover Services at the primary data centre.	Incident Parties would experience loss of connectivity to Services via the Self-Service Interface. Incident Parties may experience a loss of all Services, with the exception of some Testing services which operate from the secondary data centre during the failover to the secondary data centre and on failback to the primary data centre.	1. When requested by the DCC, Incident Parties shall suspend until notified that Services have been restored submission of: • In respect of SMETS2+, Service Requests and Signed Pre-Commands; and • in respect of SMETS1, SMETS1 Service Requests. 2. Upon restoration of impacted Services, Incident Parties may recommence submission of Service Requests and Signed Pre-Commands (including submitting any that have failed). 3. Incident Parties may need to log in to the Self-Service Interface again. 4. When requested by the DCC, the Incident Party shall take each of the actions identified in column 6, of rows D5, D8, D9, D11 and D16 of this table 3 and B6, B7 and B12 of table 4 below, as relevant, when DCC fails over from or fails back to the primary data centre.	SMETS1 and SMETS2+
D11(a)	The DCC experiences a failure of the connection between the service providers	The DCC shall provide primary & secondary data centres providing data services for the DCC Live Systems,	The DCC shall do one of the following: a. fail over to the secondary data centre; or b. recover	Incident Parties may experience a delay or failure in the processing of Service Requests, Commands, Responses and Alerts.	1. When requested by the DCC, Incident Parties shall suspend submission of Service Requests and Signed Pre-Commands until notified that Services	SMETS2+

	referred to in paragraphs 1.2(a) and 1.2(b) of Schedule 1 of the DCC Licence (DCC WAN Gateway).	with resilient server configuration in the primary data centre with an active-passive configuration between data centres. All configurations & data shall be backed up & backups are stored offsite. There are resilient network links to the data centres providing communication services. Commands, Responses & Alerts shall be cached.	connection at the primary data centre.	Incident Parties may experience a loss of all Services during the failover to the secondary data centre. Incident Parties would also experience a short impact on all Services on failback to the primary data centre.	have been restored. 2. Upon restoration of impacted Services, Incident Parties may recommence submission of Service Requests and Signed Pre-Commands (including submitting any that have failed). 3. When requested by the DCC, the Incident Party shall take each of the actions identified in column 6, of rows D5, D8, D9, D10 and D16 of this table 3 and B6, B7 and B12 of table 4 below, as relevant, when DCC fails over from or fails back to the primary data centre.	
D11(b)	The DCC experiences a failure of the connection between the DSP and the SMETS1 Data Service Providers (SMETS1 Management Gateway).	The DCC shall provide primary & secondary data centres providing data services for the DCC Live Systems, with resilient server configuration in the primary data centre with an active-passive configuration between data centres. All configurations & data shall be backed up & backups are stored offsite. There are resilient network links to the data centres providing communication services. Commands, Responses & Alerts shall be cached.	The DCC shall do one of the following: a. fail over to the secondary data centre; or b. recover connection at the primary data centre.	Incident Parties may experience a delay or failure in the processing of Service Requests, Commands, Responses and Alerts. Incident Parties may experience a loss of all Services during the failover to the secondary data centre.	Upon restoration of impacted Services, Incident Parties may recommence submission of SMETS1 Service Requests (including submitting any that have failed).	SMETS1
D12	Intentionally Blank					
D13	The DCC loses its primary data centre provided pursuant to the (SMKI) contract referred to in Schedule 1 of the DCC Licence.	The DCC shall provide instances of the SMKI service infrastructure at primary & secondary SMKI data centres in an active-passive configuration with full data replication between sites and resilient network links to the Data Service Provider. The DCC shall backup all SMKI configurations & data and shall store backups offsite.	The DCC shall do one of the following: a. fail over to the secondary data centre; or b. recover Services at the primary data centre.	Incident Parties would be unable to request new Organisational or Device Certificates during failure, failover or failback to the primary data centre.	1. When requested by the DCC, Incident Parties shall suspend transmission of Certificate Signing Requests. 2. Upon restoration of impacted Services, Incident Parties may recommence submission of Certificate Signing Requests (including submitting any that have failed).	SMETS1 and SMETS2+
D14	The DCC loses both primary & secondary data	The DCC shall maintain full off-site	The DCC shall: a. Restore failed services at one of	Incident Parties may be unable to request new	1. When requested by the DCC, Incident Parties shall suspend submission of	SMETS1 2 and SMETS2+

	centres provided pursuant to the (SMKI) contract referred to in Schedule 1 of the DCC Licence.	configuration & data backups.	the existing datacentres; or b. restore failed Services to new infrastructure at an alternative data centre and shall then redirect network links to the alternate data centre.	Organisational or Device Certificates.	Certificate Signing Requests until Services have been restored. 2. Upon Services restoration, Incident Parties may resubmit failed Certificate Signing Requests.	
D15(a)	The DCC loses both primary data centres provided pursuant to the DCO (Dual Control Organisation) contract.	The DCC shall provide primary and secondary data centres in order to provide data services for the DCC Live Systems, with a resilient server configuration in the primary data centre with an active-passive configuration between data centres. All configurations and data are backed up and backups are stored offsite. There are resilient network links to the data centres providing communication services.	The DCC shall do one of the following: a. fail over to the secondary data centre; or b. recover Services at the primary data centre.	Incident Parties may experience a partial loss of SMETS1 Services on failover to the secondary data centre and on failback to the primary data centre.	Upon restoration of impacted Services, Incident Parties may recommence submission of SMETS1 Service Requests (including submitting any that have failed).	SMETS1
D15 (b)	The DCC loses both primary & secondary data centres provided pursuant to the (Dual Control Organisation) contract.	The DCC shall maintain full off-site configuration & data backups.	The DCC shall do one or more of the following: a. recover Services at the primary data centre; b. recover Services at the secondary data centre; c. restore Services to new infrastructure at an alternative data centre; or d. set up network links to the new data centre.	Incident Parties will experience a loss of all SMETS1 Services. Incident Parties may experience a loss of some SMETS1 transactions to a particular S1SP. On restart the DCC may impose systems-driven Restrictions on transaction volumes/types.	1. When requested by the DCC, Incident Parties shall suspend submission of all SMETS 1 Service Requests until Services have been restored. 2. Upon restoration of impacted Services, Incident Parties may recommence submission of SMETS1 Service Requests (including submitting any that have failed).	SMETS1
D16	A failure of a connection or interface between one or more Registration Data Providers (RDP) and the DCC	There are resilient network links to the Registration Data Providers from both primary and secondary data centres.	The DCC shall do one or more of the following: a. recover connection at the primary data centre; b. recover connection at the secondary data centre; c. recover connection to the Registration Data Provider; or d. Send Registration update by	There may be a delay in the issuing of DCC Status Files.	1. Upon service restoration, Incident Parties may resubmit failed Service Requests and/or SMETS1 Service Requests. 2. When requested by the DCC, RDPs shall receive updates by alternative (secure) means.	SMETS1 and SMETS2+

			alternative (secure) means.			
D17	The DCC loses a data centre provided pursuant to the (communications services) contract referred to in paragraph 1.2(b) of Schedule 1 of the DCC Licence.	The DCC shall provide primary & secondary sites for communication services data centres in an active-active configuration. All configurations & data are backed up and backups are stored offsite. In the event of failure of one communications service data centre, Services would continue to be provided from the secondary data centre.	The DCC shall: a. restore the provision of Impacted Services at the affected communications data centre; or b. restore the provision of impacted Services at a new data centre.	There would be no impact on Incident Parties from a single communications service data centre failure. Restoration of the existing data centre will not impact Incident Parties.	1. No action would be required from Incident Parties to resolve this Incident. 2. Restoration of the existing data centre will not require action from Incident Parties.	SMETS1 and SMETS2+
D18	The DCC loses both data centres provided pursuant to the (communications services) contract referred to in paragraph 1.2(b) of Schedule 1 of the DCC Licence.	The DCC shall maintain full off-site configuration & data backups.	The DCC shall: a. restore impacted Services to new infrastructure at the affected location(s); or b. restore services at an alternative data centre(s)	Incident Parties may be unable to send Commands to Devices or receive Responses and Device Alerts via the DCC and will experience loss of some Services.	1. When requested by the DCC, Incident Parties shall suspend submission until notified that Services have been restored of: • In respect of SMETS2+, Service Requests and Signed Pre-Commands; and • in respect of SMETS1, SMETS1 Service Requests. 2. Incident Parties shall also comply with all reasonable DCC requests to assist with prioritising & phasing back transmission of Service Requests and/or SMETS1 Service Requests.	SMETS1 and SMETS2+
D19	The service provided pursuant to the contract referred to in paragraph 1.2(b) of Schedule 1 of the DCC Licence experiences multiple access node failure (Failure of a single access node would not be regarded as a DCC Disaster).	The DCC has significant, although not complete, overlap between access nodes. The DCC shall ensure that access nodes are of a resilient design and that it has sufficient provision of mobile equipment and components spares to restore service within acceptable timescales.	The DCC shall: deploy field maintenance and/or mobile equipment to restore Services.	Incident Parties may experience the failure of impacted Services directed to meters, Communications Hubs and Gas Proxy Functions in the affected area(s).	Upon Services restoration, Incident Parties may resubmit failed Service Requests and/or SMETS1 Service Requests.	SMETS1 and SMETS2+
D20	Communications Hub Product Recall	The DCC has more than one source for Communications Hubs. Buffer stocks are held by the DCC and Communications Hub manufacturers.	The DCC shall: a. determine the nature and extent of the problem; and b. notify all Incident Parties of the extent of product recall required and effects on existing stocks	This could result in Incident Parties diverting field staff to uninstall affected Communications Hubs, resulting in delays in installations. It might also impact stocks and future supply.	Incident Parties shall provide reasonable assistance to the DCC in resolving issues.	SMETS2+

			and future supply.			
D21	Loss of a site housing a DCC service function	The DCC shall have arrangements in place to resume all activity at an alternate location as part of its business continuity arrangements.	The DCC shall: a. relocate the service function to the designated recovery site & shall restore service from there; or b. recover services at existing site	Incident Parties may be unable to contact the affected service function until it has been recovered at an alternate location.	There is no action required from Incident Parties.	SMETS1 and SMETS2+
D22	Intentionally Blank					

Table 3 – Disaster Recovery Procedures

Business Continuity

5.2.2 Pursuant to the requirements of Section H10.9:

(a) the DCC shall implement the measures in the table below under 'DCC Mitigation' to reduce the likelihood of a Business Continuity Event occurring and limit the impact in the event that a Business Continuity Event has occurred;

(b) in the event of the occurrence of a Business Continuity Event, the DCC shall follow the actions in the table below detailed under 'DCC Recovery Action'; and

(c) Incident Parties may experience the impact set out in the table below under 'Incident Party Impact' and shall follow the actions as detailed under 'Incident Party Actions on failure, failover or failback'.

Business Continuity ID	**DCC BC Impact**	**DCC Mitigation**	**DCC Recovery Action**	**Incident Party Impact**	**Incident Party Actions on failure, failover or failback**
B6	The DCC experiences a failure of the systems used to support the provision of service management.	The DCC shall provide primary & secondary data centres providing data services for the DCC Live Systems, with resilient server configuration in the primary data centre with an active-passive configuration between data centres. All configurations & data are backed up & backups are stored offsite. There are resilient network links to the data centres providing communication services.	The DCC shall do one of the following: 1. fail over to the secondary data centre; or 2. recover Services at the primary data centre; and 3. the DCC Service Desk shall capture Incidents using another method until it regains access to the Service Management System.	Incident Parties may be unable to raise incidents or access incident information via the Self-Service Interface. Incident Parties may experience a loss of all Services, with the exception of some Testing services which operate from the secondary data centre during the failover to the secondary data centre and on failback to the primary data centre.	1. When requested by DCC, Incident Parties may only submit Category 1 Incidents. 2. Upon Services restoration, Incident Parties may submit outstanding Incidents. 3. When requested by the DCC, the Incident Party shall take each of the actions identified in column 6, of rows D5, D8, D9, D10, D11 and D15 of table 3 above and B6, B7 and B12 of this table 4, as relevant, when DCC fails over from or fails back to the primary data centre.
B7	The DCC experiences a failure of the systems used to support the provision	The DCC shall provide primary & secondary data centres providing data services for the DCC Live Systems, with resilient	The DCC shall do one of the following: 1. fail over to the secondary data	Incident Parties may experience unavailability of preconfigured reports via the	1. When requested by the DCC, Incident Parties shall suspend submission of Service

	of data warehousing and reporting.	server configuration in the primary data centre with an active-passive configuration between data centres. There are resilient network links to the data centres providing communication services.	centre; or 2. recover Services at the primary data centre.	Self-Service Interface. Incident Parties may experience a loss of all Services, with the exception of some Testing services which operate from the secondary data centre during the failover to the secondary data centre and on failback to the primary data centre.	Requests and Signed Pre-Commands until notified that Services have been restored. 2. Upon restoration of impacted Services, Incident Parties may recommence submission of Service Requests and Signed Pre-Commands (including submitting any that have failed). 3. When requested by the DCC, the Incident Party shall take each of the actions identified in column 6, of rows D5, D8, D9, D10, D11 and D15 of table 3 above and B6, B7 and B12 of this table 4, as relevant, when DCC fails over from or fails back to the primary data centre.
B12	Loss of the systems used to support Communications Hub ordering.	The DCC shall provide dual instances of the order management system in resilient configuration across primary and secondary data centres. All configurations & data are backed up with backups stored offsite. The DCC shall provide multiple network links & diverse routing.	The DCC shall do one or more of the following: 1. Capture orders using electronic or paper forms; 2. Restore the system from backups; and 3. On restoration of the system, the DCC shall ensure that all captured orders are entered.	Restoration of the CH Ordering System will not impact Incident Parties.	1. In the event of a service interruption, Incident Parties shall submit orders as requested by the DCC. 2. No action is required from Incident Parties on restoration of the system.

Table 4 – Business Continuity Procedures

6. Business Continuity and Disaster Recovery for Vodafone Global Enterprise Limited and Telefonica UK Limited

6.1. The provisions of Section H10.13 shall not apply to the Services supported by the SMETS1 SM WAN for which Vodafone Global Enterprise Limited or Telefonica UK Limited is the DCC Service Provider.

6.2. On the occurrence of a Disaster affecting the SMETS1 SM WAN for which either Vodafone Global Enterprise Limited or Telefonica UK Limited is the DCC Service Provider, the DCC shall take reasonable steps to restore any and all affected Services.

6.3. The requirements of Section H10.11 shall not apply to the Services supported by the SMETS1 SM WAN for which Telefonica UK Limited is the DCC Service Provider.

7. Planned Maintenance for Vodafone Global Enterprise Limited and Telefonica UK Limited

7.1. The requirements of Section H8.4 shall not apply to Planned Maintenance of the SMETS1 SM WAN for which Vodafone Global Enterprise Limited is the DCC Service Provider. The requirements of Sections H8.3

and H8.4 shall not apply to Planned Maintenance of the SMETS1 SM WAN for which Telefonica UK Limited is the DCC Service Provider.

7.2. Where Planned Maintenance is proposed to the SMETS1 SM WAN for which Vodafone Global Enterprise Limited or Telefonica UK Limited is the DCC Service Provider, the DCC will take reasonable steps to provide notice to Parties, to Registration Data Providers and to the Technical Architecture and Business Architecture Sub-Committee of the Planned Maintenance setting out the following information:

(a) the proposed Maintenance activity (in reasonable detail);

(b) the parts of the Services that will be disrupted (or in respect of which there is a Material Risk of disruption) during each such Maintenance activity;

(c) the time and duration of the Maintenance activity; and

(d) any associated risk that may subsequently affect the return of normal Services.

DCC shall take reasonable steps to provide such notice at least 4 (four) Working Days in advance where Vodafone Global Enterprise Limited is the DCC Service Provider and at least 6 (six) Working Days in advance where Telefonica UK Limited is the DCC Service Provider.

Version AH 2.0

Appendix AH

Self-Service Interface Access Control Specification

Definitions

In this document, except where the context otherwise requires:

- expressions defined in Section A1 of the Code (Definitions) have the same meaning as is set out in that Section;
- the expressions in the left-hand column below shall have the meanings given to them in the right-hand column below; and
- any expressions not defined here or in Section A1 of the Code have the meaning given to them either in the DCC User Interface Specification or the Self-Service Interface Code of Connection.

Business Functional Domain	means a grouping of one or more Functional Components which is used to describe and deliver the functional requirements of Self-Service Interface Users.
Functional Component	means a specific item or set of functionality provided by the Self-Service Interface which is subject to the access controls set out in this Appendix AH.
Job Type Role	means one of the functional roles as set out in the table contained in clause 1.5.2
Order Management System (OMS)	as defined in the CH Handover Support Materials
Security Assertion Markup Language (SAML)	an open, published framework for exchanging security information between online business partners
SSI Baseline Requirements Document	means a document which sets out the design specification of the Self-Service Interface, and which is maintained by the DCC in accordance with Section 1 of this Appendix AH.

1. SELF-SERVICE INTERFACE ACCESS CONTROL SPECIFICATION

The DCC shall ensure that, where the DCC receives a request to access the Self-Service Interface, it shall direct that request to the appropriate URL for dealing with that request, and that such URL shall be implemented and maintained such that communications across it can be authenticated.

Where any fields are found to be invalid, the DCC shall ensure that validation error messages and suggestions for resolution are provided.

1.1. Authorisation

The DCC shall ensure that each user of the Self-Service Interface shall only be permitted to access a Functional Component if it is entitled to do so pursuant to clause 1.5.1 and 1.5.2 given the User ID(s) and Job Type Role(s) that are supplied as attributes of the SAML assertion.

1.2. SAML Authentication

The DCC shall provide to Users a SAML-capable Identity Provider Service for the purpose of authentication of User Personnel to the Self-Service Interface (the "DCC Identity Provider Service").

Each User may use an Identity Provider Service that is not the DCC Identity Provider Service for the purpose of authentication of its User Personnel to the Self- Service Interface.

To authenticate each request from a User Personnel that seeks to access the Self-Service Interface, the DCC shall use either:

(a). a SAML assertion provided by the DCC Identity Provider Service (as defined in clause 1.3); or

(b). a SAML assertion provided by an Identity Provider Service provided by the User (as defined in clause 1.4).

After an Identity Provider Service provides the User Personnel's SAML assertion, the DCC shall store a secure cookie in the User Personnel's browser. Such secure cookie shall be set to expire 8.5 hours after initial authentication by:

(a) the DCC, for the DCC Identity Provider Service; or

(b) the User, where such User is using an Identity Provider Service that is not the DCC Identity Provider Service.

If this cookie exists during subsequent authentication, the DCC shall bypass SAML authentication. Where using either the DCC Identity Provider Service or any other Identity Provider Service, if a User wishes to change the rights of that User Personnel to access the Self-Service Interface, the User shall delete the cookie from the User Personnel's browser cookie store.

The User shall ensure that its browser uses HTTP POST to transfer SAML between its Identity Provider Service and the Self-Service Interface.

Each User shall ensure that SAML assertions are applied when requesting access to the Self-Service Interface.

Each User must, when using any Identity Provider Service, present the Job Type Role(s) for which access to the Functional Component is being requested in the SAML assertion sent to the DCC.

Each User shall ensure that each SAML assertion includes a Digital Signature produced by a DCCKI Digital Signing Key associated with a DCCKI Infrastructure Certificate in accordance with the FIPS 186-4 Digital Signature Standard using SHA-256 hashing algorithm. The User shall ensure that a SHA-256 hashing algorithm is applied to the SAML assertion.

1.3. SAML Authentication via the DCC Identity Provider Service

Where a User Personnel attempts to access the Self-Service Interface and a non-expired cookie is not stored in the User Personnel's browser cookie store:

1. The DCC shall send a SAML assertion request to the DCC Identity Provider Service via the User Personnel's browser;

2. When requested, the User shall provide the requested credentials (username, password, and certificate) to the DCC Identity Provider Service;

3. As set out in clause 1.1, the DCC shall grant or deny that person's access to the Self-Service Interface by providing a cookie enabling such access to be stored in the User Personnel's browser cookie store. If access is denied, the DCC shall provide a browser message which requests that the User Personnel resubmits their credentials.

The DCC shall ensure that, where a User is using the DCC Identity Provider Service, access to the Self-Service Interface is only provided once a User Personnel performs a login and generates a new password the first time that it uses that Identity Provider Service.

1.4. SAML Authentication via an Identity Provider Service that is not the DCC Identity Provider Service

When using an Identity Provider Service that is not the DCC Identity Provider Service, the User shall comply with this clause 1.4.

1.4.1 Authentication Requirements

A User providing a SAML assertion when seeking to access the Self-Service Interface via an Identity Provider Service that is not the DCC Identity Provider Service, shall ensure that its Identity Provider Service:

- prompts the User Personnel to provide their credentials (username, password, and certificate); and

- validates the User Personnel's credentials and (only where successfully validated) sends a SAML response including a SAML assertion to the Self-Service Interface.

The User shall ensure that SAML assertions, provided to the DCC by its Identity Provider Service, comply with the OASIS Standard – Assertions and Protocols for the OASIS Security Assertion Markup Language (SAML) v2.0.

The User shall ensure that the Identity Provider Service authentication mechanism shall use an appropriate SAML security assertion to demonstrate conformance to UK Government Authentication Framework Level 2.

1.4.2 Enrolment of an Identity Provider Service that is not the DCC Identity Provider Service

Where using an Identify Provider Service that is not the DCC Identify Provider Service, prior to seeking to access the Self-Service Interface for the first time, the User shall obtain at least one DCCKI Infrastructure Certificate in accordance with the DCCKI RAPP, and shall install such DCCKI Certificates on its Identity Provider Service.

The User shall configure their Identity Provider Service as defined in clause 1.4.1 and export and send a copy of the Identity Provider Service metadata to the DCC via secured electronic means, where such metadata shall include the URL of the Identify Provider Service and contact details in respect of the Identity Provider Service. Where the DCC reasonably requires the metadata to include additional information, the DCC shall inform the User of the information required and the User shall provide the information requested.

1.4.3 SAML Profiles, Bindings and Protocols

The User shall ensure that the Identity Provider Service it uses supports the following SAML profile, binding and protocol:

Profile	Web Browser SSO (single sign-on)
Binding	HTTP POST (HTTP/1.1)
Protocol	Authentication Request Protocol

1.4.4 Identity Provider Service SAML Configuration

Where a User notifies the DCC that it wishes to use an Identity Provider Service that is not the DCC Identity Provider Service, the DCC shall upon request provide, to that User via secured electronic means, the following information to be included in each SAML assertion:

- the service provider unique ID to be used by the Identity Provider Service, which is denoted as '[UNIQUE IDENTIFIER SP]' in the SAML attributes list below; and
- the URL formatted identifier of the Self-Service Interface, which is denoted as '[DCC SP URL]' in the SAML attributes list below.

The User shall ensure that their Identity Provider Service:

- shall not sign Authentication Requests (AuthnRequest);
- shall sign SAML Assertions;
- shall not sign Authentication responses;
- shall not encrypt any part of the SAML assertion (other than the Digital Signature);
- shall use persistent and unique nameIDs;
- shall only include NotBefore, NotOnOrAfter or AudienceRestriction in the SAML Condition elements; and
- shall set the SAML assertion nameID to be persistent and unique to the User Personnel.

The User shall ensure that their Identity Provider Service sets the following SAML attributes shown in square brackets, making reference to the information shown after each colon:

- [UNIQUE IDENTIFIER IDP]: a unique ID assigned to the SAML response by the Identity Provider Service.
- [UNIQUE IDENTIFIER SP]: the service provider unique ID for the SAML request, as provided by the DCC.
- [TIMESTAMP]: a timestamp in standard SAML format.
- [DCC SP URL]: the URL formatted identifier for the Self-Service Interface, as provided by the DCC.
- [IDP ISSUER URL]: a URL identifying the Identity Provider Service issuing the SAML assertion.
- [SAML ASSERTION UNIQUE IDENTIFIER]: a unique identifier assigned to the SAML assertion by the Identity Provider Service.

- [MESSAGE SIGNATURE]: a Digital Signature generated by the signing of the SAML assertion message using the DCCKI Digital Signing Key associated with a DCCKI Infrastructure Certificate.

- [USERNAME]: a unique username assigned to the User Personnel by the Identity Provider Service.

- [SESSION EXPIRY]: a valid SAML date/time object describing the expiry time of the session associated with the user.

- [ASSERTION START]: a valid SAML date/time object describing the start time of the validity of the SAML assertion.

- [ASSERTION EXPIRY]: a valid SAML date/time object describing the expiry time of the validity of the SAML assertion.

- [SAML AUTHENTICATION CONTEXT]: a valid SAML Authentication Context Class describing the authentication that the user has completed with the Identity Provider Service.

- [Role name]: Job Type Role(s) as described in section 1.5. Multiple roles should be specified by separating role names using commas (,).

- [OrgID]: a list of User ID(s) in relation to which the User has been granted permission to access information held on the Self-Service Interface by the other User(s) to whom that information pertains. Such permission having been granted in accordance with clause 1.1.1 and not having been rescinded in accordance with clause 1.5.4. Multiple User IDs should be specified by separating values with commas (,).

1.5. Roles

1.5.1 DCC defined access

The DCC shall provide to User Personnel of each User access to each Functional Component that the User is eligible to access as set out in Section H8.16 or, where not specified in Section H8.16, as set out in this clause 1.5. Such access shall either be full or conditional, where:

- 'Full' means that the User can access data and use all functions associated with the specific Functional Component; and

- 'Conditional' means that a User’s entitlement to access data and use all functions associated with the specific Functional Component is based on the access rules for conditional access set out below.

BFD ID	Business Functional Domain Name	Service capability	Functional Component	DCC Defined Access
			Raise service management Incidents UC_RaiseSMI_001 UC_RaiseSMI_002	Full

BFD01	Service Management	Provide service management capabilities in accordance with H9.4 and the Incident Management Policy, enabling Users to: • Raise, update, view and track Incidents. • Track and view detailed Problem information related to Incidents.	UC_RaiseSMI_003 UC_RaiseSMI_004	
			Update service management Incidents UC_UpdateSMI_001	Conditional. Access shall be granted as set out in Section H9.
			View service management Incidents UC_ViewSMI_001 UC_ViewSMI_002	Conditional. Access shall be granted as set out in Section H9.
			Problem management UC_ProblemManagement_001, UC_ProblemManagement_002	Conditional. Access shall be granted in accordance with Section H9.
BFD02	Smart Metering Inventory	Enable Users to search and query current information on Smart Meter Inventory down to individual Devices in accordance with H8.16(a). Provide detailed information on a Device and any associated Devices.	Smart metering inventory UC_Inventory_001, UC_Inventory_002	Full
BFD03	DCC Service Status	Provide Users with a dashboard of component availability for DCC Services in accordance with H8.16(g).	DCC service status UC_ServiceDashboard_001	Full
BFD04	Service Audit Trails	Enable Users to query information on Service Audit Trails, showing a record of service activity in accordance with H8.16(b). Only the records pertaining to that User will be shown in search and individual message view, where the records pertaining to a User are those for: • the User IDs for that User; and • any User IDs for which that User has been granted permission to access the information in accordance with clause 2.5.3 and such permission has not been rescinded in accordance with clause 2.5.4.	Service Audit Trails UC_ServiceAudit_001, UC_ServiceAudit_002	Conditional. Access shall be granted as set out in Section H8.16(b).
BFD05	Forward Schedule of Change	Enable Users to query and view detailed information on Planned Maintenance, changes scheduled or change freezes affecting any of the following elements of	Forward schedule of change UC_Schedule_001,	Full

		DCC Smart Metering ecosystem in accordance with H8.16(g): • Communications Hub firmware. • Parse & Correlate software. • SMIKI software. • DCC-impacting SEC Releases. • Other major DCC releases. • Meter firmware (Meter firmware events will only be visible to Users for Devices for which they are the Responsible Supplier)	UC_Schedule_002, UC_Schedule_003	
BFD06	Meter Read Transactions	Enable Users to query information on Meter Read Transactions for all users in accordance with H8.16(c).	Meter Read Transactions UC_Inventory_001	Full
BFD07	CSP SMWAN Network Coverage	Enable Users to query information on SM WAN network coverage down to premises level across each of the three GB regions in accordance with H8.16(f).	SM WAN network coverage UC_CSPCoverage_001 UC_CSPCoverage_002	Full
BFD08	DCC Service Alerts	Enable Users to view details of any Service affecting news / Alerts and other useful text relating to the quality of service delivery and service management in accordance with H8.16(g).	DCC Service Alerts UC_ServiceAlerts_001, UC_ServiceAlerts_002	Full
BFD09	Service Requests	Enable Users to: • Browse a catalogue of available DCC Service Requests. • Raise and update service management Service Requests with DCC from their service catalogue. Enables Users to track and update the status of raised requests within DCC service management system. • View full details of the raised Service Request User Personnel will only be able to access requests raised by the User with which they are associated.	Service catalogue publication and call off UC_ServiceCatalogue_001, UC_ServiceCatalogue_002, UC_ServiceCatalogue_003	Full
BFD10	Communications Hub Availability & Diagnostics	Enable Users to query information on Communication Hub availability and diagnostics down to individual Communications Hubs. Allows Users to attempt to diagnose and resolve Incidents	Communications Hub availability and diagnostics UC_HubStatus_001 UC_HubStatus_002	Conditional. Access shall be granted to the Responsible Supplier, the

		relating to any Communications Hubs for which they are the Responsible Supplier, the Network Party or Registered Supplier Agent, using DCC's remote diagnostic tools.		Network Party or Registered Supplier Agent for any Smart Metering System of which the Communications Hub Function in question forms a part.

BFD11	Reporting	Enable users to access on demand a standard set of pre-defined reports. Allow Users to view and download individual reports from a defined set of published reports.	Reporting UC_Reports_001	Conditional. Users will only be permitted to view reports which pertain to them.

BFD12	Knowledge Management, Search and FAQ's	Enable Users to access the following functionality in accordance with H8.16(g) where applicable: • Knowledge management. This allows Users to view help and support information enabling early triage of User issues and queries, including access to the anonymous resolution details of service management problems and Incidents. • FAQ information. • DCC User Manuals detailing the operation of DCC Services. • Search capability, allowing Users to search for content provided by the SSI using tagged keywords, or textual content of page titles and descriptions.	Knowledge management UC_KnowledgeManagement_001	Full
			FAQs UC_FAQ_001	Full
			DCC user manuals UC_Manuals_001	Full
			UC_Search_001	Full

BFD13	Forecasting and Ordering	Enable Users to access OMS in accordance with H8.16(e). In OMS Users can submit orders and forecasts of future orders for Communications Hubs and Communication Hub Auxiliary Equipment.	Forecasting and ordering of Communications Hubs and auxiliary equipment UC_CSPOMS_001	Full

		Manage the verification of User identities requesting login access to SSI and DCC	Log In UC_Login_001	Full

BFD14	User Identity & Login Access Management	Platforms. Manage the functionality available to individual Users based on their User Role. This includes the following capabilities: • Enable Users to use DCC Identity Provider Service to assign access to functionality to their User Personnel based on Job Type Role and manage the SSI accounts and associated settings (e.g. password resets) for User Personnel accounts subsequently created by an Administration User. • Enable Administration Users to unlock, delete and manage the details of another account created within their organisation. • Enable an Administration User to create a new account for User Personnel within their organiszation. • Enable User Personnel to view detailed information about the account they are accessing via SSI including the functionality they have access to. Ensure secure communications between DCC systems and Users.	User account management UC_OrgManager_001, UC_OrgManager_002, UC_OrgManager_003	Conditional. Access shall be granted to Administration Users.
			User profile information UC_Profile_001	Full

Where a User is entitled to conditional access to more than one Functional Component, the DCC shall apply permissions such that any User Personnel can access any of those Functional Components that the User is eligible to access, subject to such User Personnel being entitled to such access on the basis of the Job Type Role(s) as further set out in 1.5.2.

1.5.2 Administration User defined access

In addition to the full and conditional access restrictions applied by the DCC in 1.5.1, Administration Users, appointed in accordance with the process set out in the DCCKI RAPP, may further define access restrictions for User Personnel to individual Functional Components by assigning one or more Job Type Roles to User Personnel in relation to one or more User IDs. Where a User is using the DCC Identity Provider Service, the DCC shall enable an Administration User to do this through the use of the Functional Component User Account Management.

The DCC shall ensure that access to Functional Components is only provided to the Job Type Role(s) presented to the DCC by the User in the SAML assertion accompanying the request for access to the Functional

Component, on the basis of the Functional Components that the Job Type Role is entitled to access as set out in the table below.

The table below shows which Functional Components that User Personnel with a given Job Type Role are only permitted to access (User Personnel with a given Job Type Role may only access those Functional Components where there is a 'Y' in the corresponding box).

Where the SAML assertion presented to the DCC when seeking to access the Functional Component(s) contains multiple Job Type Roles, the DCC shall grant access to that User Personnel to all of the Functional Components that it is entitled to access in all of those Job Type Roles.

1.5.3 Users granting access to other Users

Information available through the Self-Service Interface that relates to one or more User IDs of a User may be shared with another User where that other User is also willing to share information relating to one or more of its User IDs with the first User.

Where two Users wish to grant access to each other's information accessible through the Self-Service Interface, each of those Users shall submit, via secured electronic means, a notification to the DCC which includes:

- that the notification relates to granting to another User access to its data which is available via the Self-Service Interface;

- the list of User IDs of both of the relevant Users, for which mutual access for the two Users is being granted; and
- details of the DCCKI SRO responsible for the relevant User IDs that is authorising such access on behalf of the User submitting the notification, which shall comprise:
  - the name of the authorising DCCKI SRO;
  - telephone and email contact details for the DCCKI SRO; and
  - signature of the DCCKI SRO.

Upon receipt of such notifications, the DCC shall confirm if each request is authentic, by:

- verification of the DCCKI SRO; and
- by confirming that the User IDs provided by each User granting access are User IDs that have been assigned to each such User by the Panel in accordance with H1.6.

Where both of the notifications are confirmed to be authentic, the DCC shall:

- configure the Self-Service Interface to enable any Administration User acting on behalf of either of the two Users to grant access to its User Personnel to information available via the Self-Service Interface relating to any of such User IDs; and
- confirm in writing, to each DCCKI SRO submitting a notification that such access has been granted.

Where either or both of the notifications are not confirmed to be authentic, the DCC shall confirm in writing, to each of the DCCKI SRO submitting a notification, that such access has been rejected and giving the reasons for rejection.

1.5.4 Users rescinding access permission to other Users

Where a User wishes to rescind permission to allow another User to access its information available through the Self-Service Interface for a defined set of User IDs, having previously granted such access, the User wishing to remove access shall submit, in writing via secured electronic means, a notification to the DCC which includes:

- that the User wishes to rescind access to its information on the Self-Service Interface by another User;
- the list of User IDs pertaining to the User submitting the notification, for which it wishes to rescind access to another User (each a “Rescinding User ID”);
- the list of User IDs pertaining to the other User for which access is to be rescinded (each a “Rescinded User ID”); and
- details of a DCCKI SRO that is authorising such rescinding of access on behalf of the User submitting the notification, which shall comprise:
  - the name of the authorising DCCKI SRO;
  - telephone and email contact details for the DCCKI SRO; and

- signature of the DCCKI SRO.

Upon receipt of such a notification, the DCC shall confirm if the request is authentic, by:

- verification of the DCCKI SRO; and
- by confirming that the User IDs provided by the User notifying that access should be rescinded, are User IDs that have been assigned to that User by the Panel in accordance with H1.6.

Where the notification is confirmed to be authentic, the DCC shall:

- configure the Self-Service Interface to remove access to information relating to Rescinding User IDs by any User Personnel of the second User who were permitted to access such information only by virtue of themselves being permitted to access information relating to a Rescinded User ID;
- configure the Self-Service Interface to remove access to information relating to Rescinded User IDs by any User Personnel of the first User who were permitted to access such information only by virtue of themselves being permitted to access information relating to a Rescinding User ID; and
- confirm in writing, to the DCCKI SROs of both affected Users that such access has been rescinded.

Where the notification is not confirmed to be authentic, the DCC shall confirm in writing, to the DCCKI SRO, that the notification of permission to be rescinded has been rejected.

Version AI 3.0

Appendix AI

Self-Service Interface Code of Connection

Contents

Definitions

In this document, except where the context otherwise requires:

- expressions defined in Section A1 of the Code (Definitions) have the same meaning as is set out in that Section;
- the expressions in the left hand column below shall have the meanings given to them in the right hand column below; and
- any expressions not defined here or in section A1 of the Code have the meaning given to them in the Self-Service Interface Access Control Specification, the SSI Baseline Requirements Document or the DCC User Interface Specification.

Administration User	means, in relation to a particular User, a member of User Personnel who has been appointed to act in such a role in accordance with the DCCKI RAPP (and who has not subsequently ceased to carry out such a role).
Administration User Credentials Request	has the meaning given to that expression in the DCCKI RAPP.
Identity Provider Service	means a service that authenticates that an individual member of User Personnel is who they purport to be for the purposes of access control.
Network Address Translation	means a mechanism by which Users map one Self-Service Interface IP address space to another by modifying network address information in Internet Protocol (IP) datagram packet headers while they are in transit across a traffic routing device.

Personnel Authentication Certificate	has the meaning given to that expression in the DCCKI Certificate Policy.
Policy Enforcement Point (PEP)	a logical entity that enforces policies for admission control and policy decisions in response to a request for access. It is the logical boundary between the DCC Systems and connecting systems, namely User Systems, RDP Systems or any other systems used to access the Self-Service Interface. The PEP ensures that: the policies in the applicable Code of Connection relevant to the applicable Party or RDP are being enforced; there is appropriate separation of the DCC Systems from the connecting systems of the applicable Party or RDP; and all the connections to the User Systems, RDP Systems, systems used to access the Self-Service Interface, or DCC Systems are compliant with the same applicable Code of Connection.
Supported Web Browser	Internet Explorer versions 9, 10 and 11, and a minimum of 2 other browsers as listed on the DCC Website (such list as updated from time to time).
TLS	means transport layer security in accordance with the relevant SMKI PMA and SSC Guidance (Standards, Procedures and Guidelines) published on the SEC website.
UI DCCKICA Certificate	has the meaning given to that expression in the DCCKI Certificate Policy.
Uniform Resource Locator (URL)	a reference to a resource that specifies the location of the resource on a computer network and a mechanism for retrieving it.
W3C WCAG AA	means the World Wide Web Consortium's (W3C) Web Content Accessibility Guidelines (WCAG) for making content accessible. AA is one of three conformance levels.

1. SELF-SERVICE INTERFACE CODE OF CONNECTION

1.1 These provisions apply to the DCC and any User seeking to access information via the Self-Service Interface as described in Section H8.16 of the Code.

General Obligations

1.2 The DCC and each User shall inform each other of the contact details of one or more persons working for their respective organisations for the purposes of communications associated with the use of the Self-Service Interface (in the case of the User, where the contact details for such persons are not already held by the DCC). The following information shall be provided in relation to each such person (and subsequently kept up to date by the Party and/or the DCC):

(a) contact name;

(b) contact email;

(c) contact telephone number;

(d) contact address; and

(e) any other contact details as may be reasonably required by the DCC or the User from time to time.

Restrictions on Physical Connections

1.3 Each User shall only access the Self-Service Interface over a DCC Gateway Connection.

1.4 Each User acknowledges that use of a DCC Gateway Connection for the purposes of accessing the Self-Service Interface will utilise some of the available bandwidth of that connection and may consequently reduce the rate at which information may be exchanged when accessing other Services over that connection.

Connection Mechanisms

1.5 Each User shall route all communications to the Self-Service Interface through its Policy Enforcement Point.

1.6 The DCC shall make the Self-Service Interface available on a set of Internet Protocol version 4 addresses.

1.7 The DCC shall provide details of the set of IP addresses and network configuration to each User, via secured electronic means, as part of the process for obtaining a connection to the Self-Service Interface.

1.8 Each User shall use Network Address Translation to map internal Internet Protocol addresses to the published DCC provided IP addresses within the User's firewall prior to accessing the Self-Service Interface.

1.9 Each User shall use Network Address Translation to remap incoming DCC traffic Internet Protocol addresses from the published IP addresses within the User's firewall to IP addresses within their subnet, as notified by the DCC via secured electronic means.

1.10 Each User shall establish a TLS connection between their User Personnel browsers and either the Self-Service Interface or an Identity Provider Service, in accordance with clause 1.14.

1.11 The DCC shall provide access to the Self-Service Interface to each User using a Supported Web Browser with a minimum screen resolution of 1280x1024 pixels.

1.12 The DCC shall provide reasonable notice to Users of changes to the list of Supported Web Browsers.

Communications Authentication

1.13 Each User shall install a valid Root DCCKICA Certificate, UI DCCKICA Certificate and Personnel Authentication Certificate in its User Personnel's browser prior to establishing a TLS connection to the Self-Service Interface in accordance with the Self-Service Interface Access Control Specification, where such DCCKI Certificates shall be obtained as set out in the DCCKI RAPP.

1.14 The User shall secure the connection between its User Personnel browser and the Self Service Interface or the Identity Provider Service used by the User, using TLS in accordance with RFC5246 and will make use of:

(a) for the Identity Provider Service, mutual authentication using PKCS #3 Ephemeral Diffie Hellman key exchange to generate a shared secret for communications encryption, utilising one of the following cipher suites:

(i) TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA256 ECDHE-RSA- AES128-SHA256;

(ii) TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA384 ECDHE-RSA- AES256-SHA384;

(iii) TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256 ECDHE- RSA-AES128-GCM-SHA256; or

(iv) TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 ECDHE-RSA-AES256-GCM-SHA384; or

(b) for the Self Service Interface, server-side authentication.

Technical Infrastructure

1.15 The DCC shall provide the User, via secured electronic means, with details of a Uniform Resource Locator (URL) to access the Self Service Interface, corresponding with each applicable IP address provided in accordance with clause 1.7.

1.16 The DCC shall give reasonable advance notification to each User of any changes to the Self-Service Interface URL.

1.17 The DCC shall ensure that the IP addresses of the Self-Service Interface shall remain static.

Use of DCC Identity Provider Service

1.18 Each User using the DCC Identity Provider Service shall follow the processes set out in the DCCKI RAPP in order to obtain Personnel Authentication Certificates for its User Personnel prior to accessing the Self-Service Interface.

1.19 Each User that elects to use the DCC Identity Provider Service may create, modify or remove accounts for its User Personnel using the Self-Service Interface as further set out in the Self-Service Interface Specification, save that in the case of accounts for an Administration User, the DCCKI Registration Authority shall, upon receiving an Administration User Credentials Request as set out in the DCCKI RAPP, create, modify or remove the accounts.

1.20 The DCC shall provide an Identity Provider Service that shall, pursuant to clause 1.26, store secure cookies on each User Personnel's browser(s) to validate login sessions and shall ensure that such cookies do not include storage of information that permits personal identification.

Use of an Identity Provider Service that is not the DCC Identity Provider Service

1.21 The DCC shall only permit the use of an Identity Provider Service which conforms to the Identity Provider Service requirements set out in the Self-Service Interface Access Control Specification. The DCC shall not provide access to the Self-Service Interface where a User uses an Identity Provider Service that does not conform to such requirements.

1.22 When using an Identity Provider Service that is not the DCC Identity Provider Service, a User shall provide to the DCC the following details of its authentication arrangements:

(a) identity provider – <name of external Identity Provider Service>; and

(b) identity provider - <External Identity Provider Service URL>

and shall inform the DCC if the details change.

1.23 Each User that elects to use an Identity Provider Service that is not the DCC Identity Provider Service shall ensure that the SAML assertions, as set out in the Self-Service Interface Access Control Specification, are applied to access requests prior to establishing a TLS session.

1.24 Where a User elects to operate an Identity Provider Service that is not the DCC Identity Provider Service, the DCC shall regard an authentic signature on the SAML token for a member of User Personnel as confirmation that the User has appropriately performed verification, validation, role assignment and authentication of that member of User Personnel.

Interface Usage

1.25 Each User shall not use any systems to apply automated tools in order to interact or operate with the Self-Service Interface.

1.26 Each User shall configure each User Personnel's browser to enable the storage of cookies by the DCC in the browser's cookie store.

1.27 Each User consents to the recording and storage by the DCC of details that they make available to the DCC through SAML authentication and request parameters for the purposes of auditing, diagnostics and capacity planning.

1.28 Each User agrees to the recording and storage by the DCC of requests processed by the Self-Service Interface for the purposes of auditing, diagnostics and capacity planning.

1.29 The DCC shall ensure that the Self-Service Interface complies with the W3C Web Content Accessibility Guidelines at an 'AA' conformance level ("W3C WCAG AA").

1.30 The DCC shall log information associated with all requests processed by the Self- Service Interface. Logged information includes data such as the User Personnel's organisation, the User Personnel's username, the URL requested and any inputs provided.

1.31 The DCC shall, upon request, make available to a User, reports summarising the information in clause 1.30 in relation to that User's User Personnel.

1.32 Prior to first use of the Self-Service Interface or where there are any material changes to the following information, each User shall estimate and notify to the DCC:

(a) maximum total active User Personnel accounts;

(b) maximum number of User Personnel concurrently accessing the Self- Service Interface;

(c) average activity (requests/hour/account) for a typical Working Day; and

(d) maximum peak activity in relation to each User Personnel account (the maximum number of requests and the corresponding hour) for a typical Working Day.

Abbreviations & Acronyms

This document uses standard testing terminology but for the avoidance of doubt, the meanings of abbreviations and acronyms are shown below.

Abbreviation	Meaning
BAT	Business Acceptance Testing
BEIS	Department for Business, Energy & Industrial Strategy
CHTS	Communications Hub Technical Specification
CSP	Communications Service Provider
CTSD	Common Test Scenarios Document
DBCH	Dual Band Communications Hub
DCC	Data Communications Company
DIT	Device Integration Testing
DSP	Data Service Provider

[1] JTM is a methodology agreed by BEIS and industry participants for repeatable laboratory testing of HAN radio performance

FAT	Factory Acceptance Testing
GIT	GB Companion Specification Interface Testing
HAN	Home Area Network
IRB	Issue Resolution Board
ISMS	Information Security Management System
ITCH	Instrumented Test Communications Hubs
OCT	Operational Confidence Testing
PIT	Pre Integration Testing
PTCH	Prototype Test Communications Hub
RDP	Registration Data Provider
SBCH	Single Band Communications Hub
SEC	Smart Energy Code
R2	Release 2.0
RIT	Radio Interface Testing
SIT	Systems Integration Testing
SMETS	Smart Metering Equipment Technical Specifications
SMKI	Smart Meter Key Infrastructure
SM WAN	Smart Metering Wide Area Network
SP	DCC Service Provider
SP UAT	Service Provider User Acceptance Testing
SVTAD	SEC Variation Testing Approach Document

TAG	Testing Advisory Group
TSP	Trusted Service Provider
TTO	Transition to Operations
UEPT	User Entry Process Testing
UIT	User Integration Testing

Narrative Text

In a number of places this document contains background narrative text, rather than specific rights or obligations (for example in the Introduction section). Whilst not required in the Sec Variation Testing Approach Document, this narrative text is provided for background context for stakeholders.

Glossary

The table below defines only terms that are specifically not as defined in Section A (Definitions and Interpretations) of the SEC[2].

This document uses standard testing terminology, a glossary (Reference 1) of which can be found on the International Software Testing Qualification Board website www.istqb.org

Term	Meaning
1.1 Communications Hubs ("1.1 CHs")	Means single-band and Dual Band Communications Hubs which comply with, or are designed to comply with, the requirements of CHTS v1.1 and GBCS v2.0
DCC Meter Protocol Emulators	Testing Stubs developed by DCC to emulate the functional aspects of smart metering Devices
Modified DCC Total System	Means the DCC System as modified in order to meet (or to be designed to meet) the DCC's obligations under the SEC as at Release 2.0 go live, together with the Communications Hubs that form part of Enrolled Smart Metering Systems.
Instrumented Test Communications Hub	Means a Test Communications Hub that includes an interface making diagnostic information relating to the HAN available. The interface will allow Users to capture HAN activity in real time using a Windows PC.
Release 2.0	Is defined in 1.1 of this document.

[2] https://www.smartenergycodecompany.co.uk/sec/sec-and-guidance-documents

X11 Direction	Means the Secretary of State's direction under section X11 of the SEC dated 23 February 2017, pursuant to which the DCC has prepared this document.
UIT Approach Document	means the User Integration Testing Approach Document for Release 2.0.
User Regression Testing	The regression testing that must be conducted by certain Supplier Parties as described in Section 5 of this document.
Exit Criteria	means the criteria that must be satisfied before testing can be considered complete.
User Testing	means testing by one or more Users of all or part of any changes to the DCC Total System.
User Interface Testing	means the testing that tests the capability of the DCC and the DCC Systems together with the Communications Hubs to interoperate with User Systems.

Table 3 - Glossary

Approval of this Approach Document

The X11 Direction requires that DCC submit this Release 2.0 Testing Approach Document to the Secretary of State for approval after appropriate stakeholder consultation. When submitting the document, DCC will be required to provide the information set out in section X11.6, including why DCC considers the document fit for purpose and details from the consultation process. The Secretary of State will then consider the document, instruct DCC to carry out any remedial actions as necessary and then incorporate the document into the SEC using the powers in Section X5 of the SEC.

As part of the consultation process, the document will be issued to the SEC Panel's Testing Advisory Group and the SEC Panel for review and comment. Any recommendations emerging from this review will be considered by DCC, with amendments made to the document as necessary, and provided to BEIS as per the requirements of section X11.6.

1. Introduction

1.1. General

On 23 February 2017, the Secretary of State directed DCC to produce a Testing Approach document for the changes to the SEC that will be made for the purposes of Release 2.0, in accordance with Section X11 of the Smart Energy Code.

Release 2.0 is defined in the baseline documents agreed by the Technical and Business Design Group on 30 May 2017, as such baseline documents may be updated from time to time, as may the related amendments to the SEC, including the DCC User Interface Specification and Message Mapping Catalogue. These documents are published by SECAS on the 'Developing SEC' page of their website.[3]

[3] https://www.smartenergycodecompany.co.uk/sec/the-developing-sec

Release 2.0 may include additional elements of scope as may be added by DCC itself, which do not affect SEC Parties.

This document sets out the information required of a SEC Variation Testing Approach document in section X11.5 of the SEC, including the manner in which testing will be conducted by DCC as directed for Release 2.0.

1.2. Modification of this Document

This document:

(i) shall be modified by DCC in accordance with any direction to do so made by the Secretary of State;

(ii) may be modified by DCC following consultation with affected parties, the Authority and the Secretary of State, provided that:

(a) prior to making any such modification, DCC must present to the Secretary of State a summary of the consultation responses received and an explanation of how the DCC has taken them into account; and

(b) it may not be modified to the extent that the Secretary of State directs otherwise; and

(iii) may be modified by DCC without consultation where the modification is of a minor typographical nature, or where the modification does not have any material effect on the rights or obligations of SEC Parties or any other person who is entitled to undertake testing in accordance with this document.

2. Scope

In plain terms, Release 2.0 will update the DCC Total System to support updated versions of key technical smart metering specification documents. It will see DCC introduce new Communications Hubs with additional radio capabilities (Dual Band Communications Hubs) that will enable Supplier Parties to install Smart Metering Systems in an increased proportion of GB homes. In addition, it will see DCC provide updated single band Communications Hubs and upgrade existing Single Band Communications Hubs to reflect amendments and clarifications in the Release 2 requirements. Further, all CHs will need to support current and updated versions of the ZigBee Alliance specifications and the Devices that use them.

This will be the first Release to introduce new Devices to the DCC Total System that operate to different device specifications. As a consequence, the DCC Total System will need to support Devices operating on multiple technical specification standards.

As for earlier Releases (R1.x), DCC will perform testing following established industry practice. The changes will be developed and tested by DCC Service Providers, then subjected to integration testing by DCC and then made available to Parties for integration testing with their Systems and Devices.

This approach document describes how this testing will be conducted and assured to make sure the changes fully meet the new requirements and obligations, at the same time as ensuring that the changes do not undermine the ability of Parties to continue to meet their existing obligations.

The document describes the objectives of testing and defines the different stages of testing in terms of the activities, resources and evidence needed to meet those objectives.

All 1.1 CHs variants will be subject to testing in R2.0.

In addition to, and supporting the specific direction received from the Secretary of State, Release 2.0 includes changes to the following components of the DCC Total System/Services;

- GIT for Industry (GFI Testing under section X9 of the SEC)
- DCC Meter Protocol Emulator (see 13.2 below)
- Parse & Correlate Software
- DCC enterprise systems (the systems which support the usage, billing and reporting of use of DCC Services)
- Instrumented Test Communications Hubs (see section 13.3.3)

Where this document places an obligation on any DCC Service Provider, or any personnel of a DCC Service Provider, it shall, for the purposes of the SEC, be read as an obligation on DCC to ensure that the relevant Service Provider meets that obligation.

2.1. Documents for Release 2.0

The table below lists the specifications that were notified to DCC for implementation in Release 2.0.

Document Name	Version
Smart Metering Equipment Technical Specification (SMETS2)	v3.0
Communication Hub Technical Specification (CHTS)	v1.1
GB Companion Specification (GBCS)	v2.0

Table 4 - Technical Specification

2.2. Joint Testing Strategy and Other DCC Testing Approach Documents

For Release 1.2 and 1.3 DCC produced a Joint Testing Strategy and a number of individual Testing Approach documents covering separate testing phases and activities. These documents established processes, reports and other elements that are now ongoing elements of DCC activities.

The Joint Testing Strategy has not been updated to reflect developments and improvements resulting from the delivery of Release 1.x and large parts of other Testing Approach documents are similarly no longer applicable.

Where relevant, or where there is an apparent conflict with the Joint Testing Strategy and other Testing Approach Documents developed for Release 1.x, this Testing Approach Document for Release 2.0, and relevant Approach Documents for Testing Phases, supersede and replace those earlier documents.

Recognising the potential variety of future DCC change, a new high level DCC Testing Principles document will be created to inform and reflect the ongoing change activities, the content of this Testing Approach Document and lessons learned.

2.3. Out of Scope

A number of requirements in this document do not apply for DSP PIT, which is a testing phase planned to be completed ahead of other testing phases and has been designed based on the existing DSP PIT processes and the Joint Testing Strategy. At the time of consulting on this document, DSP PIT has already commenced - DCC considers there to be minimal risk to Parties associated with that development work.

A number of the requirements in this Testing Approach Document do not apply to UIT, which is a Testing Phase to allow Parties to conduct their testing. For instance, the DCC Systems Integrator is not responsible for providing test artefacts for test participants and a separate defect process and repository is used.

The following assurance activities are outside the scope of the testing approach for Release 2.0:

(i) CPA Certification of Communications Hubs (CSPs are responsible for this activity)

(ii) DCC is not responsible for proving that Devices are compliant with SMETS requirements, but will undertake testing with Devices and provide testing services that Parties can use as part of their own Device testing

(iii) Testing of the Home Area Network (HAN) except for:

(a) its interaction with the Modified DCC Total System

(b) where the HAN is tested as part of Device Integration Testing and User Integration Testing

(iv) Testing the inter-changeability of Devices connected to the Home Area Network

3. Objectives of Testing

3.1. Testing Objectives

The following testing objectives are contained in the X11 Direction received from the Secretary of State[4]:

(a) demonstrate that 1.1 CHs designed to comply with CHTS v1.1 do comply with CHTS v1.1 and GBCS v2.0

(b) demonstrate that Communications Hubs that comply with CHTS v1.0 / GBCS v1.0 can be upgraded to comply with CHTS v1.1 / GBCS v2.0 via a firmware upgrade sent over the SM WAN

(c) demonstrate that DCC and the component parts of the Modified DCC Total System together with 1.1 CHs operating to CHTS v1.1 / GBCS v2.0 technical specifications operate and interoperate with each other, and with User Systems and RDP Systems, to the extent necessary that DCC and RDPs are capable of complying with their obligations under Sections E (Registration Data), G (Security), H (DCC Services) and L (SMKI) (and for such purposes DCC shall, to the extent reasonably practicable, use Devices that comply with (or have been designed to comply with) SMETS2 v3.0

(d) demonstrate the extent to which the Modified DCC Total System and both new 1.1 CHs and those upgraded from CHTS v1.0 are capable of interoperating:

[4] Note that the definition of DCC Total System in the direction is that as modified to include changes for Release 2.0. This is reflected in the use of the term Modified DCC Total System in this document.

(i) with the Device or Devices that form part of an Enrolled Smart Metering System; and

(ii) with IHDs that have been installed pursuant to Condition 34 or 40 of (respectively) the Electricity Supply Licences or the Gas Supply Licences

in each case where one or more of those Devices comply with SMETS2 v2.0 (but not SMETS2 v3.0)

(e) enable (to the extent that it is reasonably practicable to do so, and in each case as far as reasonably practicable in advance of Service Release 2.0 Go Live):

(i) Parties to test the interoperability of their User Systems with the DCC System together with 1.1 CHs; and

(ii) Testing Participants to test the interoperability of Devices that comply with (or have been designed to comply with) the requirements of SMETS2 v3.0 with the DCC System together with 1.1 CHs

(iii) Demonstrate that the new versioning aspects of the DUIS operate correctly for Users to facilitate communication to a mixed estate of Devices operating to multiple different technical specifications with different functionality sets

(iv) Demonstrate that Users can successfully install and commission and operate all Communications Hubs using the Modified DCC Total System

In addition, the following testing objectives shall also apply:

(f) demonstrate that the Modified DCC Total System can operate successfully within a wider Smart metering ecosystem comprised of multiple Devices operating to different technical specifications in a consistent manner;

(g) test end-to-end communication from User to Device and back again for all technical specifications in operation, together with the updated Parse and Correlate Software;

(h) verify that all other functional changes that are part of Release 2.0 are functionally correct including consequential amendments (e.g. anomaly detection);

(i) throughout the process, testing will be in accordance with Good Industry Practice, and with wider DCC objectives in Condition 5 of the DCC Licence;

(j) wherever practicable, use of automated testing is required to improve the efficiency and lower the cost of testing;

(k) assure Single Band Communications Hubs and Dual Band Communications Hubs against v3.0 of the Joint Test Methodology;

(l) ensure that the changes do not materially impact the security risks associated with the Modified DCC Total System, or changes are identified, tested and accepted. Consideration should be given to the security capabilities in the DCC security architecture including the protection of data and infrastructure;

(m) validation, as defined in specific Test Phase Approach Documents, of all DCC operational impacts and regression testing of the service to ensure continuity; and

(n) validation, as defined in specific Test Phase Approach Documents, of the end-to-end data flows via the Modified DCC Total System (including reporting).

(o) In pursuance of objective c above, all Communications Hub variants will be subject to testing in R2.0 to evidence that:

(i) R2.0 development has not introduced any unintended capability regression from existing functional or non-functional behaviours such that backward compatibility is assured

(ii) New or modified functional or non-functional behaviour which is required for the Modified DCC Total System in order to meet the R2.0 requirements has been developed and implemented and is fit for purpose

(iii) Where practicable, overall Communications Hub behaviours are consistent between variants across the CSP Regions

In respect of the testing objectives described above:

(a) references to the SEC shall be construed as a reference to the intended future version of the SEC (including any Subsidiary Documents) which are due to have effect at Release 2.0;

(b) the testing objective shall be read as an objective to demonstrate or enable (as the case may be) testing of any particular thing only to the extent that such thing has not already been demonstrated or enabled by previous testing under the SEC;

(c) the testing objective shall include the regression testing of existing key end-to-end processes to ensure that they are able to operate under both Release 2.0 and previous releases;

(d) the testing objective may be met in multiple stages; for example, meeting it separately in relation to single-band and then Dual Band Communications Hubs; and

(e) the testing objective may be met in parallel with meeting the testing objective of other changes to DCC Systems.

3.2. Technical Specification Versioning

Release 2.0 of the DCC Systems will be the first release of the DCC Systems that will support Devices that may comply with different versions of GBCS, SMETS and CHTS according to the entry for the Device Model in the Certified Products List.

The introduction of updated technical documents means that Devices within the smart metering ecosystem can have different features and functionality while still being conformant to the regulation and be interoperable with other Devices conformant with a different set of technical documents. The Modified DCC Total System for Release 2.0 has to operate successfully to support communication to all Devices regardless of which applicable technical documents they are conformant with.

The DCC User Interface and the rest of the Modified DCC Total System shall therefore support multiple versions of technical documents across the mixed estate of Devices that will exist within the smart metering eco-system at any point in time.

DCC will provide information for Users on the process steps involved to operate with DUIS v2.0.

Release 2.0 of the DCC Systems introduces an upgrade to the DCC User Interface Specification (DUIS) and enables, for the first time, User choice regarding which version of DUIS they wish to operate against, v1.0 or v2.0. A User may only operate against a single version of DUIS at any one time.

Backward compatibility of GBCS use cases in versions of GBCS with a valid Applicability Period must be supported by the DCC User Interface and the rest of the Modified DCC Total System (unless specifically mandated otherwise within GBCS for a specific GBCS Use Case). The latest version of DUIS will support Devices with older GBCS versions as well as the Devices compliant with the latest GBCS version.

Forward compatibility, meaning use of DUIS v1.0 with a Device that is compliant with GBCS v2.0, shall be supported by DCC for GBCS use cases that are in common between GBCS v1.0 and GBCS v2.0.

It shall not be possible for a Service Request issued by a User to DCC via DUIS v1.0 to be transformed by the Modified DCC Total System into a GBCS Command/message code which has been newly introduced in GBCS v2.0.

The upgrade to DUIS v2.0 is optional for Users however if any of the v2.0 functionality is required, it will be necessary for the User to upgrade.

It is expected that some Users will want to test the new DUIS v2.0 (functionality and regression) and some Users (not upgrading to DUIS v2.0) will want to regression test against DUIS v1.0. Some Users may wish to undertake both activities.

DCC will test technical specification versioning during the DSP PIT and SIT test phases.

Testing during these phases shall demonstrate that the new versioning aspects of the DUIS operate correctly to allow Users to communicate, using their preferred version of DUIS, to a mixed estate of Devices operating to multiple different technical specifications with different functionality sets.

The following are key principles for DUIS versioning (DUIS versions and GBCS versions):

- The old DUIS v1.0 remains supported by DCC and continues to support all the use cases in GBCS v1.0.
- The new DUIS v2.0 needs to support Devices running both old and new versions of GBCS.
- The old DUIS version can be used with updated Devices where existing GBCS use cases are still supported in the later GBCS version.
- DUIS v1.0 cannot be used to access use cases that appear in GBCS v2.0 but not in GBCS v1.0
- A User should plan to operate against a single version of DUIS, either DUIS v1.0 or DUIS v2.0

Users, as part of UIT, will be able to test with the new DUIS versioning functionality to ensure that the Modified DCC Total System is working correctly as designed against the version of DUIS that they intend to use upon implementation of Release 2.0. Users will be able to test Service Requests in UIT against their chosen DUIS version against a mixed estate of Devices operating at different GBCS versions to ensure that commands are processed as expected and appropriate Responses received correctly by Users.

4. Testing Approach

As described above, Release 2.0 comprises changes to support the increment of a number of baseline technical documents, the introduction of Dual Band Communications Hubs and any changes to the DCC Systems and processes needed to support the release.

The scope of the DCC Total System that relates to processing communications with Users and Devices is shown below (in the grey box + the HAN).

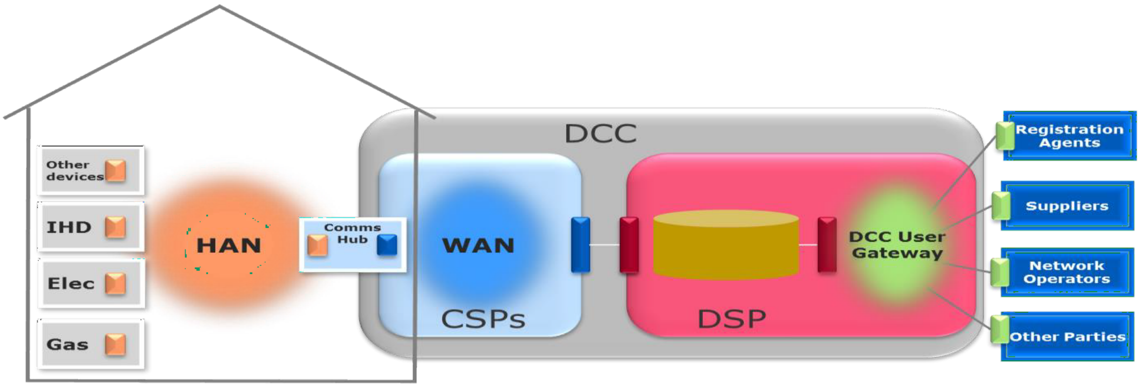

Figure 1 – Scope of DCC Total System for Processing Service Requests

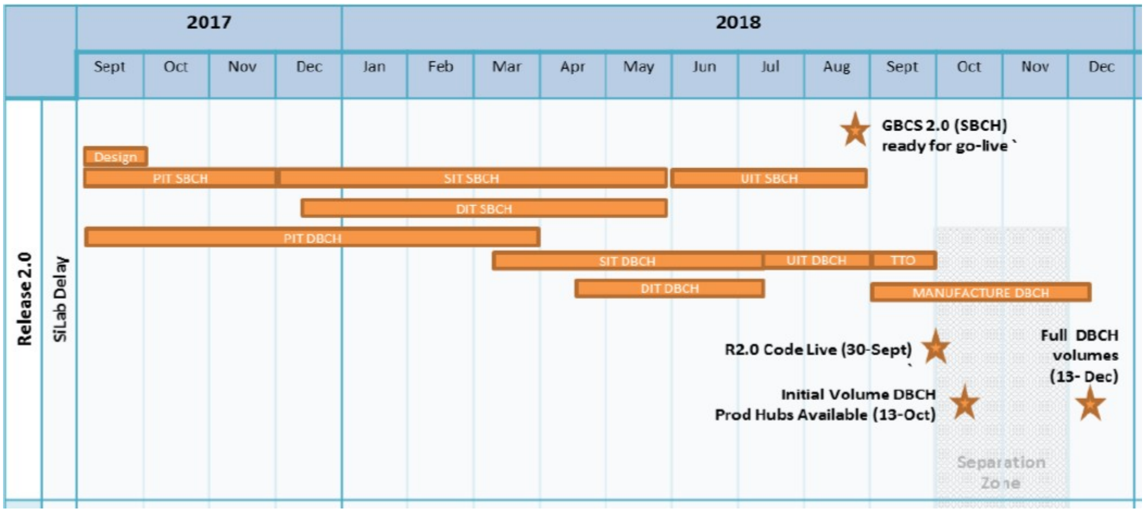
All interfaces and functions of the Communications Hub, including the HAN interface and Gas Proxy Function, fall within the scope of the DCC Total Systems. The Parse and Correlate Software is also part of the scope of the DCC Total System.

This document will describe the specific testing approach requirements for each phase, and then describe the common approach requirements that apply across the release.

4.1. High Level Plan

The detailed delivery plan is described in the Licence Condition 13 planning document for Release 2.0 and is not included in this Testing Approach Document. A high level outline plan is shown below.



The changes that comprise Release 2.0 will be developed and tested by DCC and its Service Providers in three parts. All parts will include regression testing and backwards compatibility testing.

- Part 1 – Early Integration (DSP Only). Regression testing of the R1.3/1.4 functionality by DSP only for backwards compatibility, plus testing of new DSP functionality to support a Device estate operating to multiple different versions of technical specifications with a CSP simulator.
- Part 2 – GBCS v2.0 testing with a Single-Band Communications Hub compliant to CHTS v1.1 for all Service Providers. Testing of new GBCS v2.0 functionality between DSP and CSPs.
- Part 3 – GBCS v2.0 testing with a Dual Band Communications Hub compliant to CHTS v1.1 for all Service Providers. Testing to complete the scope of Release 2.0.

4.2. Description of Test Phases

The approach to testing will include defined test phases. Subject to 4.3 below, and accepting an overarching principle for Release 2.0 to progress testing from phase to phase iteratively to facilitate progress and provide access to Parties for testing earlier than waiting for a test phase to complete, these are steps to develop and assure code or products prior to making them available in production.

In plain English, and with further detail provided in section 5 below, the test phases can be described as follows:

- The Pre Integration Test (PIT) phase covers the testing by DCC Service Providers undertaken individually to verify that the solution meets the requirements
- Systems Integration Testing (SIT) confirms that the different DCC Service Provider and DCC internal systems work effectively together to meet the requirements of the SEC and operate as a working system for Users. This phase will include
- Solution Testing and Service Provider User Acceptance Testing (SP UAT). It will also include Operational Confidence Testing by the DCC Service Providers.
- Device Integration Testing (DIT) will test the interoperability between the Modified DCC Total System and 1.0 CHs, new 1.1 CHs (Single and Dual Band) and those that have been upgraded from CHTS v1.0 and
  - Devices that form part of Enrolled Smart Metering Systems and associated IHDs; and
  - new Devices complying with SMETS2 v3.0 (where Devices are available to support testing)
- DIT will take place independently of other phases, and will be subject to the overall LC13 plan, but is expected to be undertaken at the same time as SIT. The start of DIT will be offset from the start of SIT to ensure that components integrate prior to beginning testing with Devices.
- User Integration Testing (UIT) allows Users to test their systems and Devices with the Modified DCC Total System before changes are made available in the production environment. For Release 2.0, each Supplier Party that is a Responsible Supplier for any Device with an SMI Status of ‘commissioned’ is required to execute User Regression Testing against the Modified DCC Total System, as further described in Section 5. UIT also allows new and existing Parties to provide evidence of their ability to interact with the Modified DCC Total Systems for formal user testing using DCC Meter Protocol Emulators.

- Testing to support the Transition to Operations (TTO). These testing stages may operate independently and overlap with other phases. Testing as part of this group will include Operational Acceptance Testing, Business Acceptance Testing, security testing, pre-production proving and any required Performance Testing. It is the phase that assures that DCC Systems and processes – including billing and reporting are ready to support the changes introduced by the wider release.

The table below shows how the test phases address the testing objectives (using summarised language) described in detail above in section 3.1.

Ref	Objective	Test Phase
A	Demonstrate that new 1.1 CHs comply with CHTS v1.1	CSP PIT, SIT
B	V1.0 Communications Hubs can be upgraded to comply with CHTS v1.1 and GBCS v2.0	CSP PIT, SIT
C	Demonstrate that Modified DCC Total System together with v1.1 CHs interoperate with each other and User Systems to comply with SEC	CSP PIT, SIT, UIT, DIT, TTO
D	Regression testing for existing Devices and new SMETS2 3.0 Devices	PIT, DIT, SIT
E	Support User testing of Systems and Devices	UIT
F	Good Industry Practice and DCC objectives	PIT, SIT, UIT, DIT, TTO
G	Use of automated testing	PIT, SIT
H	Assure the 2.4GHz and Sub GHz RF Coverage performance	CSP PIT
I	Security	PIT, SIT, UIT, TTO
J	Communications Hubs work as intended	CSP PIT, SIT, DIT
K	DCC operational impact	UIT, TTO
L	End-to-end data flows	PIT, SIT, UIT, DIT

Table 5 Testing Objectives by Phase

Alongside the testing activities associated with Release 2.0, DCC will continue to provide support for testing by new and existing Parties as part of the ongoing provision of testing services.

Release 2.0 changes a live system and will be developed and planned at a time when significant User testing of the system will be taking place within E2E testing. The Release must take account of incidents from production, and issues raised in E2E testing, both in test plans, but also as they arise during test phases.

Security testing should include appropriate testing to demonstrate security of the test and production environments and code. This may include penetration and other vulnerability testing, and may occur across multiple test phases.

DCC shall make available a version of the Parse and Correlate Software that is consistent with the functionality of Devices and DCC Systems that will be in operation from Release 2.0 live in the timescales set out in the Release 2.0 LC13 plan.

4.3. Delivery of Test Phases and Stages

In accordance with the X11 Direction, the execution of the testing to support Release 2.0 may be undertaken in multiple stages, this could include the possible delivery of multiple PIT, SIT and UIT phases, but using the same Release 2.0 PIT, SIT and UIT environments.

The approach may also include overlapping testing phases and stages to support early availability of elements of the scope, but consistently subject to the established DCC quality gating process including the DCC Test Assurance Board.

Apart from SIT and DIT which have been designed to be parallel and concurrent phases (with suitable dependencies for components and service requests to pass in SIT prior to being used in DIT), there will be no parallel testing across phases for any given functionality – functionality will not be released into a subsequent phase until testing, assurance and governance procedures are completed for prior and current test phases. The option to overlap, for instance SIT and UIT, is intended to allow Parties to test the GBSC v2.0 solution in UIT with Single Band Communications Hubs whilst SIT for Dual Band Communications Hubs is ongoing.

The detail of the execution plan for Release 2.0 is contained in the Licence Condition 13 Plan.

5. Supplier Parties – User Regression Testing

Each Supplier Party that is a Responsible Supplier for any Device that has an SMI Status of ‘commissioned’ on the date of the milestone “UIT TSG 2.0/SBCH Commence” (as defined in Table 7 of UIT Approach Document), shall:

(a) take all reasonable steps to meet the Entry Criteria for User Regression Testing, as set out in Section 5.1.1 of the UIT Approach Document, by no later than 50 working days prior to the date of the milestone “R2 End of UIT testing Window” (as defined in Table 7 of the UIT Approach Document);

(b) ensure that in carrying out User Regression Testing it sends test Service Requests that are consistent with Version 0.8.2.1 of the DUIS XML Schema;

(c) ensure that the scope of its User Regression Testing tests comply with the requirements of Section 5.1.3 of the UIT Approach Document;

(d) cooperate with the DCC to ensure that all of its User Regression Testing tests are executed by a date which is no later than 10 working days prior to the date of the milestone “R2 End of UIT testing Window” (as defined in Table 7 of the UIT Approach Document); and

(e) provide the DCC, by the date which is no later than 5 working days prior to the date of the milestone “R2 End of UIT testing Window” (as defined in Table 7 of the UIT Approach Document) , a self-certification of completion of User Regression Testing in the form provided by the DCC.

6. Test Phase Description

This section 6 of the Release 2.0 Testing Approach Document defines the testing activities and assurance requirements for individual test phases.

Subsequent sections describe and define generic elements of the approach to testing for Release 2.0. e.g. roles and responsibilities.

The testing deliverables required in section 8 below shall ensure that these requirements and focus areas are suitably covered by each DCC Service Provider and each testing phase, and assured accordingly. All requirements and deliverables for each phase shall ensure that the test objective coverage described in Table 5 above is met.

6.1. Requirements & Focus Areas for Pre Integration Testing

PIT for Release 2.0 is required to provide assurance of quality earlier in the process than has previously been the case for DCC Releases.

As an overall requirement, any and all testing which can be reasonably and cost- effectively undertaken prior to SIT should be undertaken in PIT.

Ref	Requirement
PIT.1	DCC Test Assurance will engage in PIT across all activities except unit and link testing, as subsequent activities within PIT provide assurance of outputs from those tests
PIT.2	DCC Systems Integrator shall support the DCC Service Provider PIT activities
PIT.3	DCC Service Provider PIT shall include suitable performance testing
PIT.4	DCC Service Provider PIT shall be conducted using the latest available version of Parse and Correlate Software
PIT.5	DCC Service Provider PIT shall include suitable security testing of the whole solution. Specifically for CSPs this will include security testing of their Sub-GHz design and components
PIT.6	CSPs shall use a common methodology to assess the effectiveness of their HAN radio implementation and HAN coverage
PIT.7	Functional testing shall be aligned with all specifications, including CHTS v1.1 requirements
PIT.8	CSP Testing of GBCS v2.0 10.6.2.2 (Duty Cycle Monitoring) shall be undertaken using emulators
PIT.9	DCC shall review and approve the PIT test scenarios, where used, for appropriateness and suitable functionality coverage
PIT.10	CSP to verify ZigBee interPAN functionality

PIT.11	CSP to verify full functionality with maximum Devices attached
PIT.12	CSPs to demonstrate through testing that the WAN coverage assumptions which support the CSP “B” milestones are not jeopardised by the new Dual Band CHs
PIT.13	CSPs to demonstrate through testing that SM WAN connectivity is reliable and robust over a range of timed periods, at different power levels

Table 6 PIT Requirements

6.2. Requirements & Focus Areas for Systems Integration Testing

SIT for Release 2.0 shall be planned to allow for incremental delivery (based on incremental proving out of PIT) of functionality from SIT to support earlier delivery of final, assured code for User testing.

Ref	Requirement
SIT.1	SIT will be undertaken using scenario testing and will ensure that Service Requests are validated for the correctness and consistency of content, alongside the correctness of formatting
SIT.2	SIT coverage will be proved using a test traceability matrix, which may be facilitated by the use of additional reporting tools
SIT.3	SIT will be designed to make use of automation where practicable to improve testing throughput rates
SIT.4	SIT will test all variants of 1.1 CHs, and regression against 1.0 CHs
SIT.5	SIT will include suitable security testing, including protection of data and E2E messaging security
SIT.6	SIT will include Solution Test and Service Provider User Acceptance Testing
SIT.7	SIT will include non-exhaustive testing of disruptive and negative functional test scenarios
SIT.8	SIT shall be performed using assured testing stubs and Meter Protocol Emulators. If there are Devices where there are no assured emulator alternatives, e.g. In Home Displays, then SIT shall use actual Devices
SIT.9	Testing of the integration with the Parse & Correlate Software
SIT.10	SIT will include testing of the Local Command Interface using a hand held terminal Device, or a suitable testing tool developed to emulate connectivity at the Local Command Interface[5]

[5] This interface is only required for the 2.4GHz interface

SIT.11	SIT will include verification of the correct operation of all interfaces in DCC Systems
SIT.12	SIT will include verification that the correct E2E data is contained in all relevant DCC enterprise system produced report feeds
SIT.13	SIT will include suitable tools to allow testing and verification of encrypted and sensitive payloads
SIT.14	Where SIT makes use of the DCC Meter Protocol Emulator, testing must include emulator configuration to provide valid data in a service response. A blank / null response cannot result in a passed test. The response must include valid data that can be successfully parsed and where relevant decrypted, to prove the response data received is as expected based on the emulator configuration for that test
SIT.15	SIT will include appropriate levels of testing of the v1.0 to v1.1 Communications Hub upgrade process to reflect the installed base of v1.0 Communications Hubs
SIT.16	SIT will include testing 1.0 CHs with the Modified DCC Total System

Table 7 SIT Requirements

Specifically for SIT.10, testing of the Local Command Interface shall cover, as a minimum, the following activities:

- Service user simulator to DSP to service user simulator local command
- Local command to Communications Hub Function to Device
- Device to Communications Hub Function to local response
- Local response to service user simulator to DSP

6.2.1 Service Provider User Acceptance Testing

The SIT Phase includes the DCC Service Provider User Acceptance Testing (SP UAT) activity. This activity will operate concurrently with Solution Test, and is undertaken to provide additional assurance.

It allows DCC to witness an agreed subset of the tests carried out in Solution Test. The subset of tests will be described in a SP UAT test plan.

Giving at least 2 Working Days' notice, the DCC Systems Integrator will provide DCC with a schedule of when and where tests will be executed and invite DCC to witness either on- site or remotely.

Witnessing of the test execution, or reviewing evidence of executed tests, will adhere to two key rules;

- There will be no deviation from test scripts
- There will be no hands on execution by witnesses

SP UAT will report on test completion, test failures and test pass rate independently of Solution Test, in order to ensure that 100% coverage and other success criteria of SP UAT are met.

6.2.2 Operational Confidence Testing

At the same time as SIT, and for functionality that has completed SIT, the CSPs will undertake Operational Confidence Testing to assure functionality and non-functional performance of the Communications Hubs, supported by the DCC Systems Integrator and the DSP.

In the absence of a suitable environment for complete non-functional testing, Operational Confidence Testing will address non-functional testing as is practicable, and will include characterisation of timings, testing of different network transport layers and soak testing of Communications Hubs over a range of time periods to identify defects and issues occurring as a result of extended operation, including intermittent HAN connections.

Because of the nature of Operational Confidence Testing a different definition of success criteria will be applied. These will be defined by the Communications Service Providers in a joint OCT approach document and reviewed by the SEC Panel Testing Advisory Group (TAG), but will not be part of the SIT audit scope.

The OCT approach document will include;

- summary scope of tests to be carried out by each CSP
- detail of the environments to be used for OCT
- assurance approach and progress/test coverage reporting
- interaction with the DCC Systems Integrator
- approach to classifying and managing defect
- success criteria and completion report.

Where relevant, Operational Confidence Testing will be coordinated with DIT.

6.3. Requirements & Focus Areas for User Integration Testing

The provision of User Integration Testing environments and associated services is part of DCC's ongoing activities, this section 6.3 describes the specific requirements and focus areas for Release 2.0.

Release 2.0 will introduce a second UIT environment to allow Parties to continue to test against the Release 1.0 code base/production (using the existing UIT A environment) in parallel with testing the Release 2.0 solution (using the new UIT B environment initially). How DCC will operate multiple UIT environments, and how Parties will interact with those environments, will be covered in a new DCC deliverable defined in section 8 below.

DCC shall provide a testing service (User Integration Testing (UIT)) that allows a Party to test the interoperability of its User Systems with the Modified DCC Total Systems (including via the Self-Service Interface), and to test simultaneously the interoperability of User Systems and Devices (other than those comprising Communications Hubs) with the Modified DCC Total Systems and with Test 1.1 Communications Hubs provided by DCC. This testing service shall be made available on the same basis as Testing Services under Section H14 (Testing Services), but subject to this Testing Approach Document.

As for previous releases, there will be a period between the completion of SIT and promoting functionality to live operations. This period allows for Parties to undertake any User Entry Process Testing (UEPT) activities and test with the Modified DCC Total System as they choose. Certain Supplier Parties will also carry out User Regression Testing as described in this Testing Approach Document.

The UIT Approach Document will provide timings for the uplift of DCC documents relating to User Testing, including the options for completing additive UEPT for Release 2.0 and how test Devices should be managed in a multiple environment context.

DCC now operates a production business, and defects found in User testing against DCC Systems will be managed through to resolution by the appropriate DCC release channel available. The Enduring Test Approach Document will be updated to provide detail of this process.

Ref	Requirement
UIT.1	UIT will enable Parties to test Release 2.0 functionality
UIT.2	UIT will be planned to allow earlier availability of functionality from SIT for Parties to test against their systems and Devices, ahead of the completion of the full Release
UIT.3	UIT will include the provision of a Prototype Test Communications Hub for remote test labs, to enable the testing and diagnosis of HAN interoperability and HAN performance
UIT.4	UIT will include the provision of an Instrumented Test Communications Hub for DCC and remote test labs, to allow participants to diagnose and assure HAN performance and interoperability with other Devices, and undertake functional testing[6]
UIT.5	The deployment of new releases to UIT will be subject to specific entry criteria and testing to ensure minimal risk of disruption to ongoing participant testing in the environment
UIT.6	UIT security testing of DCC user authentication and authorisation, including protection of data and E2E messaging security
UIT.7	UIT testing shall include the capability for participants to verify all installation and maintenance activities for CHs as described in the SEC
UIT.8	UIT testing must include the capability for participants to verify their end-to- end data is operating correctly over DUIS and SSI, and in SSI reports
UIT.9	UIT testing must include the capability for DCC operations to verify their processes using SSI, SSMI, and reports as in the production environment but based on actual participant activities

[6] Release 2.0 will introduce a Dual Band Instrumented Communications Hub for use in DCC and remote test labs. A single band Instrumented Communications Hub is subject to a separate DCC Change Request and is not part of Release 2.0. The earlier of the provision of DB ITCH or SB ITCH will see DCC update working practices and testing participant guidance documentation to support the use of ITCH in RTLs as part of overall issue management activities

UIT.10	UIT testing shall allow for users to test with the mesh technology
UIT.11	DCC will make meters available to be requested for testing by Users who are not in a position to install and commission meters themselves – e.g. Network Operator Parties
UIT.12	Supplier Parties with commissioned Devices are required to execute User Regression Testing as described in Clause 5 of this Test Approach Document

Table 8 UIT Requirements

UIT will continue to support UEPT. DCC will propose updates to the Common Test Scenarios Document (CTSD) to reflect the functionality available as a result of Release

2.0. All Parties who have not previously completed UEPT will be required to prove their capability against the full set of relevant requirements in CTSD for the user roles they seek to operate in production.

Existing Users will be required to prove their capability against the updated requirements in CTSD for the User Roles they seek to operate in production. Parties can select whether to follow the documented UEPT process supported by DCC, or provide evidence of their capabilities outside of the documented UEPT process for DCC to consider prior to issuing certificates. UIT for Release 2.0 will be sufficient in scope for Parties to prove their capability to use the new Services.

Full detail of the process and how Parties will be able to engage with DCC to complete UEPT in the manner of their choosing, if they are entitled to choose, will be provided in the UIT Approach Document.

Where a Party provides evidence to DCC that it has proven its capability to use one or more of the new Services and DCC is not satisfied that a Party has successfully demonstrated that capability, that Party may refer the matter to the Panel for its determination (which shall be final and binding for the purposes of the SEC).

It is noted that DCC maintains its obligations to provide and support an integrated environment for the purposes of user testing, which includes ongoing assurance of the provision of CSP and remote test labs used within UIT, and demonstrating that the UIT environment is secure.

6.4. Requirements & Focus Areas for Device Integration Testing

DIT as a phase will build upon the lessons learnt from Release R1.2 and R1.3. During DIT DCC will engage with Device manufacturers throughout and notify Parties of the ongoing DCC interoperability events and other DCC engagement.

The deliverables for this test phase shall acknowledge the potential availability risk of suitable Devices and make exceptional provision for DIT to be undertaken using testing stubs, subject to approval to do so being provided by BEIS.

Further to the lessons from R1.3 testing with meters, DIT will be a formal test phase, and shall be required to achieve 100% coverage of planned tests, rather than be time limited. The exception will be when tests are blocked due to meter defects which are confirmed to exist in the live code base, which are not fixed by meter manufacturers within DIT timescales.

DIT will provide industry with confidence that v1.1 Communications Hubs, and v1.0 Communications Hubs upgraded to v1.1 interoperate with existing SMETS2 v2.0 Devices (including IHDs) and Devices designed to meet SMETS2 v3.0. DIT will also provide industry with the confidence that v1.0 Comms hubs and SMETS2v2 Devices interoperate with the Release 2.0 code base.

DCC has undertaken a documented commercial selection activity to determine which Devices and manufacturers will participate in DIT in line with the requirements below. All selected participants in DIT have confirmed the readiness and suitability of their Devices to support DIT.

All of the requirements below are subject to the availability of sufficient firmware and individual Devices, capable of fully participating in the testing at the time of the planned activity and supported by the manufacturers of those Devices.

If the availability of sufficient capable and supported Devices would result in any of the requirements below being at risk of not being proven, following confirmation with BEIS, DCC will complete such testing as is practical (potentially utilising emulators) and provide detail of the reasons why DIT has not been fully completed in the Test Phase Completion report. DCC will endeavour to complete any coverage of testing with Devices in UIT should suitable Devices become available after the completion of DIT and prior to go live.

DIT will be conducted in the same environment as SIT, coordinated to ensure Device testing scenarios and combinations take place against an appropriate code base.

Ref	Requirement
DIT.1	DIT shall test Communications Hubs with a minimum of 2 ESME Device Models from different manufacturers designed to meet SMETS2 v3.0
DIT.2	DIT shall test Communications Hubs with a minimum of 2 GSME Device Models from different manufacturers designed to meet SMETS2 v3.0
DIT.3	DIT shall test Communications Hubs with a minimum of 2 GSME Device Models from different manufacturers designed to meet SMETS2 v3.0 and capable of Sub-GHz HAN communications
DIT.4	DIT shall test Communications Hubs with a minimum of 2 PPMID or combined PPMID/IHD Device Models from different manufacturers designed to meet SMETS2 v3.0
DIT.5	DIT shall test Communications Hubs with a minimum of 2 PPMID or combined PPMID/IHD Device Models from different manufacturers designed to meet SMETS2 v3.0 and capable of Sub-GHz communications
DIT.6	DIT shall test Communications Hubs with a minimum of one Device Model for each of the leading ZigBee Alliance silicon stack providers
DIT.7	DCC shall select Device Models for DIT using dry-run qualification events and commercial proposals from Device Model providers to support DIT activities
DIT.8	DIT shall specifically ensure that Communications Hubs are verified as capable of complying with: • GBCS v2.0 10.6.2.6 (Frequency Agility) • GBCS v2.0 10.6.2.2 (Duty Cycle Monitoring)

DIT.9	DIT shall include risk based regression testing of Communications Hubs with a minimum of 2 SMETS2 v2.0 ESME and GSME Device Models selected to be representative of a significant proportion of the installed base of SMETS2 v2.0 Devices at the time of undertaking DIT
DIT.10	Should actual HCALCS Device Models exist and be in a suitable state of readiness, DIT shall test Communications Hubs with a minimum of 1 HCALCS Device
DIT.11	Removed
DIT.12	DIT shall test Communications Hubs with a minimum of 2 IHD Device Models from different manufacturers
DIT.13	DIT shall include end-to-end testing of the Local Command Interface using Hand Held Terminal Devices, if available, or using the DCC tool required to be developed for testing in SIT[7]
DIT.14	Removed
DIT.15	DIT shall include regression testing of SMETS2 v2.0 Devices with R2.0 of DSP

Table 9 DIT Requirements

6.5. Requirements and Focus Areas for Transition to Operations Testing

The Transition to Operations (TTO) Test Phase will include Business Acceptance, Operational Acceptance and Security related requirements as focus areas to transition R2.0 solution to operations. TTO Testing will focus upon the service management processes as SIT will have tested technical end-to-end functionality. Completion of SIT Testing is a prerequisite for TTO Test execution to start. Support from the DCC Systems Integrator and CSPs is required to carry out internal and external testing as part of TTO Testing.

The Environment Plan deliverable will highlight how TTO will utilise existing DCC environments. It is assumed that the DCC pre-production environment will not be available for Release 2.0.

Ref	Requirement
TTO.1	Transition to Operations testing shall ensure that non-functional security risks to the production environment are identified, assessed and resolved or managed, e.g. through PEN testing, work off plans and appropriate ISMS risk entries
TTO.2	TTO will include pre-production proving
TTO.3	Prioritise the resolution of known User and Service Issues evident from testing Release 2.0
TTO.4	Review impact to existing operational Services, security processes and any adverse effects

[7] The End to End process for the Local Command interface is described in 6.2 above

TTO.5	Assess information security risk and vulnerabilities
TTO.6	Prove that the system supports business/operational requirements and/or Service design
TTO.7	Transitional, business, operational processes and documents are proven and in place
TTO.8	Provide confidence that solution/services are suitable for wider infrastructure, fully implemented and fit for live service
TTO.9	TTO will test DCC internal systems and processes, including but not limited to the Cognos business information management/management information tool, SMKI Recovery and Repository Management
TTO.10	DCC operations will be included as a test participant in order to validate their processes, scenarios and procedures supporting User activity
TTO.11	Determine the potential impact of Release 2.0 on operational demand management, through regression testing and non-functional testing. Specifically this will include detailing the final message sizes

Table 10 TTO Requirements

7. Common Testing Requirements and Activities

The following sections describe the approach to testing that is required for all test phases and stages, unless explicitly described otherwise.

As a general principle, the established testing and test assurance governance, resources, processes and other activities developed by DCC for previous releases will continue – except as where explicitly required otherwise by this Testing Approach Document.

7.1. Test Activities

For each Test Phase, the following activities will be performed;

- Prepare and maintain a Test Phase Approach
- Implementation of testing infrastructure
- Test Phase planning
- Identification of test scenarios
- Design of test scripts
- Produce test specification document

- Produce requirements traceability matrix, or equivalent
- Design and preparation of test Data, including loading of test Data into the test environment
- Preparation of test execution schedule
- Execution of testing
- Performing quality gate reviews
- Test issue management
- Test issue resolution
- Release management
- Configuration management
- Test Progress reporting
- Test assurance of third party components
- Training for Test Execution

7.2. Test Method

As for previous DCC Releases, testing will be conducted using high-level test scenarios (or sequences of Service Requests for specific Test Phases). The Test Phase Approach Documents will specify the detailed testing methodologies for each individual Test Phase.

Testing should cover both functional and non-functional aspects of the dynamic interaction between solution elements, and shall provide full coverage of the DCC Service Request variables – user role, command variant, and mode of operation. Where interfaces are to be tested within a Test Phase – all relevant interfaces should be tested. Similarly, testing should account for all elements of the Modified DCC Total System, for example the internal DCC-Enterprise components that support billing and reporting.

Priority, within the design of testing for Release 2.0, shall be on the changes introduced by the scope of the Release, but also on the functionality and Service Requests that are considered to be of highest risk to Parties and Energy Consumers.

Where testing makes use of the DCC Meter Protocol Emulator, testing must include emulator configuration to provide valid data in a service response. A blank / null response cannot result in a passed test. The response must include valid data that can be successfully parsed and where relevant decrypted, to prove the response data received is as expected based on the emulator configuration for that test

DCC is seeking a significant increase in the amount of automated testing that will be performed for Release 2.0, and will require the DCC Systems Integrator to provide detail of this in the SIT Test Phase Approach Document, including reporting to demonstrate that automation expectations have been met.

Also in relation to the design of testing for SIT, coverage of DUIS v1.0 and DUIS v2.0 interfaces and how testing between regression and new elements is balanced across the interfaces and Communications Hubs types and CHTS versions.

7.3. Test Scenarios

Except for the DSP PIT test phase[8], Release 2.0 will include the non-exclusive use of test scenarios to reduce the risk of the design of testing not sufficiently matching the intended real life use of the system.

Test scenarios may, within the context of the individual Test Phases, be represented by defined sequences of Service Requests or other relevant activities.

Test scenarios shall be used in PIT to ensure that the products which are received in SIT have been exercised in an expected manner, prior to the start of SIT.

Each test phase will define test scenarios as a deliverable as appropriate, but as a minimum the definition of test scenarios will include:

- Description
- Responsibility for development
- Type (Normal, Exception, Alternative)
- Prerequisites
- Test conditions
- Verification method
- Traceability to requirements (or use case for DSP PIT)
- Test variations – User Roles, Communications Hub, mode of operation, Command variant, Device

The definition of Test Scenarios for SIT and DIT shall include and consider:

- Key common scenarios that will be experienced by the Parties in production – e.g. install and commission, Communications Hub replacement, over the air Firmware upgrade etc.
- A reasonable minimum number of exception or non-happy path scenarios
- A relevant subset of scenarios (or Service Request sequences) to reflect Network Operator Party use cases
- Include data and infrastructure security tests, taking into account DCC security architecture and security standards and patterns, alongside functional and non- functional testing

DCC will review the proposed Test Scenarios, or sequences of Service Requests, for SIT and DIT with Parties at the DCC monthly testing forum – the Testing Design and Execution Group.

Test Scenarios may be updated to take account of activities from live operation, subject to suitable change controls.

[8] DSP PIT is based on Use Cases.

Test Scenarios will also include sequences for use by DCC operations and DCC finance in order to test other DCC business processes that more generally provide support to Parties, invoice customers, and correct data errors.

Test scenarios must cover exercising all of the interfaces in DCC Systems in an end-to- end manner verifying functionality as well as data is reported correctly.

Where emulators are used, test scripts should define the required emulator configuration to provide valid data in a service response. A blank / null response cannot be considered a passed test and the response must include valid and expected data that can be successfully parsed and where relevant decrypted, to prove the response data is received as expected based on the emulator configuration to meet the defined test objective for that test.

7.4. Regression Testing

All new releases of any element of the solution from all DCC Service Providers will be subject to completing a successful regression test prior to being accepted into subsequent testing phases and environments.

The following requirements for regression testing shall apply:

- Wherever practicable, regression testing will be automated
- Regression testing will be an ongoing activity
- Any regression testing must include the SMKI – even if that element has not been changed[9]
- The regression test approach for each phase will be described in the Test Phase Approach Document
- The scope of regression, where appropriate, is permitted to be risk-based with regard for combinations of User Role, Command variant etc. The exact scope of regression shall be defined in the Test Phase Approach Document for each phase
- If risk based regression is used within a test phase, as a minimum it should include key processes
- Regression testing of the uplifted technical specifications with single band Communications Hubs cannot be risk based
- The Regression Test Pack (test scripts, test data and documentation) will be submitted to DCC at the end of the test phase, with any agreed omissions being rectified promptly.
- As part of the completion of testing phases, a minimum of two full regression cycles will be undertaken to provide confidence in the stability of the release[10]
- Regression testing for DIT must be completed against Devices for single band Communications Hubs. This requirement also applies to dual band Communications Hubs except where no suitable Device is available to test against. Only where suitable Devices are not available will it be possible to use emulators to complete DIT regression testing.
- User Regression Testing, as required by the obligations set out in this Testing Approach Document, must be completed by certain Supplier Parties.

[9] Not in scope for PIT

[10] Not in scope for DSP PIT

7.5. Dependencies and Assumptions

The following table describes the dependencies that need to be satisfied in support of Release 2.0 – individual test phases are expected to detail specific dependencies.

No.	Description	Dependent Upon
1	Commencement of specific test phases	Availability of test environments for Release 2.0
2	Commencement of UIT	Availability of the UIT-B environment, Communications Hubs and supporting User guidance
3	Commencement of DIT	Availability of Devices capable of satisfying the DIT Device Selection criteria (as outlined in 5.4 above)

Table 11 - Dependencies

In order to deliver Release 2.0 as a whole with a suitable level of confidence in the planning and assurance of the testing, there is an underlying principle that all solution elements will be fully tested and assured before being used in subsequent test phases. Therefore, SIT cannot test solution elements that have not received an approval to proceed certificate from PIT, issued by DCC – but the commencement of SIT is not dependent upon the whole scope of PIT being completed.

The following table describes the assumptions that underpin this test approach:

No.	Description
1	All solution elements will be PIT tested and gated before being subjected to SIT, i.e. defects will fall within agreed thresholds and any Work Off Plans (see Table 13) will be agreed with DCC
2	Emulators and Devices used in SIT and DIT will be assured and approved as fit for purpose prior to being used in testing

Table 12 - Assumptions

8. Deliverables

DCC will follow the testing documentation practices established for earlier releases. These are described at a high level in this section, and specific enhancements and requirements for Release 2.0 are highlighted.

8.1. By Test Phase

Deliverables will be produced for each Test Phase. The Test Phase Approach Document will detail the other deliverables required for the individual Test Phase.

For Release 2.0, a UIT Test Phase Approach Document for UIT is required. The provisions of the Enduring Test Approach Document apply, where relevant, to all testing carried out in accordance with this Testing Approach

Document modified, where necessary, to reflect the fact that the testing in this document applies to the Modified DCC Total System and includes 1.1 Communications Hubs in addition to Communications Hubs.

For the SIT and DIT Test Phase Approach Documents, DCC Test Assurance will introduce an industry review and feedback process, whereby content and/or the documents themselves will be circulated and discussed with the DCC Testing Design & Execution Group and the SEC Panel Testing Advisory Group.

The author for individual Test Phases will create the deliverable, which will be subject to the established DCC documentation review processes and 8.2 below:

- PIT – DCC Service Providers
- SIT – DCC Systems Integrator
  - OCT – Communications Service Providers
- DIT
  - DCC Test Assurance – Test Phase Approach Document, Test Scenarios
  - DCC Systems Integrator – All other DIT deliverables
- UIT – DCC Testing Services
- TTO - DCC

The table below describes the generic content and anticipated timing of the deliverables that may be required to be produced for each Test Phase by the Test Phase Approach Document.

Deliverable	Description	Timing
Test Phase Approach Documents[11]	Describes for the relevant test phase: the activities, participants, resources, roles and responsibilities, assurance requirements, reporting, success criteria and other information relating to the execution of the Test Phase. Where relevant, the Test Phase Approach Documents shall also define the entry and exit criteria, and the basis of any risk basis for regression	Following any applicable review cycle with industry, final version to be submitted to DCC by the relevant DCC Service Provider no later than 20 Working Days before the commencement of test execution. Following approval by BEIS, Test Phase Approach Documents will be published on the DCC website.
Test Plan & Test Schedule	Details the extent of the testing to be carried out and the responsibilities of DCC Service Providers and other parties	Final approved version to be provided to DCC by DCC Service Providers DCC no later than 10 Working Days before the commencement of test execution, including identification of any security constraints, e.g. sensitive scripts

[11] There will be a SIT Approach Document, a DIT Approach Document, a UIT Approach Document and a TTO Approach Document

Test Specifications	Includes Requirements Traceability Matrix and Test Scripts	To be provided to DCC by DCC Service Providers no later than 20 days before the commencement of test execution
Test Readiness Reports	Statement of readiness to commence testing	To be provided to DCC by parties undertaking testing, on a weekly basis, commencing no later than 20 days before the start of test execution
Test Results	Detail may vary by Test Phase – report content and frequency will be defined by the Test Phase Approach Document	Made available by DCC Service Providers for review DCC throughout test execution
Test Issue Log	Outstanding Testing Issues	Made available by DCC Service Providers for review by DCC throughout test execution[12]
Regression Test Pack		To be provided to DCC by DCC Service Providers with the final Test Stage Completion Report
Test Phase Completion Report	Will follow the format and content established for earlier DCC releases, and will include; • Overview of testing undertaken • Actual number of tests run, passed, failed and not run • Explanation of any tests not run • Test issue I.D. detail for failed tests • Number of test issues outstanding, split by severity • Number and severity of test issues raised • Specification of test environment used	Draft version to be provided to DCC by DCC Service Providers DCC no later than 10 working days before the planned end of test execution Final version to be provided to DCC by DCC Service Providers DCC within 5 Working Days of the completion of test execution

[12] This can be via direct access to the system, or through the provision of regular reports from the system

	- Recommendations for tests to be included in the next Test Phase - Lessons learnt during the Test Phase	
Test Scenarios	May comprise of planned and sequenced series of Service Requests.	To be available from DCC Service Providers at the same time as the finalised Test Phase Approach Document.
Work Off Plan	A plan to resolve outstanding issues	To be provided to DCC by DCC Service Providers with the final Test Stage Completion Report.

Table 13 – Deliverables

8.2. Specific Deliverables

DCC will publish the following documents.

Deliverable	Description	Timing
Environment Plan	Describes the plan for the utilisation of specific environments for each test phase, and how R2.0 will manage issues within the 1.x environments	To be provided by DCC as soon as possible following the Test Phase Approach Document being approved and prior to the start of R2.0 SIT
Environment Guide for UIT Participants	Describes the approach, policies and procedures for users testing across multiple UIT environments. Will include, as a minimum, details of Device certification and mobility, triage, defect and fix management, change management, Device management in UIT	To be provided by DCC Testing Services Team as soon as possible following the Test Phase Approach Document being approved and prior to the pre-UIT pipe-cleaning tests to be run by Users
DIT Device Selection Approach	Describes the approach for selecting the Devices to be used in DIT	To be provided by DCC Device team alongside the DIT Approach Document
Independent Assurance Reports	As described in section 16, a range of independent assurance activities will be undertaken – where appropriate there will be reports	As determined by the timing for the completion of the assurance

CTSD Update	DCC will propose changes to update CTSD to reflect the new service requests for Release 2.0, and the options for evidence for participants undertaking additive testing	DCC will consult on the updates to the CTSD following confirmation of this Testing Approach Document by the Secretary of State
Test Communications Hub Definition	Describes the capabilities and highlights the differences between the PTCH and ITCH Devices	To be presented and discussed at DCC forums (TDEG, CH Forum etc.)
PIT Communications Hub Performance Information	Provides the results of PIT testing for activities relevant to operation of Communications Hubs – e.g. firmware activation and reset timings. Will also include detail of relevant non- functional PIT testing	To be presented and discussed at DCC forums (TDEG, CH Forum etc.)

8.3. Requirements Traceability

The Service Providers will each use their own tools to manage their requirements and demonstrate traceability to both the solution design and the Pre Integration Tests. The DSP and CSPs will each provide DCC with a PIT Requirements Traceability Matrix (RTM), extracted from these separate tools.

The scope of testing will be validated by use of Test Traceability Matrix (TTM), setting out how each requirement within the scope of the direction from the Secretary of State for this release is met. The TTM supersedes the RTM developed and used within PIT.

The TTM will be prepared by DCC, based on the updates to the specifications listed in section 2.1 above, and will consider the resulting impact of those changes and resulting coexistence of enrolled Devices operating to different mixtures of versions of those specifications as well as current version of those specifications. Completion of the TTM is a dependency for SIT to commence.

The DCC Systems Integrator will support DCC in reconciling the planned Solution Testing against the TTM.

At the completion of SIT, any additional tests which have been created during SIT will be added to the TTM.

The TTM will be used by DCC, and form a key element of the independent SIT audit, to demonstrate the completion of SIT, alongside the enhanced tracking ‘Heatmap’ approach described in section 10.1 below.

9. Test Procedure

This section describes the requirements for the testing process to prove the solution for Release 2.0.

The Test Phase Approach Documents will define specific Entry and Exit Criteria for the individual Test Phases, with generic requirements for these described below.

Specific criteria for individual Test Phases, and the governance process relating to the approval of the criteria, and the evaluation of success against them.

9.1. Generic Entry and Exit Criteria

Progression through testing phases for Release 2.0 will be gated using generic and specific Entry and Exit Criteria.

The Test Phase Approach Documents will provide detail of the evidence to be gathered in the form of an evidence pack.

9.1.1 Generic Entry Criteria

The following generic Entry Criteria will gate the entry to all Test Phases:

- Test Phase Approach Document for Test Phase signed off;
- Solution Test Plan signed off (except UIT);
- Test Phase Complete Certificate for preceding Test Phase issued, unless the plan clarifies that Test Phases overlap;
- Test Specification prepared, including traceability to Requirements/Design documents (except UIT);
- Test labs, Devices, tools, stubs, environments and data are assured and accepted as fit for purpose, including external assurance;
- DCC and all relevant Service Providers have confirmed they have resources with the requisite skills and access available to support the Test Phase; and
- Approval to proceed certificate issued by DCC.

9.1.2 Generic Exit Criteria

The following generic Exit Criteria will gate the exit of all Test Phases except UIT:

- All tests run, or any exceptions documented and agreed by DCC Test Assurance Board;
- All test success criteria (e.g. test pass rate) achieved, or any exceptions documented and agreed by DCC Test Assurance Board;
- The number and severity of any outstanding Test Issues is at or below the target thresholds, or any exceptions documented and agreed by DCC Test Assurance Board;
- Test results documented and evidence captured;
- Set of test issue logs have been produced;
- Regression testing successfully completed;
- Regression test pack has been prepared or updated;
- Production of agreed Work Off Plans for any outstanding Test Issues that occurred in the Test Phase;

- Work Off Plans from preceding Test Phases have been completed; and
- Test completion reports have been produced and test completion certificates have been issued by DCC.

9.2. Governance of Test Phase Approach Documents and Entry and Exit Criteria

The following requirements shall apply in relation to each of the SIT, DIT and UIT Test Phase Approach Documents, and in particular the relevant entry and exit criteria:

(i) DCC shall prepare a draft of the document and submit the document to the SEC Panel Testing Advisory Group for comment;

(ii) Following the receipt of comments from the SEC Panel Testing Advisory Group, DCC shall update the document, taking into account the TAG comments as appropriate, and submit the draft document to the Secretary of State for approval (noting those SEC Panel comments that have not been incorporated);

(iii) DCC shall comply with any direction given by the Secretary of State to reconsider, re-consult and/or re-submit the draft document.

Where DCC proposes to deviate materially from a Test Phase Approach Document, it shall consult on its proposal to do so with the SEC Panel Testing Advisory Group and submit the proposal to the Secretary of State for approval.

DCC shall conduct its testing in a manner that is consistent with this document and the Test Phase Approach Document (as approved by the Secretary of State) for each phase including, in each case, as modified by any deviations that have been approved by the Secretary of State.

9.3. Specific Entry and Exit Criteria for Test Phases

Specific Entry and Exit criteria for individual test phases will be listed in the relevant Test Phase Approach Document.

For PIT and SIT, this will include the definition in the Test Phase Approach Document of any incremental gating into subsequent Test Phases.

9.3.1 Entry into SIT

The entry criteria for SIT shall include, inter alia:

- Completion of independent assurance of the DCC Meter Protocol Emulator will be included in the SIT entry criteria.

9.3.2 Exit from SIT

The exit criteria for SIT shall include, without limitation:

- All 1.1 Communications Hub variants introduced or changed by Release 2.0 have been tested, alongside regression testing of 1.0 CHs

9.3.3 Exit from DIT

The exit criteria for DIT shall include, without limitation:

- In the event that insufficient capable and supported Devices are available to achieve full coverage of DIT scope, DCC will complete such testing as is practical and provide detail of the reasons why DIT has not been fully completed in the Test Phase Completion report. DCC will endeavour to complete any coverage of testing with Devices in UIT should suitable Devices become available after the completion of DIT and prior to go live

9.3.4 Entry into UIT

The entry criteria for UIT shall include, inter alia:

- Successful completion of testing, assurance and DCC governance of the SIT and DIT test phases for the functionality to be promoted into UIT.

- For TSG 2.0/SBCH UIT, at least SIT and DIT regression testing with SMETS2v2 Devices will have been completed.

- For DBCH UIT, DCC will enter UIT based on the completion of SIT only.

9.3.5 Exit from UIT

The exit criteria for UIT shall include:

- Successful completion of User Regression Testing by all Supplier Parties required to carry out such testing, the details of which are defined in the UIT Approach Document. Any relaxation of the exit criteria from UIT with regard User Regression testing would be subject to approval of the SEC Panel and the Secretary of State.

9.4. Acceptance Process Following SIT Completion

Following the completion of SIT (and DIT), DCC will notify the Secretary of State, the Authority, the SEC Panel and the SEC Parties that SIT (and DIT) for a Region or Regions has ended.

DCC will provide the Authority, the SEC Panel and the Secretary of State with copies of the SIT and DIT Test Completion Report(s) and the SIT Auditor’s report, along with a list of those sections of such reports that it considers should be redacted.

DCC will review the documentation and evidence to support the relevant entry and exit criteria with the SEC Panel Testing Advisory Group to inform the SEC Panel recommendation to the Secretary of State regarding the completion of SIT (and DIT).

On direction from the SEC Panel, DCC will provide the SEC Parties and DCC Service Providers with copies of the Test Completion Report(s) and the auditor’s report, having first redacted any sections specified by the SEC Panel.

9.5. Go Live Decision and DCC Incentives

The SEC Panel and/or Parties shall provide such reasonable support and assistance that is requested from them by the Secretary of State in relation to:

(i) The Secretary of State's decision to make (or bring into legal effect) any of the SEC variations associated with Release 2,0; and/or

(ii) The administration of any Baseline Margin Project Performance Adjustment Scheme (having the meaning given to that term in the DCC Licence) relating to Release 2.0, including as set out in any BMPPA Scheme Principles (also having the meaning given to that term in the DCC Licence).

DCC will undertake a review with Parties of their activities, progress and concerns from UIT, and include collected feedback to the Secretary of State as part of the DCC go live activities.

The process for Parties to provide feedback to DCC on their UIT experiences, and how DCC will review and present the feedback will be defined in detail in the UIT Approach Document.

Supplier Parties that undertake User Regression Testing will provide the DCC with a self- certification of completion of User Regression Testing. The DCC will consider all such completed User Regression Testing as a part of the DCC go live activities.

The final report of UIT feedback and User Regression Testing will be reviewed with the SEC Panel prior to inclusion in the DCC go live submission to the Secretary of State.

DCC will provide the following materials as part of the submission to the Secretary of State relating to go live, in addition to the established DCC live services criteria:

- UIT feedback and User Regression Testing report
- UIT defect report
- All independent assurance or audit reports prepared for Release 2.0
- OCT completion reports.

9.6. Post Go Live Activities

In order to mitigate the risk to Energy Consumers, DCC will continue to offer the support for production provided at R1.3 go live, whereby for a maximum period of six months following the Release 2.0 go live date Communications Hub firmware upgrades are not initiated unless requested by the User.

This allows Users to continue to perform regression testing in Device and User System Tests (carried out in accordance with Section H14.31 of the SEC) with specific combinations of Communications Hubs and Devices and resolve issues without affecting service to Energy Consumers.

This requirement also applies to the firmware supported for the installation and commission process until a User confirms they accept that the new Communications Hub firmware operates acceptably with their Devices.

9.7. Test Phase Success Criteria

For SIT and DIT and the testing for SP UAT the following Test Success Criteria will be included in the Exit Criteria:

- 100% of tests listed in the Test Specifications have been executed, or any exceptions documented and agreed with DCC, and reported to SEC Panel;
- at least 85% of planned tests have been passed, or any exceptions documented and agreed with DCC, except for regression testing with single band Communications Hubs in DIT where 100% of tests passed is the requirement

9.8. Test Issue Defect Masks

The following table lists the standard target thresholds for outstanding test issues in each test phase.

Test Issue Severity	PIT	SIT	DIT	TTO
1	0	0	0	0
2	0	0	0	0
3	15	15	15	15
4	30	30	30	30
5	60	60	60	60

Table 14 Test Issue Thresholds

Note that:

- The defect mask thresholds are applied as part of the exit criteria for relevant test phases, and apply cumulatively if there are iterative deliveries within a test phase, for example from PIT to SIT or from SIT to UIT. For example there will never be more than 15 Severity 3 defects per Service Provider at an exit gate.
- BAT defects will be included in the TTO defect mask
- For PIT, SIT and DIT, the figures in Table 14 Test Issue Thresholds are per DCC Service Provider, i.e. 15 Severity 3s for the DSP, 15 for CSP N and 15 for CSP C/S
- The defect masks shall include any security defects within the relevant testing phase
- the Test Assurance Board, including industry representatives, may judge that the next Test Phase can start even if the target thresholds set in the Exit Criteria for the Test Phase Plan have not been achieved, provided that an agreed work off plan is in place

- If the Test Assurance Board, including industry representatives, believes that an exception for a Severity 2 issue at SIT exit should be considered, DCC will request an ex-committee review by the SEC Panel before confirming SIT exit
- A defect mask will apply for UIT Exit and will be linked to the User Regression Testing. The Exit Criteria are detailed in the UIT Approach Document.

9.9. Work Off Plans

Work off plans will be produced by each Service Provider as part of the quality gate process at the end of Testing Phases, detailing the defects that are outstanding and the plan for resolving them.

Each Service Provider must resolve all of the items within the work off plan within the following timescales;

- For Severity 3 defects, within 20 Working Days from the quality gate meeting
- For Severity 4 defects, within 40 Working Days from the quality gate meeting
- For Severity 5 defects, within 60 Working Days from the quality gate meeting

In the event that the timescales for the work off plan are not met, the DCC Service Provider shall produce and agree a correction plan with DCC.

If a Test Phase Complete Certificate has been issued subject to completion of a work off plan, and the work off plan has not been completed within the applicable time period, then DCC will revoke the Test Phase Complete Certificate unless the failure relates solely to Severity 5 test issues.

9.10. UIT Test Issue Thresholds and Work off Targets

During the UIT Test Phase, by DCC Service Provider, the following performance targets will apply to defects assigned to a Service Provider for resolution, at any given point:

- 0 Severity 1 defects
- Fewer than 5 Severity 2 defects
- Fewer than 15 Severity 3 defects
- Fewer than 30 total Severity 4 and 5 defects

In all cases, each DCC Service Provider must resolve UIT defects within the work off timings shown below, measured from the point of the defect being accepted by the Service Provider:

- For Severity 1 defects, within 10 days
- For Severity 2 defects, within 20 days
- For Severity 3 defects, within 40 days
- For Severity 4 defects, within 50 days

The above targets and work off times shall apply to defects associated with UIT testing of the new R2 functionality in relation to both Single and Dual Band.

Defects associated with User Regression Testing are subject to the UIT Exit Criteria described in the UIT Approach Document.

10. Test Result Management & Reporting

Test Result Management and Reporting is to be provided to DCC by the DCC Systems Integrator with input from SPs for PIT, SIT, UIT, DIT and TTO Test phases, as relevant, on a frequency to be detailed in the Test Phase Approach Documents.

10.1. Tracking & Reporting

HP's Application Lifecycle Management (ALM) Test Management tool will be used to manage testing and testing issues[13].

All requirements, scripts, tests, execution results and defects are to be maintained in ALM. Connectivity between requirements, tests and defects is to be maintained for traceability and reporting purposes.

Overall responsibility of maintaining traceability of test and defects will lie with the DCC Systems Integrator for SIT Test Phase.

DCC Systems Integrator shall implement a tool and processes based upon the existing solution revised with learnings from previous releases to provide enhanced visibility and reporting of the progress, completion and coverage of testing for SIT across a number of parameters.

Security testing defects should be recorded/reported with other testing defects, redacted as required, but counting towards defect masks.

10.2. Weekly DCC Test Execution Report

DCC will provide a weekly Test Execution report to the SEC Panel and the Secretary of State. The content of this report will reflect the status of progress within Release 2.0, based upon data from HP ALM and other DCC Systems.

It will include detail of testing progress in relevant test phases, reporting on testing issues and matters relating to the capacity and availability of the user testing services. Whilst SIT, DIT and TTO are being conducted, it will include detail of the progress against the testing glide path. The report will include testing coverage of functional areas, alongside Service Requests. The content of this report will be anonymised and redacted as if it was subject to Section H14.44 of the SEC.

10.3. SIT & DIT Test Completion Reports

In accordance with 9.3.1 above, DCC will produce its own Test Completion Reports when it considers that the Exit Criteria required by the SIT/DIT Test Phase Approach Documents for a Region have been met. The report will provide evidence of the testing undertaken, the results of testing and how the exit criteria have been met.

DCC will also produce a TTO Test Completion Report.

[13] Except where not applicable for PIT

These reports, alongside any relevant independent assurance reports, will be provided to the Authority, the SEC Panel and the Secretary of State.

11. Acceptance and Test Assurance

DCC has established processes for the acceptance of testing activity completion – these will continue for Release 2.0. The DCC Test Assurance Board will conduct quality gate meetings and review testing completion reports before issuing Test Completion and Approval to Proceed Certificates.

Where a Test Completion Certificate has been issued subject to completion of a Work Off Plan, and the Work Off Plan has not been completed within the applicable time period, then the Test Completion Certificate will be revoked unless the failure relates solely to Severity 5 test issues.

11.1. DCC Service Provider Self Assurance

DCC Service Providers will continue to assure their own PIT activities against this Testing Approach Document and specific PIT Test Phase and Test Plan. Service Providers will also continue to make their relevant testing deliverables available to the other Service Providers and exchange constructive comments to ensure solution and testing compatibility.

11.2. Test Assurance by DCC

DCC will continue to assure Service Provider testing using the processes and activities established for earlier releases, and will include the following methods, at times determined by the individual Test Phase Approach Documents:

- Test Assurance Board quality gates
- Test Witnessing
- Test Observation
- Reviewing Test Evidence
- Test Quality Audits
- Product Inspections
- Document Review

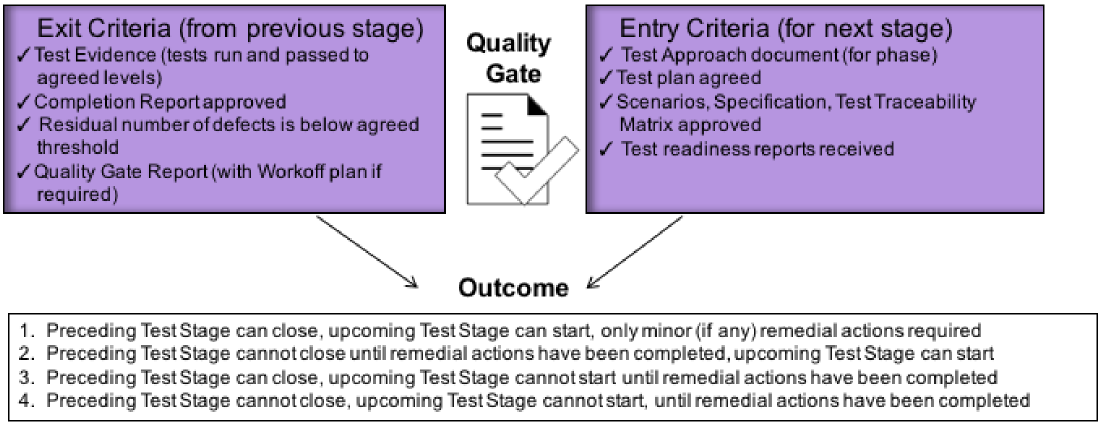
11.2.1 Quality Gating & the DCC Test Assurance Board

DCC will continue to operate the Quality Gating process developed for Release 1.x and enhanced through experience.

The Quality Gate process provides:

- Controlled entry of functionality into subsequent test phases
- Formal and objective evidence that test criteria have been met for a stage

- Transparency of test activities and outcomes to facilitate DCC Test Assurance
- Formal evidence for signoff of Service Provider test milestones and/or associated payments
- A mechanism for managing remedial work associated with closure of test stages



Exit Criteria (from previous stage)
Quality Gate
Entry Criteria (for next stage)
Outcome

Exit Criteria (from previous stage)

- ✓ Test Evidence (tests run and passed to agreed levels)
- ✓ Completion Report approved
- ✓ Residual number of defects is below agreed threshold
- ✓ Quality Gate Report (with Workoff plan if required)

Entry Criteria (for next stage)

- ✓ Test Approach document (for phase)
- ✓ Test plan agreed
- ✓ Scenarios, Specification, Test Traceability Matrix approved
- ✓ Test readiness reports received

Outcome

1. Preceding Test Stage can close, upcoming Test Stage can start, only minor (if any) remedial actions required
2. Preceding Test Stage cannot close until remedial actions have been completed, upcoming Test Stage can start
3. Preceding Test Stage can close, upcoming Test Stage cannot start until remedial actions have been completed
4. Preceding Test Stage cannot close, upcoming Test Stage cannot start, until remedial actions have been completed

Figure 2 – DCC Quality Gate Process

The Quality Gate process will apply to all PIT and SIT testing, and relevant elements of UIT, DIT and TTO testing.

The Quality Gates from PIT into SIT and from SIT into UIT are operated as DCC Test Assurance Board gates.

The Test Assurance Board (TAB), is a meeting called, facilitated and chaired by the DCC Head of Test Assurance, attended by Service Providers, the DCC Systems Integrator, relevant attendees from DCC departments and nominated representatives of the industry, on behalf of the BEIS Smart Meter Delivery Group.

11.2.2 Test Witnessing

DCC will agree, in advance, with the SPs which tests it wants to witness during FAT and Service Provider UAT. Details of these tests (which will be a subset of System Tests for FAT and a subset of Solution Tests for UAT) will be described in the FAT and Service Provider UAT test plans. The SPs will provide DCC with a schedule of when the tests will be executed and invite DCC to either witness on-site or remotely. The witness will have the skills required to fulfil the role. The SP will provide the witness with relevant documentation and access.

For R2.0 DCC Test Assurance and the SIT Auditor must be given full access to attend and witness such testing.

Execution of the agreed set of tests will be performed by the relevant SP test analyst, and there will be:

- No deviation from the scripts (e.g. in response to “what if” questions raised by witnesses)
- No hands-on execution by witnesses

Test issues raised during witnessing will be entered in to the relevant Test Issue Management tool and progressed through the Test Issue Management process.

As far as possible, any queries and issues arising during the witnessing period will be addressed at the time with the relevant SMEs. A wash-up session will be convened at the end of the witnessing period to discuss the outcome of witnessing and to agree any outstanding queries and issues.

DCC may elect to receive System/Solution Test execution evidence as a substitute for some tests nominated for witnessing.

11.2.3 Test Observation

By prior agreement with the SPs on the timing, duration and scope, DCC staff may observe test execution and test issue management activities during System Testing and Solution Testing in order to familiarise themselves with SP processes and the systems under test. The DCC observers will have the skills required to fulfil the role.

12. Testing Issue Management

This section describes the processes for Testing Issue Management and the Test Issue Lifecycle. The Testing Issue Management process remains the same across all phases of testing in scope[14] with a slight variance to how UIT (i.e. UEPT and End to End testing) Testing Issues are handled.

The process defined in the Testing Issues Resolution Process covers both SIT and UIT based testing. However there are small variations that arise due to the requirement to interact with Service User Testing Participants. In summary the main differences are as follows:

Triage process: This varies depending upon the types of Testing Issue detected, particularly where the issue is CSP related (where test labs are used) rather than DSP related.

Communications process: In UIT Testing Participants may or may not have access to the Testing Tool used for Testing Issue recording, in which case a manual workaround process is employed.

Escalation: Where a Testing Issue needs to be referred to the Issue Resolution Board (IRB) and a Service User is the Testing Participant that is the subject of the IRB, special information disclosure conditions will apply.

For clarity, Testing Issue Management will not apply to TTO.

The 'Testing Issue Resolution Process' document can be found on the DCC website: *https://www.smartdcc.co.uk/media/332365/testing_issue_resolution_process.pdf*.

This document will be updated by DCC to incorporate the option for Testing Participants to use Instrumented Test Communications Hubs in their own Remote Testing Laboratories.

12.1. Logging and Triage of Test Issues

Where testing is taking place in the SIT environment all issues relating to the DCC solution will be logged and recorded in HP ALM by the person executing the test. New testing issues will be referred to the Triage team, who will:

- classify them as one of:

[14] The test issue management process does not apply to DSP PIT, which will follow the existing DSP PIT defect management process

(i) Testing issue:

- that prevents execution of a test; or
- that causes an unexplained or unexpected outcome or response to a test

(ii) not a Testing issue (e.g. a misunderstanding)

(iii) duplicate of an existing Testing Issue

(iv) change to DCC systems i.e. not a valid Testing issue

(v) a situation where more information is needed

- set their Severity and Priority (see Section 12.7 for definitions)
- evaluate the potential impact on the DCC production solution, and record that evaluation in a suitable, searchable field on HP ALM, or other appropriate tool
- assign the Testing Issue to the relevant Resolver Group (typically a DCC Service Provider)

In situations where a Testing Participant wishes to raise a Testing Issue whilst undertaking testing in the UIT environment (for example during UEPT), then the above process applies with the following variations:

- The Testing Participant may have access to the DCC hosted HP ALM system, in which case they may log the Testing Issue themselves via their web browser. If they don’t have this capability then they are required to log the Testing Issue using a manual spreadsheet form (full documentation is available on the DCC website), which is then picked up and logged in HP ALM by DCC on their behalf.
- Classification, setting Severity/Priority and assignment to Resolver Groups is carried out in the same way as described for issues raised in the SIT environment above.
- The process of logging and triage for testing in UIT testing may involve more steps than are required for SIT, due to the remote nature of some of the testing, specifically where testing occurs in remote test labs without an Instrumented Test Communications Hub. In such cases it may be necessary to rerun the tests that cause the Testing Issue so that additional diagnostic information can be captured, for example Communication Hub logs, prior to the assignment of the Testing Issue for triage. Further documentation defining this process has been prepared by DCC and is available to Testing Participants on request.
- Testing Participants may log Testing Issues discovered in UIT for further assessment and triage, even where they are discovered during testing that hasn’t followed a specific test script.

12.2. Resolution of Test Issues

The DCC Systems Integrator Testing Issue Manager will:

(i) regularly review all outstanding test issues to ensure that they are resolved with reasonable speed

(ii) agree with the relevant SP Test Managers the defect fixes to be included in each Release to the SIT environment

(iii) report progress directly to stakeholders.

12.3. Target Response Times

For issues raised in SIT, DIT and UIT, the following table lists the target response times, which apply and are measured from the point at which the issue is logged in the test issue management tool.

The timings:

- Are in working hours
- Assume the working day to be Monday to Friday, 08:00 to 18:00
- Assume that a suitable Triage group and Issue Resolution Board are each available to meet once a day
- Are for in-house supported system elements only: system elements supported by third parties are subject to the timings defined in the relevant contracts
- May need to be adjusted for cases where a resolver group is not working to UK time.

Note that the targets are not binding, and there are no penalties associated with non- achievement. Target response times are subject to ongoing reporting and may be reviewed to reflect circumstances in test phases.

Priority	Initial Response Completed	Triage Completed	Assessed by Resolver Group	Fix Time Assessed
1	1 hour	4 hours	6 hours	18 hours
2	1 hour	Next Triage Panel	Next Triage Panel + 2 hours	Next Triage Panel + 14 hours
3	4 hours	Next Triage Panel	Next Triage Panel + 4 hours	Next Triage Panel +22 hours
4	4 hours	Next Triage Panel	Next Triage Panel + 6 hours	Next Triage Panel + 30 hours

Table 15 Target Issue Response Times

The Triage Panel will meet daily.

The checkpoints in the above table are defined as follows:

- Initial response completed: acknowledgement sent to the person raising the Testing Issues
- Triage Completed: the Triage Panel (either scheduled or emergency) has triaged the test issue and either a) assigned it to a resolver group, or b) escalated it to the Issue Resolution Board
- Assessed by Resolver Group: the resolver group has either accepted or rejected the test issue

- Fix Time Assessed: the resolver group has estimated how much effort it will take the fix the test issue.

Note also that there are not target fix times because:

- In a complex, bespoke system such as the DCC Total System, there will be an extensive variation in fix times
- Any such targets would be inconsistent with the existing DCC Service Provider Contracts.

12.4. Assurance and Disputes

12.4.1 Assurance

The Triage Panel, comprising each DCC SP's design authorities, the DCC System Integrator and the DCC including DCC Design Authority, and chaired by the DCC Systems Integrator Triage Manager, will meet daily (and on demand for urgent test issues which are delaying testing) to:

- resolve cases where the ownership of a test issue is disputed;
- confirm, by a process of review of all new issues, that test issues are being given the correct Severity and Priority by the local triage process or Service User raising the test issue;
- confirm, by a process of sampling, that Priority 1 and 2 defects are being resolved at the requisite speed.
- The DCC's Issue Management Team are responsible for reviewing by sampling the execution of issue management activity and for ensuring that all aspects of this are correctly undertaken and documented, including (but not limited to):

(i) Full and proper adherence to the process;

(ii) Use of appropriate and sufficient communications around the process;

(iii) Documentation of the process having been properly followed via commentary, collection of appropriate support documentation, e.g. logs, evidence and release notes;

(iv) That each action that has been taken within the process has been taken by the appropriate member of staff; and

(v) That audit requirements have been met.

12.4.2 DCC Issue Resolution Board

Testing Issues can be referred to the DCC Issue Resolution Board (IRB) as a means of escalation in the following circumstances:

(a) Agreement cannot be reached on the severity level and priority status of the Testing Issue;

(b) Agreement cannot be reached on the status of a Testing Issue; or

(c) The Testing Participant is dissatisfied with the speed at which the Testing Issue is being resolved; or

(d) A Testing Participant disagrees with the manner in which a Testing Issue should be resolved.

In the case of a), b) or c), the Testing Participant (or DCC Service Provider) must provide justification for its view and DCC may request further supporting information from them.

The IRB will determine:

(a) The severity, priority, status and response timescale that should apply to the Testing Issue;

(b) The organisation responsible for rectifying the Testing Issue;

(c) Whether the error is due to an issue with the design baseline, which could result in a Change Request (in which case the matter will be referred to the DCC Design & Assurance Director); and

(d) Whether the Testing Issue should be rectified pre-DCC Live or postponed to the post- DCC Live release.

The IRB is scheduled to occur every working day by default, and will be cancelled if not required.

Where a Testing Participant disagrees with the determination of the IRB they may request that DCC refers the matter to the SEC Panel, as if Section H14.43 applied. Note that this is only available where a Testing Participant disagrees with the manner in which a Testing Issue should be resolved.

12.5. Reporting of Test Issues

Information on the status of test issues will be reported by the DCC Systems Integrator to DCC in the weekly Test Execution reports described in 10.2 above.

DCC will report information regarding Testing Issues that have the potential to impact testing undertaken by Testing Participants during End to End Testing.

12.6. Test Issue Management Process

The detailed Test Issue Management process will be reviewed and revised in conjunction with the creation of the Release Test Plan.

The high level lifecycle for test issues raised during testing is shown in the following diagram.

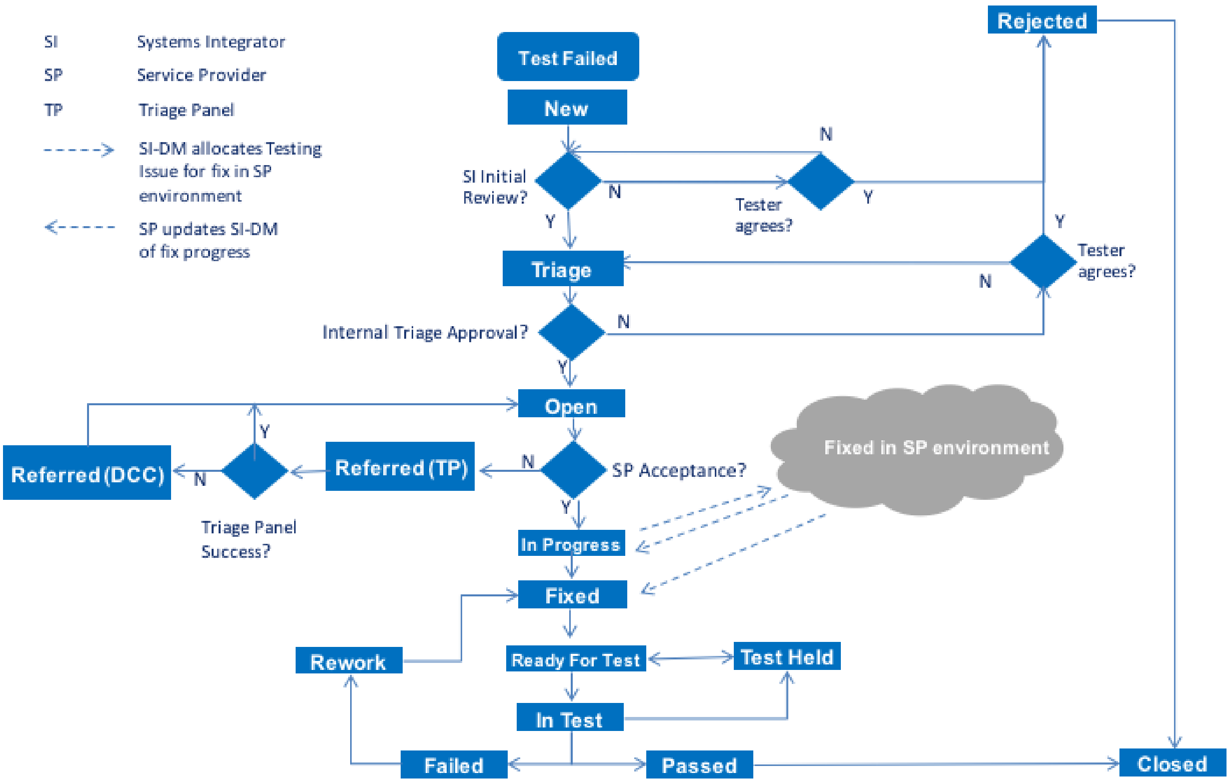


Figure 3 – Test Issue Lifecycle (with transition states)

Note that test issues can be passed back to "Triage" from the various process steps (e.g. "Failed PIT"), but these links are not shown on the diagram in order to preserve clarity.

Test Issues which are agreed to be a Change will follow the DCC Change Control process (set out in the "Core SP Change Management Process" document).

Testing Issues Resolution Process will apply for this release, which is available at the following link:

https://www.smartenergycodecompany.co.uk/docs/default-source/sec- documents/guidance/decc-guidance---testing-issue-resolution-process.pdf?sfvrsn=4

DCC will have the final judgement on the severity of a particular defect based on the impact on User operations.

12.7. Test Issue Severities and Priorities

The following table lists the standard Test Issue Severities. The Severity of a Testing Issue relates to the impact it would have on **Users and Parties, and/or DCC,** if released into production. Particular consideration should be taken of the impact on end consumers, especially those in vulnerable circumstances.

Issue Severity	Description
1	A Test Issue which: • Prevents a User or large group of Parties from using the DCC Systems; • Has a critical adverse impact on the activities of Users and Parties, and/or DCC; • Could cause significant financial loss and/or disruption to the DCC services or

	DCC Parties; or • Results in any material loss or corruption of data. Non-exhaustive examples: • An issue leading to non-availability of the DCC Services; • An issue leading to non-availability of the CSP core solution element(s).
2	A Test Issue which: • Has a major (but not critical) adverse impact on the activities of Users and Parties, and/or DCC but the service is still working at a reduced capacity; or • Causes limited financial loss and/or disruption to Users and Parties, and/or DCC Non-exhaustive examples: • An issue leading to non-availability of the network management centre; • An issue leading to loss of resilience of the SM WAN gateway; • Large areas of functionality will not be able to be tested.
3	A Test Issue which: • Has a major adverse impact on the activities of Users and Parties, and/or DCC but which can be reduced to a moderate adverse impact through a work around; or • Has a moderate adverse impact on the activities of Users and Parties, and/or DCC.
4	A Test Issue which: • Has a minor adverse impact on the activities of Users and Parties, and/or DCC Non-exhaustive examples: • Minor service interruptions in the business process or functionality of the DCC Systems and/or Services
5	A Test Issue which: • Has minimal impact to the activities of Users and Parties, and/or DCC Non-exhaustive examples: • Trivial issues with workarounds which are noted for future releases but minimal impact of running existing services

Table 16 Test Issue Severities

The following table lists the standard Test Issue Priorities. The priority of a Test Issue is the impact of the issue on **testing** progress – it is a measure of how quickly the issue needs to be fixed to allow development and testing to continue.

Issue Priority	Description
1 – Urgent	Has a severe impact on testing. Must be fixed immediately. A critical set of functionality scoped to be tested cannot be completed and needs this issue fixed before testing can continue.

2 – High	Has a major impact on testing. Should be fixed within a day of the issue being logged. A major set of functionality can only be tested by use of a complicated workaround which is slowing down test progress.
3 – Medium	Has a medium impact on testing. The issue could be fixed before release of the current version is in development. Incident affects pass success on some tests but the issue can be by-passed for other tests by means of a simple workaround.
4 – Low	Has a minor impact on testing. The issue would be fixed if there is time, but it could be deferred until another build release. The issue is normally cosmetic in nature and does not affect the key delivery of the business requirements

Table 17 Test Issue Priorities

13. Test Resources

Given the scale of Release 2.0, and the number of organisations supporting its delivery, this document will not provide detail of the DCC internal teams or the DCC Service Providers who will be undertaking the actual testing, but does provide detail of the DCC Test Assurance Team who are responsible for assuring compliance with this Testing Approach Document.

The Test Phase Approach Documents will also highlight how Release 2.0 will impact Release 1.0 resources.

This section also describes the Testing Stubs which will be used, and the other Testing Tools.

13.1. Test Assurance Team

Notwithstanding any organisational change at DCC affecting the structure of the team, dedicated DCC resources will support the assurance of testing described in this document.

The functions and services delivered by the DCC Test Assurance Team shall include:

(a) Systems Test Assurance – responsible for assuring the progress of testing, including witnessing and observing testing within PIT, DIT,SIT and TTO; reviewing test plans, scripts and scenarios; undertaking User Acceptance Testing; providing evidence and documents into the Test Assurance Board meetings; assuring reporting by Service Providers. This team also includes the Business Acceptance Testing and Operational Acceptance Testing resources

(b) Issue Management – responsible for operating the issue management process; including chairing the Issue Resolution Board and reporting on issues for all test phases except PIT. Responsible for producing reports on testing issues, including providing regular reporting to DCC problem management on issues potentially affecting the DCC production solution

(c) Device Management – responsible for the use of Devices in DIT and UIT; maintaining GFI Testing and the Meter Protocol Emulator; providing Device expert support to triage and issue management processes; planning and managing ongoing DCC interoperability testing events; reporting on Device testing

(d) Test Assurance Management – responsible for reporting progress to industry; point of escalation for testing participants; conducting Test Assurance Board meetings; managing independent audit and assurance providers; maintaining this approach document; submitting evidence and reporting to SEC Panel and the Secretary of State as required

(e) Industry Test Team – responsible for supporting the SREPT and UEPT entry process activities; supporting user testing and managing relationships with testing participants; reporting on user testing

13.2. Test Stubs

This Testing Approach Document allows for the use of Testing Stubs where appropriate across each of the testing phases to support entry into and completion of those phases. Individual Service Providers, DCC and Testing Participants may utilise Testing Stubs to simulate or emulate elements of the solution which are either not available or practical for use in the relevant test phase. For example, within SIT, a Service User Simulator will be used to act in the role of a DCC User.

DCC has developed a Meter Protocol Emulator, capable of acting as an Electricity or Gas meter, or as a PPMID or HCALCS Device. This emulator will be used as part of SIT for Release 2.0, be used for User Entry Process Testing and made available to Testing Participants in the DCC Labs should they choose to use it in UIT.

The DCC Meter Protocol Emulator will not be used by Service Providers in PIT, they are responsible for meeting their own emulator requirements during PIT.

The Meter Protocol Emulator will be updated to enable its use to complete testing for Release 2.0 including the addition of acting as an In Home Display, and will be subject to an independent assurance activity.

13.3. Testing Tools

13.3.1 ALM

HP's Application Life Management (ALM) Test Management tool will be used to manage testing and test issues in all phases after PIT, where test management is supported by the DCC Systems Integrator.

HP ALM will be used to maintain:

- Requirements connecting to Test Scenarios/ Scripts and defects for traceability and reporting purposes across respective test phases.
- The test scripts
- Execution details of each test script (e.g. when run, by whom)
- Evidence of system behaviour (e.g. screen shot, log file) observed during execution
- The result of execution (pass, fail)
- Defects raised for failed tests (which will be linked to the failed tests).

13.3.2 GFI Testing Service

DCC shall make available an enhanced GFI testing service, being the testing service referred to in X9.1 of the SEC, enhanced to enable eligible persons to test the interoperability of Devices (other than those comprising

Communications Hubs) with the Modified DCC systems and with v1.1 CHs, such that those Devices are able to respond to Commands received from or via DCC in accordance with the requirements defined in the GB Companion Specification version 3.0. This testing service shall be made available on the same basis as Testing Services under Section H14 (Testing Services), but subject to this Testing Approach Document. This service and the requisite Test Communications Hubs must be made available by DCC by the commencement of SIT (see Section 16 – Interoperability Testing Events for further detail of this Testing Service).

13.3.3 Communications Hubs for Testing

Release 2.0 requires that DCC makes the following Dual Band Test Communications Hub variants available for participants to request for use in the UIT environment in both the DCC and remote test labs, alongside non-instrumented Communications Hubs:

(a) Prototype Test Communications Hub (PTCH) – this variant will be available to request for use in UIT, at DCC Test and Remote Test Labs if required, prior to the completion of SIT. This variant will enable participants to assure HAN connection and interoperability with other Devices, but may not support testing of all 1.1 Communications Hub functionality

(b) Instrumented Test Communications Hub (ITCH) – this variant will be available to request for use in UIT, at DCC and Remote Test Labs. It will allow participants to diagnose and assure HAN performance and interoperability with other Devices, and undertake functional testing. The ITCH shall be capable of producing logs in a format that can be easily interrogated.

A Deliverable explaining the capabilities of PTCH and ITCH will be produced by DCC.

The ITCH for Dual Band will not replace the ITCH for Single Band CHs.

13.4. Test Laboratories

Each CSP will provide a test lab facility and supporting services to enable Parties to complete User Entry Process Testing using the DCC Meter Protocol Emulator, DCC meters and DCC Communications Hubs, alongside enabling Parties to test with their own Devices and DCC Communications Hubs and SM WAN infrastructure in the User Integration Testing environment.

DCC will continue to support the use of remote test labs by Testing Participants.

13.5. Assurance of Emulators and Tools

As described in section 17.4 below, and with SEC Panel Testing Advisory Group oversight, DCC will appoint independent parties to undertake assurance of any changes to the DCC Meter Protocol Emulator and the GFI tool. The assurance activities will include the provision of a report to DCC.

- In particular, the assurance will review the ability of the DCC Meter Protocol Emulator and GFI tool to support testing and assurance of GBCS v2.0 10.6.2.6 and 10.6.2.2.

- Completion of the independent assurance will be a pre-requisite for entry into SIT

14. Roles and Responsibilities

All parties involved in Release 2.0 testing shall:

- Follow the SEC definition for “Good Industry Practice”, i.e. the exercise of that degree of skill, diligence, prudence and foresight which would reasonably and ordinarily be expected from a skilled and experienced person engaged in a similar type of undertaking as that party under the same or similar circumstances

- Take all reasonable steps to facilitate achievement of the testing objectives

- Ensure that all testing issues are evaluated for the potential impact on the DCC production solution, at the point of raising the issue or during triage, and recorded as such on HP ALM

14.1. DCC Systems Integrator

DCC shall ensure that the DCC Systems Integrator will manage SIT and be responsible for the following activities:

(a) Assure Service Provider PIT by supporting DCC, where required for:

(i) Reviewing the SP PIT Approach documents;

(ii) Reviewing the SP System Test Plan and FAT plan;

(iii) Reviewing SP Requirements Traceability Matrix;

(iv) Reviewing SP FAT test scenarios and data

(v) Reviewing SP Test Completion Reports and Work Off Plans for Systems Test and FAT for PIT; and

(vi) Attending the SP Quality Gate Review.

(b) Producing and maintaining the SIT Approach, the Solution Test Plan and the SP UAT Test Plan;

Ensuring that SIT activities are carried out in accordance with the SIT Approach, the Solution Test Plan and the SP UAT Test Plan;

Overall planning and control of SIT, including chairing entry Quality Gates between FAT and Solution Test, and between Solution Test and User Interface Testing

Maintaining Risk, Assumption, Issue and Dependency Logs for SIT

Leading the design and creation of test scenarios, test scripts, test data and test environments for SIT

Preparing test execution and environment usage schedules for SIT

Supporting the other SPs in their assigned test preparation and execution activities within SIT

Managing test issue resolution, and supporting SPs in the resolution process for selective test phases

Producing the Test Stage Plans, Test Specifications, Test Traceability Matrices, Progress Reports and Test Completion Reports for SIT and DIT

Operating the master Configuration Management Plan

Operating the master Release Schedule

Operating the Environment Plan Support the Interoperability Test Events

14.2. DCC Service Providers

DCC shall ensure that the DCC Service Providers (including DCC in its role as provider of Enterprise Systems) shall:

(a) Manage its own PIT Test Phase, including their own processes, staff, test environments, test data, test tools including emulators and test labs. Other Service Provider PIT responsibilities include:

- Provide PIT Test Approach and PIT Test Plan documents to DCC ahead of test execution;
- Provide regular progress reports on testing and testing issues;
- Provide a Test Completion Report at the end of PIT, or an equivalent report for incremental gates throughout PIT;
- Support DCC in assuring, through witnessing and the review of evidence, the quality of PIT;

(b) Support the DCC Systems Integrator in:

- Planning and control of test phases;
- Design and creation of test scenarios, test scripts, test data and test environments;
- Preparing test execution and environment usage schedules;
- Diagnosing test issues;
- Producing Test Plans, Test Specifications, Requirements Traceability Matrices, Progress Reports and Test Completion Reports;
- Contributing to the Master Configuration Plan;
- Contributing to the master Release Schedule;
- Contributing to the Environment Plan;

Establish, maintain and control their own test environments, in terms of software/hardware configuration and access control;

For tests within their agreed test boundary, under the direction of the DCC Systems Integrator;

- Execute and monitor test scripts;
- Capture evidence;
- Report progress;

Resolve test issues for their solution elements and undertake PIT testing (including regression testing) of any fixes required

Support the interoperability test events

The CSPs will:

(a) Establish, maintain and control their own Test Labs;

(b) Procure and install 1.1 Communications Hubs in their Test Labs;

(c) Install, maintain and support DCC Device Emulators in their Test Labs;

(d) In conjunction with their Communications Hub manufacturers, obtain Communications Hub certifications from the relevant authorities.

14.3. DCC

DCC shall:

(a) Comply with its obligations under this Testing Approach Document (this document);

Ensure that activities attributed to Service Providers that are described in this document are undertaken;

Use its reasonable endeavours to ensure that SIT and DIT are completed as soon as is reasonably practicable to do so;

Enter into agreements with Device manufacturers to provide and support Devices for use in DIT, following appropriate qualification or selection activity;

Support the DCC Systems Integrator in the planning, control and operation of testing;

Assure planning, preparation and execution activities undertaken by the DCC Systems Integrator and Service Providers as detailed in this document and through the Test Traceability Matrix;

Operate and Chair the DCC Test Assurance Board process to review and approve the relevant Test Documents and issue the Approval to Proceed certificates, including the approval of test phase Completion Reports;

Operate and Chair the DCC Design Assurance Board; Participate in Quality Gate Reviews;

Agree with the DCC Systems Integrator and Service providers the subsets of Solution Tests to be witnessed in the UAT stage;

Witness the execution of UAT;

Specify, procure, provide and maintain the DCC Meter Protocol Emulator Devices and Service; and

Appoint and manage the independent audit and assurance activities described in this document.

15. Environments

Release 2.0 requires the following changes to the integrated DCC environments:

- an additional UIT environment – UITb for R2.0, with the existing UIT environment becoming UITa to mirror production

- an additional SIT environment for the Central & South Communications Service Provider

These additional environments will be available as required by the overall plan for Release 2.0. Specific deliverables relating to the management and use of environments, particularly co-existing UIT environments, will be published by DCC. This will clarify the approaches to issue and Device management, triage across environments, code streams and management.

Each DCC Service Provider is responsible for establishing, maintaining and controlling its own Test Environments. Service Providers are also required to design, develop and support Test Stubs, Test Data, Test Labs and necessary hardware installations (Communication Hubs/Smart Meters/Other Devices) that are required for execution of respective test phases.

DCC Service Providers are also expected to follow necessary software installation versions, firmware versions and adhere to ZigBee and other relevant certificates.

15.1. Code Management

DCC will operate a process to merge code changes and fixes from production into the SITB environment used by R2.0. The SIT Approach Document will provide detail of the frequency of the operation of this process.

16. Device Interoperability Testing Events

DCC will continue to host interoperability testing events, with a minimum of four taking place in a twelve month period.

These events will see the CSPs provide resources and communications hub hardware to enable other participants to test their Devices with.

The aim of the interoperability events are to provide a testing environment where Device manufactures can test with the Communications Hubs in an informal yet structured way. The events are generally scheduled to test features before they reach SIT, in order to provide an element of risk mitigation.

The Interoperability Testing Events will support Release 2.0 by acting as Market Facilitation Events – allowing participants to test interoperability with Sub GHz HAN Devices.

DCC will continue to provide notice of, and reporting, following these events.

To support these events the Communications Service Providers will provide ZigBee Sub GHz Test Devices, compliant with the relevant technical specifications.

17. Audit and Independent Assurance

As part of the testing approach for Release 2.0 further assurance of the testing and the tools used will be subject to independent review.

17.1. Independent Audit of SIT Exit Criteria

DCC shall appoint an auditor (that is sufficiently independent of Parties) to monitor SIT activities and to confirm that the exit criteria have been met for each Region.

This appointment will take place a minimum of one month prior to the commencement of SIT using the existing DCC Audit and Assurance Framework Agreement.

DCC shall engage with the SEC Panel Testing Advisory Group to seek a minimum of one representative to participate in the definition of the audit scope, and the selection of the SIT auditor.

The auditor will be procured against the scope that is set out below and tender responses assessed by DCC against criteria that will include:

(a) Independence from DCC and the DCC Service Providers;

(b) Proposed Audit Approach;

(c) Relevant Experience; and

(d) Cost

The identity of the SIT auditor will be provided to the Authority, SEC Panel and Secretary of State following contract award.

17.2. SIT Audit Scope

The SIT audit will encompass activities that are undertaken in the Solution Test and SP UAT testing stages, and will provide confirmation that all exit criteria have been met including that:

- Testing had been conducted in accordance with this approach document;
- The coverage and completeness of testing, making specific reference to the Test Traceability Matrix, and the operation of the heatmap test management tool by the SI;
- A robust issue/defect resolution process has been used, including the manner in which issues have been closed, and that no bias has been introduced into the process.

The SIT Auditor will be engaged and will monitor the matters being tested pursuant to SIT during Release R2.0 and confirm that the exit criteria have been met for each Region.

17.3. Approach to SIT Audit

The SIT audit will be undertaken on a Region by Region basis.

The auditor will be required to produce an audit approach document for review by DCC prior to commencement of the work. A risk-based approach will be taken to the audit and the manner in which the risk assessment will be conducted should be set out in the audit approach document.

The audit will include: observation of test activities during Solution Test and witnessing during SP UAT; review of test artefacts; suitability of testing methodology and review of issue resolution logs. The auditor may also attend selected IRB and Triage Panel meetings, alongside participating in Test Assurance Board meetings.

The auditor will inform DCC of any observations that are raised during Solution Test within 1 Working Day, such that DCC can initiate corrective action at the earliest possible opportunity. DCC will inform the Panel's Testing

Advisory Group of any such observations and corrective actions, and may request the attendance of the SIT auditor at monthly Testing Advisory Group meetings.

A report on the testing that has been conducted within a Region, including confirmation that the exit criteria have been met, will be provided to DCC no later than 2 Working Days following the completion of SIT for that Region.

DCC and the SIT Auditor will review the report with the Panel's Testing Advisory Group as part of the SIT exit governance process.

DCC shall include the independent auditor’s report as part of the evidence submitted to SEC Parties and the Secretary of State as part of the SIT Completion process.

17.4. Assurance of Testing Tools and Stubs

DCC shall appoint a party or parties to undertake independent assurance assessments of the updates to the following testing tools being updated to support testing for Release 2.0:

(a) ALM

(b) DCC Device Emulator

(c) GIT For Industry tool (GFI)

Where relevant the independent assurance of the readiness of these tools for their use in Release 2.0 will be completed ahead their use in test phases. For example, the assurance of the Device Emulator shall be completed prior to SIT entry, and the report will be required as one of the SIT entry criteria.

17.5. Assurance of 2.4GHz and Sub GHz RF Coverage

DCC shall appoint a suitably competent independent party to review the results of Joint Test Methodology Testing against the acceptance criteria specified in the Joint Test Methodology. The review shall assure that DCC has performed sufficient testing to demonstrate the degree to which Dual Band Communications Hubs meet expectations for RF Coverage.

Version 12.0

APPENDIX AK

SEC Variation Testing Approach Document for SMETS1 Services

Contents

1 Definitions and Interpretations

1.1 In this SEC Variation Testing Approach Document for SMETS1 Services (SMETS1 SVTAD), except where the context otherwise requires, the expressions in the left-hand column within Table 1.1 shall have the meanings given to them in the right-hand column within Table 1.1. Where not defined in this SMETS1 SVTAD, capitalised terms used in this document are set out in Section A of the Amended SMETS1 SEC or in Schedules or Appendices of the Amended SMETS1 SEC.

1.2 Where there are conflicts between this SMETS1 SVTAD and any of the Testing Approach Documents, this SMETS1 SVTAD shall take precedence.

1.3 Where obligations are expressed in respect of DCC Service Providers in this SMETS1 SVTAD, these shall be construed as obligations on the DCC. Where text is included in this SMETS1 SVTAD which does not explicitly place obligations on a Party, the Panel, or Testing Participant, these shall be construed as obligations on the DCC.

Table 1.1 SMETS1 SVTAD Definitions

Term	Meaning
Active Meter Migration Testing (Active MMT)	has the meaning set out in the MTAD.
Additional SR Testing	has the meaning set out in SEC Appendix R the Common Testing Scenarios Document
Amended SMETS1 SEC	means planned changes to the SEC that do not comprise part of a SMETS1 Uplift, and: • in the case of changes to Sections of the Code, those that have most recently been published by the Secretary of State setting out Services in respect of SMETS1 Smart Metering Systems and other provisions relating to SMETS1 Smart Metering Systems that apply in respect of: • the Device Models and/or Device Model Combinations that are being used in testing in respect of IOC, MOC, or FOC, as the case may be and /or • the Device Models and/or Device Model Combinations that are the subject of the DMCT Process; and • in the case of changes to Schedules and Appendices of the Code, the versions that apply in respect of: • the Device Models and/or Device Model Combinations that are being used in testing in respect of IOC, MOC, or FOC, and/or • the Device Models and/or Device Model Combinations that are the subject of the DMCT Process, which are set out in a document published by the Secretary of State entitled “SMETS1 Testing Baseline Requirements Document”.
Capability Release	means each of Initial Operating Capability (IOC), Middle Operating Capability (MOC) and Final Operating Capability (FOC).

Completion Report	means a report that is produced at completion of a Test Phase setting out evidence demonstrating how the criteria for the completion of that Test Phase have been met.
Depth and Breadth of Regression Testing	means the document produced pursuant to Clause 7.7 that sets out the depth and breadth of regression testing planned for a Migration Test Phase and SIT Test Phase relating to the same DMC.
Depth and Breadth of SIT	means the document produced pursuant to Clause 12.7 that sets out the depth and breadth of testing planned to be undertaken for a SIT Test Phase.
Device Model Combination (DMC)	means a combination of SMETS1 Device Models.
Dormant Meter Migration Testing (Dormant MMT)	has the meaning set out in the MTAD.
DMCT EPCL Report	means the report that is prepared pursuant to Clause 20.41.
DMCT Migration Testing (DMCT MT)	means testing undertaken for the purpose of Clause 20.15 (a).
DMCT Non-Standard Test Pack	means a test pack that is not the Standard Dormant DMCT Migration Test Pack or the Standard DMCT Service Reference Variant Test Pack.
DMCT Process	means the process, procedures and testing set out in Clause 20. DMCT stands for Device Model Combination Testing.
DMCT Schedule	means the schedule published pursuant to Clause 20.10.
DMCT Service Reference Variant Testing	means testing undertaken for the purpose of Clause 20.15 (b).
DMCT Status List	means the list produced pursuant to Clause 20.8.
DMCT Testing Report	means the report that is prepared pursuant to Clause 20.34, Clause 20.35 or Clause 20.38 as the case may be.
Energy Supplier	means a holder of an Electricity Supply Licence and / or a Gas Supply Licence.
Entry Criteria	means the criteria that must be met in order for a Test Phase to start.

EPCL means the list of SMETS1 Eligible Product Combinations.

Exit Criteria means the criteria that must be met in order for a Test Phase to complete.

Final Operating Capability (FOC) has the meaning set out in the DCC's delivery plan for SMETS1 services produced pursuant to Condition 13 of the DCC Licence.

In-Scope DMCs means DMCs comprising SMETS1 Smart Metering Systems that are in scope for enrolment which:

a. are not MOC SIT DMCs;
b. are not IOC Migration Testing DMCs; and
c. in the case of FOC, are not DMCs that have been selected for use in a Migration Test Phase and/or a SIT Test Phase, except where the DCC has issued a notification, pursuant to Clause 20.2A, that such a DMC should be included in the DMCT Process.

For this purpose the SMETS1 Smart Metering Systems that are in scope for enrolment are those which, once enrolled, would comprise SMETS1 Meters for which the Secretary of State has concluded that the DCC is required to provide SMETS1 Services (or, if such conclusions have not yet been reached, those for which the Secretary of State is consulting on as being minded to require the DCC to provide SMETS1 Services), and have not subsequently been determined to be out of scope pursuant to Clause 1.9 (b) of Appendix AL.

Initial Operating Capability (IOC) has the meaning set out in the DCC's delivery plan for SMETS1 services produced pursuant to Condition 13 of the DCC Licence.

IOC Migration Testing DMCs means for DMCs that would utilise the operating capability that is delivered at IOC:

a. any DMC against which Migration Testing in respect of a planned entry on the EPCL comprising that DMC has completed; or
b. where Migration Testing has not completed, any DMCs that have been selected for Migration Testing in respect of a planned entry on the EPCL comprising that DMC and have not been de-selected.

Middle Operating Capability (MOC) has the meaning set out in the DCC's delivery plan for SMETS1 services produced pursuant to Condition 13 of the DCC Licence.

Migration Completion Report has the meaning set out in the MTAD.

Migration Dormant Meter Readiness Testing has the meaning set out in the MTAD.

Migration Testing (MT) means:

a. Active Meter Migration Testing;
b. Dormant Meter Migration Testing; and/or;
c. Mixed Meter Migration Testing.

Migration Test Phase has the meaning set out in the MTAD.

Migration Testing Approach means a document that sets out supplementary rights and obligations in relation to Migration

Document (MTAD)	Testing and Migration DUST.
Migration DUST	means a Testing Service provided by the DCC within Device and User System Testing to enable testing of the interactions with the systems and processes used by the DCC to Migrate SMETS1 Installations.
Migration Solution Testing	has the meaning set out in the MTAD.
Mixed Meter Migration Testing (Mixed MMT)	has the meaning set out in the MTAD.
MOC SIT DMCs	means: a. any DMC against which SIT for MOC has concluded and demonstrated that the DCC can successfully process SMETS1 Service Requests and relevant SMETS1 Alerts in respect of that particular DMC in accordance with the Amended SMETS1 SEC; or b. where SIT has not concluded, any DMCs that have been selected for SIT for MOC and have not been de-selected.
Modified DCC Total System	means the DCC Total System as will be modified to enable the delivery of Services as set out in the Amended SMETS1 SEC.
Pre-Integration Testing (PIT)	means a set of tests undertaken by a DCC Service Provider to verify that the part of the Modified DCC Total System being provided by that DCC Service Provider meets the SMETS1 Testing Objective.
Secure Meters Device Models	means SMETS1 ESME Device Models, SMETS1 GSME Device Models, and SMETS1 CH Device Models manufactured by Secure Meters (UK) Ltd (company number 02199653).
SIT Audit	means a review, conducted by the SIT Auditor, of the testing and assurance undertaken by the DCC during a SIT Test Phase.
SIT Auditor	means the independent person appointed pursuant to Clause19.1.
SIT Auditor Report	has the meaning set out in Table 10.1.
SIT Planned Tests	means the tests that result from the Depth and Breadth of SIT document established pursuant to Clause 12.7.
SMETS1 Interface Testing	means the testing activity that further assures, through the involvement of Users, that the part of the Modified DCC Total System that comprises the DCC User Interface operates in accordance with the Amended SMETS1 SEC.
SMETS1 Interface Test Completion Report	has the meaning set out in Table 10.1.

SMETS1 Services	means Services in relation to SMETS1 Smart Metering Systems.
SMETS1 Testing Objective	means the objective set out in Clause 5.
SMETS1 Uplift	means amendment(s) to the Code that are not planned to be delivered as part of a Capability Release or under the DMCT Process and, in the case of more than one amendment, that are planned to be delivered at the same time.
SMETS1 Uplift DCC Testing	means testing by the DCC of any changes to the DCC Total System that would arise as a result of a SMETS1 Uplift.
SMETS1 Uplift DCC Testing Approach Document	means any document produced pursuant to Clause 21 that sets out the approach to SMETS1 Uplift DCC Testing.
SMETS1 Uplift DCC Testing Completion Report	means the report prepared pursuant to Clause 21.11.
SMETS1 Uplift Mandated User Testing	means mandatory testing by one or more Users of all or part of any changes to the DCC Total System that would arise as a result of a SMETS1 Uplift.
SMETS1 Uplift Mandated User Testing Document	means any document prepared pursuant to Clause 21 that sets out the approach to SMETS1 Uplift Mandated User Testing.
SMETS1 Uplift Testing	means SMETS1 Uplift DCC Testing and/or SMETS1 Uplift Mandated User Testing as the case may be.
Standard Dormant DMCT Migration Test Pack	means a set of tests undertaken for the purposes of Clause 20.15 (a) in respect of SMETS1 Installations comprising only Dormant Meters.
Standard DMCT Service Reference Variant Test Pack	means a set of tests undertaken for the purposes of Clause 20.15 (b).
Solution Test	means a test stage within the System Integration Test Phase that will include testing to ensure that changes to existing interfaces, and new interfaces within the solution, as a result of the Amended SMETS1 SEC, work as intended and to confirm that integration of those parts of the Modified DCC Total System that have changed as a result of the Amended SMETS1 SEC has not caused any regression to existing functionality.
System Capacity Testing (SCT)	means additional non-functional tests that assure that the DCC is capable of meeting the SMETS1 Testing Objective.

System Capacity Testing Approach Document (SCTAD) means a document that sets out the supplementary rights and obligations in relation to System Capacity Testing.

Systems Integration Testing (SIT) means a set of tests undertaken by the DCC and the DCC Service Providers collectively to verify that the parts of the Modified DCC Total System being provided by those DCC Service Providers and the DCC operate together in a way that meets the SMETS1 Testing Objective (excluding those parts that are subject to Migration Testing).

TAG has the meaning given in Clause 3.1.

Testing Approach Document(s) means one or more of the Migration Testing Approach Document, and the System Capacity Testing Approach Document.

Test Assurance Board (TAB) means the DCC body established to approve or reject DCC assurance reports relating to code promotion between environments; consider Test Phase Completion Reports; and approve or revoke the issuance of Test Completion Certificates.

Test Completion Certificate has the meaning of a certificate issued by the DCC to a DCC Service Provider when the DCC considers that the DCC Service Provider has met the relevant Exit Criteria for a Test Phase.

Testing Issue Thresholds means the maximum number of extant Testing Issues that may be permitted:

a. at Test Phase exit;
b. in the case of testing undertaken as part of the DMCT Process, at successful test completion; or
c. in the case of testing undertaken as part of SMETS1 Uplift DCC Testing, at successful test completion.

Test Phase means one of the following:

- Pre-Integration Testing (PIT);
- in the case of IOC, System Integration Testing (SIT) in respect of the DMCs that have been selected pursuant to Clause 13 for the Capability Release, excluding any DMC that has subsequently been de-selected from SIT;
- in the case of MOC and/or FOC, System Integration Testing (SIT) in respect of each planned entry on the EPCL for each DMC that has been selected pursuant to Clause 13 for the Capability Release, excluding any DMC that has subsequently been de-selected from SIT;
- In the case of IOC, SMETS1 Interface Testing;
- Active Meter Migration Testing (Active MMT) in respect of a specified planned entry on the list of SMETS1 Eligible Product Combinations;
- Dormant Meter Migration Testing (Dormant MMT) in respect of a specified planned entry on the list of SMET1 Eligible Product Combinations;
- Mixed Meter Migration Testing (Mixed MMT) in respect of a specified planned entry on the list of SMETS1 Eligible Product Combinations; or
- System Capacity Testing (SCT).

Test Stage means a sub-component part of a Test Phase that may be executed sequentially or in parallel with other sub-components within that Test Phase.

Test Traceability Matrix (TTM) means a document employed to map requirements to test cases that is used to demonstrate how the requirements are covered by the test cases.

Work Off Plan	Means a plan produced on completion of a Test Phase or at the completion of Interface Testing, that specifies the outstanding Testing Issues, and the dates by which these Testing Issues should be resolved.

2 General

2.1 This document is the SEC Variation Testing Approach Document for SMETS1 Services.

2.2 Section X11.7 of the Code requires that the DCC and each person other than the DCC that participates in (or is required to participate in) testing under a SEC Variation Testing Approach Document shall comply with the SEC Variation Testing Approach Document.

2.3 Section X11.8 of the Code specifies that Section H14 of the Code (Testing Services) and the Enduring Testing Approach Document shall apply in respect of testing under a SEC Variation Testing Approach Document as if such testing was a Testing Service under Section H14.34 (Modification Implementation Testing); and each participant in such testing shall be deemed to be a Testing Participant for such purposes.

2.4 This SMETS1 SVTAD sets out:

(a) the testing that is required to be undertaken prior to each of IOC, MOC and FOC of the SMETS1 Services and obligations to undertake such testing;

(b) the requirement for the DCC to undertake the DMCT Process; and

(c) the rules to apply to the development of any SMETS1 Uplift DCC Testing and SMETS1 Uplift Mandated User Testing.

3 Testing Approach Documents

3.1 The Testing Approach Documents shall be developed by the DCC. In developing a Testing Approach Document, the DCC shall consult with the Testing Advisory Group of the Panel (**"TAG"**), Parties and other relevant stakeholders prior to the submission of the document to the Secretary of State.

3.2 The DCC shall submit each draft Testing Approach Document to the Secretary of State, indicating:

(a) why the DCC considers the draft to be fit for purpose;

(b) copies of the consultation responses received; and

(c) any areas of disagreement that arose during the consultation process and that have not been resolved.

3.3 The DCC shall comply with any direction given by the Secretary of State to re-consider, re-consult, and/or re-submit the draft document.

3.4 Once a Testing Approach Document has been approved by the Secretary of State, the DCC and each person other than the DCC that participates in (or is required to participate in) testing in the Test Phase to which that Testing Approach Document relates shall comply with that Testing Approach Document.

3.5 The Testing Approach Document for a Test Phase must describe the Parties or other persons who are entitled or required to participate in that Test Phase.

4 Modification of the SMETS1 SEC Variation Testing Approach Document and Testing Approach Documents

4.1 This SMETS1 SVTAD and the Testing Approach Documents shall be modified by the DCC in accordance with any direction to do so made by the Secretary of State. The DCC shall consult with Parties concerning any proposed modification to those documents in accordance with any direction to do so made by the Secretary of State.

4.2 This SMETS1 SVTAD and the Testing Approach Documents may be modified by the DCC following consultation with Parties and other relevant persons, the TAG, the Authority, and the Secretary of State, provided that:

(a) prior to making any such modification, the DCC must present to the Secretary of State a summary of the consultation responses received and an explanation of how the DCC has taken them into account; and

(b) it may not be modified to the extent that the Secretary of State directs otherwise.

4.3 This SMETS1 SVTAD and the Testing Approach Documents may be modified by the DCC without consultation where the modification is of a minor typographical nature or where the modification has no material effect on the rights or obligations of Parties or any other person who is entitled to undertake testing in accordance with this document. Prior to making such changes, the DCC shall provide notice of its intention to do so, together with the intended changes, to relevant stakeholders and the Code Administrator and shall publish such notice on the DCC Website. Additionally, the DCC shall notify relevant stakeholders and the Code Administrator and shall publish the revised document(s) on the DCC Website once the changes have taken effect.

5 SMETS1 Testing Objective

5.1 With the exception of testing undertaken pursuant to Clause 21, the objective of testing undertaken pursuant to this SMETS1 SVTAD (the "**SMETS1 Testing Objective**") is to:

(a) demonstrate that the DCC, the component parts of the Modified DCC Total System and SMETS1 SMSO Systems where used by a SMETS1 SMSO acting in the capacity of DCC Service Provider:

(i) operate; and

(ii) interoperate with User Systems, Active Meters, Dormant Meters and Smart Metering Systems comprising SMETS1 and SMETS2+ Devices,

to the extent necessary for the DCC to comply with the relevant requirements in Sections F, G, H, L, N and P of the Amended SMETS1 SEC;

(b) demonstrate the capability of a User to interoperate with the DCC User Interface that forms part of the Modified DCC Total System before becoming eligible to send Service Requests in respect of SMETS1 Devices; and

(c) provide a service to enable testing of the interactions with the DCC systems and processes used to Migrate SMETS1 Installations.

5.2 The Testing Objective is demonstrated in the following ways:

(a) SIT demonstrates that the individual systems and processes of the Modified DCC Total System can operate together and interoperate with Smart Metering Systems comprising SMETS1 and SMETS2+ Devices to meet the Testing Objective, except where the systems are those referred to in Clause 5.2 (c);

(b) SMETS1 Interface Testing demonstrates that the Modified DCC Total System can interoperate with User Systems;

(c) Migration Testing demonstrates that:

(i) the individual systems of the Modified DCC Total System and SMETS1 SMSO Systems where used by a SMETS1 SMSO acting in the capacity of DCC Service Provider used to Migrate SMETS1 Installations can operate together and interoperate with Active Meters, Dormant Meters, User Systems, and Smart Metering Systems comprising SMETS1 Devices and SMETS2+ Devices to meet the Testing Objective; and

(ii) the systems used by a SMETS1 SMSO that apply a configuration to Dormant Meters and any associated Devices, and/or instruct the upgrade of the firmware on Dormant Meters and any associated Devices, (in each case pursuant to the requirements in clause 4.27 of the Transition and Migration Approach Document) operate and interoperate with Dormant Meters to meet the Testing Objective;

(d) System Capacity Testing demonstrates that the operational performance of the Modified DCC Total System is not adversely affected by the introduction of SMETS1 Services and that the SMETS1 Services will operate at the requisite performance levels;

(e) through the provision of Migration DUST; and

(f) the DMCT Process demonstrates that the DCC's processes and the component parts of the Modified DCC Total System interoperate with SMETS1 Smart Metering Systems and SMETS1 SMSO Systems such that the DCC is able to successfully Migrate SMETS1 Installations and process SMETS1 Service Requests and relevant SMETS1 Alerts in respect of Smart Metering Systems that comprise a particular Device Model Combination in accordance with the Amended SMETS1 SEC.

5.3 Testing shall be performed by the DCC in accordance with Good Industry Practice.

5.4 In order to achieve the SMETS1 Testing Objective the DCC shall undertake testing activities which include the following:

(a) communication tests from Users to SMETS1 Devices and from SMETS1 Devices to Users;

(b) verifying that all other functional changes, in accordance with the relevant requirements in Sections F, G, H, L, N and P of the Amended SMETS1 SEC, operate as intended;

(c) wherever practicable, the use of automated testing;

(d) monitoring and evaluation of all impacts on the Services, including regression testing of the Service, as defined in this SMETS1 SVTAD and the relevant Testing Approach Documents;

(e) monitoring and evaluation of test data used for testing under this SMETS1 SVTAD and the relevant Testing Approach Documents; and

(f) resolution of Testing Issues via the Testing Issue resolution process as set out in Clause 14.

5.5 PIT, SIT, System Capacity Testing and Migration Testing shall be performed in respect of each of IOC, MOC, and FOC. The SMETS1 Testing Objective applies in respect of each of IOC, MOC, and FOC. The DMCT Process shall apply in respect of any In-Scope DMCs and the SMETS1 Testing Objective shall apply in respect of the DMCT Process.

Overlapping of SMETS1 Testing

5.6 The DCC shall not overlap any SIT and SMETS1 Interface Testing without the prior review of the TAG and agreement of the Panel. For MOC and FOC, the DCC may overlap any Migration Test Phase and any SIT Test Phase in respect of the same, or different, planned entries on the EPCL, however when running an end of cycle for a SIT Test Phase the DCC shall use device sets that have exited end of cycle testing for a Migration Test Phase for the same DMC.

6 SMETS1 Security Testing

6.1 Security testing is integral to all Test Phases and shall be undertaken to demonstrate that the Modified DCC Total System remains Secure.

6.2 Security testing shall be managed by the DCC and undertaken in conjunction with the DCC Service Providers in accordance with Good Industry Practice.

6.3 In order to demonstrate the security of the Modified DCC Total System, during testing the DCC shall undertake activities which shall include the following:

(a) ensuring that all security-enforcing functionality has been adequately tested, including user account provisioning and resets, protective monitoring, SMKI/key management, gateway interfaces, and network infrastructure; and

(b) confirming that security needs have been taken into account in the development of test use cases and the subsequent development of test scripts, including testing of all security-relevant 'misuse' cases, i.e. error conditions that would cause a potential security alert to be raised.

6.4 The DCC shall ensure that appropriate security testing in respect of the Modified DCC Total System is performed across all Test Phases, and that it covers both applications and infrastructure. This will be achieved by:

(a) reviewing and approving IT security vulnerability/penetration test approaches and scope;

(b) reviewing testing reports, identifying outstanding Testing Issues, and ensuring that their security impacts are properly considered at TAB approval points;

(c) ensuring that all security functional and non-functional requirements are appropriately tested (or otherwise assured) and evidenced through the use of a traceability matrix for each Test Phase; and

(d) reviewing all identified Testing Issues that impact security to ensure that they are satisfactorily resolved, or where such issues remain outstanding notify the relevant persons before progression to the next Test Phase and/or before live operation.

7 <u>Approach to Testing</u>

7.1 This SMETS1 SVTAD sets out the generic testing requirements for all Test Phases for each of IOC, MOC, and FOC. Where there are specific testing requirements for a Test Phase these shall be set out in this SMETS1 SVTAD or in the Testing Approach Document for that phase.

7.2 The PIT, SIT, SCT, and MT Test Phases shall be conducted for each of IOC, MOC, and FOC.

7.3 SMETS1 Interface Testing shall be conducted for IOC only. Should a material change to the DCC User Interface be proposed as part of MOC and/or FOC, then SMETS1 Interface Testing shall be repeated for that operating capability. Where any change to the DCC User Interface is proposed as part of MOC and/or FOC, the DCC shall consult with the TAG on whether such change is considered to be material. The DCC shall subsequently notify the Secretary of State of the DCC's views and that of TAG as to whether the change is considered to be material. Where directed to do so by the Secretary of State, the DCC shall propose and consult upon the necessary changes to this SMETS1 SVTAD and any relevant Testing Approach Documents to support repeated SMETS1 Interface Testing in respect of MOC and/or FOC, in accordance with Clause 4. Where the Secretary of State has not issued a direction under this Clause 7.3, then Clause 5.2 (b) shall be deemed to have been met by virtue of SMETS1 Interface Testing having been successfully completed for IOC.

7.4 In undertaking testing for a Capability Release, the DCC shall:

(a) include the testing in each SIT Test Phase of the new functionality that is introduced;

(b) for IOC, include regression testing in SIT of the functionality employed in the DCC Live Systems at the point at which regression testing begins;

(c) for MOC and FOC, prior to exiting any SIT Test Phase undertake two functional end of cycle test runs; and

(d) for MOC and FOC, undertake regression testing in accordance with the Depth and Breadth of Regression Testing document for the relevant Test Phase(s) covering both SIT and MT.

7.5 In undertaking regression testing, the DCC shall ensure that the regression testing undertaken is adequate and that it is undertaken in a suitable manner which may include a combination of automated and targeted testing. For IOC, DCC shall consult with the TAG on the scope of regression testing undertaken during each Test Phase. Where the TAG proposes a change to the regression testing undertaken by the DCC, the DCC shall assess the impact of this and where practical shall accommodate the change and inform TAG of its decision. For IOC, should TAG disagree with the DCC's decision, it may refer the matter to the Secretary of State, whose decision shall be final and binding.

7.6 In the case of MOC and FOC, for each Migration Test Phase and SIT Test Phase relating to the same DMC, the DCC shall set out its proposals to the TAG for regression testing in a draft Depth and Breadth of Regression Testing document applicable to that Migration Test Phase(s) and SIT Test Phase. Each Depth and Breadth of Regression Testing document shall include details on planned regression tests, the environment within which they shall be performed, and the codebase on which they shall be run. Any disagreements between the DCC and the TAG regarding the content of the draft Depth and Breadth of Regression Testing document shall be referred to the Secretary of State for decision whose decision shall be final and binding. Such discussion may take place prior to this Clause 7.6 coming into effect.

7.7 In the case of MOC and FOC, for each Migration Test Phase and SIT Test Phase relating to the same DMC, the DCC shall publish on the DCC Website the final version of the Depth and Breadth of Regression Testing document. The published version shall either be the version that TAG did not disagree with or, where TAG did disagree, the version that reflects any decision by the Secretary of State pursuant to Clause 7.6. Where the DCC considers it necessary, the DCC shall prepare an updated version of the Depth and Breadth of Regression Testing document and the procedures set out in Clause 7.6 and this Clause 7.7 shall apply. The DCC may combine the activities described in Clause 7.6 and this Clause 7.7 so that a single Depth and Breadth of Regression Testing document relates to more than one DMC.

8 Generic Testing Activities

8.1 For each of the Test Phases, the DCC shall perform the following activities in accordance with Good Industry Practice:

(a) implement testing infrastructure;

(b) undertake Test Phase planning;

(c) identify test scenarios;

(d) design test scripts;

(e) produce a test specification document;

(f) produce a relevant traceability matrix;

(g) design and prepare test data, and load the test data into the test environment;

(h) prepare a test execution schedule;

(i) execute testing;

(j) perform quality gate reviews;

(k) Testing Issue management;

(l) Testing Issue resolution;

(m) release and configuration management;

(n) test progress reporting;

(o) test assurance;

(p) test completion reporting; and

(q) in addition, for the DCC shall provide support for Users undertaking testing using the Testing Services made available to User, in accordance with Good Industry Practice.

Test principles

8.2 The DCC shall develop its testing methodologies, test scenarios, and regression testing in accordance with Good Industry Practice.

Test Environment

8.3 Testing of SMETS1 Services shall make use of the DCC test environments and shall permit the use of additional cloud-based environments for DCC Service Provider development and integration activities.

8.4 Each DCC Service Provider shall:

(a) establish, maintain, and control their own secure test environments;

(b) design, develop, and support test stubs, test data and test labs that are required for execution of the respective Test Phases; and

(c) ensure the firmware and software versions required for each Test Phase are installed on the SMETS1 Devices that are used for testing.

Environment Management

8.5 The DCC shall manage and communicate to persons participating in a Test Phase any changes and/or fixes arising from production that are to be deployed into the SIT and UIT environments. Such deployments shall be undertaken in accordance with Good Industry Practice.

Timetable for Testing

8.6 Test Phases shall be commenced in the timescales that are necessary to facilitate testing in accordance with the DCC's delivery plan for SMETS1 Services produced pursuant to Condition 13 of the DCC licence.

9 <u>General Requirements for SMETS1 Testing</u>

9.1 The DCC Service Providers shall produce a test plan & test schedule for each Test Phase for the DCC which shall detail:

(a) the extent of testing to be carried out; and

(b) the responsibilities of the DCC Service Providers including the provision of test data.

9.2 Testing Issues logs shall be produced and retained by the DCC detailing all Testing Issues found during test execution.

9.3 An adequate level of regression testing shall be used to test the Modified DCC Total System to ensure defects are not introduced or uncovered as a result of changes made when the software or its environment is changed.

9.4 Where the DCC considers that a Test Phase should complete, or where the DCC considers that code should be promoted from one DCC test environment to another, the DCC shall have its DCC Service Provider produce a report that shall include:

(a) an overview of the testing that was planned, that details the breadth and depth of the planned tests;

(b) information on the actual number of tests run, passed, failed, and not run, mapped to the overview of testing referred to in Clause 9.4 (a);

(c) an explanation of why any tests were not run;

(d) the details of any failed tests, including impact, severity, and quantity;

(e) details on the number and severity of any Testing Issues that were raised;

(f) information on any outstanding Testing Issues and their severity;

(g) specification of the test environment used;

(h) recommendations for any additional tests to be included in subsequent testing; and

(i) lessons learnt during the testing.

9.5 Following receipt of a report as referred to in Clause 9.4, the DCC shall produce a DCC assurance report that shall include:

(a) details of the test assurance activities undertaken by DCC in the Test Phase;

(b) data on tests executed and assured as passed;

(c) an evaluation of whether the governing exit criteria have been met; and

(d) a view on the acceptability of any open Testing Issues and the associated Work Off Plans.

9.6 The DCC assurance report and supporting documentation will be presented to the TAB for their approval or rejection. Where approved, the DCC assurance report shall be provided to the TAG for information. Where requested by a TAG member, the DCC shall also make available supporting documentation including the report referred to in Clause 9.4 and shall include the appropriate confidentiality markings when doing so.

9.7 For SIT, following approval of the report referred to in Clause 9.6 and where the DCC considers that the SIT Test Phase is completed, the DCC shall produce a Completion Report for that Test Phase (as specified in Table 10.1 which shall include the reports produced pursuant to Clause 9.4 and Clause 9.5) and shall provide the Completion Report for the SIT Test Phase to the TAG for recommendation to the Panel. The DCC may combine the activities described in this Clause 9.7 so that a single Completion Report covers the completion of more than one SIT Test Phase. For MOC or FOC, a Completion Report for a SIT Test Phase may also be combined with a Completion Report for a Migration Test Phase where they are in respect of the same planned entry on the EPCL. Furthermore, for MOC or FOC, a Completion Report for a SIT Test Phase and a Completion Report for a Migration Test Phase in respect of the same planned entry on the EPCL may be combined with other Completion Reports in respect of other planned entries on the EPCL. Each Completion Report for a SIT Test Phase shall be accompanied by the SIT Auditor Report (as an Annex) where the report is required to be prepared pursuant to Clause 19, which shall also be provided to the TAG for information.

9.8 Where the DCC considers that code should be promoted from a DCC test environment into production, the DCC shall produce a report setting out the testing that has been undertaken, which shall be provided to such persons or bodies as directed by the Secretary of State.

9.9 The DCC shall discuss with TAG the format and content (including the level of granularity) of any reports that are to be produced pursuant to this Clause 9 in advance of them being produced and sufficiently early such that any information that needs to be reported is captured as part of the DCC’s test activities.

9.10 Prior to promoting code into an environment in which a Testing Participant(s) is undertaking testing, the DCC shall provide to the Testing Participant(s) a release note. The DCC shall provide such release note in advance of promoting such code to enable the Testing Participant(s) to consider any possible impacts.

10 Specific Deliverables

10.1 The DCC shall publish or update published versions of the documents detailed in Table 10.1.

10.2 The structure of the Completion Reports specified in Table 10.1 shall be discussed with the TAG prior to production.

Table 10.1 Specific Deliverables

Deliverable	Description	Created by	Audience	Timing	Where available
SIT Auditor Reports	Using the SIT Auditor as referenced in Clause 19, a range of independent assurance activities shall be conducted and reports relating to said activity shall be produced in accordance with Clause 19 DCC	DCC	Panel / TAG	As determined by the timing for the reports in Clause 19	Provided to Parties in accordance with Clause 13.20
Completion Report for a SIT Test Phase	Evidence of success against the SMETS1 SIT Exit Criteria. For IOC this is a single SIT Test Phase and for MOC and FOC there are multiple SIT Test Phases.	DCC	Panel / TAG	Following TAB approval of SIT Exit for IOC, and each SIT Test Phase exit for MOC, and FOC.	Provided to Parties in accordance with Clause 13.20
SMETS1 Interface Test Completion Report	Evidence of success against the SMETS1 Interface Testing Exit Criteria	DCC	Panel / TAG	As determined by the timing for the completion of SMETS1 Interface Testing	Publish on DCC Website

11 Traceability

11.1 The overall scope of testing in SIT shall be validated by the DCC to ascertain that it is correct through the use of a TTM, assured by the DCC, which shall set out the requirements in Sections F, G, H, L, N and P of the Amended SMETS1 SEC that are to be tested and the associated test scenarios.

11.2 In respect of IOC, the DCC shall assure the TTM (and any subsequent updates to it) in timescales that do not adversely impact upon the timely undertaking of SIT. In respect of MOC and FOC, the TTM shall be assured by the DCC prior to the commencement of SIT for those operating capabilities. If, during SIT, further changes are made to the Sections F, G, H, L, N and P of the Amended SMETS1 SEC, the TTM will be updated to reflect these changes.

11.3 The TTM shall be used by the DCC to track SIT progress and to demonstrate the completion of SIT and shall form a key element of each and every SIT Audit produced pursuant to Clause 19.4 or each and every Completion Report produced pursuant to Clause 19.6 (as the case may be).

12 Test Procedure

12.1 Progression through the Test Phases for SMETS1 Services shall be gated using Entry Criteria and Exit Criteria.

12.2 The generic Entry Criteria for any Test Phase are set out in Clause 12.5. The generic Exit Criteria for PIT and SIT are set out in Clause 12.9.

12.3 Additional specific Entry Criteria and Exit Criteria shall be established for other Test Phases where required. These shall be set out in the relevant Testing Approach Document (with the exception of SIT where, should such specific Entry Criteria or Exit Criteria be required, they shall be set out in this SMETS1 SVTAD). The DCC shall not commence Migration Testing unless the Test Approach Document for that Test Phase has been approved. The DCC shall produce any other Testing Approach Document in timescales that do not have an adverse impact upon the timely undertaking of the Test Phase to which it relates.

12.4 Test Phases may be subdivided into Test Stages. In these circumstances, Entry and Exit criteria may be established at the Test Stage level to support internal DCC Test Stage gating. Where this occurs, this will be specified in the relevant test plan.

Generic Entry Criteria

12.5 The fulfilment of the following generic Entry Criteria is required to permit entry to all Test Phases:

(a) test plan signed off by the DCC;

(b) Test Completion Certificates for any precursor Test Phase issued, unless in accordance with Clause 5.7 it is determined that the Test Phase may overlap;

(c) test specification prepared, including the production of a TTM, with the exception of SIT for IOC;

(d) confirmation that the required test laboratories, SMETS1 Devices, tools, stubs, environments, and data are in place, secure and are ready for testing;

(e) in the case of each SIT Test Phase for MOC or FOC, the DCC has concluded its discussions with TAG for the depth and breadth of testing to be undertaken in accordance with a draft Depth and Breadth of SIT document applicable to the SIT Test Phase (such discussion may take place prior to this Clause 12.5 (e) coming into effect); and

(f) an approval to proceed certificate for the Test Phase has been issued by the DCC.

12.6 For purposes of Clause 12.5 (b) in respect of MOC and FOC, an MT Test Phase in respect of the same planned entry on the ECPL (or any MT Test Phase) shall not be considered to be a precursor to a SIT Test phase in respect of the same planned entry on the EPCL (or any SIT Test Phase).

12.7 For any SIT Test Phase related to MOC and FOC, any disagreements between the DCC and the TAG regarding the content of the draft Depth and Breadth of SIT document (following discussions concluding as per Clause 12.5 (e)) shall be referred to the Secretary of State for a decision, whose decision shall be final and binding. For each of MOC and FOC, the DCC shall publish on the DCC Website the final version of the Depth and Breadth of SIT document. The published version shall either be the version that TAG did not disagree with or, where TAG did disagree, the version that reflects any decision by the Secretary of State. Where the DCC considers it necessary, the DCC shall prepare an updated version of the Depth and Breadth of SIT document and the procedures set out in Clause 12.5 (e) and this Clause 12.7 shall apply.

12.8 In the case of MOC and FOC, the DCC may combine the activities described in Clause 12.5 (e) and Clause 12.7 so that a single Depth and Breadth of SIT document covers more than one SIT Test Phase. For MOC or FOC, a Depth and Breadth of SIT document may also be combined with a Depth and Breadth of MT document (as described in clause 8 of the MTAD) where they are in respect of the same planned entry on the EPCL. Furthermore, for MOC or FOC, a Depth and Breadth of SIT document and a Depth and Breadth of MT document in respect of the same planned entry on the EPCL may be combined with other Depth and Breadth of SIT documents and Depth and Breadth of MT documents in respect of other planned entries on the EPCL.

Generic Exit Criteria for PIT and SIT

12.9 The following generic Exit Criteria are required to exit and complete any PIT and SIT Test Phase:

(a) all planned tests have been executed. In exceptional circumstances, the DCC may propose to de-scope a planned test. Such de-scoping shall be subject to approval by the TAB. In the case of SIT, the DCC shall refer the TAB's recommendation to the Secretary of State and the test shall only be de-scoped if the Secretary of State approves;

(b) the test success rate that is achieved shall be at or above the minimum levels specified in the relevant Testing Approach Document (for the purposes of SIT this is set out in Table 13.1);

(c) the number and severity of any outstanding Testing Issues is at or below the Testing Issue Thresholds specified in Clause 13 for PIT or SIT as appropriate;

(d) test results and other requisite evidence is documented;

(e) test issue logs are produced;

(f) regression testing is successfully completed in accordance with the criteria specified in the relevant Testing Approach Document (for the purposes of SIT this is set out in Table 13.1);

(g) production of Work Off Plans for any outstanding Testing Issues that occurred in the Test Phase;

(h) Work Off Plans from preceding Test Phases have been completed and the associated tests successfully re-run; and

(i) the reports referenced in Clauses 9.4 and 9.5 have been produced and, where specified, the associated Test Completion Certificates have been issued by the DCC.

12.10 Supplementary information on the SIT Exit Criteria (detailed in Clause 12.9) is set out in Table 13.1.

13 <u>SMETS 1 System Integration Testing</u>

Selection of DMCs for use in testing for each of IOC, MOC, and FOC

13.1 Each Supplier Party shall provide the DCC with any information that the DCC reasonably requests relating to the SMETS1 Devices in respect of which it is the current Supplier Party. This information may include:

(a) corresponding SMETS1 Device Models;

(b) configuration settings of the SMETS1 Devices;

(c) DMC quantities;

(d) the number of Smart Metering Systems that the Supplier Party intends to enrol in relation to IOC, MOC, and FOC;

(e) the mapping of numbers of SMETS1 Devices to the associated DMCs; and

(f) notification of any changes or proposed changes to such SMETS1 Devices including to firmware and configuration settings.

13.2 When selecting DMCs for use in testing pursuant to the SMETS1 SVTAD for a Capability Release, the DCC shall do so with the objective of facilitating the enrolment of all SMETS1 Smart Metering Systems that are in scope for enrolment as soon as reasonably practicable. For the purposes of this Clause 13, the SMETS1 Smart Metering Systems that are in scope for enrolment are those which, once enrolled, would comprise SMETS1 Meters for which the Secretary of State has concluded that DCC should be required to provide SMETS1 Services (or, if such conclusions have not yet been reached, those for which the Secretary of State is consulting on as being minded to require DCC to provide SMETS1 Services), and have not subsequently been determined to be out of scope pursuant to Clause 1.9 (b) of Appendix AL.

13.3 For IOC, the DCC shall determine the DMCs with which to start testing pursuant to this SMETS1 SVTAD. For MOC and FOC, the DCC shall determine the DMCs with which to start testing in respect of a SIT Test Phase or a Migration Test Phase pursuant to this SMETS1 SVTAD. Prior to making such a determination, and with the exception of the SMETS1 ESME Device Model component(s) of the DMC(s) for FOC (as further set out in Clauses 13.10 to 13.12), the DCC shall discuss its proposals with stakeholders and set out the rationale for its selection.

13.4 This Clause 13.4 and Clauses 13.5 to 13.9 do not apply in respect of the SMETS1 ESME Device Model component(s) of the DMC(s) for FOC (as to which see Clauses 13.10 to 13.12). For IOC, the DCC shall notify Supplier Parties of the DMCs with which it has decided to start testing. For MOC and FOC, the DCC shall notify Supplier Parties of the DMCs with which it has decided to start testing for particular Test Phases. Where any Supplier Party disagrees with any DCC decision made pursuant to this Clause 13.4, the matter may be referred to the Secretary of State within 10 Working Days of the DCC's decision, and the decision of the Secretary of State shall be final and binding for the purposes of this Code.

DMC De-selection (excluding SMETS1 ESME for FOC and Secure Meters Device Models for MOC)

13.5 Except for Secure Meters Device Models for MOC (as to which see Clauses 13.10 to 13.12), where, having regard to the objective of facilitating the enrolment of all SMETS1 Smart Metering Systems that are in scope for enrolment as soon as reasonably practicable, the DCC considers that a DMC previously selected for use in a Migration Test Phase and/or a SIT Test Phase should be de-selected for such use, then the DCC shall consult with TAG on the de-selection of the DMC from testing, and in so doing shall anonymise and redact information where appropriate.

13.6 Following the TAG consultation, the DCC shall decide whether to de-select the DMC from testing pursuant to this SMETS1 SVTAD and notify the TAG and Supplier Parties accordingly.

13.7 Where a Supplier Party disagrees with the DCC de-selection decision, the Party may refer the issue to the Secretary of State within 10 Working Days of the DCC's decision. Pending the determination by the Secretary of State, the Secretary of State shall inform the DCC as to whether it should continue testing with the DMC in SIT for IOC or in the Migration Test Phase and/or SIT Test Phase for MOC or FOC.

13.8 Where the Secretary of State determines that the DMC should not be omitted from SMETS1 testing, the DCC shall not de-select it from either:

(a) SIT for IOC; or

(b) the SIT Test Phase and/or Migration Test Phase for either MOC or FOC (as the case may be).

13.9 Where the DCC, having taken all reasonable steps to do so, is unable to obtain a selected DMC for use in testing and thus the DCC has proposed de-selection pursuant to Clause 13.5, the DCC shall recommend to the Secretary of State any alternative course of action, having regard to the objective of facilitating the enrolment of all SMETS1 Smart Metering Systems that are in scope for enrolment as soon as reasonably practicable.

Varying Device Models for FOC and MOC Secure

13.10 The SMETS1 ESME Device Model(s) used in respect of Migration Test Phases and SIT Test Phases for FOC shall be the Device Model(s) chosen by DCC from time to time. The Secure Meters Device Models used in respect of Migration Test Phases and SIT Test Phases for MOC may be varied by DCC from time to time. It is acknowledged that the following may need to change as testing progresses:

(a) the SMETS1 ESME Device Model(s) used in Migration and/or SIT Test Phases for FOC; and

(b) the Secure Meters Device Models used in Migration and/or SIT Test Phases for MOC.

When initially choosing the ESME Device Model(s) for FOC, and when changing any of the Device Models referred to in Clause 13.10 (a) or Clause 13.10 (b) in respect of FOC or MOC (as applicable), the DCC shall choose the one(s) that it considers will successfully interoperate with the DCC Systems, and shall have regard to the objective set out in Clause 13.2.

13.11 The DCC shall first notify the SMETS1 ESME Device Model(s) chosen to form component(s) of DMC(s) used in FOC Test Phases alongside its notification made pursuant to Clause 13.4. The DCC shall promptly notify any change in Device Model(s) pursuant to Clause 13.10 (a) or Clause 13.10 (b) and the rationale for such change. Such notifications shall be via the reports produced pursuant to Clause 16.1.

13.12 In the case of FOC, with the exception of references in Clauses 13.3 to 13.11 references in the Code to DMCs selected for use in Migration Test Phases or SIT Test Phases shall be deemed to include the SMETS1 ESME Device Model components from time to time chosen by the DCC pursuant to this Clause 13. In the case of MOC, with the exception of Clauses 13.5 to 13.11, references in the Code to DMCs selected for use in Migration Test Phases or SIT Test Phases shall be deemed to include the DMC(s) including Secure Meters Device Models, determined or chosen from time to time pursuant to this Clause 13.

DCC Witnessing of SIT Testing

13.13 For IOC, the DCC shall produce and maintain a document (the "**SMETS1 SIT Approach Release**"). This document shall contain supplementary information setting out the testing to be undertaken in SIT for IOC including a description of the testing to be undertaken, the scope of planned tests, test methods and test procedures. The DCC shall provide this SMETS1 SIT Approach Release to the TAG as part of the ongoing oversight of SIT for IOC.

13.14 The DCC shall observe a subset of the tests carried out in each and every SIT Test Phase. The subset of tests to be observed shall be selected by the DCC having regard to providing assurance that the Testing Objective has been met.

13.15 The DCC shall observe test execution, and record results produced from executed tests. There shall be:

(a) no deviation from test scripts; and

(b) no involvement by observers in the execution.

13.16 The DCC shall in its Completion Report for a SIT Test Phase describe the results of DCC's witnessing including:

(a) the number of successfully completed tests;

(b) the number and reason for tests that have failed; and

(c) the number of successfully completed tests as a ratio or percentage of the total number of tests executed.

SIT Exit Criteria

13.17 The Exit Criteria in Clause 12.9 apply to any SIT Test Phase and are supplemented with the additional details and additional Exit Criteria set out in Table 13.1. SIT testing shall be performed for each of IOC, MOC, and FOC and these additional details and Exit Criteria will apply for each of IOC, MOC, and FOC.

Table 13.1 SIT Exit Criteria

#	Exit Criteria	Success	Evidence

1A	Functional SIT Execution (For IOC)	For IOC, successful completion will be 100% of planned tests (unless as set out in Clause 12.9 tests have been de-scoped and such de-scoping approved by the Secretary of State) for functional testing have been executed, with a 90% pass rate for any planned tests on the same DMC (excluding those tests that have been de-scoped).	Completion Report for the SIT Test Phase and TAB Test Completion Certificate
1B	Functional SIT Execution (For any SIT Test Phase for MOC and FOC)	For MOC and FOC, successful completion will be 100% of SIT Planned Tests (unless as set out in Clause 12.9 tests have been de-scoped and such de-scoping approved by the Secretary of State) for functional testing have been executed, with a 90% pass rate for any planned tests for the SIT Test Phase (excluding those tests that have been de-scoped).	Completion Report for the SIT Test Phase and TAB Test Completion Certificate
2A	SIT End of Cycle Testing	Successful completion will be 100% of SIT Planned Tests for end of cycle testing established pursuant to Clause 12.7 have been executed, with a pass rate of 100% excluding: 1. defects known at the start of end of cycle testing; 2. any new defects arising since the start of end of cycle testing where such exclusion is approved by the TAG. Where the TAG does not approve exclusion of a new defect in (b) above, the DCC may refer the matter to the Secretary of State for determination. The Secretary of State's determination shall be final and binding for the purposes of this Code.	Completion Report for the SIT Test Phase and TAB Test Completion Certificate
2B	SIT Regression Execution	Successful completion will be 100% of planned tests for regression testing (pursuant to Clause 7) have been executed: 1. for IOC, on the stage exit versions of the software; and 2. for MOC and FOC, in accordance with the relevant Depth and Breadth of Regression Testing, with a 100% pass rate excluding known defects.	Completion Report for the SIT Test Phase and TAB Test Completion Certificate
3	Testing Issue Thresholds	Extant Testing Issues are within the relevant Testing Issue Threshold (Clause 13)	Completion Report for the SIT Test Phase and TAB Test Completion Certificate
4	Test results documented and evidence captured	Results of testing documented and evidence stored	Completion Report for the SIT Test Phase
5	Complete set of Testing Issue logs produced	Logs have been produced and stored for all Testing Issues identified in Testing	Referenced in the Completion Report for the SIT Test Phase
6	Full Test traceability to the requirements	Test Traceability (as defined in the TTM) demonstrated and documented as set out in Clause 11	Completion Report for the SIT Test Phase (where Clause 19.6 applies) or the SIT Auditor Report
7	Full Test traceability of	Test heatmap produced that shows coverage and success of	Completion Report for the

	executed tests	testing, and traceability to the TTM as set out in Clause 11	SIT Test Phase (where Clause 19.6 applies) or the SIT Auditor Report

8	DCC assurance report approved	TAB approval of the DCC assurance report referred to in Clause 9.6	Issuing of a Completion Report for the SIT Test Phase by the TAB for consideration by the Panel

Process for agreeing SIT Completion

13.18 SIT for IOC and each SIT Test Phase for MOC and FOC shall only complete when the Panel determines that the SIT Exit Criteria have been met. When the DCC considers that such completion ought to occur, the DCC shall:

(a) notify the Secretary of State, the Authority, the Panel, and the Parties that the DCC considers that SIT has been completed;

(b) provide the Authority, the Panel, and the Secretary of State with copies of the SIT Completion Report (including any corresponding SIT Auditor Report), and a list of the sections of such reports that the DCC considers should be redacted; and

(c) review the supporting documentation and evidence with regards to the relevant entry and exit criteria with the TAG.

13.19 The Panel shall confirm the completion of SIT, for the Test Phase or shall highlight where it believes the Exit Criteria have not been met. Where the Panel believes the Exit Criteria have not been met, it shall direct the DCC to continue SIT for the Test Phase and to address outstanding matters and submit further documentation and evidence to support the completion of SIT for the Test Phase, following receipt of additional materials the Panel shall determine whether or not SIT for the Test Phase has completed (and this Clause 13.19 shall apply again).

13.20 On direction from the Panel, the DCC shall provide the Parties with copies of the Completion Report (including any corresponding SIT Auditor Report), having first redacted any sections specified by the Panel.

Testing Issue Thresholds

13.21 Testing Issue Thresholds shall be applied as a component of the Exit Criteria for a Test Phase in each of IOC, SMETS1 Interface Testing, MOC, and FOC. Within a Test Phase, all Testing Issues that are raised during that Test Phase or that were raised in any equivalent Test Phase for IOC or MOC, and which remain open shall be counted as extant Testing Issues within that Test Phase for that Test Phase exit or for SMETS1 Interface Testing exit. In addition, in the case of SMETS1 Interface Testing, any extant Testing Issues identified elsewhere across the DCC test environments, or production issues identified in the production environment, which could impact the decision to deploy the SMETS1 code into the production environment will also be assessed and where agreed by TAG shall be treated as extant Testing Issues and included in the overall assessment for SMETS1 Interface Testing exit as further set out in Clause 13.27.

13.22 Except in the case of a Test Phase for SIT for MOC or FOC, the Testing Issue Thresholds per DCC Service Provider in each Test Phase for a Capability Release are set out in Table 13.2 below, with the exception of Testing Issue Thresholds for the Migration Test Phase (which shall be detailed in the MTAD). The Testing Issue severity levels shall be applied where the Testing Issue has arisen as a consequence of the DCC or the Modified DCC Total System and shall be defined by reference to the testing issue severity descriptions in clause 12 of the Common Test Scenarios Document.

Table 13.2 Testing Issue Thresholds per DCC Service Provider

Testing Issue Severity	PIT	SIT (IOC only)	SMETS1 Interface	SCT

			Testing (IOC Only)	
1	0	0	0	0
2	0	0	0	0
3	15	15	5	15
4	30	30	10	30
5	60	60	20	60

13.23 In the case of a Test Phase for SIT for MOC or FOC, the Testing Issue Thresholds set out in Table 13.3 apply. The Testing Issue Thresholds are calculated across all DCC Service Providers collectively and comprise both:

(a) a threshold for the individual Test Phase for SIT; and

(b) an aggregate threshold that takes into account any open Testing Issues for MOC or FOC.

Table 13.3 SMETS 1 SVTAD Testing Issue Thresholds for SIT in the Circumstances of MOC or FOC

Testing Issue Severity	For Clause 13.23 (a) SIT Test Phases for MOC or FOC	For Clause 13.23 (b) Aggregate limit across Test Phases for MOC or FOC
1	0	0
2	0	0
3	15	30
4	30	60
5	60	120

13.24 In the case of a SIT Test Phase for MOC, or FOC, on completion of any SIT Test Phase, any Testing Issues that are open that would affect the functioning of the solution for the planned entry on the EPCL shall be counted for the purpose of the SIT Test Phase for that planned entry on the EPCL, irrespective of the Test Phase in which they arose.

13.25 If during the SIT Test Phase or the SMETS1 Interface Testing Phase, a Testing Issue is opened that the DCC believes should not be counted against the Testing Issue Threshold for that Test Phase, the DCC shall inform the TAB, the TAG, and the Panel; and shall state its rationale for proposing the exclusion. The Testing Issue shall be excluded for the purposes of calculating whether the Testing Issue Threshold has been exceeded only if the TAG agrees. Information on all Testing Issues so excluded from the calculation shall be included in the Completion Report produced pursuant to Clause 16.5.

13.26 Where the DCC's initial exclusion proposal is not supported, the Testing Issue shall be counted when calculating whether the Testing Issue Threshold has been exceeded. Should the TAG and the DCC disagree on the exclusion of a Testing Issue and where this decision has a material impact on the ability to:

(a) deliver IOC; or

(b) complete SIT or MT in respect of a planned entry of the EPCL for either, MOC, or FOC,

the DCC (having regard to the objective of facilitating the enrolment of all SMETS1 Smart Metering Systems that are in scope for enrolment as soon as reasonably practicable) may refer the matter to the Secretary of State, within 5 Working Days of the TAG's decision, for determination. The Secretary of State's decision shall be final and binding for the purposes of this Code.

13.27 In reviewing extant Testing Issues for a SIT Test Phase, the DCC shall discuss with TAG whether any Testing Issues that have been raised in the SCT Test Phase to date, should be counted for the purposes of determining whether the SIT Test Phase Testing Issue Threshold has been exceeded and therefore whether the Testing Issue Threshold exit criterion for the SIT Test Phase has been met.

13.28 In reviewing extant Testing Issues for SMETS1 Interface Testing exit, the DCC shall present:

(a) all open severity 1-3 Testing Issues raised by any Testing Participant; and

(b) all open severity 4-5 Testing Issues raised by any Party that has completed Additional SR Testing of SMETS1 Service Requests or Alerts; and

(c) any other open severity 1-3 issues that have arisen in DCC test or production environments that the DCC believes could impact the decision to deploy the SMETS1 code into the production environment,

to the TAG, to:

(d) confirm that the correct severities have been assigned; and

(e) determine which of the issues in (a), (b) and (c) should be counted for the purposes of determining whether the Testing Issue Threshold has been exceeded and therefore whether the Testing Issue Threshold exit criterion for SMETS1 Interface Testing has been met.

13.29 Should the DCC disagree with the TAG on whether a Testing Issue raised in the SCT Test Phase should be counted under Clause 13.27, or on the matters set out in Clause 13.28 (d) or Clause 13.28 (e), the DCC may refer the matter to the Secretary of State for determination, whose decision shall be final and binding for the purposes of this Code.

Variation to Enduring Test Approach Document

13.30 Clause 7.1(b), 8.3 and 8.4(c) of the Enduring Testing Approach Document shall be varied so that:

(a) Prior to a Device Model Combination being added to the list of Eligible Product Combinations, references to a Device Model Combination that is on the list of Eligible Product Combinations shall include:

(i) a Device Model Combination against which SIT has completed or, where SIT has not completed, a Device Model Combination against which all relevant SIT tests in respect of that DMC have been successfully concluded; and

(ii) a Device Model Combination for which a DMCT Report has been published pursuant to Clause 20 whereby the DCC is recommending that an entry is added to the list of SMETS1 Eligible Product Combinations in respect of that DMC; and

(b) the DCC shall only be required to provide DMCs of the type listed in Clause 7.1(b) and 8.3, and a Testing Participant shall only be entitled to supply its own DMCs in a DCC test lab of the type set out in Clauses 8.4(c), where

(i) SIT has completed against such a type of DMC or, where SIT has not completed, all relevant SIT tests in respect of such a type of DMC have been successfully concluded; or

(ii) A DMCT Report whereby the DCC is recommending that an entry is added to the list of SMETS1 Eligible Production Combinations in respect of that DMC has been published pursuant to Clause 20.

14 <u>Testing Issue Resolution</u>

14.1 The process set out in Section H14.37 onwards of the Code shall apply for the purposes of Testing Issue resolution during SIT, SMETS1 Interface Testing, SCT, and MT; subject to Clause 14.2 and Clause 14.3.

14.2 Where a Testing Participant disagrees with a determination by the DCC pursuant to Section H14.39(a) (with regards to the severity level only) then the matter may be referred to the TAG, whose decision will be final and binding for the purposes of this Code.

14.3 Where the Testing Participant disagrees with the DCC's determination pursuant to Section H14.41 of the matters set out at Section H14.39(c) (but not otherwise), then the Testing Participant may request that the DCC refers the matter to the Secretary of State.

14.4 Except in the circumstances set out in Clause 14.5, where a disagreement exists pursuant to Clause 14.2, the determination of the DCC including assigned Testing Issue severity shall remain and be included in any evaluation until the TAG reaches its determination and notifies the DCC and the Testing Participant for the purposes of this Code.

14.5 If the matter being disputed pursuant to Clause 14.2 could affect whether the Exit Criteria for a Test Phase have been met, a decision on whether the Exit Criteria have been met cannot be made until the TAG determination has been made.

15 Work Off Plans

15.1 At the point of Test Phase exit and, in the case of the SMETS1 Interface Testing test completion, all open Testing Issues shall be documented in a Work Off Plan which shall be approved by the TAB. The Work Off Plan will form part of the underlying evidence considered by the DCC which is referenced in the Completion Report presented for agreement to the Panel. Any Work Off Plans shall set out the following timescales within which all open Testing Issues are to be resolved:

(a) for severity 3 Testing Issues, within 20 Working Days from the issuing of a Test Completion Certificate;

(b) for severity 4 Testing Issues, within 40 Working Days from the issuing of a Test Completion Certificate; and

(c) for severity 5 Testing Issues, within 60 Working Days from the issuing of a Test Completion Certificate.

15.2 The DCC shall monitor the discharge of Work Off Plans and report progress to the TAB. If the timescales for resolution of a Work Off Plan are not going to be met, as soon as reasonably practicable after the person responsible for implementing the Work Off plan becomes aware that this is the case, a correction plan shall be produced and presented to the TAB for its approval. The TAB will consider the correction plan and may elect to revoke any Test Completion Certificate that it has issued pending resolution of the open Testing Issues contained in the correction plan. The resolution of Work Off Plans shall be reported to the TAG and the Panel and the resolution of production issues shall be reported to the Panel.

16 Test Reporting

Weekly DCC Test Execution Report

16.1 The DCC shall provide a weekly test execution report to the Panel and the Secretary of State; the content shall be anonymised and redacted where appropriate.

16.2 The test execution report shall detail progress of testing undertaken pursuant to this SMETS1 SVTAD, including relevant test phases, test issue reporting and capacity.

16.3 During SIT, the test execution report shall, in addition to the requirements specified in Clause 16.1 to Clause 16.2, detail progress of testing and testing coverage of functional areas, including functional groups as detailed in the heatmap.

Completion Reports

16.4 With the exception of PIT, the DCC shall produce Completion Reports covering the matters set out in Table 10.1 where it considers the relevant Exit Criteria for the Test Phase or Exit Criteria for SMETS1 Interface Testing, have been met.

17 Test Resources

Test Stubs

17.1 The DCC may during SIT use a service user simulator Testing Stub to simulate a User.

18 Additional Obligations

All Testing Participants and the DCC

18.1 The DCC and all Testing Participants involved in SMETS1 Services testing undertaken pursuant to this SMETS1 SVTAD shall:

(a) undertake testing in accordance with Good Industry Practice; and

(b) take all reasonable steps to facilitate achievement of the SMETS1 Testing Objective.

The DCC

18.2 The DCC shall ensure that:

(a) test activities are conducted in accordance with this SMETS1 SVTAD and the associated Testing Approach Documents;

(b) test plans are produced and employed;

(c) the necessary test scenarios, test scripts, Test Traceability Matrices, test data, and test environments are put in place;

(d) planned tests are executed and evidence captured;

(e) test issues are documented, diagnosed, and where it is within the remit of the DCC they are resolved;

(f) test progress is monitored and progress is reported;

(g) tests are assured, through witnessing and the review of evidence;

(h) Completion Reports are produced and submitted;

(i) the TAB is managed and supported;

(j) the Panel is supported in making their SMETS1 recommendations and decisions; and

(k) the Secretary of State is supported in making his or her SMETS1 decisions.

19 SIT Audit and Independent Assurance

19.1 The DCC shall appoint an independent SIT Auditor through the existing DCC audit and assurance framework agreement available on the DCC website.

19.2 Tender responses shall be assessed against criteria which inter alia shall include:

(a) independence from the DCC and the DCC Service Providers;

(b) proposed audit approach;

(c) relevant experience; and

(d) cost.

19.3 The identity of the SIT Auditor shall be notified to the Authority, the Panel, Parties, and the Secretary of State following contract award.

19.4 For the SIT Test Phase in respect of the first planned entry on the EPCL in respect of a SMETS1 SMSO, the SIT Auditor shall produce a SMETS1 SIT Audit Report (to accompany the Completion Report for the SIT Test Phase) that shall include:

(a) a review of the Test Traceability Matrix documentation produced by the DCC, to confirm that it provides a mapping of test scenarios to the Code requirements (being those requirements that need to have been tested in order to demonstrate the SMETS1 Testing Objective in Clause 5);

(b) a review of the test heatmap produced by the DCC to confirm that the planned tests map to the test scenarios and test them adequately;

(c) confirmation that DCC testing and assurance has been conducted in accordance with this SMETS1 SVTAD (including confirming its coverage and completeness);

(d) confirmation that each of the test Exit Criteria have been met;

(e) confirmation that all open Testing Issues have been captured and either closed or, where still open, Work Off Plans are in place; and

(f) a view on the acceptability of any open Testing Issues and the associated Work Off Plans.

19.5 In the case of SIT for IOC, the DCC shall require the SIT Auditor to, as soon as reasonably practicable after SIT has commenced, provide an interim opinion on the matters set out in Clause 19.4 (a) and Clause 19.4 (b). This opinion shall reflect the Test Traceability Matrix and heat map in use at that point. DCC shall share and discuss the interim opinion with the TAG.

19.6 The obligation in this Clause 19.6 shall apply in respect of SIT Test Phases in relation to any subsequent planned entries on the EPCL in respect of a SMETS1 SMSO. The DCC shall ensure that the matters prescribed in this Clause 19.6 shall be undertaken by DCC personnel that are sufficiently independent from those undertaking the testing activities. Within each Completion Report for the SIT Test Phase, the DCC shall include:

(a) confirmation that the DCC has assured that the Test Traceability Matrix documentation provides a mapping of test scenarios to the Code requirements (being those requirements that need to have been tested in order to demonstrate the SMETS1 Testing Objective in Clause 5);

(b) confirmation that the DCC has reviewed the test heatmap to confirm that the SIT Planned Tests map to the test scenarios and test them adequately;

(c) confirmation that the DCC's testing and assurance has been conducted in accordance with this SMETS1 SVTAD (including confirming its coverage and completeness);

(d) confirmation that each of the test Exit Criteria have been met;

(e) confirmation that all open Testing Issues have been captured and either closed or, where still open, Work Off Plans are in place; and

(f) a view on the acceptability of any open Testing Issues and the associated Work Off Plans.

19.7 The DCC may combine the activities described in this Clause 19 for several SIT Test Phases undertaken pursuant to this SMETS1 SVTAD into a single set of activities and report to align to each Completion Report where a single report is being produced for those SIT Test Phases pursuant to Clause 13.

20 Process for Device Model Combination Testing (DMCT Process)

20.1 The DCC shall undertake the DMCT Process for any In-Scope DMCs and shall do so in timescales and in a manner designed to facilitate the enrolment of all SMETS1 Smart Metering Systems that are in scope for enrolment as soon as is reasonably practicable. For this purpose and for the purpose of Clause 20.2A, the SMEST1 Smart Metering Systems that are in scope for enrolment are those which, once enrolled, would comprise SMETS1 Meters for which the Secretary of State has concluded that the DCC is required to provide SMETS1 Services (or, if such conclusions have not yet been reached, those SMETS1 Smart Metering Systems for which the Secretary of State is consulting on as being minded to require the DCC to provide SMETS1 Services), and have not subsequently been determined to be out of scope pursuant to Clause 1.9 (b) of Appendix AL.

20.1A Clause 20.1 shall not apply in respect of any In-Scope DMCs that comprise (or would comprise) SMETS1 Smart Metering Systems in respect of a SMETS1 SMSO for which the RP Decommissioning Date for the associated Requesting Party has expired. Where the DCC is partway through the DMCT Process in respect of such DMCs at the point at which the RP Decommissioning Date expires, the DCC shall not continue the DMCT Process in respect of those DMCs. Additionally, Clause 20.2 shall not apply in respect of any SMETS1 Smart Metering Systems that comprise (or would comprise) Smart Metering Systems in respect of a SMETS1 SMSO for which the RP Decommissioning Date for the associated Requesting Party has expired.

20.2 A Supplier Party may notify the DCC of any SMETS1 Smart Metering Systems that the Supplier Party is planning to enrol excluding:

(a) Smart Metering Systems that are comprised of an MOC SIT DMC or an IOC Migration Testing DMC; and

(b) in the case of FOC, Smart Metering Systems that comprise a DMC that has been selected for use in a Migration Test Phase and/or a SIT Test Phase pursuant to Clause 13, except where the DCC has notified Supplier Parties pursuant to Clause 20.2A that such a DMC is to be included in the DMCT Process.

Where a Supplier Party wishes to so notify the DCC, the Supplier Party shall contact the DCC via an email to SMETS1DMCT@smartdcc.co.uk to advise of their intent. The DCC shall respond within 10 working days following receipt by the DCC, stating the data reasonably required by the DCC for the purposes of this Clause 20, and a reasonable format for the submission. Each Supplier Party shall ensure that it provides in its submission to the DCC the most accurate and up to date data. The DCC shall be entitled to rely upon the data notified for the purposes of this Clause 20.

20.2A In the case of FOC, the DCC shall include within the DMCT Process any DMC that has been selected for use in a Migration Test Phase and/or a SIT Test Phase where the DCC considers that doing so would facilitate the enrolment of all SMETS1 Smart Metering Systems that are in scope for enrolment as soon as reasonably practicable. Where this is the case, the DCC shall notify each Supplier Party that is an Installing Supplier (as defined in the Transition and Migration Approach Document) of Smart Metering Systems comprising the DMC that such DMC is also to be included in the DMCT Process.

20.3 For any particular submission required to be made pursuant to Clause 20.2, where a Supplier Party confirms in writing to the DCC that the most recently submitted data applies to the current submission, then the Supplier Party shall not be required to resubmit the data that has remained unchanged. For the purposes of this Clause 20.3, a Supplier Party shall be entitled to refer to any data submitted to the DCC prior to this Clause 20 coming into effect.

20.4 Where a Supplier Party has been unable to provide part of the data requested pursuant to Clause 20.2, the DCC shall take all reasonable steps to obtain the data from the relevant Meter Manufacturer and/or SMETS1 SMSO. Additionally, for the purposes of undertaking the DMCT Process, the DCC shall source data relating to SMETS1 Installations comprising all or part Dormant Meters from SMETS1 SMSOs acting in the capacity of DCC Service Provider.

20.5 Subject to clause 20.5 A, where the DCC is unable to source all of the data that it reasonably requires, then the DCC shall be entitled to exclude the impacted DMC from the remainder of the DMCT Process, and the DCC shall notify any Supplier Party that included the DMC in its submission accordingly. The Supplier Party may include

Device Model Combinations for which the DCC has not been able to source all data required in subsequent submissions made pursuant to Clause 20.2.

20.5A Where a Device Model initially included as a SMETS1 PPMID in a Device Model Combination for the purposes of the DMCT Process is determined by the DCC, pursuant to the definition of a SMETS1 PPIMD as varied by Clause 3.1 (g) of Appendix AL, not to be a SMETS1 PPMID then the DCC shall proceed with the DMCT Process on the basis that the Device Model is deemed to have been included in the DMCT Process as a SMETS1 IHD. Where the Device Model was included as a SMETS1 PPMID in a Device Model Combination by a Supplier Party pursuant to Clause 20.2, the DCC shall promptly notify any Supplier Party of the reclassification of the SMETS1 PPMID Device Model as a SMETS1 IHD, together with the associated rationale. Where any Supplier Party disagrees with the reclassification to a SMETS1 IHD, the matter may be referred to the Secretary of State within 10 Working Days of the DCC's notification to that Supplier Party, and the decision of the Secretary of State shall be final and binding for the purposes of this Code.

20.6 Where all of the data required by the DCC has been provided to, or sourced by, the DCC, or following the process set out in Clause 20.5A, the DCC shall then consider:

(a) whether the DMC proposed for testing is already on the list of SMETS1 Eligible Product Combinations or is already proposed for addition onto that list;

(b) whether the DMC is currently:

(i) an MOC SIT DMC;

(ii) a DMC selected for use in a SIT Test Phase and/or a Migration Test Phase for FOC which has not been notified by the DCC as a DMC that should also be included in the DMCT Process pursuant to Clause 20.2A;

(iii) an IOC Migration Testing DMC; or

(iv) being tested in PPCT;

(c) whether Migration Testing and SIT in respect of the Capability Release of which the DMC will form a part are unlikely to be completed in timescales that would allow the testing of the DMC to be scheduled with a reasonable degree of confidence;

(d) whether, in the DCC's opinion, the DMC proposed is substantively equivalent to:

(i) an entry for an existing DMC that is on the list of SMETS1 Eligible Product Combinations;

(ii) an entry for a DMC that is proposed for addition onto the list of SMETS1 Eligible Product Combinations; or

(iii) a DMC that is planned for testing;

(e) whether the DCC has been unable to source suitable devices for testing (which may include sourcing them for Supplier Parties), or does not yet know whether it can source them; and

(f) whether, in the DCC's opinion, it is not economic to test the DMC.

20.7 The DCC may propose to the Secretary of State any DMC which, in the DCC's opinion, should not be tested on the grounds that it is not economic to test. Prior to making such proposals the DCC shall first discuss with stakeholders its views and the associated rationale and invite stakeholder views. As part of the proposals submitted by the DCC to the Secretary of State, the DCC shall include any stakeholder views received. The decision of the Secretary of State as to whether the DCC should test the DMC shall be final and binding for the purposes of this Code. Where the Secretary of State agrees with the DCC's proposal, the DCC shall exclude the DMC from this DMCT Process. Where the Secretary of State disagrees with the DCC's proposal, the DCC shall continue to progress the DMC through the DMCT Process.

20.8 The DCC shall publish and keep up to date a list ('a DMC Status List') that shows the status of the DMCs in the DMCT Process. The DCC shall change the classification of the status of the DMC on the DMCT Status List as it progresses through the DMCT Process.

20.9 The DCC shall include within a schedule ("the DMCT Schedule") those DMCs for which the DCC is reasonably confident of the proposed dates for testing along with:

(a) the planned start and completion dates for testing of any planned entries on the SMETS1 Eligible Production Combinations that are comprised of that DMC (together with details of those entries) and either;

(b) the test pack planned to be used for DMCT Migration Testing and DMCT Service Reference Variant Testing (as further set out in Clauses 20.16 and 20.17); or

(c) where the DCC proposes to use a DMCT Non-Standard Test Pack in respect of a DMC, the rationale for doing so; and

the DCC shall publish any changes from the previously published DMCT Schedule. Where the DCC is planning to test in respect of an EPCL entry for a SMETS1 Installation that comprises only Dormant Meters, the DCC may choose not to additionally test entries for the same DMC in respect of SMETS1 Installations that comprise Active Meters or both Dormant and Active Meters where it considers that the testing in respect of the entry containing only Dormant Meters will suffice.

20.10 The DCC shall publish the DMCT Schedule (and any subsequent updates to it) on the DCC Website and shall notify Supplier Parties, the SEC Panel, the Authority and the Secretary of State of its publication (and of any update to it). The DCC shall also provide the DMCT Schedule (and any updates to it) to SECAS for publication on the SEC Website.

20.11 For those DMCs that are on the DMCT Status List but where the DCC considers that testing is not required and so is not planned, or testing is planned but the DCC is not reasonably confident of the proposed date for testing, or testing is not planned as the DCC cannot source test devices, the DCC shall notify any Supplier Party that included the DMC in its submission that it has been excluded from the DMCT Schedule indicating:

(a) which of the reasons in Clause 20.6 (a) to 20.6 (e) apply; and

(b) in the case of Clause 20.6 (c), 20.6 (d) or 20.6 (e) the associated rationale.

Such notification shall also be published on the DCC Website and provided to Supplier Parties by the DCC prior to the next submission of information to the DCC pursuant to Clause 20.2.

20.12 Within 20 Working Days of the notification by the DCC to the Supplier Party pursuant Clause 20.11, where a Supplier Party that included a DMC in its submission to the DCC pursuant to Clause 20.2 disagrees with the DCC's decision that:

(a) the DMC proposed is substantively equivalent to an entry for an existing DMC that is on the list of SMETS1 Eligible Product Combinations or is already proposed for addition onto that list or is planned for testing, then the Supplier Party shall notify the DCC (including the rationale for their disagreement) and the DCC shall update the DMCT Schedule to include planned testing of that DMC; or

(b) Migration Testing and / or SIT in respect of the Capability Release of which the DMC will form a part are unlikely to be completed in timescales that would allow DCC to schedule the testing of the DMC with a reasonable degree of confidence, then the Supplier Party shall notify the DCC (including the rationale for their disagreement) and the DCC shall refer the matter to the Secretary of State for determination and the DCC shall update the DMCT Schedule to include planned testing of the DMC where directed to do so by the Secretary of State.

20.12A Where planned testing of a DMC is included in the DMCT Schedule pursuant to Clause 20.12 (a) but the DCC disagrees and considers that testing is not required for the reason in Clause 20.6 (d), the DCC may refer the matter to the Secretary of State for determination, in which case the DCC shall provide the associated rationale for its position to the Secretary of State as part of the referral, and the DCC shall update the DMCT Schedule to remove the planned testing of the DMC where directed to do so by the Secretary of State, in which case the DCC may continue to progress the DMC through the DMCT Process on the basis of Clause 20.6 (d). The DCC must notify any Supplier Party that included the DMC in its submission to the DCC pursuant to Clause 20.2 that it has referred the matter to the Secretary of State and provide the associated rationale for its view that testing is not required.

Tests undertaken against a DMC

20.13 When testing in respect of a planned entry on the EPCL in respect of a DMC, the objective of the tests shall be to verify that:

(a) the DCC can successfully Migrate SMETS1 Installations that are comprised of the DMC; and

(b) once Enrolled, the DCC can successfully process SMETS1 Service Requests and relevant SMETS1 Alerts in respect of Smart Metering Systems that are comprised of the DMC (in whole or in part).

20.14 Where the DCC considers that the DCC Systems used to Migrate SMETS1 Installations comprising the DMC should be tested under Migration Testing pursuant to the MTAD, the DCC shall notify the TAG along with the associated rationale. In circumstances where Migration Testing is not going to be undertaken pursuant to the MTAD for the DMC, the DCC shall execute DMCT MT and DMCT SRVT for that DMC. However, in the alternate case, the DCC shall only be required to execute DMCT SRVT and may do so once the TAB has determined that the Migration Test Phase for the DMC under the MTAD has been completed. Notifications for the purposes of this Clause 20.14 may take place prior to this Clause coming into effect.

20.15 Subject to Clause 20.17 when undertaking:

(a) DMCT MT, the DCC shall execute the Standard Dormant DMCT Migration Test Pack for the Capability Release; and

(b) DMCT SRVT, the DCC shall execute the Standard DMCT Service Reference Variant Test Pack for the Capability Release.

20.16 Each standard test pack referred to in Clause 20.15 shall set out the tests which shall be executed as part of that test pack for the relevant Capability Release. The test pack in respect of each Capability Release shall be proposed by the DCC and agreed with the TAG. Where the DCC and the TAG cannot reach agreement, the DCC may refer the matter to the Secretary of State, whose decision shall be final and binding for the purposes of this Code.

20.17 The DCC may propose to execute a different set of tests (a DMCT Non-Standard Test Pack) for DMCT MT and/or DMCT SRVT in respect of a particular DMC. Prior to doing so, the DCC shall discuss the proposed set of tests with the TAG and seek agreement from the TAG. Where the DCC and the TAG cannot reach agreement on the set of tests which shall be executed and contained within the relevant test pack(s), the matter may be referred to the Secretary of State by the DCC, whose decision shall be final and binding for the purposes of this Code.

20.18 Where the versions of the DCC Systems and environments against which DCC is planning to execute tests (pursuant to this Clause 20) are not the ones that most closely match those that are (or will be) in the production environment at the time at which the Smart Metering Systems that are comprised of the DMCs that are being tested will be eligible to be Migrated, then the DCC shall discuss its proposals with the TAG and shall only execute tests against the alternate version of the DCC Systems and environments if the TAG agrees.

20.19 Once testing in respect of a particular DMC has commenced, the DCC shall be relieved of its obligations to complete testing of a DMC pursuant to this Clause 20 should it no longer have sufficient devices available for use in testing. Where this is the case, the DCC shall notify all Supplier Parties, the Panel, the Authority and the Secretary of State. Such DMCs may be included in a subsequent Supplier Party submission pursuant to Clause 20.2.

DMCT Testing Issues

20.20 Where a DMCT Testing Issue arises whilst executing tests under the DMCT Process which could result in one or more of:

(a) a change to the DCC Internal Systems but no change to the Code; or

(b) a change to the DCC Systems and a change to the Code; or

(c) a change to a SMETS1 Device; or

(d) a change to the Code (but no change to the DCC Systems),

the DCC shall discuss the issue with affected stakeholders and recommend which of the above options should be followed, notifying stakeholders, the SEC Panel, the Authority and the Secretary of State of its recommendation.

20.21 When progressing a DMCT Testing Issue pursuant to Clause 20.20, where appropriate the DCC may pause (and recommence) the DMCT Process (including testing) for the impacted DMC(s). Where the DMCT Process is paused (or recommenced), the DCC shall inform the Panel and the Secretary of State via the reports produced pursuant to Clause 16.1.

20.22 Where the DCC recommends that the option in Clause 20.20 (a) is followed, the DCC shall:

(a) where there is no material impact to the timescales for testing the DMC (or other DMCs), progress the change to the DCC Internal Systems in accordance with Section H8.9 to H8.12, re-run the test pack accordingly and update the DMCT Schedule with the revised completion dates in respect of the DMC(s); or

(b) where there is a material impact to the timescales for testing the DMC (or other DMCs), progress the change to the DCC Internal Systems in accordance with Section H8.9 to H8.12, re-run the test pack accordingly and update the DMCT Schedule with the revised completion dates in respect of the DMC(s), unless the Secretary of State directs otherwise. Where the Secretary of State directs otherwise, the DCC shall comply with any alternative course of action set out in such direction.

The DCC shall inform SEC Parties, the Panel, the Authority and the Secretary of State which of (a) or (b) above that the DCC is planning to undertake in advance of doing so.

20.23 Where the DCC's recommendation is that the option in Clause 20.20 (b) is followed, the DCC shall first consult with the Secretary of State as to whether, in his opinion, the Code change should be consulted upon. Where the Secretary of State agrees that the change ought to be consulted upon the DCC shall propose an approach for testing for agreement by the TAG. The proposed approach shall include:

(a) the DCC’s approach to testing the change (including when and where testing should be undertaken, the tests to be undertaken and the approach to regression testing), rules for test completion and the associated governance; and

(b) an indication of whether testing by Users is required.

Where the Secretary of State does not agree that the Code change should be consulted upon, the DCC shall reconsider and recommend an alternative option for resolving the Testing Issue from the options outlined in Clause 20.20.

20.24 Where an approach for testing (pursuant to Clause 20.23) cannot be agreed by the DCC and the TAG, the matter shall be referred to the Secretary of State for determination whose decision will be final and binding for the purpose of this Code. The DCC shall undertake testing in accordance with the approach and governance as agreed with the TAG or determined by the Secretary of State (as the case may be).

20.25 Where the DCC's recommendation is that the option in Clause 20.20 (c) is followed it shall recommend this to the Secretary of State indicating whether it considers a firmware upgrade or a configuration change or both is required. Where the Secretary of State agrees with the DCC's recommendation and the change requires:

(a) a firmware upgrade, the DMCT Process shall no longer be undertaken in respect of that DMC; or

(b) a change to the configuration applied to a Device or Devices that comprise part of the DMC, the DMC shall be excluded from the DMCT Process until such time as evidence can be provided by any Supplier Party proposing its inclusion (through a subsequent request for information pursuant to Clauses 20.2 and/or 20.3) that the change has been applied or will be applied prior to enrolment; or

(c) a firmware upgrade and a change to the configuration applied to a Device or Devices that comprise part of the DMC, the DMC that results from the new firmware version shall be excluded from the DMCT Process until such time as evidence can be provided by any Supplier Party proposing its inclusion (through a subsequent request for information pursuant to Clauses 20.2 and/or 20.3) that the configuration change has been applied or will be applied prior to enrolment.

20.26 Where the Secretary of State disagrees with the recommendation of the DCC that the option in Clause 20.20 (c) should be followed, the DCC shall reconsider and recommend an alternative option for resolving the Testing Issue from the options outlined in Clause 20.20.

20.27 Where the DCC's recommendation is that the option in Clause 20.20 (d) is followed, but the Secretary of State has indicated that such change(s) should not be progressed, then the DCC shall reconsider and recommend an alternative option from the options outlined in Clause 20.20.

DMCT Testing Exit Criteria

20.28 Testing under the DMCT Process in respect of a planned entry on the EPCL cannot successfully complete where the open Testing Issues in respect of that planned entry on the EPCL exceed the thresholds set out in Table 20.1. The Testing Issue Thresholds are calculated across all DCC Service Providers (including the relevant SMETS1 SMSO, acting in the capacity of DCC Service Provider) collectively and comprise both:

(a) a threshold for the individual planned entry on the EPCL that is the subject of testing under the DMCT Process; and

(b) an aggregate threshold that takes into account any open Testing Issues, irrespective of where they arose.

Table 20.1 SMETS 1 SVTAD Testing Issue Thresholds for DMCT

Testing Issue Severity	For Clause 20.28 (a) Planned entry on the EPCL	For Clause 20.28 (b) Aggregate limit across DMCT
1	0	0
2	0	0
3	15	30
4	30	60
5	60	120

20.29 If there are any open Testing Issues that the DCC believes should not be counted against the Testing Issue Thresholds for the purposes of Clause 20.28 in respect of a planned entry on the EPCL, including where the DCC considers that the open Testing Issues would not affect the functioning of the solution for the planned entry on the EPCL, the DCC may propose to exclude such Testing Issue(s) from its count. Where the DCC proposes to exclude such Testing Issue(s) from its count, the DCC shall:

(a) describe the Testing Issue(s) that it proposes to exclude and the DCC's rationale for exclusion in a draft DMCT Testing Report; and

(b) provide the TAG with a description of the Testing Issue(s) excluded and the DCC's rationale for exclusion for the TAG to review pursuant to Clause 20.38.

20.30 The DCC shall provide the TAG with a description of all open Testing Issues in respect of a planned entry on the EPCL and their assigned severity, indicating whether the extant Testing Issues exceed the relevant Testing Issue Thresholds (pursuant to Clause 20.28).

DMCT Testing Completion

20.31 Where testing is required under the DMCT Process for a planned entry on the EPCL, the DCC shall not produce a draft DMCT Testing Report (pursuant to Clause 20.34 or Clause 20.35 as the case may be) until testing has completed (as determined in Clause 20.32 or Clause 20.33 as the case may be).

20.32 Testing for a planned entry on the EPCL shall be considered to have been completed and to be successful when:

(a) all DMCT Process tests related to the planned entry on the EPCL have been executed;

(b) all Testing Issues raised during testing of the planned entry on the EPCL have been through the processes outlined in Clauses 20.20 to 20.27, as applicable;

(c) where, pursuant to Clause 20.14 the DCC has undertaken Migration Testing for the planned entry on the EPCL pursuant to the MTAD, the Panel has determined that the Migration Test Phase for the planned entry on the EPCL has completed; and

(d) subject to Clause 20.28, any extant Testing Issues do not exceed the relevant Testing Issue Threshold.

20.33 Testing for a planned entry on the EPCL shall be considered to have been completed and to be unsuccessful either,

(a) when:

(i) all DMCT Process tests related to the planned entry on the EPCL have been executed;

(ii) all Testing Issues raised during testing of the planned entry on the EPCL have been through the processes outlined in Clauses 20.20 to 20.27, as applicable;

(iii) subject to Clause 20.28, extant Testing Issues exceed the relevant Testing Issue Threshold; and/or

(iv) where, pursuant to Clause 20.14 the DCC has undertaken Migration Testing for the planned entry on the EPCL pursuant to the MTAD, the Panel has determined that the Migration Test Phase for the planned entry on the EPCL has not completed; or

(b) when it was not possible for all DMCT Process tests related to the planned entry on the EPCL to be executed having been through the processes outlined in Clauses 20.20 to 20.27, or where Migration Testing was planned pursuant to Clause 20.14 and it is not possible to complete it, or where a blocking defect has arisen and the Secretary of State agrees that testing should not continue.

DMCT Testing Reports

20.34 Where the DCC has undertaken testing in respect of the proposed entry on the EPCL and testing has completed successfully, prior to producing the associated DMCT EPCL Report for the purposes of Clause 20.41, the DCC shall produce a draft DMCT Testing Report which shall include:

(a) the version of the DCC Systems and environments against which tests were executed, which, subject to Clause 20.18, shall be those versions and environments that most closely match those that are or will be in the production environment at the time at which Smart Metering Systems that are comprised of the DMC are eligible to be Migrated;

(b) the tests run as per the relevant test pack;

(c) the results of the tests run;

(d) confirmation that all open Testing Issues have been captured and either closed, or where still open, Work Off Plans are in place;

(e) the approach to re-running tests following the deployment of any fixes during testing;

(f) details for any Testing Issues that were excluded pursuant to Clause 20.29 including the rationale for exclusion;

(g) supporting detail setting out the rationale for the severity assigned to any open Testing Issues and the associated Work Off Plans (excluding any Testing Issues reported pursuant Clause 20.34 (f));

(h) any other information as prescribed in the relevant test pack; and

(i) a statement of why the planned entry on the EPCL has successfully completed testing (including, where relevant, reference to any Migration Completion Report).

20.35 Where testing under the DMCT Process has completed unsuccessfully pursuant to Clause 20.33 and therefore the DCC is not proposing a corresponding entry on the EPCL, the DCC shall produce a draft DMCT Testing Report which shall include.

(a) the version of the DCC Systems and environments against which tests were executed, which, subject to Clause 20.18, shall be those versions and environments that most closely match those that are (or will be) in the production environment at the time at which the Smart Metering Systems that are comprised of the DMC are eligible to be Migrated;

(b) the tests run as per the relevant test pack;

(c) the results of the tests run;

(d) confirmation that all open Testing Issues have been captured and either closed, or where still open, Work Off Plans are in place;

(e) the approach to re-running tests following the deployment of any fixes during testing;

(f) details for any Testing Issues that were excluded pursuant to Clause 20.29 including the rationale for exclusion;

(g) supporting detail setting out the rationale for the severity assigned to any open Testing Issues and the associated Work Off Plans (excluding any Testing Issues reported pursuant Clause 20.35 (f));

(h) any other information as prescribed in the relevant test pack; and

(i) a statement of why the planned entry on the EPCL has unsuccessfully completed testing (including, where relevant, reference to any Migration Completion Report).

20.36 The DCC shall make available each draft DMCT Testing Report to any Supplier Party that was planning to enrol one or more SMETS1 Installations that are comprised of the planned entry on the EPCL that is the subject of the DMCT Testing Report (based on the information provided pursuant to Clause 20.2). In addition to the notice provisions set out in Section M10 of the Code, the DCC shall also use any additional contact details provided to DCC pursuant to Clause 20.2 when making available the draft DMCT Testing Report. Such notification of additional contact details by the Supplier Party can include notifications made in submissions received pursuant to Clause 20.2 prior to this Clause 20.36 coming into effect.

20.37 Where a draft DMCT Testing Report has been provided to a Supplier Party pursuant to Clause 20.36 and that Supplier Party considers that a different determination on the successful completion or unsuccessful completion should be arrived at, or might be arrived at because:

(a) the approach to re-running tests following the deployment of any fixes during testing is considered inappropriate;

(b) one or more Testing Issues should not have been excluded pursuant to Clause 20.29; and/or

(c) the severity assigned to one or more Testing Issues should be reduced or increased (as the case may be);

that Supplier Party may (within 10 Working Days of the relevant draft DMCT Testing Report being provided) refer the matter to the Secretary of State for a determination (pursuant to Clause 20.40), setting out its supporting arguments.

20.38 Where the TAG considers that a different determination of the number or severity of the extant Testing Issues against the relevant Testing Issue Thresholds should be arrived at, or might be arrived at, because:

(a) the TAG considers that the severity of one of more of the open Testing Issue(s) (provided pursuant to Clause 20.30) should change; and/or

(b) the TAG disagrees with the exclusion of one or more Testing Issues (where the details were provided to the TAG pursuant to Clause 20.29 (b)),

and that different determination would result in the status of testing changing from successful to unsuccessful, then the DCC shall either:

(c) continue testing under the DMCT Process for the relevant planned entry on the EPCL (and Clause 20.13 onwards shall apply again) and notify any Supplier Party that was provided with the draft DMCT Testing Report accordingly; or

(d) refer the matter to the Secretary of State for determination (pursuant to Clause 20.40).

20.39 Where,

(a) each Supplier Party that received a draft DMCT Testing Report (pursuant to Clause 20.36) has confirmed to the DCC that they will not refer the matter to the Secretary of State for a determination (pursuant to Clause 20.37), or no referral has been made within 10 Working Days (pursuant to Clause 20.37);

(b) any TAG disagreement with the DCC's proposed excluded open Testing Issues (pursuant to Clause 20.38) would not result in changing the status of testing from successful to unsuccessful; and

(c) any TAG disagreement with the severity assigned to open Testing Issues (pursuant to Clause 20.38) would not result in changing the status of testing from successful to unsuccessful,

the draft DMCT Testing Report shall be updated as necessary and deemed to be final.

20.40 Where a referral has been made by a Supplier within 10 Working Days (pursuant to Clause 20.37) and/or by the DCC (pursuant to Clause 20.38) the determination of the Secretary of State shall be final and binding for the purposes of this Code as follows:

(a) where the Secretary of State agrees with the DCC's treatment of the matters in the draft DMCT Testing Report that have been referred by the Supplier Party and/or the DCC, the draft DMCT Testing Report shall be deemed to be final;

(b) where the Secretary of State disagrees with the DCC's treatment of any of the matters in the DMCT Testing Report and as a consequence the status of the testing changes to successful (as referred to in Clause 20.32) the DCC shall update the draft DMCT Testing Report and it shall be deemed to be final; and/or

(c) where the Secretary of State disagrees with the DCC's treatment of any of the matters in the DMCT Testing Report and as a consequence, the status of the testing changes to unsuccessful (as referred to in Clause 20.33) or further tests need to be run, as determined by the Secretary of State, either,

(i) the DCC shall update the draft DMCT Testing Report and it shall be deemed to be final; or

(ii) the DCC shall continue testing under the DMCT Process for the relevant planned entry on the EPCL (and Clause 20.13 onwards shall apply again).

DMCT EPCL Reports

20.41 Where the DCC considers that an entry on the EPCL should be made in respect of a particular In-Scope DMC as a result of the DMCT Process, it shall produce a DMCT EPCL Report:

(a) specifying the proposed entry for the EPCL; and

(b) setting out why the DCC considers that the entry should be made including, where applicable:

(i) a final DMCT Testing Report which provides for successful completion for the proposed entry on the EPCL; or

(ii) a reference to a prior final DMCT Testing Report or other Completion Reports that are relevant for the proposed entry on the EPCL.

For the avoidance of doubt, a DMCT EPCL Report is also required where testing of the DMC under the DMCT Process is not required (as the DCC considers that a planned entry on the EPCL is substantially equivalent pursuant to Clause 20.6 (d) and the DCC's view has not been over-ridden pursuant to Clauses 20.12 (a) and 20.12A). In such circumstances, where Clause 20.6 (d) (iii) applies, the DMCT EPCL Report shall not be produced until the relevant final DMCT Testing Report or other test completion reports on which it relies have been produced.

20.42 The DCC may combine the activities described in Clause 20.41 so that a single DMCT EPCL Report may cover more than one planned entry on the EPCL.

20.43 The DCC shall publish each DMCT EPCL Report (which shall be anonymised and redacted where appropriate by the DCC) on the DCC Website and shall notify the Panel, the Secretary of State, the Authority and SEC Parties of the publication of the report.

21 SMETS1 Uplift Testing

21.1 Only Clauses 1, 2 and 16 of this SMETS1 SVTAD shall apply to SMETS1 Uplift Testing, unless expressly stated in the relevant SMETS1 Uplift DCC Testing Approach Document or SMETS1 Uplift Mandated User Testing Document.

21.2 SMETS1 Uplift Testing shall be performed by the DCC and any other Party that participates in it in accordance with Good Industry Practice. The DCC may overlap SMETS1 Uplift Testing if provided for in the relevant SMETS1 Uplift DCC Testing Approach Document(s) and/or SMETS1 Uplift Mandated User Testing Document(s).

21.2A Clauses 21.3 to 21.6 and Clauses 21.11 to 21.13 shall apply in respect of each SMETS1 Uplift where the SMETS1 Uplift DCC Test Approach Document has been approved by the TAG (pursuant to Clause 21.4) prior to 22 September 2021. For the avoidance of doubt, Clauses 21.1 to 21.2 and Clauses 21.7 to 21.10 shall apply in respect of each SMETS1 Uplift.

21.2B Where the SMETS1 Uplift DCC Test Approach Document has not been approved by the TAG (pursuant to Clause 21.4) prior to 22 September 2021 or where the TAG agrees to the DCC retracting any SMETS1 Uplift DCC Test Approach Document which was approved (pursuant to Clause 21.4) prior to 22 September 2021, then the DCC shall propose an approach for SMETS1 Uplift Testing for agreement by the TAG. The proposed approach shall include:

(a) the DCC's approach to testing the change (including when and where testing should be undertaken, the tests to be undertaken and the approach to regression testing), rules for test completion and the associated governance; and

(b) an indication of whether testing by Users is required.

Notwithstanding the above and for the avoidance of doubt, Clauses 21.1 to 21.2 and Clauses 21.7 to 21.10 shall apply in respect of each SMETS1 Uplift.

21.2C Where an approach for SMETS1 Uplift Testing (pursuant to Clause 21.2B) cannot be agreed by the DCC and the TAG, the matter shall be referred to the Secretary of State for determination whose decision will be final and binding for the purpose of this Code. The DCC shall undertake testing in accordance with the approach and governance as agreed with the TAG or determined by the Secretary of State (as the case may be).

21.3 Each time that a SMETS1 Uplift is planned which would require a change to the DCC Total System, the DCC shall prepare a draft SMETS1 Uplift DCC Testing Approach Document, which shall set out the DCC's proposals for SMETS1 Uplift DCC Testing including:

(a) the proposed amendments to this Code that are the subject of the testing, an explanation of the associated changes to the DCC Total System, and the testing objective;

(b) the SMETS1 Device Model and/or the combinations of SMETS1 Device Models that are to be used in testing or a statement as to why testing using Devices is not considered necessary;

(c) the testing environments to be used;

(d) the requirements (if any) for security testing;

(e) the requirements (if any) for system capacity testing;

(f) the testing that shall be undertaken, both in terms of the scope of testing and the extent of testing (including negative tests) and the approach to regression testing;

(g) the applicable Testing Issue Thresholds and the process for excluding Testing Issues;

(h) the exit criteria for testing to complete successfully;

(i) any perceived risks associated with the approach to testing and the proposed mitigations;

(j) the approach to providing for assurance of the testing undertaken; and

(k) matters to be included in the SMETS1 Uplift DCC Testing Completion Report (to be prepared pursuant to Clause 21.7).

21.4 The DCC shall submit each draft SMETS1 Uplift DCC Testing Approach Document to the TAG for review (and such submission by the DCC and review by the TAG may take place prior to this Clause 21.4 coming into effect):

(a) where the TAG and the DCC can reach an agreement, the relevant draft SMETS1 Uplift DCC Testing Approach Document shall be updated by the DCC as necessary and deemed to be final; or

(b) where the TAG and the DCC cannot reach an agreement, the relevant SMETS1 Uplift DCC Testing Approach Document shall be referred by the DCC to the Secretary of State for determination (whose decision shall be final and binding for the purposes of this Code) and the relevant draft SMETS1 Uplift DCC Testing Approach Document shall be updated by the DCC as necessary and deemed to be final.

21.5 The DCC shall take all reasonable steps to complete the tests set out in each SMETS1 Uplift DCC Testing Approach Document in accordance with the milestone plan published by the DCC for the relevant SMETS1 Uplift DCC Testing.

21.6 Revisions to a SMETS1 Uplift DCC Testing Approach Document finalised pursuant to Clause 21.4 may, from time to time be submitted by the DCC to the TAG for agreement in accordance with the provisions of Clause 21.4, and the provisions of Clause 21.5 shall apply (again) to the revised version of the document.

21.7 Where the DCC considers that User testing is required as part of SMETS1 Uplift Testing it shall set out its proposals for User testing in a draft SMETS1 Uplift Mandated User Testing Document, including those Users that should be required to participate in the testing, the approach to testing, the arrangements for test completion and notification of test completion. In developing a SMETS1 Uplift Mandated User Testing Document, the DCC shall consult with the TAG, Parties and other relevant stakeholders prior to the submission of the document to the Secretary of State.

21.8 The DCC shall submit each draft SMETS1 Uplift Mandated User Testing Document to the Secretary of State, indicating:

(a) why the DCC considers the draft to be fit for purpose;

(b) copies of the consultation responses received; and

(c) any areas of disagreement that arose during the consultation process and that have not been resolved.

21.9 The DCC shall comply with any direction given by the Secretary of State to re-consider, re-consult, and/or re-submit the draft document.

21.10 Should a SMETS1 Uplift Mandated User Testing Document be approved by the Secretary of State, the DCC and each Party other than the DCC that participates in (or is required to participate in) testing, as set out in such approved document, shall comply with that SMETS1 Uplift Mandated User Testing Document.

21.11 Where the DCC reasonably considers that the DCC's solution testing is complete for an instance of SMETS1 Uplift DCC Testing (or a subset of the solution), the DCC shall prepare a report (being a SMETS1 Uplift DCC Testing Completion Report) as provided for in the SMETS1 Uplift DCC Testing Approach Document. The DCC shall present each SMETS1 Uplift DCC Testing Completion Report to the TAB for their acceptance or rejection. Where accepted by the TAB, a SMETS1 Uplift DCC Testing Completion Report shall be provided to the TAG for approval as follows:

(a) where the TAG approves the SMETS1 Uplift DCC Testing Completion Report (subject to the TAG and the DCC reaching an agreement regarding resolution of any issues raised by the TAG) the relevant SMETS1 Uplift DCC Testing Completion Report shall be updated by the DCC as necessary and deemed to be final; or

(b) where the TAG declines to approve the SMETS1 Uplift DCC Testing Completion Report, the DCC shall, if necessary, update the SMETS1 Uplift DCC Testing Completion Report (to reflect resolution of any issues where the DCC and the TAG reached an agreement), and the DCC shall either:

(i) refer the SMETS1 Uplift DCC Testing Completion Report to the Secretary of State for determination pursuant to Clause 21.12; or

(ii) continue with SMETS1 Uplift DCC Testing (and Clause 21.5 onwards shall apply again).

21.12 Where a referral has been made by the DCC (pursuant to Clause 21.11 (b) (i)) the determination of the Secretary of State shall be final and binding for the purposes of this Code as follows:

(a) where the Secretary of State agrees that SMETS1 Uplift DCC Testing is complete, the relevant SMETS1 Uplift DCC Testing Completion Report shall be updated by the DCC as necessary and deemed to be final; or

(b) where the Secretary of State disagrees that SMETS1 Uplift DCC Testing is complete, the DCC shall continue with SMETS1 Uplift DCC Testing (and Clause 21.5 onwards shall apply again).

21.13 The DCC shall publish each final SMETS1 Uplift DCC Testing Completion Report (which shall be anonymised and redacted where appropriate by the DCC) on the DCC Website and shall notify the Panel, the Secretary of State, the Authority and the SEC Parties of the publication of the report.

APPENDIX AL

SMETS1 Transition and Migration Approach Document

1 Introduction and General Obligations

1.1 This Appendix is the Transition and Migration Approach Document (TMAD) developed by the DCC pursuant to Section N6 of the Code.

1.2 Where directed to do so by the Secretary of State from time to time, the DCC shall develop and consult upon a further draft or drafts of this TMAD and submit it to the Secretary of State in accordance with the process set out in Section N6.4 of the Code.

1.3 For the purposes of Section N6.8 (Expiry of Transition and Migration Approach Document) this TMAD will cease to apply on 31 December 2024 (or any such later date as the Secretary of State may direct following a consultation on a proposed alternative with the Parties and the Panel).

1.4 The DCC shall develop proposals for amendments to the Code (and a proposed timing for their designation) that would enable SMETS1 Installations that comprise SMETS1 Meters that are In-Scope for Enrolment to be successfully Migrated, where the DCC considers that without such amendments, the successful Migration of those SMETS1 Installations is not likely to be possible.

1.5 Where the DCC considers that it would be technically or operationally impracticable or disproportionately costly to enable particular categories of SMETS1 Installations to be Migrated and/or particular categories of SMETS1 Smart Metering Systems to be Enrolled, rather than developing proposals pursuant to Clause 1.4, the DCC shall develop proposals for amendments to Clause 18 to prescribe those categories of SMETS1 Installations that should not be Migrated and/or those categories of SMETS1 Smart Metering Systems that should not be Enrolled together with the DCC's supporting rationale.

1.6 The DCC shall develop proposals pursuant to Clauses 1.4 and 1.5 in accordance with the following process:

(a) the DCC shall:

(i) in consultation with the Parties and such other persons as are likely to be interested, produce a draft of the proposals and, where applicable, the supporting rationale; and

(ii) in the case of proposals pursuant to Clause 1.5, concurrently advise each Responsible Supplier for a SMETS1 Smart Metering System that would be affected or would potentially be affected by the DCC proposals (to the extent to which the DCC reasonably knows) that the DCC is proposing that it should no longer be required to:

(A) undertake activities; and/or

(B) undertake a Migration,

that would enable that SMETS1 Smart Metering System to be Enrolled or provide SMETS1 Services to the SMETS1 Smart Metering System(s);

(b) where a disagreement arises with any Party or other person with regard to any proposals or rationale, the DCC shall endeavour to reach an agreed proposal/rationale with that Party or person;

(c) after completion of the process described in (a) and (b) above, the DCC shall submit to the Secretary of State a document or documents containing its proposed amendments to the Code (together with the supporting rationale), and shall when doing so also provide to the Secretary of State:

(i) a statement of the reasons why the DCC considers the proposal(s) and, where applicable, the supporting rationale, to be fit for purpose;

(ii) copies of the consultation responses received; and

(iii) a summary of any disagreements that arose during consultation and that have not been resolved by reaching an agreed proposal/rationale; and

(d) the DCC shall comply with any requirements in a direction given to it by the Secretary of State in relation to the document or documents, including:

(i) any amendments to be made to the document;

(ii) any requirement to produce and submit to the Secretary of State a further draft of the document; and

(iii) any requirement as to the process to be followed by the DCC (and the time within which that process shall be completed) prior to submitting a further such draft.

1.7 [NOT USED]

1.8 The DCC shall develop proposals pursuant to Clauses 1.4 and 1.5 in such timeframes as may be specified in directions issued by the Secretary of State from time to time for such purpose.

1.9 For the purposes of Clauses 1.4-1.6, SMETS1 Smart Meters that are In-Scope for Enrolment are those:

(a) for which the Secretary of State has concluded that the DCC is required to provide SMETS1 Services; and

(b) which are not SMETS1 Smart Meters that are the subject of an Excluded Category(ies) set out in Clause 18 (except where a direction has been issued by the Secretary of State pursuant to Clause 18.16).

2 Defined Terms and Interpretations

Term	Meaning
Active Device	Shall mean an Active Meter or Active GPF as the context requires.
Active GPF	Shall mean the SMETS1 GPF that is associated with a SMETS1 GSME that is an Active Meter.
Active Meter	Shall mean, at the relevant point in time, a SMETS1 ESME or a SMETS1 GSME in relation to which, at that point in time, the Responsible Supplier has arrangements with a SMETS1 SMSO to provide the Responsible Supplier with services in relation to that SMETS1 ESME or SMETS1 GSME.
Authenticator	Shall be the DCC, the DCO, the Commissioning Party, a Supplier Party or the S1SP when undertaking the processing required by Table5.9.
Authorised DCO SMETS1 Device Credentials	Shall mean the security related information required by the DCO for a SMETS1 Device which is provided to the DCO securely (and independently from the S1SP) and which the DCO is required to use to independently assure requests it receives from the S1SP in relation to the Device's installation or Migration.
Authorised S1SP SMETS1 Device Credentials	Shall mean the security related information required by the S1SP for a SMETS1 Device which is provided to the S1SP securely (and independently from the DCO) and which the S1SP is required to use in relation to the Device's installation or Migration.

Certificate ID	In relation to an Organisation Certificate, shall be the combination of serialNumber and Issuer X520 Common Name (with their Organisation Certificate Policy meanings) and so shall be a unique identifier for that Organisation Certificate. Thus, the identifier shall be the SMETS1 Migration Schema combination of the X509SerialNumber and X509IssuerName values. Where no Organisation Certificate is identified, it shall have the Null Certificate ID value.

Term	Meaning
CHF Identifier	Shall be the Device ID of the SMETS1 CHF associated with each SMETS1 Installation.
CHF Whitelist	In relation to a SMETS1 Installation, shall include the list of Device IDs, being IEEE media access control addresses, held on the SMETS1 CHF detailing the set of Devices which are currently authorised to communicate over the ZigBee network to which the CHF controls access. For clarity this list never includes Device IDs for a CHF or a GPF, and in the case of an ESME only includes the Device ID where that ESME communicates with the CHF using a ZigBee network. For clarity, the CHF Whitelist, for GroupIDs specified in Clauses 12, 13, 14, 15 and 16, includes, for each IEEE media access control address either (1) the UTC date-time at which the CHF last communicated with the identified Device or (2) an indication that the CHF has never communicated with the identified Device.
Commissioning Outcome File	Shall mean a file created by the Commissioning Party which complies with the requirements of Clause 6.3(d)(ii).
Commissioning Outcome File Counter	A counter of that name created and maintained pursuant to Table 5.7 to guard against replay of files processed pursuant to this TMAD.
Commissioning Party	See Clause 3.1(e).
Commissioning Party Systems	See Clause 3.1(e).
Commissioning Request	Shall mean a request from the Commissioning Party as set out in Table 6.3.
Common Validation Checks	Shall means those checks carried out pursuant to Clause 5.10.
Completion Report	means a report that is produced at completion of a Test Phase setting out evidence demonstrating how the criteria for the completion of that Test Phase have been met.
Critical Network Operator ID	In relation to an Organisation Certificate identified by a specified Certificate ID, if it has a Remote Party Role of 'networkOperator' and a keyUsage of 'digitalSignature', the Critical Network Operator ID shall be the Entity Identifier of the subject of that Certificate (all with their Organisation Certificate Policy meanings). Otherwise, the Critical Network Operator ID shall be null.
Critical Supplier ID	In relation to an Organisation Certificate identified by a specified Certificate ID, if it has a Remote Party Role of 'supplier' and a keyUsage of 'digitalSignature', the Critical Supplier ID shall be the Entity Identifier of the subject of that Organisation Certificate (all with their Organisation Certificate Policy meanings). Otherwise, the Critical Supplier ID shall be null.

Term	Meaning
Daily Migration Demand	Shall have the meaning given in Clause 4.8.
DCC's Microsoft SharePoint	A web-based collaborative platform that DCC uses to securely share and exchange information with individual Parties.
DCC Migration Systems	Shall have the meaning given in Clause 3.1(e).
DCO Public Key	Shall mean a public key produced pursuant to Clause 5.4A.
DCO Required File Set	Shall mean the set of files specified in Clauses 12, 13, 14, 15 and 16 for the relevant GroupID.
DCO Viable Installations	Shall have the meaning ascribed to that term in Clause 5.19.
Dormant Meter	Shall mean, in relation to a SMETS1 SMSO, a SMETS1 ESME or a SMETS1 GSME that is installed in respect of an Energy Consumer's premises, that: i) the relevant SMETS1 SMSO is able to remotely communicate with via a SMETS1 CHF; and ii) is not an Active Meter.
Excluded Category	Shall have the meaning given in Clause 18.
Group	Shall mean the set of SMETS Installations identified by the same GroupID on the Group Device Model Combination List.
Group Device Model Combination List	Shall mean a list of Device Model Combinations that are entries on the SMETS1 Eligible Product Combinations list and form part of the same Group.
GroupID	Shall be the unique value used by the DCC to identify a Group within the Group Device Model Combination List.
Group Specific Requirements	Shall mean the set of requirements as specified in Clauses 12, 13, 14, 15 and 16 for the relevant GroupID.
IEEE	The Institute of Electrical and Electronics Engineers.
Indicative Migration Forecasts	In relation to a Supplier Party and a SMETS1 SMSO, shall mean the forecast number of all SMETS1 Installations that the Supplier Party is planning to include within a Migration Authorisation each day and the associated dates. This forecast shall be broken down by Electricity Network Party.
Installing Supplier	Means, in relation to a Device, the Supplier Party that installed, or arranged for the installation of, that Device.

Term	Meaning
Key Identifier	The SHA-1 hash of a Public Key that is used to identify that Public Key, where SHA-1 has the meaning specified in the US Government's Federal Information Processing Standards document 180-4.
Last EPCL Entry	Means, in respect of entries that include Secure SMSO Limited (company number 10611361) or, with effect from the novation of the enduring SMETS1 agreement between DCC and Secure SMSO Limited, its transferee, Secure Meters (UK) Limited (company number 02199653), the entry on the list of SMETS1 Eligible Product Combinations which has been approved by the Secretary of State after which no other entries in respect of Secure SMSO Limited have been approved by the Secretary of State for a period of 12 months.
Migration	Shall have the meaning given in Clause 3.1(e).
Migration Authorisation	An authorisation given by the Responsible Supplier in relation to a SMETS1 Installation via the Migration Authorisation Mechanism to commence the Migration of a SMETS1 Installation, or an authorisation deemed to be given in accordance with Clause 4.27. Except where GroupID = "EA" or "EB", where there are two Responsible Suppliers for the Smart Metering Systems that together comprise the same SMETS1 Installation and they are Affiliates of one another, then any authorisation for the Migration of the SMETS1 Installation from the Responsible Supplier for the Electricity Smart Metering System shall, where the Migration Authorisation Mechanism also includes details of the Gas Smart Metering System, be deemed to constitute an authorisation for Migration of the SMETS1 Installation by the Responsible Supplier for the Gas Smart Metering System.
Migration Authorisation Mechanism	The mechanism of that name referred to in Clause 4.35.
Migration Common File	Shall mean a file created by a Requesting Party pursuant to Clause 5.8 that details information about SMETS1 Installations, along with the additional requirements for the relevant GroupID.
Migration Common File Counter	A counter of that name created and maintained pursuant to Table 5.7 to guard against replay of relevant files processed pursuant to this TMAD.
Migration Common Validation File	Shall mean a file created by the DCC pursuant to Clause 5.10(b) detailing, for a corresponding Migration Common File, which SMETS1 Installations have passed the Common Validation Checks and which have not. For those which have not, the file shall specify the validation failure. For clarity, any SMETS1 Installation which does not pass the Common Validation Checks shall not be further processed by the DCC in relation to the corresponding Migration Common File.
Migration Common Validation File Counter	A counter of that name created and maintained pursuant to Table 5.7 to guard against replay of relevant files processed pursuant to this TMAD.

Term	Meaning
Migration Demand Commitment	Shall have the meaning given in Clause 4.8(b).
Migration Error Handling and Retry Strategy	Shall have the meaning set out in Clause 8.8.
Migration Group Encrypted File	Shall mean a file created by a Requesting Party pursuant to Clause 5.12(g) which details a list of SMETS1 Installations which the Requesting Party wishes to Migrate, as identified by the CHF Identifier of each, along with the additional Group Specific Requirements for the relevant GroupID. For clarity, such files shall only be processed where they are specified as being required in Group Specific Requirements.
Migration Group Encrypted File Counter	A counter of that name created and maintained pursuant to Table 5.7 to guard against replay of relevant files processed pursuant to this TMAD.
Migration Group File	Shall mean a file created by a Requesting Party pursuant to Clause 5.12(f) which details a list of SMETS1 Installations which the Requesting Party wishes to Migrate as identified by the CHF Identifier of each, along with, where required for the Group identified by GroupID, any additional Group Specific Requirements for the relevant GroupID. For clarity, such files shall only be processed where they are specified as being required in the Group Specific Requirements.
Migration Group File Counter	A counter of that name created and maintained pursuant to Table 5.7 to guard against replay of relevant files processed pursuant to this TMAD.
Migration Header	In relation to a file created pursuant to this TMAD, the combination of the values in the RequestingPartyID and MCFCounter elements, each with the meaning set out in Clause 10.
Migration Incident	Shall have the meaning given in Clause 3.1(e).
Migration Reporting Regime	Shall have the meaning given in Clause 4.45.
Migration Scaling Methodology	Shall have the meaning given in Clause 4.11
Migration Week	Means in relation to a SMETS1 SMSO, a period of seven days commencing on a Monday and within which DCC plans to Migrate one or more SMETS1 Installations that pertain to that SMETS1 SMSO, although it is acknowledged that, in the case of Group ID = “EA” or “EB”, the Migration might not complete within that week. The first Migration Week for a SMETS1 SMSO shall commence on the first Monday following the day on which an entry for a combination of Device Models which lists that SMETS1 SMSO, as part of that entry, has been added to the SMETS1 Eligible Product Combinations.

Term	Meaning
Network Operator Certificate ID	The Certificate ID of an Organisation Certificate that has been Issued to a Network Party.
Non-Critical Network Operator ID	In relation to an Organisation Certificate identified by a specified Certificate ID, if it has a Remote Party Role of 'networkOperator' and a keyUsage of 'keyAgreement', the Non-Critical Network Operator ID shall be the Entity Identifier of the subject of that Certificate (all with their Organisation Certificate Policy meanings). Otherwise, the Non-Critical Network Operator ID shall be null.
Non-Critical Supplier ID	In relation to an Organisation Certificate identified by a specified Certificate ID, if it has a Remote Party Role of 'supplier' and a keyUsage of 'keyAgreement', the Non-Critical Supplier ID shall be the Entity Identifier of the subject of that Certificate (all with their Organisation Certificate Policy meanings). Otherwise, the Non-Critical Supplier ID shall be null.
Null Certificate ID	Shall be the Certificate ID used to mean that no Certificate is identified. The value of Null Certificate ID shall be the combination where serialNumber and Issuer X520 Common Name (with their Organisation Certificate Policy meanings) are '0' and 'NULL' respectively.
Plaintext	When used in relation to symmetric key encryption / decryption, shall have its GBCS meaning. When used in relation to public key encryption / decryption, shall mean the 'message M' with its IETF RFC-8017 meaning.
Recently Dormant SMETS1 Installation	means a SMETS1 Installation that: (a) comprises a Device Model Combination that is eligible to be Enrolled; (b) included one or more Active Meters at any point in time after it became eligible to be Enrolled; and (c) at a point in time after 12 November 2020, became a SMETS1 Installation that comprises only Dormant Meter(s).
Recovery Time Objective	Shall be the targeted duration of time within which a system must be restored after a disaster (or disruption).
Recovery Point Objective	Shall be the targeted duration of time over which Data can be lost due to a Major Incident.

Term	Meaning
Relevant Device	Means an Active Meter in a SMETS1 Installation with which, prior to the UTRN Period, Secure SMSO Limited (company number 10611361) or, with effect from the novation of the enduring SMETS1 agreement between DCC and Secure SMSO Limited, its transferee, Secure Meters (UK) Limited (company number 02199653) communicated on behalf of the Responsible Supplier.
Request to Exclude	A list of MPRN(s) and associated Device ID(s) provided pursuant to Clause 5.8C and in the format specified in Clause 5.8D.
Requested Installations	Shall have the meaning ascribed to that term in Clause 5.12.
Requesting Party	See Clause 3.1(e).
Requesting Party Systems	See Clause 3.1(e).
RP Decommissioning Date	Means, in relation to a Requesting Party, the decommissioning date identified in relation to that Requesting Party in a RP Decommissioning Timetable.
RP Decommissioning Timetable	The timetable of that name for each Requesting Party most recently approved by the Secretary of State pursuant to Clause 7.3.
Single Use Authorisation Code (SUA)	A one-time authorisation code used by Devices with GroupID = “DA” when cryptographically verifying Instruction.
S1SP Commissioning File	Shall mean a file created by the S1SP pursuant to Clause 5.27(c)(ii) which details whether, for the SMETS1 Installations in question, the S1SP successfully undertook the processing required of the S1SP and, if not fully successful, the issues arising in that processing.
S1SP Commissioning File Counter	A counter of that name created and maintained pursuant to Table 5.7 to guard against replay of files processed pursuant to this TMAD.
S1SP Required File Set	Shall mean the set of files specified for the relevant GroupID.
S1SP Viable Installations	Shall have the meaning set out in Clause 5.25.
SMETS1 CAD	Shall be a Device operating on a home area network created by a SMETS1 CHF, which is not a SMETS1 ESME, a SMETS1 GSME, a SMETS1 CHF, a SMETS1 GPF, a SMETS1 PPMID or a SMETS1 IHD.
SMETS1 Device Security Testing	means tests carried out by the DCC in accordance with the requirements of Clause 17.
SMETS1 Device Security Testing Completion Report	means the document of that name developed pursuant to Clause 17.11.

Term	Meaning
SMETS1 Device Security Testing Scope and Timetable Document	means the document of that name developed pursuant to Clause 17.3.
SMETS1 Installation	Means a SMETS1 CHF installed in respect of an Energy Consumer's premises, the SMETS1 GPF which is part of the same SMETS1 CH, the SMETS1 ESME with which the SMETS1 CHF can communicate, and the set of other Devices (if any) which are authorised to communicate over the HAN to which the CHF controls access. The set of other Devices within a SMETS1 Installation shall include at most one SMETS1 GSME, at most one SMETS1 PPMID, at most one SMETS1 IHD and at most one SMETS1 CAD.
SMETS1 Loss of System Availability	Shall have the meaning given in Clause 3.1(e).
SMETS1 Migration Interface	Shall be the technical interface, as specified at Clause 9, used for the exchange of files between the DCC and Supplier Parties pursuant to the requirements to exchange files in this TMAD.
SMETS1 Migration Schema	The XML SMETS1 Migration Schema included at Clause 10.
SUA Symmetric Key	A secret, symmetric key used by the DCO to authorise Critical Instructions (with its SMETS1 Supporting Requirements meaning), in relation to Devices with a GroupID = "DA".
Supplier Certificate ID	The Certificate ID of an Organisation Certificate that has been Issued to a Supplier Party.
Supplier Signifier	The Party Signifier of the Supplier Party identified by the Entity Identifier of the subject in the Organisation Certificate identified by any CriticalSupplierCertificateID in the Migration Common File. If any CriticalSupplierCertificateID in the Migration Common File is the Null Certificate ID, the value of the Supplier Signifier shall be the empty string.
UTRN Period	In relation to an ESME or a GSME that forms part of a SMETS1 Installation that is within the Group with a GroupID = "DA", a period that: (a) commences from the time at which the step in 3.14C(a) has been successfully passed in relation to that Device; and (b) has a duration that is 336 hours.

2.2 The XML elements listed in Table 10.1 are references to the parts of the SMETS1 Migration Schema and shall have the meaning given to them in the SMETS1 Migration Schema. Where such XML elements are referred to in this TMAD, then as the context requires, the reference shall be interpreted to be either to the element that is to be populated or to the information that is populated within that element for a particular file.

2.3 Additionally, where defined terms from specific parts of the Code are used, the relevant part of the Code is stated. Where no specific part of the Code is stated, a defined term shall have its Section A (Definitions and Interpretation) meaning.

2.4 Where this TMAD affords rights to, or imposes obligations on, a Party in relation to a Migration Week, then, until such time as an entry exists on the list of Eligible Product Combinations in respect of a particular SMSO, the term "Migration Week" in respect of that SMSO shall be interpreted as meaning each week that the Party reasonably anticipates will be a Migration Week (based on the milestones set out in the SMETS1 Services delivery plan produced pursuant to condition 13 of the DCC Licence).

3 Transitional Application of Sections of the Code

Application of Section A (Definitions and Interpretation)

3.1 Whilst this TMAD remains in force, Section A (Definitions and Interpretation) of the Code shall apply as follows:

(a) the definition of "DCC Live Systems" shall be replaced with the following:

DCC Live Systems means those parts of the DCC Total System which are used for the purposes of:

(a) (other than to the extent to which the activities fall within paragraph (b), (c), (f), (g), (h), (i), (j), (k) or (l) below) processing (including Countersigning of SMETS1 Responses, SMETS1 Alerts and S1SP Alerts, but not Countersigning of SMETS1 Service Requests) Service Requests, Pre-Commands, Commands, Instructions, Service Responses and Alerts, holding or using Registration Data for the purposes of processing Service Requests and Signed Pre-Commands, and providing the Repository Service;

(b) Threshold Anomaly Detection (other than that carried out by a DCO) and (other than to the extent to which the activity falls within paragraph (d), (f), (g), (h), (i), (j), (k) or (l) below) Cryptographic Processing relating to the generation and use of a Message Authentication Code and Countersigning SMETS1 Service Requests;

(c) discharging the obligations placed on the DCC in its capacity as CoS Party;

(d) providing SMKI Services;

(e) the Self-Service Interface;

(f) discharging the DCC's obligations under the SMKI Recovery Procedure;

(g) the Production Proving Systems;

(h) discharging the obligations of any SMETS1 Service Provider in its capacity as such;

(i) discharging the obligations of any DCO in its capacity as such;

(j) discharging the obligations of the CSS Provider in its capacity as such;

(k) discharging the obligations of any Requesting Party in its capacity as such; and

(l) discharging the obligations of the Commissioning Party in its capacity as such.

(b) the definition of "DCC Individual Live System" shall be replaced with the following:

DCC Individual Live System

means, with regard to the DCC's duty to Separate parts of the DCC Total System, a part of the DCC Total System which is used:

(a) for one of the purposes specified in paragraphs (a) to (g), or (j) or paragraph (l) of the definition of DCC Live Systems, where the part used for each such purpose shall be treated as an individual System distinct from:

(i) the part used for each other such purpose; and

(ii) any part used for a purpose specified in either paragraphs (h) to (k) of the definition of DCC Live Systems; or

(b) by a SMETS1 Service Provider for the purpose specified in paragraph (h) of the definition of DCC Live Systems, where the part used by each

SMETS1 Service Provider shall be treated as an individual System distinct from:

(i) the part used by each other SMETS1 Service Provider; and

(ii) any part used for a purpose specified in any of paragraphs (a) to (g), or paragraphs (i) to (l), of the definition of DCC Live Systems; or

(c) by a DCO for the purpose specified in paragraph (i) of the definition of DCC Live Systems, where the part used by each DCO shall be treated as an individual System distinct from:

(i) the part used by each other DCO; and

(ii) any part used for a purpose specified in any of paragraphs (a) to (h) or paragraphs (j) to (l) of the definition of DCC Live Systems; or

(d) by a Requesting Party for the purpose specified in paragraph (k) of the definition of DCC Live Systems, where the part used by each Requesting Party shall be treated as an individual System distinct from:

(i) the part used by each other Requesting Party; and

(ii) any part used for the purpose specified in any of paragraphs (a) to (j) or paragraph (l) of the definition of DCC Live Systems.

(c) the definition of "Planned Maintenance" shall be replaced with the following:

Planned Maintenance means, in respect of a month, Maintenance of the DCC Systems planned prior to the start of that month or, in the case of DCC Migration Systems, planned 10 Working Days prior to the start of the Maintenance, and which will disrupt, or poses a Material Risk of disruption to, the provision of the services.

(d) The definition of "Responsible Supplier" shall be replaced with the following:

Responsible Supplier means in respect of a Smart Metering System (or any Device forming, or intended to form, part of a Smart Metering System) or a SMETS1 Installation (or any Device forming part of a SMETS1 Installation) which relates to:

(a) an MPAN, the Import Supplier for the Electricity Meter that forms part of that Smart Metering System or SMETS1 Installation; and/or

(b) an MPRN, the Gas Supplier for the Gas Meter that forms part of that Smart Metering System or SMETS1 Installation.

(e) the following definitions shall be added to Section A:

Commissioning Party	Shall mean the DCC when performing the tasks ascribed to the Commissioning Party in this Code.
Commissioning Party Systems	That part of the DCC Total System used for the purposes referred to in sub-paragraph (l) of the definition of DCC Live Systems.
DCC Migration Systems	Shall mean the Requesting Party Systems and the Commissioning Party Systems.
Migration	In relation to a SMETS1 Installation, or any Device comprising part of that SMETS1 Installation, the carrying out of each of the steps (where relevant to the point of failure) set out in Clauses 5 and 6 of the Transition and Migration Approach Document in relation to that SMETS1 Installation or Device; and the term "Migrate" shall be interpreted accordingly.
Migration Incident	Shall mean an Incident that relates to the Services provided pursuant to the Transition and Migration Approach Document.
Requesting Party	Shall mean, in relation to each of one or more Groups, the DCC when performing the tasks ascribed to the Requesting Party in this Code.
Requesting Party Systems	Shall mean those parts of the DCC Total System used when carrying out the role of a Requesting Party, provided that any SMETS1 SMSO's Systems from which information is provided to the Requesting Party for the purposes of populating the content of any Migration Common File, Migration Group File or Migration Group Encrypted File (each as defined in the Transition and Migration Approach Document) shall not be considered to form part of the Requesting Party Systems.

Smart Metering Inventory Systems	Shall mean that part of DCC Systems that is capable of adding to, modifying or removing any information held in the Smart Metering Inventory and any other part of DCC Systems that is not Separated from it.
SMETS1 Loss of System Availability	Shall mean a material loss of availability, other than for Maintenance purposes, of the DCC Migration Systems, or any of its individual components.

(f) an additional rule of interpretation shall apply such that words beginning with capital letters which are defined in this TMAD and used elsewhere in this Code shall, unless the context otherwise requires, have the meanings given to them in this TMAD; and

(g) the definitions set out below shall be added to Section A or, where they already exist in Section A, they shall be replaced with the meanings set out below:

Application Association	has the meaning given to that expression in the DLMS COSEM Green Book (DLMS UA 1000-2 Ed. 8), published by the DLMS User Association.
Authentication Key	has the meaning given to that expression in the DLMS COSEM Green Book (DLMS UA 1000-2 Ed. 8), published by the DLMS User Association.
Cryptographic Processing	means the generation, storage (other than of Secret Key Material used in relation to communications with a SMETS1 Device, where that Secret Key Material is encrypted) or use of any Secret Key Material.
Instruction	means, in respect of a SMETS1 Device, a communication generated by the SMETS1 Service Provider or a DCO following receipt of a SMETS1 Service Request by the DCC that is designed to instruct the Device to execute the functionality necessary to permit the DCC to take the necessary Equivalent Steps.
SMETS1 PPMID	means: (a) where GroupID = “EA” or “EB”, a SMETS1 IHD that is capable of upgrading its Firmware in response to an Instruction sent over the SMETS1 SM WAN; or

	(b) except where GroupID = "EA" or "EB", a SMETS1 IHD that is capable of upgrading its Firmware in response to an Instruction sent over the SMETS1 SM WAN (except such Devices where, during assessment by the DCC under the DMCT Process (pursuant to Clause 20.4 and 20.5 of Appendix AK), the DCC is unable to obtain from either the Supplier Party or the SMETS1 SMSO the set of data for the SMETS1 PPMID Device Model that is required to enable the relevant entry to be made as a SMETS1 PPMID on the list of SMETS1 Eligible Product Combinations).
SMETS1 Symmetric Key	means an Authentication Key or a symmetric key which is in either case used to process communications with SMETS1 Devices.
Transport Layer Security	means in accordance with the relevant SMKI PMA and SSC Guidance (Standards, Procedures and Guidelines) published on the SEC website.

3.1 ANo SMETS1 SMSO Systems (other than to the extent they are used to carry out Requesting Party activities) shall be considered to form part of the DCC Total System for the purposes of this Code.

Application of Appendix AC (Inventory Enrolment and Decommissioning Procedures)

3.2 The provisions of Clauses 3.4 and 3.5 of the Inventory Enrolment and Decommissioning Procedures shall not apply to the addition of SMETS1 Devices to the Smart Metering Inventory where those Devices form part of a SMETS1 Installation that is to be Migrated.

3.3 For the purposes of Migration, SMETS1 Devices may be added to the Smart Metering Inventory by the following organisations:

(a) in the case of a SMETS1 CHF, an S1SP; or

(b) in the case of any other SMETS1 Device, the Responsible Supplier for the Device or the Commissioning Party but, in either case, only in circumstances where the Device forms part of a SMETS1 Installation that is identified within a SMETS1 Commissioning File as having completed all the checks and processing referred to in Clause 5.27 without any failures flagged as ‘Critical’.

Application of Appendix AG (Incident Management Policy)

3.4 Whilst this TMAD remains in force, Appendix AG shall be modified as follows:

(a) The definition of Live Services shall be replaced with the following definition:

Live Services	Means: (a) any of the Services that the DCC is obliged to provide to a User, an Authorised Subscriber, a DCC Gateway Party (once its connection is capable of operation), but excluding Testing Services; (b) the exchange of data pursuant to Section E2; and (c) any of the Services provided pursuant to the TMAD.

3.5 The provisions of the Incident Management Policy shall apply to Migration Incidents provided that the following variations shall apply:

(a) Clause 2.1.3 of Appendix AG shall not apply in respect to Migration Incidents;

(b) Clause 5.2 of Appendix AG shall not apply in respect of DCC Migration Systems;

(c) where the DCC ought to be reasonably able to resolve a Migration Incident without the assistance of any Responsible Supplier, or the DCC ought to be able to arrange for the relevant SMETS1 SMSO to do so without the assistance of any Responsible Supplier, any incident resolution activities associated with a Migration Incident shall be assigned to the DCC; otherwise the incident resolution activities shall be assigned to the Responsible Supplier;

(d) except where an Incident is required to be raised by the DCC pursuant to this TMAD, the DCC shall not be required to raise an Incident, and no Party shall have the right to raise an Incident, in circumstances where a Responsible Supplier or the SMETS1 SMSO is notified by the DCC in accordance with this TMAD that one or more of the steps in the Migration of a SMETS1 Installation have not been successfully completed; and

(e) Table 1 in Clause 2.4 of Appendix AG shall be replaced with the following Table:

Incident Category	**Description**	**Target Initial Response Time**	**Target Resolution Time**
1	A Category 1 Incident (Major Incident) is an Incident which, in the reasonable opinion of the DCC: • prevents a large group of Incident Parties from using the Live Services; • has a critical adverse impact on the activities of the Incident Parties using the Live Services of the DCC; • has a critical adverse impact on the activities necessary to Migrate SMETS1 Installations comprising Dormant Meters pursuant to the Transition and Migration Approach Document; • causes significant financial loss and/or disruption to the Incident Parties; or • results in any material loss or corruption of DCC Data. For a Major Security Incident there are additional considerations: • HMG, through CPNI, have declared a Major Incident based on their procedures; • a pattern has been seen across the DCC Total System that in total would have a significant security impact; or • Data covered by the Data Protection Act has either been lost or obtained by an unauthorised party, or is seriously threatened.	10 minutes	4 hours

2	An Incident which in the reasonable opinion of the DCC: • has a non-critical adverse impact on the activities of Incident Parties, but the Live Service is still working at a reduced capacity; • causes financial loss and/or disruption to other Incident Parties which is more than trivial but less severe than the significant financial loss described in the definition of a Category 1 Incident; or • has a non-critical adverse impact on the activities necessary to Migrate SMETS1 Installations comprising Dormant Meters pursuant to the Transition and Migration Approach Document.	20 minutes	24 hours
3	An Incident which, in the reasonable opinion of the DCC: • has an adverse impact on the activities of an Incident Party but which can be reduced to a moderate adverse impact due to the availability of a workaround; • has a moderate adverse impact on the activities of an Incident Party; or • has a moderate adverse impact on the activities necessary to Migrate SMETS1 Installations comprising Dormant Meters pursuant to the Transition and Migration Approach Document.	45 minutes	72 hours
4	An Incident which, in the reasonable opinion of the DCC: • has a minor adverse impact on the activities of an Incident Party; or • has a minor adverse impact on the activities necessary to Migrate SMETS1 Installations comprising Dormant Meters pursuant to the Transition and Migration Approach Document.	3 hours	5 days

5	An Incident which, in the reasonable opinion of the DCC: • has minimal impact on the activities of Incident Party; or • has minimal impact on the activities necessary to Migrate SMETS1 Installations comprising Dormant Meters pursuant to the Transition and Migration	1 day	10 days

Application of Section F (Smart Metering System Requirements)

3.6 Whilst this TMAD remains in force, for the purposes of Section F2.10A (SMETS1 Lists), each entry that is made on each of the SMETS1 Pending Product Combinations and SMETS1 Eligible Products Combinations lists shall, in addition to setting out a combination of Device Models and communication services provider, additionally include, in relation to that entry, the identity of the SMETS1 SMSO, and whether that entry applies to SMETS1 Installations comprising either (i) solely Dormant Meters (ii) solely Active Meters; or (iii) either Dormant Meters and/or Active Meters. However, the requirement to identify the aforementioned additional information shall not apply to any entry on the SMETS1 Pending Product Combinations or SMETS1 Eligible Products Combinations lists that is made whilst this TMAD remains in force but after the expiry of the RP Decommissioning Date for the Requesting Party that formed part of the SMETS1 SMSO that would otherwise have appeared in that entry. Where either list contains two or more entries that have the same combination of Device Models but identify different SMETS1 SMSOs and/or different permitted combinations of Active Meters / Dormant Meters, each entry shall be treated as a separate entry for the purpose of the list and the requirements of Section H5.8 shall be modified accordingly so that the words “listed on the SMETS1 Eligible Product Combinations” (in both places that they appear) are replaced with “which match all of the characteristics of an entry on the SMETS1 Eligible Product Combinations”. The requirements of Section H5.9 shall be modified so that the words “that is listed on the SMETS1 Eligible Products Combinations” are replaced with “which match all of the characteristics of an entry on the SMETS1 Eligible Product Combinations”.

3.7 With the exception of those that arise as a consequence of SMETS1 Pending Product Combination Tests, the DCC shall not add an entry to the list of SMETS1 Eligible Product Combinations other than to the extent that it has the approval of the Secretary of State to do so. In the case of a manifest error in the submission, approval and / or addition of an entry to the list of SMETS1 Eligible Product Combinations the Secretary of State may take such steps as are reasonably necessary to correct for such error(s) and / or direct the DCC to take such steps as are reasonably necessary to correct the error(s). The DCC shall promptly notify all SEC Parties, the Panel, the Authority and the Secretary of State where steps are taken to correct errors pursuant to this Clause 3.7.

Application of Section G (Security)

3.8 For the purposes of Section G (with the exception of Sections G2.19 to G2.24 inclusive), no Requesting Party Systems shall be considered to form part of the DCC Total System; provided that the DCC shall ensure that the requirements of Clause 11 are met in relation to each Requesting Party and each associated SMETS1 SMSO.

3.9 The Commissioning Party Systems shall not be considered to form part of the DCC Live Systems for the purposes of Sections G2.23, G2.25, G3.13 or G3.14.

3.10 Whilst this TMAD remains in force, the following additional requirement shall apply under Section G4 (Organisational Security: Obligations on Users and the DCC): The DCC shall ensure that no individual is engaged in:

(a) the development of bespoke software or firmware, or the customisation of any software or firmware, for the purpose of its installation on any part of the Commissioning Party Systems; or

(b) the development, design, build, testing, configuration, implementation, operation, maintenance, modification or decommissioning of any part of the Commissioning Party Systems,

unless that individual satisfies the requirements of Clause 3.11.

3.11 An individual satisfies the requirements of this Clause only if, at any time at which that individual is engaged in any activity described in Clause 3.10, he or she:

(a) is not at the same time also engaged in:

(i) the development of bespoke software or firmware, or the customisation of any software or firmware, for the purpose of its installation on any Smart Metering Inventory Systems; or

(ii) the development, design, build, testing, configuration, implementation, operation, maintenance, modification or decommissioning of any Smart Metering Inventory

Systems; and

(b) has not been engaged in any activity described in paragraph (a) for a period of time which the DCC reasonably considers to be appropriate, having regard to the need to ensure the management of risk in accordance with the DCC Information Security Management System.

3.12 Whilst this TMAD remains in force, the following additional requirement shall apply under Section G2 (System Security: Obligations on the DCC):

(a) The DCC shall ensure that no resources which form part of the Commissioning Party Systems also form part of its Smart Metering Inventory Systems.

3.13 The Commissioning Party Systems do not need to comply with the requirements of Section G (Security) which apply to User Systems or which apply to RDP Systems (via Section E (Registration Data)); save that Section G6 (Anomaly Detection Thresholds: Obligations on the DCC and Users) shall apply to the Commissioning Party as if it was a User.

3.14 The DCC shall ensure that Anomaly Detection Thresholds set in relation to the Commissioning Party are 0 for all requests that are not Commissioning Requests.

3.14A [NOT USED]

3.14B For GroupID = “DA”, the DCC shall, in relation to each Relevant Device during the UTRN Period for that Device, ensure that any request to generate a SMETS1 UTRN for a non-negative prepayment top-up in relation to that Device that;

(a) is received by the SMETS1 SMSO; and

(b) had it been received prior to the commencement of the UTRN Period, would have been processed by the SMETS1 SMSO,

is processed by the SMETS1 SMSO and/or the SMETS1 Service Provider (as the case may be) in materially the same manner (including to have the same effect on the Relevant Device) as it would have had, if it had been processed by the SMETS1 SMSO prior to the commencement of the UTRN Period.

3.14C The DCC shall ensure that the SMETS1 SMSO for GroupID = “DA”:

(a) is not capable of generating a SMETS1 UTRN in relation to a SMETS1 Device after the S1SP has successfully processed a Service Request with Service Reference Variant 8.1.1 for that SMETS1 Device as set out in Clause 8.1 and Table 8.7.2; and

(b) does not provide any response to a request to generate a SMETS1 UTRN in relation to such a SMETS1 Device after the step in Clause 3.14C(a), other than a response that is generated by the relevant S1SP in accordance with Clause 3.14D below.

3.14D For GroupID = "DA":

(a) during the UTRN Period for an ESME or GSME and where the S1SP receives a request to generate a SMETS1 UTRN for such a SMETS1 Device from the SMETS1 SMSO, the S1SP shall send a UTRN for the Relevant Device, that is consistent with the request, to that Device and / or to that SMETS1 SMSO; and

(b) after the UTRN Period ends for the Relevant Device, shall only send a response to the SMETS1 SMSO that indicates that the request to generate a UTRN has been unsuccessful.

3.14E The DCC shall ensure that, by no later than 15 months after the Last EPCL Entry for the S1SP related to the GroupID = "DA", all interfaces to the Systems of that S1SP that are not required by the DCC for the provision of Services under this Code (excluding any amendments to those Services made by virtue of this TMAD) are securely and irrevocably disconnected from the Systems of the S1SP.

3.14F The DCC shall as soon as reasonably practicable following the carrying out of the steps referred to in Clause 3.14E, obtain an independent audit and provide to the SMKI PMA and the Security Sub-Committee the report of that audit confirming that the steps have been properly and successfully carried out together with any remediation plan that may be required.

Application of Section H (DCC Services)

3.15 Whilst this TMAD remains in force:

(a) [Not used];

(b) Section H8.3(b) (Maintenance of the DCC Systems) shall not apply in respect of the DCC Migration Systems. The DCC may undertake Planned Maintenance of the DCC Migration Systems at any time during any day, provided that the DCC shall only undertake such maintenance when it is not likely to have an adverse impact on the ability to Migrate the number of SMETS1 Installations that the DCC has committed to Migrate on that day;

(c) Section H8.4 (Maintenance of the DCC Systems) shall be modified in respect of DCC Migration Systems, such that no later than 10 Working Days prior to the start of Planned Maintenance on the DCC's Migration Systems, the DCC makes available to Parties, to Registration Data Providers and to the Technical Architecture and Business Architecture Sub-Committee a schedule of that maintenance. Such schedule shall set out (as a minimum) the following:

(i) the proposed Maintenance activity (in reasonable detail);

(ii) the parts of the Services that will be disrupted (or in respect of which there is a Material Risk of disruption) during each such Maintenance activity;

(iii) the time and duration of each such Maintenance activity; and

(iv) any associated risk that may subsequently affect the return of normal Services.

(d) Section H8.5 shall be modified such that it also applies in respect of the schedule made available pursuant to Clause 3.15(c).

(e) Section H10.13 (Business Continuity and Disaster Recovery Targets) shall not apply in respect of a SMETS1 Loss of System Availability. Instead, the DCC shall:

(i) take all reasonable steps to ensure that the Services supported by the DCC Migration Systems are restored in accordance with the following Target Service Levels, and in any event shall ensure that the Services supported by the DCC Migration Systems are restored in accordance with the following Minimum Service Levels; and

	Target Service level	**Minimum Service Level**
Recovery Time Objective	4 hours	8 hours
Recovery Point Objective	15 minutes	30 minutes

(ii) within 21 Working Days of a SMETS1 Loss of System Availability which is not deemed to be a Major Incident, produce a report setting out:

(A) the nature, cause and impact of that SMETS1 Loss of System Availability;

(B) the action that was taken to resolve the SMETS1 Loss of System Availability;

(C) any failure to achieve the Target Service Level and/or the Minimum Service Level for the Recovery Time Objective and/or the Recovery Point Objective;

(D) whether there is likely to be a reduction in DCC External Costs as a result of any failure to meet the Target Service Level(s) and/or Minimum Service Level(s); and

(E) the steps the DCC is taking to prevent re-occurrence or continuation of that reason for the SMETS1 Loss of System Availability.

(f) The DCC shall make the report under Clause 3.15(e) available to the SEC Panel. The SEC Panel shall make the report available to Parties subject to any redactions it considers necessary to avoid a risk of Compromise to the DCC Total System, User Systems, RDP Systems and/or Devices.

(g) Section H5.8 of the Code shall be modified in accordance with the provisions of Clause 3.6 of TMAD. Where there is any conflict between Sections H5.8 to H5.9 of the Code and Clause 18 of this TMAD, Clause 18 of this TMAD shall take precedence.

Application of Section L (Smart Metering Key Infrastructure and DCC Key Infrastructure)

3.16 Whilst this TMAD remains in force, each of the rows in the table in Section L3.18 (Organisation Certificates) as modified by the provisions of Clause 3.1(d) of Appendix AS (ECoS Transition and Migration Approach Document) that correspond to the "Remote Party Role" identified in the following table shall be replaced with the corresponding rows in the following Table:

Remote Party Role	**Party**	**User Role or RDP**	**DCC Live Systems definition paragraph**
commissioningPartyFileSigning	The DCC	[Not Applicable]	(l)
requestingPartyFileSigning	The DCC	[Not Applicable]	(k)
s1SPMigrationSigning	The DCC	[Not Applicable]	(h)
commissioningPartyXmlSigning	The DCC	[Not Applicable]	(l)

Application of Section M (General)

3.17 The Responsible Supplier for each Device referred to in Clause 4.26 of this TMAD acknowledges that the carrying out of one or more of the steps referred to in this TMAD, at the request of the DCC, may result in the loss of Data stored on or in relation to each such Device and/or the ability to utilise the functionality of the Device. Neither the DCC nor the Installing Supplier shall be liable to the Responsible Supplier (or any other Party) for any Liability that arises from the carrying out of (or attempt to carry out) any of those steps, at the request of the DCC, where (and to the extent that) such person has acted in accordance with Good Industry Practice.

3.18 Where a Supplier Party has agreed with a SMETS1 SMSO that the SMETS1 SMSO shall not permit any third parties to communicate or otherwise interfere with a SMETS1 Installation (or any Devices forming part of it), then that Supplier Party confirms that that SMETS1 SMSO may permit the DCC to take the steps provided for in this TMAD which results in a communication or interference with that SMETS1 Installation (or any Devices forming part of it). Notwithstanding Section M11.6 of the Code, the SMETS1 SMSO shall be entitled to rely on and enforce the confirmation in this Clause 3.18 under the Contract (Rights of Third Parties) Act 1999.

3.19 It is acknowledged that each SMETS1 SMSO is acting as a DCC Service Provider when performing tasks ascribed to a SMETS1 SMSO under this TMAD (including where the SMETS1 SMSO provides services to the DCC in order for the DCC to carry out the tasks ascribed to a Requesting Party), and notwithstanding Section M11.6 of the Code, is therefore a person under Section M11.5 of the Code and entitled to rely on the waiver in Section M2.13(a) of the Code.

3.20 The DCC shall provide the Services described in this TMAD in accordance with Good Industry Practice. Each Installing Supplier shall act in accordance with Good Industry Practice when providing the support or assistance referred to in Clause 4.33.

3.21 The DCC shall take reasonable steps to ensure that any Data that is provided to it by each SMETS1 SMSO, for the purposes of Migration, is accurate.

3.22 Each Party’s liability under and in connection with this TMAD is limited in accordance with Section M2 (Limitations of Liability), provided that the liability of each of the DCC and each Installing Supplier for failing to act in accordance with Good Industry Practice in relation to the carrying out of (or attempt to carry out) one or more of the steps referred to in Clause 4.26

of this TMAD (and/or, in the case of the Installing Supplier, the provision of support or assistance referred to in Clause 4.33) shall be limited to £1,000,000 in the aggregate for each period of 12 months from the date this TMAD comes into effect (and from each anniversary of such date); and further provided that the DCC and/or relevant Installing Supplier will not be liable for a claim unless the claiming Party has given notice of such claim within six months of the occurrence of the relevant failure.

3.23 Where necessary, the provisions of Section M2.5(d) shall apply in relation to any liability that has been limited by the provisions of Clause 3.22.

<u>MPRN Validation for Leading Zeros</u>

3.24 In relation to SMETS1 Installations where GroupID = "AA", "BA", or "CA", each Supplier Party agrees that the DCC may ignore any leading zeros provided within the MPRN for a SMETS1 GSMS for the purposes of any validation steps under this TMAD.

<u>Provision of the current value of PINs</u>

3.25 Where GroupID = "CA", the DCC shall undertake the activities prescribed in this Clause 3.25 no later than 30 Working Days following this Clause 3.25 coming into effect. Where the PIN required to access functionality of the Gas Smart Metering System not meant for use by Energy Consumers (described in Clause 13.1 of the SMETS1 Supporting Requirements) was amended by the SMETS1 SMSO prior to this Clause 3.25 coming into effect:

(a) the DCC shall provide the current value of the PIN for the Gas Smart Metering System to the Installing Supplier for that Gas Smart Metering System and shall do so in an appropriately secure manner; and

(b) the Responsible Supplier consents to the provision of the PIN for the Gas Smart Metering System by the DCC to the Installing Supplier provided that such provision is done so in an appropriately secure manner.

4 <u>Pre-Migration Rights and Obligations</u>

4.1 Each Supplier Party shall provide any information that the DCC reasonably requests in order to support the planning, coordination and undertaking of (and ongoing support for) the Migration of SMETS1 Installations and shall do so in the timescales that the DCC reasonably requests.

4.1 A Where a Supplier Party is:

(a) not a DCC User; and

(b) the Responsible Supplier for one or more Dormant Meters and any associated devices;
the DCC may take reasonable steps to migrate SMETS1 Installations containing one or more such Dormant Meters without providing the various notifications and reports prescribed in this TMAD to the relevant Supplier Party that is not a DCC User.

4.1B Where a person:

(a) has ceased to be a Party; and

(b) is currently identified in the Registration Data as the Responsible Supplier for one or more Dormant Meters and any associated devices;

the DCC may take reasonable steps to migrate SMETS1 Installations containing one or more such Dormant Meters without providing the various notifications and reports prescribed in this TMAD for a Responsible Supplier.

4.1C Where,

(a) the SMETS1 Installation contains solely Dormant Meter(s); and

(b) either the MPAN, MPRN, or both for the SMETS1 Installation are recorded either:

(i) in multiple SMETS1 SMSOs; or

(ii) in at least one SMETS1 SMSO and the Smart Metering Inventory against SMETS2+ Devices;

the DCC may take reasonable steps to verify that the SMETS1 Installation with the latest installation date is the only SMETS1 Installation communicating with a SMETS1 SMSO and no SMETS2+ Devices are communicating with DCC Systems in order to allow Migration of the SMETS1 Installation to subsequently commence based on a deemed authorisation pursuant to Clause 4.27.

4.2 Where, and to the extent notified by the DCC, each Supplier Party may request that the DCC undertakes early validation of any Migration Common Files pertaining to SMETS1 Installations comprising an Active Meter for which it is the Responsible Supplier. To enable this, the DCC shall permit each SMETS1 SMSO to make arrangements with the relevant

Requesting Party to enable the submission of Migration Common Files for early validation purposes, provided that such files shall be submitted to a different location from those submitted by the Requesting Party pursuant to Clause 5.8. When the DCC receives such a file, it shall carry out the steps required by Clauses 5.9 and 5.10.

4.3 Subject to Clause 4.24, the DCC shall, on any day during which it is carrying out the Migration of SMETS1 Installations, take reasonable steps to Migrate relevant SMETS1 Installations flagged as a priority prior to SMETS1 Installations not flagged as a priority.

4.4 Where, by virtue of this TMAD, the DCC is required to consult on the content of any document with the Panel, all Parties, the Authority and (on request) the Secretary of State prior to such a document taking effect, this requirement may be satisfied by the undertaking of consultation on such content prior to this TMAD coming into effect.

Indicative Migration Forecasts and Migration Demand Commitment

4.5 For the purposes of supporting the planning and coordination of the Migration of SMETS1 Installations, by no later than the 20th day of each month, each Responsible Supplier shall provide an Indicative Migration Forecast to the DCC for each SMETS1 SMSO. Such forecast shall, at a minimum, be broken down by Electricity Distributor and shall be provided in relation to any SMETS1 SMSOs in relation to which Migration is due to commence within the next six months (as set out in the SMETS1 Services delivery plan produced pursuant to condition 13 of the DCC Licence).

4.6 By the end of each month, the DCC shall provide all Parties, the Panel, the Authority and the Secretary of State with a summary report that aggregates information from all Indicative Migration Forecasts showing the aggregate forecast number of SMETS1 Installation Migrations per day and per SMETS1 SMSO.

4.7 The DCC may provide to a SMETS1 SMSO all Indicative Migration Forecasts provided to it by Responsible Suppliers that pertain to that SMETS1 SMSO.

4.8 The DCC and each Responsible Supplier shall schedule the Migration of SMETS1 Installations comprising an Active Meter(s) that pertain to a particular SMETS1 SMSO in each Migration Week in accordance with the following process:

(a) by no later than 15.00 hours on the Monday that falls two weeks prior to each Migration Week, each Responsible Supplier shall notify the DCC, of the number of SMETS1 Installations in relation to which it reasonably expects to submit Migration Authorisations for each day of that

Migration Week, per day and identify the number of those SMETS1 Installations per day per SMETS1 SMSO (the "Daily Migration Demand") and this Daily Migration Demand will be dis-aggregated by Electricity Distributor;

(b) by no later than 10.00 hours on the Tuesday that falls two weeks prior to each Migration Week, the DCC shall confirm to each Responsible Supplier the number of SMETS1 Installations that the DCC is committing to Migrate on each day within that Migration Week for that Responsible Supplier per SMETS1 SMSO (the "Migration Demand Commitment"), which shall, subject to Clause 4.11, be the same as the Responsible Supplier's Daily Migration Demand; and

(c) by no later than 17.00 hours on that same following Tuesday, the DCC shall provide all Parties, the Panel, the Authority and the Secretary of State with a summary report that aggregates information from all Migration Demand Commitments, which includes the number of SMETS1 Installations dis-aggregated by Electricity Distributor in that Migration Week per SMETS1 SMSO, or where necessary a pro-rata estimate of this.

4.9 Where a Responsible Supplier does not notify the DCC of the Responsible Supplier's Daily Migration Demand for any particular Migration Week in accordance with Clause 4.8(a), the DCC shall use zero for the values of Daily Migration Demand for that Responsible Supplier for the purposes of its migration scheduling in relation to that Migration Week.

4.10 Where pursuant to Clause 4.8(b), the DCC fails to confirm the Migration Demand Commitment for a Responsible Supplier, the DCC shall be deemed to have agreed to and confirmed that the Responsible Supplier's Daily Migration Demand for each day per SMETS1 SMSO within the relevant Migration Week is that Supplier's Daily Migration Demand Commitment.

4.11 Where the DCC reasonably considers that it cannot commit to the value for a Daily Migration Demand for one or more days within any future Migration Week, the DCC shall set each Responsible Supplier's Daily Migration Demand Commitment in accordance with the rules set out in a document for that purpose (the "**Migration Scaling Methodology**"), as described in Clause 4.12.

4.12 The DCC shall make available to the Panel, all Parties, the Authority and (on request) the Secretary of State the Migration Scaling Methodology, as follows:

(a) the DCC shall

(i) establish and periodically review the Migration Scaling Methodology, and shall consult with the Panel, the Parties and the Authority on the content of or any subsequent modification to the Migration Scaling Methodology prior to it taking effect; and

(ii) may modify the Migration Scaling Methodology without consultation where the modification is of a minor typographical nature or where the modification has no material effect on the rights or obligations of Parties; and

(b) at least 14 days prior to the coming into effect of the Migration Scaling Methodology or any subsequent revision to it, the DCC shall provide a copy of that document to the Panel, the Parties, the Authority and the Secretary of State, and publish a copy of it on the DCC Website.

4.13 Except in the case of modification to the Migration Scaling Methodology made pursuant to Clause 4.12 (a) (ii), where a Party disagrees with the content of any version of the Migration Scaling Methodology, the Party may (within one month of that version coming into effect) refer the matter to the Secretary of State for their determination, which determination shall be final and binding for the purposes of the Code. In the event that such referral is made the new version of the Migration Scaling Methodology published by the DCC shall apply prior to any such determination.

4.14 The DCC shall, in relation to each Responsible Supplier, take all reasonable steps to Migrate each day a number of SMETS1 Installations that contain one or more Active Meters for which that Supplier Party is the Responsible Supplier that is equal to the number within the Migration Demand Commitment for that Responsible Supplier, subject to having received the necessary Migration Authorisation to do so. For each Migration Week, the DCC shall, as soon as reasonably practicable, notify the relevant Responsible Supplier where the DCC reasonably considers that it will only be able to Migrate a number of SMETS1 Installations for that Responsible Supplier that is materially less than the number within the Migration Demand Commitment for that Responsible Supplier.

4.15 For each Responsible Supplier, the DCC may Migrate further SMETS1 Installations each day in excess of the Migration Demand Commitment for that Responsible Supplier where the DCC considers it is reasonable to undertake such additional Migrations and where a Migration Authorisation has been submitted for the excess. It is acknowledged that, in the case of Group ID = “EA” or “EB”, the Migration might not complete within the day.

Pre-conditions for Migration

4.16 The Requesting Party shall not commence the Migration of any SMETS1 Installation that does not correspond to an entry on the SMETS1 Eligible Product Combinations.

4.17 The Requesting Party shall not commence the Migration of any SMETS1 Installation until the DCC has received (or is deemed to have received in accordance with Clause 4.27 or the definition of Migration Authorisation) a Migration Authorisation from the Responsible Supplier or Responsible Suppliers for that SMETS1 Installation.

4.18 Each Supplier Party agrees that where the DCC has received (or is deemed to have received in accordance with Clause 4.27 or the definition of Migration Authorisation) such Migration Authorisation(s), it may carry out the steps to Migrate that SMETS1 Installation in accordance with the provisions of this TMAD.

4.19 Where there is more than one Responsible Supplier for a SMETS1 Installation and where the DCC has received Migration Authorisations from both such Responsible Suppliers which authorise the Migration of that SMETS1 Installation on different days in the same Migration Week, the Requesting Party shall take steps to initiate the Migration of that SMETS1 Installation in timescales consistent with the later of those two days. In such circumstances, the Migration Authorisation provided by the Responsible Supplier for the earlier of the two days is deemed amended to constitute a Migration Authorisation for the later of those two days.

4.20 Each Supplier Party agrees that each SMETS1 SMSO and the DCC may exchange any information (including Secret Key Material) that is reasonably needed for the DCC to discharge any of its obligations under this TMAD.

4.21 The DCC shall, from time to time, use and rely upon (and shall, subject to Clause 3.21, have no liability arising from any inaccuracy in) the information provided to it by each SMETS1 SMSO for the purposes of this TMAD, including:

(a) the Device IDs of Devices that are to be Migrated;

(b) the status of Devices, being ‘Dormant Meter’, ‘Active Meter’ or ‘Active GPF’;

(c) MPANs and MPRNs associated with Devices; and

(d) the content of Migration Common Files, Migration Group Files and Migration Group Encrypted Files.

4.22 This TMAD constitutes each Responsible Supplier’s documented instructions to the DCC and each SMETS1 SMSO to Process any Personal Data required for the purposes of Migration of SMETS1 Installations.

4.23 With the exception of GroupID = “DA”, the DCC shall, where requested to do so by a

Responsible Supplier for one or more SMETS1 Installations comprising an Active Meter for which that Supplier is the Responsible Supplier, take all reasonable steps not to start the Migration of those SMETS1 Installations notwithstanding that the DCC has previously received a Migration Authorisation in respect of them from the Responsible Supplier.

4.23A For GroupID = “DA” where requested by a Responsible Supplier, the DCC shall take all reasonable steps not to start the Migration of any SMETS1 Installation for which that Supplier Party is a Responsible Supplier for one (or both) Active Meters. The effect of this shall be that where DCC can accommodate the request, the DCC shall not start the Migration of any of the SMETS1 Installations contained in any Migration Authorisation received from that Responsible Supplier that are due to commence on the same day as the SMETS1 Installation(s) that was the subject of the request, for which the Migration has not yet commenced.

Dormant Meters

4.24 The DCC shall take all reasonable steps to Migrate SMETS1 Installations comprising only Dormant Meters, including arranging for any pre-requisite steps set out in this TMAD to be undertaken. The DCC shall Migrate such SMETS1 Installations comprising only Dormant Meters as soon as reasonably practicable, which shall include giving priority to the Migration of SMETS1 Installations comprising only Dormant Meters over and above SMETS1 Installations which include one or more Active Meters.

4.25 Each Responsible Supplier for each SMETS1 CHF that forms part of a SMETS1 Installation that includes one or more Dormant Meters agrees that the relevant SMETS1 SMSO may, where requested to do so by the DCC, initiate remote communications with that SMETS1 CHF in order to confirm whether or not the SMETS1 SMSO is capable of remotely communicating with that SMETS1 CHF.

4.26 The Responsible Supplier for each Dormant Meter and any associated Devices for which it is also the Responsible Supplier that form part of a SMETS1 Installation agrees that the relevant SMETS1 SMSO may, where requested to do so by the DCC, take any steps reasonably necessary in order to ensure that the Devices are configured in accordance with the requirements of the SMETS1 Supporting Requirements and Clause 5.12(e) of this TMAD, and/or such that the Devices form part of a SMETS1 Installation that comprises an entry on the list of Eligible Product Combinations, including upgrading the firmware on the Devices for those purposes. The Responsible Supplier for each Dormant Meter and any associated Devices for which it is also the Responsible Supplier that form part of a SMETS1 Installation agrees that the relevant SMETS1 SMSO may, where requested to do so by the DCC, take any steps reasonably necessary in order to upgrade the firmware on the Devices such that the Devices form part of an entry that is planned to be listed on the Eligible Product Combinations. For the purposes of this Clause 4.26, an entry is planned to be listed on the Eligible Product Combinations where pursuant to the SEC Variation Testing Approach Document for SMETS1 Services:

(a) a Completion Report for the Migration Test Phase and SIT Test Phase regarding the planned entry on the list of Eligible Product Combinations has been approved by the Testing Advisory Group of the Panel ("TAG"); or

(b) a DMCT EPCL Report has been issued in respect of the planned entry on the list of Eligible Product Combinations.

4.26A The DCC shall instruct the SMETS1 SMSO to de-register the Gas Meter from the SMETS1 Installation within their SMETS1 SMSO system where:

(a) [NOT USED];

(b) such SMETS1 Installation contains solely Dormant Meters;

(c) the firmware has successfully upgraded and configuration applied for the Electricity Meter within such SMETS1 Installation such that the Devices, excluding the Gas Meter, form part of a SMETS1 Installation that comprises an entry on the list of Eligible Product Combinations;

(d) the firmware has not successfully upgraded and/or configuration not applied for the Gas Meter within such SMETS1 Installation (having taken all reasonable steps pursuant to Clause 4.26); and

(e) the DCC reasonably believes that:

(i) there is not another entry to the list of SMETS1 Eligible Product Combinations that it could propose which, were it to be approved by the Secretary of State, would enable the Migration of that SMETS1 Installation to be attempted without firmware upgrade for the Gas Meter; and

(ii) such SMETS1 Installation would be capable of successful Migration were an appropriate entry added to the list of SMETS1 Eligible Product Combinations.

4.26B The DCC shall instruct the SMETS1 SMSO to de-register the Gas Meter from the SMETS1 Installation within their SMETS1 SMSO system where:

(a) GroupID = “CB” or “DA”;

(b) such SMETS1 Installation contains solely Dormant Meters;

(c) the GT01 check has failed at least three times;

(d) each such failure is in a separate and non-contiguous Migration Week; and

(e) each such failure is at either:

(i) GT01, sub-step 4 in Table A3 where GroupID = “CB”; or

(ii) GT01, sub-step 2 in Table C2 where GroupID = “DA”,

4.26C The Responsible Supplier for each Gas Meter referred to in either Clause 4.26A or Clause 4.26B, authorises the DCC to instruct the SMETS1 SMSO take the steps to deregister the Gas Meter within the relevant SMETS1 Installation.

4.26D The DCC may instruct the SMETS1 SMSO to de-register the SMETS1 PPMID from the SMETS1 Installation within their SMETS1 SMSO system where:

(a) Group ID = “EA”;

(b) such SMETS1 Installation contains solely Dormant Meters;

(c) due to invalid data for the SMETS1 PPMID, the DCC has been unable to propose an entry on the list of SMETS1 Eligible Product Combinations that would allow the Migration of the SMETS1 Installation to commence; and

(d) the Devices, excluding the SMETS1 PPMID, form part of a SMETS1 Installation that comprises an entry on the list of SMETS1 Eligible Product Combinations.

4.26E Both the Responsible Supplier for the ESME and the Responsible Supplier for the GSME (where present) within the SMETS1 Installation referred to in Clause 4.26D, authorises the DCC to instruct the SMETS1 SMSO to take the steps to deregister the SMETS1 PPMID within the relevant SMETS1 Installation.

4.27 The Responsible Supplier for each Device referred to in Clause 4.26, authorises the DCC to take the steps and carry out the processing set out in this TMAD in order to Migrate the relevant SMETS1 Installation (and is therefore deemed to have given a Migration Authorisation in respect of that SMETS1 Installation).

4.28 Where a SMETS1 Installation includes both an Active Meter and a Dormant Meter, the DCC shall not commence the Migration unless it has received a Migration Authorisation from the Responsible Supplier for the Active Meter in relation to that SMETS1 Installation.

4.29 Where the DCC plans to carry out the steps referred to in Clause 4.26 in relation to any SMETS1 Installation which includes Dormant Meters (but no Active Meters), the DCC shall notify the Responsible Supplier(s) for that SMETS1 Installation at least 5 Working Days (or 2 Working Days in the case of Recently Dormant SMETS1 Installations) (or fewer where mutually agreed between the DCC and the Responsible Supplier(s) for that SMETS1 Installation) before the earliest scheduled date for undertaking those steps. Where there are two Responsible Suppliers for the Smart Metering Systems that together comprise the same SMETS1 Installation that contains only Dormant Meters, and they are Affiliates of one another, then the DCC may issue such notification only to the Responsible Supplier for the Electricity Smart Metering System and the Responsible Supplier for the Gas Smart Metering System shall be deemed to have received a notification for the purpose of this Clause 4.29. Where there is a change of Responsible Supplier after the DCC has issued such notification, the DCC may continue to carry out the relevant steps as planned and shall take reasonable steps to notify the new Responsible Supplier prior to carrying them out.

4.30 Where the DCC plans to carry out the steps referred to in Clause 4.27 in relation to any SMETS1 Installation which includes Dormant Meters (but no Active Meters), the DCC shall notify the Responsible Supplier(s) for that SMETS1 Installation at least 15 Working Days (or 8 Working Days in the case of Recently Dormant SMETS1 Installations) (or fewer where mutually agreed between the DCC and the Responsible Supplier(s) for that SMETS1 Installation) before the earliest scheduled date for undertaking those steps. Where there are two Responsible Suppliers for the Smart Metering Systems that together comprise the same SMETS1 Installation that contains only Dormant Meters, and they are Affiliates of one another, then the DCC may issue such notification only to the Responsible Supplier for the Electricity Smart Metering System and the Responsible Supplier for the Gas Smart Metering System shall be deemed to have received a notification for the purpose of this Clause 4.30. Where there is a change of Responsible Supplier after the DCC has issued such a notification, the DCC may continue to carry out the relevant steps as planned and shall take reasonable steps to notify the new Responsible Supplier prior to carrying them out.

4.31 Notifications sent by the DCC pursuant to Clause 4.29 or Clause 4.30 shall be processed in accordance with the Migration Authorisation Mechanism and shall include, as a minimum, in relation to each SMETS1 Installation:

(a) the date from which the DCC has scheduled the relevant activities;

(b) the relevant MPANs and MPRNs;

(c) the Device ID for each relevant Device;

(d) the device serial number (according to information held by the relevant SMETS1 SMSO) for each relevant Device; and

(e) where such notification is sent pursuant to Clause 4.29, the Device Model Combination that the DCC intends should result from any firmware upgrades that it plans to instruct in relation to the relevant Device(s).

4.32 Where a Responsible Supplier receives a notification from DCC pursuant to Clause 4.30 the Responsible Supplier may respond in the manner set out in the Migration Authorisation Mechanism to flag any notified SMETS1 Installation as a priority and/ or to specify the Supplier and/or Network Operator Certificate IDs that it wishes the DCC to include in Commissioning Requests that it processes in relation to any notified SMETS1 Installation. Where there are two Responsible Suppliers for the Smart Metering Systems that together comprise the same SMETS1 Installation, and they are Affiliates of one another, then the Responsible Supplier for the Electricity Smart Metering System may specify the Supplier and/or Network Operator Certificate IDs that it wishes the DCC to include in Commissioning Requests in respect of the Gas Smart Metering System, in which case the Responsible Supplier for the Gas Smart Metering System shall be deemed to have specified those Supplier and/or Network Operator Certificate IDs. The DCC shall only be obliged to consider such information where it is received within the timescales set out in the Migration Authorisation Mechanism but may use such information submitted after these timescales if it is practicable to do so. A Supplier Party may only request that a SMETS1 Installation is treated as a priority for Migration purposes where the type of Energy Consumer at the premises for that SMETS1 Installation requires it to be prioritised over and above the Migration of other SMETS1 Installations.

4.32A For the purposes of Migration, the DCC shall disregard any Network Operator Certificate IDs for a Gas Transporter provided by the Responsible Supplier (pursuant to Clause 4.32) where that Network Operator Certificate ID has previously resulted in at least five Migration failures for the SMETS1 Installation due to a failure of the check at either 5.10.16 or 5.10.17 as set out in Table 5.10.

4.33 Any Supplier Party that is an Installing Supplier for any of the Dormant Meters and associated Devices referred to in Clause 4.26 shall take all reasonable steps to provide such support and assistance as the DCC may reasonably request (including where they exist, the provision of firmware for each such Device) in order that the DCC or the relevant SMETS1 SMSO is capable of carrying out the steps set out in Clause 4.26. For the purposes of carrying out the steps that are set out in Clause 4.26, the DCC and/or any relevant SMETS1 SMSO shall rely on (and shall have no liability arising from any inaccuracy in) the firmware that is provided to the DCC by an Installing Supplier together with the relevant information that supports the sequencing of the required firmware upgrades, unless it is (or should reasonably have been) apparent to the DCC that the firmware or relevant information that has been provided to the DCC is not suitable.

4.34 The DCC shall provide to any Supplier Party upon request relevant excerpts from the information provided to it pursuant to Clause 4.33 in relation to sequencing of firmware upgrades and/or configuration of devices. No Party shall have any liability arising from any inaccuracy in the information provided by the DCC pursuant to this Clause 4.34.

4.34A Where there is more than one SMETS1 PPMID, SMETS1 IHD or SMETS1 CAD in a SMETS1 Installation, that is comprised solely of Dormant meters, the DCC shall include only one of each Device Type in the Migration Common File, which shall be the one that was most recently joined to the HAN. Any SMETS1 PPMID, SMETS1 IHD or SMETS1 CAD for which there is insufficient information in order to populate the Migration Common File shall not be included in the MCF and therefore shall not be Migrated.

Migration Authorisations and the Migration Authorisation Mechanisms

4.35 The DCC shall set out and make available to all Supplier Parties the proposed mechanism (the "Migration Authorisation Mechanism") which shall, in addition to the matters set out in Clauses 4.29 to 4.32, provide the means by which:

(a) a Migration Authorisation may be provided by the Responsible Supplier(s) for a SMETS1 Installation comprising one or more Active Meters to the Requesting Party;

(b) where the Responsible Supplier is the Responsible Supplier for all Devices comprising a SMETS1 Installation comprising only Active Meters, the Responsible Supplier shall indicate whether it wishes the Commissioning Party to carry out the steps necessary to Commission the Devices comprising that SMETS1 Installation or, alternatively that the Responsible Supplier wishes itself to carry out these steps, being, as further described in Clauses 4.37 to 4.40; and

(c) Clause 4.35 (b) shall also apply where there are two Responsible Suppliers for the Smart Metering Systems that together comprise the same SMETS1 Installation comprising only Active Meters, and they are Affiliates of one another, in which case the Responsible Supplier for the Electricity Smart Metering System shall give the required indication on behalf of itself and the Responsible Supplier for the Gas Smart Metering System (and any such indication shall be deemed to constitute an indication by the Responsible Supplier for the Gas Smart Metering System) provided that the indication is either that both Responsible Suppliers wish the Commissioning Party to carry out the steps, or both Responsible Suppliers wish themselves to carry out the steps.

4.36 Where a SMETS1 Installation includes any Dormant Meter, the steps that are necessary to Commission the Devices that comprise that SMETS1 Installation shall only be carried out by the Commissioning Party.

4.37 Where a SMETS1 Installation includes both an Active Meter and a Dormant Meter, the DCC shall notify the Responsible Supplier, that is the Responsible Supplier for the Active Meter in relation to that SMETS1 Installation, by no later than 23:59 on the Thursday that falls three days prior to the Migration Week in which that SMETS1 Installation is scheduled to commence Migration, that the SMETS1 Installation includes a Dormant Meter. Where the DCC receives a Migration Authorisation after the timescales for receipt set out in the Migration Authorisation Mechanism the DCC may still process Migrations based on the Migration Authorisation but shall not be obliged to do so.

4.38 The Migration Authorisation Mechanism shall require that the Responsible Supplier(s) for a SMETS1 Installation for which a Migration Authorisation is being provided shall provide the MPRN for each SMETS1 GSMS and/or the MPAN for each SMETS1 ESMS that forms part of that SMETS1 Installation. The Migration Authorisation Mechanism shall require that, in relation to each SMETS1 Device that forms part of a SMETS1 Installation for which Migration Authorisation is being provided, the Responsible Supplier for each Device listed in Table 4.38 shall provide the information required in that table for that Device. Where there are two Responsible Suppliers for the Smart Metering Systems that together comprise the same SMETS1 Installation comprising only Active Meters, and they are Affiliates of one another, the Responsible Supplier for the Electricity Smart Metering System may provide the required information for the SMETS1 ESME on behalf of itself and the required information for the SMETS1 GPF and SMETS GSME on behalf of the Responsible Supplier for the Gas Smart Metering System and this shall be deemed to constitute provision by the Responsible Supplier for the Gas Smart Metering System.

Device	**Required information**
SMETS1 ESME	CriticalSupplierCertificateID NonCriticalSupplierCertificateID
SMETS1 GPF	CriticalSupplierCertificateID NonCriticalSupplierCertificateID
SMETS1 GSME	CriticalSupplierCertificateID NonCriticalSupplierCertificateID

Table 4.38

4.39 The Migration Authorisation Mechanism shall require the Responsible Supplier that submits the Migration Authorisation to Digitally Sign communications containing Migration Authorisations using a Private Key associated with an IKI Certificate that has been Issued to an Authorised Responsible Officer of that Responsible Supplier. More generally the DCC and Supplier Parties may use Private Keys associated with IKI Certificates that have been Issued to their Authorised Responsible Officers in order to Digitally Sign communications in relation to the Migration Authorisation Mechanism.

4.40 The Migration Authorisation Mechanism shall allow the Responsible Supplier to flag any SMETS1 Installation as a priority and/or to specify the Network Operator Certificate IDs that it wishes the DCC to include in Commissioning Requests that it processes. Where there are two Responsible Suppliers for the Smart Metering Systems that together comprise the same SMETS1 Installation, and they are Affiliated of one another, then the Responsible Supplier for the Electricity Smart Metering System may provide the Network Operator Certificate ID in respect of the Gas Smart Metering System, in which case the Responsible Supplier for the Gas Smart Metering System shall be deemed to have specified that Network Operator Certificate ID. A Supplier Party may only request that a SMETS1 Installation is treated as a priority for Migration purposes where the type of Energy Consumer at the premises for that SMETS1 Installation requires it to be treated as a priority.

4.41 The DCC shall, following consultation with Supplier Parties and after taking into account any comments that have been provided to it, publish the Migration Authorisation Mechanism to all Supplier Parties, together with the date on which it intends that the Migration Authorisation Mechanism shall come into effect, which shall be not less than 14 days from the date of publication.

4.42 Following DCC's publication of the Migration Authorisation Mechanism and in accordance with the requirements of Clause 4.41 and prior to DCC's published date for the coming into effect of the Migration Authorisation Mechanism, any Supplier Party that wishes to object to the Migration Authorisation Mechanism may refer the matter to the Secretary of State for a determination, which determination shall be final and binding for the purposes of this TMAD.

4.43 The DCC may, from time to time, update the Migration Authorisation Mechanism, provided that the DCC shall ensure that the most up to date Migration Authorisation Mechanism is published to all Supplier Parties at all times. The processes set out in Clauses 4.41 and 4.42 shall apply to any modification of the Migration Authorisation Mechanism, except where the modification is of a minor typographical nature or where the modification has no material effect on the rights or obligations of Parties. Where the modification is of a minor typographical nature or where the modification has no material effect on the rights or obligations of Parties, the DCC shall publish the updated Migration Authorisation Mechanism to all Supplier Parties, together with the date on which it intends that the updated Migration Authorisation Mechanism shall come into effect, which shall be not less than 14 days from the date of publication. The Migration Authorisation Mechanism published by the DCC shall have effect unless or until the Secretary of State determines otherwise.

4.44 The Responsible Supplier for each Active Meter and any associated Devices for which it is also the Responsible Supplier that form part of a SMETS1 Installation shall ensure that, prior to its Migration, the Devices that form part of that SMETS1 Installation are configured in accordance with the requirements of SMETS1 Supporting Requirements of this TMAD, and/or the Devices form part of a SMETS1 Installation that comprises a Device Model Combination that is listed on the Eligible Product Combinations, including upgrading the firmware on the Devices for those purposes.

4.44A Where there is more than one SMETS1 PPMID, SMETS1 IHD or SMETS1 CAD in a SMETS1 Installation, that is comprised of Active or Mixed Installations, the DCC shall include only one of each Device Type in the Migration Common File, which shall be the one that was most recently joined to the HAN. Any SMETS1 PPMID, SMETS1 IHD or SMETS1 CAD for which there is insufficient information in order to populate the Migration Common File shall not be included in the MCF and therefore shall not be Migrated.

Migration Reporting

4.45 The DCC shall make available to the Panel, all Parties and (on request) the Secretary of State the “Migration Reporting Regime” that list the reports that the DCC shall provide on Migration and provides an overview of the frequency, content of and recipients of those reports, as follows:

(a) the DCC:

(i) shall establish and periodically review the Migration Reporting Regime, and shall consult with the Panel, the Parties and the Authority on the content of or any subsequent modification to the Migration Reporting Regime prior to it taking effect; and

(ii) may modify the Migration Reporting Regime without consultation where the modification is of a minor typographical nature or where the modification has no material effect on the rights or obligations of Parties; and

(b) at least 14 days prior to the coming into effect of the Migration Reporting Regime or any subsequent revision to it, the DCC shall provide a copy of that document to the Panel, the Parties, the Authority and the Secretary of State, and publish a copy of it on the DCC Website.

4.46 Where a Party considers that the reporting provided for in the Migration Reporting Regime made pursuant to Clause 4.45 is insufficient, the Party may (within one month of the document being provided under Clause 4.45) refer the matter to the Secretary of State for determination, which determination shall be final and binding for the purposes of this TMAD. In the event that such referral is made the new version of the Migration Reporting Methodology published by the DCC shall apply prior to any such determination.

Electricity Distributor Network Operator Certificate IDs

4.47 The DCC shall establish a reasonable process by which Electricity Distributors can notify the DCC of the Network Operator Certificate IDs that they wish the DCC to include in Commissioning Requests that the DCC processes in relation to SMETS1 ESMEs and shall inform Electricity Distributors of that notification process. The process shall allow an Electricity Distributor to change from time to time the Network Operator Certificate IDs that have been notified.

4.48 Where in relation to a SMETS1 ESME, the Responsible Supplier has not specified to the DCC either or both of the Electricity Distributor’s Network Operator Certificate IDs in accordance with the Migration Authorisation Mechanism (for a SMETS1 ESME that is either an Active Meter or a Dormant Meter except where the SMETS1 ESME is a Dormant Meter and there is a SMETS1 GSME that is an Active Meter within the same SMETS1 Installation), the DCC shall (unless the DCC has identified that the relevant MPAN is invalid) ensure that, for any such unspecified Network Operator Certificate IDs, the latest Network Operator Certificate IDs that have been notified by the Electricity Distributor under Clause 4.47 are included in relation to the relevant Devices within any Migration Common File sent by the relevant Requesting Party.

Change of Supplier Events

4.49 The Responsible Supplier for any Meter:

(a) that forms part of an Enrolled Smart Metering System;

(b) that forms part of a SMETS1 Installation where GroupID = "EA";

(c) that was operating in Prepayment Mode (with its SMETS1 meaning) at the time that the SMETS1 Installation of which it formed part was Migrated;

(d) which has continued to operate in Prepayment Mode (with its SMETS1 meaning) since that time;

(e) in relation to which a "Top Up" Service Request has not been successfully processed since the Meter was Commissioned;

(f) that has not been the subject of a change of supplier event since the Meter was Commissioned; and

(g) in relation to which a change of supplier event is pending,

shall ensure that the Payment Mode (with its SMETS1 meaning) of the Meter is set to Credit Mode (with its SMETS1 meaning) by the time that the change of supplier event occurs.

5 Migration Process

Setup steps

5.1 Before the DCC adds an entry to the SMETS1 Eligible Product Combinations, the DCC shall, for the Group which includes Devices with the corresponding combination of Device Models:

(a) notify to the relevant SMETS1 SMSO any Public Keys that are to be used to create any required EncryptedS1SPGroupInformation or MasterKeyInformation elements and for each such Public Key:

(i) the Key Identifier (see X509SKI);

(ii) the inclusive start and end dates of the period during which the Public Key may be used; and

(iii) any constraints as to the part(s) of the Group in relation to which the Public Key can be used;

(b) notify to the relevant SMETS1 SMSO either:

(i) the technical details and associated steps that would be required in order to configure Devices within such SMETS1 Installations and any associated systems, including those required by ‘Pre-enrolment Configuration Requirements’ for the specified GroupID, so as to be able to communicate with the DCC Live Systems; or

(ii) a statement that no such configuration would be required for Devices comprising such SMETS1 Installations; and

(c) where GroupID = “EA” or “EB”, receive from the relevant SMETS1 SMSO any certificates required to restore communication to the SMETS1 SMSO in the event of a rollback along with:

(i) the inclusive start and end dates of the period during which the certificates may be used; and

(ii) any constraints as to the use of the certificates.

5.2 When the DCC adds an entry to the SMETS1 Eligible Products Combinations, the DCC shall include within it the associated GroupID with that entry.

5.3 Any Private Key, which is associated with a Public Key published pursuant to Clause 5.1 for use in creating MasterKeyInformation elements, shall be generated by, and known only to, the relevant DCO.

5.4 Any Private Key, which is associated with a Public Key published pursuant to Clause 5.1 for use in creating EncryptedS1SPGroupInformation elements, shall be generated by, and known only to, the relevant S1SP.

5.4A Before the DCC adds the first entry to the SMETS1 Eligible Product Combinations with a GroupID = “DA”, the DCO shall generate at least one Private Key and corresponding Public Key(s) for that GroupID to be used solely in relation to ‘Securing a SMETS1 GSME’ and ‘Securing a SMETS1 ESME’ for that GroupID in Appendix C. Such Private Key(s) shall be generated by, and known only to, the relevant DCO.

<u>Digital Signature</u>

5.5 In relation to the Digital Signing obligations in this TMAD, Parties shall only accept as valid Digital Signatures which authenticate against Certificates with Remote Party Roles conforming to Table 5.5. The Parties identified in Table 5.5 shall only sign using Private Keys where the corresponding Public Keys have been incorporated in Organisation Certificates with the corresponding Remote Party Role.

Object to which signature relates	**Party Digitally Signing**	**Required Remote Party Role in the Certificate used to check signature**
Commissioning Outcome File	Commissioning Party	commissioningPartyFileSigning
Migration Common File	Requesting Party	requestingPartyFileSigning
Migration Group File	Requesting Party	requestingPartyFileSigning
Migration Group Encrypted File	Requesting Party	requestingPartyFileSigning
Migration Common Validation File	S1SP	s1SPMigrationSigning
S1SP Commissioning File	S1SP	s1SPMigrationSigning
XML documents created to comply with the DUIS Schema	Commissioning Party	commissioningPartyXmlSigning

Table 5.5

Counters

5.6 Each Requesting Party, each S1SP and the Commissioning Party shall maintain counters, which are sequentially increased for each file created, according the requirements of Table 5.7 so that the files each creates shall, except in cases of replay, pass the anti-replay checks specified in Table 5.9.

5.7 Where an entity acts as the Authenticator with respect to the checks and processing required by Table 5.9, it shall have the capacity to establish and maintain the counters in the ‘Counter of Authenticator’ column of Table 5.7 in the way required by Table 5.9.

File Type	Party creating the file	Counter of file creator	Counter of Authenticator
Commissioning Outcome File	Commissioning Party	Commissioning Outcome File Counter	Commissioning Outcome File Stored Counter
Migration Common File	Requesting Party	Migration Common File Counter. For clarity, this counter shall be included, along with RequestingPartyID, in all files related to this Migration Common File. Other counters shall additionally be included in all such related files.	Migration Common File Stored Counter
Migration Group File	Requesting Party	Migration Group File Counter	Migration File Group Stored Counter
Migration Group Encrypted File	Requesting Party	Migration Group Encrypted File Counter	Migration File Group Encrypted Stored Counter
Migration Common Validation File	S1SP	Migration Common Validation File Counter	Migration File Common Validation Stored Counter
S1SP Commissioning File	S1SP	S1SP Commissioning File Counter	S1SP Commissioning File Stored Counter

Table 5.7

Creation and validation of standard information

5.8 Before the Migration of any set of SMETS1 Installations is triggered pursuant to Clause 5.12, the Requesting Party shall create, populate with details of that set of SMETS1 Installations, Digitally Sign and then submit to the DCC a Migration Common File adhering to 'Migration Common File Device Selection Requirements' for the specific GroupID, as specified in the Group Specific Requirements. Except where the GroupID is "EA" or "EB", the Requesting Party shall not include in any Migration Common File details for any Active Device where either the CriticalSupplierCertificateID or NonCriticalSupplierCertificateID have the null value. The Requesting Party may only set the ToBeCommissionedByDCC to be False where the Migration Common File only contains details on Active Devices.

The Requesting Party shall set ToBeCommissionedByDCC to ‘True’ unless:

(i) all of the Devices that form such a SMETS1 Installation are Active Devices; and

(ii) the Responsible Supplier (or a Responsible Supplier to which it is Affiliated) has indicated, pursuant to Clause 4.35(b), that it wishes to carry out the steps to commission all such Devices; and

(iii) all Supplier Certificate IDs within the file refer to Certificates all of which contain User IDs allocated to the same Supplier Party (or allocated to multiple Supplier Parties provided that they are all Affiliates of one another).

5.8A For Group ID = “EA” or “EB”, where a Migration in respect of a SMETS1 Installation cannot successfully complete and it is not possible to rollback that SMETS1 Installation to the SMETS1 SMSO, but, in the reasonable opinion of the DCC, the Migration ought to be capable of successfully completing were a new Migration Common File to be submitted in respect of that SMETS1 Installation, then the DCC shall instruct the Requesting Party to submit a new Migration Common File. For the avoidance of doubt, such submission does not constitute a commencement of the Migration in respect of that SMETS1 Installation.

5.8B For each SMETS1 Installation where the SMETS1 GSME is a Dormant Meter and:

(a) where GroupID = “AA”, “BA”, or “CA”;

(b) the GT01 check has failed at least three times (since 4 November 2021);

(c) each such failure is in a separate and non-contiguous Migration Week;

(d) each such failure is at GT01, sub-step 4 in Table A3; and

(e) the Payment Mode (with its SMETS1 meaning) of the Gas Meter is set to Credit Mode (with its SMETS1 meaning);

then the DCC shall exclude the SMETS1 GSME from the SMETS1 Installation in the generation of subsequent Migration Common File(s), notwithstanding that a Migration Authorisation in respect of the SMETS1 Installation that includes that Dormant GSME is deemed to have been provided pursuant to Clause 4.27.

5.8C For each SMETS1 Installation where the GSME is an Active Meter and:

(a) where GroupID = “AA”, “BA”, or “CA”; and

(b) the Payment Mode (with its SMETS1 meaning) of the Gas Meter is set to Credit Mode (with its SMETS1 meaning);

then the Responsible Supplier for the SMETS1 GSME may instruct the DCC to exclude the SMETS1 GSME from the SMETS1 Installation in the generation of subsequent Migration Common File(s), notwithstanding that an authorisation may be provided via the Migration Authorisation Mechanism by the Responsible Supplier in respect of a SMETS1 Installation which includes within it the Active GSME. Such instruction shall be provided via a Request to Exclude that complies with Clause 5.8D (a) to (d).

5.8D The following shall apply in respect of a Request to Exclude provided pursuant to Clause 5.8C:

(a) it shall be provided to the DCC using the file exchange arrangements set out in Clause 9 in a reasonable electronic file format notified by the DCC;

(b) it shall be provided to the DCC no later than 10.00 hours on the Wednesday prior to the Migration Week and shall only be applicable to that Migration Week;

(c) it shall overwrite any prior Request to Exclude provided by that Responsible Supplier for that Migration Week;

(d) it may be empty;

(e) the DCC shall disregard any entry in the Request to Exclude where the Responsible Supplier providing the Request to Exclude is not the Responsible Supplier for the Smart Metering System of which the GSME identified in the entry forms a part; and

(f) upon receipt of the final Request to Exclude for a Migration Week, the DCC shall check its contents and shall disregard any entry in it where a change of supplier event is pending in respect of the Smart Metering System of which the GSME identified in the entry forms a part.

5.8E For GroupID = “AA”, “BA”, or “CA”, where, pursuant to Clause 5.8D, a SMETS1 GSME is to be excluded from the preparation of the Migration Common File data for a SMETS1 Installation:

(a) prior to undertaking the check in Clause 5.8F, the DCC shall configure the SMETS1 GPF to prevent any messages from the SMETS1 GSME being sent to the S1SP following Migration; and

(b) the Responsible Supplier for such SMETS1 GSME authorises the DCC to take the steps and carry out the processing specified in Clause 5.8E (a).

5.8F For GroupID = "AA", "BA", or "CA", notwithstanding that an authorisation has been provided (via the Migration Authorisation Mechanism and/or deemed to have been provided pursuant to Clause 4.27) by the Responsible Supplier in respect of a SMETS1 Installation, prior to preparation of the Migration Common File where a SMETS1 GSME is to be excluded from the preparation of the Migration Common File data for a SMETS1 Installation and where the Payment Mode (with its SMETS1 meaning) of the Gas Meter that forms part of that SMETS1 Installation is set to Prepayment Mode (with its SMETS1 meaning), the DCC shall:

(a) exclude the SMETS1 Installation from the preparation of the Migration Common File data; and

(b) configure the SMETS1 GPF to allow any messages from the SMETS1 GSME to be sent to the S1SP.

5.9 Where the DCC receives a Migration Common File, the DCC shall, as the Authenticator, undertake, using whichever parts of the DCC Live Systems it chooses, the sequence of checks and processing required by Table 5.9 for such a file.

Step number	Checks and processing
	Should any of the following checks fail, the Authenticator shall cease processing that file, discard it and raise an Incident.
5.9.1	Confirm the xml file is well formed and valid against the SMETS1 Migration Schema and meets the requirements of Clause 10.1
5.9.2	Check Cryptographic Protection in terms of the signature within the file
5.9.3	Confirm the Remote Party Role specified in the Certificate which was used to Check Cryptographic Protection at Step Number 2 aligns to that required by Table 5.5 for the relevant file type
5.9.4	Confirm Validity of the Certificate used to Check Cryptographic Protection at Step Number 2
5.9.5	Where the file is a Migration Common File confirm either that: 1. the Authenticator holds one or more Migration Common File Stored Counters for the Requesting Party Identifier (RequestingPartyID) and the MCFCounter is not equal to any such Migration Common File Stored Counter created in the last 60 days; or 2. the Authenticator does not hold any Migration Common File Stored Counter for this Requesting Party Identifier Should this check succeed, the Authenticator shall: 1. Create a Migration Common File Stored Counter that is set to the value of MCFCounter
5.9.6	Where the file is a Migration Group File confirm either that: 1. the Authenticator holds one or more Migration Group File Stored Counters for this Requesting Party Identifier (RequestingPartyID) and the MGFCounter is not equal to any such Migration Group File Stored Counter created in the last 60 days; or 2. the Authenticator does not hold a Migration Group File Stored Counter for this Requesting Party Identifier (RequestingPartyID) Should this check succeed, the Authenticator shall: 1. Create a Migration Group File Stored Counter that is set to the value of MGFCounter.

Step number	Checks and processing
5.9.7	Where the file is a Migration Group Encrypted File confirm either that: 1. the Authenticator holds one or more Migration Group Encrypted File Stored Counters for this Requesting Party Identifier (RequestingPartyID) and the MEFCounter is not equal to any such Migration Group Encrypted File Stored Counter created in the last 60 days; or 2. the Authenticator does not hold a Migration Group Encrypted File Stored Counter for this Requesting Party Identifier (RequestingPartyID) Should this check succeed, the Authenticator shall: 1. Create a Migration Group Encrypted File Stored Counter that is set to the value of MEFCounter.
5.9.8	Where the file is a Migration Common Validation File confirm either that: 1. the Authenticator holds one or more Migration File Common Validation Stored Counters for this Requesting Party Identifier (RequestingPartyID) and the MVFCounter is not equal to any such Migration File Common Validation Stored Counter created in the last 60 days; or 2. the Authenticator does not hold a Migration File Common Validation Stored Counter for this Requesting Party Identifier (RequestingPartyID) Should this check succeed, the Authenticator shall: 1. Create a Migration File Common Validation Stored Counter that is set to the value of MVFCounter.
5.9.9	Where the file is a S1SP Commissioning File confirm either that: 1. the Authenticator holds one or more S1SP Commissioning File Stored Counters for this S1SP Identifier (S1SPID) and the SCFCounter is not equal to any such S1SP Commissioning File Stored Counter created in the last 60 days; or 2. the Authenticator does not hold a S1SP Commissioning File Stored Counter for this S1SP Identifier (S1SPID) Should this check succeed, the Authenticator shall: 1. Create a S1SP Commissioning File Stored Counter that is set to the value of SCFCounter.
5.9.10	NOT USED.

Table 5.9

5.10 Where all checks and processing at Clause 5.9 succeed for a Migration Common File, the DCC shall, using whichever parts of the DCC Live Systems it chooses:

(a) ensure that the file is provided to the relevant S1SP, the relevant DCO, and, where ‘ToBeCommissionedByDCC’ is set to ‘True’, the Commissioning Party and, where ‘ToBeCommissionedByDCC’ is set to ‘False’, the Responsible Supplier for the SMETS1 Installations identified with that file over the SMETS1 Migration Interface subject to the naming requirement at Clause 10.2;

(b) create a Migration Common Validation File with the Migration Header having the same values as that of the Migration Common File;

(c) for each SMETS1Installation detailed in the Migration Common File, add a SMETS1Installation element to the Migration Common Validation File where the DeviceID element within the CHF element is that of the SMETS1 CHF of the SMETS1 Installation, and undertake the full sequence of checks and processing in Table 5.10. Should one of those checks fail for a SMETS1 Installation, the DCC shall append to the SMETS1Installation element, a FailedCheck element which includes (1) the relevant StepNumber from Table 5.10 (the ‘FailedStepNumber’) and (2) the SupportingData (as required by the relevant row in from Table 5.10). For clarity, the DCC shall undertake all checks from Table 5.10 for the SMETS1

Installation and so there may be zero, one or many FailedCheck elements for a SMETS1Installation element; and

(d) once all checks are completed for all SMETS1 Installations in the Migration Common File, Digitally Sign the Migration Common Validation File, ensure the relevant S1SP and the relevant DCO has that file, and send that file to the Requesting Party identified by RequestingPartyID.

StepNumber	Check and processing	SupportingData
5.10.1	For the CHF then the ESME then the GSME (if present) and then the PPMID (if present), confirm that the DeviceDetail specified equates to at least one entry on the Central Products List and that that CPL entry is for the required DeviceType	DeviceID of the Device whose Device Model is not on the CPL
5.10.2	For the CHF then the ESME then the GSME (if present) and then the PPMID (if present), confirm that the DeviceDetail specified is one allowable for the GroupID according to the Group Device Model Combination List.	DeviceID of the Device whose Device Model is not within the Group specified by the GroupID
5.10.3	Confirm there is at least one entry on the SMETS1 Eligible Product Combinations which has the combination of Device Models and Device Types specified for this SMETS1 Installation in relation to its CHF, ESME, GSME (if present) and PPMID (if present) and, for at least one such entry the GroupID matches the GroupID in the file.	None
5.10.4	For the CHF then the GPF then the ESME then the GSME (if present) then the PPMID (if present) then the IHD (if present) then the CAD (if present), confirm that DeviceID is not already recorded for any Device in the Smart Metering Inventory.	DeviceID of the Device which is already recorded in the Smart Metering Inventory.
5.10.5	Except for any where the value of CertificateID is the Null Certificate ID, for the ESME, Confirm Validity of each of the Certificates identified by each of the associated four CertificateIDs.	CertificateID for the invalid Certificate
5.10.6	Except for any where the value of CertificateID is the Null Certificate ID, for the GPF, Confirm Validity of each of the Certificates identified by each of the associated four CertificateIDs.	CertificateID for the invalid Certificate
5.10.7	Except for any where the value of CertificateID is the Null Certificate ID, for the GSME if present, Confirm Validity of each of the Certificates identified by each of the associated two CertificateIDs.	CertificateID for the invalid Certificate
5.10.8	Unless the value of the CriticalSupplierCertificateID is the Null Certificate ID for the ESME, confirm, using the Certificates identified by the ESME's CriticalSupplierCertificateID and NonCriticalSupplierCertificateID: • Neither the Critical Supplier ID nor the Non-Critical Supplier ID has the null value; and • the Critical Supplier ID and the Non-Critical Supplier ID identify the same Supplier Party (which is referred to as the 'ESME Supplier Party' in later steps in this Table).	CriticalSupplierCertificateID || NonCriticalSupplierCertificateID
5.10.9	Unless the value of the CriticalSupplierCertificateID is the Null Certificate ID for the ESME, confirm, that, according to Registration Data, the 'ESME Supplier Party' is the current Import Supplier in relation to the MPxN specified in the ESME element.	CriticalSupplierCertificateID
5.10.10	Unless the value of the CriticalSupplierCertificateID is the Null Certificate ID for the ESME, confirm, that, according to Registration Data, there is no change within the next 9 Working Days to the Import Supplier in relation to the MPxN specified in the ESME element.	
5.10.11	Unless the value of the CriticalNetworkOperatorCertificateID is the Null Certificate ID for the ESME, confirm, using the Certificates identified by the ESME's CriticalNetworkOperatorCertificateID and NonCriticalNetworkOperatorCertificateID: • Neither the Critical Network Operator ID nor the Non-Critical Network Operator ID has the null value; and • the Critical Network Operator ID and the Non-Critical Network Operator ID identify the same Network Party (which is referred to as the 'ESME Network Party' in later steps in this Table).	CriticalNetworkOperatorCertificateID || NonCriticalNetworkOperatorCertificateID:
5.10.12	Unless the value of the CriticalNetworkOperatorCertificateID is the Null Certificate ID for the ESME, confirm, that, according to Registration Data, the 'ESME Network Party' is the current Electricity Distributor in relation to the MPxN specified in the ESME element.	CriticalNetworkOperatorCertificateID

StepNumber	Check and processing	SupportingData
5.10.13	If GSME is present, unless the value of the CriticalSupplierCertificateID is the Null Certificate ID for the GSME, confirm, using the Certificates identified by the GSME's CriticalSupplierCertificateID, the GSME's NonCriticalSupplierCertificateID, the GPF's CriticalSupplierCertificateID, and the GPF's NonCriticalSupplierCertificateID: • Neither the Critical Supplier IDs nor the Non-Critical Supplier IDs have the null value; and • the Critical Supplier IDs and the Non-Critical Supplier IDs identify the same Supplier Party (which is referred to as the 'Gas Supplier Party' in later steps in this Table).	CriticalSupplierCertificateID || NonCriticalSupplierCertificateID
5.10.14	Unless the value of the CriticalSupplierCertificateID is the Null Certificate ID for the GSME, confirm, that, according to Registration Data, the 'Gas Supplier Party' is the Gas Supplier in relation to the MPxN specified in the GSME element.	CriticalSupplierCertificateID
5.10.15	Unless the value of the CriticalSupplierCertificateID is the Null Certificate ID for the GSME, confirm, that, according to Registration Data, there is no change within the next 9 Working Days to the Gas Supplier in relation to the MPxN specified in the GSME element.	
5.10.16	Unless the value of the CriticalNetworkOperatorCertificateID is the Null Certificate ID for the GPF, confirm, using the Certificates identified by the GPF's CriticalNetworkOperatorCertificateID and NonCriticalNetworkOperatorCertificateID: • Neither the Critical Network Operator ID nor the Non-Critical Network Operator ID has the null value; and • the Critical Network Operator ID and the Non-Critical Network Operator ID identify the same Network Party (which is referred to as the 'Gas Network Party' in later steps in this Table).	CriticalNetworkOperatorCertificateID || NonCriticalNetworkOperatorCertificateID:
5.10.17	Unless the value of the CriticalNetworkOperatorCertificateID is the Null Certificate ID or the Gas Transporter is an independent Gas Transporter, for the GPF, confirm, that, according to Registration Data, the Gas Network Party is the Gas Transporter in relation to the MPxN specified in the GSME element.	CriticalNetworkOperatorCertificateID
5.10.18	For each of the IHD and CAD, confirm the DeviceType element within the DeviceDetail has the required value.	DeviceID of the Device.

Table 5.10

5.11 Where the Requesting Party, the S1SP or the DCO receives a Migration Common Validation File, it shall, as the Authenticator, undertake the sequence of checks and processing required by Table 5.9 for such a file.

Preparing to trigger Migration

5.12 Where a Requesting Party wishes to Migrate one or more SMETS1 Installations (the 'Requested Installations'), and is in receipt of the required Migration Authorisations for the Requested Installations (or is deemed to have received them pursuant to Clause 4.27 or the definition of Migration Authorisation), the Requesting Party shall first:

(a) confirm a Migration Common File including the Requested Installations has been submitted to the DCC and authenticated as required by Clause 5.8, and a corresponding Migration Common Validation File has been received within the prior 24 hours and authenticated as required by Clause 5.11;

(b) confirm that in the Migration Common Validation File, no errors were detailed for the

Requested Installations;

(c) confirm that there has been one or more wide area network communications with the Communications Hub in each of the Requested Installations within the last 7 days;

(d) where the relevant SMSO is reasonably aware that the Responsible Supplier (or, in the case of Dormant Meters and any associated Devices within the same SMETS1 Installation for which the same Supplier Party is the Responsible Supplier, the DCC) intends to configure any Device within any Requested Installation in accordance with the requirements of the SMETS1 Supporting Requirements (in whole or in part), check that the SMETS1 SMSO has sent the necessary instructions to all such Devices within the Requested Installations to give effect to such configuration;

(e) arrange for the SMETS1 SMSO to take the necessary steps to ensure that all Devices within the Requested Installations, and any associated systems, have been configured in line with the requirements notified by the DCC pursuant to Clause 5.1(b) and where such steps are required, confirm that such steps have been undertaken; and

(f) if required by the ‘Migration Group File’ section of this TMAD for the specified GroupID, populate a Migration Group File with details for the Requested Installations required for the specified GroupID, Digitally Sign and then submit it to the DCC, with the Migration Header having the same values as the Migration Common File; and

(g) if required by the ‘Migration Group Encrypted File’ section of this TMAD for the specified GroupID, populate with details for the Requested Installations, Digitally Sign and then submit to the DCC, a Migration Group Encrypted File, with the Migration Header having the same values as the Migration Common File. The EncryptedS1SPGroupInformation and MasterKeyInformation parts of a Migration Group Encrypted File shall be encrypted according to Clause 11 where the Public Keys used are those notified by the DCC pursuant to Clause 5.1(a) for the GroupID in question.

S1SP and DCO receipt of migration data

5.13 Where the DCC receives a Migration Group Encrypted File, the DCC shall ensure that the DCO and the S1SP, corresponding to the GroupID in the file, have that file.

5.14 Where the DCC receives a Migration Group File, the DCC shall ensure the S1SP corresponding to the GroupID in the file, has that file.

DCO processing on receipt of migration data

5.15 Where the DCO receives a Migration Group Encrypted File, the DCO shall, as the Authenticator, undertake the sequence of checks and processing required by Table 5.9 for such a file. The DCO shall then:

(a) attempt to decrypt the MasterKeyInformation parts of the Migration Group Encrypted File according to Clause 11, where the Public Keys used are those published by DCC pursuant to Clause 5.1(a) for the GroupID in question; and

(b) if this step fails, the DCO shall cease processing that file, discard it and raise an Incident.

5.16 When the DCO has authenticated a Migration Group Encrypted File, it shall start a timer. If that timer reaches 192 hours without the S1SP requesting use of any details in that file, the DCO shall discard the file.

5.17 Where the S1SP requests that the DCO uses details in a Migration Group Encrypted File before the 192 hour timer has elapsed, the DCO shall start another timer. When that timer reaches 60 days, the DCO shall discard any details in the Migration Group Encrypted File related to SMETS1 Installations for which the S1SP has not requested any details be used by the DCO.

5.18 When the DCO authenticates the first Migration Common Validation File for a specific DCO Required File Set, pursuant to Clause 5.20, it shall start a timer. If that timer reaches 24 hours without all of the DCO Required File Set being received, the DCO shall discard the files it has received in that DCO Required File Set.

5.19 If, and only if, the DCO receives all of the files in the DCO Required File Set before its corresponding timer reaches 24 hours, it shall identify the set of SMETS1 Installations from that set which it will allow to be processed further (the "**DCO Viable Installations**"). The DCO shall include in the DCO Viable Installations for this DCO Required File Set all the SMETS1 Installations which:

(a) are included in the Migration Common Validation File, the Migration Common File and, if required, the Migration Group Encrypted File;

(b) do not have any FailedCheck elements within the corresponding SMETS1Installation element in the Migration Common Validation File; and

(c) have not failed any of the checks applied by the DCO as required by ‘DCO Migration Group Encrypted File data validation’ for the specified GroupID, as detailed in the Group Specific

Requirements.

5.20 Where the S1SP requests that the DCO uses some details in relation to a SMETS1 Installation, the DCO shall respond to such requests notifying the S1SP of an error unless either:

(a) the SMETS1 Installation is one of the installations in a set of DCO Viable Installations for which the DCO holds the corresponding DCO Required File Set; or

(b) the SMETS1 Installation was one of the installations in a set of DCO Viable Installations for which the DCO held the corresponding DCO Required File Set when it received a notification from the S1SP that the CHF forming part of that SMETS1 Installation was commissioned.

5.21 When processing such requests from the S1SP, the DCO shall treat only information which is (1) for a DCO Viable Installation and (2) in the corresponding Migration Group Encrypted File as Authorised DCO SMETS1 Device Credentials.

S1SP processing on receipt of migration data

5.22 Where the S1SP receives a Migration Common File, a Migration Common Validation File, a Migration Group File or a Migration Group Encrypted File, the S1SP shall, as the Authenticator, undertake the sequence of checks and processing required by Table 5.9 for such a file.

5.23 For a Migration Group Encrypted File where EncryptedS1SPGroupInformation is required for this GroupID, the S1SP shall then:

(a) attempt to decrypt the EncryptedS1SPGroupInformation parts of the Migration Group Encrypted File according to Clause 11, where the Public Keys used are those notified by DCC pursuant to Clause 5.1(a) for the GroupID in question; and

(b) confirm that the plaintext output from decrypting EncryptedS1SPGroupInformation is well formed and valid against the SMETS1 Migration Schema for a DecryptedS1SPGroupInformation structure or DecryptedS1SPDPGroupInformation structure as in Table 11.2.1.

If either step fails, the S1SP shall cease processing that file, discard it and raise an Incident.

5.24 When the S1SP authenticates, pursuant to Clause 5.22, the first Migration Common Validation File, for a specific S1SP Required File Set, it shall start a timer. If that timer reaches 24 hours without all of the S1SP Required File Set being received, the S1SP shall discard the files it has received in that S1SP Required File Set.

5.25 Where the SISP has received all the files in an S1SP Required File Set and has successfully undertaken the checks required by Clause 5.20 in relation to each of the files, the S1SP shall undertake the sequence of checks and processing required by Table 5.25. Where a SMETS1 Installation fails any of those checks, the S1SP shall include details of that SMETS1 Installation's failure in an S1SP Commissioning File and the S1SP shall undertake no further processing in relation to such SMETS1 Installations as part of the processing of that Migration Group File. Only the SMETS1 Installations which pass all of the checks in Table 5.25 shall be included in the set of S1SP Viable Installations for the S1SP Required File Set.

Step number	Check and processing
	Should any of the following checks fail, checking in relation to that SMETS1 Installation shall cease
5.25.1.1	For each CHFIdentifier in the Migration Group File, where one is required for this GroupID, or in the Migration Group Encrypted File, where a Migration Group File is not required for this GroupID, confirm that the Migration Common File contains a CHFIdentifier with the same value
5.25.1.2	For each CHFIdentifier in the Migration Group File, where one is required for this GroupID, or in the Migration Group Encrypted File, where a Migration Group File is not required for this GroupID, confirm that the Migration Common Validation File does not contain a CHFIdentifier with the same value indicating a validation error
5.25.2.X	Undertake the steps required by the 'S1SP Migration Group File data validation' section of this TMAD for the specified GroupID, where X is the Step number value specified in that section
5.25.3.X	Undertake the steps required by the 'S1SP Migration Group Encrypted File data validation' section of this TMAD for the specified GroupID, where X is the Step number value specified in that section

Table 5.25

5.26 The S1SP shall treat only information which is (i) for an S1SP Viable Installation and (ii) in the corresponding Migration Group Encrypted File as Authorised S1SP SMETS1 Device Credentials.

5.27 For each of the S1SP Viable Installations, the S1SP, and where required the DCO, shall:

(a) undertake, in the order specified, the checks and processing required by the 'S1SP / DCO Commissioning of SMETS1 Installation' section of this TMAD for the associated GroupID;

(b) where a SMETS1 Installation fails any of those checks or processing which is flagged as 'Critical':

(i) include details of that SMETS1 Installation's failure in an S1SP Commissioning File;

(ii) where steps are specified at 'Installation Rollback' for this GroupID, undertake the steps specified to allow communications with the SMETS1 Installation via the relevant SMETS1 SMSO; and

(iii) undertake no further processing in relation to that SMETS1 Installation as part of the processing of the 'DCO Required File Set' or 'S1SP Required File Set', and discard information it has stored or derived about that SMETS1 Installation; and

(c) where a SMETS1 Installation completes all checks and processing without any failures flagged as 'Critical':

(i) record or derive all the information it requires in order to maintain communications with the CHF which forms part of that SMETS1 Installation; and

(ii) include details of that SMETS1 Installation's success in an S1SP Commissioning File.

5.28 The S1SP may include details relating to one or more SMETS1 Installations in each S1SP Commissioning File subject to that inclusion not delaying the sending of details related to any one SMETS1 Installation by more than 60 minutes. Whenever the S1SP creates an S1SP Commissioning File, it shall Digitally Sign that file and send that file:

(a) to the Requesting Party identified by RequestingPartyIdentifier; and either:

(b) where, in the corresponding Migration Common File, the 'ToBeCommissionedByDCC' is set to 'True', to the Commissioning Party identified by CommissioningPartyIdentifier; or

(c) where, in the corresponding Migration Common File, the 'ToBeCommissionedByDCC' is set to 'False', to the Responsible Supplier for the Devices referred to in that file over the SMETS1 Migration Interface.

6 Commissioning Requirements

6.1 Where the Commissioning Party receives a Migration Common File or an S1SP Commissioning File, then the Commissioning Party shall, as the Authenticator, undertake the sequence of checks and processing required by Table 5.9 for such a file. Additionally, the Commissioning Party shall check that any Migration Common File has a value for 'ToBeCommissionedByDCC' set to 'True'. If this check fails, the Commissioning Party shall discard the file and cease processing of it.

6.2 Where the checks undertaken pursuant to Clause 6.1 are successful and the file is a Migration Common File, the Commissioning Party shall start a timer. When that timer reaches 60 days or the Commissioning Party has received and processed S1SP Commissioning Files for all SMETS1 Installations in the Migration Common File, the Commissioning Party shall discard the Migration Common File.

6.3 Where the checks undertaken pursuant to Clause 6.1 are successful and the file is an S1SP

Commissioning File, the Commissioning Party shall, in the following sequence:

(a) confirm that it holds a Migration Common File where the Migration Header has the same values as that S1SP Commissioning File. If it does not, processing of the S1SP Commissioning File shall cease, the file shall be discarded and an Incident shall be raised;

(b) confirm that the S1SP Commissioning File contains details of at least one SMETS1 Installation which the S1SP has successfully processed. If it does not, processing of the S1SP Commissioning File shall cease and the file shall be discarded;

(c) for each SMETS1 Installation specified as being successful in the S1SP Commissioning File, confirm that there is a corresponding SMETS1 Installation in the Migration Common File. Should this check fail for any SMETS1 Installation, processing of the S1SP Commissioning File shall cease, the file shall be discarded and an Incident shall be raised; and

(d) for each SMETS1 Installation in each S1SP Commissioning File that successfully passes the checks at Clause 6.3(a), 6.3(b) and 6.3(c):

(i) submit the Commissioning Requests to the DCC, in line with the requirements of Clause 8 (where ‘Target SMETS1 Device’, ‘Other SMETS1 Device’ and ‘RemotePartyRole’ have their Table 6.3 values for the relevant Commissioning Request), as required by Table 6.3 in the sequence specified, using the details from the Migration Common File for that SMETS1 Installation; and

(ii) include details of that SMETS1 Installation’s processing in a Commissioning Outcome File, specifically by including a SMETS1Installation element, where the DeviceID element within the CHF element is that of the SMETS1 CHF of the SMETS1 Installation. Additionally, where there are any errors in relation to ‘StepNumbers’ 6.3.1 to 6.3.20 the Commissioning Party shall append to the SMETS1Installation element, a FailedCheck element which includes the relevant StepNumber from Table 6.3 (the ‘FailedStepNumber’). For clarity (1) the Commissioning Party shall undertake all relevant steps required by Table 6.3 for the SMETS1 Installation and so there may be zero, one or many FailedCheck elements for a SMETS1Installation element; and (2) where the relevant CertificateID is null or a Device is not present, a step cannot produce errors.

StepNumber	Commissioning Request	Only submit if:	Target SMETS1 Device ID	Other SMETS1 Device ID	RemotePartyRole
6.3.1	Device Pre-notification	True	DeviceID in ESME	NA	NA

StepNumber	Commissioning Request	Only submit if:	Target SMETS1 Device ID	Other SMETS1 Device ID	RemotePartyRole
6.3.2	Update HAN Device Log	True	DeviceID in CHF	DeviceID in ESME	NA
6.3.3	Device Pre-notification	If GSME present	DeviceID in GSME	NA	NA
6.3.4	Update HAN Device Log	If GSME present	DeviceID in CHF	DeviceID in GSME	NA
6.3.5	Device Pre-notification	If PPMID present	DeviceID in PPMID	NA	NA
6.3.6	Update HAN Device Log	If PPMID present	DeviceID in CHF	DeviceID in PPMID	NA
6.3.7	Device Pre-notification	If IHD present	DeviceID in IHD	NA	NA
6.3.8	Update HAN Device Log	If IHD present	DeviceID in CHF	DeviceID in IHD	NA
6.3.9	Device Pre-notification	If CAD present	DeviceID in CAD	NA	NA
6.3.10	Update HAN Device Log	If CAD present	DeviceID in CHF	DeviceID in CAD	NA
6.3.11	Request Handover Of DCC Controlled Device	If Supplier Certificate IDs in the ESME element are not null	DeviceID in ESME	NA	Supplier
6.3.12	Request Handover Of DCC Controlled Device	If (GSME present) and (Supplier Certificate IDs in the GSME element are not null)	DeviceID in GSME	NA	Supplier
6.3.13	Commission Device	True	DeviceID in ESME	NA	NA
6.3.14	Commission Device	If GSME present	DeviceID in GSME	NA	NA
6.3.15	Join Service (Non-Critical)	If PPMID present	DeviceID in PPMID	DeviceID in ESME	NA
6.3.16	Join Service (Critical)	If PPMID present	DeviceID in ESME	DeviceID in PPMID	NA
6.3.17	Join Service (Non-Critical)	If GSME present	DeviceID in GSME	DeviceID in GPF	NA
6.3.18	Request Handover Of DCC Controlled Device	If (GSME present) and (Supplier Certificate IDs in the GPF element are not null)	DeviceID in GPF	NA	Supplier
6.3.19	Request Handover Of DCC Controlled Device	If Network Operator Certificate IDs in the ESME element are not null	DeviceID in ESME	NA	NetworkOperator
6.3.20	Request Handover Of DCC Controlled Device	If Network Operator Certificate IDs in the GPF element are not null	DeviceID in GPF	NA	NetworkOperator

Table 6.3

6.4 The Commissioning Party may include details relating to one or more SMETS1 Installations in each Commissioning Outcome File subject to that inclusion not delaying the sending of details related to any one SMETS1 Installation by more than 60 minutes and, where a Supplier Party is identified in the corresponding entries in the Migration Common File, the Supplier Party is the Responsible Supplier for at least one of the Smart Meters in all of the SMETS1 Installations in that file. Whenever the Commissioning Party creates a Commissioning Outcome File, it shall:

(a) ensure the Migration Header has the same values as that of the Migration Common File; and

(b) Digitally Sign that file and send that file to:

(i) the Requesting Party identified by RequestingPartyIdentifier; and

(ii) where one or more Supplier Parties is identified in the corresponding entries in the Migration Common File, each such Supplier Party via the SMETS1 Migration Interface.

6.5 Where an S1SP receives a Commissioning Request that in accordance with, and subject to, Clause 8.1 is to be treated as a 'Commission Device' Service Request (with its DUIS meaning) for a Device communicating via a CHF that it has established communication with pursuant to Clause 5.27, the S1SP shall establish that Device's Device Model using the Smart Metering Inventory and undertake the processing required for such a Device Model according to the S1SP requirements in the SMETS1 Supporting Requirements. Upon successful completion of the required S1SP processing, where the relevant Service Request is a Commissioning Request, the S1SP shall issue an S1SP Alert, populated according to Table 6.5. For clarity, S1SP Alerts are defined in Version 3.0 of the DCC User Interface Specification, therefore a User that has not yet sent a Service Request using Version 3.0 of the DUIS XML Schema shall not receive such S1SP Alerts.

DUIS Data Item	**Value**
RequestID	Shall be the concatenation of: • The Notified Critical Supplier ID, where the S1SP holds such an identifier in relation to the Device or, where the S1SP does not hold such an identifier, a User ID associated with the Responsible Supplier for the Device; • The Business Target ID in the Commissioning Request; and • 1, separated by ":".
DeviceID	The Business Target ID in the Commissioning Request
S1SPAlertCode	S1MC1
AdditionalInformation	Shall be the sequential concatenation of the following data items: • the MPxN that is, according to the Smart Metering Inventory, associated with the Device identified by the DeviceID; • the EUI-64 identifier of the Communications Hub Function associated with the Device identified by the DeviceID; and • only where the Device identified by the DeviceID is a Gas Smart Meter, the EUI-64 identifier of the Gas Proxy Function associated with that Gas Smart Meter; with a colon (":") used a separator between each data item in the concatenation.
DateTime	Any value as set out in Clause 3.9.15.2 in the DCC User Interface Specification
ds: Signature	Any value as set out in Clause 3.9.15.2 in the DCC User Interface Specification

Table 6.5

6.6 Where, in a Migration Common File, the 'ToBeCommissionedByDCC' set to 'False' the Responsible Supplier for the Devices referred to in that file shall undertake those steps necessary (including submitting Service Requests) to achieve an outcome that is equivalent to that which would have been achieved had the Commissioning Party carried out the steps set out in the Clause 6 in relation to those Devices.

6.7 The S1SP for GroupID = "DA" shall not process any request, received via its interface with the SMETS1 SMSO for that GroupID, to communicate with or generate instructions for a Device in relation to which the steps in Clause 5.12(e) have been carried out, except pursuant to Clause 3.14D.

7 Decommissioning of a Requesting Party or the Commissioning Party

7.1 The DCC shall develop a number of timetables each setting out a date (each a proposed "**RP Decommissioning Date**") at which it proposes to decommission a Requesting Party, each timetable being a draft of a "**RP Decommissioning Timetable**" for the relevant Requesting Party. The DCC shall include within each RP Decommissioning Timetable:.

(a) the final date for which a Migration Authorisation can be submitted (or deemed to be submitted pursuant to Clause 4.27) in respect of the relevant Requesting Party; and

(b) the final Migration Week applicable to the SMETS1 SMSO of which that Requesting Party forms a part.

7.2 Where GroupID = "DA" and "EA", the date within any draft timetable upon which it is proposed to decommission any particular Requesting Party shall be no earlier than twelve months after the date upon which the SMETS1 Eligible Product Combinations is updated by the DCC so as to include an entry for each of the Device Model combinations contained within each Group that pertains to that Requesting Party.

7.3 The DCC shall develop and consult on each RP Decommissioning Timetable (and such consultation may take place prior 10 June 2022). For the purposes of such consultation, the DCC may consult on a date or range of dates that are candidates for the RP Decommissioning Timetable, however the timetable submitted to the Secretary of State must include only one of those dates. The DCC shall consult upon an RP Decommissioning Timetable and submit it to the Secretary of State for approval in accordance with the following process:

(a) the DCC shall, in consultation with Supplier Parties and such other persons as are likely to be interested, produce a draft of the document;

(b) where a disagreement arises with any Supplier Party with regard to any proposal as to the content of the document, the DCC shall endeavour to reach an agreed proposal with that person consistent with the purposes of that RP Decommissioning Timetable;

(c) the DCC shall send a draft of the RP Decommissioning Timetable to the Secretary of State as soon as is practicable after completion of the process described in (a) and (b) above, and shall when doing so provide to the Secretary of State:

(i) a statement of the reasons why the DCC considers that draft to be fit for purpose;

(ii) copies of the consultation responses received; and

(iii) a summary of any disagreements that arose during consultation and that have not been resolved by reaching an agreed proposal; and

(d) the DCC shall comply with any requirements in a direction given to it by the Secretary of State in relation to the draft document.

7.4 Following approval of a RP Decommissioning Timetable by the Secretary of State in accordance with Clause 7.3, the DCC shall publish such RP Decommissioning Timetable to all Supplier Parties and send a copy of the final document to the Secretary of State and to the Authority.

7.4A Following approval of a RP Decommissioning Timetable by the Secretary of State, the DCC shall not take any further step under Clause 4 that relates to a SMETS1 Installation for which it considers commencement of Migration by the relevant Requesting Party could not take place before the expiry of the RP Decommissioning Date for that Requesting Party.

7.5 The DCC may update each RP Decommissioning Timetable by following the procedure in Clause 7.3, provided that the DCC must ensure that the most up to date RP Decommissioning Timetable for each Requesting Party is published to all Supplier Parties and a copy is provided to the Secretary of State and to the Authority.

7.6 Following the expiry of the RP Decommissioning Date for a Requesting Party, the DCC shall ensure that that the relevant Requesting Party does not take any further step under this Code that could result in, or contribute towards, the commencement of Migration for any SMETS1 Installation.

7.7 As soon as reasonably practicable following the RP Decommissioning Date for a Requesting Party, the DCC shall submit a Certificate Revocation Request for all Organisation Certificates in which:

(a) that Requesting Party is identified by the Entity Identifier of the subject of that Organisation Certificate; and

(b) any S1SP that pertains to any Group that pertains to that Requesting Party is identified by the Entity Identifier of the subject of that Organisation Certificate and where such Organisation Certificates have a Remote Party Role of 's1SPMigrationSigning'.

7.8 The DCC shall, as soon as reasonably practicable following the revocation of each of the Organisation Certificates referred to in Clause 7.7, destroy the Private Key associated with each such Organisation Certificate and any associated cryptographic material.

7.9 The DCC shall as soon as reasonably practicable after the RP Decommissioning Date for a Requesting Party:

(a) destroy any Secret Key Material in addition to that referred to in Clause 7.7; and

(b) revoke any Certificate associated with any other Public Key in addition to those referred to in Clause 7.7.

7.9A Following the RP Decommissioning Date for a Requesting Party and in respect of Data that is (in each case) held within any part of the DCC Systems and that was used (or was intended for use) for the purpose of the Migration of the SMETS1 Installations that pertained to that Requesting Party:

(a) the DCC shall retain such Data where it is required for the purposes of providing ongoing Services under the Code in relation to the Devices comprising those SMETS1 Installations and / or where it is required to be retained under the DCC's Data Retention Policy; and

(b) subject to Clause 7.9C, the DCC shall delete such Data where it is not required for the purposes of providing ongoing Services under the Code in relation to the Devices comprising those SMETS1 Installations and / or where it is not required to be retained under the DCC's Data Retention Policy.

7.9B Once the DCC reasonably knows of the date from which it shall no longer require particular Data for the purposes of providing ongoing Services under the Code and / or where it shall no longer require particular Data to be retained under the DCC's Data Retention Policy, the DCC shall promptly notify the Secretary of State and the Authority of the planned date for deletion of the Data and the associated Requesting Party. The planned date within such notification shall be no sooner than 2 months from the date of the notification.

7.9C As soon as reasonably practicable following expiry of the planned date for Data deletion as notified under Clause 7.9B, the DCC shall delete any Data which is the subject of the notice unless either the Secretary of State or the Authority direct that the data should be retained until a later date. Where:

(a) either the Secretary of State or the Authority direct that the Data should be retained until a later date then that Data shall be so retained, or

(b) both the Secretary of State and the Authority direct that the Data should be retained until a later date, the DCC shall retain the Data until the later of the two dates,

and the DCC shall delete the Data as soon as reasonably practicable thereafter.

7.9D The DCC shall as soon as reasonably practicable following each deletion of data pursuant to Clause 7.9C provide the SMKI PMA and the DCC Independent Security Assurance Service Provider with confirmation that the appropriate steps were taken as pursuant to Clause 7.9C.

7.10 As soon as reasonably practicable following the last RP Decommissioning Date the DCC shall submit a Certificate Revocation Request for all Organisation Certificates that identify the Commissioning Party by the Entity Identifier of the subject of those Organisation Certificates.

7.11 The DCC shall, as soon as reasonably practicable following the revocation of each of the Organisation Certificates referred to in Clause 7.10, destroy the Private Key associated with each such Organisation Certificate and any associated cryptographic material.

7.12 The DCC shall as soon as reasonably practicable after the last RP Decommissioning Date:

(a) destroy any Secret Key Material in addition to that referred to in Clause 7.10;

(b) revoke any Certificate associated with any other Public Key in addition to those referred to in Clause 7.10; and

(c) delete any Data,

that (in each case) is held within any part of the DCC Systems and that was used (or was intended for use) for the purpose of the operation of the Commissioning Party; provided that information may be retained for a limited period of time in order to resolve any disagreements over the process.

7.13 The DCC shall as soon as reasonably practicable following the decommissioning of any Requesting Party or the Commissioning Party, obtain an independent audit and provide to the SMKI PMA the report of that audit, confirming that the decommissioning has been properly and successfully carried out together with any remediation plan that may be required.

7.14 Prior to the decommissioning of the Requesting Party, the DCC shall apply the configurations as required by ‘Post Migration Configuration’ for the specified GroupID.

8 Commissioning Requests

8.1 The Commissioning Party and the DCC shall process Commissioning Requests as if they were Service Requests except as varied in this Clause 8.

8.2 The DCC shall not apply any checks on Commissioning Requests that relate to User Role.

8.3 The DCC shall not apply any checks on Commissioning Requests that validate the Notified Critical Supplier ID (with its SMETS1 Supporting requirements meaning) against the Business Originator ID (with its DUIS meaning).

8.4 The DCC shall not apply any validation to Commissioning Requests that relate to Registration Data unless such validation is required by this Clause 8.

8.5 The Commissioning Party shall populate the data items in all Commissioning Requests according to Table 8.7.4, using the information from the Migration Common File where required. Where the S1SP receives a Countersigned Service Request which has InstallCode set to ‘00000000000000000000000000000000’, the S1SP shall not take any related action which would or could affect the communications on any HAN.

8.6 The DCC shall apply the validation checks in Table 8.7.1 to all Commissioning Requests that it receives from the Commissioning Party, and shall additionally apply the validation checks in Table 8.7.3 to any Commissioning Request that it receives from the Commissioning Party which is of the type specified in that Table, and the Commissioning Party shall construct

Commissioning Requests accordingly. Where one of the checks required by this Clause 8.6 fails, the DCC shall send a Service Response to the Commissioning Party detailing the relevant Response Code, which shall be interpreted according to Table 8.7.1 or Table 8.7.3 as appropriate to the Response Code. Where the Commissioning Party receives such a Response other than in relation to a 'Request Handover Of DCC Controlled Device', it shall raise an Incident and not continue processing subsequent Commissioning Requests for that SMETS1 Installation until and unless that incident is resolved so as to allow the erroneous requests to be processed without error. Where the Commissioning Party receives such as Response in relation to a 'Request Handover Of DCC Controlled Device', it shall take the actions required by Clause 6.3(d)(ii) and shall continue processing subsequent Commissioning Requests for that SMETS1 Installation.

8.7 The DCC shall apply the checks in Table 8.7.1 and Table 8.7.3 in the sequence they appear in each Table and shall successfully apply all Table 8.7.1 checks before applying checks in Table 8.7.3. The DCC shall cease processing a Commissioning Request at the point that the first check fails, save that it shall send a response detailing the error to the Commissioning Party.

Validation Check	Response Code	Response Code Name	Response code type	Applicable to response types
The combination of values in the Service Reference and Service Reference Variant fields, with their DUIS meanings, is a combination detailed in one of the rows in Table 8.7.2	E48	Commissioning Party is not allowed to use such Service Requests	Error	Acknowledgement
The Remote Party Role in the Certificate used to verify the Digital Signature on the Commissioning Request is that required by Table 5.5.	C2	Wrong Remote Party Role for Commissioning Request	Error	Acknowledgement
The Business Originator ID in the RequestID (with their DUIS meanings) has the same value as the Entity Identifier in the Certificate used to verify the Digital Signature on the Commissioning Request	E100	Commissioning Party identifier mismatch in Commissioning Service Request	Error	Acknowledgement
Where Business Target ID in the RequestID (with their DUIS meanings) refers to a Device, the Devices is, according to the SMI, a SMETS1 Device or a CAD. For clarity, CADs are not specified in any version of SMETS, and so cannot have an associated SMETS version, where CAD has its DUIS meaning.	C4	Target is not a SMETS1 Device	Error	Acknowledgement
Where the Body part of a Commissioning Request, which is not a 'Device Pre-notification', contains a Device ID (with their DUIS meanings), that Device ID is for a SMETS1 Device according to the Smart Metering Inventory	C5	Other Device is not a SMETS1 Device	Error	Acknowledgement

Table 8.7.1

Commissioning Request name	**Service Reference**	**Service Reference Variant**
Request Handover Of DCC Controlled Device	6.21	6.21
Commission Device	8.1	8.1.1
Join Service (Critical)	8.7	8.7.1
Join Service (Non-Critical)	8.7	8.7.2
Update HAN Device Log	8.11	8.11
Device Pre-notification	12.2	12.2

Table 8.7.2

Commissioning Request name	**Validation Check (**With terms having their DUIS meaning, where not defined otherwise)	**Response Code**	**Response Code name**	**Response code type**	**Applicable to response types**
Request Handover Of DCC Controlled Device	If RemotePartyRole is 'supplier' in the Commissioning Request, confirm that the Remote Party Role in all Certificates in ReplacementCertificates is 'supplier'. If RemotePartyRole is 'NetworkOperator' in the request, confirm that the Remote Party Role in all Certificates in ReplacementCertificates is 'networkOperator'.	C062199	Remote Party Role in Certificates different than in request	Error	Acknowledgement
Request Handover Of DCC Controlled Device	Confirm that the Entity Identifiers in all Certificates contained within ReplacementCertificates are identifiers for the same Party.	C062197	Not all identifiers are for the same Party	Error	Acknowledgement
Request Handover Of DCC Controlled Device	If RemotePartyRole is 'Supplier' in the request, confirm that according to: • the Registration Data linking MPxN to current Import Supplier or Gas Supplier, as the context requires; • the MPxN recorded in the Smart Metering Inventory against; the Device identified by Business Target ID in the request; and • the Party identified by the Entity Identifiers in the Certificates, that the Party identified is the current Import Supplier or Gas Supplier for the Device identified.	C062196	Asserted Supplier is not the Supplier	Error	Acknowledgement
Request Handover Of DCC Controlled Device	If RemotePartyRole is 'NetworkOperator' in the request, confirm that according to: • the Registration Data linking MPxN to current Electricity Distributor or Gas Transporter, as the context requires; • the MPxN recorded in the Smart Metering Inventory against; the Device identified by Business Target ID in the request; and • the Party identified by the Entity Identifiers in the Certificates, that the Party identified is the current Electricity Distributor or Gas Transporter for the Device identified.	C062195	Asserted Network Operator is not the Network Operator	Error	Acknowledgement

Table 8.7.3

DUIS Data Item	Commissioning Service Request(s)	Value
Business Originator ID in Request ID	All	A DCC ID allocated by the DCC for use by the Commissioning Party
Business Target ID in Request ID	All except Device Pre-Notification	‘Target SMETS1 Device ID’
Business Target ID in Request ID	Device Pre-Notification	A DCC ID allocated by the DCC
Originator Counter in Request ID	Join Service (Critical)	For each ‘Target SMETS1 Device ID’, a 64-bit unsigned integer with an initial value of 1 that is increased by 1 for each instance of the Commissioning Request
Originator Counter in Request ID	All except Join Service (Critical)	Any value as set out in Clause 5 in SMETS1 Supporting Requirements Document
ExecutionDateTime	All	Never present
RemotePartyRole	Request Handover Of DCC Controlled Device	‘Supplier’ when processing Certificate IDs provided in relation to a Supplier Party role; or ‘NetworkOperator’ when processing Certificate IDs provided in relation to a Network Party role; or
RemotePartyFloorSeqNumber	Request Handover Of DCC Controlled Device	0 (zero)
RemotePartyPrepaymentTopUpFloorSeqNumber	Request Handover Of DCC Controlled Device	0 (zero) for RemotePartyRole = ‘Supplier’ and Device Type = ESME or GSME Otherwise not present.
ReplacementCertificates	Request Handover Of DCC Controlled Device	The Certificates identified by the Certificate IDs specified for this RemotePartyRole
CertificationPathCertificates	Request Handover Of DCC Controlled Device	The Certification Authority Certificates identified in the Certificates included in ReplacementCertificates.
ApplyTimeBasedCPVChecks	Request Handover Of DCC Controlled Device	True
CurrentDateTime	Commission Device	The Commissioning Parties current date-time which shall be within 10 seconds of UTC
TolerancePeriod	Commission Device	0 (zero)
OtherDeviceID	Join Service (Critical) & Join Service (Non-Critical)	‘Other SMETS1 Device ID’
DeviceID	Update HAN Device Log	‘Other SMETS1 Device ID’
RequestType	Update HAN Device Log	‘Add’
JoinTimePeriod	Update HAN Device Log	1 (one)

DUIS Data Item	Commissioning Service Request(s)	Value
ImportMPxN	Update HAN Device Log	For GSME the MPRN specified for the SMETS1 Installation For ESME; the MPAN specified for the SMETS1 Installation.
SecondaryImportMPAN	Update HAN Device Log	Never present
ExportMPAN	Update HAN Device Log	Never present
DeviceID	Device Pre-Notification	'Target SMETS1 Device ID'
DeviceManufacturer	Device Pre-Notification	As specified in relation to the 'Target SMETS1 Device ID'
DeviceModel	Device Pre-Notification	As specified in relation to the 'Target SMETS1 Device ID'
DeviceType	Device Pre-Notification	The device type specified in relation to the 'Target SMETS1 Device ID', so the relevant one of: • ESME • GSME • PPMID • IHD • CAD
SMETSCHTSVersion	Device Pre-Notification	Not present if DeviceType = "CAD'; as specified in the CPL for the Device Model of the Device identified by the 'Target SMETS1 Device ID' otherwise
FirmwareVersion	Device Pre-Notification	As specified in relation to the 'Target SMETS1 Device ID' where present; otherwise omitted from Commissioning Request
ESMEVariant	Device Pre-Notification	Not present unless DeviceType = "ESME'; 'A' otherwise
AssociatedGPFDeviceID	Device Pre-Notification	Never present

Table 8.7.4

8.8 The DCC shall develop and consult on a "Migration Error Handling and Retry Strategy" in accordance with the following process:

(a) the DCC shall, in consultation with Supplier Parties and such other persons as are likely to be interested, produce a draft of the document;

(b) where a disagreement arises with any Supplier Party with regard to any proposal as to the content of the document, the DCC shall endeavour to reach an agreed proposal with that person consistent with the purposes of the Migration Error Handling and Retry Strategy;

(c) the DCC shall publish a draft of the Migration Error Handling and Retry Strategy as soon as is practicable after completion of the process described in (a) and (b) above together with:

(i) a statement of the reasons why the DCC considers that draft to be fit for purpose;

(ii) copies of the consultation responses received (apart from those marked confidential); and

(iii) a summary of any disagreements that arose during consultation and that have not been resolved by reaching an agreed proposal.

8.9 Within 14 days of DCC publishing the draft Migration Error Handling and Retry Strategy pursuant to Clause 8.8 any Supplier Party may refer the document to the Secretary of State whose decision on its contents shall be final and binding. In the absence of any such referral, the draft published by the DCC shall be Migration Error Handling and Retry Strategy.

8.10 Except where the modification to the Migration Error Handling and Retry Strategy is of a minor typographical nature or where the modification has no material effect on the rights or obligations of Parties, the Migration Error Handling and Retry Strategy may be updated following the procedure set out in Clause 8.8 and 8.9, provided that the DCC must ensure that the most up to date Migration Error Handling and Retry Strategy is published to all Supplier Parties.

8.10A Where the modification to the Migration Error Handling and Retry Strategy is of a minor typographical nature or where the modification has no material effect on the rights or obligations of Parties, the DCC shall publish the updated Migration Error Handling and Retry Strategy to all Supplier Parties together with the date on which it intends that the updated Migration Error Handling and Retry Strategy shall come into effect, which shall be not less than 14 days from the date of publication.

9 SMETS1 Migration Interface

9.1 This Clause 9 specifies the technical interface allowing the exchange of files between the DCC and Supplier Parties pursuant to requirements to exchange files in this TMAD.

9.2 For each Supplier Party, the DCC shall detail directory structures in DCC’s Microsoft SharePoint through which that Supplier Party can exchange files.

9.3 The DCC shall securely exchange only those files which are relevant to a Supplier Party with that Supplier Party through DCC’s Microsoft SharePoint.

10 SMETS1 Migration Schema

10.1 This Clause 10 incorporates the SMETS1 Migration Schema, with which the contents of files created pursuant to this TMAD shall comply, if they are to be valid and authentic. For each file type, the contents shall be a single instance of the XML structure specified in Table 10.2. Each such XML structure shall be populated with information, within each element, as required by Table 10.1 in the format specified by the SMETS1 Migration Schema embedded below.

SMETS1 Migration
Schema v1.2_MOC_F

XML Element	Information
CHFDetail	The information required in relation the SMETS1 CHF which forms part of this SMETS1 Installation and which is required in order to carry out the checks and processing in this TMAD. As per the SMETS1 Migration Schema, this shall not contain any of: • CriticalNetworkOperatorCertificateID • NonCriticalNetworkOperatorCertificateID • CriticalSupplierCertificateID • NonCriticalSupplierCertificateID
GPFDetail	The information required in relation the SMETS1 GPF which forms part of this SMETS1 Installation and which is required in order to carry out the checks and processing in this TMAD. As per the SMETS1 Migration Schema, this shall contain one and only one of each of: • CriticalNetworkOperatorCertificateID • NonCriticalNetworkOperatorCertificateID • CriticalSupplierCertificateID • NonCriticalSupplierCertificateID Where the SMETS1Installation does not contain a GSME, the values in the above four elements shall be the Null Certificate ID.
ESMEDetail	The information required in relation the SMETS1 ESME which forms part of this SMETS1 Installation and which is required in order to carry out the checks and processing in this TMAD. As per the SMETS1 Migration Schema, this shall contain one and only one of each of: • CriticalNetworkOperatorCertificateID • NonCriticalNetworkOperatorCertificateID • CriticalSupplierCertificateID • NonCriticalSupplierCertificateID

XML Element	Information
GSMEDetail	The information required in relation the SMETS1 GSME which forms part of this SMETS1 Installation and which is required in order to carry out the checks and processing in this TMAD. As per the SMETS1 Migration Schema, this shall contain one and only one of each of: • CriticalSupplierCertificateID • NonCriticalSupplierCertificateID As per the SMETS1 Migration Schema, this shall contain not contain: • CriticalNetworkOperatorCertificateID • NonCriticalNetworkOperatorCertificateID
IHDDetail	The information required in relation the SMETS1 IHD which forms part of this SMETS1 Installation and which is required in order to carry out the checks and processing in this TMAD. As per the SMETS1 Migration Schema, this shall not contain any of: • CriticalNetworkOperatorCertificateID • NonCriticalNetworkOperatorCertificateID • CriticalSupplierCertificateID • NonCriticalSupplierCertificateID
PPMIDDetail	The information required in relation the SMETS1 PPMID which forms part of this SMETS1 Installation and which is required in order to carry out the checks and processing in this TMAD. As per the SMETS1 Migration Schema, this shall not contain any of: • CriticalNetworkOperatorCertificateID • NonCriticalNetworkOperatorCertificateID • CriticalSupplierCertificateID • NonCriticalSupplierCertificateID
CADDetail	The information required in relation the SMETS1 CAD which forms part of this SMETS1 Installation and which is required in order to carry out the checks and processing in this TMAD. As per the SMETS1 Migration Schema, this shall not contain any of: • CriticalNetworkOperatorCertificateID • NonCriticalNetworkOperatorCertificateID • CriticalSupplierCertificateID • NonCriticalSupplierCertificateID
DeviceDetail	For the Device to which this element relates, the combination of FirmwareVersion, DeviceModel, DeviceManufacturer (so equating to Device Model) and DeviceType (equating to Device Type)
FirmwareVersion	For the Device to which this element relates, the value required by DUIS in the FirmwareVersion element
DeviceType	For the Device to which this element relates, the value required by DUIS in the DeviceType element
DeviceModel	For the Device to which this element relates, the value required by DUIS in the DeviceModel element
DeviceManufacturer	For the Device to which this element relates, the value required by DUIS in the DeviceManufacturer element
DeviceID	The Device ID of the Device to which this element relates
RequestingPartyID	The DCC ID of the relevant Requesting Party which shall have the same value as Entity Identifier in the Organisation Certificate identified in the X509IssuerSerial element in the file.
S1SPID	The DCC ID of the relevant S1SP which shall have the same value as Entity Identifier in the Organisation Certificate identified in the X509IssuerSerial element in the file.

XML Element	Information
CommissioningPartyID	The DCC ID of the Commissioning Party which shall have the same value as Entity Identifier in the Organisation Certificate identified in the X509IssuerSerial element in the file.
GroupID	The GroupID for the set of SMETS1 Installations detailed in this file.
CriticalNetworkOperatorCertificateID	Where no Network Party is identified, the Null Certificate ID; otherwise a Certificate ID identifying a Certificate which contains the Critical Network Operator ID
NonCriticalNetworkOperatorCertificateID:	Where no Network Party is identified, the Null Certificate ID; otherwise a Certificate ID identifying a Certificate which contains the Non-Critical Network Operator ID
CriticalSupplierCertificateID:	Where no Supplier Party is identified, the Null Certificate ID; otherwise a Certificate ID identifying a Certificate which contains the Critical Supplier ID
NonCriticalSupplierCertificateID:	Where no Supplier Party is identified, the Null Certificate ID; otherwise a Certificate ID identifying a Certificate which contains the Non-Critical Supplier ID
SMETS1Installation	The information required in relation to a SMETS1 Installation in order to carry out the checks and processing in this TMAD.
X509IssuerSerial	In relation to the Signature element, the Certificate ID, which is composed of the X509SerialNumber and X509IssuerName, of the Organisation Certificate that can be used to verify the SignatureValue. In other uses, contains the Certificate ID of the relevant Certificate.
X509SerialNumber	Contains the serialNumber (with its Organisation Certificate Policy meaning) of the relevant Certificate
X509IssuerName	Contains the issuerName (with its Organisation Certificate Policy meaning) of the relevant Certificate
MCFCounter	The current value of the Requesting Party's Migration Common File Counter.
MGFCounter	The current value of the Requesting Party's Migration Group File Counter
MEFCounter	The current value of the Requesting Party's Migration Group Encrypted File Counter
MVFCounter	The current value of the DCC's Migration Common Validation File Counter
SCFCounter	The current value of the S1SP's S1SP Commissioning File Counter
COFCounter	The current value of the Commissioning Party's Commissioning Outcome File Counter
FailedCheck	An element detailing the outcome of a failed check undertaken pursuant to this TMAD
FailedStepNumber	An element detailing which check failed
SupportingData	Additional data associated with a failed check
CHFIdentifier	The DeviceID in the CHFDetail
CertificateID	For the Supporting Data in the Table 5.10
CertificatePair	For the Supporting Data in the Table 5.10
EncryptedS1SPGroupInformation	As required by Table 11.2.1
DecryptedS1SPGroupInformation	As required by Table 11.2.1
DeviceCertificate	As required by Appendix B of this TMAD, the device certificate used to establish TLS communications with the CHF encoded in Base64.
EncryptedMasterKey	Either: • A structure containing one EncryptedKey and a list of one of more DeviceIDs identifying which of the ESME, GPF and CHF the corresponding EncryptedKey is the Master Key (with its DLMS COSEM meaning) for; or • A structure containing one EncryptedKey and the DeviceID of the PPMID where the corresponding EncryptedKey is the Master Key (with its DLMS COSEM meaning) for the PPMID.

<table>
<tr><th>XML Element</th><th>Information</th></tr>
<tr><td>Signature</td><td>As required by Clause 5.5, each of the objects in Table 5.5 shall incorporate a Digital Signature (XMLDSig) generated using the Elliptic Curve Digital Signature Algorithm (ECDSA), and a Private Key for which the associated Public Key is included in an Organisation Certificate with the Remote Party Role Code as in the table in Annex A to Section L.

The parameters and algorithms used shall be
<table>
<tr><th>Parameter/Algorithm</th><th>Value</th></tr>
<tr><td>Reference URI</td><td>“”</td></tr>
<tr><td>Transform Algorithm</td><td>http://www.w3.org/2000/09/xmldsig#enveloped-signature</td></tr>
<tr><td>CanonicalizationMethod Algorithm</td><td>http://www.w3.org/2001/10/xml-exc-c14n#</td></tr>
<tr><td>SignatureMethod Algorithm</td><td>http://www.w3.org/2001/04/xmldsig-more#ecdsa-sha256</td></tr>
<tr><td>DigestMethod Algorithm</td><td>http://www.w3.org/2001/04/xmlenc#sha256</td></tr>
</table>
</td></tr>
<tr><td>KeyInfo</td><td>Shall contain an X509IssuerSerial element (in a single X509Data element) which shall identify the Organisation Certificate that can be used to Check Cryptographic Protection</td></tr>
<tr><td>ToBeCommissionedByDCC</td><td>As required by Clause 5.10</td></tr>
<tr><td>PrepayFlag</td><td>As required by Appendix A of this TMAD.</td></tr>
<tr><td>ESMEVariant</td><td>For the Device to which this element relates, the value required by DUIS in the ESMEVariant</td></tr>
<tr><td>ImportMPAN</td><td>For the Device to which this element relates, the value required by DUIS in the ImportMPxN</td></tr>
<tr><td>MPRN</td><td>For the Device to which this element relates, the value required by DUIS in the ImportMPxN</td></tr>
<tr><td>ReportingPartyID</td><td>The DCC ID of the part of the DCC creating the file, which shall have the same value as Entity Identifier in the Organisation Certificate identified in the X509IssuerSerial element in the file.</td></tr>
<tr><td>IMSI</td><td>The international mobile subscriber identity of the SIM Card used in Comms Hub</td></tr>
<tr><td>IPAddr</td><td>The static IP address associated with the SIM identified by IMSI</td></tr>
<tr><td>DNSServer</td><td>The DNS server IP address configured on the SIM identified by IMSI</td></tr>
<tr><td>PingServer</td><td>The ping server IP address configured on the SIM identified by IMSI</td></tr>
<tr><td>PreviousAPN</td><td>The access point name configured for the SIM identified by IMSI</td></tr>
<tr><td>SerialNumbers</td><td>Each string within SerialNumbers is the serial number of the relevant Device</td></tr>
</table>

Table 10.1

10.2 Each file shall be named according to the following requirements:

FileType_RequesterID_MCFCounter_AdditionalID.xml

where:

- MCFCounter have the values as per the content of the files (so in all cases correspond to the Migration Common File which triggered the processing for the SMETS1 Installation(s) detailed in the file); and

- FileType, RequesterID and AdditionalID have the values required by Table 10.2.

Type of file	FileType value	RequesterID value	AdditionalID value	XML structure within file
Commissioning Outcome File	'COF'	Supplier Signifier value from S1SP Commissioning File filename and ReportingPartyID value concatenated using an "_" (underscore).	COFCounter value from the file	CommissioningOutcomes
Migration Common File	'MCF'	RequestingPartyID value from the file when named by the Requesting Party. When the DCC intends to send to the Registered Supplier over the SMETS1 Migration Interface, RequesterID shall be the Supplier Signifier followed by an "_" (underscore) followed by RequestingPartyID value from the file.	Zero	MigrationCommon
Migration Group File	'MGF'	RequestingPartyID value from the file	MGFCounter value from the file	MigrationGroup
Migration Group Encrypted File	'MEF'	RequestingPartyID value from the file	MEFCounter value from the file	MigrationGroupEncrypted
Migration Common Validation File	'MVF'	ReportingPartyID value from the file	MVFCounter value from the file	MigrationValidation
S1SP Commissioning File	'SCF'	Supplier Signifier and ReportingPartyID value from the file concatenated using an "_" (underscore).	SCFCounter value from the file	S1SPOutcomes

Table 10.2

11 File Content Encryption and Decryption

11.1 A Requesting Party shall only have access to any populated EncryptedS1SPGroupInformation and MasterKeyInformation, where required for the specified GroupID, provided by the relevant SMETS1 SMSO, and shall not have access to either the Plaintext or symmetric keys which were used as input to the population of such elements.

11.2 When a SMETS1 SMSO generates a 128 bit symmetric key for use in relation to this Clause 11, the DCC shall ensure that the SMETS1 SMSO;

(a) generates a new such key for each EncryptedS1SPGroupInformation it creates;

(b) generates each such key using random numbers such as to make it computationally infeasible to regenerate the key even with knowledge of when and by means of what equipment it was generated; and

(c) populates each EncryptedS1SPGroupInformation in line with the requirement of Table 11.2.1 and Table 11.2.2.

Terms in Table 11.2.1 shall have the meanings in NIST Special Publication 800-38D November, 2007 (https://csrc.nist.gov/publications/detail/sp/800-38d/final).

Terms in Table 11.2.2 and Table 11.3 shall have the meanings in IETF RFC 8017 (https://tools.ietf.org/html/rfc8017).

Attribute	**Values**
Plaintext	A string containing fully populated DecryptedS1SPGroupInformation where GroupID = “AA”, “BA”, “CA”, “CB” or “DA”, or DecryptedS1SPDPGroupInformation as required where GroupID = “EA” or “EB”.
Algorithm	AES-GCM-128
Key	The number generated pursuant to Clause 11.2
Initialization Vector	0x000000000000000000000000
Additional Authenticated Data	Empty string
ProtectedData within the EncryptedS1SPGroupInformation	Base64 encoded Ciphertext
AuthenticationTag within the EncryptedS1SPGroupInformation	Base64 encoded 128 bit Authentication Tag

Table 11.2.1

Attribute	**Values**
Algorithm	RSAES-OAEP

Label hash	SHA-256
Mask Generation Function	MGF1 with SHA-1 hash
Recipient's RSA public key	As pursuant to Clause 5.1(a)
Message to be encrypted	The number generated pursuant to Clause 11.2.
Label	Empty string
WrappedTransportKey within the EncryptedS1SPGroupInformation	Base64 encoded Ciphertext

Table 11.2.2

11.3 The DCC shall ensure that each SMETS1 SMSO shall populate EncryptedMasterKey element according to Table 11.3

Attribute	**Values**
Algorithm	RSAES-OAEP
Label hash	SHA-256
Mask Generation Function	MGF1 with SHA-256 hash
Recipient's RSA public key	As pursuant to Clause 5.1(a)
Message to be encrypted	Master Key (with its DLMS COSEM meaning) for the Device(s) identified by DeviceID(s) within EncryptedMasterKey
Label	Empty string
EncryptedKey within the EncryptedMasterKey	Base64 encoded Ciphertext
DeviceID(s) within EncryptedMasterKey	The DeviceID of the Devices for which EncryptedMasterKey contains the Master Key with its DLMS COSEM meaning

Table 11.3

11.3B For GroupID = “DA”, the DCC shall ensure that each SMETS1 SMSO shall populate any required EncryptedSUAKey element according to Table 11.3B

Attribute	**Values**
Algorithm	RSAES-OAEP
Hash	SHA-256
Mask Generation Function	MGF1
Recipient's RSA public key	As pursuant to Clause 5.1(a)
Message to be encrypted	The symmetric key required by the DCO to begin controllinginstructions for the Device
Label	Empty string
EncryptedSUAKey within the SUAKeyDetails	Base64 encoded Ciphertext
DeviceType within SUAKeyDetails	The Device Type of the Device being “ESME” or “GSME”.
PublicKey within SUAKeyDetails	The Base64 encoded uncompressed form of the Elliptic Curve P-256 Public Key, corresponding to the Private Key used for signing ephemeral keys during key establishment with DCO. This is the concatenation 0x04 || X || Y, where len(X)=len(Y)=32 bytes for a 256 bits curve.
SerialNumber within SUAKeyDetails	The Device serial number (according to information held by the relevant SMETS1 SMSO) for the Device.

Table 11.3B

11.4 ensure that each SMETS1 SMSO shall populate any WrappedPrepaymentKey element where it is required for the specified GroupID according to Table 11.4.

Terms in Table 11.4 shall have the meanings in IETF RFC 3394 (https://tools.ietf.org/html/rfc3394).

Attribute	**Values**
Plaintext	The PrepaymentKey within ManagementAssociation for the Device
Algorithm	AES Key Wrap
Key	Master Key (with its DLMS COSEM meaning) for the Device
WrappedPrepaymentKey within the ManagementAssociation	Base64 encoded Ciphertext

Table 11.4

11.5 The DCC shall ensure that each SMETS1 SMSO shall, in populating any required EncryptedS1SPGroupInformation and MasterKeyInformation elements to provide them to the Requesting Party, not decrease the security of the Secret Key Material used as input to the formation of the corresponding Plaintext.

11.6 Where the SMETS1 SMSO and Requesting Party exchange information pursuant to this TMAD, the DCC shall ensure that they shall do so in a way which ensures the information cannot be read by any other entity.

12 Requirements specific to GroupID = "AA"

12.1 This Clause 12 specifies the requirements which are specific to processing in relation to SMETS1Installations where GroupID = "AA".

Pre-enrolment Configuration Requirements

12.2 NOT USED

Migration Group Encrypted File

12.3 A Migration Group Encrypted File is required for this GroupID.

S1SP Required File Set

12.4 The S1SP Required File Set consists of one Migration Common File, one Migration Common Validation File, one Migration Group File and one Migration Group Encrypted File, all with the same Migration Header, and so the same GroupID.

DCO Required File Set

12.5 The DCO Required File Set consists of one Migration Common File, one Migration Common Validation File and one Migration Group Encrypted File, all with the same Migration Header, and so the same GroupID.

S1SP Migration Group File data validation

12.6 The checks at Table 12.6 shall be the 'S1SP Migration Group File data validation' for this GroupID.

Step number	Check and processing
	Should the following check fail, checking in relation to that SMETS1 Installation shall cease
12.6.1	Confirm the following are present and populated validly within the entry with the CHFIdentifier for this SMETS1 Installation: • for the CHFDetails: • IMSI • PreviousAPN • SerialNumbers

Table 12.6

DCO Migration Group Encrypted File data validation

12.7 The checks at Table 12.7 shall be the 'DCO Migration Group Encrypted File data validation' for this GroupID.

Step number	Check and processing
	Should any of the following checks fail, checking in relation to that SMETS1 Installation shall cease
12.7.1	Confirm the following are present and populated validly for the entry with the CHFIdentifier for this SMETS1 Installation: • an EncryptedKeyGPF, and EncryptedKey element within the EncryptedMasterKeyand an EncryptedKey element within the EncryptedMasterKey which contains the DeviceID of the ESME

Table 12.7

S1SP Migration Group Encrypted File data validation

12.8 The checks at Table 12.8 shall be the 'S1SP Migration Group Encrypted File data validation' for this GroupID.

Step number	Check and processing
	Should any of the following checks fail, checking in relation to that SMETS1 Installation shall cease

Step number	Check and processing
12.8.1	Confirm the following are present and populated validly within the DecryptedS1SPGroupInformation for the entry with the CHFIdentifier for this SMETS1 Installation: • for each of the DataCollectionAssociation, ExtendedDataCollectionAssociation, ManagementAssociation and FirmwareAssociation within each of the CHFDetails, GPFDetails and ESMEDetails: • AuthenticationKey • EncryptionKey • for the ESMEDetails: • PrepaymentKey
12.8.2	If there is a GSMEIdentifier for this SMETS1 Installation in the Migration Common File, confirm the following are present and populated validly within the DecryptedS1SPGroupInformation for the GSMEDetails within the entry with the CHFIdentifier for this SMETS1 Installation: • PrepaymentKey

Table 12.8

S1SP / DCO Commissioning of SMETS1 Installation

12.9 The checks at Table 12.9 shall be the 'S1SP / DCO Commissioning of SMETS1 Installation' for this GroupID.

StepNumber	Check and processing	Critical?	SupportingData
	Should any of the following checks which are marked 'Critical' fail, checking in relation to that SMETS1 Installation shall cease		
12.9.1.X	The checks and processing required for 'Installing a SMETS1 Electricity Meter' for this GroupID, as specified in Appendix A of this TMAD, shall be undertaken. For clarity, this includes retrieval of the CHF Whitelist. The information returned shall be that used in subsequent steps.	Yes	The error code for any failure that occurs, as defined in Appendix A of this TMAD.
12.9.2.X	Where a GSMEDetail element is present, the checks and processing required for 'Installing a SMETS1 GSME' for this GroupID, as specified in Appendix A of this TMAD, shall be undertaken.	Yes	The error code for any failure that occurs, as defined in Appendix A of this TMAD.
12.9.1.X	The checks and processing required for 'Securing a SMETS1 ESME' for this GroupID, as specified in Appendix A of this TMAD, shall be undertaken.	Yes	The error code for any failure that occurs, as defined in Appendix A of this TMAD.
12.9.3.X	Where a PPMIDDetail element is present, the checks and processing required for 'Installing a SMETS1 PPMID' for this GroupID, as specified in Appendix A of this TMAD, shall be undertaken.	Yes	The error code for any failure that occurs, as defined in Appendix A of this TMAD.
12.9.4	Where the CHF is of a Device Model which requires the ESME Device Identifier to be in the CHF Whitelist, check that the ESME Device Identifier, included in the Migration Common File for this SMETS1 Installation, is included in the CHF Whitelist retrieved at StepNumber 1.	Yes	
12.9.5	Where a GSME Device Identifier is included in the Migration Common File for this SMETS1 Installation, check that that GSME Device Identifier is included in the CHF Whitelist retrieved at StepNumber 12.9.1.	Yes	
12.9.6	Where a PPMID Device Identifier is included in the Migration Common File for this SMETS1 Installation, check that that PPMID Device Identifier is included in the CHF Whitelist retrieved at StepNumber 12.9.1.	Yes	
12.9.7.X	For the CHF identified in the Migration Common File for this SMETS1 Installation, undertake the processing as specified in Appendix A of this TMAD required 'Commission Device (CHF)' processing for this GroupID and confirm it is successful. For clarity, the DCC shall only return a response indicating success if the CHF Smart Metering Inventory Status is successfully set to 'Commissioned'.	Yes	The error code for any failure that occurs, as defined in Appendix A of this TMAD.

Table 12.9

Installation Rollback

12.10 The processing at Table 12.10 shall be the 'Installation Rollback' for this GroupID**.**

Step number	Check and processing
12.10.1	The DCO shall delete any keys and related information it has stored pursuant to Clause 5.27 in relation to this SMETS1 Installation. The DCO shall either successfully delete all such keys and information or raise an Incident if it cannot.
12.10.2	The S1SP shall delete any keys and information it has stored pursuant to Clause 5.27 in relation to this SMETS1 Installation. The S1SP shall either successfully delete all such keys and information or raise an Incident if it cannot.
12.10.3	The S1SP shall take reasonable steps to restore WAN communication between SMETS1 Installation and the relevant SMETS1 SMSO.

Table 12.10

CHF Whitelist

12.11 The CHF Whitelist shall, for this GroupID, include, for each IEEE address either (1) the UTC date-time at which the CHF last communicated with the identified Device or (2) an indication that the CHF has never communicated with the identified Device.

12.12 The CHF Whitelist shall never include Device IDs for a CHF or a GPF and shall always include the Device ID for an ESME.

Post Migration Configuration

12.13 NOT USED.

Migration Group File

12.14 A Migration Group File is required for this Group ID.

Additional File Structure Validation

12.15 A Migration Group Encrypted File is required for this Group ID, and each such file must include EncryptedS1SPGroupInformation and EncryptedMasterKey, and must not include any SUAKeyDetails.

Migration Common File Device Selection Requirements

12.16 NOT USED.

13 Requirements specific to GroupID = “BA”

13.1 This Clause 13 specifies the requirements which are specific to processing in relation to SMETS1Installations where GroupID =”BA”.

Pre-enrolment Configuration Requirements

13.2 NOT USED.

13.3 The DCC shall ensure that each SMETS1 SMSO shall populate the PrepaymentKey within DecryptedS1SPGroupInformation in Migration Group File with the key used for UTRN generation with;

(a) Where it currently holds such a value, that value; or

(b) Where it does not currently hold such a value, a value it generates. It shall generate such values using random numbers such as to make it computationally infeasible to regenerate the values even with knowledge of when and by means of what equipment they were generated.

13.4 The WrappedPrepaymentKey is required for this GroupID and so shall be populated by the SMETS1 SMSO pursuant to Clause 11.4.

Migration Group Encrypted File

13.5 A Migration Group Encrypted File is required for this GroupID.

S1SP Required File Set

13.6 The S1SP Required File Set consists of one Migration Common File, one Migration Common Validation File, one Migration Group File and one Migration Group Encrypted File, all with the same Migration Header, and so the same GroupID.

DCO Required File Set

13.7 The DCO Required File Set consists of one Migration Common File, one Migration Common Validation File and one Migration Group Encrypted File, all with the same Migration Header, and so the same GroupID.

S1SP Migration Group File data validation

13.8 Clause 12.6 shall apply.

DCO Migration Group Encrypted File data validation

13.9 The checks at Table 13.9 shall be the ‘DCO Migration Group Encrypted File data validation’ for this GroupID.

Step number	Check and processing
	Should any of the following checks fail, checking in relation to that SMETS1 Installation shall cease

Step number	Check and processing
13.9.1	Confirm the following are present and populated validly for the entry with the CHFIdentifier for this SMETS1 Installation: • an EncryptedKey element within the EncryptedMasterKey which contains the DeviceID for each of the CHF, the GPF and the ESME

Table 13.9

S1SP Migration Group Encrypted File data validation

13.10 The checks at Table 13.10 shall be the 'S1SP Migration Group Encrypted File data validation' for this GroupID.

Step number	Check and processing
	Should any of the following checks fail, checking in relation to that SMETS1 Installation shall cease
13.10.1	Confirm the following are present and populated validly within the DecryptedS1SPGroupInformation for the entry with the CHFIdentifier for this SMETS1 Installation: • for each of the DataCollectionAssociation, ExtendedDataCollectionAssociation, ManagementAssociation and FirmwareAssociation within each of the CHFDetails, GPFDetails and ESMEDetails: • AuthenticationKey • EncryptionKey

Table 13.10

S1SP / DCO Commissioning of SMETS1 Installation

13.11 Clause 12.9 shall apply.

Installation Rollback

13.12 Clause 12.10 shall apply.

CHF Whitelist

13.13 The CHF Whitelist shall, for this GroupIDs, include, for each IEEE address, either (1) the UTC date-time at which the CHF last communicated with the identified Device or (2) an indication that the CHF has never communicated with the identified Device.

13.14 The CHF Whitelist shall never include Device IDs for a CHF, a GPF or an ESME and shall only include the Device ID for a GSME where that GSME communicates with the GPF using a ZigBee network.

Post Migration Configuration

13.15 NOT USED

Additional File Structure Validation

13.16 Clause 12.15 shall apply.

Migration Common File Device Selection Requirements

13.17 NOT USED.

14 Requirements specific to GroupID = "CA" or "CB"

14.1 This Section 14 specifies the requirements which are specific to processing in relation to SMETS1Installations where GroupID =”CA” or “CB”.

Pre-enrolment Configuration Requirements

14.2 The DCC shall ensure that each SMETS1 SMSO shall take reasonable steps to configure WAN communication between SMETS1 Installation and the relevant S1SP.

14.3 To enable Clause 14.2 for GroupID = “CB”, the DCC shall ensure that the communication services provider takes all reasonable steps to carry out any precursor steps that are necessary to allow the SMETS1 SMSO to configure the WAN in accordance with Clause 14.2 and provide any relevant information to the SMETS1 SMSO.

Migration Group Encrypted File

14.4 A Migration Group Encrypted File is required for these GroupIDs.

S1SP Required File Set

14.5 The S1SP Required File Set consists of one Migration Common File, one Migration Common Validation File, one Migration Group File and one Migration Group Encrypted File, all with the same Migration Header, and so the same GroupID.

DCO Required File Set

14.6 The DCO Required File Set consists of one Migration Common File, one Migration Common Validation File and one Migration Group Encrypted File, all with the same Migration Header, and so the same GroupID.

S1SP Migration Group File data validation

14.7 The checks at Table 14.7 shall be the ‘S1SP Migration Group File data validation’ for these GroupIDs.

Step number	Check and processing
	Should any of the following checks fail, checking in relation to that SMETS1 Installation shall cease
14.7.1	Confirm the following are present and populated validly within the entry with the CHFIdentifier for this SMETS1 Installation: • for the CHFDetails: • IMSI • IPAddr • PreviousAPN • SerialNumbers

Table 14.7

DCO Migration Group Encrypted File data validation

14.8 The checks at Table 14.8 shall be the 'DCO Migration Group Encrypted File data validation' for these GroupIDs.

Step number	Check and processing
	Should any of the following checks fail, checking in relation to that SMETS1 Installation shall cease
14.8.1	Confirm the following are present and populated validly for the entry with the CHFIdentifier for this SMETS1 Installation: • an EncryptedKey element within the EncryptedMasterKey which contains the DeviceID of the CHF, an EncryptedKey element within the EncryptedMasterKey which contains the DeviceID of the GPF and an EncryptedMasterKey element which contains the DeviceID of the ESME

Table 14.8

S1SP Migration Group Encrypted File data validation

14.9 The checks at Table 14.9 shall be the 'S1SP Migration Group Encrypted File data validation' for this GroupID.

Step number	Check and processing
	Should any of the following checks fail, checking in relation to that SMETS1 Installation shall cease
14.9.1	Confirm the following are present and populated validly within the DecryptedS1SPGroupInformation for the entry with the CHFIdentifier for this SMETS1 Installation: • for each of the DataCollectionAssociation, ExtendedDataCollectionAssociation, ManagementAssociation and FirmwareAssociation within each of the CHFDetails, GPFDetails and ESMEDetails: • AuthenticationKey • EncryptionKey

Table 14.9

S1SP / DCO Commissioning of SMETS1 Installation

14.10 Clause 12.9 shall apply.

Installation Rollback

14.11 Clause 12.10 shall apply.

CHF Whitelist

14.12 The CHF Whitelist shall, for this GroupID, include, for each IEEE address either (1) the UTC date-time at which the CHF last communicated with the identified Device or (2) an indication that the CHF has never communicated with the identified Device.

14.13 The CHF Whitelist shall never include Device IDs for a CHF, a GPF or an ESME and shall only include the Device ID for a GSME where that GSME communicates with the GPF using a ZigBee network.

Post Migration Configuration

14.14 For GroupID = “CB”, the DCC shall ensure that the communications services provider takes all reasonable steps to ensure that the SMETS1 SMSO can no longer communicate with the Commissioned SMETS1 Devices or any associated communications service provider systems.

Migration Group File

14.15 A Migration Group File is required for this Group ID.

Additional File Structure Validation

14.16 Clause 12.15 shall apply.

Migration Common File Device Selection Requirements

14.17 NOT USED.

15 Requirements specific to GroupID = "EA" or "EB"

15.1 This Section 15 specifies the requirements which are specific to processing in relation to SMETS1 Installations where GroupID = "EA" or "EB".

Pre-enrolment Configuration Requirements

15.2 Prior to Migration of a SMETS1 Installation where GroupID = "EA" or "EB" the DCC shall ensure that configuration by each SMETS1 SMSO takes place to enable communication between the SMETS1 Installation and relevant S1SP.

Migration Group Encrypted File

15.3 A Migration Group Encrypted File is required for these GroupIDs. Each file must include EncryptedS1SPGroupInformation and EncryptedMasterKey elements.

S1SP Required File Set

15.4 The S1SP Required File Set consists of one Migration Common File, one Migration Common Validation File, one Migration Group File and one Migration Group Encrypted File, all with the same Migration Header, and so the same GroupID.

DCO Required File Set

15.5 The DCO Required File Set consists of one Migration Common File, one Migration Common Validation File and one Migration Group Encrypted File, all with the same Migration Header, and so the same GroupID.

S1SP Migration Group File data validation

15.6 The checks at Table 15.6 shall be the 'S1SP Migration Group File data validation' for these GroupIDs.

Step number	Check and processing
	Should any of the following checks fail, checking in relation to that SMETS1 Installation shall cease
15.6.1	Confirm the following are present and populated validly within the entry with the CHFIdentifier for this SMETS1 Installation: • for the CHFDetails: • IMSI • PreviousAPN

Table 15.6

DCO Migration Group Encrypted File data validation

15.7 The checks at Table 15.7 shall be the 'DCO Migration Group Encrypted File data validation' for these GroupIDs.

Step	Check and processing
	Should any of the following checks fail, checking in relation to that SMETS1Installation shall cease
15.7.1	Confirm the following are present and populated validly for the entry with the CHFIdentifier for this SMETS1 Installation: • an EncryptedKey element within the EncryptedMasterKey which contains the DeviceID of the ESME

Table 15.7

S1SP Migration Group Encrypted File data validation

15.8 The checks at Table 15.8 shall be the 'S1SP Migration Group Encrypted File data validation for these GroupIDs.

Step number	Check and processing
	Should any of the following checks fail, checking in relation to that SMETS1 Installation shall cease
15.8.1	Confirm the following are present and populated validly within the DecryptedS1SPDPGroupInformation for the entry with the CHFIdentifier for this SMETS1 Installation: • for HighLevelAssociation within the ESMEDetail • AuthenticationKey • EncryptionKey • PrepaymentKey
15.8.2	For each GSME identified in the GSMEIdentifier for this SMETS1 Installation in the Migration Common File, confirm the following are present and populated validly within the DecryptedS1SPDPGroupInformation for the GSMEDetail/PrePayDetails within the entry with the CHFIdentifier for this SMETS1 Installation: a. PrepaymentKey

Table 15.8

S1SP / DCO Commissioning of SMETS1 Installation

15.9 The checks at Table 15.9 shall be the 'S1SP / DCO Commissioning of SMETS1 Installation' for these GroupIDs.

StepNumber	Check and processing	Critical?	SupportingData
	Should any of the following checks which are marked 'Critical' fail, checking in relation to that SMETS1 Installation shall cease		
15.9.1.X	The checks and processing required for 'Installing a SMETS1 Electricity Meter' for this Group ID, as specified Appendix B of this TMAD, shall be undertaken. For clarity, this includes retrieval of the CHF Whitelist. The information returned shall be that used in subsequent steps.	Yes	The error code for any failure that occurs, as defined in Appendix B of this TMAD.
15.9.2.X	Where a GSMEDetail element is present, the checks and processing required for 'Installing a SMETS1 GSME' for this Group ID, as specified in Appendix B of this TMAD, shall be undertaken.	Yes	The error code for any failure that occurs, as defined in Appendix B of this TMAD.
15.9.3.X	Where a PPMIDDetail element is present, the checks and processing required for 'Installing a SMETS1 PPMID' for this Group ID, as specified in Appendix B of this TMAD, shall be undertaken.	Yes	The error code for any failure that occurs, as defined in Appendix B of this TMAD.
15.9.4	Where a PPMID Device Identifier is included in the Migration Common File for this SMETS1 Installation, check that that PPMID Device Identifier is included in the CHF Whitelist retrieved at StepNumber 15.9.1.	Yes	
15.9.4a.X	The checks and processing shall be undertaken for 'Configure Pushing of Profile Data' for this Group ID, as specified in Appendix B of this TMAD.	Yes	The error code for any failure that occurs, as defined in Appendix B of this TMAD.
15.9.5.X	The checks and processing required for 'Securing a SMETS1 ESME' for this Group ID, as specified in Appendix B of this TMAD, shall be undertaken.	Yes	The error code for any failure that occurs, as defined in Appendix B of this TMAD.

StepNumber	Check and processing	Critical?	SupportingData
15.9.6.X	For the CHF identified in the Migration Common File for this SMETS1 Installation, undertake the steps set out in Appendix B of this TMAD required 'Commission Device (CHF)' processing for this GroupID and confirm it is successful. For clarity, the DCC shall only return a response indicating success if the CHF Smart Metering Inventory Status is successfully set to 'Commissioned'.	Yes	The error code for any failure that occurs, as defined in Appendix B of this TMAD.

Table 15.9

Installation Rollback

15.10 The processing at Table 15.10 shall be the 'Installation Rollback' for these GroupIDs**.**

Step number	Check and processing
15.10.1	The DCO shall delete any keys and related information it has stored pursuant to Clause 5.27 in relation to this SMETS1 Installation. The DCO shall either successfully delete all such keys and information or raise an Incident if it cannot.
15.10.2	The S1SP shall delete any keys and information it has stored pursuant to Clause 5.27 in relation to this SMETS1 Installation. The S1SP shall either successfully delete all such keys and information or raise an Incident if it cannot.
15.10.3	The S1SP shall take all reasonable steps to re-instate SMSO certificates on Devices.
15.10.4	The S1SP shall take reasonable steps to restore prior WAN communication settings between the SMETS1 Installation and the relevant SMETS1 SMSO.

Table 15.10

16 Requirements specific to GroupID = “DA”

16.1 This Clause 16 specifies the requirements which are specific to processing in relation to SMETS1 Installations where GroupID = “DA”.

Pre-enrolment Configuration Requirements

16.2 NOT USED

Migration Group Encrypted File

16.3 A Migration Group Encrypted File is required for this GroupID.

S1SP Required File Set

16.4 The S1SP Required File Set consists of one Migration Common File, one Migration Common Validation File, and one Migration Group Encrypted File, all with the same Migration Header, and so the same GroupID.

DCO Required File Set

16.5 The DCO Required File Set consists of one Migration Common File, one Migration Common Validation File and one Migration Group Encrypted File, all with the same Migration Header, and so the same GroupID.

S1SP Migration Group File data validation

16.6 NONE REQUIRED.

DCO Migration Group Encrypted File data validation

16.7 The checks at Table 16.7 shall be the ‘DCO Migration Group Encrypted File data validation’ for this GroupID.

Step	Check and processing
	Should any of the following checks fail, checking in relation to that SMETS1 Installation shall cease
16.7.1	For each SMETS1Installation, confirm there are no EncryptedMasterKey elements.
16.7.2	For each SMETS1Installation, confirm there is one and only one EncryptedSUAKey (referring to a SUA Symmetric Key) element with DeviceType of “ESME”.

Step	Check and processing
16.7.3	If according to the "Migration Common File" there is a "GSME" in this SMETS1Installation, confirm there is one and only one other EncryptedSUAKey (referring to a SUA Symmetric Key) element which has a DeviceType of "GSME".
16.7.4	If according to the "Migration Common File" there is no "GSME" in this SMETS1Installation, confirm there is no other EncryptedSUAKey (SUA Symmetric Keys) element.
16.7.5	For each SMETS1Installation, confirm that there is no empty child element within any SUAKeyDetails element.

Table 16.7

S1SP Migration Group Encrypted File data validation

16.8 NONE REQUIRED.

S1SP / DCO Commissioning of SMETS1 Installation

16.9 The steps at Table 16.9 may be carried out by the DCC up to 7 days in advance of the other steps in Clause 5.27 for the SMETS1 Installation in question.

StepNumber	Check and processing	Critical?	SupportingData
	Should any of the following checks which are marked 'Critical' fail, checking in relation to that SMETS1 Installation shall cease		
16.9.1.x	The checks and processing required for 'Installing a SMETS1 Electricity Meter' for this GroupID, as specified in Appendix C of this TMAD, shall be undertaken. For clarity, this includes retrieval of the CHF Whitelist. The information returned shall be that used in subsequent steps.	Yes	The error code for any failure that occurs, as defined in Appendix C of this TMAD.
16.9.2.x	Where a GSMEDetail element is present, the checks and processing required for 'Installing a SMETS1 GSME' for this GroupID, as specified in Appendix C of this TMAD, shall be undertaken.	Yes	The error code for any failure that occurs, as defined in Appendix C of this TMAD.
16.9.3	Where a PPMIDDetail element is present, the checks and processing required for 'Installing a SMETS1 PPMID' for this GroupID, as specified in Appendix C of this TMAD, shall be undertaken.	Yes	The error code for any failure that occurs, as defined in Appendix C of this TMAD.
16.9.4	Where a PPMID Device Identifier is included in the Migration Common File for this SMETS1 Installation, check that that PPMID Device Identifier is included in the CHF Whitelist retrieved at StepNumber 16.9.1.	Yes	

Table 16.9

16.10 The steps at Table 16.10 shall not be carried out in advance of the other steps in Clause 5.27 for the SMETS1 Installation in question.

StepNumber	Check and processing	Critical?	SupportingData
	Should any of the following checks which are marked 'Critical' fail, checking in relation to that SMETS1 Installation shall cease		
16.10.1.X	Where a GSMEDetail element is present, the checks and processing required for 'Securing a SMETS1 GSME' for this GroupID, as specified in Appendix C of this TMAD, shall be undertaken.	Yes	The error code for any failure that occurs, as defined in Appendix C of this TMAD.
16.10.2.X	The checks and processing required for 'Securing a SMETS1 ESME' for this GroupID, as specified in Appendix C of this TMAD, shall be undertaken.	Yes	The error code for any failure that occurs, as defined in Appendix C of this TMAD.

StepNumber	Check and processing	Critical?	SupportingData
16.10.3.X	For the CHF identified in the Migration Common File for this SMETS1 Installation, undertake the checks and processing required for 'Commission Device (CHF)' for this GroupID, as specified in Appendix C of this TMAD, and confirm it is successful. For clarity, the DCC shall only return a response indicating success if the CHF Smart Metering Inventory Status is successfully set to 'Commissioned'.	Yes	The error code for any failure that occurs, as defined in Appendix C of this TMAD.

Table 16.10

Installation Rollback

16.11 The processing at Table 16.11 shall be the 'Installation Rollback' for this GroupID.

Step number	Check and processing
16.11.1	If GSMEDetail is present, the S1SP shall revert control of the SMETS1 Installation to the relevant SMETS1 SMSO where any of the steps in "Securing a SMETS1 GSME" fails for this GroupID . The S1SP shall not revert control of the SMETS1 Installation to the relevant SMETS1 SMSO if any of the steps in "Securing a SMETS1 ESME" fails for this GroupID.

Table 16.11

CHF Whitelist

16.12 The CHF Whitelist shall, for this GroupID, include, for each IEEE address either (1) the UTC date-time at which the CHF last communicated with the identified Device or (2) an indication that the CHF has never communicated with the identified Device.

16.13 The CHF Whitelist shall never include Device IDs for a CHF, a GPF or an ESME and shall only include the Device ID for a GSME where that GSME communicates with the GPF.

Post Migration Configuration

16.14 NOT USED.

Migration Group File

16.15 A Migration Group File is not required for this GroupID.

Additional File Structure Validation

16.16 A Migration Group Encrypted File is required for this GroupID, and each such file must not include any EncryptedS1SPGroupInformation or any EncryptedMasterKey, and must include SUAKeyDetails.

Migration Common File Device Selection Requirements

16.17 Where there is more than one SMETS1 PPMID, SMETS1 IHD or SMETS1 CAD in a SMETS1

Installation that solely comprises Dormant meters, the DCC shall include only one of each Device Type in the Migration Common File, being the one that most recently joined the HAN.

17 SMETS1 Device Security Testing

17.1 The DCC shall carry out SMETS1 Device Security Testing in accordance with the requirements of this Clause 17 for the purpose of identifying security risks to the DCC Total System.

17.2 Each Supplier Party hereby acknowledges that in preparing and conducting SMETS1 Device Security Testing under this Clause 17, the DCC does not warrant or represent that SMETS1 Device Models or combinations of SMETS1 Device Models operate or do not operate in a particular way when comprising part of an Enrolled SMETS1 Smart Metering System.

17.3 No later than 5 Working Days following this Clause 17.3 coming into effect, the DCC shall submit the SMETS1 Device Security Testing Scope and Timetable Document to the Security Sub-Committee (and such submission may take place prior to this this Clause 17.3 coming into effect). The SMETS1 Device Security Testing Scope and Timetable Document shall set out:

(a) the SMETS1 Device Models (and, where relevant, the combinations of SMETS1 Device Models) that are to be the subject of SMETS1 Device Security Testing which shall be those SMETS1 Device Models proposed to the Security Sub-Committee for the purposes of SMETS1 Device Security Testing by the DCC on 14 May 2020;

(b) the nature of the tests (including negative tests) that are to be carried out as part of SMETS1 Device Security Testing, which shall be those tests that were agreed by the Security Sub-Committee for the purposes of SMETS1 Device Security Testing on 8 January 2020; and

(c) the associated reasonable timetable in accordance with which the tests are to be carried out.

17.4 The DCC may seek variations to the SMETS1 Device Security Testing Scope and Timetable Document by submitting a revised draft SMETS1 Device Security Testing Scope and Timetable Document to the Security Sub-Committee for review, provided that the nature of the tests may not be modified so as to result in a material deviation from the implicit purposes of the tests referred to in Clause 17.3(b):

(a) where the Security Sub-Committee and the DCC can reach an agreement, the relevant revised draft SMETS1 Device Security Testing Scope and Timetable Document shall be updated by the DCC as necessary and deemed to be final; or

(b) where the Security Sub-Committee and the DCC cannot reach an agreement, the relevant revised draft SMETS1 Device Security Testing Scope and Timetable Document shall be referred by the DCC to the Secretary of State for determination (whose decision shall be final and binding for the purposes of this Code) and the relevant revised draft SMETS1 Device Security Testing Scope and Timetable Document shall be updated by the DCC as necessary and deemed to be final.

17.5 The DCC shall take reasonable steps to complete the tests set out in the SMETS1 Device Security Testing Scope and Timetable Document in accordance with the timetable set out therein.

17.6 Revisions to the SMETS1 Device Security Testing Scope and Timetable Document finalised pursuant to Clause 17.4 may, from time to time be submitted by the DCC to the Security Sub-Committee in accordance with the provisions of Clause 17.4, and the provisions of Clauses 17.4 and 17.5 shall apply (again) to the revised version of the document.

17.7 The DCC shall take all reasonable steps to obtain a reasonable number of SMETS1 Devices for use in SMETS1 Device Security Testing and necessary consents.

17.8 In order that the DCC may perform SMETS1 Device Security Testing, any Supplier Party that is an Installing Supplier for any of the SMETS1 Device Models identified in the SMETS1 Device Security Testing Scope and Timetable Document shall take all reasonable steps to provide such support and assistance as the DCC may reasonably request including the provision of:

(a) such SMETS1 Devices; and

(b) firmware and firmware upgrades applicable to such SMETS1 Devices in an appropriate format to enable security testing consistent with the SMETS1 Device Security Testing Scope and Timetable Document.

17.9 Each Supplier Party providing SMETS1 Devices pursuant to Clause 17.8 is deemed to have provided consent, or procured consent, for the security testing of such SMETS1 Devices consistent with the SMETS1 Device Security Testing Scope and Timetable Document.

17.10 SMETS1 Device Security Testing shall only be performed by the DCC using SMETS1 Devices which are installed in appropriate DCC appointed test laboratories.

17.11 Where the DCC reasonably considers that any SMETS1 Device Security Testing in relation to a relevant SMETS1 Device Model (or, where relevant, combinations of SMETS1 Device Models) is complete, the DCC shall, as soon as reasonably practicable, provide a report (being a SMETS1 Device Security Testing Completion Report) to the Security Sub-Committee setting out the results of such tests for review by the Security Sub-Committee. Following such review, the DCC shall update each SMETS1 Device Security Testing Completion Report to include any observations provided by the Security Sub-Committee and the DCC’s responses to those observations and that SMETS1 Device Security Testing Completion Report shall be deemed to be final.

17.12 The DCC shall promptly provide each final SMETS1 Device Security Testing Completion Report to the Security Sub-Committee (and copied to the Secretary of State).

18 Excluded Categories

18.1 Where there is any conflict between the other Clauses of this TMAD and this Clause 18, this Clause 18 shall take precedence.

18.2This Clause 18 describes each category of SMETS1 SMS or SMETS1 Installation:

(a) that are not, or will no longer be, eligible for Enrolment and accordingly, will not be Enrolled;

(b) that shall no longer be eligible for Migration notwithstanding that there may be an entry on the EPCL corresponding to such SMETS1 Installation; and/or

(c) for which DCC shall no longer be required to take steps which would enable it to propose an entry to the EPCL which corresponds to such SMETS1 Installation.

Each such category shall be an Excluded Category and any SMETS1 Installation or SMETS1 SMS falling within an Excluded Category shall no longer be treated by the DCC as comprising SMETS1 Meters for which the Secretary of State has concluded that the DCC is required to provide SMETS1 Services and shall no longer be In-Scope for Enrolment.

18.2A Where:

(a) a SMETS1 Installation comprises solely Dormant Meters;

(b) the Responsible Supplier for the SMSs within that SMETS1 Installation (where there is more than one) is the same; and

(c) the Dormant Meters have such a status because the DCC reasonably believes that the Responsible Supplier has terminated its arrangements with the relevant SMETS1 SMSO,

following a request from the DCC, the Responsible Supplier shall promptly provide the DCC with a statement (and provision of such statement may take place prior to this Clause 18.2A and Clause 18.14 coming into effect) that either:

(d) confirms that in its reasonable opinion such SMETS1 Installation is not capable of successfully being Migrated; or

(e) confirms that in its reasonable opinion such SMETS1 Installation may be capable of successfully being Migrated.

18.3 By the last Working Day of each month, the DCC shall provide each Responsible Supplier with information relating to their SMETS1 SMS(s) which comprise all or part of an Excluded Category. Such information shall be provided via the file exchange arrangements set out in Clause 9 and shall include:

(a) the Excluded Category;

(b) for each excluded GSME, the MPRN for the relevant SMETS1 Installation; and

(c) for each excluded ESME, the MPAN for the relevant SMETS1 Installation.

<u>Excluded Category - Master Key Errors</u>

18.4 Clause 18.2 (b) applies for each SMETS1 Installation where:

(a) GroupID = “AA”, “BA”, “CA”, or “CB”;

(b) it comprises solely Dormant Meters; and

the DCC has taken all reasonable steps to obtain the correct Master Key (with its DLMS COSEM meaning) for the SMETS1 CHF within the SMETS1 Installation required to enable the corresponding SMETS1 Installation to be successfully migrated but the DCC has been unable to obtain such correct Master Key (and steps to obtain such correct Master Key may take place prior to this this Clause 18 coming into effect).

<u>Excluded Category - Partial Migration</u>

18.5 Clause 18.2 (a) applies to the SMETS1 GSMS where:

(a) a new Migration Common File (that excludes the SMETS1 GSME) is generated pursuant to Clause 5.8C and 5.8D; or

(b) a Gas Meter is deregistered pursuant to either Clause 4.26A or 4.26B.

<u>Excluded Category – No WAN Before Migration Attempted</u>

18.6 Clause 18.2 (b) applies where:

(a) GroupID = “AA”, “BA”, or “CA”;

(b) a SMETS1 Installation contains solely Dormant Meters;

(c) the DCC has instructed the relevant SMETS1 SMSO to take the steps described in Clause 4.26 at least three times (and each such instruction may take place prior to this this Clause 18 coming into effect); and

(d) each time the steps described in Clause 4.26 have been unsuccessful as the SMETS1 SMSO has been unable to successfully complete the requested firmware upgrade and/or configuration where the failure is attributed by the SMETS1 SMSO as an inability to maintain the wide area network communication with the Communications Hub.

Notwithstanding that Clause 18.2 (b) applies, prior to decommissioning of the Requesting Party for the GroupID (pursuant to Clause 7), the DCC shall instruct the SMETS1 SMSO to re-

attempt the steps described in Clause 4.26 for a SMETS1 Installation for which Clause 18.6 (a) to (d) applies, following the receipt of a request from the Responsible Supplier to do so. In the case of SMETS1 Installations comprising both a GSMS and an ESMS the instruction shall only be actioned by the DCC where the Responsible Supplier for both Smart Metering Systems is the same. The DCC shall commence the Migration of the SMETS1 Installation should the steps required under Clause 4.26 be successfully executed.

<u>Excluded Category – No WAN Attempting Migration</u>

18.7 Clause 18.2 (b) applies where:

(a) GroupID = “AA”, “BA”, “CA”, or “CB”;

(b) the SMETS1 Installation contains solely Dormant Meters;

(c) the DCC has commenced Migration for the SMETS1 Installation at least three times each in separate and non-contiguous Migration Weeks (and each such commencement of Migration may take place prior to this this Clause 18 coming into effect); and

(d) each time the Requesting Party has been unable confirm that there has been one or more wide area network communications with the Communications Hub in the SMETS1 Installation within the last 7 days pursuant to Clause 5.12 (c).

Notwithstanding that Clause 18.2 (b) applies, prior to decommissioning of the Requesting Party (pursuant to Clause 7) the DCC shall re-attempt the Migration of the SMETS1 Installation to which Clause 18.7 (a) to (d) applies, following the receipt of a request from the Responsible Supplier to do so. In the case of SMETS1 Installations comprising both a GSMS and an ESMS the Migration shall only be reattempted by the DCC where the Responsible Supplier for both Smart Metering Systems is the same.

Excluded Category – Five Retries Attempting Migration

18.8 Clause 18.2 (b) applies where:

(a) [NOT USED];

(b) the SMETS1 Installation contains solely Dormant Meter(s);

(c) the DCC has commenced Migration for the corresponding SMETS1 Installation at least five times each in separate Migration Weeks (and each such commencement of Migration may take place prior to this Clause 18 coming into effect);

(d) each time the Migration has failed to complete successfully; and

(e) none of the failures relate to:

(i) a check set out in Table 5.9 or in Table 5.10;

(ii) expiry of a Migration Authorisation;

(iii) the ET02.4.4 check; or

(iv) where GroupID = "EA" and the SMETS1 Installation does not contain a GSME, the GT02.3 or GT01.4 check for a Migration attempt prior to 2 November 2022.

Notwithstanding that Clause 18.2 (b) applies, prior to decommissioning of the Requesting Party (pursuant to Clause 7) the DCC shall re-attempt the Migration of the SMETS1 Installation to which Clause 18.8 (a) to (e) applies, following the receipt of a request from a Responsible Supplier to do so. In the case of SMETS1 Installations comprising both a GSMS and an ESMS the Migration shall only be reattempted by the DCC where the Responsible Supplier for both Smart Metering Systems is the same.

Excluded Category – Unable to Attempt Firmware Upgrade where GroupID = "AA", "BA", or "CA"

18.9 Clause 18.2 (a) applies where:

(a) GroupID = "AA", "BA", or "CA";

(b) the SMETS1 SMS is a Dormant Meter; and

(c) the DCC has taken all reasonable steps to obtain the correct information to allow an upgrade of the firmware for the SMETS1 SMS to be attempted but the DCC has been unable to obtain such correct information (and steps to obtain such correct information may take place prior to this Clause 18 coming into effect).

Excluded Category – Firmware Upgrade / Configuration Failure where GroupID = "CB"

18.10 Clause 18.2 (b) applies where:

(a) GroupID = "CB";

(b) a SMETS1 Installation contains solely Dormant Meters; and

(c) either:

(i) the DCC has instructed the relevant SMETS1 SMSO to take the steps described in Clause
4.26 to configure the devices at least once where GroupID = "CB" (and each such instruction may take place prior to this this Clause 18 coming into effect) and each time the steps described in Clause 4.26 have been unsuccessful as the SMETS1 SMSO has been unable to successfully complete the requested configuration; or

(ii) the Meter Operator has confirmed in writing to the DCC that the firmware has failed to upgrade successfully.

Notwithstanding that Clause 18.2 (b) applies, prior to decommissioning of the Requesting Party for the GroupID (pursuant to Clause 7), the DCC shall instruct the SMETS1 SMSO to re- attempt the steps described in Clause 4.26 for a SMETS1 Installation for which Clause 18.10
(a) to (c) applies, following the receipt of a request from the Responsible Supplier to do so. In the case of SMETS1 Installations comprising both a GSMS and an ESMS the instruction shall only be actioned by the DCC where the Responsible Supplier for both Smart Metering Systems is the same. The DCC shall commence the Migration of the SMETS1 Installation should the steps required under Clause 4.26 be successfully executed.

Excluded Category – Firmware Upgrade / Configuration Failure where GroupID = "AA", "BA", or "CA"

18.11 Clause 18.2 (b) applies where:

(a) GroupID = "AA", "BA", or "CA";

(b) a SMETS1 Installation contains solely Dormant Meters;

(c) the DCC has instructed the relevant SMETS1 SMSO to take the steps described in Clause 4.26 at least three times (and each such instruction may take place prior to this this Clause 18 coming into effect); and

(d) each time the steps described in Clause 4.26 have been unsuccessful as the SMETS1 SMSO has been unable to successfully complete the requested firmware upgrade and/or configuration.

Notwithstanding that Clause 18.2 (b) applies, prior to decommissioning of the Requesting Party for the GroupID (pursuant to Clause 7), the DCC shall instruct the SMETS1 SMSO to re- attempt the steps described in Clause 4.26 for a SMETS1 Installation for which Clause 18.11
(a) to (d) applies, following the receipt of a request from the Responsible Supplier to do so. In the case of SMETS1 Installations comprising both a GSMS and an ESMS the instruction shall only be actioned by the DCC where the Responsible Supplier for both Smart Metering Systems is the same. The DCC shall commence the Migration of the SMETS1 Installation should the steps required under Clause 4.26 be successfully executed.

Excluded Category – Data Issues

18.12 Clause 18.2 (b) applies where:

(a) the SMETS1 Installation contains solely Dormant Meter(s);

(b) the DCC has taken all reasonable steps to obtain the correct information to allow Migration of the SMETS1 Installation but the DCC has been unable to obtain such correct information (and steps to obtain such correct information may take place prior to this Clause 18 coming into effect); and

(c) the DCC reasonably believes:

(i) there are no other amendments to the Code (pursuant to Clause 1.4) that would enable the Migration of that SMETS1 Installation to be attempted; and

(ii) there is not another entry to the list of SMETS1 Eligible Product Combinations that the DCC could propose which, were it to be designated or approved by the Secretary of State, would enable the Migration of that SMETS1 Installation to be attempted.

Excluded Category – Duplicate MPANs and MPRNs

18.13 Clause 18.2 (b) applies where:

(a) the SMETS1 Installation contains solely Dormant Meter(s);

(b) either the MPAN, MPRN, or both in respect of the commissioned SMETS1 Installation or the enrolled Smart Metering System (as the case may be) are recorded:

(i) in multiple SMETS1 SMSOs; or

(ii) in at least one SMETS1 SMSO and the Smart Metering Inventory;

(c) the DCC is able to verify that:

(i) in the case of a SMETS1 Installation where neither of the Smart Metering Systems of which it is comprised is an Enrolled Smart Metering System, there is another SMETS1 Installation assigned the same MPAN and/or MPRN that has communicated with another SMETS1 SMSO in the previous 35 days;

(ii) in the case of a SMETS1 Installation where there is an Enrolled Smart Metering System assigned the same MPAN as a Smart Metering System that forms part of the SMETS1 Installation, the Enrolled Smart Metering System has communicated with DCC Systems in the previous 35 days;

(iii) in the case of a SMETS1 Installation where there is an Enrolled Smart Metering System assigned the same MPRN as a Smart Metering System that forms part of the SMETS1 Installation, the Enrolled Smart Metering System has communicated with DCC Systems in the previous 35 days; or

(iv) in the case of a SMETS1 Installation where neither of the Smart Metering Systems of which it is comprised is an Enrolled Smart Metering System, the SMETS1 Installation has not communicated with the SMETS1 SMSO in the previous 35 days; and

(d) the DCC has taken all reasonable steps to obtain the correct information to allow Migration of the SMETS1 Installation to commence but the DCC has been unable to obtain such correct information (and steps to obtain such correct information may take place prior to this Clause 18 coming into effect).

Excluded Category – Dormant not due to Change of Supplier

18.14 Clause 18.2 (a) applies where, pursuant to Clause 18.2A, the Responsible Supplier for that SMETS1 Installation has provided the confirmation set out in 18.2A (d).

Excluded Category – Uneconomic to Test

18.15 Subject to Clause 18.16, Clause 18.2 (c) applies where the Secretary of State has agreed with the DCC's proposal that it is not economic to test the relevant DMC pursuant to Clause 20.7 of Appendix AK.

18.16 The Secretary of State may issue directions to the DCC to develop further proposals for amendments to the Code that would enable SMETS1 Installations excluded by Clause 18.15 to become eligible for Migration. Where such a direction is issued the proposals shall be developed in accordance with the process described in Clause 1.4.

Excluded Category – Firmware Upgrade / Configuration Failure where GroupID = "DA", "EA", or "EB"

18.17 Clause 18.2 (b) applies where:

(a) GroupID = "DA", "EA", or "EB";

(b) a SMETS1 Installation contains solely Dormant Meters;

(c) the DCC has instructed the relevant SMETS1 SMSO to take the steps described in Clause 4.26 (and such instruction may take place prior to this this Clause 18.17 coming into effect);

(d) the steps described in Clause 4.26 have been unsuccessful as the SMETS1 SMSO has been unable to successfully complete the requested firmware upgrade and/or configuration; and

(e) the DCC reasonably believe that:

(i) there is not another entry to the list of SMETS1 Eligible Product Combinations that it could propose which, were it to be approved by the Secretary of State, would enable the Migration of that SMETS1 Installation to be attempted; and

(ii) such SMETS1 Installation would be capable of successful Migration were an appropriate entry added to the list of SMETS1 Eligible Product Combinations.

Notwithstanding that Clause 18.2 (b) applies, prior to decommissioning of the Requesting Party for the GroupID (pursuant to Clause 7), the DCC shall instruct the SMETS1 SMSO to re-attempt the steps described in Clause 4.26 for a SMETS1 Installation for which Clause 18.15 (a) to (d) applies, following the receipt of a request from the Responsible Supplier to do so. In the case of SMETS1 Installations comprising both a GSMS and an ESMS the instruction shall only be actioned by the DCC where the Responsible Supplier for both Smart Metering Systems is the same. The DCC shall commence the Migration of the SMETS1 Installation should the steps required under Clause 4.26 be successfully executed.

Appendix A **Device installation – For GroupIDs "AA", "BA", "CA" and "CB"**

A1 The Application Association labels:

(a) Public

(b) Data Collection

(c) Extended Data Collection

(d) Management

(e) Firmware

shall be the names allocated by the manufacturers of Devices in this group to the Application Associations accessible to the DCC.

Installing a SMETS1 Electricity Meter

A2 The checks and processing at Table A2 shall be that required of the S1SP and DCO for 'Installing a SMETS1 Electricity Meter' for relevant GroupID and shall take place in the order specified in that Table.

Error code on failure	**S1SP checks and processing**	**DCO checks and processing**	**SupportingData**
	Should any of the following checks fail, checking and processing in relation to that SMETS1 Installation shall not proceed to a subsequent step.		
ET01	For each of the CHF, GPF (for GroupID = "AA", only where a GSMEDetail element is also present) and ESME, confirm that reading of the Public Application Association returns valid data, including all the device counters required by the subsequent steps in this table.		DeviceID
ET02	For each EncryptedMasterKey for this SMETS1 Installation, request that the DCO process the EncryptedMasterKey, and where that is successful, store the digitally signed package provided in response.	Confirm that the details provided are semantically identical to the corresponding EncryptedMasterKey in the corresponding Migration Group Encrypted File. Decrypt the EncryptedKey, re-encrypt that key with a secret key known only to the DCO, package that re-encrypted key with relevant Device IDs from the Migration Common File, then digitally sign and pass back the signed package to the S1SP .	EncryptedMasterKey
ET03	NOT USED		

Error code on failure	S1SP checks and processing	DCO checks and processing	SupportingData
ET04	Using the AuthenticationKey and EncryptionKey in each of the DataCollectionAssociation, ManagementAssociation and FirmwareAssociation within each of the CHFDetails, GPFDetails (for GroupID = "AA", only where a GSMEDetail element is also present) and ESMEDetails: 1. confirm the successful creation of an Application Association with the Device in question, 2. close each such Application Association 3. securely store each key and its association with: ○ Its 'key type' ○ the 'name of Application Association' ○ the Device ID For clarity, this is to confirm that all keys operate before any are changed.		DeviceID || 'name of Application Association' Where 'name of Application Association' is one of DataCollectionAssociation, ExtendedDataCollectionAssociation, ManagementAssociation or FirmwareAssociation
ET05	Using the AuthenticationKey and EncryptionKey in the ExtendedDataCollectionAssociation in the CHFDetails: 1. confirm the successful creation of an Application Association with the Device, 2. read the CHF Whitelist, 3. confirm the Device ID for ESME is included in CHF Whitelist where the GroupID = "AA", 4. read the serial number of the Device, 5. confirm the serial number of the Device is same as in SerialNumbers\CHF element for the SMETS1 Installation in Migration Group File 6. close the Application Association 7. securely store each key and its association with: ○ its 'key type' ○ the 'name of Application Association' ○ the Device ID ○ the serial number of the Device		1, 2, 3, 4, 5, 6 or 7 reflecting the sub step which failed
ET06	Using the AuthenticationKey and EncryptionKey in the ExtendedDataCollectionAssociation in the GPFDetails (for GroupID = "AA", only where a GSMEDetail element is also present): 1. confirm the successful creation of an Application Association with the Device, 2. NOT USED 3. close the Application Association 4. securely store each key and its association with: a. its 'key type' b. the 'name of Application Association' c. the Device ID		1, 2, 3 or 4 reflecting the sub step which failed

ET07	Using the AuthenticationKey and EncryptionKey in the ExtendedDataCollectionAssociation in the ESMEDetails: 1. confirm the successful creation of an Application Association with the Device, 2. read the serial number of the Device, 3. confirm the serial number of the Device is same as in SerialNumbers\ESME element for the SMETS1 Installation in Migration Group File 4. read the Payment Mode (with its SMETS1 meaning) 5. if the Payment Mode is prepayment (with its SMETS1 meaning), read the UTRN Meter ID form the Device. 6. then close the Application Association 7. securely store each key and its association with: a. its ‘key type’ b. the ‘name of Application Association’ c. the Device ID d. the serial number of the Device 8. If the Payment Mode is prepayment (with its SMETS1 meaning): a. for SMETS1 Installations where the GroupID = “BA”, confirm the following are present and populated validly within the ESMEDetail of the DecryptedS1SPGroupInformation for the entry with the CHFIdentifier for this SMETS1 Installation: • PrepaymentKey • WrappedPrepaymentKey b. for SMETS1 Installations where the GroupID = “CA”, confirm the following are present and populated validly within the ESMEDetail of the DecryptedS1SPGroupInformation for the entry with the CHFIdentifier for this SMETS1 Installation: • PrepaymentKey • PrepaymentWrapperKey else if the Payment Mode is Credit (with its SMETS1 meaning): a. for SMETS1 Installations where the GroupID = “CA” or “CB”, if PrepaymentWrapperKey is present and populated validly within the ESMEDetail of the DecryptedS1SPGroupInformation for the entry with the CHFIdentifier for this SMETS1 Installation, securely store the PrepaymentWrapperKey and its association to the ESME Device ID. If the Payment Mode is prepayment (with its SMETS1 meaning), using the AuthenticationKey and EncryptionKey in the ManagementAssociation in the ESMEDetails: 9. confirm the successful creation of an Application Association with the Device, 10. create and send a zero value ‘Add Credit’ instruction, 11. confirm receipt of a successful response from the Device, 12. close the Application Association, 13. securely store the PrepaymentKey, PrepaymentWrapperKey and its association to the ESME Device ID, 14. set PrepayFlag attribute as true for the SMETS1 Installation in the S1SP Commissioning File		1, 2, 3, 4, 5, 6, 7, 8, 9 ,10, 11, 12, 13 or 14 reflecting the sub step which failed

Table A2

Installing a SMETS1 GSME

A3 The processing at Table A3 shall be that required of the S1SP and DCO for 'Installing a SMETS1 GSME' for this GroupID.

Error code on failure	S1SP checks and processing	DCO checks and processing	SupportingData
	Should any of the following checks fail, checking and processing in relation to that SMETS1 Installation shall not proceed to a subsequent step		
GT01	Using the DeviceID for the CHF on which the GSME should have been whitelisted: 1. Retrieve the AuthenticationKey and EncryptionKey for the Extended Data Collection Application Association 2. Using those keys, confirm the successful creation of an Application Association with the Device, 3. read the CHF Whitelist 4. confirm that the GSME's Device ID is on that CHF Whitelist and that the GSME has communicated in the last 72 hours, 5. close the Application Association		1, 2, 3, 4, or 5 reflecting the sub step which failed

Error code on failure	S1SP checks and processing	DCO checks and processing	SupportingData
GT02	Using the Device ID of the GPF associated with the GSME 1. Retrieve the AuthenticationKey and EncryptionKey for the Extended Data Collection Application Association 2. Using those keys, confirm the successful creation of an Application Association with the Device, 3. read the serial number of the Device, 4. for SMETS1 Installations where the GroupID = “BA” only, confirm the serial number of the Device is same as in SerialNumbers\ESME element for the SMETS1 Installation in Migration Group File, 5. read the Payment Mode (with its SMETS1 meaning) 6. if the Payment Mode is prepayment (with its SMETS1 meaning), read the UTRN Meter ID form the Device. 7. then close the Application Association 8. securely store the serial number of the Device and its association to the GSME Device ID 9. If the Payment Mode is prepayment (with its SMETS1 meaning): a. for SMETS1 Installations where the GroupID = “BA”, for the GSME identified in the GSMEIdentifier for this SMETS1 Installation in the Migration Common File, confirm the following are present and populated validly within the DecryptedS1SPGroupInformation for the GSMEDetails within the entry with the CHFIdentifier for this SMETS1 Installation: • PrepaymentKey • WrappedPrepaymentKey b. for SMETS1 Installations where the GroupID = “CA” or “CB”, for the GSME identified in the GSMEIdentifier for this SMETS1 Installation in the Migration Common File, confirm the following are present and populated validly within the DecryptedS1SPGroupInformation for the GSMEDetails within the entry with the CHFIdentifier for this SMETS1 Installation: • PrepaymentKey • PrepaymentWrapperKey else if the Payment Mode is Credit (with its SMETS1 meaning): a. for SMETS1 Installations where the GroupID = “CA” or “CB”, if either of the following are present and populated validly within the GSMEDetail of the DecryptedS1SPGroupInformation for the entry with the CHFIdentifier for this SMETS1 Installation, securely store with its association to the GSME Device ID: • PrepaymentWrapperKey • WrappedPrepaymentKey If the Payment Mode is prepayment (with its SMETS1 meaning), using the AuthenticationKey and EncryptionKey in the ManagementAssociation of the GPFDetail of the GPF associated with the GSMEDetails: 10. confirm the successful creation of an Application Association with the Device, 11. create and send a zero value ‘Add Credit’ instruction, 12. confirm receipt of a successful response from the Device 13. close the Application Association 14. securely store the PrepaymentKey, PrepaymentWrapperKey and its association to the GSME Device ID 15. set PrepayFlag attribute as true for the SMETS1 Installation in S1SP Commissioning File.		1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14 or 15 reflecting the sub step which failed

Table A3

Installing a SMETS1 PPMID

A4 The processing at Table A4 shall be that required of the S1SP and DCO for ‘Installing a SMETS1 PPMID’ for this GroupID.

Error code on failure	S1SP checks and processing	DCO checks and processing	SupportingData
	Should any of the following checks fail, checking and processing in relation to that SMETS1 Installation shall not proceed to a subsequent step		
	NOT USED		

Table A4

Commission Device (CHF)

A5 The processing at Table A5 shall be that required of the S1SP and DCO for 'Commission Device (CHF)' for this GroupID.

Error code on failure	S1SP checks and processing	DCO checks and processing	SupportingData
DP01	Instruct the DCC to add the relevant CHF details to the Smart Metering Inventory.		

Table A5

Securing a SMETS1 ESME

A6 The checks and processing at Table A6 shall be that required of the S1SP and DCO for 'Securing a SMETS1 ESME' for relevant GroupID and shall take place in the order specified in that Table.

Error code on failure	S1SP checks and processing	DCO checks and processing	SupportingData
	Should any of the following checks fail, checking and processing in relation to that SMETS1 Installation shall not proceed to a subsequent step		
ET08	For each EncryptedMasterKey for this SMETS1 Installation that relates to an ESME and / or CHF and / or (where a GSMEDetail element is also present) GPF: 1. Generate a new value for the EncryptionKey for the DataCollectionAssociation for one of the Devices within EncryptedMasterKey 2. Request that the DCO creates, using the relevant Master Key, the relevant form of the EncryptionKey for inclusion in key change instructions to the Device 3. Request that the Device changes to use the new key in this Application Association 4. Confirm that the Device has switched to using the new key 5. securely store the new key and its association with: o its 'key type' o the 'name of Application Association' o the Device ID 6. invalidate the replaced key	Create the relevant form of key required for inclusion in the instructions using the relevant Master Key.	DeviceID, so identifying the Master Key which is not functioning

Table A6

Appendix B Device Installation – For GroupID = "EA" or "EB"

B1 The Application Association labels:

(a) Application Association G

shall be the names allocated by the manufacturers of the SMETS1 ESMEs in this group to the Application Associations accessible to the DCC.

Installing a SMETS1 Electricity Meter

B2 The checks and processing at Table B2 shall be that required of the S1SP and DCO for 'Installing a SMETS1 Electricity Meter' and shall take place in the order specified in that Table.

Error code on failure	S1SP checks and processing	SupportingData
	Should any of the following checks fail, checking and processing in relation to that SMETS1 Installation shall not proceed to a subsequent step.	
ET01	Using the DeviceCertificate in the CHFDetails\DeviceCertificate element which the ESME is associated with, 1) initialise network connection with CHF confirming successful responses to messages 2) confirm the successful creation of a TLS session with the CHF in question. 3) read the CHF Whitelist, 4) confirm the Device ID in the Migration Common File for the ESME is included in the CHF Whitelist,	1, 2, 3, 4 reflecting the sub step which failed
ET02	Using the Device ID for the ESME, 1. confirm the successful creation of an Application Association G with the Device 2. Not Used 3. Not Used 4. read the Payment Mode (with its SMETS1 meaning) of the Device, if the Payment Mode is prepayment (with its SMETS1 meaning): a. confirm the following are present and populated validly within the ESMEDetail of the DecryptedS1SPDPGroupInformation for the entry with the CHFIdentifier for this SMETS1 Installation: i. PrepaymentKey 5. close the Application Association G 6. if the payment mode is Prepayment Mode (with its SMETS1 meaning), set the PrepayFlag attribute as true for the SMETS1 Installation in the S1SP Commissioning File 7. securely store the PrePaymentKey and its association with: a. its 'key type' b. the Device ID	1, 2, 3, 4, 5, 6 or 7 reflecting the sub step which failed
ET03	Using the AuthenticationKey and EncryptionKey within the ESMEDetails: 1. confirm the successful creation of an Application Association G using High Level Security (with its DLMS meaning) with target ESME, 2. close the Application Association G using High Level Security (with its DLMS meaning) 3. securely store AuthenticationKey and EncryptionKey in addition to their association with: ○ its 'key type' ○ the 'name of Application Association' ○ the Device ID For clarity, this is to confirm that all keys operate before any are changed.	1, 2 or 3 reflecting the sub step which failed

Table B2

Installing a SMETS1 GSME

B3 The processing at Table B3 shall be that required of the S1SP for 'Installing a SMETS1 GSME' and shall take place in the order specified in that Table.

Error code on failure	S1SP checks and processing	SupportingData
	Should any of the following checks fail, checking and processing in relation to that SMETS1 Installation shall not proceed to a subsequent step	

Error code on failure	S1SP checks and processing	SupportingData
GT01	Using the DeviceCertificate in the CHFDetails\DeviceCertificate element which the GSME is associated with, 1. initialise network connection with CHF confirming successful responses to messages 2. confirm the successful creation of a TLS session with the CHF in question, 3. read the CHF Whitelist, 4. confirm the Device ID in the Migration Common File for the GSME is included in CHF Whitelist,	1, 2, 3 or 4 reflecting the sub step which failed
GT02	Using the Device ID of the GPF associated with the GSME 1. initialise network connection with CHF confirming successful responses to messages 2. confirm the successful creation of a TLS session with the CHF in question 3. Not Used 4. Not Used 5. read the Payment Mode (with its SMETS1 meaning) if the Payment Mode is prepayment (with its SMETS1 meaning): a. confirm that the following are present and populated validly within the GSMEDetail of the DecryptedS1SPDPGroupInformation for the entry with the CHFIdentifier of this SMETS1 installation:PrepaymentKey 6. close TLS session 7. if the Mode is prepayment (with its SMETS1 meaning), set PrepayFlag attribute as true for the SMETS1 Installation in the S1SP Commissioning File. 8. securely store PrepaymentKey and its association with: a. its 'key type' b. the Device ID	1, 2, 3, 4, 5, 6, 7 or 8 reflecting the sub step which failed

Table B3

Installing a SMETS1 PPMID

B4 No additional checks or processing is required.

Commission Device (CHF)

B5 The processing at Table B5 shall be that required of the S1SP for 'Commission Device (CHF)'.

Error code on failure	S1SP checks and processing	DCO checks and processing	SupportingData
DP01	Instruct the DCC to add the relevant CHF details to the Smart Metering Inventory.	None required	

Table B5

Securing a SMETS1 ESME

B6 The checks and processing at Table B6 shall be that required of the S1SP and DCO for 'Securing a SMETS1 ESME' for relevant GroupIDs and shall take place in the order specified in that Table.

Error code on failure	S1SP checks and processing	DCO checks and processing	SupportingData
	Should any of the following checks fail, checking and processing in relation to that SMETS1 Installation shall not proceed to a subsequent step, except where otherwise stated		

Error code on failure	S1SP checks and processing	DCO checks and processing	SupportingData
ET04	The S1SP shall connect through Application Association G using High Level Security (with its DLMS meaning), using the appropriate EncryptionKey and AuthenticationKey 1. configure the amount the clock can be adjusted daily without authorisation of the DCO to 9 seconds 2. configure security access attributes to restrict write access without authorisation of the DCO for Application Association G not using High Level Security (with its DLMS meaning) 3. verify write access changes to Application Association G not using High Level Security (with its DLMS meaning) by reading security access attribute 4. configure firmware key to prevent activation of firmware images without authorisation of the DCO		1, 2, 3 or 4 reflecting the sub step which failed
ET05	For the EncryptedMasterKey for this SMETS1 Installation that relates to an ESME, request that the DCO creates a new Master Key for the Application Association G using High Level Security (with its DLMS meaning) for inclusion in key change instruction to the Device.	DCO to check that the DeviceID is in a DCO viable installation. Create the relevant form of key required for inclusion in the instructions using the relevant Master Key.	DeviceID, so identifying the Master Key which is not functioning
ET06	Send the authorising request that the Device performs a key rotation to use the new Master Key in Application Association G using High Level Security (with its DLMS meaning).	None required	
ET07	If a response is received from the ESME indicating a successful rotation: 1. securely store the encrypted MasterKey and its association with: ○ its 'key type' ○ the 'name of Application Association' ○ the Device ID 2. invalidate the replaced key	None required	1 or 2 reflecting the sub step which failed
ET08	For the Master Key created in ET05, request the DCO creates a new EncryptionKey and AuthenticationKey for inclusion in key change instructions to the device.	Create the relevant form of key required for inclusion in the instructions using the relevant Master Key.	DeviceID, so identifying the Master Key which is not functioning
ET09	Send the authorising request that the Device performing a key rotation to use the new EncryptionKey and AuthenticationKey in Application Association G using High Level Security (with its DLMS meaning)	None required	
ET10	If a response is received from the ESME indicating a successful rotation: 1. confirm that the ESME has switched to using the new keys from the old keys 2. securely store the new encrypted Encryptionkey and AuthenticationKey along with their association with: ○ its 'key type' ○ the 'name of Application Association' ○ the Device ID 3. invalidate the replaced keys	None required	1, 2 or 3 reflecting the sub step which failed

Table B6

Configure Pushing of Profile Data

B7 The processing at Table B7 shall be that required of the S1SP for 'Configure Pushing of Profile Data' and shall take place in the order specified in that Table.

Error code on failure	S1SP checks and processing	SupportingData
	Should any of the following checks fail, checking and processing in relation to that SMETS1 Installation shall not proceed to a subsequent step, except where otherwise stated	
ET11	Attempt to configure the CHF to disable pushing of ESMS's Profile Data Log (with its SMETS1 meaning) and confirm receipt of a successful response	
GT03	Where a GSMEDetail element is present, attempt to configure the CHF to disable pushing of GSMS's Profile Data Log (with its SMETS1 meaning) and confirm receipt of a successful response	

Table B7

Appendix C Device Installation – For GroupID "DA"

Installing a SMETS1 Electricity Meter

C1 The checks and processing at Table C1 shall be that required of the DCC for 'Installing a SMETS1 Electricity Meter' and shall take place in the order specified in that Table.

Error code on failure	DCC checks and processing	SupportingData
	Should any of the following checks fail, checking and processing in relation to that SMETS1 Installation shall not proceed to a subsequent step.	
ET01	Using the DeviceID for the ESME: 1. read the Payment Mode (with its SMETS1 meaning); and 2. ensure the VendPriceChangeHANLimit is set to zero. If the Payment Mode is prepayment (with its SMETS1 meaning): 3. create and send a zero value 'Add Credit' instruction, 4. confirm receipt of a successful response from the Device, 5. store the PrepayFlag attribute as true for the SMETS1 Installation for the S1SP Commissioning File generation.	1, 2, 3, 4 or 5 reflecting the sub step which failed

Table C1

Installing a SMETS1 GSME

C2 The processing at Table C2 shall be that required of the DCC for 'Installing a SMETS1 GSME' and shall take place in the order specified in that Table.

Error code on failure	DCC checks and processing	SupportingData
	Should any of the following checks fail, checking and processing in relation to that SMETS1 Installation shall not proceed to a subsequent step	
GT01	Using the DeviceID for the CHF on which the GSME should have been whitelisted: 1. read the CHF Whitelist and 2. confirm that the GSME's Device ID is on that CHF Whitelist and that the GSME has communicated in the last 24 hours.	
GT02	Using the Device ID of the GPF associated with the GSME 1. read the Payment Mode (with its SMETS1 meaning) 2. ensure the VendPriceChangeHANLimit is set to zero. If the Payment Mode is prepayment (with its SMETS1 meaning): 3. create and send a zero value 'Add Credit' instruction, 4. confirm receipt of a successful response from the Device 5. store the PrepayFlag attribute as true for the SMETS1 Installation for the S1SP Commissioning File generation.	1, 2, 3, 4, or 5 reflecting the sub step which failed

Table C2

Installing a SMETS1 PPMID

C3 No additional checks or processing is required.

Commission Device (CHF)

C4 The processing at Table C4 shall be that required of the S1SP for 'Commission Device (CHF)'.

Error code on failure	S1SP checks and processing	DCO checks and processing	SupportingData
DP01	Instruct the DCC to add the relevant CHF details to the Smart Metering Inventory.	None required	

Table C4

Securing a SMETS1 GSME

C5 The checks and processing at Table C5 shall be that required of the S1SP and DCO for 'Securing a SMETS1 GSME' for the relevant GroupID and shall take place in the order specified in that Table.

Error code on failure	S1SP checks and processing	DCO checks and processing	SupportingData
	Should any of the following checks fail, checking and processing in relation to that SMETS1 Installation shall not proceed to a subsequent step, except where otherwise stated.		
GT03	The S1SP shall request using the GSME serial number that the DCO creates a Single Use Authorisation Code for SUAKeyDetails for the Device type GSME to bring the GSME within DCO control.	The DCO validates that serial number is currently in a DCO Viable Installation, and if so creates an authorisation instruction, containing a DCO Public Key, using the decrypted EncryptedSUAKey element, and then persists relevant information about the SMETS1 Installation.	
GT04	The S1SP shall send the authorising instruction to the GSME requesting that it performs a key rotation to come under the DCO control.	None required	
GT05	If the S1SP receives a response from the GSME indicating a success of the authorising instruction from the DCO pursuant to GT04, then the S1SP shall store: 1. the DCO Public Key; and 2. the GSME's Public Key generated as a result of this instruction and the associated Digital Signature created using the GSME's permanent Private Key.	None required	1 or 2 reflecting the sub step which failed

Error code on failure	S1SP checks and processing	DCO checks and processing	SupportingData
GT06	If the S1SP receives a response from the GSME indicating a failure of the authorising instruction from the DCO, the S1SP shall: 1. read the GSME's Public Key and the associated Digital Signature from the GSME; 2. request using the GSME serial number, the GSME's Public Key and the DCO Public Key that the DCO creates an authorising instruction to rotate the key used to authenticate instructions to the GSME; 3. sends the authorising instruction to the GSME requesting that it performs a key rotation to change the key used to authenticate instructions from the DCO.	The DCO validates the Digital Signature on the GSME public key against the Public Key stored from the installation. The DCO creates an authorisation instruction, containing a DCO Public Key, using the key derived from the GSME's Public Key and the Private Key corresponding to the supplied DCO Public Key.	1, 2 or 3 reflecting the sub step which failed
GT07	If the S1SP receives a response from the GSME indicating a success of the authorising instruction from the DCO pursuant to GT04, then the S1SP shall store: 1. the DCO Public Key; and 2. the GSME's Public Key generated as a result of this instruction and the associated Digital Signature created using the GSME's permanent Private Key.	None required	1 or 2 reflecting the sub step which failed

Table C5

Securing a SMETS1 ESME

C6 The checks and processing at Table C6 shall be that required of the S1SP and DCO for 'Securing a SMETS1 ESME' for the relevant GroupID and shall take place in the order specified in that Table.

Error code on failure	S1SP checks and processing	DCO checks and processing	SupportingData
	Should any of the following checks fail, checking and processing in relation to that SMETS1 Installation shall not proceed to a subsequent step, except where otherwise stated		
ET03	The S1SP shall request using the ESME serial number that the DCO creates a Single Use Authorisation Code for SUAKeyDetails for the Device type ESME to bring the ESME within DCO control.	The DCO validates that serial number is currently in a DCO Viable Installation, and if so creates an authorisation instruction, containing a DCO Public Key, using the decrypted EncryptedSUAKey element, and then persists relevant information about the SMETS1 Installation.	

Error code on failure	S1SP checks and processing	DCO checks and processing	SupportingData
ET04	The S1SP shall send the authorising instruction to the ESME requesting that it performs a key rotation to come under the DCO control.	None required	
ET05	If the S1SP receives a response from the ESME indicating a success of the authorising instruction from the DCO pursuant to ET04, then the S1SP shall store: 1. the DCO Public Key; and 2. the ESME's Public Key generated as a result of this instruction and the associated Digital Signature created using the ESME's permanent Private Key.	None required	1 or 2 reflecting the sub step which failed
ET06	If the S1SP receives a response from the ESME indicating a failure of the authorising instruction from the DCO, the S1SP shall: • read the ESME's Public Key and the associated Digital Signature from the ESME; • request using the ESME serial number, the ESME's Public Key and the DCO Public Key that the DCO creates an authorising instruction to rotate the key used to authenticate instructions to the ESME; • sends the authorising instruction to the ESME requesting that it performs a key rotation to change the key used to authenticate instructions from the DCO.	The DCO validates the Digital Signature on the ESME public key against the Public Key stored from the installation. The DCO creates an authorisation instruction, containing a DCO Public Key, using the key derived from the ESME's Public Key and the Private Key corresponding to the supplied DCO Public Key.	1, 2 or 3 reflecting the sub step which failed
ET07	If the S1SP receives a response from the ESME indicating a success of the authorising instruction from the DCO pursuant to ET03, then the S1SP shall store: 1. the DCO Public Key; and 2. the ESME's Public Key generated as a result of this instruction and the associated Digital Signature created using the ESME's permanent Private Key.	None required	1 or 2 reflecting the sub step which failed

Table C6

Version AM 13.0

APPENDIX AM

SMETS1 Supporting Requirements

1 Introduction

1.1 This document lays out supporting requirements in relation to SMETS1 Devices and communications relating to SMETS1 Devices. None of the provisions in this document apply to SMETS2+ Devices nor to communications relating to them.

2 Defined Terms

Term	Meaning
||	X || Y shall mean the concatenation of the two octet strings X and Y.
Alert Code	For a SMETS1 Alert, shall mean the value placed in the GBCSHexAlertCode field (with its Message Mapping Catalogue meaning).
Authorising Remote Party Signature	Shall have the meaning specified in Clause 16.1.
Category 1 Device	Shall mean for the purposes of Section G2.44A of this Code, all SMETS1 Devices for which the "Group ID" for that Device Model in the SMETS1 Eligible Product Combinations List is 'DA'.
Category 2 Device	Shall mean for the purposes of Section G2.44A of this Code any SMETS1 Device that is not a Category 1 Device.
Certificate ID	In relation to an Organisation Certificate, shall be the combination of `serialNumber` and Issuer X520 Common Name (each with their Organisation Certificate Policy meanings) and so shall be a unique identifier for that Certificate.
Critical Instruction	Shall mean an Instruction that has the potential to affect the supply of energy to the premises or the security of any Device installed in the premises (but excluding any Instruction that is expected to increase the amount of credit available to the consumer).
SMETS1 CHF Device Log	Shall have the meaning specified in Clause 17.49.
CoS Execution Counter	Shall have the meaning specified in Clause 11.2(a).

Term	**Meaning**
Device Security Credentials	In relation to a SMETS1 Device, Device Security Credentials shall include the Certificates identified by Notified Critical Supplier Certificate ID, Notified Non-Critical Supplier Certificate ID, Notified Critical Network Operator Certificate ID and Notified Non-Critical Network Operator Certificate ID.
Event Code	For a SMETS1 Response containing Security Log or Event Log entries (with their SMETS1 meanings), shall mean the SMETS1 Mandated Event Code or the SMETS1 Non-Mandated Event Code in an entry.
Event/Alert Code	Shall mean the Alert Code or the Event Code, as required by the context.
Execution Counter	Shall have the meaning specified in Clause 11.1(a).
IEEE	The Institute of Electrical and Electronics Engineers.
Message Code	For a SMETS1 Alert, shall mean the SMETS1 Mandated Event Message Code or the SMETS1 Non-Mandated Event Message Code. For a SMETS1 Response, shall mean the value of GBCSHexadecimalMessageCode (with its Message Mapping Catalogue meaning) required by Clause 9.
Most Recently Verified Manufacturer Image Hash	Shall have the meaning laid out at Clause 16.5 (as updated in accordance with Clause 17.57).
Notified Critical Network Operator Certificate ID	Shall be the Certificate ID most recently recorded by the relevant S1SP in relation to a SMETS1 Device pursuant to Clause 18, with the Certificate ID having the values from the Certificate in the Service Request where Remote Party Role is 'networkOperator' and keyUsage is '`digitalSignature`' (all with their Organisation Certificate Policy meanings).
Notified Critical Network Operator ID	Shall be the Entity Identifier (with its Organisation Certificate Policy meaning) most recently recorded by the relevant S1SP in relation to a SMETS1 Device pursuant to Clause 18, with the Entity Identifier having the value from the Certificate in the Service Request where Remote Party Role is 'networkOperator' and keyUsage is '`digitalSignature`' (all with their Organisation Certificate Policy meanings).

Term	**Meaning**
Notified Critical Supplier Certificate ID	Shall be the Certificate ID most recently recorded by the relevant S1SP in relation to a SMETS1 Device pursuant to Clause 18, with the Certificate ID having the values from the Certificate in the Service Request where Remote Party Role is 'supplier' (with its Section L meaning) and `keyUsage` is '`digitalSignature`'(each with their Organisation Certificate Policy meanings).
Notified Critical Supplier ID	Shall be the Entity Identifier (with its Organisation Certificate Policy meaning) most recently recorded by the relevant S1SP in relation to a SMETS1 Device pursuant to Clause 18, with the Entity Identifier having the value from the Certificate in the Service Request where Remote Party Role is 'supplier' and keyUsage is '`digitalSignature`' (all with their Organisation Certificate Policy meanings).
Notified Non-Critical Network Operator Certificate ID	Shall be the Certificate ID most recently recorded by the relevant S1SP in relation to a SMETS1 Device pursuant to Clause 18, with the Certificate ID having the values from the Certificate in the Service Request where Remote Party Role is 'networkOperator' and keyUsage is '`keyAgreement`' (all with their Organisation Certificate Policy meanings).
Notified Non-Critical Supplier Certificate ID	Shall be the Certificate ID most recently recorded by the relevant S1SP in relation to a SMETS1 Device pursuant to Clause 18, with the Certificate ID having the values from the Certificate in the Service Request in the KeyAgreementCertificate data item, where the RemotePartyRole data item has the value of Supplier (each with their DUIS meanings).
Notified Non-Critical Supplier ID	Shall be the Entity Identifier (with its Organisation Certificate Policy meaning) most recently recorded by the relevant S1SP in relation to a SMETS1 Device pursuant to Clause 18, with the Entity Identifier having the value from the Certificate in the Service Request in the KeyAgreementCertificate data item where the RemotePartyRole data item has the value of Supplier (with their DUIS meanings).
Notified Non-Critical Network Operator ID	Shall be the Entity Identifier (with its Organisation Certificate Policy meaning) most recently recorded by the relevant S1SP in relation to a SMETS1 Device pursuant to Clause 18, with the Entity Identifier having the value from the Certificate in the Service Request where Remote Party Role is 'networkOperator' and keyUsage is '`keyAgreement`' (all with their Organisation Certificate Policy meanings).
Originator Counter	Shall have the meaning laid out at Clause 5.
OTA Header	Shall have the meaning laid out at Clause 16.3.

Term	Meaning
OTA Upgrade Image	Shall have the meaning laid out at Clause 16.4.
S1SP Time	In relation to an S1SP, shall be the time measured by a time source used by that S1SP pursuant to Clause 10.
SMETS1 Mandated Event	Shall have the meaning laid out at Clause 8.1.
SMETS1 Mandated Event Code	In a SMETS1 Alert or a Countersigned SMETS1 Alert, shall be the value placed in the GBCSHexAlertCode field (with its Message Mapping Catalogue meaning) as required by Clause 8.7(b).
SMETS1 Mandated Event Message Code	In a SMETS1 Alert or a Countersigned SMETS1 Alert created as a result of a SMETS1 Mandated Event, shall be the value placed in the GBCSHexadecimalMessageCode field (with its Message Mapping Catalogue meaning) as required by Clause 8.5.
SMETS1 Message Code	In a SMETS1 Response or a Countersigned SMETS1 Response, shall be the value placed in the GBCSHexadecimalMessageCode field (with its Message Mapping Catalogue meaning) as required by Clause 9.1. In a SMETS1 Alert or a Countersigned SMETS1 Alert, shall be either the SMETS1 Mandated Event Message Code or the SMETS1 Non-Mandated Event Message Code, as determined by Clauses 8.5 and 8.7(a).
SMETS1 Non-Mandated Event	Shall have the meaning laid out at Clause 8.3.
SMETS1 Non-Mandated Event Code	Shall have the meaning laid out at Clause 8.3(a).
SMETS1 Non-Mandated Event Description	Shall have the meaning laid out at Clause 8.3(b).
SMETS1 Non-Mandated Event Message Code	In a SMETS1 Alert or a Countersigned SMETS1 Alert created as a result of a SMETS1 Non-Mandated Event, shall be the hexBinary value of 1000 (where hexBinary has the meaning defined at http://www.w3.org/TR/xmlschema-2/#hexBinary) placed in the GBCSHexadecimalMessageCode field (with its Message Mapping Catalogue meaning).
Time-based Debt Recovery	Shall have the meaning set out in SMETS1.

Term	Meaning
Unknown Remote Party (URP)	In relation to a SMETS1 Device, shall mean a Party for which the relevant S1SP does not hold either a current Notified Critical Supplier ID or a current Notified Critical Network Operator ID for the SMETS1 Device in question.
Unsupported Value	Shall have the meaning set out in DUIS.
Upgrade Image	Shall have the meaning laid out at Clause 16.2.

2.1 Additionally, where defined terms from specific parts of the Code are used, the relevant part of the Code is stated. Where no part of the Code is stated, a defined term shall have its Section A meaning.

3 Device IDs

3.1 A Party notifying a SMETS1 Device's details to the DCC for recording in the Smart Metering Inventory shall notify the Device's Device ID according to the requirements of Table 1.

Type of SMETS1 Device	Requirement for Device ID
SMETS1 CHF	The Device ID shall be an identifier that the notifying Party has ensured is EUI-64 Compliant.
SMETS1 ESME	Where the Device's only network interface is one complying with ZigBee Alliance standards, the Device ID shall be the IEEE address associated with that network interface. Otherwise, the Device ID shall be an identifier that the notifying Party has ensured is EUI-64 Compliant.
SMETS1 GSME, SMETS1 GPF, SMETS1 PPMID, SMETS1 IHD or	The Device ID shall be the IEEE address associated with the Device's network interface which implements ZigBee Alliance standards.

any other device operating on a home area network created by a SMETS1 CHF	

Table 1

4 User IDs in Service Requests

4.1 In relation to 'Top Up Device' (SRV 2.2) and all Critical Service Requests where the Device Type of the target Device is neither 'CHF' nor ‘PPMID’, a User shall use its Notified Critical Supplier ID or its Notified Critical Network Operator ID (as the context requires) for the Device whose Device ID is in the BusinessTargetID field (with its DUIS meaning) in the Service Request and shall create a Digital Signature within which the Certificate ID identifies a Certificate with an Entity Identifier having the same value as its Notified Critical Supplier ID or its Notified Critical Network Operator ID (as the context requires). In relation to Critical Service Requests where the Device Type of the target Device is 'CHF' or ‘PPMID’ (specifically 'Activate Firmware' (SRV 11.3)), a User shall use its Notified Critical Supplier ID for the ESME that is on the same home area network as the CHF or PPMID (as the context requires) whose Device ID is in the BusinessTargetID field (with its DUIS meaning) in the Service Request and shall create a Digital Signature within which the Certificate ID identifies a Certificate with an Entity Identifier having the same value as its Notified Critical Supplier ID. In relation to all other Service Requests, a User may use any User ID which the DCC has previously accepted in relation to the User acting in the User Role in which the User wishes to have the Service Request in question processed by the DCC.

4.2 On receipt of a 'Top Up Device' or Critical Service Request, the S1SP shall confirm that the target Device's Notified Critical Supplier ID or Notified Critical Network Operator ID (as the context requires), or where the target Device's Device Type is 'CHF' or ‘PPMID’, the Notified Critical Supplier ID of the ESME on the same home area network, is that specified in the BusinessOriginatorID field (with its DUIS meaning) in the Service Request and is the Entity Identifier within the Certificate used to Check Cryptographic Protection on the Service Request and where it is not, the S1SP shall create and send a SMETS1 Response notifying failure and shall undertake no further processing.

5 Originator Counters

5.1 Except for ‘Update Security Credentials (CoS) (SRV 6.23)’ SMETS1 Service Requests, in relation to each SMETS1 Service Request that a User creates using a specific User ID and a specific Device ID, the User shall ensure that the Originator Counter is a 64-bit unsigned integer that is numerically greater than both zero and the value it has used in relation to any previous Service Request containing the same User ID and Device ID.

5.2 In relation to each 'Update Security Credentials (CoS) (SRV 6.23)' SMETS1 Service Request that a User creates, the User shall ensure that the Originator Counter is a 64-bit unsigned integer that is numerically greater than the value it has used in relation to any previously created 'Update Security Credentials (CoS) (SRV 6.23)' SMETS1 Service Request.

5.3 In relation to each SMETS1 Alert created using a specific Device ID and a specific User ID, the S1SP shall ensure that the Originator Counter is a 64-bit unsigned integer that is numerically greater than the value it has used in relation to any previous SMETS1 Alert containing the same User ID and Device ID.

6 Related Identifiers & Counters

6.1 In relation to any SMETS1 Service Request targeted at a SMETS1 Device, the sending User shall, within the RequestID field (with its DUIS meaning), populate:

(a) BusinessOriginatorID (with its DUIS meaning) with a User ID complying with Clause 4;

(b) BusinessTargetID (with its DUIS meaning) with the Device's Device ID, where that Device ID complies with Clause 3; and

(c) OriginatorCounter (with its DUIS meaning) with an Originator Counter complying with Clause 5.1 or Clause 5.2 (as relevant).

6.2 In relation to any SMETS1 Response, any Countersigned SMETS1 Response, any S1SP Alert and any Countersigned S1SP Alert, the DCC and the S1SP shall:

(a) populate any RequestID field (with its DUIS meaning) with the value of the RequestID in the corresponding SMETS1 Service Request;

(b) within any ResponseID field (with its DUIS meaning) and within the fields themselves, populate:

(i) any BusinessOriginatorID field (with its DUIS and Message Mapping Catalogue meaning) with the value of the BusinessTargetID in the

RequestID as identified in Clause 6.1(b);

(ii) any BusinessTargetID field (with its DUIS and Message Mapping Catalogue meaning) with the value of the BusinessOriginatorID in the RequestID as identified in Clause 6.1(a); and

(iii) any OriginatorCounter field (with its DUIS and Message Mapping Catalogue meaning) with the value of the OriginatorCounter in the RequestID as identified in Clause 6.1(c).

6.3 In relation to any SMETS1 Alert, the S1SP shall populate:

(a) any BusinessOriginatorID field (with its DUIS and Message Mapping Catalogue meaning) with the Device's Device ID, where that Device ID complies with Clause 3;

(b) any BusinessTargetID field (with its DUIS and Message Mapping Catalogue meaning) in accordance with Clause 8.6 and 8.7; and

(c) any OriginatorCounter field (with its DUIS and Message Mapping Catalogue meaning) with an Originator Counter complying with Clause 5.3.

7 <u>Supplementary Party Details</u>

7.1 Where, in processing a SMETS1 Service Request, the DCC would have included a Supplementary Remote Party ID value and a Supplementary Remote Party Counter value (with their GBCS meanings) in a resulting Command if the target Device had been a SMETS2+ Device, the DCC shall include those values in the Countersigned Service Request sent to the relevant S1SP, and shall identify those details as being a Supplementary Remote Party ID value and a Supplementary Remote Party Counter value respectively (with their GBCS meanings).

7.2 Where an S1SP creates a SMETS1 Response where the corresponding Countersigned Service Request contained details identified as a Supplementary Remote Party ID value and a Supplementary Remote Party Counter value, the S1SP shall use those values to populate the SupplementaryRemotePartyID and SupplementaryRemotePartyCounter fields (with their Message Mapping Catalogue meaning). For clarity, the S1SP shall not incorporate a SupplementaryOriginatorCounter field (with its Message Mapping Catalogue meaning) in any SMETS1 Response.

8 Event logging and alerts

8.1 SMETS1 requires that a number of events can be detected by SMETS1 Devices and that an occurrence of such an event triggers:

(a) the sending of an alert over a WAN interface (with its SMETS1 meaning); or

(b) the recording of the event in either the Event Log or the Security Log (with their SMETS1 meanings); or

(c) both the sending of such an alert over a WAN interface and the recording of the event in either the Event Log or the Security Log (with their SMETS1 meanings).

8.2 Table 2 identifies the SMETS1 requirements for Devices to detect events and the associated alerting and logging requirements. Additionally, the Service Request Processing Document (SRPD) requires that when processing a SMETS1 'Update Firmware' (SRV11.1) Service Request, the S1SP undertakes verification of the FirmwareImage (with its DUIS meaning). This can lead to one of two events: (1) the verification succeeds or (2) the verification fails. Both events are also included in Table 2. Events (described in the column headed "AlertDescription / LogMeaning) in Table 2 are referred to as "SMETS1 Mandated Events" in this document.

Specification of the SMETS1 Mandated Event	GBCSHexadecimal MessageCode	GBCSHexAlertCode / LogCode	AlertDescription / LogMeaning	BusinessTargetID	SMETS1 Alert required?	Logging Required? (No / Event Log / Security Log)
SMETS1 5.3.5.1 (ii) / (iii)	1000	8F01	Active Power Import above Load Limit Threshold	Notified Critical Supplier ID	Yes	Event Log
SMETS1 5.3.10.1 (ii) (a) / (c)	1001	8F40	SMETS1 Average RMS Voltage above Average RMS Over Voltage Threshold	Notified Non-Critical Network Operator ID	Yes	Event Log
SMETS1 5.3.10.1 (iii) (a) / (c)	1001	8F41	SMETS1 Average RMS Voltage below Average RMS Under Voltage Threshold	Notified Non-Critical Network Operator ID	Yes	Event Log
SMETS1 4.3.6.2 (iv) SMETS1 5.3.6.2 (iv)	1001	810D	Combined Credit Below Low Credit Threshold (prepayment mode)	Notified Non-Critical Supplier ID	Yes	No
SMETS1 4.3.6.2 (v) SMETS1 5.3.6.2 (v)	1000	8F0F	Credit Below Disablement Threshold (prepayment mode)	Notified Critical Supplier ID	Yes	No
SMETS1 4.3.5.2 (v)	1000	8F1D	GSME Power Supply Loss	Notified Critical Supplier ID	Yes	No

Specification of the SMETS1 Mandated Event	GBCSHexadecimal MessageCode	GBCSHexAlertCode / LogCode	AlertDescription / LogMeaning	BusinessTargetID	SMETS1 Alert required?	Logging Required? (No / Event Log / Security Log)
SMETS1 4.3.5.1 (i)/(ii)	1000	8F1F	Low Battery Capacity	Notified Critical Supplier ID	Yes	Event Log
SMETS1 4.4.2.2 SMETS1 4.4.3.2 SMETS1 4.4.3.4 SMETS1 5.4.3.2 SMETS1 5.4.4.2 SMETS1 5.5.4.4	1000	8F32	Supply Armed	Notified Critical Supplier ID	Yes	No
SMETS1 5.3.5.1 (v)	1000	8F33	Supply Disabled then Armed - Load Limit triggered	Notified Critical Supplier ID	Yes	No
SMETS1 5.3.10.2 (i) / (ii)	1001	8020	RMS Voltage above Extreme Over Voltage Threshold (voltage rises above for longer than the configurable period)	Notified Non-Critical Network Operator ID	Yes	Event Log
SMETS1 5.3.10.5 (i) / (ii)	1001	8024	RMS Voltage above Voltage Swell Threshold (voltage rises above for longer than the configurable period)	Notified Non-Critical Network Operator ID	Yes	Event Log
SMETS1 5.3.10.3 (i) / (ii)	1001	8028	RMS Voltage below Extreme Under Voltage Threshold (voltage falls below for longer than the configurable period)	Notified Non-Critical Network Operator ID	Yes	Event Log
SMETS1 5.3.10.4 (i) / (ii)	1001	802C	RMS Voltage below Voltage Sag Threshold (voltage falls below for longer than the configurable period)	Notified Non-Critical Network Operator ID	Yes	Event Log
SMETS1 4.3.9.3 (viii) / (viii) SMETS1 5.3.9.3 (viii) / (viii)	1000	8F3E	Unauthorised Communication Access attempted	Notified Critical Supplier ID	Yes	Security Log
SMETS1 4.3.9.2 (viii) / (ix) SMETS1 5.3.9.2 (viii) / (ix)	1000	8F3F	Unauthorised Physical Access - Tamper Detect	Notified Critical Supplier ID	Yes	Security Log
SRPD 16.1	00CE	8F1C	Firmware Verification Failed (ESME)	Notified Critical Supplier ID	Yes	No
SRPD 16.1	00CE	8F72	Firmware Verification Successful (ESME)	Notified Critical Supplier ID	Yes	No
SRPD 16.1	00CF	8F1C	Firmware Verification Failed (GSME)	Notified Critical Supplier ID	Yes	No
SRPD 16.1	00CF	8F72	Firmware Verification Successful(GSME)	Notified Critical Supplier ID	Yes	No
SRPD 16.1	1002	8F1C	Firmware Verification Failed (CH)	Notified Critical Supplier ID for the ESME on the same home area network	Yes	No
SRPD 16.1	1003	8F72	Firmware Verification Successful (CH)	Notified Critical Supplier ID for the ESME on the same home area network	Yes	No
SRPD 16.1	1002	8F1C	Firmware Verification Failed (PPMID)	Notified Critical Supplier ID for the ESME on the same home area network	Yes	No

Specification of the SMETS1 Mandated Event	GBCSHexadecimal MessageCode	GBCSHexAlertCode / LogCode	AlertDescription / LogMeaning	BusinessTargetID	SMETS1 Alert required?	Logging Required? (No / Event Log / Security Log)
SRPD 16.1	1003	8F72	Firmware Verification Successful (PPMID)	Notified Critical Supplier ID for the ESME on the same home area network	Yes	No
SMETS1 4.3.2 SMETS1 5.3.2	N/A	8F3D	Trusted Source Authentication Failure	N/A	No	Security Log

SMETS1 4.4.3 SMETS1 5.4.4	N/A	8155	Immediate HAN Interface Command Received but not Successfully Actioned	N/A	No	Event Log

Table 2

8.3 SMETS1 Devices may additionally be capable of detecting events not required by SMETS1. Such additional events are referred to in this document as "SMETS1 Non-Mandated Events". Each such SMETS1 Non-Mandated Event may result in a log entry or an alert or both being created by the Device. For each such SMETS1 Non-Mandated Event, the DCC shall:

(a) produce a textual description of that event, such a description being referred to as a "SMETS1 Non-Mandated Event Description"; and

(b) associate a 16-bit integer where the most significant bit has the value zero and the integer is not associated with any other SMETS1 Non-Mandated Event Description. The hexBinary representation (with the meaning defined at http://www.w3.org/TR/xmlschema-2/#hexBinary) of this 16-bit integer shall be referred to as the "SMETS1 Non-Mandated Event Code".

8.4 The DCC shall maintain and publish to all Users the list of SMETS1 Non-Mandated Event Descriptions and, for each such description:

(a) the Device Type or Device Types which can detect such events;

(b) the associated SMETS1 Non-Mandated Event Code;

(c) whether, for each detected occurrence of the corresponding SMETS1 Non-Mandated Event, the DCC would produce a corresponding SMETS1 Alert and, if so, which User ID would be placed in the BusinessTargetID fields (with their Message Mapping Catalogue meanings);

(d) whether, for each detected occurrence of the corresponding SMETS1 Non-Mandated Event, a corresponding entry would appear in a SMETS1 Response containing the Device's Security Log (with its SMETS1 meaning); and

(e) whether, for each detected occurrence of the corresponding SMETS1 Non-Mandated Event, a corresponding entry would appear in a SMETS1 Response containing the Device's Event Log (with its SMETS1 meaning).

8.5 Each S1SP shall create a SMETS1 Alert whenever:

(a) it receives information that a SMETS1 Mandated Event or SMETS1 Non-Mandated Event has occurred; and

(b) a SMETS1 Alert is required for that Event (as identified in relation to SMETS1 Mandated Events in Table 2 above, or in relation to a SMETS1 Non-Mandated Event in accordance with the information published pursuant to Clause 8.4),

(c) unless it does not have a record of the User ID that it is to associate (pursuant to Table 2 or Clause 8.4(c)) with that Event/Alert Code, in which case it shall not create a SMETS1 Alert.

8.6 Where an S1SP creates a SMETS1 Alert based on information from a Device that a SMETS1 Mandated Event has occurred, the S1SP shall populate the GBCSHexadecimalMessageCode, GBCSHexAlertCode, and AlertDescription fields, and any BusinessTargetID fields (each with their Message Mapping Catalogue meanings) according to the values specified in Table 2 for the SMETS1 Mandated Event in question.

8.7 Where an S1SP creates a SMETS1 Alert based on information from a Device that a SMETS1 Non-Mandated Event has occurred, the S1SP shall populate:

(a) the GBCSHexadecimalMessageCode field (with its Message Mapping Catalogue meaning) with the SMETS1 Non-Mandated Event Message Code;

(b) the GBCSHexAlertCode field (with its Message Mapping Catalogue meaning) with the corresponding SMETS1 Non-Mandated Event Code;

(c) the AlertDescription field (with its Message Mapping Catalogue meaning) with the corresponding SMETS1 Non-Mandated Event Description; and

(d) any BusinessTargetID fields (with their Message Mapping Catalogue meanings) with the corresponding BusinessTargetID published pursuant to Clause 8.4(c).

8.8 Where an S1SP creates a SMETS1 Response which includes a log entry's details based on information from a Device that a SMETS1 Mandated Event has occurred, the S1SP shall populate the corresponding LogCode and LogDescription fields (with their Message Mapping Catalogue meanings) according to the values specified in Table 2 for the SMETS1 Mandated Event in question. Where an S1SP creates a SMETS1 Response which includes a log entry's details based on information from a Device that a SMETS1 Non-Mandated Event has occurred, the S1SP shall populate the corresponding LogCode and LogDescription fields (with their Message Mapping Catalogue meanings) according to the values specified in the document published by the DCC pursuant to Clause 8.3. An S1SP shall only include an entry in a SMETS1 Response containing details from a Security Log or an Event Log (with their SMETS1 meanings) where that entry relates to either a SMETS1 Mandated Event or a SMETS1 Non-Mandated Event.

8.9 An S1SP shall not include OtherInformation or OtherInformationLogMeaning fields (with their Message Mapping Catalogue meaning) in any SMETS1 Response.

9 SMETS1 Message Codes

9.1 Where an S1SP creates a SMETS1 Response, the S1SP shall

(a) identify the row in Table 3 where, in the corresponding Service Request:

(i) the Service Reference Variant has the value in the row; and

(ii) the Device Type recorded in the Smart Metering Inventory for the Device ID in the BusinessTargetID part of the RequestID (with their DUIS meanings) has the value in the row; and

(iii) Condition1 and Condition 2 (see Table 3) are true including, where relevant, in terms of the content of the corresponding Service Request;

(b) populate the GBCSHexadecimalMessageCode field (with its Message Mapping Catalogue meaning) according to the row identified at Clause 9.1(a); and

(c) include a Timestamp (with its Message Mapping Catalogue meaning) in the Header element (with its DUIS meaning) in the SMETS1 Response where the row identified at Clause 9.1(a) requires it.

Service Reference Variant	Type of target Device as recorded in the SMI	Condition 1	Condition 2	GBCSHexadecimalMessageCode	Timestamp required in SMETS1 Response Header?
1.1.1	ESME	True	True	0019	Yes
1.1.1	GSME	True	True	006B	Yes
1.2.1	ESME	True	True	00A2	Yes
1.2.1	GSME	True	True	00A3	Yes
1.5	ESME	If an AdjustMeterBalance element (with its DUIS meaning) is present	True	001C	No

Service Reference Variant	Type of target Device as recorded in the SMI	Condition 1	Condition 2	GBCSHexadecimalMessageCode	Timestamp required in SMETS1 Response Header?
1.5	GSME	If an AdjustMeterBalance element (with its DUIS meaning) is present	If a PrepaymentMode element (with its DUIS meaning) is present	0086	No
1.5	GSME	If an AdjustMeterBalance element (with its DUIS meaning) is present	If a CreditMode element (with its DUIS meaning) is present	00C0	No
1.5	ESME	If a ResetMeterBalance element (with its DUIS meaning) is present	True	00B3	No
1.5	GSME	If a ResetMeterBalance element (with its DUIS meaning) is present	If a PrepaymentMode element (with its DUIS meaning) is present	00B4	No
1.5	GSME	If a ResetMeterBalance element (with its DUIS meaning) is present	If a CreditMode element (with its DUIS meaning) is present	00C2	No
1.6	ESME	True	If a Prepayment element (with its DUIS meaning) is present	001B	Yes
1.6	ESME	True	If a Credit element (with its DUIS meaning) is present	001A	Yes
1.6	GSME	True	If a Prepayment element (with its DUIS meaning) is present	006D	Yes
1.6	GSME	True	If a Credit element (with its DUIS meaning) is present	006C	Yes
2.1	GSME	True	True	006F	Yes
2.1	ESME	True	True	00DE	Yes
2.2	ESME	True	True	0007	Yes
2.2	GSME	True	True	0097	Yes
2.3	ESME	True	True	001E	No

8.8.1	ESME or GSME	True	True	000F	No
8.8.2	PPMID	True	True	000F	No
8.8.2	ESME, GSME or GPF	True	True	0010	No
8.9	CHF	True	True	010F	No
8.11	CHF	If RequestType (with its DUIS meaning) is 'Add'.	True	0001	No

Service Reference Variant	Type of target Device as recorded in the SMI	Condition 1	Condition 2	GBCSHexadecimalMessageCode	Timestamp required in SMETS1 Response Header?
8.11	CHF	If RequestType (with its DUIS meaning) is 'Remove'	True	0002	No
11.2	ESME, PPMID or CHF	True	True	0059	No
11.2	GSME or GPF	True	True	0084	No
11.3	ESME, GSME, PPMID or CHF	True	True	0012	Yes

Table 3

9.2 Where a clause in section 17 or 18 relates to a SMETS1 GSME and, for the Service Request in question, where Table 3 allows that Service Request to be targeted at both a GSME and a GPF then that clause also applies in relation to a SMETS1 GPF.

10 Timestamp

10.1 Where an S1SP populates any Timestamp field (with its Message Mapping Catalogue meaning) in a SMETS1 Alert or a SMETS1 Response, the S1SP shall populate the field with a UTC value. The S1SP shall, if a corresponding timestamp is provided by the corresponding SMETS1 Device, base the value on the timestamp provided by the Device and shall, if a corresponding timestamp is not provided by the corresponding SMETS1 Device, base the value on the S1SP Time at the time the field is populated. Each S1SP shall ensure that its S1SP Time is accurate to within ten seconds of UTC.

11 Execution Counters

11.1 The DCC and each S1SP shall:

(a) maintain, for each SMETS1 Device of a Device Type in Table 4, a series of integers (the value of each of which shall be between 0 and (2^{64} -1) inclusive) as required by Table 4 dependent upon the type of the Device, as recorded in the Smart Metering Inventory (each such number being known as an "Execution Counter"); and

(b) before processing the first Service Request targeted at a specific SMETS1 Device, set all Execution Counters related to that SMETS1 Device to 0 except for the Execution Counters related to ‘Update Device Security Credentials (KRP) (SRV 6.15.1)’ which shall be set to (2^{64} -1).

Type of SMETS1 Device	**Required Execution Counters**
SMETS1 CHF	One for the ‘Activate Firmware (SRV 11.3)’ Service Request
SMETS1 PPMID	One for the ‘Activate Firmware (SRV 11.3)’ Service Request
SMETS1 ESME	One for each type of Critical Service Request which can be targeted at the Device (where type is defined by the Service Reference Variant value), excluding the ‘Update Device Security Credentials (KRP) (SRV 6.15.1). Two for the ‘Update Device Security Credentials (KRP) (SRV 6.15.1)’ Service Request: • One for use where RemotePartyRole is Supplier (with their DUIS meanings); and • One for use where RemotePartyRole is NetworkOperator (with their DUIS meanings). Two for the ‘Request Handover of DCC Controlled Device (SRV 6.21)’ Service Request: • One for use where RemotePartyRole is Supplier (with their DUIS meanings); and • One for use where RemotePartyRole is NetworkOperator (with their DUIS meanings). One for the ‘Top Up Device (SRV 2.2)’ Service Request
SMETS1 GSME	One for each Critical Service Request which can be targeted at the Device One for the ‘Request Handover of DCC Controlled Device (SRV 6.21)’ Service Request: which, for clarity, shall only be for use where RemotePartyRole is Supplier (with their DUIS meanings); and One for the ‘Top Up Device (SRV 2.2)’ Service Request

Type of SMETS1 Device	Required Execution Counters
SMETS1 GPF	Two for the 'Update Device Security Credentials (KRP) (SRV 6.15.1)' Service Request: • One for use where RemotePartyRole is Supplier (with their DUIS meanings); and • One for use where RemotePartyRole is NetworkOperator (with their DUIS meanings). Two for the 'Request Handover of DCC Controlled Device (SRV 6.21)' Service Request: • One for use where RemotePartyRole is Supplier (with their DUIS meanings); and • One for use where RemotePartyRole is NetworkOperator (with their DUIS meanings).
Other SMETS1 Device Types	None required

Table 4

11.2 The DCC and each S1SP shall:

(a) maintain, for each User which has a User Role of Import Supplier or Gas Supplier, a series of 1,000 integers (the value of each of which shall be between 0 and (2^{64} -1) inclusive) (each such number being known as a CoS Execution Counter); and

(b) before processing the first Service Request from such a User, set the CoS Execution Counter related to that User to 0.

12 Replay

12.1 Where the DCC or an S1SP is required to ensure that a Service Request is not a Replay, it shall, in the following order:

(a) Where the Service Request is not an 'Update Security Credentials (CoS) (SRV 6.23)' or a 'Request Handover of DCC Controlled Device (SRV 6.21)' Service Request, confirm that the User ID in the BusinessOriginatorID field (with its DUIS meaning) in the Service Request is the Notified Critical Supplier ID or the Notified Critical Network Operator ID (as the context requires) for, or where the Device Type of the target Device is

'CHF' or ‘PPMID’ the Notified Critical Supplier ID for the ESME Associated with, the Device whose Device ID is in the BusinessTargetID field (with its DUIS meaning) in the Service Request. Where that test fails, the Service Request shall be a Replay, processing of subsequent checks under this Clause shall not be undertaken and, if the test is being undertaken by an S1SP, the S1SP shall send an S1SP Alert accordingly.

(b) Where the Service Request is a ‘Update Security Credentials (CoS) (SRV 6.23)’ Service Request, confirm that the OriginatorCounter in the Service Request (with its DUIS meaning) is:

(i) greater than at least one of the CoS Execution Counter values that it holds for the sending User; and

(ii) is not equal to any of the CoS Execution Counter values that it holds for the sending User.

Where either of those tests fail, the Service Request shall be a Replay, and, if the tests are being undertaken by an S1SP, the S1SP shall send an S1SP Alert accordingly. Where both the tests succeed, the lowest of the CoS Execution Counter values for this User shall be replaced with the value of the OriginatorCounter in the Service Request (with its DUIS meaning).

(c) Where the Service Request is either a ‘Update Device Security Credentials (KRP) (SRV 6.15.1)’ or a ‘Request Handover of DCC Controlled Device (SRV 6.21)’ Service Request, confirm that the OriginatorCounter in the Service Request (with its DUIS meaning) is strictly numerically greater than the Execution Counter held for the Device ID is in the BusinessTargetID field (with its DUIS meaning) and the same RemotePartyRole as in the Service Request (with its DUIS meaning). Where that test fails, the Service Request shall be a Replay and, if the test is being undertaken by an S1SP, the S1SP shall send an S1SP Alert accordingly. Where the test succeeds the relevant Execution Counter value shall be replaced with the value of the OriginatorCounter in the Service Request (with its DUIS meaning).

(d) Where the Service Request is neither a ‘Update Device Security Credentials (KRP) (SRV 6.15.1)’ nor a ‘Request Handover of DCC Controlled Device (SRV 6.21)’ nor a ‘Update Security Credentials (CoS) (SRV 6.23)’ Service Request, confirm that the OriginatorCounter in the Service Request (with its DUIS meaning) is strictly numerically greater than the Execution Counter held for the Device ID is in the BusinessTargetID field (with its DUIS meaning) for this type of Service Request. Where that test fails, the Service Request shall be a Replay and, if the test is being undertaken by an S1SP, the S1SP shall send an S1SP Alert accordingly. Where the test succeeds the relevant Execution Counter value shall be replaced with the value of the OriginatorCounter (with its DUIS meaning) in the Service Request.

13 Configuration pre-requisites for operating a SMETS1 Device through the DCC

13.1 Some SMETS1 Devices may support features which are additional to those required by SMETS1 and which cannot be configured through the DCC. Table 5 lays out a number of such features. Where a Device supports, or is capable of supporting, one or more of the features in Table 5, the Responsible Supplier shall (unless to do so would result in a material delay to the Migration of the relevant SMETS1 Installation), ensure that before the relevant SMETS1 Installation is Migrated, any such features are configured according to the requirements of Table 5.

Feature	Type of Device	Required configuration
Privacy PIN which has to be entered to access SMETS information on the Device's user interface.	SMETS1 ESME, SMETS1 GSME	The Device shall be configured such that a PIN does not have to be entered to gain access to SMETS information on the Device's user interface, and such that the Energy Consumer cannot subsequently set such a PIN.
'Blacklisting' of access to the HAN	SMETS1 CHF	The Device shall be configured so that only 'whitelisted' Devices recorded on the SMI as being associated with the SMETS1 CHF can have access to the HAN, and that access is not controlled via any 'blacklisting' mechanism.
Configuration of actions to be taken on the occurrence of SMETS1 Mandated Events.	SMETS1 ESME, SMETS1 GSME	The Device shall be configured so that a Security Log or Event Log entry is created on occurrence of the SMETS1 Mandated Event where required by Table 2 and information is capable of being provided by the Device to the relevant S1SP to allow the S1SP to create any corresponding SMETS1 Alert, where required by Table 2.
Additional functionality not meant for Energy Consumer use, such as that available for installing engineers.	Any SMETS1 Device	The Device shall be configured so that Energy Consumers cannot access such facilities so for example, including the setting of any associated PINs or passwords so that they do not have default values.
Supplier name and / or contact details that may be visible to the Energy Consumer	Any SMETS1 Device	The Device shall be configured so that such values are either blank or not capable of being displayed to the Energy Consumer.
MPAN (ESME) or MPRN (GSME) whose value can be accessed via the Device's user interface or via the home area network.	SMETS1 ESME, SMETS1 GSME	The Device shall be configured so that such values are either blank or correctly identify the Metering Point for which the Smart Meter in question is measuring supply of energy in to the Premises.
Display of Currency Units	SMETS1 ESME SMETS1 GSME SMETS1 IHD SMETS1 PPMID	The Device shall be configured so that Currency Units (with its SMETS1 meaning) are displayed as GBP.

Remote energy supply control functionality	SMETS1 ESME SMETS1 GSME	The Device shall be configured so that Enable Supply, Disable Supply and Arm Load Switch (with their SMETS1 meanings) functions operate on receipt of the relevant instruction.

Table 5

13.2 For Category 1 Devices, the Responsible Supplier shall additionally ensure that, before the relevant SMETS1 Installation is Migrated, the Devices are configured according to the requirements in Table 15 in Annex B – Device Configuration Settings for Category 1 Devices.

14 Remote Party Role

14.1 Where a Remote Party Role Code is required in a Certificate or a Certificate Signing Request, the DCC shall use the Remote Party Role of 's1SPxmlSigning' (with its meaning in the Organisation Certificate Policy) when the Certificate or Certificate Signing Request relates to the DCC acting in the role of an S1SP.

15 SMETS1 Data Items

15.1 When a User creates a SMETS1 Service Request containing a field in Table 6, the User shall populate that field according to the meanings in Table 6.

DUIS / Message Mapping Catalogue field	**Meaning of values**
SuspendDebtDisabled	For an ESME: • **true**: shall mean that, if the Supply is Disabled (with its SMETS1 Meaning) pursuant to SMETS1 5.3.6.2, then the ESME shall suspend Time-based Debt Recovery. • **false**: shall mean that, if the Supply is Disabled (with its SMETS1 Meaning) pursuant to SMETS1 5.3.6.2, then the ESME shall continue with Time-based Debt Recovery For a GSME: • **true**: shall mean that, if the Supply is Disabled (with its SMETS1 Meaning) pursuant to SMETS1 4.3.6.2, then the GSME shall suspend Time-based Debt recovery.

	- **false**: shall mean that, if the Supply is Disabled (with its SMETS1 Meaning) pursuant to SMETS1 4.3.6.2, then the GSME shall continue with Time-based Debt Recovery
SuspendDebtEmergency	- **true**: shall mean that, if Emergency Credit (with its SMETS1 Meaning) is in use, then the Device shall suspend Time-based Debt Recovery. - **false**: shall mean that, if Emergency Credit (with its SMETS1 Meaning) is in use, then the Device shall continue with Time-based Debt Recovery
SupplyDepletionState	- **Locked**: shall have the SMETS1 meaning of Disabled - **Unchanged**: shall have the SMETS1 meaning of Unchanged
SupplyTamperState	- **Locked**: shall have the SMETS1 meaning of Disabled - **Unchanged**: shall have the SMETS1 meaning of Unchanged

Table 6

15.2 When an S1SP creates a SMETS1 Service Response containing a field in Table 6, the S1SP shall populate that field according to the meanings in Table 6.

15.3 When an S1SP creates a SMETS1 Service Response containing a field in Table 7, the S1SP shall populate that field according to the meanings in Table 7.

Message Mapping Catalogue field	**Meaning**
AccumulatedDebtRegister within ReadInstantaneousPrepayValuesRsp	Shall populate the field according to the SMETS1 meaning of Accumulated Debt Register, with the value being an integer value in thousandths of pence. For clarity, this is different that the SMETS2+ meaning of the same term.

Message Mapping Catalogue field	Meaning
AccumulatedDebtRegister within PrepaymentOperationalData	Shall populate the field according to the SMETS1 required Billing Data Log recording of the Accumulated Debt Register value, with the value being an integer value in thousandths of pence. For clarity, this is different that the SMETS2+ meaning of the same term.
Value within ConsumptionRegister	Shall populate the field according to the SMETS1 meaning of Total Consumption Register, with the value being a decimal number in metres cubed
GasActiveImportRegisterConsumption	Shall populate the field according to the SMETS1 required Daily Read Log copy of the Total Consumption Register, with the value being a decimal number in metres cubed
PrimaryValue within Gas	Shall populate the field according to the SMETS1 required Profile Data Log copy of the Total Consumption Register, with the value being a decimal number in metres cubed
Value within ActiveImportRegister	Shall populate the field according to the SMETS1 meaning of Total Active Import Register with the value being an integer number of watt hours (Wh).
ElecActiveImportRegisterConsumption	Shall populate the field according to the SMETS1 required Daily Read Log copy of the Total Active Import Register with the value being an integer number of watt hours (Wh).
PrimaryValue within Electricity	Shall populate the field according to the SMETS1 required Profile Data Log copy of the Total Active Import Register with the value being an integer number of watt hours (Wh).
Value within ReactiveImportRegister	Shall populate the field according to the SMETS1 Total Reactive Import Register with the value being an integer number of volt-amperes reactive hours (varh).
ReactiveEnergyImportedValue	Shall populate the field according to the SMETS1 required Profile Data Log copy of the Total Reactive Import Register with the value being an integer number of volt-amperes reactive hours (varh).

Message Mapping Catalogue field	Meaning
Value within ActiveExportRegister	Shall populate the field according to the SMETS1 meaning of Total Active Export Register with the value being an integer number of watt hours (Wh).
ActiveEnergyExportedValue	Shall populate the field according to the SMETS1 required Profile Data Log copy of the Total Active Export Register with the value being an integer number of watt hours (Wh).
Value within ReactiveExportRegister	Shall populate the field according to the SMETS1 meaning of Total Reactive Export Register with the value being an integer number of volt-amperes reactive hours (varh).
ReactiveEnergyExportedValue	Shall populate the field according to the SMETS1 required Profile Data Log copy of the Total Reactive Export Register with the value being an integer number of volt-amperes reactive hours (varh).
SupplyState	**Enabled** shall mean: • For a SMETS1 GSME, a Valve State of opened (with SMETS1 meanings); and • For a SMETS1 ESME, a Load Switch State of closed (with SMETS1 meanings) **Disabled** shall mean: • For a SMETS1 GSME, a Valve State of closed (with SMETS1 meanings); and • For a SMETS1 ESME, a Load Switch State of opened (with SMETS1 meanings) **Armed** shall mean: • For a SMETS1 GSME, a Valve State of armed (with SMETS1 meanings); and • For a SMETS1 ESME, a Load Switch State of armed (with SMETS1 meanings)

Table 7

16 OTA Header, Upgrade Image, OTA Upgrade Image and Authorising Remote Party Signature.

16.1 In relation to a Manufacturer Image which is to be sent to a Device, the Authorising Remote Party Signature shall be the Digital Signature generated across the Manufacturer Image using the private key associated with the Certificate identified by the Device's Notified Critical Supplier Certificate ID. Therefore the Authorising Remote Party Signature within an Upgrade Image can be checked (i.e. a Check Cryptographic Protection step may be carried out) using the Manufacturer Image and the Public Key in the Certificate identified by the Device's Notified Critical Supplier Certificate ID.

16.2 Upgrade Image shall be the concatenation:

Manufacturer Image || 0x0040 || Authorising Remote Party Signature

16.3 For clarity, each Manufacturer Image that is capable of being distributed using an Update Firmware Service Request must have an associated Central Products List entry containing a number of values. The OTA Header associated with that same Manufacturer Image shall be an octet string constructed using the values from that associated Central Products List entry in the way specified in Table 8, except that the OTA Header requires, in line with the ZigBee OTA specification, elements to be 'little endian'. Where Devices of this Device Model support the ZigBee OTA Specification, the values used shall also align to the corresponding values used by such Devices in OTA firmware related processing.

ZigBee OTA Message Element	Contents	Length (octets)	Note
OTA upgrade file identifier	0x0BEEF11E	4	
OTA Header version	0x0100	2	
OTA Header length	0x003C	2	
OTA Header Field control	0x0004	2	
Manufacturer code	Value of manufacturer_identifier in the associated Central Products List entry (with its Central Products List meaning)	2	Identifies the Manufacturer producing the Manufacturer Image
Image type	Value of model_identifier in the associated Central Products List entry (with its Central Products List meaning)	2	As per the ZigBee OTA specification, this is to differentiate products from the same Manufacturer
File version	Value of firmware_version in the associated Central Products List entry (with its Central Products List meaning)	4	As per the ZigBee OTA specification, this is to differentiate release and build numbers for the product in question
ZigBee Stack version	0x0002	2	
OTA Header string	Manufacturer specific	32	May be used but is not required to be used in Device processing of the Manufacturer Image
Total Image size (including header)	The length in octets of OTA Upgrade Image	4	Contents to be interpreted as an unsigned integer

Minimum hardware version	Value of hardware_version.version || hardware_version.revision in the associated Central Products List entry (with their Central Products List meanings)	2	
Maximum hardware version	Value of hardware_version.version || hardware_version.revision in the associated Central Products List entry (with their Central Products List meanings)	2	

Table 8

16.4 OTA Upgrade Image shall be the concatenation:

OTA Header || Upgrade Image

16.5 For each SMETS1 CHF, each SMETS1 PPMID, each SMETS1 ESME and each SMETS1 GSME with which the S1SP can (in each case) communicate, the S1SP shall maintain a Most Recently Verified Manufacturer Image Hash which shall be a 256-bit integer value and which shall be set to the value zero prior to the time at which the S1SP first communicates with the Device in question.

17 Processing SMETS1 Service Requests

17.1 The obligation on DCC to carry out Equivalent Steps when processing SMETS1 Service Requests shall be interpreted in light of the different requirements and device functionality set out in this document generally and in particular in these Clauses 17 and 18. In each case, the text describing the modified processing to be undertaken by DCC (including, where appropriate the relevant S1SP) relates to the type of Service Request(s) identified by Service Reference Variant in the underlined heading immediately above the text.

17.2 The different requirements and device functionality specified in Clause 17 shall apply to all SMETS1 Devices of the relevant Device Types.

17.3 The different requirements and device functionality specified in Clause 18 shall apply only to SMETS1 Devices which are of specified Device Models. Such Device Models and the different requirements or functionality that applies to them shall be specified in Annex A - Device Model Variations to Equivalent Steps Matrix (DMVES Matrix).

General

17.4 Where processing Service Requests that are requesting the reading of logs, and where, according to the Smart Metering Inventory, the target Device is a GSME, then the S1SP shall populate SMETS1 Responses using only data provided from the SMETS1 GSME and Unsupported Values in fields required by this Clause 17.

17.5 Where processing Service Requests for the reading of gas related information, and, according to the Smart Metering Inventory, the target Device is a GPF, then the S1SP shall populate SMETS1 Responses using any data available for the SMETS1 GSMS of which the SMETS1 GPF forms a part.

17.6 The DCC shall not be required to provide Enrolment or Communication Services in relation to any SMETS1 GSME that is added to the CHF Device Log of an Enrolled SMETS1 Smart Metering System.

17.6A Where Service Requests are attempting to write Configuration data (with its SMETS1 meaning) and are targeted at the SMETS1 GSME or SMETS1 GPF, any SMETS1 Responses will be triggered on receipt of the Service Request and not after processing on the device.

17.6B Clause 17.6A does not apply for Category 1 devices.

Update Tariff (SRV 1.1.1) and Update Price (SRV 1.2.1)

17.7 SMETS1 Smart Meters are not required to support Currency Units as a Configuration Data Item (with their SMETS2 meanings). Therefore, the S1SP shall discard any value in the CurrencyUnits fields (with its DUIS meaning) when setting values on the Smart Meter as a result of such a Service Request. For clarity, this discarding of values shall not result in an error in the SMETS1 Response.

17.8 For SMETS1 GSME, processing shall include the SMETS1 required capture of information in to the Billing Data Log (with its SMETS1 meaning), and so may therefore not include capturing a value for the Total Consumption Register (with its SMETS1 meaning).

17.9 For SMETS1 ESME, processing shall include the SMETS1 required capture of information in to the Billing Data Log (with its SMETS1 meaning), and so may therefore not include capturing values for the Total Active Import Register (with its SMETS1 meaning) or the Tariff TOU Block Register Matrix (with its SMETS2 meanings).

Adjust Meter Balance (SRV 1.5)

17.10 Where the Device is not capable of supporting Reset Meter Balance (with its SMETS2 meaning), the S1SP shall create a SMETS1 Response indicating failure.

Update Payment Mode (SRV 1.6)

17.11 Processing shall include the SMETS1 required capture of information in to the Billing Data Log (with its SMETS1 meaning), and so may therefore not include capturing values for the Total Consumption Register, Total Active Import Register or the Tariff TOU Block Register Matrix (with their SMETS1 / SMETS2 meanings).

17.12 Processing shall, except where clause 18 specifies different processing, reflect the meanings of SuspendDebtDisabled and SuspendDebtEmergency in Clause 15.1 noting that Standing Charge (with its SMETS1 meaning) will continue to be collected in all cases.

Update Prepay Configuration (SRV 2.1)

17.13 As per DUIS, processing shall not include the setting of values equivalent to the MaxMeterBalance and MaxCreditThreshold (with their DUIS meanings) where the Device does not support such setting.

Top Up Device (SRV 2.2)

17.14 Processing shall be as specified for an Add Credit WAN Interface Command (with their SMETS1 meanings).

Update Debt (SRV 2.3)

17.15 Where any one or more of TimeDebtRegister1, TimeDebtRegister2 and PaymentDebtRegister values (with their DUIS meanings) is not zero, debt adjustment related processing shall be as specified for an Adjust Debt WAN Interface Command (with their SMETS1 meanings). Other processing shall be as for a SMETS2+ Device.

Activate Emergency Credit (SRV 2.5)

17.16 Processing shall be as specified for an Activate Emergency Credit WAN Interface Command (with their SMETS1 meanings). As for a SMETS2+ Device, if, after the Device has executed the associated instructions, emergency credit is activated on the Device then the S1SP shall return a SMETS1 Response indicating the Command executed successfully. This shall be so regardless of whether emergency credit was activated on the Device prior to the instruction's execution or not except where Clause 18.8 applies.

Restrict Access For Change Of Tenancy (SRV 3.2)

17.17 Where, according to the Smart Metering Inventory, the target Device is an ESME, processing shall be as specified for a SMETS1 ESMS Restrict Data WAN Interface Command (with their SMETS1 meanings).

17.18 Where, according to the Smart Metering Inventory, the target Device is a GPF, processing shall be as specified for a SMETS1 GSMS Restrict Data WAN Interface Command (with their SMETS1 meanings).

Clear Event Log (SRV 3.3)

17.19 Processing shall be as specified for a Clear Event Log WAN Interface Command (with their SMETS1 meanings) and, therefore, a corresponding Security Log entry (with its SMETS1 meaning) may not be created.

Read Instantaneous Import TOU With Blocks Matrices (4.1.3)

17.20 Where the Device is not capable of providing Tariff TOU Block Register Matrix values (with its SMETS2meaning), the S1SP shall set the corresponding values in the SMETS1 Response to the relevant Unsupported Values.

Retrieve Change Of Mode / Tariff Triggered Billing Data Log (4.4.2) and Retrieve Billing Calendar Triggered Billing Data Log (SRV 4.4.3)

17.21 Where the Device is not capable of recording the Total Consumption Register or Total Active Import Register values (with their SMETS1 meanings) in such log entries, the S1SP shall set the corresponding values in the SMETS1 Response to the relevant Unsupported Values.

17.22 SMETS1 ESME are not required to record Tariff TOU Block Register Matrix values (with their SMETS2 meaning) but are required to record the Tariff Block Counter Matrix values in the Billing Data Log (with their SMETS1 meanings). Therefore, the S1SP shall, where the target Device is recorded as being an ESME in the Smart Metering Inventory, populate the TariffTOUBlock[1..4]RegisterMatrixValue values (with their Message Mapping Catalogue meaning) with the Tariff Block Counter Matrix values from the Billing Data Log (with their SMETS1 meanings).

17.23 For clarity, SMETS1 does not require the recording of additional prepayment values to the timetable set out in the Billing Calendar.

Retrieve Import Daily Read Log (SRV 4.6.1)

17.24 SMETS1 ESME are not required to record Tariff TOU Block Register Matrix values (with their SMETS2 meaning) but are required to record the Tariff Block Counter Matrix values in the Daily Read Log (with their SMETS1 meanings). Therefore, the S1SP shall, where the target Device is recorded as being an ESME in the Smart Metering Inventory, populate the TariffTOUBlock[1..4]RegisterMatrixValues values (with their Message Mapping Catalogue meaning) with the Tariff Block Counter Matrix values from the Daily Read Log (with their SMETS1 meanings).

17.25 For clarity, SMETS1 Smart Meters need only support 14 entries in this log.

Read Tariff Primary Element (SRV 4.11.1)

17.26 In populating a SMETS1 Response, the S1SP shall:

(a) set CurrencyUnitsLabel to GBP and CurrencyUnitsName to Millipence (with their Message Mapping Catalogue meanings), since these values do not have to be supported by SMETS1 Devices;

(b) set the value of PrimaryActiveTariffPrice and PrimaryActiveTariffPriceScale (with their Message Mapping Catalogue meanings) to the relevant Unsupported Value, so indicating that these values do not have to be supported by SMETS1 Devices;

(c) Read Tariff Type (with its SMETS1 meaning) from the target SMETS1 Smart Meter to establish whether it is 'Time-of-use' or 'Time-of-use with Block' (with their SMETS1 meanings);

(d) where the target Device is, according to the Smart Metering Inventory, a SMETS1 ESME:

(i) if Tariff Type is 'Time-of-use', then set the values in TariffTOUPriceMatrix to those read from the Device and the values in TariffBlockPriceMatrix (with their Message Mapping Catalogue meanings) to the relevant Unsupported Values, to denote which values are in use and so which Tariff Type; or

(ii) if Tariff Type is 'Time-of-use with Block', then set the values in TariffBlockPriceMatrix to those read from the Device and the values in TariffTOUPriceMatrix (with their Message Mapping Catalogue meanings) to the relevant Unsupported Values, to denote which values are in use and so which Tariff Type; and

(e) where the target Device is, according to the Smart Metering Inventory, a SMETS1 GSME:

(i) if Tariff Type is 'Time-of-use', then set the values in TOUTariff to those read from the Device and omit the BlockTariff element (with their Message Mapping Catalogue meanings), to denote which values are in use and so which Tariff Type; or

(ii) if Tariff Type is 'Time-of-use with Block', then set the values in BlockTariff to those read from the Device and omit the TOUTariff element (with their Message Mapping Catalogue meanings), to denote which values are in use and so which Tariff Type.

<u>Read Prepayment Configuration SRV 4.13</u>

17.27 Where the SMETS1 Device does not support the setting of values equivalent to the MaxMeterBalance or MaxCreditThreshold values (with their Message Mapping Catalogue meanings), then the S1SP shall, in populating a SMETS1 Response, set the values to the relevant Unsupported Value.

Read Load Limit Data (SRV 4.15)

17.28 A SMETS1 ESME cannot support a Load Limit Period (with its SMETS2 meaning) since the equivalent period is fixed at 30 seconds in SMETS1. Therefore, when populating a SMETS1 Response the S1SP shall set the LoadLimitPeriod (with its Message Mapping Catalogue meaning) to the relevant Unsupported Value.

17.29 A SMETS1 ESME cannot support a Load Limit Restoration Period (with its SMETS2 meaning) since there is no equivalent SMETS1 functionality. Therefore, when populating a SMETS1 Response, the S1SP shall set the LoadLimitRestorationPeriod (with its Message Mapping Catalogue meaning) to the relevant Unsupported Value.

Read Network Data (SRV 4.10)

17.30 A SMETS1 ESME is only required to support setting of Average RMS Voltage Measurement Period (with its SMETS1 meaning) in minutes, whereas the SMETS2 equivalent can be set in seconds. Therefore, where the SMETS1 ESME does not support setting to a resolution of seconds, the value in the MeasurementPeriod within AvgRMSVoltageProfileDataLog (with their Message Mapping Catalogue meanings) may be a multiple of 60 rather than the number of seconds requested in a prior ‘Update Device Configuration (Voltage) (SRV 6.5)’ Service Request.

Read Device Configuration (Identity Exc MPxN) (SRV 6.2.4)

17.31 In populating the SMETS1 Response, the S1SP shall:

(a) not include MeterVariant or ModelType fields (with their Message Mapping Catalogue meanings), since those do not have to be supported by SMETS1 Devices; and

(b) only include ManufacturerIdentifier (with its Message Mapping Catalogue meaning) where the target SMETS1 Device has a Device Identifier (with its SMETS1 meaning) and, in this case, set the value of ManufacturerIdentifier (with its Message Mapping Catalogue meaning) to be the value returned by the target Device for its Device Identifier (with its SMETS1 meaning).

Read Device Configuration (Gas) (SRV 6.2.8)

17.32 Where the SMETS1 Device does not support the setting of values equivalent to the StabilisationPeriod or MeasurementPeriod values (with their Message Mapping Catalogue meanings), then the S1SP shall, in populating a SMETS1 Response, set the values to the relevant Unsupported Value.

Update Device Configuration (Load Limiting General Settings) (SRV 6.4.1)

17.33 As noted in Clauses 17.28 and 17.29, a SMETS1 ESME cannot support either a Load Limit Period (with its SMETS2 meaning) or a Load Limit Restoration Period (with its SMETS2 meaning). Therefore, the S1SP shall discard any values in the LoadLimitPeriod or LoadLimitRestorationPeriod fields (with their DUIS meanings) when setting values on the SMETS1 ESME as a result of such a Service Request. For clarity, this discarding of values shall not result in an error in the SMETS1 Response.

Update Device Configuration (Voltage) (SRV 6.5)

17.34 A SMETS1 ESME is only required to support setting of Average RMS Voltage Measurement Period (with its SMETS1 meaning) in minutes, whereas the SMETS2 equivalent can be set in seconds. Therefore, where the target SMETS1 ESME does not support setting to a resolution of seconds, the S1SP shall divide the value in the AverageRMSVoltageMeasurementPeriod (with its DUIS meaning) by 60, round up to the nearest integer and set the value of the Average RMS Voltage Measurement Period (with its SMETS1 meaning) to the integer number of minutes so calculated.

Update Device Configuration (SRV 6.7)

17.35 Where a SMETS1 GSME supports the setting of values equivalent to the StabilisationPeriod or MeasurementPeriod values (with their Message Mapping Catalogue meanings), then the S1SP shall instruct the Device to set such values. Where the Device does not support setting of such values, the S1SP cannot send such instructions to the Device and therefore shall not do so and the S1SP shall create a SMETS1 Response indicating failure.

Read Event Or Security Log (SRV 6.13)

17.36 For clarity, in populating the SMETS1 Response, the S1SP shall comply with the requirements of Clause 8.

Update Security Credentials (KRP) (SRV 6.15.1)

17.37 The S1SP shall undertake the processing required by Clause 19. For clarity, since the Service Request is not to effect a change of control, any value in the RemotePartyFloorSequenceNumber field shall be discarded.

Update Security Credentials (CoS) (SRV 6.23)

17.38 Where the DCC has successfully authenticated the Service Request, the DCC shall then set all the Execution Counters required by Table 9 for the target Device (and for a SMETS1 ESME, the SMETS1 CHF and any SMETS1 PPMID on the same home area network), according to the Device Type recorded for that target Device in the Smart Metering Inventory, to the value specified for that Execution Counter in Table 9.

17.39 The S1SP shall undertake the processing required by Clause 19. Where that processing is successful, the S1SP shall then set each Execution Counter required by Table 9 for the target Device (and for a SMETS1 ESME, the SMETS1 CHF and any SMETS1 PPMID on the same home area network), according to the Device Type recorded for that target Device in the Smart Metering Inventory, to the value specified for that Execution Counter in Table 9.

Type of SMETS1 Device	**Execution Counters**
SMETS1 ESME	Those for each Critical Service Request which can be targeted at the Device, excluding the ‘Update Device Security Credentials (KRP) (SRV 6.15.1) shall be set to the value in the SupplierFloorSequenceNumber field; That for the ‘Update Device Security Credentials (KRP) (SRV 6.15.1)’ Service Request, for use where RemotePartyRole is Supplier (with their DUIS meanings) shall be set to the value in the SupplierFloorSequenceNumber field; That for the ‘Top Up Device (SRV 2.2)’ Service Request shall be set to the value in the SupplierFloorSequenceNumber field; In relation to the SMETS1 CHF which is Associated with the SMETS1 ESME, that for the ‘Activate Firmware (SRV 11.3)’ Service Request shall be set to the value in the SupplierFloorSequenceNumber field;

	In relation to any SMETS1 PPMID which is on the same home area network as the SMETS1 ESME, that for the 'Activate Firmware (SRV 11.3)' Service Request shall be set to the value in the SupplierFloorSequenceNumber field; and That for the 'Request Handover of DCC Controlled Device (SRV 6.21)' Service Request, for use where RemotePartyRole is Supplier (with their DUIS meanings), shall be set to (2^{64} -1).
SMETS1 GSME	Those for each Critical Service Request which can be targeted at the Device shall be set to the value in the SupplierFloorSequenceNumber field; That for the 'Top Up Device (SRV 2.2)' Service Request shall be set to the value in the SupplierFloorSequenceNumber field; and That for the 'Request Handover of DCC Controlled Device (SRV 6.21)' Service Request, for use where RemotePartyRole is Supplier (with their DUIS meanings), shall be set to (2^{64} -1).
SMETS1 GPF	That for the 'Update Device Security Credentials (KRP) (SRV 6.15.1)' Service Request, for use where RemotePartyRole is Supplier (with their DUIS meanings) shall be set to the value in the SupplierFloorSequenceNumber field; and That for the 'Request Handover of DCC Controlled Device (SRV 6.21)' Service Request, for use where RemotePartyRole is Supplier (with their DUIS meanings), shall be set to (2^{64} -1).

Table 9

Retrieve Device Security Credentials (KRP) (SRV 6.24.1)

17.40 If (with their DUIS meanings):

(a) RemotePartyRole is Supplier and there is no recorded Notified Critical Supplier ID for the target Device; or

(b) RemotePartyRole is NetworkOperator and there is no recorded Notified Critical Network Operator ID for the target Device; or

(c) RemotePartyRole is neither NetworkOperator nor Supplier then the S1SP shall populate the SMETS1 Response with a single instance of RemotePartyDetails where the RemotePartyRole is as per the Service Request, StatusCode is trustAnchorNotFound and all other fields are omitted. Only otherwise shall the S1SP undertake the processing required in Clause 17.41 or 17.42 as required by RemotePartyRole.

17.41 Where RemotePartyRole is Supplier (with their DUIS meanings), the S1SP shall populate the SMETS1 Response as follows:

(a) populate a first instance of RemotePartyDetails where CertificateUsage is DigitalSigning, ExistingCertificateHash is that from the Certificate identified by Notified Critical Supplier Certificate ID, ExistingRemotePartyId is the Notified Critical Supplier ID, StatusCode is success and RemotePartyFloorSeqNumber has the value of the Execution Counter for 'Update Device Security Credentials (KRP) (SRV 6.15.1)' Service Request, for use where RemotePartyRole is Supplier (with their DUIS meanings); and

(b) populate a second instance of RemotePartyDetails where CertificateUsage is KeyAgreement, ExistingCertificateHash is that from the Certificate identified by Notified Non-Critical Supplier Certificate ID, ExistingRemotePartyId is the Notified Non-Critical Supplier ID, StatusCode is success and RemotePartyFloorSeqNumber has the value of the Execution Counter for 'Update Device Security Credentials (KRP) (SRV 6.15.1)' Service Request, for use where RemotePartyRole is Supplier (with their DUIS meanings).

17.42 Where RemotePartyRole is NetworkOperator (with their DUIS meanings), the S1SP shall populate the SMETS1 Response as follows:

(a) populate a first instance of RemotePartyDetails where CertificateUsage is DigitalSigning, ExistingCertificateHash is that from the Certificate identified by Notified Critical Network Operator Certificate ID, ExistingRemotePartyId is the Notified Critical Network Operator ID, StatusCode is success and RemotePartyFloorSeqNumber has the value of the Execution Counter for 'Update Device Security Credentials (KRP) (SRV 6.15.1)' Service Request, for use where RemotePartyRole is NetworkOperator (with their DUIS meanings); and

(b) populate a second instance of RemotePartyDetails where CertificateUsage is KeyAgreement, ExistingCertificateHash is that from the Certificate identified by Notified Non-Critical Network Operator Certificate ID, ExistingRemotePartyId is the Notified Non-Critical Network Operator ID, StatusCode is success and RemotePartyFloorSeqNumber has the value of the Execution Counter for 'Update Device Security Credentials (KRP) (SRV 6.15.1)' Service Request, for use where RemotePartyRole is NetworkOperator (with their DUIS meanings).

Request Handover Of DCC Controlled Device (SRV 6.21)

17.43 The S1SP shall undertake the processing required by Clause **19**. Where that processing is successful, the S1SP shall then set Execution Counter values it holds in relation to the target Device according to the requirements of Table 10 and the Device Type recorded for the target Device in the Smart Metering Inventory. Where the S1SP creates a SMETS1 Response indicating success, it shall include in that SMETS1 Response an ExecutionOutcome (with its Message Mapping Catalogue meaning) element populated according to the requirements of Table 11.1. Where the DCC receives the resulting SMETS1 Response indicating success, the DCC shall set Execution Counter values it holds in relation to the target Device according to the requirements of Table 10 and the Device Type recorded for the target Device in the Smart Metering Inventory.

Type of SMETS1 Device and RemotePartyRole	**Required Execution Counter settings**
SMETS1 ESME or SMETS1 GSME or SMETS1 GPF where RemotePartyRole is Supplier (with their DUIS meanings)	That for the ‘Update Device Security Credentials (KRP) (SRV 6.15.1)’ Service Request, for use where RemotePartyRole is Supplier (with their DUIS meanings), shall be set to zero; and That for the ‘Request Handover of DCC Controlled Device (SRV 6.21)’ Service Request, for use where RemotePartyRole is Supplier (with their DUIS meanings), shall be set to (2^{64} -1).
SMETS1 ESME or SMETS1 GPF where RemotePartyRole is NetworkOperator (with their DUIS meanings)	That for the ‘Update Device Security Credentials (KRP) (SRV 6.15.1)’ Service Request, for use where RemotePartyRole is NetworkOperator (with their DUIS meanings), shall be set to zero; and That for the ‘Request Handover of DCC Controlled Device (SRV 6.21)’ Service Request, for use where RemotePartyRole is NetworkOperator (with their DUIS meanings), shall be set to (2^{64} -1).

Table 10

Data Item (with its Message Mapping Catalogue meaning)	**Required value in a SMETS1 Response**
AuthorisingRemotePartyOriginatorCounter	As per Message Mapping Catalogue.

CredentialsReplacementMode	Shall be populated with: • ‘SupplierBySupplier’ when the RemotePartyRole (with its DUIS meaning) in the Service Request is ‘Supplier’ • ‘NetworkOperatorbyNetworkOperator’ when the RemotePartyRole (with its DUIS meaning) in the Service Request is ‘NetworkOperator’
RemotePartySeqNumberChange	Shall be populated according to the requirements of Table 12.2
ReplacementOutcome	For each replacement (with its DUIS meaning) in the Service Request, shall be populated according to the requirements of Table 13.3

Table 11.1

Data Item (with its Message Mapping Catalogue meaning)	**Required value in a SMETS1 Response**
RemotePartyRole	The RemotePartyRole (with its DUIS meaning) in the Service Request
RemotePartyFloorSeqNumber	The RemotePartyFloorSeqNumber (with its DUIS meaning) in the Service Request

Table 12.2

Data Item (with its Message Mapping Catalogue meaning)	**Required value in a SMETS1 Response**
StatusCode	‘success’
CertificateType	• ‘DigitalSigning’ for a ‘DigitalSigningCertificate’ (with its DUIS meaning) in the Service Request

	• ‘KeyAgreement’ for a ‘KeyAgreementCertificate’ (with its DUIS meaning) in the Service Request
RemotePartyRole	The RemotePartyRole (with its DUIS meaning) in the Service Request
ExistingRemotePartyID	• The subject unique identifier equating to Entity Identifier (64 bit value) of a valid SMKI Certificate with the Remote Party Role of ‘accessControlBroker’ and keyUsage of ‘digitalSignature’ for a ‘DigitalSigningCertificate’ (with its DUIS meaning) in the Service Request • The subject unique identifier equating to Entity Identifier (64 bit value) of a valid SMKI Certificate with the Remote Party Role of ‘accessControlBroker’ and keyUsage of ‘keyAgreement’ for a ‘KeyAgreementCertificate’ (with its DUIS meaning) in the Service Request
NewRemotePartyID	• The subject unique identifier equating to Entity Identifier (64 bit value) of the ‘DigitalSigningCertificate’ (with its DUIS meaning) in the Service Request • The subject unique identifier equating to Entity Identifier (64 bit value) of a ‘KeyAgreementCertificate’ (with its DUIS meaning) in the Service Request
ExistingCertificateHash	• The subject key identifier, a SHA-1 Hash of the public key contained ina valid SMKI Certificate with the Remote Party Role of ‘accessControlBroker’ and keyUsage of ‘digitalSignature’ for a ‘DigitalSigningCertificate’ (with its DUIS meaning) in the Service Request • The subject key identifier, a SHA-1 Hash of the public key contained in a valid SMKI Certificate with the Remote Party Role of ‘accessControlBroker’ and keyUsage of ‘keyAgreement’ for a ‘KeyAgreementCertificate’ (with its DUIS meaning) in the Service Request
NewCertificateHash	• The subject key identifier, a SHA-1 Hash of the public key contained in a ‘DigitalSigningCertificate’ (with its DUIS meaning) in the Service Request • The subject key identifier, a SHA-1 Hash of the public key contained in a ‘KeyAgreementCertificate’ (with its DUIS meaning) in the Service Request

Table 13.3

Enable Supply (SRV 7.1)

17.44 For clarity, this command in SMETS1 is unconditional unlike in SMETS2. Therefore, the Service Request may result in supply being enabled on a

SMETS1 Smart Meter when it would not be enabled on a SMETS2 Smart Meter which is in the same state.

Arm Supply (SRV 7.3)

17.45 On receipt of this Service Request, the S1SP shall create and send a SMETS1 Arm Valve (for SMETS1 GSME) or a SMETS1 Arm Load Switch (for SMETS1 ESME) command. For clarity, these commands in SMETS1 are unconditional unlike the equivalent command in SMETS2. Therefore, the Service Request may result in supply being armed on a SMETS1 Smart Meter when it would not be armed on a SMETS2 Smart Meter which is in the same state.

Join Service (Critical) (SRV 8.7.1) and Join Service (Non-Critical) (SRV 8.7.2)

17.46 If, according to the information held by the S1SP, the Devices identified by OtherDeviceID and by BusinessTargetID (with their DUIS meanings) are not both on the same SMETS1 CHF's 'SMETS1 CHF Device Log', the S1SP shall create a SMETS1 Response indicating failure; otherwise the S1SP shall create a SMETS1 Response indicating success.

Unjoin Service (Critical) (SRV 8.8.1) and Unjoin Service (Non-Critical) (SRV 8.8.2)

17.47 The S1SP shall create a SMETS1 Response indicating success.

Read Device Log (SRV 8.9)

17.48 In populating the SMETS1 Response, the S1SP shall:

(a) include a CHFDeviceLogEntry (with its Message Mapping Catalogue meaning) for the SMETS1 GPF which is within the same SMETS1 CH as the SMETS1 CHF to which this Service Request is targeted;

(b) include a CHFDeviceLogEntry (with its Message Mapping Catalogue meaning) for the SMETS1 ESME which is within the same SMETS1 ESMS as the SMETS1 CHF to which this Service Request is targeted; and

(c) include, except for the SMETS1 ESME, a CHFDeviceLogEntry (with its Message Mapping Catalogue meaning) for each SMETS1 Device which communicates via the home area network using ZigBee Alliance standards managed by the SMETS1 CHF to which this Service Request is targeted.

17.49 This set of Devices for which CHFDeviceLogEntry (with its Message Mapping Catalogue meaning) would be created shall be referred to as the SMETS1 CHF's 'SMETS1 CHF Device Log'.

17.50 In populating a CHFDeviceLogEntry (with its Message Mapping Catalogue meaning) in a SMETS1 Response for a particular Device, the S1SP shall:

(a) set the value of DeviceID (with its Message Mapping Catalogue meaning) to the Device's Device ID, where that Device ID complies with Clause 3;

(b) set the value of SubGHzLinkQuality (with its Message Mapping Catalogue meaning) to zero, meaning that the Device is not communicating on Sub GHz frequencies;

(c) where the Device is not able to support the LastCommunicationsDateTime (with its Message Mapping Catalogue meaning) parameter, set the value of that parameter to the relevant Unsupported Value, to indicate that it does not support that parameter; and

(d) where the Device is able to support the LastCommunicationsDateTime (with its Message Mapping Catalogue meaning) parameter, set the value of that parameter to a value equivalent to that returned by the Device.

<u>Update HAN Device Log (SRV 8.11)</u>

17.51 Where RequestType is Add (with their DUIS meanings), the S1SP shall undertake processing in the following sequence stopping at the point at which it creates a SMETS1 Response:

(a) where DeviceID in the UpdateHANDeviceLog element (with their DUIS meanings) is, according to the Smart Metering Inventory a SMETS1 GPF:

(i) if, according to the Smart Metering Inventory, the SMETS1 GPF is Associated with the target SMETS1 CHF, the S1SP shall create a SMETS1 Response indicating success; or

(ii) if, according to the Smart Metering Inventory, the SMETS1 GPF is not Associated with the target SMETS1 CHF, the S1SP shall create a SMETS1 Response indicating failure;

(b) where DeviceID in the UpdateHANDeviceLog element (with their DUIS meanings) is, according to the Smart Metering Inventory a SMETS1 ESME which the S1SP knows does not require connection to a ZigBee Specification based home area network to communicate with the SMETS1 CHF:

(i) if, according to the S1SP's information, the SMETS1 ESME forms part of the same SMETS1 ESMS as the SMETS1 CHF, the S1SP shall create a SMETS1 Response indicating success; or

(ii) if, according to the S1SP's information, the SMETS1 ESME does not form part of the same SMETS1 ESMS as the SMETS1 CHF, the S1SP shall create a SMETS1 Response indicating failure;

(c) where DeviceID in the UpdateHANDeviceLog element (with their DUIS meanings) does not meet the criteria at (a) or that at (b):

(i) if, according to the information available to S1SP, the Device is already on the SMETS1 CHF’s ‘SMETS1 CHF Device Log’, the S1SP shall create a SMETS1 Response indicating success; or

(ii) if, according to the information held by the S1SP, the Device is already on another SMETS1 CHF’s ‘SMETS1 CHF Device Log’, the S1SP shall create a SMETS1 Response indicating failure and indicating which other SMETS1 CHF the Device is Associated with; or

(iii) if the criteria at neither (i) nor (ii) are met, the S1SP shall:

(A) instruct the CHF to allow the Device identified by DeviceID (with its DUIS meaning) to join the home area network controlled by the SMETS1 CHF, using the InstallCode and JoinTimePeriod (with their DUIS meaning). For clarity, SMETS1 CHF may not support a configurable home area network joining period. Only where this is so, the S1SP shall discard any JoinTimePeriod value (with their DUIS meaning); and

(B) ascertain (allowing for any relevant latency in the joining process, including where relevant the JoinTimePeriod (with its DUIS meaning)) whether the Device identified by Device ID (with its DUIS meaning) has joined the home area network and so is able to communicate over it. If the Device is able to communicate over the home area network, the S1SP shall create a SMETS1 Response indicating success. If the Device is not able to communicate over the home area network, the S1SP shall create a SMETS1 Response indicating failure.

17.52 Where RequestType is Remove (with their DUIS meanings), the S1SP shall undertake processing in the following sequence stopping at the point at which it creates a SMETS1 Response:

(a) where DeviceID in the UpdateHANDeviceLog element (with their DUIS meanings) is, according to the Smart Metering Inventory a SMETS1 GPF, then the S1SP shall create a SMETS1 Response indicating failure; or

(b) where DeviceID in the UpdateHANDeviceLog element (with their DUIS meanings) is, according to the Smart Metering Inventory a SMETS1 ESME which the S1SP knows does not require connection to a ZigBee Specification based home area network to communicate with the SMETS1 CHF, then the S1SP shall create a SMETS1 Response indicating failure;

(c) where DeviceID in the UpdateHANDeviceLog element (with their DUIS meanings) does not meet the criteria at (a) or that at (b):

(i) if, according to the information available to S1SP, the Device is not already on the SMETS1 CHF's 'SMETS1 CHF Device Log', then the S1SP shall create a SMETS1 Response indicating success; or

(ii) if, according to the information available to S1SP, the Device is on the SMETS1 CHF's 'SMETS1 CHF Device Log', then the S1SP shall:

(A) instruct the SMETS1 CHF to stop the Device identified by DeviceID (with its DUIS meaning) from having access to the home area network controlled by the SMETS1 CHF, and instruct the SMETS1 CHF to confirm whether it has stopped such access; and

(B) where the S1SP receives a response from the SMETS1 CHF detailing successful removal of access within a period allowing for latency in the process, the S1SP shall create a SMETS1 Response indicating success. Otherwise, the S1SP shall create a SMETS1 Response indicating failure.

Update Firmware (SRV 11.1)

17.52AClauses 17.53 to 17.57 shall not apply when Clause 18.63(b) applies.

17.53 On receipt of a firmware distribution request from the DCC, the S1SP shall, for each Device identified in that request confirm that the Device:

(a) is one for which the S1SP is operationally responsible; and

(b) is, according to the Smart Metering Inventory, of the same Device Model, other than the firmware version element, as is specified by the corresponding four values in the OTA Header.

17.54 The S1SP shall notify the DCC of the list of Device IDs which fail the check at 17.53, and the DCC shall send a DCC Alert to the User that sent the original ‘Update Firmware’ Service Request.

17.54A In relation to Clauses 17.55 and 17.56 where the Device is a CHF or PPMID, references to the Notified Critical Supplier Certificate ID shall be interpreted as references to the Notified Critical Supplier Certificate ID of the ESME on the same home area network.

17.55 Where the S1SP does immediately distribute Manufacturer Images to Devices of the Device Model identified by the OTA Header, the S1SP shall, for each Device which passes the check at 17.53:

(a) if the Notified Critical Supplier Certificate ID is the same as that of a previous Device being processed where a Check Cryptographic Protection of the Authorising Remote Party Signature for that previous Device had succeeded, then:

(i) the S1SP shall distribute the Manufacturer Image to the Device and instruct the Device to confirm when it has successfully received that image; and

(ii) where the S1SP receives a response from the Device detailing successful reception within a period allowing for latency in the process, the S1SP shall create a SMETS1 Alert for this Device to alert ‘Firmware Verification Successful’ for this Device’s Device Type (according to the Smart Metering Inventory); otherwise, the S1SP shall create a SMETS1 Alert for this Device to alert ‘Firmware Verification Failed’ for this Device’s Device Type (according to the Smart Metering Inventory);

(b) if the Notified Critical Supplier Certificate ID is either (1) different than that of a previous Device being processed where a Check Cryptographic Protection of the Authorising Remote Party Signature for that previous Device had succeeded or (2) the same as that of a previous Device being processed where the check of Authorising Remote Party Signature for that previous Device had failed, then the S1SP shall create a SMETS1 Alert for this Device to alert ‘Firmware Verification Failed’ for this Device’s Device Type (according to the Smart Metering Inventory); and

(c) if no previous Device being processed has successfully passed the Check Cryptographic Protection of the Authorising Remote Party Signature, the S1SP shall undertake the check of Authorising Remote Party Signature for this Device using the Public Key in the Certificate identified by Notified Critical Supplier Certificate ID. If that check fails then the S1SP shall create a SMETS1 Alert for this Device to alert ‘Firmware Verification Failed’ for this Device’s Device Type (according to the Smart Metering Inventory); otherwise:

(i) the S1SP shall distribute the Manufacturer Image to the Device and instruct the Device to confirm when it has successfully received that image; and

(ii) where the S1SP receives a response from the Device detailing successful reception within a period allowing for latency in the process, the S1SP shall create a SMETS1 Alert for this Device to alert ‘Firmware Verification Successful’ for this Device’s Device Type (according to the Smart Metering Inventory); otherwise, the S1SP shall create a SMETS1 Alert for this Device to alert ‘Firmware Verification Failed’ for this Device’s Device Type (according to the Smart Metering Inventory).

17.56 Where the S1SP does not immediately distribute Manufacturer Images to Devices of the Device Model identified by the OTA Header, the S1SP shall retain the Manufacturer Image and, for each Device which passes the check at 17.53:

(a) if the Notified Critical Supplier Certificate ID is the same as that of a previous Device being processed where the check of Authorising Remote Party Signature for that previous Device had succeeded, the S1SP shall create a SMETS1 Alert for this Device to alert 'Firmware Verification Successful' for this Device's Device Type (according to the Smart Metering Inventory);

(b) if the Notified Critical Supplier Certificate ID is either (1) different to that of a previous Device being processed where the check of Authorising Remote Party Signature for that previous Device had succeeded or (2) the same as that of a previous Device being processed where the check of Authorising Remote Party Signature for that previous Device had failed, then the S1SP shall create a SMETS1 Alert for this Device to alert 'Firmware Verification Failed' for this Device's Device Type (according to the Smart Metering Inventory); and

(c) if no previous Device being processed has successfully passed the check of Authorising Remote Party Signature, the S1SP shall undertake the check of Authorising Remote Party Signature for this Device. If that check fails then the S1SP shall create a SMETS1 Alert for this Device to alert 'Firmware Verification Failed' for this Device's Device Type (according to the Smart Metering Inventory); otherwise the S1SP shall create a SMETS1 Alert for this Device to alert 'Firmware Verification Successful' for this Device's Device Type (according to the Smart Metering Inventory).

17.57 Whenever the S1SP creates a SMETS1 Alert for 'Firmware Verification Successful', the S1SP shall set the value of the Device's Most Recently Verified Manufacturer Image Hash to be the Hash of the associated Manufacturer Image.

Read Firmware Version (SRV 11.2)

17.58 Based on the information available to it, the S1SP shall populate the FirmwareVersion field (with its Message Mapping Catalogue meaning) with the value from the Central Products List's firmware_version field (with its Central Products List meaning), excluding any colons from the firmware_version field's value, that reflects the operating firmware version for the Device's Device Model.

Activate Firmware (SRV 11.3)

17.59 If the FirmwareHash value (with its DUIS meaning) is not the same as the target Device's Most Recently Verified Manufacturer Image Hash, the S1SP shall create a SMETS1 Response indicating failure.

17.60 If the FirmwareHash value (with its DUIS meaning) is the same as the target Device’s Most Recently Verified Manufacturer Image Hash:

(a) the S1SP shall instruct the Device to activate the Manufacturer Image (if necessary for the Device Model, by distributing the Manufacturer Image to it) and instruct the Device to confirm when it has successfully activated that Manufacturer Image; and

(b) where the S1SP receives a response from the Device detailing successful activation within a period allowing for latency in the process, the S1SP shall create a SMETS1 Response indicating success; otherwise, the S1SP shall create a SMETS1 Response indicating failure.

Synchronise Clock (SRV 6.11) and Commission Device (SRV 8.1.1)

17.61 Where the target Device is capable of maintaining time independently of any other Device in the Smart Metering System, the S1SP shall determine the Device’s time and, if the Device’s time is within the period defined by CurrentDateTime and CurrentDateTime plus TolerancePeriod (with their DUIS meanings), the S1SP shall return a SMETS1 Response indicating ‘reliable’. If the Device’s time can be determined but is outside of that period, the S1SP shall return a SMETS1 Response indicating ‘unreliable’. If the S1SP determines that the Device does not have a valid time, the S1SP shall return a SMETS1 Response indicating ‘invalid’.

17.62 Where the target Device is not capable of maintaining time independently of another Device in the Smart Metering System, the S1SP shall determine the time of the Device that serves as the time source for the target Device and, if the time source Device's time is within the period defined by CurrentDateTime and CurrentDateTime plus TolerancePeriod (with their DUIS meanings), the S1SP shall return a SMETS1 Response indicating 'reliable'. If the time source Device's time can be determined but is outside of that period, the S1SP shall return a SMETS1 Response indicating 'unreliable'. If the S1SP determines that the Device does not have a valid time, the S1SP shall return a SMETS1 Response indicating 'invalid'.

18 Processing SMETS1 Service Requests – Device specific behaviour

18.1 Update Import Tariff (Primary Element) (SRV 1.1.1)

(a) Where the target SMETS1 ESME does not support a Standing Charge (with its SMETS1 meaning) with an accuracy of greater than hundred thousandths of Currency Units (with its SMETS1 meaning) per day, the S1SP shall, where the Service Request specifies a StandingChargeScale (with its DUIS meaning) of -6 or less, create a SMETS1 Response indicating failure.

(b) Where the target SMETS1 ESME does not support prices in a Tariff TOU Price Matrix or Tariff Block Price Matrix (with its SMETS1 meaning) with an accuracy of greater than hundred thousandths of Currency Units (with its SMETS1 meaning) per kWh, the S1SP shall, where the Service Request specifies a PriceScale (with its DUIS meaning) of -6 or less, create a SMETS1 Response indicating failure.

(c) Where the target SMETS1 ESME does not support a Standing Charge (with its SMETS1 meaning) with an accuracy of greater than ten thousandths of Currency Units (with its SMETS1 meaning) per day and the StandingChargeScale (with its DUIS meaning) specified is -5, the S1SP shall round the Standing Charge value (with its SMETS1 meaning) down to whole numbers of ten thousandths of Currency Units (with its SMETS1 meaning) per day.

(d) Where the target SMETS1 ESME does not support a PriceScale (with its DUIS meaning) at a resolution greater than ten thousandths of Currency Units (with its SMETS1 meaning) per kWh and the PriceScale (with its DUIS meaning) specified is -5, the S1SP shall round down the value of all prices in the Service Request to whole numbers of ten thousandths of Currency Units (with its SMETS1 meaning) per kWh.

(e) Where the SMETS1 ESME or SMETS1 GSME does not support StandingCharge (with its DUIS meaning) that is larger than 32767 and the StandingCharge (with its DUIS meaning) is greater than this value, the S1SP shall repeatedly divide the value by 10 and increase the associated scale by 1 until the resulting value can be stored on the Device. The stored value shall be rounded down to the nearest integer if the value to store is no longer an integer after rescaling.

(f) Where the SMETS1 ESME or SMETS1 GSME does not support prices in the TariffTOUPriceMatrix or TariffBlockPriceMatrix (with their DUIS meanings) that are larger than 32767 and any of the values in TariffTOUPriceMatrix or TariffBlockPriceMatrix (with their DUIS meanings) is greater than this value, the S1SP shall repeatedly divide all the values by 10 and increase the associated scale by 1 until the all the resulting values can be stored on the device. The stored values shall be rounded down to the nearest integer if the values to store are no longer integers after rescaling.

(g) Where the target SMETS1 ESME does not support simultaneous setting of Tariff Type (with its SMETS1 meaning) of 'Time-of-use' and 'Time-of-use with Block' and where HybridTariff (with its DUIS meaning) is specified, the S1SP shall create a SMETS1 Response indicating failure.

(h) Where the target SMETS1 GSME does not support more than two seasons in the Tariff Switching Table (with its SMETS1 meaning) and GasSeasons (with its DUIS meaning) specifies three seasons, the S1SP shall create a SMETS1 Response indicating failure.

(i) Where the target SMETS1 GSME does not support the equivalent of wildcards in the SeasonStartDate fields or the Date field in a GasSpecialDay fields (with their DUIS meanings), the S1SP shall, where the Service Request specifies such wildcards, create a SMETS1 Response indicating failure.

(j) Where the Service Request specifies a StandingCharge (with its DUIS meaning) greater than 32767 millipence and the target SMETS1 GSME does not support such a value, the S1SP shall create a SMETS1 Response indicating failure.

(k) Where the SMETS1 ESME is capable of switching an Auxiliary Load Control Switch (with its SMETS2 meaning) Where the SMETS1 ESME is capable of switching an Auxiliary Load Control Switch (with its SMETS2 meaning) according to a schedule that may only be configured in conjunction with the configuration of the Tariff Switching Table (with its SMETS1 meaning); and

(i) where TOUTariff (with its DUIS meaning) is present in the Service Request;

(ii) where all DayProfile (with its DUIS meaning) elements reference the same two TOUPrice (with its DUIS meaning) indices and no others;

(iii) those two TOUPrice's (with its DUIS meaning) values differ; and

(iv) where the Year of a Season StartDate (with their DUIS meanings) is given as a wildcard

then the S1SP shall configure the ESME to have the effect that, the Auxiliary Load Control Switch is, for the applicable DayProfile(s), closed at the StartTime(s) that reference the TOUPrice with the lowest value and is open at the StartTime(s) that reference the TOUPrice with the highest value (all with their DUIS meanings). Where conditions (i), (ii) and (iii) are not met, then the S1SP shall configure the ESME to have the effect that the state of the Auxiliary Load Control Switch is open at all times.

(l) Where the SMETS1 ESME is capable of switching an Auxiliary Load Control Switch (with its SMETS2 meaning) according to a schedule that may only be configured in conjunction with the configuration of the Tariff Switching Table (with its SMETS1 meaning); and

(i) where TOUTariff (with its DUIS meaning) is present in the Service Request;

(ii) where all DayProfile (with its DUIS meaning) elements reference the same two TOUPrice (with its DUIS meaning) indices and no others; and

(iii) those two TOUPrice's (with its DUIS meaning) values differ;

then the S1SP shall configure the ESME to have the effect that, the Auxiliary Load Control Switch is, for the applicable DayProfile(s), closed at the StartTime(s) that reference the TOUPrice with the lowest value and is open at the StartTime(s) that reference the TOUPrice with the highest value (all with their DUIS meanings). Where conditions (i), (ii) and (iii) are not met, then the S1SP shall configure the ESME to have the effect that the state of the Auxiliary Load Control Switch is open at all times.

(m) Where the target SMETS1 ESME does not support the setting of a tariff where:

(i) the SeasonStartDate has a SpecifiedYear;

(ii) the SeasonStartDate has a NonSpecifiedMonth;

(iii) the SeasonStartDate has a NonSpecifiedDayofMonth, or a LastDayofMonth or a SecondLastDayofMonth;

(iv) the SeasonStartDate has a SpecifiedDayofWeek;

(v) any of the SpecialDays has a NonSpecifiedDayofMonth, or a LastDayofMonth or a SecondLastDayofMonth;

(vi) any of the SpecialDays has a NonSpecifiedMonth;

(vii) any of the SpecialDays hasa SpecifiedDayofWeek;

(viii) the earliest StartTime (with its DUIS meaning) in each DayProfile (with its DUIS meaning) is other than midnight (UTC);

(ix) where any of the StartTimes (with their DUIS meanings) are not the start of minutes 00 or 30 in any hour or

(x) the order of the XML elements within the Seasons XML element is other than in ascending order of the SeasonStartDate (with their DUIS meanings)

then the S1SP shall, where it receives a Service Request that does not meet these criteria, create a SMETS1 Response indicating failure.

(n) Where the target SMETS1 GSME does not support the setting of a tariff where:

(i) the SeasonStartDate has a SpecifiedYear;

(ii) the SeasonStartDate has a NonSpecifiedMonth;

(iii) the SeasonStartDate has a NonSpecifiedDayofMonth;

(iv) the SeasonStartDate has a SpecifiedDayofWeek;

(v) any of the SpecialDays has a NonSpecifiedDayofMonth;

(vi) any of the SpecialDays has a NonSpecifiedMonth;

(vii) any of the SpecialDays has a SpecifiedDayofWeek;

(viii) the order of the XML elements within the Seasons XML element is other than in ascending order of the SeasonStartDate (with their DUIS meanings)

then the S1SP shall, where it receives a Service Request that does not meet these criteria, create a SMETS1 Response indicating failure.

(o) Where the target SMETS1 ESME does not support the setting of a tariff where:

(i) the SeasonStartDate has a SpecifiedYear;

(ii) the SeasonStartDate has a SpecifiedDayofWeek;

then the S1SP shall discard any SpecifiedYear or SpecifiedDayofWeek values (with their DUIS meanings) and configure the Device as if those values were NonSpecifiedYear or NonSpecifiedDayofWeek.

(p) For such SMETS1 ESME, the S1SP shall set any prices, not specified in whichever of BlockTariff or TOUTariff (with their DUIS meanings) is present in the Service Request, to zero in its instructions to the Device.

(q) For such SMETS1 GSME, the S1SP shall, where BlockTariff (with its DUIS meaning) is present in the Service Request, set any prices, not specified in the Service Request, to zero in its instructions to the Device.

(r) Where the target SMETS1 GSME does not support the setting of a tariff where:

(i) the SeasonStartDate has a NonSpecifiedYear;

(ii) SeasonStartDate has a NonSpecifiedMonth;

(iii) the SeasonStartDate has a NonSpecifiedDayOfMonth;

then the S1SP shall, where it receives a Service Request that does not meet these criteria, create a SMETS1 Response indicating failure.

(s) Where the StandingChargeScale is different to the PriceScale (with their DUIS meanings) and the SMETS1 ESME does not correctly share that difference with HAN Devices then any HAN Device will incorrectly display the Standing Charge (with its SMETS1 meaning).

(t) Where the target SMETS1 ESME stores the Tariff Switching Table and the Non-Disablement Calendar (with their SMETS1 meanings) as one object whose capacity would be breached if the SwitchingTable (with its DUIS meaning) in the Service Request were to be stored, the S1SP shall create a SMETS1 Response indicating failure. This failure state may be resolved by resetting the Non-Disablement Calendar (with its SMETS1 meaning) as specified in clause 18.5(dd).

(u) Where a SpecifiedDayofWeek is not supported by the target SMETS1 GSME the S1SP shall set a NonSpecifiedDayOfWeek in all SeasonStartDates and SpecialDay elements, where either a SpecifiedDayOfWeek or a NonSpecifiedDayOfWeek (with their DUIS meanings) is specified in the Service Request.

(v) Not Used.

(w) Where, during the period of British Summer Time the target SMETS1 ESME is configured so that each StartTime (with its DUIS meaning) is one hour earlier than that specified in the Service Request, the switches between Tariff Registers (with its SMETS1 meaning) will be one hour earlier than specified in the Service Request.

(x) Where the PriceScale (with its DUIS meaning) is different to any configured Debt Recover Rates [1..2] scale (with its SMETS1 meaning) and the SMETS1 ESME does not correctly share that difference with HAN Devices, then any HAN Device will incorrectly display any of the Debt Recovery Rates [1..2] (with its SMETS1 meaning) where there is a difference.

(y) Where the PriceScale (with its DUIS meanings) is set to a value other than -5 and the SMETS1 ESME does not correctly share financial information with HAN Devices in such situations then, any HAN Device will incorrectly display Meter Balance, Time Debt Register[1...2], Payment Debt Register, Emergency Credit Balance, Emergency Credit Limit, Accumulated Debt and Emergency Credit Threshold (with their SMETS1 meanings).

(z) For such SMETS1 ESME, where:

(i) the Service Request only contains TOUPrices with an Index less than or equal to 15 then the S1SP shall set TOUPrice with Index 1 to 15, not specified in the TOUTariff (with their DUIS meanings), to zero in its instructions to the Device; or

(ii) the Service Request contains TOUPrices with an Index greater than 15 then the S1SP shall set TOUPrice with Index 1 to 48, not specified in the TOUTariff (with their DUIS meanings) to zero in its instructions to the Device and any HAN Device may incorrectly display any information.

(aa) Where the PriceScale (with its DUIS meanings) is set to a value other than -5 or the StandingCharge is set to a value other than -4 and the SMETS1 ESME does not correctly share financial information with HAN Devices in such situations then, any HAN Device will incorrectly display Meter Balance, Time Debt Register[1...2], Payment Debt Register, Emergency Credit Balance, Emergency Credit Limit, Accumulated Debt and Emergency Credit Threshold (with their SMETS1 meanings).

(bb) Where the target SMETS1 ESME does not accept non-zero Thresholds (with its DUIS meaning) when being configured to use Time-of-use Pricing (with its SMETS meaning); and

(i) The Thresholds (with its DUIS meaning) provided in the Service Request are non-zero, then the S1SP shall send a SMETS1 Response indicating failure; or

(ii) The Thresholds are not provided in the Service Request, then the S1SP shall configure the Device to apply zero to all Thresholds (with their DUIS meanings)

(cc) Where the target SMETS1 ESME does not support the setting of a tariff where:

(i) the SeasonStartDate has a NonSpecifiedMonth;

(ii) the SeasonStartDate has a NonSpecifiedDayofWeek;

(with their DUIS meanings) then the S1SP shall create a SMETS1 response indicating failure.

(dd) Where the target SMETS1 ESME does not support the setting of a tariff where any SpecialDays has a SpecifiedDayOfWeek then the S1SP will replace any SpecifiedDayOfWeek with a NonSpecifiedDayOfWeek when configuring the Device.

18.2 **Update Price (Primary Element) (SRV 1.2.1)**

(a) The provision of Clauses 18.1(a) to 18.1(j), 18.1(p), 18.1(q), 18.1(s) and 18.1(x) apply to this Service Request.

(b) Where the SMETS1 ESME or SMETS1 GSME does not reliably process instructions from an ‘Update Price (Primary Element)’ Service Request unless it has previously successfully processed instructions from an ‘Update Tariff (Primary Element)’ Service Request, the Device may, if no such prior ‘Update Tariff (Primary Element)’ Service Request has been processed, reject the Service Request leading to a SMETS1 Response indicating failure.

(c) For such SMETS1 ESME, where:

(i) the Service Request contains TOUPrices with an Index greater than 15 and the Device is currently configured with TOUPrices with Indices between 1 and 15, then the S1SP shall send a SMETS1 Response indicating failure; or

(ii) the Service Request contains TOUPrices with an Index less than or equal to 15 and the Device is currently configured with TOUPrices with Indices greater than 15, then the S1SP shall send a SMETS1 Response indicating failure.

18.3 Update Meter Balance (SRV 1.5)

(a) Where the target SMETS1 ESME or SMETS1 GSME does not support Adjust Meter Balance when Payment Mode is Credit Mode and the Device is in Credit Mode (with their SMETS meanings), the S1SP shall return a SMETS1 Response indicating failure.

(b) Where the target SMETS1 ESME or SMETS1 GSME has no function to ResetMeterBalance (with its DUIS meaning) in Credit Mode and the Payment Mode (with its SMETS1 meaning) is Credit and the Service Request specifies a ResetMeterBalance (with its DUIS meaning) the S1SP shall create a SMETS1 Response indicating failure.

(c) Where the target SMETS1 ESME or SMETS1 GSME may apply Payment based Debt Recovery (with its SMETS1 meaning) when a positive adjustment is made to the Meter Balance, the increase in the Meter Balance resulting from this Service Request may be correspondingly less than the adjustment specified.

(d) Where the target SMETS1 ESME or SMETS1 GSME does not support negative adjustments to the ESME Meter Balance/ GSME PrepaymentMode Meter Balance (with their DUIS and SMETS1 meanings) if the result of applying those adjustments would have been either to change the Meter Balance from a negative value to a more negative value or from a non-negative value to a negative value, then the S1SP shall create a SMETS1 Response indicating failure should such a Service Request be received.

(e) Where the target SMETS1 ESME or SMETS1 GSME processes a positive adjustment to the GSME PrepaymentMode Meter Balance (with their

DUIS and SMETS1 meanings) then the Device will, in addition to adjusting the Meter Balance (with its SMETS1 meaning), first apply that adjustment to the Accumulated Debt Register if it is greater than zero, second, if the accumulated Debt Register is zero, or is reduced to zero, apply any remaining adjustment to the Emergency Credit Balance until it reaches the Emergency Credit Limit.

(f) Where the SMETS1 GSME does not support the setting of Meter Balance (with its SMETS1 meaning) to greater than £20,000 then the S1SP shall, where it receives a Service Request that would result in a Meter Balance of greater than £20,000, return a SMETS1 Response indicating failure.

(g) The target SMETS1 ESME and SMETS1 GSME applies the adjustment in the following order:

(i) recovery of Payment-based Debt of an amount defined by Debt Recovery per Payment from the Payment Debt Register subject to the Debt Recovery Rate Cap;

(ii) recovery of debt accumulated in the Accumulated Debt Register;

(iii) increasing the meter balance until it reaches the non-disablement threshold;

(iv) repayment of Emergency Credit activated and used by Consumer; and

(v) adding remaining credit (the credit after deduction of i, ii, iii and iv above) to the Meter Balance.

(h) Where the target SMETS1 ESME does not support a zero value for AdjustMeterValue (with its DUIS meaning) then where such a Service Request is received, the S1SP shall create a SMETS1 Response indicating failure.

18.4 **<u>Update Payment Mode (SRV 1.6)</u>**

(a) When the S1SP changes Payment Mode (with its SMETS1 meaning) to Credit Mode, the SMETS1 ESME or SMETS1 GSME resets Meter Balance, Emergency Credit Balance, Emergency Credit Limit, Emergency Credit Threshold, Debt Recovery Rates [1 … 2] and Debt Recovery Per Payment (with their SMETS1 meanings).

(b) When the S1SP changes Payment Mode (with its SMETS1 meaning) to Prepayment, the SMETS1 ESME or GSME automatically activates Emergency Credit (with its SMETS1 meaning) if the Emergency Credit Limit (with its SMETS1 meaning) is greater than zero.

(c) When the S1SP changes Payment Mode (with its SMETS1 meaning) to Prepayment and no Emergency Credit Limit (with its SMETS1 meaning) has been set by way of a successful 'Update Prepayment Configuration (SRV 2.1)' more recently than the most recent Payment Mode (with its SMETS1 meaning) to change, an Emergency Credit Limit (with its SMETS1 meaning) of £5 shall apply on the Device.

(d) On a change of Payment Mode (with its SMETS1 meaning) the target SMETS1 ESME or SMETS1 GSME resets the Non-Disablement Calendar (with its SMETS1 meaning) to a factory default which is no Non-Disablement periods.

(e) Where the target SMETS1 ESME or SMETS1 GSME does not support positive values for the Disablement Threshold (with its SMETS1 meaning) and the DisablementThreshold value in the Service Request is positive (with their DUIS meanings), the S1SP shall create a SMETS1 Response indicating failure. For clarity, the S1SP shall undertake no further processing of the Service Request.

(f) Where the target SMETS1 ESME does not support the setting of the Disablement Threshold (with its SMETS1 meaning), the S1SP shall discard the value in DisablementThreshold when processing the Service Request. For clarity, the S1SP shall create a SMETS1 Response indicating success where all other processing succeeds and the SMETS1 ESME will continue to have the default Disablement Threshold (with its SMETS1 meaning) of zero.

(g) Where the target SMETS1 GSME does not support the setting of Suspend Debt Emergency (with its SMETS1 meaning) to be active and the value of SuspendDebtEmergency (with its DUIS meaning) is 'true' in the Service Request, the S1SP shall create a SMETS1 Response indicating failure. For clarity, the S1SP shall undertake no further processing of the Service Request.

(h) The S1SP shall read the Payment Mode (with its SMETS1 meaning) of the Device identified by the BusinessTargetID (with its DUIS meaning) and, where that is consistent with the PaymentMode (with its DUIS meaning), the S1SP shall create a SMETS1 Response indicating 'success', shall not send any instruction to the Device and shall ignore SuspendDebtEmergency, SuspendDebtDisabled and DisablementThreshold (with their DUIS meaning).

(i) Where the target SMETS1 GSME or SMETS1 ESME does not action the setting of Suspend Debt Disabled (with its SMETS1 meaning) to be active and the value of SuspendDebtDisabled (with its DUIS meaning) is 'true' in the Service Request, the S1SP shall configure the Device but the Device will continue with Time-based Debt Recovery.

(j) Where the target SMETS1 GSME or SMETS1 ESME does not collect Standing Charge when Suspend Debt Emergency (with its SMETS1 meaning) is active and the value of SuspendDebtEmergency (with its DUIS meaning) is 'true' in the Service Request, the S1SP shall configure the Device so that the Device does not collect Standing Charge.

(k) Where the SMETS1 ESME or the SMETS1 GSME supports the setting of DisablementThreshold (with its DUIS meaning) to a whole number of pence, the S1SP shall round up the value of DisablementThreshold (with its MMC meaning) to the nearest whole number of pence and instruct the device to apply the resulting value.

(l) When the S1SP changes Payment Mode (with its SMETS1 meaning) from Credit to Prepayment, the SMETS1 ESME or GSME will be configured with a NonDisablementCalendar (with its SMETS1 meaning) such that disablement of supply is suspended between 20:00 and 08:00 UTC on weekdays and all day on weekends.

(m) When the S1SP changes Payment Mode (with its SMETS1 meaning) from Credit to Prepayment, the SMETS1 ESME / GSME will reset the Meter Balance / PrepaymentMode Meter Balance (with its SMETS1 and DUIS meanings) respectively to zero.

(n) When the S1SP changes Payment Mode (with its SMETS1 meaning) from Credit to Prepayment, the SMETS1 ESME or GSME will be configured with an Emergency Credit Limit (with its SMETS1 meaning) of £10.

(o) When the S1SP changes Payment Mode (with its SMETS1 meaning) from Credit to Prepayment, the SMETS1 ESME or GSME will be configured with an Emergency Credit Threshold (with its SMETS1 meaning) of £1.

(p) When the S1SP changes Payment Mode (with its SMETS1 meaning) from Credit to Prepayment, the SMETS1 ESME or GSME will automatically activate Emergency Credit (with its SMETS1 meaning) if the Supply would have disabled due to insufficient credit.

(q) When the S1SP changes Payment Mode (with its SMETS1 meaning) from Credit to Prepayment, the SMETS1 ESME or GSME will be configured with a Maximum Meter Balance Threshold (with its SMETS2 meaning) of £1000.

(r) When the S1SP changes Payment Mode (with its SMETS1 meaning) from Credit to Prepayment, the SMETS1 ESME or GSME will be configured with a Maximum Credit Threshold (with its SMETS2 meaning) of £500.

(s) Where the target SMETS1 GSME or SMETS1 ESME does not suspend the collection of Time-based Debts (with its SMETS1 meaning) when SuspendDebtEmergency is set to true (with its DUIS meaning) then the Device shall, when Emergency Credit is activated (with its SMETS1 meaning) and SuspendDebtEmergency is set to true (with its DUIS meaning), collect any Time-based Debts from the Accumulated Debt Register (with their SMETS1 meanings).

(t) When setting Payment Mode to Prepayment Mode, regardless of whether the Device is currently in Credit Mode or Prepayment Mode, the target SMETS1 GSME:

(i) sets the Emergency Credit Balance to twice the Emergency Credit Limit and activates Emergency Credit, regardless of whether Emergency Credit is currently activated, or any Emergency Credit has been used thereby clearing any Emergency Credit that has been used (with their SMETS1 meanings). For clarity, any successful activation of Emergency Credit resulting from an Activate Emergency Credit (with its SMETS1 meanings) will set the Emergency Credit Balance to the Emergency Credit Limit; and

(ii) sets the Meter Balance, Payment Debt Register, Time Debt Registers [1 … 2] and the Accumulated Debt Register (with their SMETS1 meanings) to zero.

(u) Where the target SMETS1 GSME does not support positive values for the Disablement Threshold (with its SMETS1 meaning) and the DisablementThreshold value in the Service Request is positive (with their DUIS meanings), the S1SP shall create a SMETS1 Response indicating failure. For clarity, the S1SP shall undertake no further processing of the Service Request.

(v) When setting Payment Mode to Prepayment Mode, regardless of whether the Device is currently in Credit Mode or Prepayment Mode, the target

SMETS1 ESME:

(i) sets the Emergency Credit Limit to £5, or some other value that may have been set on the ESME prior to the ESME’s DateCommissioned (with its DUIS meaning), and sets the Emergency Credit Balance to twice that Emergency Credit Limit and activates Emergency Credit, regardless of whether Emergency Credit is currently activated, or any Emergency Credit has been used thereby clearing any Emergency Credit that has been used (with their SMETS1 meanings). For clarity, any successful activation of Emergency Credit resulting from an Activate Emergency Credit (with its SMETS1 meanings) will set the Emergency Credit Balance to the current Emergency Credit Limit; and

(ii) sets the Meter Balance, Payment Debt Register, Time Debt Registers [1 … 2] and the Accumulated Debt Register (with their SMETS1 meanings) to zero.

(w) When the S1SP changes Payment Mode (with its SMETS1 meaning) from Credit Mode to Prepayment Mode, the SMETS1 ESME or SMETS1 GSME resets the Accumulated Debt Register (with their SMETS1 meanings).

(x) When the S1SP changes Payment Mode (with its SMETS1 meaning) from Prepayment Mode to Prepayment Mode, the SMETS1 ESME does not reset the Accumulated Debt Register, the Emergency Credit Balance or the Meter Balance (with their SMETS1 meanings).

18.5 **Update Prepayment Configuration (SRV 2.1)**

(a) Where the target SMETS1 ESME or SMETS1 GSME does not support the update of Debt Recovery Rate Cap (with its SMETS1 meaning) when in Prepayment Mode (with its SMETS1 meaning) the S1SP shall ignore DebtRecoveryRateCap (with its DUIS meaning) if the Device is already in Prepayment Mode (with its SMETS1 meaning) and return a SMETS1 Response indicating success.

(b) Where the target SMETS1 ESME or SMETS1 GSME does not support the update of Debt Recovery Rate Cap (with its SMETS1 meaning) when in Credit Mode (with its SMETS1 meaning) the S1SP shall ignore DebtRecoveryRateCap (with its DUIS meaning) if the Device is in Credit Mode (with its SMETS1 meaning) and return a SMETS1 Response indicating success.

(c) Where the target SMETS1 ESME or SMETS1 GSME does not support the update of Low Credit Threshold (with its SMETS1 meaning) when in Prepayment Mode (with its SMETS1 meaning) the S1SP shall ignore LowCreditThreshold (with its DUIS meaning) if the Device is already in Prepayment Mode (with its SMETS1 meaning) and return a SMETS1 Response indicating success.

(d) Where the target SMETS1 ESME does not support StartDate and EndDate (with their DUIS meanings) for seasons and a StartDate (with its DUIS meaning) is specified that is in the future or an EndDate (with its DUIS meaning) is specified which is other than ‘3000-12-31T00:00:00Z’, the S1SP shall create a SMETS1 Response indicating failure.

(e) Where the target SMETS1 ESME does not support Special Days in a Non-Disablement Calendar (with their SMETS2 meanings) that do not specify all-day non-disablement and the Service Request specifies a SpecialDay (with its DUIS meaning) relating to a ElectricityNonDisablementSchedule (with its DUIS meaning) that has anything other than one SwitchTime (with its DUIS meaning) at midnight with a NonDisablementScript (with its DUIS meaning) set to START, the S1SP shall create a SMETS1 Response indicating failure.

(f) Where the target SMETS1 ESME only supports one Day Profile in a Non-Disablement Calendar (with its SMETS2 meaning) which has more than one period in it and the Service Request specifies an ElectricityNonDisablementSchedule (with its DUIS meaning) and DayOfWeekApplicability (with its DUIS meaning) that mandates more than one Day Profile that is set to not disable all day or has more than one period in it, the S1SP shall create a SMETS1 Response indicating failure.

(g) Where the target SMETS1 ESME or SMETS1 GSME does not have the capacity to store the Non-Disablement Calendar (with its SMETS meaning) requested, the S1SP shall create a SMETS1 Response indicating failure.

(h) For a target SMETS1 ESME or SMETS1 GSME, if the Service Request does not specify at least one NonDisablementScript with its DUIS meaning) that should apply on each day between the earliest StartDate and latest EndDate (with their DUIS meanings), the S1SP shall create a SMETS1 Response indicating failure.

(i) For a target SMETS1 GSME, if the Service Request does not specify at least one TimeStartAction (with its DUIS meaning) that should apply on each day after the earliest SeasonStartDate (with its DUIS meaning) as defined by the Service Request, the S1SP shall create a SMETS1 Response indicating failure.

(j) Where the target SMETS1 ESME does not support the equivalent of wildcards in the date in the ElecSpecialDayPrepayment fields (with its DUIS meaning) and the Service Request contains such wildcards, the S1SP shall create a SMETS1 Response indicating failure.

(k) Where the target SMETS1 GSME does not support the equivalent of wildcards in the SeasonStartDate fields or the date in the GasSpecialDayNonDisablement fields (with their DUIS meanings) and the Service Request contains such wildcards, the S1SP shall create a SMETS1 Response indicating failure.

(l) For a SMETS1 ESME that requires the check below to be successfully passed before it can process the instruction and the Service Request fails the check, the S1SP shall not action the Service Request and shall send a SMETS1 Response indicating failure. The check to be applied is:

1. Create an ordered list of all StartDates in the ElectricityNonDisablementCalendar

2. For each SpecialDayApplicability in each ElectricityNonDisablementSchedule, confirm that the date associated with that SpecialDayID (ignoring any years specified in that date) is:

   a) on or after the StartDate in that ElectricityNonDisablementSchedule (ignoring any years specified in that date) and

   b) is before the next subsequent StartDate (ignoring any years specified in that date) in the list created at step 1.

(m) Where the target SMETS1 ESME or SMETS1 GSME only supports setting of a MaxMeterBalance which is greater than the MaxCreditThreshold (with their DUIS meanings) the S1SP shall, where the Service Request does not meet these criteria, create a SMETS1 Response indicating failure.

(n) Where the target SMETS1 GSME only supports Debt Recovery Rate Cap (with its SMETS1 meaning) in whole numbers of pence, the S1SP shall round down the value in the DebtRecoveryRateCap (with its DUIS meaning), to the nearest whole pence and set the value of the Debt Recovery Rate Cap (with its SMETS1 meaning) to the value so calculated.

(o) Where the target SMETS1 ESME or the target SMETS1 GSME does not support this Service Request whilst operating in Credit Mode (with its SMETS1 meaning) and the Service Request is received whilst the device is operating in Credit Mode (with its SMETS1 meaning), the S1SP shall create a SMETS1 Response indicating failure.

(p) For SMETS1 ESME that can only support an ElectricityNonDisablementCalendar where:

(q) there are ElectricityNonDisablementSchedules, which in aggregate, are applicable to all seven days of the week;

(r) for every day covered by the ElectricityNonDisablementCalendar, there is an ElectricityNonDisablementSchedule with a ScheduleDatesAndTime where the time is midnight UTC; and

(s) in all days covered by the ElectricityNonDisablementCalendar there are at most three NonDisablementScripts that would apply during that day

(i) all SwitchTimes in ScheduleDatesAndTime of ElectricityNonDisablementSchedule are on the hour or half-hour.

(t) (with their DUIS meanings) and the Service Request does not meet all these criteria, the S1SP shall not action the Service Request and shall send a SMETS1 Response indicating failure.

(u) For SMETS1 ESME that do not support EndDates in ScheduleDatesAndTimes and do not support specified years in the StartDates of ScheduleDatesAndTimes, the S1SP shall instruct the ESME with a configuration where:

(i) the StartDate from each ScheduleDatesAndTime is treated as if there were a wildcard in the year of the StartDate; and

(ii) the EndDate in the Service Request is ignored, with the ESME treating the StartDate of each ScheduleDatesAndTime as ending the validity period of any ScheduleDatesAndTime with an earlier StartDate.

(v) Where the target SMETS1 ESME does not fully support StartDate and EndDate (with their DUIS meanings) and a StartDate (with its DUIS meaning) is specified where the year is other than ‘3000’ or an EndDate (with its DUIS meaning) is specified which is other than ‘3000-12-31’, the S1SP shall create a SMETS1 Response indicating failure.

(w) For SMETS1 ESME that can only support an ElectricityNonDisablementCalendar (with its DUIS meaning) where, in ElectricitySpecialDays, all SpecialDays, have a SpecifiedMonth, a SpecifiedDayOfMonth, and a NonSpecifiedDayOfWeek (with their DUIS meanings) and the Service Request does not meet this criteria, the S1SP shall not action the Service Request and shall send a SMETS1 Response indicating failure.

(x) For SMETS1 GSME that can only support a GasNonDisablementCalendar where:

(i) all StartTimes in all GasNonDisablementTimeStartActions are on the hour or half-hour;

(ii) the SeasonStartDate, has a NonSpecifiedYear, a SpecifiedMonth, a SpecifiedDayOfMonth and a NonSpecifiedDayOfWeek;

(iii) in all GasNonDisablementDayProfiles there are at most three NonDisablementAction elements;

(iv) all SpecialDays, have a SpecifiedMonth, a SpecifiedDayOfMonth and a NonSpecifiedDayOfWeek

(v) in each GasNonDisablementDayProfile there must be a GasNonDisablementTimeStartAction with a StartTime where the time is midnight UTC.

(with their DUIS meanings) and the Service Request does not meet all of these criteria, the S1SP shall not action the Service Request and shall send a SMETS1 Response indicating failure.

(y) Where the target SMETS1 ESME or SMETS1 GSME does not support a LowCreditThreshold which is less than the EmergencyCreditThreshold (with their DUIS meanings) then the S1SP shall create a SMETS1 Response indicating failure should such a Service Request be received.

(z) Where the target SMETS1 ESME or SMETS1 GSME does not support an EmergencyCreditThreshold when EmergencyCreditLimit is specified as zero, then the S1SP shall, where the EmergencyCreditLimit is zero, ignore the EmergencyCreditThreshold (with their DUIS meanings) but shall continue processing all other parts of the Service Request.

(aa) Where the target SMETS1 ESME or SMETS1 GSME only supports EmergencyCreditLimit, EmergencyCreditThreshold, LowCreditThreshold, MaxMeterBalance and MaxCreditThreshold (with their DUIS meanings) in whole numbers of pence, the S1SP shall round down all such values in the Service Request, to the nearest whole pence and configure the Device accordingly.

(bb) Where the target SMETS1 ESME does not support specified years in either StartDates or EndDates (with their DUIS meanings), the S1SP shall convert the year value in StartDate and EndDate as if they were wildcards and configure the Device accordingly.

(cc) Where the target SMETS1 ESME stores the Tariff Switching Table and the Non-Disablement Calendar (with their SMETS1 meanings) as one object whose capacity would be breached if the ElectricityNonDisablementCalendar (with its DUIS meaning) in the Service Request were to be stored, the S1SP shall create a SMETS1 Response indicating failure.

(dd) Where the target SMETS1 ESME stores the Tariff Switching Table and the Non-Disablement Calendar (with their SMETS1 meanings) as one object, merging failures with the Tariff Switching Table (with its SMETS1 meaning) may be resolved by submitting an Update Prepay Configuration Service Request with a single NonDisablementSchedule with:

(i) a NonDisablementScript with a value of “STOP”; and

(ii) a DayOf WeekID for all of:

(A) Monday

(B) Tuesday

(C) Wednesday

(D) Thursday

(E) Friday

(F) Saturday

(G) Sunday; and

(iii) a StartDate of 1st of January in any year and an EndDate of 31st of December in that same year; and

(iv) a SwitchTime of 00:00:00Z

(ee) Where the target SMETS1 GSME does not support different values for EmergencyCreditThreshold and LowCreditThreshold then the S1SP shall create a SMETS Response indicating failure should such a Service Request be received.

(ff) Where the target SMETS1 GSME does not support a DebtRecoveryRateCap (with its DUIS meaning) of greater than £99 per week, then the S1SP shall return a SMETS1 Response indicating failure should such a Service Request be received.

(gg) Where, during the period of British Summer Time the target SMETS1 ESME or SMETS1 GSME is configured so that each SwitchTime (with its DUIS meaning) is one hour earlier than that specified in the Service Request, the switches between periods in which Disablement of Supply is suspended (with its SMETS1 meaning) will be one hour earlier than specified in the Service Request.

(hh) The provisions of Clause 18.1(r) apply to this service request.

(ii) Not Used.

(jj) Where the target SMETS1 ESME successfully processes the Instructions arising from this Service Request, the Device will immediately create a BillingDataLog entry which would be returned as a result of a subsequent Retrieve Change Of Mode / Tariff Triggered Billing Data Log (SRV 4.4.2) Service Request which covers the period of this processing.

(kk) Not Used.

(ll) Subject to clause 18.5(bb), and where the target SMETS1 ESME receives a Service Request with an ElectricityNonDisablementSchedule with an

EndDate of 31st December 3000 then the Device will be configured to continue indefinitely from the StartDate (with their DUIS meanings).

(mm) Where the target SMETS1 GSME does not support any StartTimes (with their DUIS meaning) to a resolution of seconds then the SMETS1 GSME will ignore any seconds that are specified, and the Device will be configured with 00 seconds.

18.6 **Top Up Device (SRV 2.2)**

(a) The target SMETS1 ESME and SMETS1 GSME applies the credit added in the following order:

(i) recovery of Payment-based Debt of an amount defined by Debt Recovery per Payment from the Payment Debt Register subject to the Debt Recovery Rate Cap;

(ii) recovery of debt accumulated in the Accumulated Debt Register;

(iii) increasing the meter balance until it reaches the non-disablement threshold;

(iv) repayment of Emergency Credit activated and used by Consumer; and

(v) adding remaining credit (the credit after deduction of i, ii, iii and iv above) to the Meter Balance.

(b) Where the target SMETS1 ESME or SMETS1 GSME only supports UTRN values (with its DUIS meaning) that represent positive integer multiples of 100, then the S1SP shall, where the Command Variant is 2 or 3, return a SMETS1 Alert indicating failure, unless the UTRN value provided represents a positive integer multiple of 100. For clarity, DUIS states in section 1.4.7.5 that “For SMETS1 Service Requests with a Command Variant value of 2 or 3, the UTRN data item shall contain a 20 digit string (each digit taking a value of 0-9) representing value in pence, using leading zeros as necessary to give a 20 digit length.”

18.7 **Update Debt (SRV 2.3)**

(a) Where the target SMETS1 ESME or SMETS1 GSME only supports update of the recovery period for Debt Recovery Rates 1 and 2 (with their

SMETS1 meanings) when in Credit Mode (with its SMETS1 meaning) the S1SP shall ignore DebtRecoveryRatePeriod (with its DUIS meaning) if the Device is already in Prepayment Mode (with its SMETS1 meaning) and return a SMETS1 Response indicating success.

(b) Where the target SMETS1 ESME or SMETS1 GSME does not support the update of Debt Recovery Per Payment (with its SMETS1 meaning) when in Prepayment Mode (with its SMETS1 meaning) the S1SP shall ignore DebtRecoveryPerPayment (with its DUIS meaning) if the Device is already in Prepayment Mode (with its SMETS1 meaning) and return a SMETS1 Response indicating success.

(c) Where the target SMETS1 ESME or SMETS1 GSME only supports daily Debt Recovery Rates 1 and 2 (with their SMETS1 meanings) the S1SP shall ignore DebtRecoveryRatePeriod (with its DUIS meaning) if it has a value other than DAILY (with its DUIS meaning) and return a SMETS1 Response indicating success.

(d) Where the target SMETS1 ESME does not support Debt Recovery Rate 1 or 2 (with their SMETS1 meaning) with an accuracy of greater than hundred thousandths of Currency Units per day, the S1SP shall, where the Service Request specifies a DebtRecoveryRatePriceScale (with its DUIS meaning) of -6 or less, return a SMETS1 Response indicating failure.

(e) Where the target SMETS1 ESME does not support a Debt Recovery Rate 1 or 2 (with their SMETS1 meanings) at a resolution greater than ten thousandths of Currency Units per DebtRecoveryRatePeriod (with its DUIS meaning) and the DebtRecoveryRatePriceScale (with its DUIS meaning) specified is -5, the S1SP shall round the Debt Recovery Rate value (with its SMETS1 meaning) down to a whole number of ten thousandths of Currency Units (with its SMETS1 meaning) per DebtRecoveryRatePeriod (with its DUIS meaning).

(f) Where the target SMETS1 ESME or SMETS1 GSME only supports Debt Recovery per Payment (with its SMETS1 meaning) in whole numbers of percent, the S1SP shall divide the value in the DebtRecoveryPerPayment (with its DUIS meaning) by 100, round down to the nearest integer and set the value of the Debt Recovery per Payment (with its SMETS1 meaning) to the percentage so calculated.

(g) Where the target SMETS1 ESME or SMETS1 GSME does not support a DebtRecoveryRate (with its DUIS meaning) that is larger than 32767, the S1SP shall repeatedly divide the value of any such DebtRecoveryRate (with its DUIS meaning) by 10 and increase the associated scale by 1 until the resulting value can be stored on the device. The stored value shall be rounded down to the nearest integer if the value to store is no longer an integer after rescaling.

(h) Where the target SMETS1 ESME does not support a Time Debt Register 1 or 2 or Payment Debt Register (with their SMETS1 meanings) at a resolution greater than ten thousandths of Currency Units and given that the TimeDebtRegister1 or TimeDebtRegister2 or PaymentDebtRegister (with their DUIS meanings) are always specified at a resolution of hundreds of thousandths of Currency Units, the S1SP shall round the Time Debt Register 1 or 2 or Payment Debt Register value (with their SMETS1 meanings) down to a whole number of ten thousandths of Currency Units (with its SMETS1 meaning).

(i) Where the target SMETS1 ESME or SMETS1 GSME does not support setting of debt configuration when in Credit Mode (with its SMETS1 meaning) and the Device is in Credit Mode, the S1SP shall return a SMETS1 Response indicating failure.

(j) Where the target SMETS1 ESME does not support updating of debt values unless DebtRecoveryRatePriceScales are '-2', the S1SP shall, where the Service Request does not meet these criteria, return a SMETS1 Response indicating failure.

(k) Where the target SMETS1 ESME or SMETS1 GSME only supports daily Debt Recovery Rates 1 and 2 (with their SMETS1 meanings) and the DebtRecoveryRatePeriod (with its DUIS meaning) has a value other than DAILY (with its DUIS meaning), the S1SP shall return a SMETS1 Response indicating failure.

(l) Where the target SMETS1 ESME or SMETS1 GSME does not support a Time Debt Register 1 or 2 or Payment Debt Register (with their SMETS1 meanings) at a resolution greater than hundredths of Currency Units and given that the TimeDebtRegister1 or TimeDebtRegister2 or PaymentDebtRegister (with their DUIS meanings) are always specified at a resolution of hundreds of thousandths of Currency Units, the S1SP shall configure values which are the Time Debt Register 1 or 2 or Payment Debt Register value (with their SMETS1 meanings) the values specified, discarding the 3 least significant digits with the result being treated as a whole number of hundredths of Currency Units (with its SMETS1 meaning).

(m) Where the target SMETS1 GSME only supports Debt Recovery Rates (with their SMETS1 meaning) in whole numbers of pence, the S1SP shall round down the value in the DebtRecoveryRates (with their DUIS meaning), to the nearest whole pence and set the value of the Debt Recovery Rates (with its SMETS1 meaning) to the values so calculated.

(n) Where the target SMETS1 GSME requires that the DebtRecoveryRateCap (with its DUIS meaning) is set as part of this Service Request, and where the DebtRecoveryRateCap has not been previously set, then the S1SP shall set the DebtRecoveryRateCap to be £4.

(o) Where the target SMETS1 ESME successfully processes the Instructions arising from this Service Request, the Device will immediately create a BillingDataLog entry which would be returned as a result of a subsequent Retrieve Change Of Mode / Tariff Triggered Billing Data Log (SRV 4.4.2) Service Request which covers the period of this processing.

(p) Where any DebtRecoveryRatePriceScale (with its DUIS meaning) is different to the configured Tariff TOU Price Matrix / Tariff Block Price Matrix scale (with their SMETS1 meanings) and the SMETS1 ESME does not correctly share that difference with HAN Devices, then any HAN Device will incorrectly display any of the Debt Recovery Rates [1..2] where there is a difference (with its SMETS1 meaning).

(q) Whenever the S1SP processes this Service Request and any of the Debt Recovery Rates [1 … 2] or Debt Recovery per Payment (with their SMETS1 meanings) is set to 0, then SMETS1 GSME will not adjust the corresponding one of, or ones of, the Time Debt Register [1…2] or the Payment Debt Register (with their SMETS1 meanings) regardless of the contents of the SMETS1 Response.

18.8 <u>**Activate Emergency Credit (SRV 2.5)**</u>

(a) Where the SMETS1 ESME or SMETS1 GSME does not differentiate between the reasons for failure to activate Emergency Credit (with its SMETS1 meaning) then the S1SP shall return a SMETS1 Response indicating failure where the Device has indicated failure. This may indicate either that Emergency Credit (with its SMETS1 meaning) is not available for activation or is already activated.

(b) Where the SMETS1 ESME or SMETS1 GSME successfully actions the Instructions resulting from such a Service Request, the amount of Emergency Credit made available on the Device will be the Emergency Credit Limit less any amount that the Meter Balance is below the Disablement Threshold (with its SMETS1 meanings).

18.9 <u>Restrict Access for Change Of Tenancy(SRV 3.2)</u>

(a) Whenever the S1SP processes this Service Request and the meter Payment Mode (with its SMETS1 meaning) is Prepayment Mode, the SMETS1 ESME will set the Meter Balance and Emergency Credit Balance (with their SMETS1 meanings) operational data values to zero. The ESME will not invoke the current Emergency Credit Limit (with its SMETS1 meaning) and will go off supply unless the Non-Disablement Calendar (with its SMETS1 meaning) is configured to have a non-disablement period in force at the CoT time.

(b) Whenever the S1SP actions this Service Request and the meter Payment Mode (with its SMETS1 meaning) is Prepayment Mode, the SMETS1 GSME associated with the target SMETS1 GPF will set the Meter Balance and Emergency Credit Balance (with their SMETS1 meanings) operational data values to zero. The GSME will then invoke the current Emergency Credit Limit (with its SMETS1 meaning) to remain on supply.

(c) Not Used.

(d) Where the target SMETS1 ESME or SMETS1 GSME only restricts data from the date and time of execution of the command on the Device when, according to the Device’s clock, the RestrictionDateTime is in the past then the Device will ignore any RestrictionDateTime (with its DUIS meaning) configured in the Service Request and apply the restriction from the time of execution of the command.

(e) Where the provisions of clause 18.9(d) apply, the target SMETS1 ESME will also delete the data from the ProfileDataLog (with its SMETS1 meaning) on the device from the first data item in the log to the date and time that the restriction is applied.

18.10 <u>Clear Event Log (SRV 3.3)</u>

(a) Where the target SMETS1 ESME or SMETS1 GSME does not support the Clear Event Log command (with its SMETS1 meaning), the S1SP shall return a SMETS1 Response indicating failure and shall take no further action.

18.11 <u>Read Instantaneous Import Registers (SRV 4.1.1)</u>

This section intentionally left blank

18.12 Read Instantaneous Import TOU Matrices (SRV 4.1.2)

(a) Where it is not possible to retrieve all of the values from the target SMETS1 GSME then, in the SMETS1 Response, the values in TariffTOURegisterMatrixValue with indices 1 and 2 will be the values from the Device and the values with indices 3 and 4 will be 0 meaning that the values from the Device cannot be retrieved (with their MMC meanings).

18.13 Read Instantaneous Import TOU With Blocks Matrices (SRV 4.1.3)

(a) Where the SMETS1 ESME does not report values for the Tariff Block Counter Matrix (with their SMETS1 meaning), the values returned in CounterMatrixTOUValues (with their Message Mapping Catalogue meaning) in the SMETS1 Response shall all be zero.

(b) The provisions of Clause **Error! Reference source not found.** also apply to this Service Request.

18.14 Read Instantaneous Import Block Counters (SRV 4.1.4)

(a) Where the SMETS1 GSME reports tariff Block Counters (with their SMETS1 meaning) in kWh, the values returned ImportBlockCounters (with its Message Mapping Catalogue meaning) shall, contrary to Message Mapping Catalogue Section 5.20.2.2.2, be in units of kWh rather than meters cubed.

(b) Where the SMETS1 GSME does not report tariff Block Counters (with their SMETS1 meaning), the values returned in ImportBlockCounters (with its Message Mapping Catalogue meaning) in the SMETS1 Response shall all be zero.

(c) Where it is not possible to retrieve all of the values from the target SMETS1 GSME then, in the SMETS1 Response, the value in TariffBlockCounterValue with index 1 will be the value from the Device and the values with indices 2, 3 and 4 will be 0 meaning that the values from the Device cannot be retrieved (with their MMC meanings).

18.15 <u>Read Instantaneous Export Registers (SRV 4.2)</u>

This section intentionally left blank

18.16 <u>Read Instantaneous Prepay Values (SRV 4.3)</u>

(a) Where the SMETS1 GSME only supports reading of the value equivalent to PaymentDebtRegister (with its Message Mapping Catalogue meaning) to the nearest whole number of GBP , the value returned by the S1SP in the PaymentDebtRegister (with its Message Mapping Catalogue meaning) shall be the milli pence equivalent of the nearest whole number of GBP.

(b) Where the SMETS1 ESME or SMETS1 GSME has a value equivalent to DebtRecoveryRatePriceScale (with it DUIS meaning) greater than -5 and the SMETS1 Device returns the values equivalent to the TimeDebtRegister1and TimeDebtRegister2 (with their Message Mapping Catalogue meanings) to that scale , the values returned by the S1SP in the TimeDebtRegister1and TimeDebtRegister2 (with their Message Mapping Catalogue meanings) shall be rounded down so that they are accurate only to the scale specified in the DebtRecoveryRatePriceScale value.

(c) Where the target SMETS1 ESME or SMETS1 GSME does not support reading of Accumulated Debt Register, Emergency Credit Balance, Meter Balance, Payment Debt Register and the Time Debt Registers [1..2] (with their SMETS1 meanings) when the Payment Mode is Credit Mode and the Device is in Credit Mode (with their SMETS meanings), the S1SP shall return a SMETS1 Response indicating failure.

(d) Where the target SMETS1 ESME or SMETS1 GSME also records decreases in the Emergency Credit Balance and increases in the Accumulated Debt Register as decreases in the Meter Balance (with their SMETS1 meanings) then the corresponding values returned will reflect this behaviour.

18.17 <u>Retrieve Change Of Mode / Tariff Triggered Billing Data Log (SRV 4.4.2)</u>

(a) Where the target SMETS1 ESME or SMETS1 GSME does not support the recording of the values in the Tariff Block Counter Matrix when actioning a Set Payment Mode or Set Tariff command (with their SMETS meanings), the S1SP shall omit the TariffBlockCounterMatrix element in the SMETS1 Response (with its Message Mapping Catalogue meaning)**.**

(b) Where the SMETS1 GSME reports tariff Block Counters (with their SMETS1 meaning) in kWh, the values returned in BlockRegisterMatrixValue or TariffBlockCounterMatrix (with their Message Mapping Catalogue meanings) shall, contrary to Message Mapping Catalogue Sections , 5.23.2.2.4, 6.2.2.4 or 5.27.2.2 be in units of kWh rather than meters cubed.

(c) Where the SMETS1 ESME does not report values in these logs for the Tariff Block Counter Matrix (with its SMETS1 meaning), the S1SP shall create a SMETS1 Response with zero occurrences of TariffTOUBlock1RegisterMatrixValue TariffTOUBlock2RegisterMatrixValue TariffTOUBlock3RegisterMatrixValue and TariffTOUBlock4RegisterMatrixValue.

(d) Where the target SMETS1 ESME or SMETS1 GSME adds entries to the Billing Data Log (with its SMETS1 meaning) both before and after each triggering event, the SMETS1 Response shall contain details of both entries.

(e) Where it is not possible to retrieve all of the values from the target SMETS1 GSMEs log (with its SMETS1 meaning) then, in the SMETS1 Response:

(i) The values in TariffTOURegisterMatrixValue or TariffTOURegisterMatrix with indices 1 and 2 will be the values from the Device and the values with indices 3 and 4 will be 0 meaning that the values from the Device cannot be retrieved (with their MMC meanings); and

(ii) The value in BlockRegisterMatrixValue or BlockRegisterMatrix with index 1 will be the value from the Device and the values with indices 2, 3 and 4 will be 0 meaning that the values from the Device cannot be retrieved (with their MMC meanings).

(f) Where, pursuant to clause 18.42(e), the target SMETS1 GSME has stored additional LogEntries (with its MMC meaning), the SMETS1 Response shall contain details of these extra LogEntries where the period requested includes the corresponding timestamps.

(g) Where the time period specified in the Service Request should result in more than one LogEntry being returned from the target SMETS1 GSME, the S1SP shall return a single LogEntry that has a timestamp that is the first entry after the ReadLogPeriod StartDateTime (with their DUIS meanings).

(h) Where, pursuant to clauses 18.5(jj) and 18.7(o), the target SMETS1 ESME has stored additional LogEntries (with its MMC meaning), the SMETS1 Response shall contain details of these extra LogEntries where the period requested includes the corresponding timestamps.

(i) Where an Update Import Tariff (Primary Element) (SRV 1.1.1) or Update Payment Mode (SRV 1.6) Service Request has never been successfully executed in relation to the target SMETS1 ESME the S1SP shall return a SMETS1 Alert indicating failure.

(j) Where the target SMETS1 ESME does not reset block counters in accordance with the Billing Calendar timetable, the SMETS1 Response will contain Block Counters (with their SMETS1 meanings) that are always increasing in value and are never reset.

(k) Where the target SMETS1 ESME or SMETS1 GSME adds entries to the Billing Data Log (with its SMETS1 meaning) before the triggering event, the SMETS1 Response shall, where an Update Import Tariff (Primary Element) (SRV 1.1.1) has never been executed since the DateCommissioned (with its DUIS meaning), only contain details of consumption based on the tariff configuration that was configured before the Update Import Tariff (Primary Element) (SRV 1.1.1) was executed on the Device.

(l) Where the target SMETS1 ESME does not store any items within the Billing Data Log (with its SMETS1 meaning) when executing Update Price (Primary Element) (SRV 1.2.1), the SMETS1 Response shall not contain any LogEntries (with its MMC meaning) as a result of any execution of the Update Price (Primary Element) (SRV 1.2.1) Service Request.

(m) Where the target SMETS1 ESME supports a maximum of four or Eight Tariff Registers (with their SMETS1 meaning) then any SMETS1 Response will only contain consumption in either the first four or the first eight entries of the TariffTOURegisterMatrixValue (with its MMC meaning).

(n) Where the target SMETS1 ESME adds entries to the Billing Data Log (with its SMETS1 meaning) at midnight every day, the SMETS1 Response shall contain details of these extra LogEntries (with its MMC meaning) where the period requested includes the corresponding timestamps.

(o) Where the target SMETS1 GSME does not allow the reading of Operational data when performing an update to the Configuration data (with their SMETS1 meanings) then the SMETS1 response will return zero LogEntries (with its MMC meaning) where the device is still updating its Configuration data (with its SMETS1 meaning).

18.18 <u>Retrieve Billing Calendar Triggered Billing Data Log (SRV 4.4.3)</u>

(a) The provisions of Clauses 18.17 18.17(b) to 18.17(c) apply to this Service Request

(b) Where the target SMETS1 ESME or SMETS1 GSME may record such Billing Data Log (with its SMETS1 meaning) entries after midnight UTC even when the Billing Calendar (with its SMETS1 meaning) specifies midnight UTC then the SMETS1 Response may contain Timestamps (with their MMC meanings) reflecting the delayed recording.

(c) The provision of Clause 18.17 18.17(b) apply to this Service Request

(d) Where, pursuant to clause 18.42(e), the target SMETS1 GSME has stored LogEntries (with its MMC meaning) at different date-times than required by the Billing Calendar (with its SMETS1 meaning), the SMETS1 Response shall contain corresponding LogEntries.

(e) The provisions of Clause 18.17(g) apply to this Service Request.

(f) The provisions of Clause 18.21(e) apply to this Service Request.

(g) Where an Update Device Configuration (Billing Calendar) (SRV 6.8) Service Request has never been successfully executed in relation to the target SMETS1 ESME the S1SP shall return a SMETS1 Alert indicating failure.

(h) The provisions of Clause 18.17(j) also apply to this Service Request.

(i) The provisions of Clause 18.17(m) also apply to this Service Request.

(j) The provisions of Clause 18.17(n) also apply to this Service Request.

(k) The provisions of Clause 18.17(o) also apply to this Service Request.

(l) Where the SMETS1 ESME has, according to the EPCL, a GroupID = “EA” (with its EPCL meaning) then the SMETS1 Response shall not contain any LogEntries (with its MMC meaning) where the SMETS1 ESME has been configured with an ElectricityBillingCalendar Periodicity of Daily (with their DUIS meanings).

18.19 **Retrieve Billing Data Log (Payment Based Debt Payments) (SRV 4.4.4)**

(a) Where an Add Credit Command has never resulted in the recovery of any Payment-based Debt (with their SMETS1 meanings) on the target SMETS1 GSME the S1SP shall return a SMETS1 Alert indicating failure.

(b) Where the SMETS1 GSME does not share any Payment-based Debt (with its SMETS1 meaning) with the GPF on the same HAN then the S1SP shall return a SMETS1 Response that does not include any LogEntries (with its MMC meaning) derived from any Payment-based Debt collection.

18.20 **Retrieve Billing Data Log (Prepayment Credits) (SRV 4.4.5)**

(a) Where the LogEntry containing the PrepaymentCredits cannot be provided in the SMETS1 Response from the SMETS1 ESME, the S1SP shall, for each LogEntry, return an Unsupported Value for each PrepaymentCredits element in the SMETS1 Response (with their MMC meanings).

18.21 **Retrieve Import Daily Read Log (SRV 4.6.1)**

(a) The provisions of Clauses 18.17 18.17(b) to 18.17 18.17(c) apply to this Service Request

(b) Where the target SMETS1 ESME or SMETS1 GSME may record such Daily Read Log (with its SMETS1 meaning) entries after midnight UTC then the SMETS1 Response may contain Timestamps (with their MMC meanings) reflecting the delayed recording.

(c) Where the SMETS1 GSME takes snapshots at 23:00 UTC during the period of British Summer Time then any log entries for such periods will have such a corresponding 23:00 UTC timestamp.

(d) The provision of Clause 18.17(e) apply to this Service Request.

(e) Where the target SMETS1 GSME resets the TariffBlockCounterMatrix (with their Message Mapping Catalogue meaning) before taking a Billing Calendar (with its SMETS1 meaning) snapshot and this is the last day of the billing period then:

(i) Outside of British Summer Time the TariffBlockCounterMatrix values (with their MMC meaning) will all be 0; and

(ii) During British Summer Time the TariffBlockCounterMatrix will only reflect consumption for 23 of the 24 hours of the day.

(f) Where, pursuant to Clause 18.21(c), the time period specified in the Service Request includes the Timestamp of 00:00 of the current day and the current day is within BST and the Device processes the Service Request before 23:00 UTC, the target SMETS1 GSME will return a LogEntry with a Timestamp of 00:00 that will reflect the same consumption as recorded where the Timestamp is 23:00 (with their MMC meanings).

(g) The provisions of Clause 18.17(j) also apply to this Service Request.

(h) The provisions of Clause 18.17(m) also apply to this Service Request.

(i) The provisions of Clause 18.17(n) also apply to this Service Request.

(j) The provisions of Clause 18.17(o) also apply to this Service Request.

18.22 <u>Retrieve Active Import Profile Data (SRV 4.8.1)</u>

(a) Where the target SMETS1 GSME or SMETS1 GPF does not return any LogEntry (with its MMC meaning) where the StartDateTime is later than the DateCommissioned (with their DUIS meanings) of the target Device, then the S1SP shall return a Response without any LogEntry.

(b) Not Used.

(c) Not Used.

(d) Not Used.

(e) Pursuant to clause 18.9(d), where the target SMETS1 ESME, has deleted the data from the device, the only LogEntries (with its MMC meaning) returned in the SMETS1 Response will be those after the restriction has been applied unless there has been an active DSP Schedule for this service request that covers part of the ReadLogPeriod (with its DUIS meaning), in which case this data may be returned.

(f) Where the target SMETS1 GSME does not support the reading of more than 24 hours' worth of data and the ReadLogPeriod (with its DUIS meaning) is greater than 24 hours then the S1SP shall return a SMETS1 Response with 48 LogEntrys (with its MMC meaning) where the Timestamp of the first LogEntry (with their MMC meanings) will be equal to or later than the specified StartDateTime (with its DUIS meaning) in the request.

(g) The provisions of Clause 18.17(o) also apply to this Service Request.

18.23 <u>Read Reactive Import Profile Data (SRV 4.8.2)</u>

(a) Not Used.

(b) Not Used.

(c) Not Used.

(d) The provisions of clause 18.22(d) apply to this Service request.

(e) The provisions of Clause 18.17(o) also apply to this Service Request.

18.24 <u>Read Export Profile Data (SRV 4.8.3)</u>

(a) Not Used.

(b) Not Used.

(c) Not Used.

(d) The provisions of clause 18.22(d) apply to this Service request.

(e) The provisions of Clause 18.17(o) also apply to this Service Request.

18.25 Read Network Data (SRV 4.10)

(a) Where the target SMETS1 ESME does not support the Average RMS Over Voltage Counter or Average RMS Under Voltage Counter operational data items (with their SMETS meanings), the S1SP shall omit the AvgRMSOverVoltageCounter and AvgRMSUnderVoltageCounter elements in the SMETS1 Response (with its Message Mapping Catalogue meaning).

(b) Where the target SMETS1 GSME does not support the Network Data Log operational data item (with its SMETS meaning), the S1SP shall create a SMETS1 Response indicating failure.

(c) Where the target SMETS1 GSME requires an Instruction to begin logging in to the Network Data Log operational data item (with its SMETS meaning), the S1SP shall create a SMETS1 Response indicating failure, since the DCC do not support such Instructions.

(d) Where the target SMETS1 ESME does not support the Average RMS Voltage Profile Data Log (with its SMETS1 meaning) to have a period that is the same as the AverageRMSVoltageMeasurementPeriod (with its DUIS meaning) set for calculation of Average RMS Voltage (with its SMETS1 meaning) and the AverageRMSVoltageMeasurementPeriod has not been set to be the same as the Average RMS Voltage Profile Data Log period, the values returned in the Average RMS Voltage Profile Data Log shall be averages for the AverageRMSVoltageMeasurementPeriod calculated at the time of each log entry.

(e) Where the target SMETS1 ESME only supports the capture of voltages in the Average RMS Voltage Profile Data Log (with its SMETS1 meaning) with the same Average RMS Voltage Measurement Period (with its SMETS1 meaning), then any existing values, accessible via the

AvgRMSVoltageProfileDataLog (with its MMC meaning), will be erased whenever Average RMS Voltage Measurement Period (with its SMETS1 meaning) is changed from its previous value.

18.26 **Read Tariff (Primary Element) (SRV 4.11.1)**

(a) Where the target SMETS1 ESME does not support a StandingChargeScale (with its DUIS meaning) at a resolution greater than ten thousandths of Currency Units (with its SMETS1 meaning) per day the value in StandingChargeScale (with its Message Mapping Catalogue meaning) shall be -4 and the StandingCharge (with its Message Mapping Catalogue meaning) shall represent a value in a whole number of ten thousandths of Currency Units (with its SMETS1 meaning) per day.

(b) Where the target SMETS1 ESME does not support a PriceScale (with its DUIS meaning) at a resolution greater than ten thousandths of Currency Units (with its SMETS1 meaning) per kWh the value in PriceScale (with its Message Mapping Catalogue meaning) shall be -4 and the prices within the TariffTOUPriceMatrix and TariffBlockPriceMatrix (with their Message Mapping Catalogue meaning) shall represent values in a whole number of ten thousandths of Currency Units (with its SMETS1 meaning) per kWh.

(c) Where the SMETS1 ESME or SMETS1 GSME does not support StandingCharge (with its DUIS meaning) that is larger than 32767 the value in StandingChargeScale (with its Message Mapping Catalogue meaning) and the StandingCharge (with its Message Mapping Catalogue meaning) may be different to those previously requested, as defined in Clause 18.1(e).

(d) Where the SMETS1 ESME or SMETS1 GSME does not support prices in the TariffTOUPriceMatrix or TariffBlockPriceMatrix (with their DUIS meanings) that are larger than 32767 the value in PriceScale (with its Message Mapping Catalogue meaning) and the prices in TariffTOUPriceMatrix and TariffBlockPriceMatrix (with their DUIS meanings) may be different to those previously requested, as defined in Clause 18.1(f)

(e) Where the SMETS1 GSME does not support the setting of GasThresholdMatrix when TOUTariff (with their DUIS meanings) is present in a Update Import Tariff (Primary Element) Service Request, the S1SP shall not include a GasThresholdMatrix in a SMETS1 response where TOUTariff is present (with their MMC meanings).

(f) Where an Update Import Tariff (Primary Element) (SRV 1.1.1) Service Request has never been successfully executed in relation to the target SMETS1 GSME, or in relation to the SMETS1 GSME on the same home area network as the target SMETS1 GPF, the S1SP shall return a SMETS1 Response indicating failure.

(g) Where clause 18.1(dd) applies the SMETS1 response will only contain NonSpecifiedDayOfWeek for any configured SpecialDays (with their MMC meanings)

18.27 **Read Prepayment Configuration (SRV 4.13)**

(a) Where the target SMETS1 GSME does not support the Non-Disablement Calendar to be readable over the WAN Interface (with their SMETS meanings), the S1SP shall omit the NonDisablementCalendar element in the SMETS1 Response (with its Message Mapping Catalogue meaning).

(b) Where the value in DebtRecoveryRatePeriod (with its DUIS meaning) has previously been ignored pursuant to Clauses 18.7(c) and 18.7(e), the value of DebtRecoveryRatePeriod (with its Message Mapping catalogue meaning) in a SMETS1 response relating to an SMETS1 ESME shall correspondingly be unchanged.

(c) Where the value in DebtRecoveryRatePeriod (with its DUIS meaning) has previously been ignored pursuant to Clauses 18.7(c) and 18.7(e), the value of DebtRecoveryPeriod (with its Message Mapping catalogue meaning) in a SMETS1 response relating to a GSME shall correspondingly be unchanged.

(d) Where the target SMETS1 ESME does not support a Debt Recovery Rate 1 or 2 (with their SMETS1 meanings) at a resolution greater than ten thousandths of Currency Units per DebtRecoveryRatePeriod (with its DUIS meaning), the value in DebtRecoveryRatePriceScale (with its Message Mapping Catalogue meaning) shall be -4 and the DebtRecoveryRate (with its Message Mapping Catalogue meaning) shall be returned in a whole number of ten thousandths of Currency Units (with its SMETS1 meaning) per DebtRecoveryRatePeriod (with its DUIS meaning).

(e) Where the target SMETS1 ESME or SMETS1 GSME only supports Debt Recovery per Payment (with its SMETS1 meaning) in whole numbers of percent, the value in the DebtRecoveryPerPayment (with its Message Mapping Catalogue meaning) shall be a multiple of 100, where 100 represents one percent.

(f) Where the SMETS1 ESME or SMETS1 GSME does not support a DebtRecoveryRate (with its DUIS meaning) that is larger than 32767, the value in DebtRecoveryRatePriceScale (with its Message Mapping Catalogue meaning) and the DebtRecoveryRate (with its Message Mapping Catalogue meaning) may be different to those previously requested, as defined in Clause18.7(g).

(g) For the target SMETS1 ESME there may be additional ElectricityNonDisablementSchedule (with its Message Mapping Catalogue meaning) items that were not included in any prior 'Update Prepayment Configuration (SRV 2.1)' Service Request. Such additional items will have a switch time of midnight. These entries do not change the functional effect of the ElectricityNonDisablementCalendar (with its DUIS meaning).

(h) Where the target SMETS1 ESME stores a SuspendDebtDisabled and SuspendDebtEmergency (with their DUIS meanings) value for each debt type, the S1SP shall, in the SMETS1 response, populate SuspendDebtDisabled and SuspendDebtEmergency (with their Message Mapping Catalogue meanings) with the Device's Suspend Debt Disabled and Suspend Debt Emergency (with their SMETS1 meanings) values for Time Debt Register 1 (with its SMETS1 meaning). Additionally, if these values are not the same as the Suspend Debt Disabled and Suspend Debt Emergency (with their SMETS1 meanings) values for Time Debt Register 2 and Payment Debt Register (with their SMETS1 meanings), the S1SP shall send a S1SP Alert warning that the Suspend Debt settings are inconsistent.

(i) Where the SMETS1 ESME or SMETS1 GSME does not activate changes to prepayment configuration items until it switches to Prepayment Mode (with its SMETS1 meaning), the values returned by the Device for such items will not reflect any changes that are made whilst in Credit Mode (with its SMETS1 meaning). Therefore, the S1SP shall populate the SMETS1 Response in line with the Device provided information. For clarity, this applies to all data items that can be set in an 'Update Prepayment Configuration' Service Request except for ElectricityNonDisablementCalendar and GasNonDisablementCalendar (with their DUIS meanings).

(j) Where the SMETS1 GSME only supports the setting of DebtRecoveryRateCap (with its DUIS meaning) to a whole number of pence, the value of DebtRecoveryRateCap (with its MMC meaning) returned, shall be a whole number of pence.

(k) Where the target SMETS1 ESME or SMETS1 GSME does not support reading of Debt Recovery Per Payment, Debt Recovery Rate Cap, Disablement Threshold, Emergency Credit Limit, Emergency Credit Threshold, Low Credit Threshold, Suspend Debt Disabled, Suspend Debt Emergency, Non Disablement Calendar and Debt Recovery Rates[1..2] (with their SMETS1 meanings) when the Payment Mode is Credit Mode and the Device is in Credit Mode (with their SMETS meanings), the S1SP shall return a SMETS1 Response indicating failure.

(l) Where the SMETS1 GSME only supports the setting of DisablementThreshold (with its DUIS meaning) to a whole number of pence, the value of DisablementThreshold (with its MMC meaning) returned, shall be a whole number of pence.

(m) Where the clauses 18.7 (l) and 18.7 (m) apply, the DUIS values covered by those clauses which are returned in the SMETS1 Response, may be different from those previously requested.

(n) Where the target SMETS1 ESME or SMETS1 GSME only supports EmergencyCreditLimit, EmergencyCreditThreshold, LowCreditThreshold, MaxMeterBalance and MaxCreditThreshold (with its DUIS meaning) in whole numbers of pence, the values returned shall be in whole numbers of pence.

(o) For the target SMETS1 ESME, the S1SP will always return a year value of 5000 in all StartDates and EndDates (with their MMC meanings) and meaning that the Device is treating these values as wildcards.

(p) Where an Update Prepayment Configuration (SRV 2.1) Service Request has never been successfully executed in relation to the target SMETS1 GSME, or in relation to the SMETS1 GSME on the same home area network as the target SMETS1 GPF, the S1SP shall return a SMETS1 Response indicating failure..

(q) Where an Update Debt (SRV 2.3) Service Request has never been successfully executed in relation to the target SMETS1 GSME, the S1SP shall not return the DebtRecoveryRatePeriod element (with its MMC meaning) in the SMETS1 Response.

(r) Where Clause 18.5(ll) applies, the values returned for EndDates will reflect the day before the corresponding StartDates (with their DUIS meanings).

(s) Where the target SMETS1 ESME or SMETS1 GSME does not support the retrieval of the Disablement Threshold (with its SMETS1 meaning) and an Update Payment Mode (SRV 1.6) Service Request has never been successfully executed in relation to the target SMETS1 ESME or SMETS1 GSME, the S1SP shall return the relevant Unsupported Value for the Disablement Threshold value (with its SMETS1 meaning) in any SMETS1 Response.

(t) Where the SMETS1 ESME has never successfully processed a Set Payment Mode (with its DUIS meaning) Service Request and where the SMETS1 Response specifies SuspendDebtEmergency is true (with its MMC meaning) then this may not indicate that the GSME is behaving as required by SMETS1 in relation to Suspend Debt Emergency (with its SMETS1 meaning).

(u) Where clause **Error! Reference source not found.** applies, any StartTimes returned in the SMETS1 Response will always have 00 seconds.

18.28 <u>Read Load Limit Data (SRV 4.15)</u>

(a) Where the target SMETS1 ESME does not support Load Limit Power Threshold (with its SMETS1 meaning) at a resolution greater than 10s of Watts, the value in LoadLimitPowerThreshold (with its Message Mapping Catalogue meaning) shall have a value equating to a multiple of ten Watts.

18.29 <u>Read Active Power Import (SRV 4.16)</u>

This section intentionally left blank

18.30 <u>Read Meter Balance (SRV 4.18)</u>

(a) Where the target SMETS1 ESME or SMETS1 GSME does not support the Meter Balance to be accessible over the WAN Interface when Payment Mode is Credit Mode and the Device is in Credit Mode (with their SMETS meanings), the S1SP shall return a SMETS1 Response indicating failure.

18.31 **Read Device Configuration (Voltage) (SRV 6.2.1)**

(a) Where the target SMETS1 ESME does not support RMSExtremeUnderVoltageThreshold, RMSExtremeOverVoltageThreshold, AverageRMSOverVoltageThreshold, AverageRMSUnderVoltageThreshold, RMSVoltageSagThreshold and RMSVoltageSwellThreshold (with their SMETS1 meaning) at a resolution greater than one Volt, RMSExtremeUnderVoltageThreshold, RMSExtremeOverVoltageThreshold, AverageRMSOverVoltageThreshold, AverageRMSUnderVoltageThreshold, RMSVoltageSagThreshold and RMSVoltageSwellThreshold (with their Message Mapping Catalogue meaning) shall have values equating to whole number of volts.

(b) Where the target SMETS1 ESME only supports the setting of AverageRMSOverVoltageThreshold, AverageRMSUnderVoltageThreshold, RMSExtremeOverVoltageThreshold, RMSExtremeUnderVoltageThreshold, RMSVoltageSagThreshold and RMSVoltageSwellThreshold (with their DUIS Meanings) to a whole percentage of 230 volts, the S1SP shall return values for AverageRMSOverVoltageThreshold, AverageRMSUnderVoltageThreshold, RMSExtremeOverVoltageThreshold, RMSExtremeUnderVoltageThreshold, RMSVoltageSagThreshold and RMSVoltageSwellThreshold (with their MMC meanings) which are the values configured on the ESME rounded down to the nearest tenth of a volt.

18.32 **Read Device Configuration (Billing Calendar) (SRV 6.2.3)**

(a) Where the target SMETS1 ESME or SMETS1 GSME does not support a time other than midnight UTC in its Billing Calendar (with its SMETS1 meaning), the time values in BillingTime and BillingPeriodStart (with their Message Mapping Catalogue meanings) shall be midnight UTC.

(b) Where the target SMETS1 ESME or SMETS1 GSME does not support a time resolution greater than minutes in its Billing Calendar (with its SMETS1 meaning), the seconds values in BillingTime and BillingPeriodStart (with their Message Mapping Catalogue meanings) shall be zero.

(c) Where, pursuant to clause 18.42(e), the target SMETS1 ESME has stored a Billing Calendar (with its SMETS1 meaning) that is different to that specified in the prior ‘Update Device Configuration (Billing Calendar)’ (SRV 6.8) Service Request, the SMETS1 Response shall contain details of this different Billing Calendar.

(d) Where an Update Device Configuration (Billing Calendar) (SRV 6.8) Service Request has never been successfully executed in relation to the target SMETS1 GSME, or in relation to the SMETS1 GSME on the same home area network as the target SMETS1 GPF, the S1SP shall return a SMETS1 Response indicating failure.

(e) Where, pursuant to clause 18.42(e), the target SMETS1 GSME has stored a Billing Calendar (with its SMETS1 meaning) that is different to that specified in the prior 'Update Device Configuration (Billing Calendar)' (SRV 6.8) Service Request, the SMETS1 Response shall contain details of this different Billing Calendar.

18.33 <u>Read Device Configuration (Identity Exc MPxN) (SRV 6.2.4)</u>

(a) Where the target SMETS1 GSME does not support the Supply Tamper State or Supply Depletion State configuration data item (with their SMETS meanings), the S1SP shall omit the SupplyTamperState and SupplyDepletionState elements from the SMETS1 Response (with its Message Mapping Catalogue meaning).

(b) Where the SMETS1 ESME has never successfully processed a Set Electricity Supply Tamper State (SRV 6.25) or a or SMETS1 GSME has never successfully processed an Update Device Configuration (Gas Flow) (SRV 6.7) (with their DUIS meanings) Service Request and where the SMETS1 Response indicates SupplyTamperState is Unchanged (with its MMC meaning) then this may indicate that the SMETS1 ESME or SMETS1 GSME is behaving as required by SMETS1 in relation to SupplyTamperState (with its MMC meaning).

18.34 <u>Read Device Configuration (Instantaneous Power Thresholds) (SRV 6.2.5)</u>

(a) Where the target SMETS1 ESME does not support Low Medium Power Threshold and Medium High Power Threshold (with their SMETS1 meanings) at a resolution greater than tens of Watts, the value in LowMediumPowerThreshold and MediumHighPowerThreshold (with their Message Mapping Catalogue meanings) shall have values equating to a whole number of 10s of Watts.

18.35 **Read Device Configuration (Gas) (SRV 6.2.8)**

(a) Where the target SMETS1 GSME does not support the Uncontrolled Gas Flow Rate or the Conversion Factor configuration data items (with their SMETS meanings), the S1SP shall omit the UncontrolledGasFlowRate element or the ConversionFactor element (as the context requires) from the SMETS1 Response (with its Message Mapping Catalogue meaning).

(b) Where an Update Device Configuration (Gas Flow) (SRV 6.7) Service Request has never been successfully executed in relation to the target SMETS1 GSME, or in relation to the SMETS1 GSME on the same home area network as the target SMETS1 GPF, the S1SP shall return a SMETS1 Response indicating failure.

18.36 **Read Device Configuration (Payment Mode) (SRV 6.2.9)**

(a) Where the target SMETS1 GSME does not support the setting of Suspend Debt Emergency (with its SMETS1 meaning) to be active, the S1SP shall set the value of SuspendDebtEmergency (with its Message Mapping Catalogue meaning) to be ‘false’ in the SMETS1 Response.

(b) Where the target SMETS1 GSME does not support the reading of Suspend Debt Disabled (with its SMETS1 meaning), the S1SP shall omit the SuspendDebtDisabled (with its Message Mapping Catalogue meaning) from the SMETS1 Response.

(c) Where the SMETS1 GSME has never successfully processed a Set Payment Mode (with its DUIS meaning) Service Request and where the SMETS1 Response specifies SuspendDebtEmergency is true (with its MMC meaning) then this may not indicate that the GSME is behaving as required by SMETS1 in relation to Suspend Debt Emergency (with its SMETS1 meaning).

18.37 **Update Device Configuration (Load Limiting General Settings) (SRV 6.4.1)**

(a) Where the target SMETS1 ESME does not support Load Limit Power Threshold (with its SMETS1 meaning) at a resolution greater than tens of Watts, the S1SP shall divide the LoadLimitPowerThreshold (with its DUIS meaning) by 10, round down to the nearest whole number of tens of Watts and set the resulting value on the Device.

(b) Where the target SMETS1 ESME does not support Load Limit Power Threshold (with its SMETS1 meaning) at a resolution greater than Kilowatts, the S1SP shall divide the LoadLimitPowerThreshold (with its DUIS meaning) by 1000, round down to the nearest whole number of Kilowatts and set the resulting value on the Device.

(c) Where the target SMETS1 ESME does not support Load Limit Power Threshold (with its SMETS1 meaning) greater than 100,000 Watts, the S1SP shall, where the Service Request specifies a value greater than 100,000 Watts, return a SMETS1 Response indicating failure.

(d) Where the target SMETS1 ESME does not support a value of 'Unchanged' for LoadLimitSupplyState (with its DUIS meaning), then S1SP shall, where the Service Request specifies such a value, return a SMETS1 Response indicating failure.

(e) Where the target SMETS1 ESME does not support setting of the LoadLimitPeriod or the LoadLimitRestorationPeriod (with their DUIS meanings) the S1SP shall discard the values in LoadLimitPeriod and LoadLimitRestorationPeriod (with their DUIS meanings) when processing the Service Request. For clarity, the S1SP shall create a SMETS1 Response indicating success where all other processing succeeds.

18.38 <u>Update Device Configuration (Load Limiting Counter Reset) (SRV 6.4.2)</u>

(a) Where the SMETS1 ESME does not support the Reset Load Limit Counter command (with its SMETS1 meaning), the S1SP shall return a SMETS1 Response indicating failure.

18.39 <u>Update Device Configuration (Voltage) (SRV 6.5)</u>

(a) Where the target SMETS1 ESME does not support RMSExtremeUnderVoltageThreshold, RMSExtremeOverVoltageThreshold, AverageRMSOverVoltageThreshold, AverageRMSUnderVoltageThreshold, RMSVoltageSagThreshold and RMSVoltageSwellThreshold (with their SMETS1 meaning) at a resolution greater than one Volt, the S1SP shall divide the values in each of the RMSExtremeUnderVoltageThreshold, RMSExtremeOverVoltageThreshold, AverageRMSOverVoltageThreshold, AverageRMSUnderVoltageThreshold, RMSVoltageSagThreshold and RMSVoltageSwellThreshold (with their Message Mapping Catalogue meaning) by 10, round down to the nearest whole number of volts and set the resulting value on the Device.

(b) Where the target SMETS1 ESME only supports 60, 300, 600, 900, 1800 and 3600 for AverageRMSVoltageMeasurementPeriod (with its DUIS meaning), the S1SP shall set the value of Average RMS Voltage Measurement Period (with its SMETS1 meaning) to the next greater available measurement period if for AverageRMSVoltageMeasurementPeriod (with its DUIS meaning) is not equal to a supported value or, if the specified period is larger than 3600, set it to 3600.

(c) Where the target SMETS1 ESME only supports the setting of AverageRMSOverVoltageThreshold, AverageRMSUnderVoltageThreshold, RMSExtremeOverVoltageThreshold, RMSExtremeUnderVoltageThreshold, RMSVoltageSagThreshold and RMSVoltageSwellThreshold (with their DUIS meanings) to a whole percentage of 230v, then the S1SP shall round down the value in each of the AverageRMSOverVoltageThreshold, AverageRMSUnderVoltageThreshold, RMSExtremeOverVoltageThreshold, RMSExtremeUnderVoltageThreshold, RMSVoltageSagThreshold and RMSVoltageSwellThreshold (with their DUIS meanings) to the nearest whole percentage of 230v and configure the ESME accordingly.

(d) Where the target SMETS1 ESME successfully processes the Instructions resulting from this Service Request the device will erase the data used to populate the AvgRMSVoltageProfileDataLog (with its MMC meaning).

(e) Where the target SMETS1 ESME only supports 60, 120, 180, 240, 300, 360, 600, 720, 900, 1200 and 1800 for AverageRMSVoltageMeasurementPeriod (with its DUIS meaning), the S1SP shall set the value of Average RMS Voltage Measurement Period (with its SMETS1 meaning) to the next greater available measurement period if for AverageRMSVoltageMeasurementPeriod (with its DUIS meaning) is not equal to a supported value or, if the specified period is larger than 1800, set it to 1800.

(f) Where the target SMETS1 ESME only supports the setting of AverageRMSVoltageMeasurementPeriod (with its DUIS meaning) in multiples of 10 seconds, the S1SP shall round up the value in AverageRMSVoltageMeasurementPeriod to the next 10 second increment and configure the ESME accordingly.

(g) Where the target SMETS1 ESME supports the setting of AverageRMSOverVoltageThreshold, AverageRMSUnderVoltageThreshold and AverageRMSVoltageMeasurementPeriod (with their DUIS meanings) but does not ever trigger the event when these conditions are detected, then the S1SP will never send the relevant SMETS1 Alert (0x8F40 or 0x8F41).

18.40 **Update Device Configuration (Gas Conversion) (SRV 6.6)**

(a) Where the target SMETS1 GSME does not support the Conversion Factor configuration data item (with its SMETS meaning), the S1SP shall not set the Conversion Factor. For clarity, the S1SP shall create a SMETS1 Response indicating success where all other processing succeeds.

18.41 **Update Device Configuration (Gas Flow) (SRV 6.7)**

(a) Where the target SMETS1 GSME supports setting of the Uncontrolled Gas Flow Rate configuration data item (with its SMETS meaning) only to the range of values in Table 14, the S1SP shall set the Uncontrolled Gas Flow Rate (with its SMETS1 meaning) to the value that corresponds to the UncontrolledGasFlowRate (with its DUIS meaning) in Table 14.

UncontrolledGasFlowRate (with its DUIS meaning) (m3/hr)	Uncontrolled Gas Flow Rate (with its SMETS1 meaning) set on Device (m3/hr)
1	1.08
2	2.16
3 or greater	4.32

Table 14

(b) Where the target SMETS1 GSME does not support the Supply Tamper State, Uncontrolled Gas Flow Rate or Supply Depletion State configuration data items (with its SMETS meaning), the S1SP shall create a SMETS1 Response indicating failure.

(c) Where the target SMETS1 GSME does not support setting of the UncontrolledGasFlowRate, StabilisationPeriod or the MeasurementPeriod (with their DUIS meanings) the S1SP shall discard the values in UncontrolledGasFlowRate, StabilisationPeriod and MeasurementPeriod (with their DUIS meanings) when processing the Service Request. For clarity, the S1SP shall create a SMETS1 Response indicating success where all other processing succeeds.

18.42 Update Device Configuration (Billing Calendar) (SRV 6.8)

(a) Where the target SMETS1 ESME or SMETS1 GSME does not support a time other than midnight UTC in its Billing Calendar (with its SMETS1 meaning), the S1SP shall ignore the time elements of the BillingTime or BillingPeriodStart (with their DUIS meanings) and shall set the time in the Billing Calendar (with its SMETS1 meaning) to midnight UTC.

(b) Where the target SMETS1 ESME or SMETS1 GSME does not support a time resolution greater than minutes in its Billing Calendar (with its SMETS1 meaning), the S1SP shall ignore the seconds part of the time in the BillingTime or BillingPeriodStart (with their DUIS meanings) and shall set the seconds part of the time in the Billing Calendar (with its SMETS1 meaning) to zero.

(c) Where the target SMETS1 GSME does not support the Billing Calendar (with its SMETS1 meaning), the S1SP shall create a SMETS1 Response indicating failure.

(d) Where the target SMETS1 GSME only supports a Billing Calendar timetable of either (1) midnight daily, (2) weekly at midnight on Monday or (3) monthly at midnight on the first of the month (with its SMETS1 meaning) and the Service Request specifies a GasBillingCalendar (with its DUIS meaning) with a timetable that is other than one of those options, the S1SP shall create a SMETS1 Response indicating failure.

(e) Where the target SMETS1 ESME requires a Billing Calendar (with its SMETS1 meaning) with a start date in the past, and where a Periodicity of Yearly, SixMonthly or Quarterly (with their DUIS meanings) is specified in the Service Request, the S1SP shall derive, using the S1SP Time, a DayOf Month and BillingPeriodStartMonth (with their DUIS meanings) from the corresponding fields in the Service Request to ensure they refer to a dateTime (with its DUIS meaning) which is earlier than today, according to the S1SP Time.

(f) Where the SMETS1 GSME does not support BillingPeriodStart (with its DUIS meaning) in the future and the S1SP receives a Service Request where, according to the S1SPs current time, the BillingPeriodStart is in the future, then the S1SP shall return a SMETS1 Response indicating failure and undertake no further processing.

(g) Where the SMETS1 GSME does not support BillingPeriodStart (with its DUIS meaning) in the future and the S1SP receives a Service Request where, according to the S1SPs current time, the BillingPeriodStart is in the future, then the S1SP shall:

(i) derive, using the S1SP Time, a BillingPeriodStart by taking the specified BillingPeriodStart and decreasing it by the minimum number of periods specified in the Periodicity (with its DUIS meaning) in order to derive a date-time in the past; and

(ii) configure the Device with the resulting BillingPeriodStart, recognising that the time element will be ignored by the Device, in terms of when resulting Billing Data Log (with its SMETS1 meaning) entries are created. Rather the Device shall create such entries at 23:59:59 on the dates prior to the dates specified by the derived BillingPeriodStart and Periodicity. Additionally, the Device will immediately create a BillingDataLog entry which would be returned in a subsequent Retrieve Change Of Mode / Tariff Triggered Billing Data Log (SRV 4.4.2) Service Request which covers this period.

18.43 <u>Synchronise Clock (SRV 6.11)</u>

This section intentionally left blank

18.44 <u>Update Device Configuration (Instantaneous Power Threshold) (SRV 6.12)</u>

(a) Where the target SMETS1 ESME does not support Low Medium Power Threshold and Medium High Power Threshold (with their SMETS1 meanings) at a resolution greater than tens of Watts, the S1SP shall divide the LowMediumPowerThreshold and MediumHighPowerThreshold (with their DUIS meanings) by 10, round down to the nearest whole number of tens of Watts and set the resulting value on the Device.

18.45 <u>Read Event Or Security Log (SRV 6.13)</u>

(a) Where a LogEntry with a Timestamp (with their MMC meanings) that is earlier than the DateCommissioned (with its DUIS meanings) of the target SMETS1 ESME, SMETS1 GSME or SMETS1 CHF cannot be returned, then the S1SP shall, where the Service Request includes such a period, return a SMETS1 Response without any such LogEntry(s).

18.46 **Update Security Credentials (KRP) (SRV 6.15.1)**

This section intentionally left blank

18.47 **Request Handover of DCC Controlled Device (SRV 6.21)**

This section intentionally left blank

18.48 **Update Security Credentials (CoS) (SRV 6.23)**

This section intentionally left blank

18.49 **Retrieve Device Security Credentials (KRP) (SRV 6.24.1)**

This section intentionally left blank

18.50 **Set Electricity Supply Tamper State (SRV 6.25)**

This section intentionally left blank

18.51 **Update Device Configuration (RMS Voltage Counter Reset) (SRV 6.27)**

(a) Where the target SMETS1 ESME does not support the Average RMS Over Voltage Counter or Average RMS Under Voltage Counter operational data items (with their SMETS meanings), the S1SP shall create a SMETS1 Response indicating failure.

(b) Where the target SMETS1 ESME does not support the resetting of Average RMS Over Voltage Counter or Average RMS Under Voltage Counter operational data items (with their SMETS meanings), the S1SP shall create a SMETS1 Response indicating failure.

18.52 **Enable Supply (SRV 7.1)**

(a) Where the target SMETS1 ESME does not support the Enable Supply WAN Interface command (with its SMETS meaning), the S1SP shall create a SMETS1 Response indicating failure.

18.53 **Disable Supply (SRV 7.2)**

(a) Where the target SMETS1 ESME is in Prepayment Mode (with its SMETS1 meaning) and the Device has successfully executed the Instructions associated with the Service Request, the Device will automatically Arm Supply (with its DUIS meaning).

(b) Where the target SMETS1 GSME's Valve is Armed (with its SMETS1 meaning) then the S1SP shall create a SMETS1 response indicating failure.

18.54 **Arm Supply (SRV 7.3)**

This section intentionally left blank

18.55 **Read Supply Status (SRV 7.4)**

(a) Where the target SMETS1 GSME does not support the Remaining Battery Capacity to be capable of reading over the WAN Interface (with their SMETS meanings), the S1SP shall omit the RemainingBatteryCapacity element in the SMETS1 Response (with its Message Mapping Catalogue meaning).

18.56 **Commission Device (SRV 8.1.1)**

This section intentionally left blank

18.57 **Join Service (Critical) (SRV 8. 7.1)**

This section intentionally left blank

18.58 Join Service (Non-Critical) (SRV 8. 7.2)

This section intentionally left blank

18.59 Unjoin Service (Critical) (SRV 8. 8.1)

This section intentionally left blank

18.60 Unjoin Service (Non-Critical) (SRV 8. 8.2)

This section intentionally left blank

18.61 Read Device Log (SRV 8.9)

(a) For such SMETS1 CHF, any updates to the Device Log (with its SMETS1 meaning) will not be reflected in the SMETS1 Response for a period of up to two hours.

18.62 Update HAN Device Log (SRV 8.11)

(a) Where the SMETS1 CHF only supports a JoinTimePeriod (with its DUIS meaning) of up to 255 and the JoinTimePeriod (with its DUIS meaning) specified is greater than 255, the S1SP shall treat the JoinTimePeriod (with its DUIS meaning) as if it were 255.

(b) Where the SMETS1 CHF requires a Cyclic Redundancy Check (CRC) (with the meaning given by the ZigBee Alliance) to be present in the Install Code (with the meaning given by the ZigBee Alliance), the S1SP shall calculate the CRC from the InstallCode (with its DUIS meaning) and append to the InstallCode sending the resulting value to the Device.

(c) Where the RequestType (with its DUIS meaning) is Remove, and the target Device is a SMETS1 ESME, S1SP shall create a SMETS1 Response indicating failure and shall take no further action.

(d) Where the SMETS1 CHF only supports a JoinTimePeriod (with its DUIS meaning) in whole minutes then the S1SP shall round down the provided JoinTimePeriod (with its DUIS meaning) to the nearest whole number of minutes and instruct the Device accordingly.

(e) Where the SMETS1 CHF only supports a JoinTimePeriod (with its DUIS meaning) in whole minutes and the JoinTimePeriod (with its DUIS meaning) specified is less than 60 seconds, the S1SP shall return a SMETS1 Response indicating failure and take no further action.

(f) Not Used.

18.63 Update Firmware (SRV11.1)

(a) For any Device listed in this service request the S1SP shall not action the instruction in relation to that Device if an Activate Firmware Service Request for that Device is currently being processed. The DCC shall send an alert notifying the sender of the Service Request that the instruction has been discarded for the Device in question.

(b) Not Used.

(c) Where any Device listed in this Service Request is of a Device Model identified in Annex D, the S1SP shall send an Alert indicating failure.

(d) Where any Device listed in this Service Request is of a Device Model identified in Annex E, the resulting behaviours will be uncertain.

18.64 Read Firmware Version (SRV 11.2)

(a) Not Used.

(b) Where any Device listed in this Service Request is of a Device Model identified in Annex D, the S1SP shall send an Alert indicating failure.

(c) Where the target Device is of a Device Model identified in Annex F, the FirmwareVersion (with its MMC meaning) returned in the SMETS1 Response may not match the firmware_version held in the Central Products List.

18.65 **Activate Firmware (SRV 11.3)**

(a) Where more than 90 calendar days have elapsed since receipt by the DCC of the associated Update Firmware Service Request, the S1SP shall create a SMETS1 Response indicating failure and shall take no further action.

(b) Where a firmware upgrade process for the target Device or another Device on the same HAN is underway, the S1SP shall return a Response indicating failure.

(c) Not Used.

(d) Where a firmware upgrade process for the target Device or another Device on the same HAN is underway, the currently underway firmware upgrade process will be stopped and the S1SP shall return a SMETS1 Response indicating failure for the upgrade that has been stopped.

(e) Where any Device listed in this Service Request is of a Device Model identified in Annex E, the resulting behaviours will be uncertain.

19 S1SP recording of notified details

19.1 Whenever an S1SP has successfully authenticated a Service Request containing SupplierReplacementCertificates, or one containing ReplacementCertificates where the RemotePartyRole field has a value of Supplier (with their DUIS meaning), the S1SP shall, using the Certificates in SupplierReplacementCertificates or ReplacementCertificates (as the context requires), update the details it holds in relation to the target Device for each of:

(a) Notified Critical Supplier Certificate ID;

(b) Notified Non-Critical Supplier Certificate ID;

(c) Notified Critical Supplier ID; and

(d) Notified Non-Critical Supplier ID.

19.2 Whenever an S1SP has successfully authenticated a Service Request containing ReplacementCertificates where the RemotePartyRole field has a value of NetworkOperator (with their DUIS meaning), the S1SP shall, using the Certificates in ReplacementCertificates, update the details it holds in relation to the target Device for each of:

(a) Notified Critical Network Operator Certificate ID;

(b) Notified Non-Critical Network Operator Certificate ID;

(c) Notified Critical Network Operator ID; and

(d) Notified Non-Critical Network Operator ID.

20 Key rotation

20.1 As soon as reasonably practicable (and in any event within 7 days) following the Commissioning of a SMETS1 Communications Hub Function or a SMETS1 Smart Meter or a SMETS1 Gas Proxy Function or a SMETS1 PPMID, the S1SP shall, via the DCO, in relation to each such Device and where supported by that Device, re-generate and replace any Authentication Keys and any Encryption Keys (with their DLMS COSEM meanings) held by that Device.

21 Time

21.1 Where a Device is capable of maintaining time independently of any other Device within its SMETS1 Installation and where the S1SP is required to communicate with such a Device in order to process a SMETS1 Service Request and where the Device's time is within the DCC's set tolerance of S1SP Time, the S1SP shall synchronise the time on the Device with S1SP Time, and the DCO shall allow such synchronisation.

22 Anomaly Detection

22.1 Where an Anomaly Detection Threshold of the type referred to in (b)(ii) of the definition of Anomaly Detection Threshold has been set, the relevant DCO shall apply the relevant Threshold Anomaly Detection check immediately prior to returning any Instruction to the relevant SMETS1 Service Provider.

22.2 Where the Threshold Anomaly Detection check fails, the DCO shall not authorise any associated Instruction for the SMETS1 Device and shall respond to the relevant SMETS1 Service Provider accordingly. For the avoidance of doubt, the provisions of the Threshold Anomaly Detection Procedures that relate to the further processing of quarantined communications shall not apply to any consequentially deleted SMETS1 Service Requests and nor shall the DCC be required to notify the User of the deletion.

22.3 The DCC shall ensure that no Critical Instruction is sent to a SMETS1 Device unless the relevant DCO has confirmed that either:

(a) there is a Countersigned Service Request to which the Instruction appropriately corresponds; or

(b) the Instruction has been generated by the SMETS1 Service Provider in accordance with the provisions of Clause 20 or Clause 21 which apply to the Device Model of the relevant target Device.

22.4 In circumstances where a DCO is unable to confirm that an Instruction meets the requirements of Clause 22.3, the DCC shall:

(a) delete the Instruction from its systems;

(b) delete any related SMETS1 Service Request; and

(c) raise an Incident.

23 Additional S1SP Processing Values

23.1 Where the S1SP processing requires the additional data items laid out in in Annex C, the S1SP shall use the values laid out in Annex C for the Service Reference Variants specified in Annex C.

Annex A - Device Model Variations to Equivalent Steps Matrix (DMVES Matrix)

sec-appendix-am-an
nex-a-device-model-v

Annex B – Device Configuration Settings for Category 1 Devices

Configuration parameter where defined terms have their SMETS1 meaning	Values to be set where defined terms have their SMETS1 meaning
Sequence of debt recovery types	1- Payment-based Debt Recovery 2- Time-based Debt Recovery rates from the Debt Recovery Rates [1] 3- Time-based Debt Recovery rates from the Debt Recovery Rates [2]
Disablement of Supply not allowed	False
Recording period for the Profile Data Log	30 minutes
Recording period for the GSME Network Data Log	6 minutes
Stop collecting Standing Charge on Disablement of Supply due to insufficient credit	False
Load limiting measurement period	30 seconds
Future dated Commands	All such Commands must be cancelled
Maximum value of any price change command from a device on the same HAN	0
Average RMS Voltage Measurement Period	30 minutes

Table 15

Annex C – Default values for Service Requests for Category 1 Devices

SRV Affected	Default Parameter (with their SMETS1 meanings)	Value
1.6 2.1	Number of minutes to defer Disablement of Supply due to insufficient credit.	0
1.6 2.1	The maximum power that can be consumed when the Disablement Threshold has been breached and Emergency Credit is activated before the Supply is Disabled.	100kW
1.6 2.1	Number of minutes to defer Disablement of Supply due to expiration of the Non-Disablement Calendar and there being insufficient credit.	0
1.1.1 1.6 2.1	Payment Debt Registers, and Time Debt Register [1..2] will be reset on application.	False
1.6	Stop collecting Standing Charge when the Supply is Disabled due to insufficient credit	False
1.1.1 1.6	Trigger for the resetting of Block Counters	Billing Calendar

1.1.1 2.1	The time basis.	UTC
1.1.1	The default periodicity for resetting the Block Counters where no Billing Calendar has been set.	1 month
6.6	Publication of Gas Consumption data to the HAN	kWh and m^3

Table 16

Annex D – Firmware Exclusions

Any SMETS1 PPMID where:

- according to the EPCL, the GroupID = “DA” (with its EPCL meaning) and;
- the DeviceManufacturer is not “1031” (with its DUIS meaning).

Annex E – Firmware Exclusions

Any SMETS1 PPMID where:

- according to the EPCL, GroupID = “AA”, “BA”, “CA” or “CB” (with its EPCL meaning) or,
- according to the EPCL, the GroupID = “EA” (with its EPCL meaning) and the DeviceManufacturer is “1063” (with its DUIS meaning).

Annex F – Firmware Exclusions

Any SMETS1 PPMID where:

- according to the EPCL, the GroupID = “EA” or “EB” (with its EPCL meaning).

APPENDIX AN

SEC Variation Testing Approach Document for BEIS Changes included in the November 2020 SEC Release

[NOT IN USE]

Version 2.0

APPENDIX AO

S1SPKM COMPLIANCE POLICY

1 INTRODUCTION

1.1 The document comprising this Appendix AO:

a) shall be known as the "**S1SPKM Compliance Policy**" (and in this document is referred to simply as the "**Policy**"),
b) is a SEC Subsidiary Document required by Section L14.4(a)(v) of the Code (S1SPKI Assurance).

2 S1SPKI INDEPENDENT ASSURANCE SCHEME
DCC: Duty to Submit to an S1SPKI Independent Assurance Scheme

2.1 The DCC shall subject the S1SPKI Services to assessment against an assurance scheme which satisfies:

a) the quality requirements specified in Part 2.2 of this Policy;
b) the independence requirements specified in Part 2.3 of this Policy; and
c) the approval requirements specified in Part 2.5 of this Policy and that scheme is referred to in this Policy as the "**S1SPKI Independent Assurance Scheme**".

Quality Requirements

2.2 The quality requirements specified in this Part 2.2 are that the S1SPKI Independent Assurance Scheme must be a scheme:

a) which is recognised as an accreditation scheme for the purposes of Article 3(2) of Directive 1999/93/EC on a Community framework for electronic signatures;
b) which is based on ISO 27001; and
c) the provider of which:
(i) is used by the United Kingdom Government to provide assurance in relation to electronic trust services; and
(ii) requires all its scheme assessors to be UKAS certified.

Independence Requirements

2.3 The independence requirements specified in this Part 2.3 are that the provider of the S1SPKI Independent Assurance Scheme must be independent of the DCC and of each DCC Service Provider from which the DCC acquires capability for the purposes of the provision of the S1SPKI Services (referred to in this Policy as a "Relevant DCC Service Provider").

2.4 For the purposes of Part 2.3 of this Policy, the provider of the S1SPKI Independent Assurance Scheme is to be treated as independent of the DCC (and of Relevant DCC Service Providers) only if:
a) neither the DCC nor any of its subsidiaries (or any Relevant DCC Service Provider or any of its subsidiaries) holds or acquires any investment by way of shares, securities or other financial rights or interests in the provider of the scheme;
b) either:

(i) no director or employee of the DCC (or of any Relevant DCC Service Provider) is or becomes a director or employee of the provider of the scheme; or

(ii) where any person is or becomes both a director or employee of the DCC (or of any Relevant DCC Service Provider) and a director or employee of the provider of the scheme, appropriate arrangements are in place to ensure that that person is able to have no influence on any decisions made by the provider of the scheme in respect of the approval of any person or the accreditation of anything in accordance with the scheme;

c) no person who is a director or employee of the DCC (or of any Relevant DCC Service Provider) holds or acquires any investment by way of shares, securities or other financial rights or interests in the provider of the scheme, except where sub-paragraph (b)(ii) applies and that investment is acquired by that person by way of reasonable compensation for his or her performance as a director or employee of the provider of the scheme; and

d) the provider of the scheme does not hold or acquire a participating interest (as defined in section 421A of the Financial Services and Markets Act 2000) in the DCC (or in any Relevant DCC Service Provider).

Approval Requirements

2.5 Before entering into any agreement with the provider of the S1SPKM Independent Assurance Scheme, in accordance with its obligation under Section L15.2 of the Code (S1SPKM Compliance Policy), the DCC shall submit to the SMKI PMA for approval:

a) its proposed choice of scheme; and

b) the proposed terms and conditions of its agreement with the provider of that scheme,

and shall not enter into any such agreement unless the SMKI PMA has first approved the proposed S1SPKI Independent Assurance Scheme and the proposed terms and conditions of that agreement.

2.6 If the SMKI PMA does not approve either the proposed S1SPKI Independent Assurance Scheme or the proposed terms and conditions of the DCC's agreement with the provider of that scheme:

a) the SMKI PMA shall provide the DCC with a statement of its reasons for not doing so; and

b) the DCC shall submit to the SMKI PMA for approval, as soon as is reasonably practicable, a revised proposal in relation to the scheme.

3 INDEPENDENT ASSURANCE SERVICE PROVIDER

DCC: Duty to Procure Independent Assurance Services

3.1 For the purposes of complying with its obligation under Section L15.2 of the Code (S1SPKM Compliance Policy), the DCC shall procure the provision of assurance services:

a) of the scope specified in Part 3.2 of this Policy;

b) from a person who:

(i) is suitably qualified in accordance with Part 3.3 of this Policy; and

(ii) satisfies the independence requirements specified in Part 3.4 of this Policy,

and that person is referred to in this Policy as the “Independent S1SPKI Assurance Service Provider”.

Scope of Independent Assurance Services

3.2 The assurance services specified in this Part 3.2 are services in accordance with which the Independent S1SPKI Assurance Service Provider shall:

a) undertake an initial assessment of the S1SPKI Services against the S1SPKI Independent Assurance Scheme in accordance with Part 4 of this Policy;

b) subsequently undertake further assessments of the S1SPKI Services against the S1SPKI Independent Assurance Scheme:

(i) at a frequency recommended by the provider of that scheme; or

(ii) where there is no such recommended frequency, or where the SMKI PMA otherwise determines, at a frequency specified by the SMKI PMA;

c) at the request of, and to an extent determined by, the SMKI PMA, carry out an assessment of the compliance of any S1SPKI Participant with the applicable requirements of the S1SPKI Document Set;

d) at the request of the SMKI PMA, provide to it advice in relation to the compliance of any S1SPKI Participant with the applicable requirements of the S1SPKI Document Set;

e) at the request of the SMKI PMA, provide to it advice in relation to a review of this Policy, which shall include in particular:

(i) recommendations as to the scope and frequency of assessments carried out in accordance with this Policy; and

(ii) advice in relation to the suitability of any remedial action plan for the purposes of Section M8.4 of the Code (Consequences of an Event of Default), including where the Defaulting Party is the DCC in accordance with Section L15.6 of the Code (Events of Default); and

f) at the request of the SMKI PMA Chair, provide a representative to attend and contribute to the discussion at any meeting of the SMKI PMA.

Suitably Qualified Service Provider

3.3 The Independent S1SPKI Assurance Service Provider shall be treated as suitably qualified in accordance with this Part 3.3 only if it is recognised by the provider of the S1SPKI Independent Assurance Scheme as being qualified to carry out assessments against that scheme.

Independence Requirements

3.4 The independence requirements specified in this Part 3.4 are that the Independent S1SPKI Assurance Service Provider must be independent of each S1SPKI Participant and of each service provider from whom that S1SPKI Participant acquires capability for any purpose related to its compliance with its obligations under the Code (but excluding any provider of corporate assurance services to that S1SPKI Participant).

3.5 For the purposes of Part 3.4 of this Policy, the Independent S1SPKI Assurance Service Provider is to be treated as independent of an S1SPKI Participant (and of a relevant service provider of that S1SPKI Participant) only if:

a) neither that S1SPKI Participant nor any of its subsidiaries (or such a service provider or any of its subsidiaries) holds or acquires any investment by way of shares, securities or other financial rights or interests in the Independent S1SPKI Assurance Service Provider;

b) no director of that S1SPKI Participant (or of any such service provider) is or becomes a director or employee of, or holds or acquires any investment by way of shares, securities or other financial rights or interests in, the Independent S1SPKI Assurance Service Provider; and

c) the Independent S1SPKI Assurance Service Provider does not hold or acquire a participating interest (as defined in section 421A of the Financial Services and Markets Act 2000) in that S1SPKI Participant (or in any such service provider).

4 INITIAL ASSURANCE ASSESSMENT

DCC: Duty to Procure Initial Assessment

4.1 The DCC shall ensure that an initial assurance assessment of the S1SPKI Services:

a) against the S1SPKI Independent Assurance Scheme; and

b) in respect of compliance by the DCC with the applicable requirements of the S1SPKI Document Set,

is undertaken by the Independent S1SPKI Assurance Service Provider in accordance with Part 4.2 of this Policy.

Nature of the Initial Assessment

4.2 The initial assessment referred to in Part 4.1 of this Policy shall be undertaken by no later than such date as is necessary in order to ensure that an Assurance Report may be produced in relation to the S1SPKI Services being produced by the Independent SMKI Assurance Service Provider by no later than such date as the SMKI PMA shall determine to enable the SMKI PMA to make a recommendation relating to the Live Service Criteria relating to security for the relevant Eligible Product Combination List (EPCL).

4.3 The Assurance Report shall clearly identify any failure of the DCC to comply with any applicable requirements of the S1SPKI Document Set noting the severity of any non-compliances;

SMKI PMA: Response to the Initial Assessment

4.4 On receiving a S1SPKI Assurance Report, the SMKI PMA shall:

a) promptly consider that report;

b) determine that the assurance status of the DCC in relation to the S1SPKI Services is to be set at:

(i) approved;

(ii) approved with caveats; or

(iii) not approved;

c) where the SMKI PMA has set the assurance status of the DCC in relation to the S1SPKI Services at ‘approved with caveats’, state in writing its reasons for considering that it is acceptable for the DCC to commence the provision of the S1SPKI Services; and

d) provide a summary of any non-compliances and a SMKI PMA statement of its determination (and of any reasons accompanying that determination) to all Parties.

4.5 Where the SMKI PMA has set the assurance status of the DCC in relation to the S1SPKI Services at ‘approved with caveats’ or ‘not approved’ it shall:

a) require that the DCC submit to it as soon as reasonably practicable a remedial action plan; and

b) within one month of the submission of that plan, require the DCC to make any changes to it that the SMKI PMA may specify.

DCC: Duty in relation to Remedial Action Plan

4.6 Where the DCC is required to do so in accordance with Part 4.5(a) of this Policy, it shall as soon as reasonably practicable submit to the SMKI PMA a remedial action plan.

4.7 Where the DCC is required by the SMKI PMA in accordance with Part 4.5 of this Policy to make changes to the remedial action plan, it may appeal that decision to the SEC Panel and:

(a) the SEC Panel shall determine what changes (if any) shall be made to the remedial action plan; and

(b) the determination of the SEC Panel shall be final and binding for the purposes of the Code.

4.8 The DCC shall implement any remedial action plan subject to any required changes to it specified by:

a) the SMKI PMA in accordance with Part 4.5 of this Policy; or

b) the SEC Panel in accordance with Part 4.7 of this Policy.

5 Subsequent Assurance Assessments

5.1 Following the initial assessment, the DCC shall subsequently undertake further assessments of the S1SPKI Services against the S1SPKI Independent Assurance Scheme:

a) at a frequency recommended by the provider of that scheme;

b) where there is no such recommended frequency, or where the SMKI PMA otherwise determines, at a frequency specified by the SMKI PMA;

c) at the request of, and to an extent determined by, the SMKI PMA, carry out an assessment of the compliance of any S1SPKI Participant with the applicable requirements of the S1SPKI Document Set; or

d) at the request of the SMKI PMA, provide to it advice in relation to the compliance of any S1SPKI Participant with the applicable requirements of the S1SPKI Document Set.

5.2 On receiving a S1SPKI Assurance Report, the SMKI PMA shall:

a) promptly consider that report;

b) determine that the assurance status of the DCC in relation to the S1SPKI Services is to be set at:

(i) approved;

(ii) approved with caveats; or

(iii) not approved;

c) where the SMKI PMA has set the assurance status of the DCC in relation to the S1SPKI Services at ‘approved with caveats’, state in writing its reasons for considering that it is acceptable for the DCC to commence the provision of the S1SPKI Services; and

d) provide a summary of any non-compliances and a SMKI PMA statement of its determination (and of any reasons accompanying that determination) to all Parties.

5.3 Where the SMKI PMA has set the assurance status of the DCC in relation to the S1SPKI Services at 'approved with caveats' or 'not approved' it shall:

a) require that the DCC submit to it as soon as reasonably practicable a remedial action plan; and
b) within one month of the submission of that plan, require the DCC to make any changes to it that the SMKI PMA may specify.

5.4 Where the DCC is required by the SMKI PMA in accordance with Part 5.3 of this Policy to make changes to the remedial action plan, it may appeal that decision to the SEC Panel and:

a) the SEC Panel shall determine what changes (if any) shall be made to the remedial action plan; and
b) the determination of the SEC Panel shall be final and binding for the purposes of the Code.

5.5 The DCC shall implement any remedial action plan subject to any required changes to it specified by:

a) the SMKI PMA in accordance with Part 5.3 of this Policy; or
b) the SEC Panel in accordance with Part 5.4 of this Policy.

Version 2.0

Appendix AP1

S1SPKI Certificate Policy

Secure S1SP Certificate Policy for the Secure Cohort

Table of Contents

1 Introduction

The document comprising this Secure S1SP Certificate Policy (together with its Annexes A and B) shall be known as the "**Secure S1SP Certificate Policy**" (and in this document is referred to simply as the "**Policy**"). It is one of the S1SPKI Certificate Policies in the Smart Energy Code.

1.1 Overview

(A) This Policy sets out the arrangements relating to:

(i) SS1SP End Entity Certificates; and
(ii) SS1SPCA Certificates.

(B) This Policy is structured according to the guidelines provided by IETF RFC 3647, with appropriate extensions, modifications and deletions.

(C) Except where the context otherwise requires, words or expressions used in this Policy shall have the meanings ascribed to them in IETF RFC 5280 where they:

(i) appear in Courier New font;
(ii) are accompanied by the descriptor 'field', 'type' or 'extension'; and/or
(iii) take the form of a conjoined string of two or more words, such as 'digitalSignature'.

1.2 Document name and identification

(A) This Policy has not been assigned an OID.

1.3 Secure S1SP PKI (SS1SP PKI) participants

1.3.1 The Secure S1SP Certification Authority (SS1SPCA)

(A) The definition of Secure S1SP Certification Authority is set out in Annex A.

1.3.2 SS1SP PKI Registration Authorities

(A) The definition of SS1SP PKI Registration Authority is set out in Annex A.

1.3.3 Subscribers

(A) In accordance with the SS1SP PKI RAPP as set out in Annex E of this Policy, certain Parties may become Authorised Subscribers.

(B) In accordance with the SS1SP PKI RAPP as set out in Annex E of this Policy an Authorised Subscriber shall be an Eligible Subscriber in relation to certain Certificates.

(C) The SS1SP PKI RAPP as set out in Annex E of this Policy sets out the procedure to be followed by an Eligible Subscriber in order to become a Subscriber for one or more Certificates.

(D) Eligible Subscribers are subject to the applicable requirements of the SS1SP PKI RAPP as set out in Annex E of this Policy and Subscriber Obligations as set out in Annex C this Policy.

(E) Obligations on the Secure S1SP acting in the capacity of an Eligible Subscriber can be found in the SS1SP PKI RAPP as set out in Annex E of this Policy.

(F) The definitions of the following terms are set out in Annex A of this Policy:

(i) Authorised Subscriber;

(ii) Eligible Subscriber;

(iii) Subscriber.

1.3.4 Subjects

(A) The Subject of a SS1SP End Entity Certificate is represented by an appropriate identifier in the subject field of the SS1SP End Entity Certificate Profile (as the case may be) in accordance with Annex B.

(B) The Subject of a SS1SPCA Certificate must be the entity identified by the subject field of the Root SS1SPCA Certificate Profile, the Intermediate SS1SPCA Certificate Profile or the Subordinate SS1SPCA Certificate Profile (as the case may be) in accordance with Annex B.

(C) The definition of Subject is set out in Annex A.

1.3.5 Relying Parties

(A) In accordance with this Policy, certain Parties may be Relying Parties.

(B) Relying Parties are subject to the applicable requirements of the Relying Party Obligations as set out in Annex D of this Policy.

(C) Obligations on the Secure S1SP acting in the capacity of a Relying Party are set out in Annex D: Relying Party Obligations of this Policy.

(D) The definition of Relying Party is set out in Annex A.

1.3.6 SS1SP PKI Policy Management Authority

(A) The duties of the SS1SP PKI Policy Management Authority fall under the Security Sub-Committee for PKI (SSC for PKI). This executive group is responsible for fulfilling the duties of the PMA in relation to the SS1SP PKI. The terms of reference for operation of SSC for PKI is outlined in SSC for PKI Terms of Reference _1.0

1.3.7 SS1SP PKI Repository Provider

(A) SS1SPCA will be the SS1SP PKI Repository Provider.

1.4 Usage of SS1SP end entity certificates and SS1SPCA certificates

1.4.1 Appropriate Certificate Uses

(A) The Subordinate SS1SPCA shall ensure that SS1SP End Entity Certificates are Issued only:

(i) to Eligible Subscribers; and

(ii) for the purposes of:

a) the creation, sending, receipt and processing of communications to and from Secure SMETS1 Devices in accordance with or pursuant to the Smart Energy Code (SEC), which will further include:

1) Symmetric key generation (Digital Signature, Key Agreement);

2) Code signing (Digital Signature, Non-Repudiation, Code Signing);

3) TLS Communication (Digital Signature, Key Agreement, TLS Web Client Authentication, TLS Web Server Authentication); and

4) Authentication and Non-Repudiation of Secure SMETS1 Devices (Digital Signature, Non Repudiation, Key Encipherment, Data Encipherment, Key Agreement, TLS

Web Client Authentication, TLS Web Server Authentication).

(B) The SS1SPCA shall ensure that SS1SPCA Certificates are Issued only to the SS1SPCA:

(i) in its capacity as, and for the purposes of exercising the functions of, the Root SS1SPCA;

(ii) in its capacity as, and for the purposes of exercising the functions of, the Intermediate SS1SPCA; and

(iii) in its capacity as, and for the purposes of exercising the functions of, the Subordinate SS1SPCA.

(C) Further provision in relation to the use of Certificates is made in the Subscriber Obligations as set out in Annex C of this Policy and the Relying Party Obligations as set out in Annex D of this Policy.

1.4.2 Prohibited Certificate Uses

(A) No Party shall use a Certificate other than for the purposes specified in Part 1.4.1 of this Policy.

1.5 Policy administration

1.5.1 Organisation administering the Document

(A) This Policy is a Secure S1SP document and is administered as such in accordance with the provisions of this Policy and any supporting Policy documents.

1.5.2 Contact Person

(A) Questions in relation to the content of this Policy should be addressed to the Secure S1SP's CISO (Chief Information Security Officer).

1.5.3 Person determining SS1SP CPS suitability for the Policy

(A) Security subcommittee for PKI (SSCPKI) will be responsible for determining the suitability of the SS1SP CPS.

1.5.4 SS1SP CPS approval procedures

(A) The SSCPKI shall approve the SS1SP CPS.

(B) The SS1SP shall keep the SS1SP CPS under review and shall in particular carry out a review of the SS1SP CPS whenever (and to the extent to which) it may be required to do so by the Security Sub committee for PKI

(C) Following any review of the SS1SP CPS:

(i) the SS1SP may propose amendments to it, which it shall submit to the SSCPKI for its approval; and

(ii) those amendments may be made only to the extent to which the SSCPKI has approved them.

1.5.5 Registration Authority Policies and Procedures

(A) The SS1SP PKI Registration Authority Policies and Procedures (the SS1SP PKI RAPP are set out in in Annex E of this Policy.

1.6 Definitions and acronyms

1.6.1 Definitions

(A) Definitions of the expressions used in this Policy are set out in Annex A and shall otherwise be interpreted in accordance with the Smart Energy Code.

1.6.2 Acronyms

(A) Any acronyms used for the purposes of this Policy are set out in Annex A.

2 Publication and repository responsibilities

2.1 Repositories

2.2 SS1SP PKI Repositories

(A) Each SS1SPCA has its own secure, encrypted repository that contains:

(i) Its private key (held in encrypted state at rest and subject to Secret Shares - see Parts 6.2.2 and 6.2.4 of the SS1SP CPS);

(ii) Copies of all Certificates generated and issued; and

(iii) Audit Log information with regards to the SS1SPCA functions which includes:

a) Certificate issued

b) Certificate date and time of issuance

c) Other data and data sets related to Certificates e.g. CSR.

2.3 Publication of certification information

(A) See Part 2.2 of the Policy.

2.4 Time or frequency of publication

(A) Immediately upon a Certificate being generated and issued by the SS1SPCA.

2.5 ACCESS CONTROLS ON SS1SP PKI REPOSITORIES

(A) All SS1SP PKI Repositories are subject to stringent access controls. Only authorised SS1SPCA Systems and Privileged Users have access to SS1SP PKI Repositories.

(B) All SS1SP PKI Repositories are:

(i) Encrypted using AES-128 (Galois Counter Mode);

(ii) Held off-line and not network connected until required; and

(iii) Reside in data centres in accordance with Part 5 of this Policy.

(C) SS1SPCA Private Keys held within the SS1SP PKI Repository are encrypted and further secured using M of N Secret Shares as described in Part 6.2.2 of this Policy.

3 Identification and authentication

3.1 Naming

3.1.1 Types of Names

(A) The SS1SPCA will ensure that the name of the Subject of each Certificate is in accordance with the relevant Certificate Profile at Annex B.

3.1.2 Need for Names to be Meaningful

(A) The SS1SPCA will ensure that the name of the Subject of each Certificate is meaningful and consistent with the relevant Certificate Profile in Annex B.

3.1.3 Anonymity or Pseudonymity of Subscribers

(A) Under this Policy, the SS1SPCA will:

(i) prohibit Eligible Subscribers from requesting the Issue of a Certificate anonymously or by means of a pseudonym.

3.1.4 Rules for Interpreting Various Name Forms

(A) Provision in relation to name forms is made in Annex B.

3.1.5 Uniqueness of Names

(A) Provision in relation to the uniqueness of names is made in Annex B.

3.1.6 Recognition, Authentication, and Role of Trademarks

(A) No Eligible Subscriber may make a Certificate Signing Request which contains:

(i) any information that constitutes a trademark, unless it is the holder of the Intellectual Property Rights in relation to that trade mark; or

(ii) any confidential information which would be contained in a Certificate Issued in response to that Certificate Signing Request.

3.2 Initial identity verification

3.2.1 Method to Prove Possession of Private Key

(A) Provision is made in the SS1SP PKI RAPP as set out in Annex E of this Policy in relation to:

(i) the procedure to be followed by an Eligible Subscriber in order to prove its possession of the Private Key which is associated with the Public Key to be contained in any Certificate that is the subject of a Certificate Signing Request; and

(ii) the procedure established for this purpose is in accordance with the procedure in PKCS#10 or an equivalent cryptographic mechanism.

3.2.2 Authentication of Organisation Identity

(A) Only the Secure S1SP organisation is allowed to subscribe for Certificates under this Policy.

3.2.3 Authentication of SS1SP Parties

(A) Provision is made in the SS1SP PKI RAPP as set out in Annex E of this Policy in relation to the Authentication of SS1SP Parties engaged as Authorised Subscribers, which provides for all such persons to have their identity and authorisation verified against a robust and assured authentication framework as agreed by the SSC for PKI.

3.2.4 Non-verified Subscriber Information

(A) The SS1SPCA shall:

(i) verify all information in relation to SS1SPCA Certificates;

(ii) require each Eligible Subscriber to verify the information contained in any Certificate Signing Request in respect of a SS1SP End Entity Certificate.

(B) Further provision on the content of SS1SPCA Certificates is made in Subscriber Obligations as set out in Annex C of this Policy.

3.2.5 Validation of Authority

(A) See Part 3.2.2 of this Policy.

3.2.6 Criteria for Interoperation

(A) [Not applicable in this Policy]

3.3 Identification and authentication for re-key requests

3.3.1 Identification and Authentication for Routine Re-Key

(A) This Policy only supports a limited Certificate Re-Key service.

(B) The SS1SPCA shall provide a Certificate Re-Key service for SS1SPCA End Entity Certificates with the SMSO TLS Certificate profile and the SMSO KMS Certificate Profile as defined in Annex B.

(C) SS1SPCA End Entity Certificates with the Certificate Profiles in (B) above will be re-keyed every 5 years.

(D) Identification and authentication for routine re-key will be as per Part 3.2 of this Policy.

3.3.2 Identification and Authentication for Re-Key after Revocation

(A) [Not applicable in this Policy]

3.4 Identification and authentication for revocation request

(A) [Not applicable in this Policy]

4 Certificate life-cycle operational requirements

4.1 Certificate application

4.1.1 Submission of Certificate Applications

(A) Provision is made in the SS1SP PKI RAPP as set out in Annex E of this Policy in relation to:

(i) in respect of a SS1SP End Entity Certificate:

a) the circumstances in which an Eligible Subscriber may submit a Certificate Signing Request; and

b) the means by which it may do so, including through the use of an authorised System; and

(ii) in respect of a SS1SPCA Certificate, the procedure to be followed by an Eligible Subscriber in order to obtain a SS1SPCA Certificate.

4.1.2 Enrolment Process and Responsibilities

(A) Provision is made where applicable in the SS1SP PKI RAPP as set out in Annex E of this Policy in relation to the:

(i) establishment of an enrolment process in respect of organisations, individuals, Systems and Secure SMETS1 Devices in order to Authenticate them and verify that they are authorised to act on behalf of an Eligible Subscriber or Authorised Subscriber in its capacity as such; and

(ii) maintenance by the SS1SPCA of a list of organisations, individuals, Systems and Secure SMETS1 Devices enrolled in accordance with that process.

4.1.3 Enrolment Process for the Registration Authority and its Representatives

(A) Provision is made in the SS1SP PKI RAPP as set out in Annex E of this Policy in relation to the establishment of an enrolment process in respect of SS1SPCA Personnel and SS1SPCA Systems:

(i) in order to Authenticate them and verify that they are authorised to act on behalf of the SS1SPCA in its capacity as the Registration Authority; and

(ii) including in particular, for that purpose, provision:

(a) for Authentication of all Registration Authority Personnel by a Registration Authority Manager; and

(b) for all Registration Authority Personnel to have their identify and authorisation verified against a robust assured authentication framework as agreed by the SSC for PKI.

4.2 Certificate application processing

4.2.1 Performing Identification and Authentication Functions

(A) Provision is made in the SS1SP PKI RAPP as set out in Annex E of this Policy in relation to the Authentication by the SS1SPCA of Eligible Subscribers which submit a Certificate Signing Request.

4.2.2 Approval or Rejection of Certificate Applications

(A) Where any Certificate Signing Request fails to satisfy the requirements set out in the SS1SP PKI RAPP as set out in Annex E of this Policy or this Policy, the SS1SPCA:

(i) shall reject it and refuse to Issue the Certificate which was the subject of the Certificate Signing Request; and

(ii) may give notice to the Party which made the Certificate Signing Request of the reasons for its rejection.

(B) Where any Certificate Signing Request satisfies the requirements set out in the SS1SP PKI RAPP as set out in Annex E of this Policy or any other provision of this Policy, the SS1SPCA shall Issue the Certificate which was the subject of the Certificate Signing Request.

4.2.3 Time to Process Certificate Applications

(A) All Certificate applications to the SS1SPCA will be processed within 7 days.

4.3 Certificate issuance

4.3.1 SS1SPCA Actions during Certificate Issuance

(A) The SS1SPCA may Issue a Certificate only:

(i) in accordance with the provisions of this Policy and the SS1SP PKI RAPP as set out in Annex E of this Policy; and

(ii) in response to a Certificate Signing Request made by an Eligible Subscriber in accordance with the SS1SP PKI RAPP as set out in Annex E of this Policy.

(B) The SS1SPCA shall ensure that:

(i) each SS1SPCA Certificate Issued by it contains information that it has verified to be correct and complete; and

(ii) each SS1SP End Entity Certificate Issued by it contains information consistent with the information in the Certificate Signing Request.

(C) A S1SPCA Certificate may only be:

(i) Issued by the SS1SPCA; and

(ii) for that purpose, signed using the SS1SPCA Root Private Key for the SS1SPCA Intermediate SS1SPCA or the Intermediate SS1SPCA Private Key for the Subordinate SS1SPCA.

(D) A SS1SP End Entity Certificate may only be:

(i) Issued by the Subordinate SS1SPCA; and

(ii) for that purpose, signed using a Subordinate SS1SPCA Private Key.

4.3.2 Notification to Eligible Subscriber by the SS1SPCA of Issuance of Certificate

(A) Provision is made in the SS1SP PKI RAPP as set out in Annex E of this Policy for the SS1SPCA to notify an Eligible Subscriber where that Eligible Subscriber is Issued with a Certificate which was the subject of a Certificate Signing Request made by it.

4.4 Certificate Acceptance

4.4.1 Conduct Constituting Certificate Acceptance

(A) A Certificate which has been Issued by the SS1SPCA shall be treated as valid for any purposes of this Policy until it is treated as having been rejected by the Eligible Subscriber to which it was Issued.

(B) The SS1SPCA shall maintain a record of all Certificates which have been Issued by it and are treated as accepted by a Subscriber.

(C) Further provision in relation to the rejection and acceptance of Certificates is set out in Annex C of this Policy.

4.4.2 Publication of Certificates by the SS1SPCA

(A) Provision in relation to the publication of Certificates is made in Part 2 of this Policy.

4.4.3 Notification of Certificate Issuance by the SS1SPCA to Other Entities

(A) The SS1SPCA shall not give notice of the Issue of a Certificate to any Other Entities.

4.5 KEY PAIR AND CERTIFICATE USAGE

4.5.1 Subscriber Private Key and Certificate Usage

(A) Provision for restrictions on the use by Subscribers of Private Keys in respect of Certificates is made in Annex C: Subscriber Obligations of this Policy.

4.5.2 Relying Party Public Key and Certificate Usage

(A) Provision in relation to reliance that may be placed on a Certificate is made in the Relying Party Obligations as set out in Annex D of this Policy.

4.6 Certificate renewal

(A) This Policy does not support Certificate Renewal.

(B) The SS1SPCA shall not provide a Certificate Renewal service.

(C) Where a new Key Pair has been generated the Eligible Subscriber shall apply for the Issue of a new Certificate in accordance with this Part 4.7 of this Policy.

4.6.1 Who may Request Certification of a New Public Key

[*Not applicable in this Policy*]

4.6.2 Processing Certificate Renewal Requests

[*Not applicable in this Policy*]

4.6.3 Notification of New Certificate Issuance to Subscriber

[*Not applicable in this Policy*]

4.6.4 Conduct Constituting Acceptance of a Renewal Certificate

[*Not applicable in this Policy*]

4.6.5 Publication of the Renewal Certificate by the SS1SPCA

[*Not applicable in this Policy*]

4.6.6 Notification of Certificate Issuance by the SS1SPCA to Other Entities

[*Not applicable in this Policy*]

4.7 Certificate Re-key

4.7.1 Circumstances of Certificate re-key

(A) This Policy provides support for Certificate re-key.

(B) The SS1SPCA may only re-key Certificates in accordance with Part 3.3.1 (B) of this Policy.

(C) The SS1SPCA shall not provide support for re-key of Certificates other than those outlined in Part 3.3.1 (B), or where any Certificate is compromised (or is suspected of being) in accordance with Secure S1SP's BC/DR plans as per Part 5.7 of this Policy.

4.7.2 Circumstances of Certificate Re-key

(A) An Eligible Subscriber may apply for a Certificate to be re-keyed where either:

(i) the SS1SP End Entity Private Key associated with the Certificate has expired; or

(ii) the SS1SPCA Private Key associated with the SS1SPCA Certificate has been Compromised (or is suspecting of being) in accordance with Part 5.7 of this Policy.

(B) In relation to Part 4.7.2 (A)(i) above, the SS1SP End Entity Certificates that can be re-keyed under normal operating conditions are set out in Part 3.3.1 (B) of this policy.

4.7.3 Who May Request a Re-keyed Certificate

(A) In accordance with Part 4.7.2 (B), an Eligible Subscriber may request a Certificate re-key at any time by applying for the Issue of a new SS1SP End Entity Certificate in accordance with this Policy.

4.7.4 Processing Re-keyed Certificate Requests

(A) See Part 4.2 of this Policy

4.7.5 Notification of Re-keyed Certificate Issuance to a Subscriber

(A) See Part 4.3.2 of this Policy.

4.7.6 Conduct Constituting Acceptance of a Re-keyed Certificate

(A) See Part 4.4.1 of this Policy.

4.7.7 Publication of a Re-keyed Certificate by the SS1SPCA

(A) See Part 4.4.2 of this Policy.

4.7.8 Notification of Re-keyed Certificate Issuance by the SS1SPCA to Other Entities

(A) See Part 4.4.3 of this Policy

4.8 Certificate modification

4.8.1 Circumstances for Certificate Modification

(A) This Policy does not support Certificate modification.

(B) Neither the SS1SPCA nor any Subscriber may modify a Certificate.

4.8.2 Who may request Certificate Modification

[*Not applicable in this Policy*]

4.8.3 Processing Certificate Modification Requests

[*Not applicable in this Policy*]

4.8.4 Notification of New Certificate Issuance to Subscriber

[*Not applicable in this Policy*]

4.8.5 Conduct Constituting Acceptance of Modified Certificate

[*Not applicable in this Policy*]

4.8.6 Publication of the Modified Certificate by the SS1SPCA

[*Not applicable in this Policy*]

4.8.7 Notification of Certificate Issuance by the SS1SPCA to Other Entities

[*Not applicable in this Policy*]

4.9 Certificate revocation and suspension

4.9.1 Circumstances for Revocation

(A) This Policy does not support the revocation or suspension of Certificates.

(B) The SS1SPCA shall not provide any service of revoking or suspending a Certificate.

4.9.2 Who can Request Revocation

[*Not applicable in this Policy*]

4.9.3 Procedure for Revocation Request

[*Not applicable in this Policy*]

4.9.4 Revocation Request Grace Period

[*Not applicable in this Policy*]

4.9.5 Time within which SS1SPCA must process the Revocation Request

[*Not applicable in this Policy*]

4.9.6 Revocation Checking Requirements for Relying Parties

[*Not applicable in this Policy*]

4.9.7 CRL Issuance Frequency (if applicable)

[*Not applicable in this Policy*]

4.9.8 Maximum Latency for CRLs (if applicable)

[*Not applicable in this Policy*]

4.9.9 On-line Revocation/Status Checking Availability

[*Not applicable in this Policy*]

4.9.10 On-line Revocation Checking Requirements

[*Not applicable in this Policy*]

4.9.11 Other Forms of Revocation Advertisements Available

[*Not applicable in this Policy*]

4.9.12 Special Requirements in the Event of Key Compromise

See Part 4.7.2 of this Policy.

4.9.13 Circumstances for Suspension

[*Not applicable in this Policy*]

4.9.14 Who can Request Suspension

[*Not applicable in this Policy*]

4.9.15 Procedure for Suspension Request

[*Not applicable in this Policy*]

4.9.16 Limits on Suspension Period

[*Not applicable in this Policy*]

4.10 Certificate status services

4.10.1 Operational Characteristics

[*Not applicable in this Policy*]

4.10.2 Service Availability

[*Not applicable in this Policy*]

4.10.3 Optional Features

[*Not applicable in this Policy*]

4.11 End of subscription

[*Not applicable in this Policy*]

4.12 Key Escrow and recovery

4.12.1 Key Escrow and Recovery Policies and Practices

(A) The SS1SPCA PKI does not provide Key Escrow services.

(B) SS1SPCA recovery policies and practices are documented in the SS1SP CPS.

4.12.2 Session Key Encapsulation and Recovery Policy and Practices

(A) The SS1SPCA PKI does not provide Session Key encapsulation services.

(B) SS1SPCA recovery policies and practices are documented in the SS1SP CPS.

5 Facility management and operational controls

5.1 PHYSICAL CONTROLS

5.1.1 Site Location and Construction

(A) The Secure S1SP shall ensure that the SS1SPCA Systems are operated in a sufficiently secure environment, where the Secure S1SP will comply with or achieve certification with the following standard of the International Organisation for Standards in respect of the security, reliability and resilience of its information assets and processes, where the scope will be sufficient enough to include the SS1SPCA PKI:

(i) ISO/IEC 27001:2013 (Information Technology - Security Techniques - Information Security Management Systems); or
(ii) any equivalent to that standard which updates or replaces it from time to time.

(B) The SS1SPCA shall ensure that:

(i) all of the physical locations in which the SS1SPCA Systems are situated, operated, routed or directly accessed are in the United Kingdom or India;

(ii) all bespoke Security Related Functionality is developed, specified, designed, built and tested only within the United Kingdom or India; and

(iii) all Security Related Functionality is integrated, configured, tested in situ, implemented, operated and maintained only within the United Kingdom or India.

(C) The SS1SPCA shall ensure that the SS1SPCA Systems cannot be indirectly accessed from any location outside the United Kingdom or India.

(D) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions designed to ensure that all physical locations in which the manufacture of Certificates and Time-Stamping take place are at all times manually or electronically monitored for unauthorised intrusion in accordance with ISO/IEC 27001:2013 (Information Technology – Security Techniques – Information Security Management Systems) and industry good practice.

(E) The SS1SPCA shall ensure that, where applicable, the SS1SP CPS incorporates provisions designed to ensure that all PINs, pass-phrases and passwords used for the purposes of carrying out the cryptographic and sensitive functions of the SS1SPCA are stored securely, are encrypted and are accessible only to SS1SPCA Personnel in Privileged Roles.

5.1.2 Physical Access

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions in relation to access control, including in particular provisions designed to:

(i) establish controls such that only appropriately authorised personnel may have unescorted physical access to SS1SPCA Systems, or any System used for the purposes of Time-Stamping;

(ii) ensure that any unauthorised personnel may have physical access to such Systems only if appropriately authorised and supervised;

(iii) ensure that a site access log is both maintained and periodically inspected for all locations at which such Systems are sited; and

(iv) ensure that all removable media which contain sensitive plain text Data and are kept at such locations are stored in secure containers accessible only to appropriately authorised individuals.

5.1.3 Power and Air Conditioning

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions in relation to power and air conditioning at all physical locations in which the SS1SPCA Systems are situated.

5.1.4 Water Exposure

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions in relation to water exposure at all physical locations in which the SS1SPCA Systems are situated.

5.1.5 Fire Prevention and Protection

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions in relation to fire prevention and protection at all physical locations in which the SS1SPCA Systems are situated.

5.1.6 Media Storage

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions designed to ensure that appropriate controls are placed on all media used for the storage of Data held by it for the purposes of carrying out its functions as the SS1SPCA.

5.1.7 Waste Disposal

(A) The SS1SPCA shall ensure that all media used to store Data held by it for the purposes of carrying out its functions as the SS1SPCA are disposed of only using secure methods of disposal in accordance with good industry practice.

5.1.8 Off-Site Back-Up

(A) The SS1SPCA shall regularly carry out a Back-Up of:

(i) all Data held on the SS1SPCA Systems which are critical to the operation of those Systems or continuity in the provision of the SS1SP PKI Services; and

(ii) all other sensitive Data.

(B) For the purposes of paragraph (A), the SS1SPCA shall ensure that the SS1SP CPS incorporates provisions which identify the categories of critical and sensitive Data that are to be Backed-Up.

(C) The SS1SPCA shall ensure that Data which are Backed-Up in accordance with paragraph (A):

(i) are stored on media that are located in physically secure facilities in different locations to the sites at which the Data being Backed-Up are ordinarily held;

(ii) are protected in accordance with the outcome of a risk assessment, including when being transmitted for the purposes of Back-Up; and

(iii) to the extent to which they comprise SS1SPCA Private Key Material, are Backed-Up:

(a) to appropriate Security Containers which are stored off-line in encrypted format.

(D) The SS1SPCA shall ensure that, where any elements of the SS1SPCA Systems, any Data held for the purposes of providing the SS1SP PKI Services, or any items of SS1SPCA equipment are removed from their primary location, they continue to be protected in accordance with the security standard appropriate to the primary location.

(E) The SS1SPCA will ensure that the SS1SP CPS incorporates provisions in relation to paragraphs (A), (B), (C) and (D) above.

5.2 Procedural controls

5.2.1 Trusted Roles

(A) The SS1SPCA shall ensure that:

(i) no individual may carry out any activity which involves access to resources, or Data held on the SS1SPCA Systems unless that individual has been expressly authorised to have such access;

(ii) each member of SS1SPCA Personnel has a clearly defined level of access to the SS1SPCA Systems and the premises in which they are located;

(iii) no individual member of SS1SPCA Personnel is capable, by acting alone, of engaging in any action by means of which the SS1SPCA Systems may be Compromised to a material extent; and

(iv) the SS1SP CPS incorporates provisions designed to ensure that appropriate controls are in place for the purposes of compliance by the SS1SPCA with the requirements of this Part 5.2.1 of this Policy.

5.2.2 Number of Persons Required per Task

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions designed to establish:

(i) the appropriate separation of roles between the different members of SS1SPCA Personnel; and

(ii) the application of controls to the actions of all members of SS1SPCA Personnel who are Privileged Users, identifying in particular any controls designed to ensure that the involvement of more than one individual is required for the performance of certain functions where reasonably practicable.

(B) The SS1SPCA shall ensure that the SS1SP CPS, as a minimum, makes provision for the purposes of paragraph (A) in relation to the following areas:

(i) SS1SPCA Systems administration;

(ii) SS1SPCA Systems operations;
(iii) SS1SPCA Systems security; and
(iv) SS1SPCA Systems auditing.

5.2.3 Identification and Authentication for Each Role

(A) See Part 5.2.2 of this Policy.

5.2.4 Roles Requiring Separation of Duties

(A) See Part 5.2.2 of this Policy.

5.3 Personnel controls

5.3.1 Qualification, Experience and Clearance Requirements

(A) The SS1SPCA shall ensure that all SS1SPCA Personnel must:

(i) be appointed to their roles in writing;

(ii) be bound by contract to the terms and conditions relevant to their roles;

(iii) have received appropriate training with respect to their duties;

(iv) be bound by contract not to disclose any confidential, sensitive, personal or security-related Data except to the extent necessary for the performance of their duties or for the purposes of complying with any requirement of law; and

(v) in so far as can reasonably be ascertained by the SS1SPCA, not have been previously relieved of any past assignment (whether for the SS1SPCA or any other person) on the grounds of negligence or any other failure to perform a duty.

(B) The SS1SPCA shall ensure that all SS1SPCA Personnel have, as a minimum, passed an industry recognised and assured security check before commencing their roles.

5.3.2 Background Check Procedures

(A) See Part 5.3.1 of this Policy.

5.3.3 Training Requirements

(A) See Part 5.3.1 of this Policy.

5.3.4 Retraining Frequency and Requirements

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates appropriate provisions relating to the frequency and content of retraining and refresher training to be undertaken by members of SS1SPCA Personnel.

5.3.5 Job Rotation Frequency and Sequence

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates appropriate provisions relating to the frequency and sequence of job rotations to be undertaken by members of SS1SPCA Personnel.

5.3.6 Sanctions for Unauthorised Actions

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates appropriate provisions relating to sanctions for unauthorised actions undertaken by members of SS1SPCA Personnel.

5.3.7 Independent Contractor Requirements

(A) References to the SS1SPCA in this Policy include references to persons with whom the SS1SPCA contracts in order to secure performance of its obligations as the SS1SPCA.

5.3.8 Documentation Supplied to Personnel

(A) The SS1SPCA shall ensure that all SS1SPCA Personnel are provided with access to all documents relevant to their roles or necessary for the performance of their duties, including in particular:

(i) this Policy;

(ii) the SS1SP CPS; and

(iii) any supporting documentation, statutes, policies or contracts.

5.4 Audit logging procedures

5.4.1 Types of Events Recorded

(A) The SS1SPCA shall ensure that:

(i) the SS1SPCA Systems record all systems activity in an audit log;

(ii) the SS1SP CPS incorporates a comprehensive list of all events that are to be recorded in an audit log in relation to:

(a) the activities of SS1SPCA Personnel;

(b) the use of SS1SPCA equipment;

(c) the use of (including both authorised and unauthorised access, and attempted access to) any premises at which functions of the SS1SPCA are carried out;

(d) communications and activities that are related to the Issue of Certificates (in so far as not captured by the SS1SPCA Systems audit log); and

(e) it records in an audit log all the events specified in paragraph (ii).

5.4.2 Frequency of Processing Log

(A) The SS1SPCA shall ensure that:

(i) the audit logging functionality in the SS1SPCA Systems is fully enabled at all times;

(ii) all SS1SPCA Systems activity recorded in the Audit Log is recorded in a standard format that is aligned with:

(a) British Standard BS 10008:2008 (Evidential Weight and Legal Admissibility of Electronic Information); or

(b) any equivalent to that British Standard which updates or replaces it from time to time.

(B) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions which specify:

(i) how regularly information recorded in the Audit Log is to be reviewed; and

(ii) what actions are to be taken by it in response to types of events recorded in the Audit Log.

(C) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions in relation to access to the Audit Log, providing in particular that:

(i) Data contained in the Audit Log must not be accessible other than on a read-only basis; and

(ii) access to those Data must be limited to those members of SS1SPCA Personnel who are performing a dedicated system audit role.

5.4.3 Retention Period for Audit Log

(A) The SS1SPCA shall:

(i) retain the Audit Log so that it incorporates, on any given date, a record of all system events occurring during a period of at least twelve months prior to that date; and

(ii) ensure that a copy of the Audit Log incorporating a record of all system events occurring prior to the beginning of that period is archived in accordance with the requirements of Part 5.5 of this Policy.

5.4.4 Protection of Audit Log

(A) The SS1SPCA shall ensure that:

(i) to the extent to which the Audit Log is retained electronically, the Data stored in it cannot be accessed other than on a read-only basis, and are protected from unauthorised viewing, modification and deletion in accordance with:

(a) British Standard BS 10008:2008 (Evidential Weight and Legal Admissibility of Electronic Information); or

(b) any equivalent to that British Standard which updates or replaces it from time to time; and

(c) to the extent to which the Audit Log is retained in non-electronic form, the Data stored in it are appropriately protected from unauthorised viewing, modification and destruction in order to ensure that their integrity is maintained for evidential purposes.

5.4.5 Audit Log Back-Up Procedures

(A) The SS1SPCA shall ensure that the Data contained in the Audit Log are Backed-Up (or, to the extent that the Audit Log is retained in non-electronic form, are copied):

(i) on a daily basis; or

(ii) if activity has taken place on the SS1SPCA Systems only infrequently, in accordance with the schedule for the regular Back-Up of the Data held on those Systems.

(B) The SS1SPCA shall ensure that all Data contained in the Audit Log which are Backed-Up are, during Back-Up:

(i) held in accordance with the outcome of a risk assessment which is documented in the SS1SP CPS; and

(ii) protected to the same standard of protection as the primary copy of the Audit Log in accordance with Part 5.4.4 of this Policy.

5.4.6 Audit Collection System (Internal or External)

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions in relation to its system for collecting Data for the purpose of populating the Audit Log.

5.4.7 Notification to Event-Causing Subject

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions in relation to its notification of any person who is (or is responsible for any System which is) the direct cause of an event recorded in the Audit Log.

5.4.8 Vulnerability Assessments

(A) Provision is made in the SS1SP CPS in relation to the carrying out of vulnerability assessments in respect of the SS1SPCA Systems.

5.5 Records Archival

5.5.1 Types of Records Archived

(A) The SS1SPCA shall ensure that it archives:

(i) the Audit Log in accordance with Part 5.4.3 of this Policy;

(ii) its records of all Data submitted to it by Eligible Subscribers for the purposes of Certificate Signing Requests; and

(iii) any other Data specified in this Policy as requiring to be archived in accordance with this Part 5.5.

5.5.2 Retention Period for Archive

(A) Where there is a need to Archive Data, the SS1SPCA shall ensure that any Data which is to be Archived is retained in accordance with their Data Retention and Destruction Policy.

5.5.3 Protection of Archive

(A) The SS1SPCA shall ensure that the SS1SP CPS details how Data held in its Archive are:

(i) protected against any unauthorised access;

(ii) adequately protected against environmental threats such as temperature, humidity and magnetism; and

(iii) incapable of being modified or deleted.

5.5.4 Archive Back-Up Procedures

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions in relation to its procedures for the Back-Up of its Archive.

5.5.5 Requirements for Time-Stamping of Records

(A) Provision in relation to Time-Stamping is made in Part 6.8 of this Policy.

5.5.6 Archive Collection System (Internal or External)

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions in relation to its system for collecting Data for the purpose of populating the Archive.

5.5.7 Procedures to Obtain and Verify Archive Information

(A) The SS1SPCA shall ensure that:

(i) Data held in the Archive are stored in a readable format during their retention period; and

(ii) those Data remains accessible at all times during their retention period, including during any period of interruption, suspension or cessation of the SS1SPCA's operations.

(B) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions in relation to the periodic verification by the SS1SPCA of the Data held in the Archive.

5.6 Key changeover

5.6.1 SS1SP End Entity Certificate Key Changeover

(A) The SS1SPCA shall only ever Issue a new SS1SP End Entity Certificate for those SS1SP End Entity Certificates as described in Part 3.3.1 (B) of this Policy, and where a new Certificate Signing Request is submitted by an Eligible Subscriber in accordance with the requirements of the SS1SP PKI RAPP as set out in Annex E of this Policy and Part 4.7 of this Policy.

5.7 Compromise and disaster recovery

5.7.1 Incident and Compromise Handling Procedures

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates a business continuity plan which shall be designed to ensure continuity in, or (where there has been unavoidable discontinuity) the recovery of, the provision of the SS1SP PKI Services in the event of any security compromise of the SS1SPCA Systems or major failure in the SS1SPCA processes.

(B) The SS1SPCA shall ensure that the procedures set out in the business continuity plan are:

(i) aligned with ISO 22301 and ISO 27031 (or any equivalent to those standards which update or replace them from time to time); and

(ii) tested periodically, and in any event at least once in each year, in order to ensure that they are operationally effective.

(C) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions setting out the approach to be taken by it in circumstances in which it suspects (or has reason to suspect) that any SS1SPCA Private Key or any part of the SS1SPCA Systems is Compromised.

5.7.2 Computing Resources, Software and/or Data are Corrupted

(A) The SS1SPCA shall ensure that the business continuity plan established in accordance with Part 5.7.1 of this Policy incorporates provisions setting out the steps to be taken in the event of any loss of or corruption to computing resources, software or Data.

5.7.3 Entity Private Key Compromise Procedures

(A) See Part 5.7.1 of this Policy.

5.7.4 Business Continuity Capabilities after a Disaster

(A) The SS1SPCA shall ensure that the business continuity plan established in accordance with Part 5.7.1 of this Policy is designed to ensure the recovery of the provision of the SS1SP PKI Services within not more than 48 hours of the occurrence of any event causing discontinuity.

5.8 Certification authority and registration authority termination

[*Not applicable in this Policy*]

6 Technical security controls

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates detailed provision in relation to the technical controls to be established and operated for the purposes of the exercise of its functions as the SS1SPCA.

6.1 Key pair generation and installation

6.1.1 Key Pair Generation

(A) The SS1SPCA shall ensure that all SS1SPCA Key which it uses for the purposes of this Policy are generated in accordance with Part 6.1.1 of the SS1SP CPS.

(B) The SS1SPCA shall not generate any Private Key or Public Key other than a SS1SPCA Key.

(C) The SS1SPCA shall ensure that all SS1SPCA Private Keys that are not required for continuous operational purposes will be encrypted and stored securely in an off-line security container which requires M of N to activate the SS1SPCA Private Key when required.

6.1.2 Private Key Delivery to Subscriber

(A) In accordance with Part 6.1.1(B), the SS1SPCA shall not generate any Private Key for delivery to a Subscriber.

6.1.3 Public Key Delivery to Certificate Issuer

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions:

(i) in relation to the mechanism by which Public Keys of Subscribers are delivered to it for the purpose of the exercise of its functions as the Root SS1SPCA, Intermediate SS1SPCA and Subordinate SS1SPCA; and

(ii) ensuring that the mechanism uses a recognised standard protocol such as PKCS#10.

6.1.4 SS1SPCA Public Key Delivery to Relying Parties

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions:

(i) in relation to the manner by which each SS1SPCA Public Key is to be lodged in the SS1SP PKI Repository; and

(ii) designed to ensure that the SS1SPCA Public Keys are securely lodged in the SS1SP PKI Repository in such a manner as to guarantee that their integrity is maintained.

6.1.5 Key Sizes

(A) The SS1SPCA and every Subscriber shall ensure that all Private Keys and Public Keys which each of them may use for the purposes of this Policy are of the size and characteristics set out in Annex B to this Policy.

6.1.6 Public Key Parameters Generation and Quality Checking

(A) The SS1SPCA shall ensure that any Public Key used by it for the purposes of this Policy shall be of values and lengths that make the success of known attacks infeasible.

(B) Each Subscriber shall ensure that any Public Key used by it for the purposes of this Policy shall be of values and lengths that make the success of known attacks infeasible.

6.1.7 Key Usage Purposes (as per X.509 v3 keyUsage Field)

(A) The SS1SPCA shall ensure that each Certificate that is Issued by it has a `keyUsage` field in accordance with RFC5759 and RFC5280.

(B) The SS1SPCA shall ensure that each SS1SPCA Certificate andSS1SP End Entity Certificate that is Issued by it, is in accordance with the SS1SPCA Certificate Profiles and the SS1SP End Entity Certificate Profiles in Annex B.

6.2 Private Key Protection and Cryptographic Module Engineering Controls

6.2.1 Cryptographic Module Standards and Controls

(A) The SS1SPCA shall ensure that all SS1SPCA Private Keys shall be:

(i) protected to a high standard of assurance by physical and logical security controls;

(ii) stored in Security Containers and operated in accordance with Part 6.2.1 of the SS1SP CPS; and

(iii) enforce M of N controls to activate the SS1SPCA Private Key.

(B) The SS1SPCA shall ensure that all SS1SPCA Private Keys shall, where they affect the outcome of any Certificates Issued by it, be protected by, stored in and operated in accordance with Part 6.2.1 of the SS1SP CPS.

(C) The SS1SPCA shall ensure that no SS1SPCA Private Key shall be made available in either complete or unencrypted form in accordance with Part 6.2.1 of the SS1SP CPS.

(D) The SS1SPCA shall ensure that any secure mechanism which is used for any purpose related to Certificate life-cycle management shall:

(a) operate so as to block access to itself following a number of failed consecutive attempts to access it using Activation Data, where that number shall be set out in the SS1SP CPS; and

(b) require to be unblocked by an authorised member of SS1SPCA Personnel who has been Authenticated as such following a process which shall be set out in the SS1SP CPS.

6.2.2 Private Key (m out of n) Multi-Person Control

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions for the exercise of strict controls in relation to Private Key (m out of n) Multi-Person Control.

6.2.3 Private Key Escrow

(A) This Policy does not support Key Escrow.

(B) The SS1SPCA shall not provide any Key Escrow service.

6.2.4 Private Key Back-Up

(A) The SS1SPCA may Back-Up SS1SPCA Private Keys insofar as:

(i) each Private Key is protected to a standard which is at least equivalent to that required in relation to the principal Private Key in accordance with this Policy; and

(ii) where more than one Private Key is Backed-Up within a single security environment, each of the Private Keys which is Backed-Up within that environment must be protected to a standard which is at least equivalent to that required in relation to an SS1SPCA Private Key in accordance with this Policy.

6.2.5 Private Key Archival

(A) The SS1SPCA shall ensure that no SS1SPCA Key, which is a Private Key, is archived.

6.2.6 Private Key Transfer into or from a Cryptographic Module

(A) The SS1SPCA shall ensure that no SS1SPCA Private Key is transferred or copied other than:

(i) for the purposes of:

(a) Back-Up; or

(b) establishing an appropriate degree of resilience in relation to the provision of the SS1SP PKI Services; and

(ii) kept secure and encrypted within a Security Container, with appropriate access controls enforced at all times.

6.2.7 Private Key Storage on Cryptographic Module

(A) See Part 6.2.1 of this Policy.

6.2.8 Method of Activating Private Key

(A) The SS1SPCA shall ensure that the Security Container in which any SS1SPCA Private Key is stored may be accessed only by an authorised member of SS1SPCA Personnel who has been Authenticated following an Authentication process which:

(i) has an appropriate level of strength to ensure the commensurate protection of the Private Key;

(ii) involves the use of Activation Data; and

(iii) requires M of N access to activate the SS1SPCA Private Key within the Security Container.

6.2.9 Method of Deactivating Private Key

(A) The SS1SPCA shall ensure that any SS1SPCA Private Key shall be capable of being de-activated by means of the SS1SPCA Systems, at least by:

(i) the actions of:

(a) turning off the power;

(b) logging off;

(c) carrying out a system reset; and

(ii) a period of inactivity of a length which shall be set out in the SS1SP CPS.

6.2.10 Method of Destroying Private Key

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions for the exercise of strict controls in relation to the destruction of SS1SPCA Keys.

(B) The SS1SPCA shall ensure that no SS1SPCA Key (whether in active use, existing as a copy for the purposes of resilience, or Backed-Up) is destroyed except in accordance with a positive decision by the SSC for PKI instructing the SS1SPCA to destroy it.

6.2.11 Cryptographic Module Rating

(A) See Part 6.2.1 of this Policy.

6.3 OTHER ASPECTS OF KEY PAIR MANAGEMENT

6.3.1 Public Key Archival

(A) The SS1SPCA shall ensure that, where necessary, it archives SS1SPCA Public Keys in accordance with the requirements of Part 5.5 of this Policy.

6.3.2 Certificate Operational Periods and Key Pair Usage Periods

(A) The SS1SPCA shall ensure that:

(i) the Validity Period of each Certificate, unless explicitly documented otherwise in Annex B, shall be an indefinite period; and

(ii) for this purpose, it uses the notAfter value specified in Annex B.

6.4 Activation data

6.4.1 Activation Data Generation and Installation

(A) The SS1SPCA shall ensure that any secure container within which a SS1SPCA Key is held has Activation Data that are unique and unpredictable.

(B) The SS1SPCA shall ensure that:

(i) these Activation Data, in conjunction with any other access control, shall be of an appropriate level of strength for the purposes of protecting the SS1SPCA Keys; and

(ii) where the Activation Data comprise any PINs, passwords or passphrases, the SS1SPCA shall have the ability to change these at any time.

6.4.2 Activation Data Protection

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provision for the use of such cryptographic protections and access controls as are appropriate to protect against the unauthorised use of Activation Data.

6.4.3 Other Aspects of Activation Data

[*Not applicable in this Policy*]

6.5 Computer security controls

6.5.1 Specific Computer Security Technical Requirements

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions in relation to the identification and implementation, following the conclusion of any threat assessment, of security measures which make provision for at least the following:

(i) the establishment of access controls in relation to the activities of the SS1SPCA;

(ii) the appropriate allocation of responsibilities to Privileged Users;

(iii) the identification and Authentication of organisations, individuals and Systems involved in SS1SPCA activities;

(iv) the use of cryptography for communication and the protection of Data stored on the SS1SPCA Systems;

(v) the audit of security related events; and

(vi) the use of recovery mechanisms for SS1SPCA Keys.

6.6 Life cycle technical controls

6.6.1 System Development Controls

(A) The SS1SPCA shall ensure that any software which is developed for the purpose of establishing a functionality of the SS1SPCA Systems shall:

(i) take place in a controlled environment that is sufficient to protect against the insertion into the software of malicious code;

(ii) be undertaken by a developer which has a quality system that is:

(a) compliant with recognised international standards (such as ISO 9001:2000 or an equivalent standard); or

(b) available for inspection and approval by the SSC for PKI and has been so inspected and approved.

6.6.2 Security Management Controls

(A) The SS1SPCA shall ensure that the SS1SP CPS incorporates provisions which are designed to ensure that the SS1SPCA Systems shall comply with or achieve certification with the following standard of the International Organisation for Standards in respect of the security, reliability and resilience of its information assets and processes and its SS1SPCA Systems:

(i) ISO/IEC 27001:2013 (Information Technology – Security Techniques – Information Security Management Systems); or

(ii) any equivalent to that standard which updates or replaces it from time to time.

6.6.3 Life-Cycle Security Controls

(A) See Part 6.6.2 of this Policy.

6.7 Network security controls

6.7.1 Use of Offline Root SS1SPCA and Intermediate SS1SPCA

(A) The SS1SPCA shall ensure that its functions as the Root SS1SPCA and Intermediate SS1SPCA are carried out on a part of the SS1SPCA Systems that is neither directly nor indirectly connected to any System which is not a part of the SS1SPCA Systems.

(B) The SS1SPCA CPS will provide further detail with respect to SS1SPCA network security controls.

6.7.2 Protection Against Attack

(A) The SS1SPCA shall use its best endeavours to ensure that the SS1SPCA Systems are not Compromised, and in particular for this purpose that they are designed and operated so as to detect and prevent:

(i) any Denial of Service Event;

(ii) any unauthorised attempt to connect to them.

(B) The SS1SPCA shall take reasonable steps to ensure that the SS1SPCA Systems cause or permit to be open at any time only those network ports, and allow only those protocols, which are required at that time for the effective operation of those Systems, and block all network ports and protocols which are not so required.

6.7.3 Separation of Subordinate SS1SPCA

(A) The DCC shall ensure that, where any Subordinate SS1SPCA functions are carried out on a System that is connected to an external network, they are carried out on a System that is Separated from all other SS1SPCA Systems.

6.7.4 Health Check of SS1SPCA Systems

(A) The SS1SPCA shall ensure that, in relation to the SS1SPCA Systems, a vulnerability assessment in accordance with the SS1SP CPS and is carried out with such frequency as may be specified from time to time by the Independent S1SPKM Assurance Service Provider.

6.8 Time-stamping

6.8.1 Use of Time-Stamping

(A) The SS1SPCA shall ensure that Time-Stamping takes place in relation to all Certificates and all other SS1SPCA activities which require an accurate record of time.

(B) The SS1SPCA shall ensure that the SS1SPCA incorporates provisions in relation to the time source and mechanisms used by any Time-Stamping Authority which carries out Time-Stamping on behalf of the SS1SPCA.

7 CERTIFICATE, CRL AND OCSP PROFILES

7.1 CERTIFICATE PROFILES

The SS1SPCA shall use only the Certificate Profiles in Annex B.

7.1.1 Version Number(s)

[*Not applicable in this Policy*]

7.1.2 Certificate Extensions

[Not applicable in this Policy]

7.1.3 Algorithm Object Identifiers

[Not applicable in this Policy]

7.1.4 Name Forms

[Not applicable in this Policy]

7.1.5 Name Constraints

[Not applicable in this Policy]

7.1.6 Certificate Policy Object Identifier

8 Compliance audit and other assessments

8.1 Frequency or circumstances of assessment

(A) Provision in relation to this is made in the SS1SP CPS.

8.2 Identity/qualifications of assessor

(A) Provision in relation to this is made in the SS1SP CPS.

8.3 Assessor’s relationship to assessed entity

(A) Provision in relation to this is made in the SS1SP CPS.

8.4 Topics covered by assessment

(A) Provision in relation to this is made in the SS1SP CPS.

8.5 Actions taken as a result of deficiency

(A) Provision in relation to this is made in the SS1SP CPS.

8.6 Communication results

(A) Provision in relation to this is made in the SS1SP CPS.

9 Other business and legal matters

(A) In so far as provision is made in relation to any or all the matters referred to in this Part, these can be found in the S1SP commercial contracts, this Policy and the provisions of Annex C: Subscriber Obligations of this Policy and Annex D: Relying Party Obligations of this Policy.

10 Annex A: Definitions and interpretation

In this Policy, except where the context otherwise requires -

- the expressions in the left-hand column below shall have the meanings given to them in the right hand column below,
- the rule of interpretation set out at Part 1.1 of this Policy shall apply.

Definition	Interpretation
Activation	means the process of making a SS1SPCA Private Key stored available for use.
Activation Data	means any private Data (such as a password or the Data on a smartcard) which are used to access a Security Container.
Archive	means the archive of Data created in accordance with Part 5.5.1 of this Policy (and "**Archives**" and "**Archived**" shall be interpreted accordingly).
Audit Log	means the audit log created in accordance with Part 5.4.1 of this Policy and the SS1SP CPS.
Authentication	means the process of establishing that an individual, organisation, System or Secure SMETS1 Device is what he or it claims to be (and "**Authenticate**" shall be interpreted accordingly).
Authorised Subscriber	means an individual or organization which complies with the procedures of the SS1SP PKI RAPP as set out in Annex E of this Policy and is duly authorised by the SS1SPCA to submit a Certificate Signing Request.
Back-Up	means, in relation to Data which is held on any SS1SPCA System, the storage of a copy of that Data for the purpose of ensuring that the copy may be used (if required) to restore or replace the original Data; and "Backed-Up" is to be interpreted accordingly.

Certificate	means either a SS1SP End Entity Certificate or a SS1SPCA Certificate.
Certificate Profile	means a table bearing that title in Annex B and specifying certain parameters to be contained within a Certificate.
Certificate Re-Key	means a change to the Public Key contained within a Certificate bearing a particular serial number which results in a new Certificate being issued.
Certificate Signing Request	means a request for a Certificate submitted by an Eligible Subscriber in accordance with the SS1SP PKI RAPP as set out in Annex E of this Policy.
Cryptographic Module	See Security Container.
Cryptographic Processing	means the generation, storage or use of any Secret Key Material.
Data	means any information, data, knowledge, figures, methodologies, minutes, reports, forecasts, images or sounds (together with any database made up of any of these) embodied in any medium (whether tangible or electronic).
Eligible Subscriber	means: a) in relation to a SS1SP End Entity Certificate, an Authorised Subscriber which is identified as an Eligible Subscriber in accordance with the SS1SP PKI RAPP as set out in Annex E of this Policy; and b) in relation to a SS1SPCA Certificate, an Authorised Subscriber which is identified as an Eligible Subscriber in accordance with the SS1SP PKI RAPP as set out in Annex E of this Policy.

Intermediate Secure S1SP Certification Authority (or Intermediate SS1SPCA)	means the Secure S1SP exercising the function of the Intermediate SS1SPCA to Issue Certificates to Subordinate SS1SPCAs and of storing and managing the Private Keys associated with that function. Intermediate SS1SPCAs comprise the following: a) Operations CA; and b) Manufacturing CA.
Intermediate SS1SPCA Certificate	means a certificate in the form set out in the Intermediate SS1SPCACertificate Profile in accordance with Annex B and Issued by the Root SS1SPCA to the Intermediate SS1SPCA in accordance with this Policy.
Intermediate SS1SPCA Private Key	means a Private Key which is stored and managed by the SS1SPCA acting in its capacity as the Intermediate SS1SPCA.
Key Escrow	means the storage of a Private Key by a person other than the Subscriber or Subject of the Certificate which contains the related Public Key.
Object Identifier (or **OID**)	means an Object Identifier assigned by the Internet Address Naming Authority.
Policy	means this Secure S1SP Certificate Policy.
Private Key	means the private part of an asymmetric Key Pair used for the purposes of public key cryptography
Private Key Material	in relation to a Private Key, means that Private Key and the input parameters necessary to establish, use and maintain it.
Privileged User	means a member of SS1SPCA Personnel who is authorised to carry out activities which involve access to resources, or Data held, on the SS1SPCA System and which are capable of being a means by which the SS1SPCA System, any other Systems, or Secure SMETS1 Device are (or are capable of being) being compromised to a material extent.

Public Key	means the public part of an asymmetric Key Pair used for the purposes of public key cryptography.
Registration Authority	means the Secure S1SP exercising the function of receiving and processing Certificate Signing Requests made in accordance with Annex E: SS1SP PKI RAPP of this Policy.
Registration Authority Manager	means either a director of the Secure S1SP or any other person who may be identified as such in accordance with Annex E: SSS1SP PKI RAPP of this Policy.
Registration Authority Personnel	means those persons who are engaged by the Secure S1SP, in so far as such persons carry out, or are authorised to carry out, any function of the SS1SPCA Registration Authority.
Relying Party	means a SS1SP Party who, pursuant to this Policy, receives and relies upon a Certificate.
Root SS1SP Certification Authority (or **Root SS1SPCA**)	means the Secure S1SP exercising the function of Root SS1SPCA to Issue Certificates to the Intermediate SS1SPCA and storing and managing Private Keys associated with that function.
Root SS1SPCA Certificate	means a certificate in the form set out in the Root SS1SPCA Certificate Profile in accordance with Annex B and self-signed by the Root SS1SPCA in accordance with this Policy.
Root SS1SPCA Private Key	means a Private Key which is stored and managed by the SS1SPCA acting in its capacity as the Root SS1SPCA.
Secret Key Material	means any Private Key, Shared Secret, Symmetric Key or other functionally equivalent cryptographic material (and any associated input parameter) that is generated and maintained by the SS1SPCA.

Secure SMETS1 Service Provider (or SS1SP)	means Secure Meters (UK) Limited (Company number: 02199653).

Secure S1SP Certification Authority (or SS1SPCA)	means the Secure S1SP, acting in the capacity and exercising the functions of one or more of the:
	(a) Root SS1SPCA;
	(b) Intermediate SS1SPCA;
	(c) Subordinate SS1SPCA;
	(d) SS1SPCA Systems; and
	(e) the SS1SP PKI Registration Authority.

Secure SMETS1 Device	means one of the following devices manufactured and provided by Secure:
	a SMETS1 ESME;
	a SMETS1 GSME;
	a SMETS1 CHF;
	a SMETS1 GPF;
	a SMETS1 PPMID;
	a SMETS1 IHD; and
	any other device operating on a home area network created by a SMETS1 CHF.

Secure SMETS1 Service Provider End Entity Certificate (or SS1SP End Entity Certificate)	means a Certificate only issued by one of the Subordinate SS1SPCAs. SS1SP End Entity Certificates comprise the following: a) SMSO TLS Certificate b) SMSO KMS Certificate c) Code Signing Certificate d) Device Certificate
Secure SMETS1 Service Provider PKI (or SS1SP PKI)	means the SS1SPCA System and any public key infrastructure established (or to be established) by Secure for the purpose, among other things, of providing secure communications between Secure S1SP, the DCC and Secure SMETS1 Devices.
Security Container	means a set of hardware, software and/or firmware.

Security Related Functionality	means the functionality of the SS1SPCA Systems which is designed to detect, prevent or mitigate the adverse effect of any security compromise of that System.
Security Sub-Committee or SSC	means the Security Sub-Committee under the Smart Energy Code.
Smart Energy Code	means the code of that name maintained pursuant to the smart meter communication licences granted under the UK Gas Act 1986 and the UK Electricity Act 1989.
SMETS1	means the Smart Metering Equipment Technical Specifications 1.
SSCPKI	means the Security Sub-Committee when performing its PKI functions.
SS1SPCA CSR Generation Tool	means the part of the SS1SPCA System responsible for creating Certificate Requests and validating Certificate Requests.
SS1SPCA Key	means any Private Key or a Public Key generated by the SS1SPCA for the purposes of complying with its obligations under this Policy.
SS1SPCA Management Tool	means the part of the SS1SPCA System responsible for creating and Issuing Certificates.
SS1SPCA Personnel	means those persons who are engaged by the Secure S1SP, in so far as such persons carry out, or are authorised to carry out, any function of the SS1SPCA.
SS1SPCA Public Key	means the Public Key which is part of a Key Pair of a Root SS1SPCA Private Key, an Intermediate SS1SPCA Private Key or a Subordinate SS1SPCA Private Key.
SS1SPCA Private Key	means a SS1SPCA Key which is a Private Key.
SS1SPCA Systems	means the Systems used by the SS1SPCA in relation to the SS1SP PKI services.
SS1SPCA Certificate	means either a Root SS1SPCA Certificate, an Intermediate SS1SPCA Certificate or a Subordinate SS1SPCA Certificate.

SS1SP CPS	means the Certification Practice Statement describing how the PKI is operated and maintained.
SS1SP End Entity Certificate	means a certificate in the form set out in the SS1SP End Entity Certificate Profile in accordance with Annex B of this Policy and Issued by the Subordinate SS1SPCA.
SS1SP Party	means, Secure Meters UK Limited including where they act in this capacity through an individual engaged to act on their behalf or through the use of a System or Secure SMETS1 Device that is the Subject of a Certificate in accordance with this Policy.
SS1SP PKI RAPP	Means the Secure SMETS1 Service Provider Public Key Infrastructure Registration Authority Policy and Procedures as set out in Annex E of this Policy.
Subject	means: (a) in relation to a SS1SP End Entity Certificate, the subject identified by the population of the subject field of the relevant SS1SP End Entity Certificate Profile in Annex B of this Policy; and (b) in relation to a SS1SPCA Certificate, the Root SS1SPCA, Intermediate SS1SPCA or Subordinate SS1SPCA as identified by the subject field of the relevant Certificate Profile in Annex B of this Policy.
Subordinate Secure S1SP Certification Authority (or Subordinate SS1SPCA)	means the Secure S1SP exercising the function of the Subordinate SS1SPCA to Issue SS1SP End Entity Certificates to Eligible Subscribers and of storing and managing the Private Keys associated with that function. Subordinate SS1SPCAs comprise the following: a) SMSO CA b) SMSO KMS CA c) Code Signing CA d) Device CA

Subordinate SS1SPCA Certificate	means a certificate in the form set out in the Subordinate SS1SPCA Certificate Profile in accordance with Annex B and Issued by the Intermediate SS1SPCA to the Subordinate SS1SPCA in accordance with this Policy.
Subordinate SS1SPCA Private Key	means a Private Key which is stored and managed by the SS1SPCA acting in its capacity as the Subordinate SS1SPCA.
Subscriber	means, in relation to any Certificate, an individual, organisation, System or Secure SMETS1 Device which has been Issued with and accepted that Certificate, acting in its capacity as the holder of the Certificate.
System	means a system for generating, sending, receiving, storing (including for the purposes of Back-Up), manipulating or otherwise processing electronic communications, including all hardware, software, firmware and Data associated therewith. This includes the SS1SP PKI System.
Time-Stamping	means the act that takes place when a Time-Stamping Authority, in relation to a Certificate, stamps a particular datum with an accurate indicator of the time (in hours, minutes and seconds) at which the activity of stamping takes place.
Validity Period	means, in respect of a Certificate, the period of time for which that Certificate is intended to be valid.

11 Annex B: SS1SPCA Certificate and SS1SP End entity certificate profiles

11.1 Certificate Structure and Contents

This Annex lays out requirements as to structure and content with which SS1SPCA Certificates and SS1SP End Entity Certificates shall comply. All terms in this Annex shall, where not defined in this Policy, or the GB Companion Specification (GBCS), have the meanings in IETF RFC 5759 or IETF RFC5280.

11.2 Common requirements applicable to SS1SPCA Certificates and SS1SP End Entity Certificates

All SS1SPCA Certificates and SS1SP End Entity Certificates that are validly authorised within the SS1SP PKI for use within the scope of GB Smart Metering:

- shall be compliant with IETF RFC 5759 and so with IETF RFC5280.
- for clarity and in adherence with the requirements of IETF RFC5759, all SS1SPCA Certificates and SS1SP End Entity Certificates shall:
    - contain the `authorityKeyIdentifier` in the form `[0] KeyIdentifier` which shall be marked as non-critical, except where the Certificate is the SS1SPCARoot, in which case `authorityKeyIdentifier` may be omitted;
    - contain the `keyUsage` extension which shall be marked as critical;
    - be X.509 v3 certificates as defined in IETF RFC 5280, encoded using the ASN.1 Distinguished Encoding Rules;
    - only contain Public Keys of types that are explicitly allowed by the Great Britain Companion Specification (GBCS)[1]. This means all Public Keys shall be elliptic curve Public Keys on the NIST P-256 curve;
    - only contain Public Keys in uncompressed form i.e. contain an elliptic curve point in uncompressed form as detailed in Section 2.2 of IETF RFC5480;
    - only provide for signature methods that are explicitly allowed within the GBCS. This means using P-256 Private Keys with SHA 256 and ECDSA;
    - contain a serialNumber which is a positive integer;
    - contain a subjectKeyIdentifier which shall be marked as non-critical;

[1] The latest version of the GBCS can be found here: https://smartenergycodecompany.co.uk/the-smart-energy-code-2/

    - only contain KeyIdentifiers generated as per method (2) of Section 4.2.1.2 of IETF RFC 5280 and so which shall always be 8 octets in length;
    - contain an issuer field whose contents MUST be identical to the contents of the signer's subject field in the signer's Certificate;
    - have a valid notBefore field consisting of the time of issue encoded;
    - other than the S1SP End Entity SMSO TLS and SMSO KMS Certificates, have a valid notAfter field for a not well-defined expiration date as per IETF RFC 5280 Section 4.1.2.5 (so the notAfter shall be assigned the GeneralizedTime value of 99991231235959Z).

11.3 Common Requirements applicable to SS1SP End Entity Certificates only

All SS1SP End Entity Certificates that are issued by the SS1SPCA shall:

- other than the S1SP End Entity SMSO TLS and SMSO KMS Certificates, not have a well-defined expiration date and so the `notAfter` shall be assigned the `GeneralizedTime` value of 99991231235959Z;
- have a `subject` field populated in accordance with each specific SS1SP End Entity Certificate Profile;
- contain a single Public Key;
- SS1SP End Entity Certificates shall contain the extensions described below:
    - `subjectAltName`
    - `keyUsage`
    - `authorityKeyIdentifier`
    - `subjectKeyIdentifier`
- contain a keyUsage extension marked as critical, with a value of one or more of:
    - `digitalSignature`;
    - `keyAgreement`;
    - `nonRepudiation`
    - `keyEncipherment`
    - `dataEncipherment`
- SS1SP End Entity Certificates may contain the `ExtKeyUsage` extension, with a value of one or more of:
    - `id-kp-serverAuth`
    - `id-kp-clientAuth`
    - `id-kp-codeSigning`
- SS1SP End Entity Certificates may contain the `BasicConstraints` extension, with the following values only. `cA` must be FALSE:
    - End Entity

o pathLen=0

11.4 Common Requirements applicable to the Root SS1SPCA, Intermediate SS1SPCA and Subordinate SS1SPCA ONLY

All SS1SPCA Certificates issued by the SS1SPCA shall:

- not have a well-defined expiration date and so the notAfter shall be assigned the GeneralizedTime value of 99991231235959Z;
- must have a Valid notBefore field consisting of the time of issue encoded as per RFC5280;
- Per RFC5280, the IssuerName of any certificates MUST be identical to the signer's subject;
- have a globally unique subject;
- contain a single Public Key;
- contain a keyUsage extension marked as critical and defined as keyCertSign and cRLSign;
- For the Intermediate SS1SPCA Certificates, contain the basicConstraints extension, with values cA=True, and pathLen=1. This extension shall be marked as critical.
- For the Subordinate SS1SPCA Certificates, contain the basicConstraints extension, with values cA=True, and pathLen=0. This extension shall be marked as critical.
- For the Root SS1SPCACertificate, contain the basicConstraints extension, with the value cA=True and pathLen absent (unlimited). This extension shall be marked as critical.
- must create SerialNumbers that are unique and non-negative.

11.5 SS1SP End Entity Certificate Profile - SMSO TLS Certificate

Field Name	RFC 5759/5280 Type	Value	Reference
version	INTEGER	v3	
serialNumber	INTEGER	Positive Integer	
signature	AlgorithmIdentifier	SHA256 with ECDSA	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-at-commonName (the “Issuer X520 Common Name”)	UTF8String	Globally unique common name of Subordinate SS1SPCA (as defined in the Subordinate SS1SPCA Certificate Profile)	
keyIdentifier in Authoritykeyidentifier (the "Authority Key Identifier")	keyIdentifier	A unique value that matches the subjectKeyIdentifier value of the issuer’s credential	
keyIdentifier in SubjectKeyIdentifier (the "Subject Key Identifier")	keyIdentifier	Provides a means for identifying certificates containing the particular Public Key used in an application	
notBefore	Time	Creation time of the SS1SP End Entity Certificate	

notAfter	Time	shall be assigned the GeneralizedTime value of 5 years from the notBefore Time	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-at-commonName (the “Subject X520 Common Name”)	UTF8String	Common Name of SS1SP End Entity Certificate	
Key Usage	keyUsage	The permitted Key Usages.	
Enhanced Key Usage	ExtKeyUsage	The permitted Enhanced Key Usages.	
Basic Constraints	BasicConstraints	The permitted Basic Constraints values.	
subjectPublicKeyInfo	SubjectPublicKeyInfo	The Subject’s Public Key	
signatureAlgorithm	AlgorithmIdentifier	SHA256 with ECDSA	
signatureValue	BIT STRING	SS1SP End Entity Certificate signature value	

Interpretation

Version

The version of the X.509 SS1SP End Entity Certificate. Valid SS1SP End Entity Certificates shall identify themselves as version 3.

Serial Number

SS1SP End Entity Certificate serial number, which is a positive integer. The `serialNumber` identifies the SS1SP End Entity Certificate and shall be created by the Subordinate SS1SPCA that signs the SS1SP End Entity Certificate. The `serialNumber` shall be unique in the scope of SS1SP End Entity Certificates signed by the Subordinate SS1SPCA.

Signature

The identity of the signature algorithm used to sign the SS1SP End Entity Certificate. The field is identical to the value of the SS1SP End Entity Certificate `signatureAlgorithm` field explained further under the next **`signatureAlgorithm`** heading below.

Issuer X520 Common Name

The name of the signer of the SS1SP End Entity Certificate. This will be the globally unique name of the Subordinate SS1SPCA (as defined in the Subordinate SS1SPCA Certificate Profile).

Authority Key Identifier

To optimise building the correct credential chain, the non-critical Authority Key Identifier extension shall be populated with a unique value as recommended by RFC 5280 and shall be included in all SS1SP End Entity Certificates.

Subject Key Identifier

The Subject Key Identifier extension should be included and marked as non-critical in the SS1SP End Entity Certificate.

Validity

The time period over which the Subordinate SS1SPCA expects the SS1SP End Entity Certificate to be valid. The `validity` period is the period of time from `notBefore` through `notAfter`, inclusive.

The SMSO TLS End Entity Certificates are valid to operate for 5 years from date of creation.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Times up to and including 23:59:59 December 31, 2049 UTC shall be encoded as `UTCTime` as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as `GeneralizedTime` as YYYYMMDDHHmmssZ.

Not Before Date

The earliest time a SS1SP End Entity Certificate may be used. This shall be the time the SS1SP End Entity Certificate is created.

Not After Date

The latest time a SS1SP End Entity Certificate is expected to be used. The SMSO TLS End Entity Certificate are valid for 5 years from date of creation.

Subject X520 Common Name

This field must be populated as follows:

```
C = GB
S = Hampshire
L = Winchester
OU = Secure Meters (UK) Ltd
O = Secure Meters (UK) Ltd
CN = s1t.smartwse.net
```

Key Usage

The `keyUsage` extension should be populated as follows:

`digitalSignature`; and

`keyAgreement`.

Enhanced Key Usage

The `ExtKeyUsage` extension should be populated as follows:

`id-kp-serverAuth;` and
`id-kp-clientAuth.`

Basic Constraints

The `BasicConstraints` extension should be populated as follows:

```
cA=False

End Entity

pathLen=0
```

Subject Public Key Info

The SS1SP End Entity Certificate `subjectPublicKeyInfo` field shall indicate the Public Key algorithm identifier and the Public Key in the specified algorithm format as specified in RFC 3279 and RFC 5480.

The algorithm field in the `subjectPublicKeyInfo` structure shall contain the following

identifier:

```
id-ecPublicKey OBJECT IDENTIFIER ::= {iso(1) member-body(2)
us(840) ansi-X9-62(10045) keyType(2) 1 }
```

id-ecPublicKey indicates that the algorithms that can be used with the subject Public Key are unrestricted. The key is only restricted by the values indicated in the `KeyUsage` SS1SP End Entity Certificate extension (explained further under the next **`extensions`** heading below).

The parameter for `id-ecPublicKey` is as follows and shall always be present:

```
    ECParameters ::= CHOICE {
namedCurve         OBJECT IDENTIFIER        -
- implicitCurve   NULL
          -- specifiedCurve  SpecifiedECDomain
      }
```

Only the following field in ECParameters shall be used:

`o namedCurve` - identifies all the required values for a particular set of elliptic curve domain parameters to be represented by an object identifier.

The `OBJECT IDENTIFIER` for the curve choice to be used in SS1SP End Entity Certificate is:

```
secp256r1 OBJECT IDENTIFIER ::= { iso(1) member-body(2) us(840)
ansi-X9-62(10045) curves(3) prime(1) 7 }
```

The `subjectPublicKey` from `SubjectPublicKeyInfo` is the ECC Public Key.

Implementations of Elliptic Curve Cryptography according to this document shall only support the uncompressed form.

The first octet of the `subjectPublicKey` indicates whether the key is compressed or uncompressed. The uncompressed form is indicated by 0x04 (the compressed form is indicated by either 0x02 or 0x03). The Public Key shall be rejected if any value other than 0x04 is in the first octet.

Signature Algorithm

The `signatureAlgorithm` field shall indicate the SS1SPCAIssuing SS1SPCA signature algorithm used to sign this SS1SP End Entity Certificate is as defined under the next **Signature Method (ECDSA)** heading.

Signature Value

The Subordinate SS1SPCA's signature of the SS1SP End Entity Certificate shall be computed using the Subordinate's private signing key using the algorithm identified under the next **Signature Method (ECDSA)** heading.

The structure for ECDSA signatures shall be as per RFC 5480.

Cryptographic Primitives for Signature Method

Signature Method (ECDSA)

The ECDSA signature method is defined in NIST FIPS 186-4. When implementing ECDSA, the SHA-256 message digest algorithm and the P-256 elliptic curve as defined in FIPS 186-4 Annex D, D.1.2.3, shall be used.

The signature algorithm shall be `ecdsa-with-SHA256` as specified in RFC 5759 and 6318.

The algorithm identifier is:

```
ecdsa-with-SHA256 OBJECT IDENTIFIER ::= { iso(1) memberbody(2)
us(840) ansi-X9-62(10045) signatures(4) ecdsa-withsha2(3) 2 }
```

SHA-256 hash algorithm

The hash algorithm used shall be the SHA-256 secure hash algorithm as defined in NIST FIPS 180-4.

11.6 SS1SP End Entity Certificate Profile - SMSO KMS Certificate

Field Name	RFC 5759/5280 Type	Value	Reference
version	INTEGER	v3	
serialNumber	INTEGER	Positive Integer	
signature	AlgorithmIdentifier	SHA256 with ECDSA	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-at-commonName (the "Issuer X520 Common Name")	UTF8String	Globally unique common name of Subordinate SS1SPCA (as defined in the Subordinate SS1SPCA Certificate Profile)	

keyIdentifier in Authoritykeyidentifier (the "Authority Key Identifier")	keyIdentifier	A unique value that matches the subjectKeyIdentifier value of the issuer’s credential	
keyIdentifier in SubjectKeyIdentifier (the "Subject Key Identifier")	keyIdentifier	Provides a means for identifying certificates containing the particular Public Key used in an application	
notBefore	Time	Creation time of the SS1SP End Entity Certificate	
notAfter	Time	shall be assigned the GeneralizedTime value of 5 years from the notBefore Time

`signatureValue`	`BIT STRING`	SS1SP End Entity Certificate signature value	

Interpretation

Version

The version of the X.509 SS1SP End Entity Certificate. Valid SS1SP End Entity Certificates shall identify themselves as version 3.

Serial Number

SS1SP End Entity Certificate serial number, which is a positive integer. The `serialNumber` identifies the SS1SP End Entity Certificate and shall be created by the Subordinate SS1SPCA that signs the SS1SP End Entity Certificate. The `serialNumber` shall be unique in the scope of SS1SP End Entity Certificates signed by the Subordinate SS1SPCA.

Signature

The identity of the signature algorithm used to sign the SS1SP End Entity Certificate. The field is identical to the value of the SS1SP End Entity Certificate `signatureAlgorithm` field explained further under the next **`signatureAlgorithm`** heading below.

Issuer X520 Common Name

The name of the signer of the SS1SP End Entity Certificate. This will be the globally unique name of the Subordinate SS1SPCA (as defined in the Subordinate SS1SPCA Certificate Profile).

Authority Key Identifier

To optimise building the correct credential chain, the non-critical Authority Key Identifier extension shall be populated with a unique value as recommended by RFC 5280 and shall be included in all SS1SP End Entity Certificates.

Subject Key Identifier

The Subject Key Identifier extension should be included and marked as non-critical in the SS1SP End Entity Certificate.

Validity

The time period over which the Subordinate SS1SPCA expects the SS1SP End Entity Certificate to be valid. The `validity` period is the period of time from `notBefore` through `notAfter`, inclusive.

The SMSO KMS End Entity Certificates is valid to operate for 5 years from date of creation.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Times up to and including 23:59:59 December 31, 2049 UTC shall be encoded as `UTCTime` as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as `GeneralizedTime` as YYYYMMDDHHmmssZ.

Not Before Date

The earliest time a SS1SP End Entity Certificate may be used. This shall be the time the SS1SP End Entity Certificate is created.

Not After Date

The latest time a SS1SP End Entity Certificate is expected to be used. The SMSO KMS End Entity Certificate is valid for 5 years from date of creation.

Subject X520 Common Name

This field must be populated as follows:

```
C = [Country]
S = [County]
L = [Location/City]
OU = [Supplier's Organisational Unit]
O = [Supplier's Organisation Name]
CN = [Supplier's Trading Name]
```

Key Usage

The `keyUsage` extension should be populated as follows:

`digitalSignature`; and

`keyAgreement`.

Basic Constraints

The `BasicConstraints` extension should be populated as follows:

```
cA=False

End Entity

pathLen=0
```

Subject Public Key Info

The SS1SP End Entity Certificate `subjectPublicKeyInfo` field shall indicate the Public Key algorithm identifier and the Public Key in the specified algorithm format as specified in RFC 3279 and RFC 5480.

The algorithm field in the `subjectPublicKeyInfo` structure shall contain the following

identifier:

```
        id-ecPublicKey OBJECT IDENTIFIER ::= {iso(1) member-body(2)
        us(840) ansi-X9-62(10045) keyType(2) 1 }
```

id-ecPublicKey indicates that the algorithms that can be used with the subject Public Key are unrestricted. The key is only restricted by the values indicated in the `KeyUsage` SS1SP End Entity Certificate extension (explained further under the next **`extensions`** heading below).

The parameter for `id-ecPublicKey` is as follows and shall always be present:

```
            ECParameters ::= CHOICE {

        namedCurve         OBJECT IDENTIFIER        -

        - implicitCurve   NULL
```

```
            -- specifiedCurve  SpecifiedECDomain
         }
```

Only the following field in ECParameters shall be used:

o `namedCurve` - identifies all the required values for a particular set of elliptic curve domain parameters to be represented by an object identifier.

The `OBJECT IDENTIFIER` for the curve choice to be used in SS1SP End Entity Certificate is:

```
secp256r1 OBJECT IDENTIFIER ::= { iso(1) member-body(2) us(840)
ansi-X9-62(10045) curves(3) prime(1) 7 }
```

The `subjectPublicKey` from `SubjectPublicKeyInfo` is the ECC Public Key.

Implementations of Elliptic Curve Cryptography according to this document shall only support the uncompressed form.

The first octet of the `subjectPublicKey` indicates whether the key is compressed or uncompressed. The uncompressed form is indicated by 0x04 (the compressed form is indicated by either 0x02 or 0x03). The Public Key shall be rejected if any value other than 0x04 is in the first octet.

Signature Algorithm

The `signatureAlgorithm` field shall indicate the Subordinate SS1SPCA signature algorithm used to sign this SS1SP End Entity Certificate is as defined under the next **Signature Method (ECDSA)** heading.

Signature Value

The Subordinate SS1SPCA's signature of the SS1SP End Entity Certificate shall be computed using the Subordinate SS1SPCA's private signing key using the algorithm identified under the next **Signature Method (ECDSA)** heading.

The structure for ECDSA signatures shall be as per RFC 5480.

Cryptographic Primitives for Signature Method

Signature Method (ECDSA)

The ECDSA signature method is defined in NIST FIPS 186-4. When implementing ECDSA, the SHA-256 message digest algorithm and the P-256 elliptic curve as defined in FIPS 186-4 Annex D, D.1.2.3, shall be used.

The signature algorithm shall be `ecdsa-with-SHA256` as specified in RFC 5759 and 6318.

The algorithm identifier is:

```
ecdsa-with-SHA256 OBJECT IDENTIFIER ::= { iso(1) memberbody(2)
us(840) ansi-X9-62(10045) signatures(4) ecdsa-withsha2(3) 2 }
```

SHA-256 hash algorithm

The hash algorithm used shall be the SHA-256 secure hash algorithm as defined in NIST FIPS 180-4.

11.7 SS1SP End Entity Certificate Profile - Code Signing Certificate

Field Name	RFC 5759/5280 Type	Value	Reference

version	INTEGER	v3	
serialNumber	INTEGER	Positive Integer	
signature	AlgorithmIdentifier	SHA256 with ECDSA	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-at-commonName (the "Issuer X520 Common Name")	UTF8String	Globally unique common name of Subordinate SS1SPCA (as defined in the Subordinate SS1SPCA Certificate Profile)	
keyIdentifier in Authoritykeyidentifier (the "Authority Key Identifier")	keyIdentifier	A unique value that matches the subjectKeyIdentifier value of the issuer's credential	
keyIdentifier in SubjectKeyIdentifier (the "Subject Key Identifier")	keyIdentifier	Provides a means for identifying certificates containing the particular Public Key used in an application	
notBefore	Time	Creation time of the SS1SP End Entity Certificate	

notAfter	Time	shall be assigned the GeneralizedTime value of 99991231235959Z	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-at-commonName (the “Subject X520 Common Name”)	UTF8String	Common Name of SS1SP End Entity	
Key Usage	keyUsage	The permitted Key Usages.	
Enhanced Key Usage	ExtKeyUsage	The permitted Enhanced Key Usages.	
Basic Constraints	BasicConstraints	The permitted Basic Constraints values.	
subjectPublicKeyInfo	SubjectPublicKeyInfo	The Subject’s Public Key	
signatureAlgorithm	AlgorithmIdentifier	SHA256 with ECDSA	
signatureValue	BIT STRING	SS1SP End Entity Certificate signature value	

Interpretation

Version

The version of the X.509 SS1SP End Entity Certificate. Valid SS1SP End Entity Certificates shall identify themselves as version 3.

Serial Number

SS1SP End Entity Certificate serial number, which is a positive integer. The `serialNumber` identifies the SS1SP End Entity Certificate and shall be created by the Subordinate SS1SPCA that signs the SS1SP End Entity Certificate. The `serialNumber` shall be unique in the scope of SS1SP End Entity Certificates signed by the Subordinate SS1SPCA.

Signature

The identity of the signature algorithm used to sign the SS1SP End Entity Certificate. The field is identical to the value of the SS1SP End Entity Certificate `signatureAlgorithm` field explained further under the next **`signatureAlgorithm`** heading below.

Issuer X520 Common Name

The name of the signer of the SS1SP End Entity Certificate. This will be the globally unique name of the Subordinate SS1SPCA (as defined in the Subordinate SS1SPCA Certificate Profile).

Authority Key Identifier

To optimise building the correct credential chain, the non-critical Authority Key Identifier extension shall be populated with a unique value as recommended by RFC 5280 and shall be included in all SS1SP End Entity Certificates.

Subject Key Identifier

The Subject Key Identifier extension should be included and marked as non-critical in the SS1SP End Entity Certificate.

Validity

The time period over which the Subordinate SS1SPCA expects the SS1SP End Entity Certificate to be valid. The `validity` period is the period of time from `notBefore` through `notAfter`, inclusive.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Times up to and including 23:59:59 December 31, 2049 UTC shall be encoded as `UTCTime` as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as `GeneralizedTime` as YYYYMMDDHHmmssZ.

Not Before Date

The earliest time a SS1SP End Entity Certificate may be used. This shall be the time the SS1SP End Entity Certificate is created.

Not After Date

The latest time a Certificate is expected to be used (`notAfter`). Code Signing End Entity Certificates are expected to operate indefinitely into the future and should use the value `99991231235959Z`. Systems or Secure SMETS1 Devices verifying a Certificate are expected to accept this value indefinitely.

Subject X520 Common Name

This field must be populated as follows:

C = IN

S = Rajasthan

L = Udaipur

OU = Secure Meters Ltd

O = Secure Meters Ltd

CN = Secure Meters Firmware Signer

Key Usage

The keyUsage extension should be populated as follows:

digitalSignature; and

nonRepudiation.

Enhanced Key Usage

The ExtKeyUsage extension should be populated as follows:

id-kp-codeSigning

Basic Constraints

The BasicConstraints extension should be populated as follows:

cA=False

End Entity

pathLen=0

Subject Public Key Info

The SS1SP End Entity Certificate `subjectPublicKeyInfo` field shall indicate the Public Key algorithm identifier and the Public Key in the specified algorithm format as specified in RFC 3279 and RFC 5480.

The algorithm field in the `subjectPublicKeyInfo` structure shall contain the following identifier:

```
id-ecPublicKey OBJECT IDENTIFIER ::= {iso(1) member-body(2)
us(840) ansi-X9-62(10045) keyType(2) 1 }
```

id-ecPublicKey indicates that the algorithms that can be used with the subject Public Key are unrestricted. The key is only restricted by the values indicated in the `KeyUsage` SS1SP End Entity Certificate extension (explained further under the next **`extensions`** heading below).

The parameter for `id-ecPublicKey` is as follows and shall always be present:

```
    ECParameters ::= CHOICE {
namedCurve         OBJECT IDENTIFIER        -
- implicitCurve   NULL
       -- specifiedCurve  SpecifiedECDomain
      }
```

Only the following field in ECParameters shall be used:

o `namedCurve` - identifies all the required values for a particular set of elliptic curve domain parameters to be represented by an object identifier.

The `OBJECT IDENTIFIER` for the curve choice to be used in SS1SP End Entity Certificate is:

```
secp256r1 OBJECT IDENTIFIER ::= { iso(1) member-body(2) us(840)
ansi-X9-62(10045) curves(3) prime(1) 7 }
```

The `subjectPublicKey` from `SubjectPublicKeyInfo` is the ECC Public Key.

Implementations of Elliptic Curve Cryptography according to this document shall only support the uncompressed form.

The first octet of the `subjectPublicKey` indicates whether the key is compressed or uncompressed. The uncompressed form is indicated by 0x04 (the compressed form is indicated by either 0x02 or 0x03). The Public Key shall be rejected if any value other than 0x04 is in the first octet.

Signature Algorithm

The `signatureAlgorithm` field shall indicate the Subordinate SS1SPCA signature algorithm used to sign this SS1SP End Entity Certificate is as defined under the next **Signature Method (ECDSA)** heading.

Signature Value

The Subordinate SS1SPCA's signature of the SS1SP End Entity Certificate shall be computed using the Subordinate SS1SPCA's private signing key using the algorithm identified under the next **Signature Method (ECDSA)** heading.

The structure for ECDSA signatures shall be as per RFC 5480.

Cryptographic Primitives for Signature Method

Signature Method (ECDSA)

The ECDSA signature method is defined in NIST FIPS 186-4. When implementing ECDSA, the SHA-256 message digest algorithm and the P-256 elliptic curve as defined in FIPS 186-4 Annex D, D.1.2.3, shall be used.

The signature algorithm shall be `ecdsa-with-SHA256` as specified in RFC 5759 and 6318.

The algorithm identifier is:

```
ecdsa-with-SHA256 OBJECT IDENTIFIER ::= { iso(1) memberbody(2)
us(840) ansi-X9-62(10045) signatures(4) ecdsa-withsha2(3) 2 }
```

SHA-256 hash algorithm

The hash algorithm used shall be the SHA-256 secure hash algorithm as defined in NIST FIPS 180-4.

11.8 SS1SP End Entity Certificate Profile - Device Certificate

Field Name	RFC 5759/5280 Type	Value	Reference

Systems or Secure SMETS1 Devices verifying a Certificate are expected to accept this value indefinitely.

Subject X520 Common Name

This field must be populated as follows:

```
SERIALNUMBER = 000000000195BB18
CN = Q0007098
```

Key Usage

The `keyUsage` extension should be populated as follows:

```
digitalSignature;
```

keyAgreement;

nonrepudiation;

keyEncipherment;and

dataEncipherment.

Enhanced Key Usage

The ExtKeyUsage extension should be populated as follows:

id-kp-serverAuth; and

id-kp-clientAuth.

Basic Constraints

The BasicConstraints extension should be populated as follows:

cA=False

End Entity

pathLen=0

Subject Public Key Info

The SS1SP End Entity Certificate subjectPublicKeyInfo field shall indicate the Public Key algorithm identifier and the Public Key in the specified algorithm format as specified in RFC 3279 and RFC 5480.

The algorithm field in the subjectPublicKeyInfo structure shall contain the following identifier:

```
        id-ecPublicKey OBJECT IDENTIFIER ::= {iso(1) member-body(2)
        us(840) ansi-X9-62(10045) keyType(2) 1 }
```

id-ecPublicKey indicates that the algorithms that can be used with the subject Public Key are unrestricted. The key is only restricted by the values indicated in the KeyUsage SS1SP End Entity Certificate extension (explained further under the next **extensions** heading below).

The parameter for id-ecPublicKey is as follows and shall always be present:

```
           ECParameters ::= CHOICE {
       namedCurve         OBJECT IDENTIFIER        -
       - implicitCurve   NULL
              -- specifiedCurve  SpecifiedECDomain
             }
```

Only the following field in ECParameters shall be used:

o namedCurve - identifies all the required values for a particular set of elliptic curve domain parameters to be represented by an object identifier.

The OBJECT IDENTIFIER for the curve choice to be used in SS1SP End Entity Certificate is:

```
secp256r1 OBJECT IDENTIFIER ::= { iso(1) member-body(2) us(840)
ansi-X9-62(10045) curves(3) prime(1) 7 }
```

The subjectPublicKey from SubjectPublicKeyInfo is the ECC Public Key.

Implementations of Elliptic Curve Cryptography according to this document shall only support the uncompressed form.

The first octet of the subjectPublicKey indicates whether the key is compressed or uncompressed. The uncompressed form is indicated by 0x04 (the compressed form is indicated by either 0x02 or 0x03). The Public Key shall be rejected if any value other than 0x04 is in the first octet.

Signature Algorithm

The `signatureAlgorithm` field shall indicate the Subordinate SS1SPCA signature algorithm used to sign this SS1SP End Entity Certificate is as defined under the next **Signature Method (ECDSA)** heading.

Signature Value

The Subordinate SS1SPCA's signature of the SS1SP End Entity Certificate shall be computed using the Subordinate SS1SPCA's private signing key using the algorithm identified under the next **Signature Method (ECDSA)** heading.

The structure for ECDSA signatures shall be as per RFC 5480.

Cryptographic Primitives for Signature Method

Signature Method (ECDSA)

The ECDSA signature method is defined in NIST FIPS 186-4. When implementing ECDSA, the SHA-256 message digest algorithm and the P-256 elliptic curve as defined in FIPS 186-4 Annex D, D.1.2.3, shall be used.

The signature algorithm shall be `ecdsa-with-SHA256` as specified in RFC 5759 and 6318.

The algorithm identifier is:

```
ecdsa-with-SHA256 OBJECT IDENTIFIER ::= { iso(1) memberbody(2)
us(840) ansi-X9-62(10045) signatures(4) ecdsa-withsha2(3) 2 }
```

SHA-256 hash algorithm

The hash algorithm used shall be the SHA-256 secure hash algorithm as defined in NIST FIPS 180-4.

11.9 Root SS1SPCA Certificate Profile

Field Name	RFC 5759/5280 Type	Value	Reference
version	INTEGER	v3	
serialNumber	INTEGER	Positive Integer	
signature	AlgorithmIdentifier	SHA256 with ECDSA	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-at-commonName (the “Issuer X520 Common Name”)	UTF8String	Globally unique common name of Root SS1SPCA	
keyIdentifier in subjectKeyIdentifier (the "Subject Key Identifider")	keyIdentifier	A unique value that matches the subjectKeyIdentifier of the issuer’s credential	

notBefore	Time	Creation time of the Certificate	
notAfter	Time	shall be assigned the GeneralizedTime value of 99991231235959Z	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-atcommonName (the “Subject X520 Common Name”)	UTF8String	Globally unique name of Root SS1SPCA (same as Issuer name)	
Key Usage	keyUsage	The permitted Key Usages.	
Basic Constraints	BasicConstraints	The permitted Basic Constraints values.	
subjectPublicKeyInfo	SubjectPublicKey Info	The Subject’s Public Key	
signatureAlgori thm	AlgorithmIdentifier	SHA256 with ECDSA	
signatureValue	BIT STRING	Subject Certificate signature	

These certificates are the root of trust for the Secure S1SP PKI.

Version

The version of the X.509 Certificate. Valid Certificates shall identify themselves as version 3.

Serial Number

Certificate serial number, which is a positive integer. The `serialNumber` identifies the Certificate, and shall be created by the SS1SPCA that signs the Certificate (self-signed by Root SS1SPCA). The `serialNumber` shall be unique in the scope of Certificates signed by the SS1SPCA.

Signature

The identity of the signature algorithm used to sign the Certificate. The field is identical to the value of the Root SS1SPCA Certificate's `signatureAlgorithm` field explained further under the next **Signature Algorithm heading**.

Issuer X520 Common Name

The name of the signer of the Certificate. This will be the globally unique name of the Root SS1SPCA. This will be the same as the `subject` as it is self-signed by the Root SS1SPCA.

Subject Key Identifier

The `subjectKeyIdentifier` extension should be included and marked as non-critical in the Certificate.

Validity

The time period over which the issuer expects the Certificate to be valid. The validity period is the period of time from `notBefore` through `notAfter`, inclusive.

Root SS1SPCA Certificates are expected to operate indefinitely into the future and should use the value 99991231235959Z. Solutions verifying a Root SS1SPCA Certificate are expected to accept this value indefinitely.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Times up to and including 23:59:59 December 31, 2049 UTC shall be encoded as `UTCTime` as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as `GeneralizedTime` as YYYYMMDDHHmmssZ.

Not Before Date

The earliest time a Certificate may be used (`notBefore`). This shall be the time the Certificate is created.

Not After Date

The latest time a Certificate is expected to be used (`notAfter`). Certificates are expected to operate indefinitely into the future and should use the value 99991231235959Z. Systems or Secure SMETS1 Devices verifying a Certificate are expected to accept this value indefinitely.

Subject X520 Common Name

This field must be populated as follows:

```
C = GB
S = Hampshire
L = Winchester
OU = Secure Meters (UK) Ltd
```

```
O = Secure Meters (UK) Ltd
CN = Secure Meters (UK) Root CA
```

Key Usage

The `keyUsage` extension should be populated as follows:

`keyCertSign`; and

`cRLSign`

Basic Constraints

The `BasicConstraints` extension should be populated as follows:

`cA=TRUE`

`pathLen=Absent`

Subject Public Key Info

The Certificate's `subjectPublicKeyInfo` field shall indicate the Public Key algorithm identifier and the Public Key in the specified algorithm format as specified in RFC 3279 and RFC 5480.

The algorithm field in the `subjectPublicKeyInfo` structure shall be use the following identifier:

id-ecPublicKey OBJECT IDENTIFIER ::= {iso(1) member-body(2) us(840) ansi-X9-62(10045) keyType(2) 1 } `id-ecPublicKey` indicates that the algorithms that can be used with the subject Public Key are unrestricted. The key is only restricted by the values indicated in the Key Usage Certificate extension (explained further under the next **extensions** heading).

The parameter for `id-ecPublicKey` is as follows and shall always be present:

```
    ECParameters ::= CHOICE {
namedCurve          OBJECT IDENTIFIER         -
- implicitCurve   NULL         --
specifiedCurve  SpecifiedECDomain
      }
```

Only the following field in ECParameters shall be used: o

`namedCurve` - identifies all the required values for a particular

set of elliptic curve domain parameters to be represented by an

`OBJECT IDENTIFIER`.

The object identifier for the curve choice to be used in SS1SPCA Certificates is:

```
secp256r1 OBJECT IDENTIFIER ::= { iso(1) member-body(2) us(840)
ansi-X9-62(10045) curves(3) prime(1) 7 }
```

The `subjectPublicKey` from `SubjectPublicKeyInfo` is the ECC Public Key.

Implementations of Elliptic Curve Cryptography according to this document shall only support the uncompressed form.

The first octet of the `subjectPublicKey` indicates whether the key is compressed or uncompressed. The uncompressed form is indicated by 0x04 (the compressed form is indicated by either 0x02 or 0x03). The Public Key shall be rejected if any value other than 0x04 is in the first octet.

Signature Algorithm

The `signatureAlgorithm` field shall indicate the Root SS1SPCA signature algorithm used to sign this Certificate as defined under the next **Signature Method (ECDSA)** heading.

Signature Value

The Root SS1SPCA's signature of the Certificate shall be computed using the Root SS1SPCA's private signing key using the algorithm identified under the next **Signature Method (ECDSA)** heading .

The structure for ECDSA signatures shall be as per RFC 5480.

Cryptographic Primitives for Signature Method

Signature Method (ECDSA)

The ECDSA signature method is defined in NIST FIPS 186-4. When implementing ECDSA, the SHA-256 message digest algorithm and the P-256 elliptic curve as defined in FIPS 186-4 Annex D, D.1.2.3, shall be used.

The signature algorithm shall be `ecdsa-with-SHA256` as specified in RFC 5759 and 6318.

The algorithm identifier is:

```
ecdsa-with-SHA256 OBJECT IDENTIFIER ::= { iso(1) memberbody(2)
us(840) ansi-X9-62(10045) signatures(4) ecdsa-withsha2(3) 2 }
```

SHA-256 hash algorithm

The hash algorithm shall be the SHA-256 secure hash algorithm as defined in NIST FIPS 180-4.

11.10 Intermediate SS1SPCA Certificate Profile - Operations CA

Field Name	RFC 5759/5280 Type	Value	Reference
version	INTEGER	v3	
serialNumber	INTEGER	Positive Integer	
signature	AlgorithmIdentifier	SHA256 with ECDSA	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-at-commonName (the "Issuer X520 Common Name")	UTF8String	Globally unique name of Root SS1SPCA (as defined in the Root SS1SPCA Certificate Profile)	
keyIdentifier in subjectKeyIdentif ier (the "Subject Key Identifier")	keyIdentifier	Provides a means for identifying certificates containing the particular Public Key used in an application	
keyIdentifier in authorityKeyIdentifier (the "Authority Key Identifier")	keyIdentifier	A unique value that matches the subjectKeyIdentifier value of the issuer's credential

notAfter	Time	shall be assigned the GeneralizedTime value of 99991231235959Z	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-atcommonName (the "Subject X520 Common Name")	UTF8String	Globally unique name of Intermediate SS1SPCA	
Key Usage	keyUsage	The permitted Key Usages.	
Basic Constraints	BasicConstraints	The permitted Basic Constraints values.	
subjectPublicKeyI nfo	SubjectPublicKeyI nfo	The Subject's Public Key	
signatureAlgorithm	AlgorithmIdentifier	SHA256 with ECDSA	
signatureValue	BIT STRING	Subject certificate signature	

Version

The version of the X.509 Certificate. Valid Certificates shall identify themselves as version 3.

Serial Number

Certificate serial number which is a positive integer. The `serialNumber` identifies the Certificate and shall be created by the SS1SPCA that signs the Certificate. The `serialNumber` shall be unique in the scope of Certificates signed by the Root SS1SPCA.

Signature

The identity of the signature algorithm used to sign the Certificate. The field is identical to the value of the Issuing SS1SPCA Certificate's `signatureAlgorithm` field explained further under the next **Signature Algorithm** heading.

Issuer X520 Common Name

The name of the signer of the Certificate. This will be the globally unique name of the Root SS1SPCA (as defined in the Root SS1SPCA Certificate Profile).

Subject Key Identifier

The `subjectKeyIdentifier` extension should be included and marked as non-critical in the Certificate.

Authority Key Identifier

To optimize building the correct credential chain, the non-critical `authorityKeyIdentifier` extension shall be populated with a unique value as recommended by RFC 5280 and shall be included in all SS1SP End Entity Certificates.

Validity

The time period over which the issuer expects the Certificate to be valid. The `validity` period is the period of time from `notBefore` through `notAfter`, inclusive.

Intermediate SS1SPCA Certificates are expected to operate indefinitely into the future and should use the value 99991231235959Z. Solutions verifying a Intermediate SS1SPCA Certificate are expected to accept this value indefinitely.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Times up to and including 23:59:59 December 31, 2049 UTC shall be encoded as `UTCTime` as

YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as `GeneralizedTime` as

YYYYMMDDHHmmssZ.

Not Before Date

The earliest time a Certificate may be used (`notBefore`). This shall be the time the Certificate is created.

Not After Date

The latest time a Certificate is expected to be used (`notAfter`). Certificates are expected to operate indefinitely into the future and should use the value 99991231235959Z. Systems and Secure SMETS1 Devices verifying a Certificate are expected to accept this value indefinitely.

Subject X520 Common Name

This field shall be populated with the following values:

```
C = GB
S = Hampshire
L = Winchester
OU = Secure Meters (UK) Ltd
O = Secure Meters (UK) Ltd
CN = SML-DCC Operations CA
```

Key Usage

The `keyUsage` extension should be populated as follows:

`keyCertSign;` and

`cRLSign`

Basic Constraints

The `BasicConstraints` extension should be populated as follows:

```
cA=TRUE
pathLen=Absent
```

Subject Public Key Info

The Certificate's `subjectPublicKeyInfo` field shall indicate the Public Key algorithm identifier and the Public Key in the specified algorithm format as specified in RFC 3279 and RFC 5480.

The algorithm field in the `subjectPublicKeyInfo` structure shall contain the following identifier:

```
        id-ecPublicKey OBJECT IDENTIFIER ::= {iso(1) member-body(2)
        us(840) ansi-X9-62(10045) keyType(2) 1 }
```

`id-ecPublicKey` indicates that the algorithms that can be used with the subject Public Key are unrestricted. The key is only restricted by the values indicated in the key usage Certificate extension (explained further under the next **extensions** heading).

The parameter for `id-ecPublicKey` is as follows and shall always be present:

```
    ECParameters ::= CHOICE {

namedCurve          OBJECT IDENTIFIER        -

- implicitCurve    NULL         --

specifiedCurve   SpecifiedECDomain

     }
```

Only the following field in ECParameters shall be used: o

`namedCurve` - identifies all the required values for a particular set

of elliptic curve domain parameters to be represented by an

`OBJECT IDENTIFIER`.

The object identifier for the curve choice to be used in Certificates is:

```
        secp256r1 OBJECT IDENTIFIER ::= { iso(1) member-body(2) us(840)
        ansi-X9-62(10045) curves(3) prime(1) 7 }
```

The `subjectPublicKey` from `SubjectPublicKeyInfo` is the ECC Public Key.

Implementations of Elliptic Curve Cryptography according to this document shall only support the uncompressed form.

The first octet of the `subjectPublicKey` indicates whether the key is compressed or uncompressed. The uncompressed form is indicated by 0x04 (the compressed form is indicated by either 0x02 or 0x03). The Public Key MUST be rejected if any value other than 0x04 is included in the first octet.

Signature Algorithm

The `signatureAlgorithm` field shall indicate the Root SS1SPCA signature algorithm used to sign this Certificate as defined under the next **Signature Method (ECDSA)** heading.

Signature Value

The Root SS1SPCA's signature of the Certificate shall be computed using the Root SS1SPCA's private signing key using the algorithm identified under the next **Signature Method (ECDSA)** heading.

The structure for ECDSA signatures shall be as per RFC 5480.

Cryptographic Primitives for Signature Method

Signature Method (ECDSA)

The ECDSA signature method is defined in NIST FIPS 186-4. When implementing ECDSA, the SHA-256 message digest algorithm and the P-256 elliptic curve as defined in FIPS 186-4 Annex D, D.1.2.3, shall be used.

The signature algorithm shall be `ecdsa-with-SHA256` as specified in RFC 5759 and 6318.

The algorithm identifier is:

```
        ecdsa-with-SHA256 OBJECT IDENTIFIER ::= { iso(1) memberbody(2)
        us(840) ansi-X9-62(10045) signatures(4) ecdsa-withsha2(3) 2 }
```

SHA-256 hash algorithm

The hash algorithm used shall be the SHA-256 secure hash algorithm as defined in NIST FIPS 180-4.

11.11 Intermediate SS1SPCA Certificate Profile - Operations CA

Field Name	RFC 5759/5280 Type	Value	Reference
version	INTEGER	v3	
serialNumber	INTEGER	Positive Integer	
signature	AlgorithmIdentifier	SHA256 with ECDSA	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-at-commonName (the "Issuer X520 Common Name")	UTF8String	Globally unique name of Root SS1SPCA (as defined in the Root SS1SPCA Certificate Profile)	
keyIdentifier in subjectKeyIdentif ier (the "Subject Key Identifier")	keyIdentifier	Provides a means for identifying certificates containing the particular Public Key used in an application	
keyIdentifier in authorityKeyIdentifier (the "Authority Key Identifier")	keyIdentifier	A unique value that matches the subjectKeyIdentifier value of the issuer's credential	

notBefore	Time	Creation time of the certificate	
notAfter	Time	shall be assigned the GeneralizedTime value of 99991231235959Z	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-atcommonName (the “Subject X520 Common Name”)	UTF8String	Globally unique name of Intermediate SS1SPCA	
Key Usage	keyUsage	The permitted Key Usages.	
Basic Constraints	BasicConstraints	The permitted Basic Constraints values.	
subjectPublicKeyI nfo	SubjectPublicKeyI nfo	The Subject’s Public Key	
signatureAlgorithm	AlgorithmIdentifier	SHA256 with ECDSA	
signatureValue	BIT STRING	Subject certificate signature	

Version

The version of the X.509 Certificate. Valid Certificates shall identify themselves as version 3.

Serial Number

Certificate serial number which is a positive integer. The `serialNumber` identifies the Certificate and shall be created by the SS1SPCA that signs the Certificate. The `serialNumber` shall be unique in the scope of Certificates signed by the Root SS1SPCA.

Signature

The identity of the signature algorithm used to sign the Certificate. The field is identical to the value of the Issuing SS1SPCA Certificate's `signatureAlgorithm` field explained further under the next **Signature Algorithm** heading.

Issuer X520 Common Name

The name of the signer of the Certificate. This will be the globally unique name of the Root SS1SPCA (as defined in the Root SS1SPCA Certificate Profile).

Subject Key Identifier

The `subjectKeyIdentifier` extension should be included and marked as non-critical in the Certificate.

Authority Key Identifier

To optimize building the correct credential chain, the non-critical authorityKeyIdentifier extension shall be populated with a unique value as recommended by RFC 5280 and shall be included in all SS1SP End Entity Certificates.

Validity

The time period over which the issuer expects the Certificate to be valid. The validity period is the period of time from notBefore through notAfter, inclusive.

Intermediate SS1SPCA Certificates are expected to operate indefinitely into the future and should use the value 99991231235959Z. Solutions verifying a Intermediate SS1SPCA Certificate are expected to accept this value indefinitely.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Times up to and including 23:59:59 December 31, 2049 UTC shall be encoded as UTCTime as

YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as GeneralizedTime as

YYYYMMDDHHmmssZ.

Not Before Date

The earliest time a Certificate may be used (notBefore). This shall be the time the Certificate is created.

Not After Date

The latest time a Certificate is expected to be used (`notAfter`). Certificates are expected to operate indefinitely into the future and should use the value 99991231235959Z. Systems and Secure SMETS1 Devices verifying a Certificate are expected to accept this value indefinitely.

Subject X520 Common Name

This field shall be populated with the following values:

```
C = GB
S = Hampshire
L = Winchester
OU = Secure Meters (UK) Ltd
O = Secure Meters (UK) Ltd
CN = SML-MFG Operations CA
```

Key Usage

The `keyUsage` extension should be populated as follows:

`keyCertSign;` and

`cRLSign`

Basic Constraints

The `BasicConstraints` extension should be populated as follows:

```
cA=TRUE
pathLen=Absent
```

Subject Public Key Info

The Certificate's `subjectPublicKeyInfo` field shall indicate the Public Key algorithm identifier and the Public Key in the specified algorithm format as specified in RFC 3279 and RFC 5480.

The algorithm field in the `subjectPublicKeyInfo` structure shall contain the following identifier:

```
        id-ecPublicKey OBJECT IDENTIFIER ::= {iso(1) member-body(2)
        us(840) ansi-X9-62(10045) keyType(2) 1 }
```

`id-ecPublicKey` indicates that the algorithms that can be used with the subject Public Key are unrestricted. The key is only restricted by the values indicated in the key usage Certificate extension (explained further under the next **extensions** heading).

The parameter for `id-ecPublicKey` is as follows and shall always be present:

```
    ECParameters ::= CHOICE {

namedCurve          OBJECT IDENTIFIER         -

- implicitCurve   NULL         --

specifiedCurve  SpecifiedECDomain

      }
```

Only the following field in ECParameters shall be used: o

`namedCurve` - identifies all the required values for a particular set

of elliptic curve domain parameters to be represented by an

`OBJECT IDENTIFIER`.

The object identifier for the curve choice to be used in Certificates is:

```
secp256r1 OBJECT IDENTIFIER ::= { iso(1) member-body(2) us(840)
ansi-X9-62(10045) curves(3) prime(1) 7 }
```

The `subjectPublicKey` from `SubjectPublicKeyInfo` is the ECC Public Key.

Implementations of Elliptic Curve Cryptography according to this document shall only support the uncompressed form.

The first octet of the `subjectPublicKey` indicates whether the key is compressed or uncompressed. The uncompressed form is indicated by 0x04 (the compressed form is indicated by either 0x02 or 0x03). The Public Key MUST be rejected if any value other than 0x04 is included in the first octet.

Signature Algorithm

The `signatureAlgorithm` field shall indicate the Root SS1SPCA signature algorithm used to sign this Certificate as defined under the next **Signature Method (ECDSA)** heading.

Signature Value

The Root SS1SPCA's signature of the Certificate shall be computed using the Root SS1SPCA's private signing key using the algorithm identified under the next **Signature Method (ECDSA)** heading.

The structure for ECDSA signatures shall be as per RFC 5480.

Cryptographic Primitives for Signature Method

Signature Method (ECDSA)

The ECDSA signature method is defined in NIST FIPS 186-4. When implementing ECDSA, the SHA-256 message digest algorithm and the P-256 elliptic curve as defined in FIPS 186-4 Annex D, D.1.2.3, shall be used.

The signature algorithm shall be `ecdsa-with-SHA256` as specified in RFC 5759 and 6318. The algorithm identifier is:

```
ecdsa-with-SHA256 OBJECT IDENTIFIER ::= { iso(1) memberbody(2)
us(840) ansi-X9-62(10045) signatures(4) ecdsa-withsha2(3) 2 }
```

SHA-256 hash algorithm

The hash algorithm used shall be the SHA-256 secure hash algorithm as defined in NIST FIPS 180-4.

11.12 Subordinate SS1SPCA Certificate Profile - SMSO CA

Field Name	RFC 5759/5280 Type	Value	Reference
version	INTEGER	v3	
serialNumber	INTEGER	Positive Integer	
signature	AlgorithmIdentifi er	SHA256 with ECDSA	
The value field of the AttributeTypeAndV alue structure within the subject field whose type is id-at-commonName (the "Issuer X520 Common Name")	UTF8String	Globally unique name of Intermediate SS1SPCA (as defined in the Intermediate SS1SPCA Certificate Profile)	
keyIdentifier in subjectKeyIdentif ier (the "Subject Key Identifier")	keyIdentifier	Provides a means for identifying certificates containing the particular Public Key used in an application	
keyIdentifier in authorityKeyIdent ifier (the "Authority Key Identifier")	keyIdentifier	A unique value that matches the subjectKeyIdent ifier value of the issuer's credential	
notBefore	Time	Creation time of the certificate	

notAfter	Time	shall be assigned the GeneralizedTime value of 99991231235959Z	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-atcommonName (the "Subject X520 Common Name")	UTF8String	Globally unique name of Subordinate SS1SPCA	
Key Usage	keyUsage	The permitted Key Usages.	
Basic Constraints	BasicConstraints	The permitted Basic Constraints values.	
subjectPublicKeyI nfo	SubjectPublicKeyI nfo	The Subject's Public Key	
signatureAlgorithm	AlgorithmIdentifier	SHA256 with ECDSA	
signatureValue	BIT STRING	Subject certificate signature	

Version

The version of the X.509 Certificate. Valid Certificates shall identify themselves as version 3.

Serial Number

Certificate serial number which is a positive integer. The `serialNumber` identifies the Certificate and shall be created by the SS1SPCA that signs the Certificate. The `serialNumber` shall be unique in the scope of Certificates signed by the Intermediate SS1SPCA.

Signature

The identity of the signature algorithm used to sign the Certificate. The field is identical to the value of the Intermediate SS1SPCA Certificate's `signatureAlgorithm` field explained further under the next **signatureAlgorithm** heading.

Issuer X520 Common Name

The name of the signer of the Certificate. This will be the globally unique name of the Intermediate SS1SPCA (as defined in the Intermediate SS1SPCACertificate Profile).

Subject Key Identifier

The `subjectKeyIdentifier` extension should be included and marked as non-critical in the Certificate.

Authority Key Identifier

To optimize building the correct credential chain, the non-critical `authorityKeyIdentifier` extension shall be populated with a unique value as recommended by RFC 5280 and shall be included in all SS1SP End Entity Certificates.

Validity

The time period over which the issuer expects the Certificate to be valid. The validity period is the period of time from notBefore through notAfter, inclusive.

Subordinate SS1SPCA Certificates are expected to operate indefinitely into the future and should use the value 99991231235959Z. Solutions verifying a Subordinate SS1SPCA Certificate are expected to accept this value indefinitely.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Times up to and including 23:59:59 December 31, 2049 UTC shall be encoded as UTCTime as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as GeneralizedTime as YYYYMMDDHHmmssZ.

Not Before Date

The earliest time a Certificate may be used (notBefore). This shall be the time the Certificate is created.

Not After Date

The latest time a Certificate is expected to be used (notAfter). Certificates are expected to operate indefinitely into the future and should use the value 99991231235959Z. Systems and Secure SMETS1 Devices verifying a Certificate are expected to accept this value indefinitely.

Subject X520 Common Name

This field shall be populated with the following values:

```
C = GB
```

```
S = Hampshire
L = Winchester
OU = Secure Meters (UK) Ltd
O = Secure Meters (UK) Ltd
CN = SML-HES CA
```

Key Usage

The `keyUsage` extension should be populated as follows:

`keyCertSign;` and

`cRLSign`

Basic Constraints

The `BasicConstraints` extension should be populated as follows:

```
cA=TRUE
pathLen=Absent
```

Subject Public Key Info

The Certificate's `subjectPublicKeyInfo` field shall indicate the Public Key algorithm identifier and the Public Key in the specified algorithm format as specified in RFC 3279 and RFC 5480.

The algorithm field in the `subjectPublicKeyInfo` structure shall contain the following identifier:

```
        id-ecPublicKey OBJECT IDENTIFIER ::= {iso(1) member-body(2)
        us(840) ansi-X9-62(10045) keyType(2) 1 }
```

id-ecPublicKey indicates that the algorithms that can be used with the subject Public Key are unrestricted. The key is only restricted by the values indicated in the key usage Certificate extension (explained further under the next **extensions** heading).

The parameter for id-ecPublicKey is as follows and shall always be present:

```
    ECParameters ::= CHOICE {
namedCurve          OBJECT IDENTIFIER         -
- implicitCurve    NULL         --
specifiedCurve  SpecifiedECDomain
      }
```

Only the following field in ECParameters shall be used: o

namedCurve - identifies all the required values for a particular set

of elliptic curve domain parameters to be represented by an

OBJECT IDENTIFIER.

The object identifier for the curve choice to be used in Certificates is:

```
        secp256r1 OBJECT IDENTIFIER ::= { iso(1) member-body(2) us(840)
        ansi-X9-62(10045) curves(3) prime(1) 7 }
```

The subjectPublicKey from SubjectPublicKeyInfo is the ECC Public Key.

Implementations of Elliptic Curve Cryptography according to this document shall only support the uncompressed form.

The first octet of the `subjectPublicKey` indicates whether the key is compressed or uncompressed. The uncompressed form is indicated by 0x04 (the compressed form is indicated by either 0x02 or 0x03). The Public Key MUST be rejected if any value other than 0x04 is included in the first octet.

Signature Algorithm

The `signatureAlgorithm` field shall indicate the Intermediate SS1SPCA signature algorithm used to sign this Certificate as defined under the next **Signature Method (ECDSA)** heading.

Signature Value

The Intermediate SS1SPCA's signature of the Certificate shall be computed using the Intermediate SS1SPCA's private signing key using the algorithm identified under the next **Signature Method (ECDSA)** heading.

The structure for ECDSA signatures shall be as per RFC 5480.

Cryptographic Primitives for Signature Method

Signature Method (ECDSA)

The ECDSA signature method is defined in NIST FIPS 186-4. When implementing ECDSA, the SHA-256 message digest algorithm and the P-256 elliptic curve as defined in FIPS 186-4 Annex D, D.1.2.3, shall be used.

The signature algorithm shall be `ecdsa-with-SHA256` as specified in RFC 5759 and 6318. The algorithm identifier is:

```
ecdsa-with-SHA256 OBJECT IDENTIFIER ::= { iso(1) memberbody(2)
us(840) ansi-X9-62(10045) signatures(4) ecdsa-withsha2(3) 2 }
```

SHA-256 hash algorithm

The hash algorithm used shall be the SHA-256 secure hash algorithm as defined in NIST FIPS 180-4.

11.13 Subordinate SS1SPCA Certificate Profile - SMSO KMS CA

Field Name	RFC 5759/5280 Type	Value	Reference
version	INTEGER	v3	
serialNumber	INTEGER	Positive Integer	
signature	AlgorithmIdentifier	SHA256 with ECDSA	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-at-commonName (the "Issuer X520 Common Name")	UTF8String	Globally unique name of Intermediate SS1SPCA (as defined in the Intermediate SS1SPCA Certificate Profile)	
keyIdentifier in subjectKeyIdentif ier (the "Subject Key Identifier")	keyIdentifier	Provides a means for identifying certificates containing the particular Public Key used in an application	
keyIdentifier in authorityKeyIdentifier (the "Authority Key Identifier")	keyIdentifier	A unique value that matches the subjectKeyIdentifier value of the issuer's credential	

notBefore	Time	Creation time of the certificate	
notAfter	Time	shall be assigned the GeneralizedTime value of 99991231235959Z	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-atcommonName (the “Subject X520 Common Name”)	UTF8String	Globally unique name of Subordinate SS1SPCA	
Key Usage	keyUsage	The permitted Key Usages.	
Basic Constraints	BasicConstraints	The permitted Basic Constraints values.	
subjectPublicKeyI nfo	SubjectPublicKeyI nfo	The Subject’s Public Key	
signatureAlgorithm	AlgorithmIdentifier	SHA256 with ECDSA	
signatureValue	BIT STRING	Subject certificate signature	

Version

The version of the X.509 Certificate. Valid Certificates shall identify themselves as version 3.

Serial Number

Certificate serial number which is a positive integer. The `serialNumber` identifies the Certificate and shall be created by the SS1SPCA that signs the Certificate. The `serialNumber` shall be unique in the scope of Certificates signed by the Intermediate SS1SPCA.

Signature

The identity of the signature algorithm used to sign the Certificate. The field is identical to the value of the Intermediate SS1SPCA Certificate's `signatureAlgorithm` field explained further under the next **signatureAlgorithm** heading.

Issuer X520 Common Name

The name of the signer of the Certificate. This will be the globally unique name of the Intermediate SS1SPCA (as defined in the Intermediate SS1SPCACertificate Profile).

Subject Key Identifier

The `subjectKeyIdentifier` extension should be included and marked as non-critical in the Certificate.

Authority Key Identifier

To optimize building the correct credential chain, the non-critical authorityKeyIdentifier extension shall be populated with a unique value as recommended by RFC 5280 and shall be included in all SS1SP End Entity Certificates.

Validity

The time period over which the issuer expects the Certificate to be valid. The validity period is the period of time from notBefore through notAfter, inclusive.

Subordinate SS1SPCA Certificates are expected to operate indefinitely into the future and should use the value 99991231235959Z. Solutions verifying a Subordinate SS1SPCA Certificate are expected to accept this value indefinitely.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Times up to and including 23:59:59 December 31, 2049 UTC shall be encoded as UTCTime as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as GeneralizedTime as YYYYMMDDHHmmssZ.

Not Before Date

The earliest time a Certificate may be used (notBefore). This shall be the time the Certificate is created.

Not After Date

The latest time a Certificate is expected to be used (`notAfter`). Certificates are expected to operate indefinitely into the future and should use the value 99991231235959Z. Systems and Secure SMETS1 Devices verifying a Certificate are expected to accept this value indefinitely.

Subject X520 Common Name

This field shall be populated with the following values:

```
C = GB

S = Hampshire

L = Winchester

OU = Secure Meters (UK) Ltd

O = Secure Meters (UK) Ltd

CN = SML-Key Management CA
```

Key Usage

The `keyUsage` extension should be populated as follows:

`keyCertSign;` and

`cRLSign`

Basic Constraints

The `BasicConstraints` extension should be populated as follows:

```
cA=TRUE

pathLen=Absent
```

Subject Public Key Info

The Certificate's `subjectPublicKeyInfo` field shall indicate the Public Key algorithm identifier and the Public Key in the specified algorithm format as specified in RFC 3279 and RFC 5480.

The algorithm field in the `subjectPublicKeyInfo` structure shall contain the following identifier:

```
        id-ecPublicKey OBJECT IDENTIFIER ::= {iso(1) member-body(2)
        us(840) ansi-X9-62(10045) keyType(2) 1 }
```

`id-ecPublicKey` indicates that the algorithms that can be used with the subject Public Key are unrestricted. The key is only restricted by the values indicated in the key usage Certificate extension (explained further under the next **extensions** heading).

The parameter for `id-ecPublicKey` is as follows and shall always be present:

```
    ECParameters ::= CHOICE {
namedCurve          OBJECT IDENTIFIER         -
- implicitCurve   NULL         --
specifiedCurve  SpecifiedECDomain
      }
```

Only the following field in ECParameters shall be used: o

`namedCurve` - identifies all the required values for a particular set

of elliptic curve domain parameters to be represented by an

`OBJECT IDENTIFIER`.

The object identifier for the curve choice to be used in Certificates is:

```
secp256r1 OBJECT IDENTIFIER ::= { iso(1) member-body(2) us(840)
ansi-X9-62(10045) curves(3) prime(1) 7 }
```

The subjectPublicKey from SubjectPublicKeyInfo is the ECC Public Key.

Implementations of Elliptic Curve Cryptography according to this document shall only support the uncompressed form.

The first octet of the subjectPublicKey indicates whether the key is compressed or uncompressed. The uncompressed form is indicated by 0x04 (the compressed form is indicated by either 0x02 or 0x03). The Public Key MUST be rejected if any value other than 0x04 is included in the first octet.

Signature Algorithm

The signatureAlgorithm field shall indicate the Intermediate SS1SPCA signature algorithm used to sign this Certificate as defined under the next **Signature Method (ECDSA)** heading.

Signature Value

The Intermediate SS1SPCA's signature of the Certificate shall be computed using the Intermediate SS1SPCA's private signing key using the algorithm identified under the next **Signature Method (ECDSA)** heading.

The structure for ECDSA signatures shall be as per RFC 5480.

Cryptographic Primitives for Signature Method

Signature Method (ECDSA)

The ECDSA signature method is defined in NIST FIPS 186-4. When implementing ECDSA, the SHA-256 message digest algorithm and the P-256 elliptic curve as defined in FIPS 186-4 Annex D, D.1.2.3, shall be used.

The signature algorithm shall be `ecdsa-with-SHA256` as specified in RFC 5759 and 6318.

The algorithm identifier is:

```
ecdsa-with-SHA256 OBJECT IDENTIFIER ::= { iso(1) memberbody(2)
us(840) ansi-X9-62(10045) signatures(4) ecdsa-withsha2(3) 2 }
```

SHA-256 hash algorithm

The hash algorithm used shall be the SHA-256 secure hash algorithm as defined in NIST FIPS 180-4.

11.14 Subordinate SS1SPCA Certificate Profile - SMSO Code Signing CA

Field Name	RFC 5759/5280 Type	Value	Reference
version	INTEGER	v3	
serialNumber	INTEGER	Positive Integer	
signature	AlgorithmIdentifier	SHA256 with ECDSA	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-at-commonName (the "Issuer X520 Common Name")	UTF8String	Globally unique name of Intermediate SS1SPCA (as defined in the Intermediate SS1SPCA Certificate Profile)	
keyIdentifier in subjectKeyIdentif ier (the "Subject Key Identifier")	keyIdentifier	Provides a means for identifying certificates containing the particular Public Key used in an application	
keyIdentifier in authorityKeyIdentifier (the "Authority Key Identifier")	keyIdentifier	A unique value that matches the subjectKeyIdentifier value of the issuer's credential	

`notBefore`	`Time`	Creation time of the certificate	
`notAfter`	`Time`	shall be assigned the `GeneralizedTime` value of 99991231235959Z	
The `value` field of the `AttributeTypeAndValue` structure within the `subject` field whose `type` is `id-atcommonName` (the “Subject X520 Common Name”)	`UTF8String`	Globally unique name of Subordinate SS1SPCA	
Key Usage	`keyUsage`	The permitted Key Usages.	
Basic Constraints	`BasicConstraints`	The permitted Basic Constraints values.	
`subjectPublicKeyI nfo`	`SubjectPublicKeyI nfo`	The Subject’s Public Key	
`signatureAlgorithm`	`AlgorithmIdentifier`	SHA256 with ECDSA	
`signatureValue`	`BIT STRING`	Subject certificate signature	

Version

The version of the X.509 Certificate. Valid Certificates shall identify themselves as version 3.

Serial Number

Certificate serial number which is a positive integer. The `serialNumber` identifies the Certificate and shall be created by the SS1SPCA that signs the Certificate. The `serialNumber` shall be unique in the scope of Certificates signed by the Intermediate SS1SPCA.

Signature

The identity of the signature algorithm used to sign the Certificate. The field is identical to the value of the Intermediate SS1SPCA Certificate's `signatureAlgorithm` field explained further under the next **signatureAlgorithm** heading.

Issuer X520 Common Name

The name of the signer of the Certificate. This will be the globally unique name of the Intermediate SS1SPCA (as defined in the Intermediate SS1SPCACertificate Profile).

Subject Key Identifier

The `subjectKeyIdentifier` extension should be included and marked as non-critical in the Certificate.

Authority Key Identifier

To optimize building the correct credential chain, the non-critical `authorityKeyIdentifier` extension shall be populated with a unique value as recommended by RFC 5280 and shall be included in all SS1SP End Entity Certificates.

Validity

The time period over which the issuer expects the Certificate to be valid. The `validity` period is the period of time from `notBefore` through `notAfter`, inclusive.

Subordinate SS1SPCA Certificates are expected to operate indefinitely into the future and should use the value 99991231235959Z. Solutions verifying a Subordinate SS1SPCA Certificate are expected to accept this value indefinitely.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Times up to and including 23:59:59 December 31, 2049 UTC shall be encoded as `UTCTime` as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as `GeneralizedTime` as YYYYMMDDHHmmssZ.

Not Before Date

The earliest time a Certificate may be used (`notBefore`). This shall be the time the Certificate is created.

Not After Date

The latest time a Certificate is expected to be used (`notAfter`). Certificates are expected to operate indefinitely into the future and should use the value 99991231235959Z. Systems and Secure SMETS1 Devices verifying a Certificate are expected to accept this value indefinitely.

Subject X520 Common Name

This field shall be populated with the following values:

```
C = GB

S = Hampshire

L = Winchester

OU = Secure Meters (UK) Ltd

O = Secure Meters (UK) Ltd

CN = SML-Code Signing CA
```

Key Usage

The `keyUsage` extension should be populated as follows:

`keyCertSign;` and
`cRLSign`

Basic Constraints

The `BasicConstraints` extension should be populated as follows:

```
cA=TRUE

pathLen=Absent
```

Subject Public Key Info

The Certificate's `subjectPublicKeyInfo` field shall indicate the Public Key algorithm identifier and the Public Key in the specified algorithm format as specified in RFC 3279 and RFC 5480.

The algorithm field in the `subjectPublicKeyInfo` structure shall contain the following identifier:

```
        id-ecPublicKey OBJECT IDENTIFIER ::= {iso(1) member-body(2)
        us(840) ansi-X9-62(10045) keyType(2) 1 }
```

`id-ecPublicKey` indicates that the algorithms that can be used with the subject Public Key are unrestricted. The key is only restricted by the values indicated in the key usage Certificate extension (explained further under the next **extensions** heading).

The parameter for `id-ecPublicKey` is as follows and shall always be present:

```
    ECParameters ::= CHOICE {
namedCurve         OBJECT IDENTIFIER        -
- implicitCurve   NULL        --
specifiedCurve  SpecifiedECDomain
     }
```

Only the following field in ECParameters shall be used: o

`namedCurve` - identifies all the required values for a particular set of elliptic curve domain parameters to be represented by an `OBJECT IDENTIFIER`.

The object identifier for the curve choice to be used in Certificates is:

```
secp256r1 OBJECT IDENTIFIER ::= { iso(1) member-body(2) us(840)
ansi-X9-62(10045) curves(3) prime(1) 7 }
```

The `subjectPublicKey` from `SubjectPublicKeyInfo` is the ECC Public Key.

Implementations of Elliptic Curve Cryptography according to this document shall only support the uncompressed form.

The first octet of the `subjectPublicKey` indicates whether the key is compressed or uncompressed. The uncompressed form is indicated by 0x04 (the compressed form is indicated by either 0x02 or 0x03). The Public Key MUST be rejected if any value other than 0x04 is included in the first octet.

Signature Algorithm

The `signatureAlgorithm` field shall indicate the Intermediate SS1SPCA signature algorithm used to sign this Certificate as defined under the next **Signature Method (ECDSA)** heading.

Signature Value

The Intermediate SS1SPCA's signature of the Certificate shall be computed using the Intermediate SS1SPCA's private signing key using the algorithm identified under the next **Signature Method (ECDSA)** heading.

The structure for ECDSA signatures shall be as per RFC 5480.

Cryptographic Primitives for Signature Method

Signature Method (ECDSA)

The ECDSA signature method is defined in NIST FIPS 186-4. When implementing ECDSA, the SHA-256 message digest algorithm and the P-256 elliptic curve as defined in FIPS 186-4 Annex D, D.1.2.3, shall be used.

The signature algorithm shall be `ecdsa-with-SHA256` as specified in RFC 5759 and 6318.

The algorithm identifier is:

```
ecdsa-with-SHA256 OBJECT IDENTIFIER ::= { iso(1) memberbody(2)
us(840) ansi-X9-62(10045) signatures(4) ecdsa-withsha2(3) 2 }
```

SHA-256 hash algorithm

The hash algorithm used shall be the SHA-256 secure hash algorithm as defined in NIST FIPS 180-4.

11.15 Subordinate SS1SPCA Certificate Profile - Device CA

Field Name	RFC 5759/5280 Type	Value	Reference
version	INTEGER	v3	
serialNumber	INTEGER	Positive Integer	
signature	AlgorithmIdentifier	SHA256 with ECDSA	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-at-commonName (the "Issuer X520 Common Name")	UTF8String	Globally unique name of Intermediate SS1SPCA (as defined in the Intermediate SS1SPCA Certificate Profile)	
keyIdentifier in subjectKeyIdentif ier (the "Subject Key Identifier")	keyIdentifier	Provides a means for identifying certificates containing the particular Public Key used in an application	
keyIdentifier in authorityKeyIdentifier (the "Authority Key Identifier")	keyIdentifier	A unique value that matches the subjectKeyIdentifier value of the issuer's credential	

notBefore	Time	Creation time of the certificate	
notAfter	Time	shall be assigned the GeneralizedTime value of 99991231235959Z	
The value field of the AttributeTypeAndValue structure within the subject field whose type is id-atcommonName (the “Subject X520 Common Name”)	UTF8String	Globally unique name of Subordinate SS1SPCA	
Key Usage	keyUsage	The permitted Key Usages.	
Basic Constraints	BasicConstraints	The permitted Basic Constraints values.	
subjectPublicKeyI nfo	SubjectPublicKeyI nfo	The Subject’s Public Key	
signatureAlgorithm	AlgorithmIdentifier	SHA256 with ECDSA	
signatureValue	BIT STRING	Subject certificate signature	

Version

The version of the X.509 Certificate. Valid Certificates shall identify themselves as version 3.

Serial Number

Certificate serial number which is a positive integer. The `serialNumber` identifies the Certificate and shall be created by the SS1SPCA that signs the Certificate. The `serialNumber` shall be unique in the scope of Certificates signed by the Intermediate SS1SPCA.

Signature

The identity of the signature algorithm used to sign the Certificate. The field is identical to the value of the Intermediate SS1SPCA Certificate's `signatureAlgorithm` field explained further under the next **signatureAlgorithm** heading.

Issuer X520 Common Name

The name of the signer of the Certificate. This will be the globally unique name of the Intermediate SS1SPCA (as defined in the Intermediate SS1SPCACertificate Profile).

Subject Key Identifier

The `subjectKeyIdentifier` extension should be included and marked as non-critical in the Certificate.

Authority Key Identifier

To optimize building the correct credential chain, the non-critical `authorityKeyIdentifier` extension shall be populated with a unique value as recommended by RFC 5280 and shall be included in all SS1SP End Entity Certificates.

Validity

The time period over which the issuer expects the Certificate to be valid. The `validity` period is the period of time from `notBefore` through `notAfter`, inclusive.

Subordinate SS1SPCA Certificates are expected to operate indefinitely into the future and should use the value 99991231235959Z. Solutions verifying a Subordinate SS1SPCA Certificate are expected to accept this value indefinitely.

All times shall be stated in the Universal Coordinated Time (UTC) time zone. Times up to and including 23:59:59 December 31, 2049 UTC shall be encoded as `UTCTime` as YYMMDDHHmmssZ.

Times later than 23:59:59 December 31, 2049 UTC shall be encoded as `GeneralizedTime` as YYYYMMDDHHmmssZ.

Not Before Date

The earliest time a Certificate may be used (`notBefore`). This shall be the time the Certificate is created.

Not After Date

The latest time a Certificate is expected to be used (`notAfter`). Certificates are expected to operate indefinitely into the future and should use the value 99991231235959Z. Systems and Secure SMETS1 Devices verifying a Certificate are expected to accept this value indefinitely.

Subject X520 Common Name

This field shall be populated with the following values:

C = IN

S = Rajasthan

L = Udaipur

OU = Secure Meters Ltd

O = Secure Meters Ltd

CN = Secure Meters Production CA

Key Usage

The keyUsage extension should be populated as follows:

keyCertSign; and

cRLSign

Basic Constraints

The BasicConstraints extension should be populated as follows:

cA=TRUE

pathLen=Absent

Subject Public Key Info

The Certificate's subjectPublicKeyInfo field shall indicate the Public Key algorithm identifier and the Public Key in the specified algorithm format as specified in RFC 3279 and RFC 5480.

The algorithm field in the subjectPublicKeyInfo structure shall contain the following identifier:

```
        id-ecPublicKey OBJECT IDENTIFIER ::= {iso(1) member-body(2)
        us(840) ansi-X9-62(10045) keyType(2) 1 }
```

`id-ecPublicKey` indicates that the algorithms that can be used with the subject Public Key are unrestricted. The key is only restricted by the values indicated in the key usage Certificate extension (explained further under the next **extensions** heading).

The parameter for `id-ecPublicKey` is as follows and shall always be present:

```
    ECParameters ::= CHOICE {
namedCurve          OBJECT IDENTIFIER         -
- implicitCurve   NULL        --
specifiedCurve  SpecifiedECDomain
     }
```

Only the following field in ECParameters shall be used: o

`namedCurve` - identifies all the required values for a particular   set

of elliptic curve domain parameters to be represented by an

`OBJECT IDENTIFIER`.

The object identifier for the curve choice to be used in Certificates is:

```
        secp256r1 OBJECT IDENTIFIER ::= { iso(1) member-body(2) us(840)
        ansi-X9-62(10045) curves(3) prime(1) 7 }
```

The `subjectPublicKey` from `SubjectPublicKeyInfo` is the ECC Public Key.

Implementations of Elliptic Curve Cryptography according to this document shall only support the uncompressed form.

The first octet of the subjectPublicKey indicates whether the key is compressed or uncompressed. The uncompressed form is indicated by 0x04 (the compressed form is indicated by either 0x02 or 0x03). The Public Key MUST be rejected if any value other than 0x04 is included in the first octet.

Signature Algorithm

The signatureAlgorithm field shall indicate the Intermediate SS1SPCA signature algorithm used to sign this Certificate as defined under the next **Signature Method (ECDSA)** heading.

Signature Value

The Intermediate SS1SPCA's signature of the Certificate shall be computed using the Intermediate SS1SPCA's private signing key using the algorithm identified under the next **Signature Method (ECDSA)** heading.

The structure for ECDSA signatures shall be as per RFC 5480.

Cryptographic Primitives for Signature Method

Signature Method (ECDSA)

The ECDSA signature method is defined in NIST FIPS 186-4. When implementing ECDSA, the SHA-256 message digest algorithm and the P-256 elliptic curve as defined in FIPS 186-4 Annex D, D.1.2.3, shall be used.

The signature algorithm shall be ecdsa-with-SHA256 as specified in RFC 5759 and 6318. The algorithm identifier is:

```
ecdsa-with-SHA256 OBJECT IDENTIFIER ::= { iso(1) memberbody(2)
us(840) ansi-X9-62(10045) signatures(4) ecdsa-withsha2(3) 2 }
```

SHA-256 hash algorithm

The hash algorithm used shall be the SHA-256 secure hash algorithm as defined in NIST FIPS 180-4.

12 Annex C: Subscriber Obligations

12.1 Certificate Signing Requests

(A) Each Eligible Subscriber shall ensure that all of the information contained in each Certificate Signing Request made by it conform with the relevant Certificate Profiles as set out in Annex B of this Policy.

(B) No Eligible Subscriber may make a Certificate Signing Request which contains:

(i) any information that constitutes a trade mark, unless it is the holder of the Intellectual Property Rights in relation to that trade mark; or

(ii) any confidential information which would be contained in a Certificate Issued in response to that Certificate Signing Request.

(A) Each Eligible Subscriber shall ensure that the Public Key that is included within a Certificate Signing Request is part of a Key Pair that has been generated using random numbers which are such as to make it computationally infeasible to regenerate that Key Pair even with knowledge of when and by means of what equipment it was generated.

(B) An Eligible Subscriber shall take all reasonable steps to ensure that a Certificate Signing Request for the Issue of a Certificate does not contain the same Public Key as a Public Key which that Eligible Subscriber knows to be contained in any other Certificate.

12.2 Subscribing for or Rejecting Certificates

(A) Where any Certificate is Issued to an Eligible Subscriber in response to a Certificate Signing Request, that Eligible Subscriber shall:

(i) establish whether the information contained in that Certificate is consistent with information that was contained in the Certificate Signing Request;

(ii) if it identifies that the Certificate contains any information which is untrue or inaccurate:

(a) reject that Certificate; and

(b) inform the SS1SPA that it rejects the Certificate; and

(iii) where it does not reject the Certificate, become a Subscriber for that Certificate.

12.3 Use of Certificates and Key Pairs

(A) Each Subscriber shall ensure that it does not use any Certificate, Public Key contained within a Certificate, or Private Key associated with a Public Key contained in a Certificate, that is held by it other than for the purposes set out in Part 1.4.1 of this Policy.

12.4 SS1SPCA Certificates: Expiry of Validity Period

(i) Each Subscriber for a Certificate as set out in Part 3.3.1 (b) of this Policy shall, prior to the expiry of the Validity Period that Certificate for which it is the Subscriber, request a re-key for that Certificate by applying for the Issue of a new Certificate in accordance with the provisions of this Policy.

13 Annex D: Relying Party Obligations

13.1 Relying Parties

(A) For the purposes of this Section Annex D, a ‘Relying Party’ in relation to a Certificate means the Secure S1SP which relies on the Certificate for the purposes as set out in Part 1.4 of this Policy in order to meet its security obligations to its customers as set out in their respective contractual arrangements.

13.2 Duties in relation to Certificates

(A) The Relying Party shall not rely on a Certificate where the Validity Period of that Certificate has expired.

(B) The Relying Party shall not rely on a Certificate where it suspects that the Certificate has been Compromised.

(C) The Relying Party shall take reasonable steps, by means of appropriate Systems, to verify Digital Signatures, Check Cryptographic Protection, Confirm Validity and perform other appropriate cryptographic operations before relying on any Certificate.

14 Annex E: SS1SP PKI RAPP

14.1 Purpose

(A) This Annex E: SS1SP PKI RAPP sets out the high level principle obligations and activities undertaken by the SS1SPCA in its capacity as the SS1SP PKI Registration Authority in accordance with this Policy. The SS1SP RAPP also sets out the activities undertaken by the SS1SP PKI Registration Authority in support of the procedures as set out in this Section.

14.2 SS1SP PKI RAPP Principles

(A) All Certificates requested and Certificates issued under the auspices of the SS1SPCA must be:

(i) compliant with PKCS#10;

(ii) DER encoded

(iii) compliant with the Certificate Profiles as set out in Annex B of this Policy

(iv) compliant with the obligations as set out in Annex C of this Policy.

14.3 SS1SP PKI Registration Authority Roles

(A) The SS1SP PKI RA consists of the following roles:

(i) SS1SPCA Systems technical RA role; and

(ii) SS1SPCA Personnel requesting and approving Certificates for issuance.

(B) The Subordinate SS1SPCA Device CA acts as a technical RA for Certificates requested by Secure SMETS1 Devices only. The SS1SPCA Systems have been authorised to act as technical RAs through a combination of access controls and IP whitelisting. Only valid Secure SMETS1 Devices may request a Certificate. Therefore, acting as an Authorised Subscriber for such SS1SP End Entity Certificates.

(C) Authorised and approved SS1SPCA Personnel are responsible for requesting and issuing all other SS1SPCA End Entity Certificates using SS1SPA Systems. Thereby acting as an Authorised Subscriber.

(D) Only SS1SPCA Personnel with Privileged User rights can request and approve Certificate requests through the SS1SPCA Systems. This is enforced through:

(i) Pre-authorised and pre-approved access to SS1SPCA Systems for such SS1SPCA Personnel;

(ii) Access control to the SS1SPCA Systems;

(iii) User account management (audit and logging);

(iv) Dedicated named accounts on the SS1SPCA System;

(E) Prior to being granted access to SS1SPCA Systems, all such SS1SPCA Personnel with Privileged User rights will either have:

(i) identities checked in line with personnel security standard BS7858;

(ii) background clearance checks performed in accordance with security check (SC) cleared to an appropriate level (in accordance with the latest version of the HMG Cabinet Office Security Policy; and/or

(iii) Screening and background verifications equivalent to BS7858. The personnel and key personnel, based in India, engaged in providing support for Smart metering services and solutions shall comply at all times with a background verification equivalent to personnel security British Standard BS 7858:2012 (Security Screening of Individuals Employed in Security Environment - Code of Practice),

14.4 Eligible and authorised subscribers

(A) Only those systems and SS1SPCA Personnel described in Part 14.3 of this Policy are Authorised to Subscribe for Certificates under the auspices of the SS1SP PKI. At the point of the SS1SP PKI RA approving such systems or SS1SPCA Personnel they become Authorised Subscribers.

(B) An Authorised Subscriber is an Eligible Subscriber in respect to the following:

(i) SS1SPCA Personnel who are Authorised Subscribers are Eligible Subscribers for the following SS1SPCA End Entity Certificates only:

(a) SMSO TLS Certificate;

(b) SMSO KMS Certificate; and

(c) Code Signing Certificate.

(ii) SS1SPA Systems who are Authorised Subscribers are Eligible Subscribers for the following SS1SPCA End Entity Certificate only:

(a) Device Certificate,

14.5 SS1SP PKI Technical RA Verification and Issuance of Certificate

(A) The Subordinate SS1SPCA Device CA performs the following technical RA check in response to a Certificate Signing Request from a Secure SMETS1 Device:

(i) The SS1SPCA Root Certificate is loaded on the Secure SMETS1 Device at point of manufacture;

(ii) The Secure SMETS1 Device generates a Certificate Signing Request using a Private Key generated on the Secure SMETS1 Device within the manufacturing facility;

(iii) The Certificate Signing Request is sent to a production central system (which incorporates the SS1SPCA Device CA) in PKCS#10 file format.

(iv) The production central system verifies the Certificate Signing Request against the production record it holds for each Secure SMETS1 Device (Device serial number and Device model) as well as performing a proof of possession check using the PKCS#10 format.

(v) If the production central system finds a match between its records and the Secure SMETS1 Device serial number and Secure SMETS1 Device model within the CSR, and it is expecting to manufacture such Secure SMETS1 Device, then:

(a) it passes the CSR to the Device CA to process the Certificate Signing Request;

(b) The Device CA then:

(1) signs the SS1SP End Entity Certificate for the Secure SMETS1 Device; and

(2) sends the SS1SP End Entity Certificate along with the SS1SPCA Certificate chain (in PKCS#7 file format) to the Secure SMETS1 Device.

(c) The Secure SMETS1 Device then verifies the SS1SP End Entity Certificate as well as performing Certificate Path Validation check on the SS1SPCA Certificates provided.

(d) If all verification checks are successful, the Secure SMETS1 Device stores the SS1SPCA Certificate chain and its own SS1SP End Entity Certificate in its internal storage.

14.6 SS1SP PKI Personnel RA verification and issuance of certificate

(A) Only authorised SS1SPCA Personnel (in accordance with Part 3.2.3 of the Policy) are granted a Privileged Role allowing them to create Certificate Requests, approve Certificate Requests and Issuing Certificates in accordance with this procedure and in accordance with the Policy:

(i) A service request is raised by the Service Team for issuance of a SS1SP End Entity Certificate as outlined in Part 3.3.1 (B) of the Policy;

(ii) A CSR is generated by SS1SPCA Personnel using the SS1SPCA CSR Generation Tool;

(iii) The SS1SPCA Personnel who generated the CSR then submits the CSR to the SS1SPCA Management Tool;

(iv) The SS1SPCA Management Tool parses the CSR in order to display the content of the CSR (including Subject information);

(v) The SS1SPCA Personnel who submitted the CSR verifies the contents of the CSR output and:

  (a) If successful, confirms the Certificate issuance through the SS1SPCA Management Tool;

  (b) The SS1SPCA Personnel then export the Certificate in PKCS#7 format file from SS1SPCA Management Tool; or

  (c) If unsuccessful, the SS1SPCA Personnel rejects the Certificate and starts the process again from Part 14.6 (A)(i) of this Annex E of the Policy;

(vi) This PKCS#7 file containing the Certificate is loaded back into the SS1SPCA CSR Generation Tool by the SS1SPCA Personnel;

(vii) The SS1SPCA CSR Generation Tool then verifies the PKCS#7 file including the issued SS1SP End Entity Certificate and the SS1SPCA Certificate chain within the PKCS#7 file, and:

  (a) If the PKCS#7 file validates successfully, the SS1SPCA CSR Generation Tool creates a PKCS#12 file ready for download by SS1SPCA Personnel. This file contains both the SS1SP End Entity Private Key associated with Public Key in the SS1SP End Entity Certificate and the complete SS1SPCA Certificate chain;

  (b) The SS1SPCA Personnel download the PKCS#12 file and then load into the appropriate System accordingly; or

  (c) If the PKCS#7 file cannot be validated successfully, the PKCS#7 file is rejected by the SS1SPCA Personnel and the process starts again.

Version 3.0

Appendix AP2

S1SPKI Certificate Policy

FOC S1SPKI Certificate Policy

FOC S1SPKI Certificate Policy

1 INTRODUCTION

The document comprising of this Final Operating Capacity SMETS1 Service Provider Certificate Policy together with its Annexes, shall be known as the “FOC S1SPKI Certificate Policy” (and this document is referred to simply as the “Policy”).

1.1 Overview

(A) This Policy sets out the arrangements of the FOC S1SPKI related to the issuance of the following Certificates:

(i) FOC SISPKI End Entity Certificates; and

(B) FOC S1SPKI CA Certificates. This Policy is structured according to the guidelines provided by IETF RFC 3647, with appropriate extensions, modifications and deletions.

(C) Except where the context otherwise requires, words or expressions used in this Policy shall have the meanings ascribed to them in IETF RFC 5280 where they:

(i) appear in `Courier New font`;

(ii) are accompanied by the descriptor 'field', 'type' or 'extension'; and/or

(iii) take the form of a conjoined string of two or more words, such as '`digitalSignature`'.

Where in this Policy, a system or device is expressed to be a Registration Authority, a FOC S1SPKI CA, an Authorised Subscriber, Subscriber or a Relying Party, this shall be interpreted as meaning that the DCC Service Provider operating the relevant system or device is the Registration Authority, the Certification Authority, Authorised Subscriber, Subscriber or Relying Party (as the case may be). In the case of any SMETS1 Device, the FOC S1SP shall be the Authorised Subscriber and/or Relying Party (as the case may be).

1.2 Document name and identification

(A) This Policy has not been assigned an OID.

1.3 FOC S1SPKI participants

1.3.1 FOC S1SPKI CA

(A) The definition of FOC S1SPKI CA can be found in Annex A.

1.3.2 FOC S1SPKI Registration Authority

(A) The definition of FOC S1SPKI Registration Authority can be found in Annex A.

1.3.3 Subscribers

(A) In accordance with the FOC S1SPKI RAPP as set out in Annex E of this Policy, certain Parties may become Authorised Subscribers.

(B) In accordance with the FOC S1SPKI RAPP as set out in Annex E of this Policy an Authorised Subscriber shall be an Eligible Subscriber in relation to certain Certificates.

(C) The FOC S1SPKI RAPP as set out in Annex E of this Policy sets out the procedure to be followed by an Eligible Subscriber in order to become a Subscriber for one or more Certificates.

(D) Eligible Subscribers are subject to the applicable requirements of the FOC S1SPKI RAPP as set out in Annex E of this Policy and Subscriber Obligations as set out in Annex C this Policy.

(E) The definitions of the following terms are set out in Annex A of this Policy:

(i) Authorised Subscriber;

(ii) Eligible Subscriber;

(iii) Subscriber.

1.3.4 Subjects

(A) The Subject of a FOC S1SPKI End Entity Certificate is represented by an appropriate identifier in the subject field of the FOC S1SPKI End Entity Certificate Profile (as the case may be) in accordance with Annex B.

(B) The Subject of a FOC S1SPKI CA Certificate must be the entity identified by the subject field of the FOC S1SP Operator Root CA Certificate Profile, the Intermediate Enterprise CA Certificate Profile; the Intermediate Operator CA Certificate Profile; the Application Service Root CA Certificate Profile or the Intermediate Application Service PKI CA Certificate Profile (as the case may be) in accordance with Annex B.

(C) The definition of Subject is set out in Annex A.

1.3.5 Relying Parties

(A) In accordance with this Policy, certain Parties may be Relying Parties.

(B) Relying Parties are subject to the applicable requirements of the Relying Party Obligations as set out in Annex D of this Policy.

(C) The definition of Relying Party is set out in Annex A.

1.3.6 Policy Management Authority

(A) The FOC S1SP’s IT Steering Committee (FOC S1SP ITSC) is responsible for fulfilling the duties of the Policy Management Authority in relation to the FOC S1SPKI.

(B) This Policy is subject to periodic review by the SMKI PMA in accordance with the provisions of the SEC.

1.3.7 FOC S1SPKI Repository

(A) The FOC S1SPKI CA will be responsible for providing the FOC S1SPKI Repository in accordance with this Policy.

1.3.8 Certificate usage

(A) The FOC S1SP Intermediate CA shall ensure that FOC S1SP End Entity Certificates are Issued only:

(i) to Eligible Subscribers; and

(ii) for the purposes of:

a) the creation, sending, receipt and processing of communications to and from FOC SMETS1 Devices in accordance with or pursuant to the Smart Energy Code (SEC), which will further include:

1) Symmetric key generation (Digital Signature, Key Agreement);

2) TLS Communication (Digital Signature, Key Agreement, TLS Web Client Authentication, TLS Web Server Authentication); and

3) Authentication and Non-Repudiation (Digital Signature, Non-Repudiation, Key Encipherment, Data Encipherment, Key Agreement, TLS Web Client Authentication, TLS Web Server Authentication).

(B) The FOC S1SPCA shall ensure that FOC S1SPCA Certificates are Issued only to the FOC S1SPCA:

(i) in its capacity as, and for the purposes of exercising the functions of, the FOC S1SP Operator Root Certification Authority (CA);

(ii) in its capacity as, and for the purposes of exercising the functions of, the Intermediate Enterprise CA; and

(iii) in its capacity as, and for the purposes of exercising the functions of, the Intermediate Operator CA.

(C) The Intermediate Application Service PKI CA shall ensure that Application Service End Entity Certificates are Issued only:

(ii) to Eligible Subscribers; and

(iii) for the purpose of secure communications and authenticating users to the Application Service for administration purposes.

(D) The Further provision in relation to the use of Certificates is made in the Subscriber Obligations as set out in Annex C of this Policy and the Relying Party Obligations as set out in Annex D of this Policy.

1.3.9 Prohibited Certificate uses

(A) No party shall use a Certificate other than for the purposes specified in Part 1.3.8 of this policy.

1.4 Policy administration

1.4.1 Organisation administering the document

(A) This Policy is a SEC Subsidiary Document and is administered as such in accordance with the provisions of the Code.

1.4.2 Contact person

(A) Questions in relation to the content of this Policy should be addressed to the Chief Information Security Officer CISO at DCC.

1.4.3 Person determining CPS suitability for the policy

(A) The SMKI PMA determines the suitability of any Certification Practice Statement operating under this Policy.

1.4.4 CPS approval procedures

(A) The FOC S1SPKI CPS is subject to a review by, the SMKI PMA in accordance with the provisions of the SEC.

(B) The DCC shall keep the FOC S1SPKI CPS under review and shall in particular carry out a review of the FOC S1SPKI CPS whenever (and to the extent to which) it may be required to do so in line with its duties as set out in the SEC.

(C) Following any review of the FOC S1SPKI CPS:

(i) the FOC S1SP may propose amendments to it, which it shall submit to the SMKI PMA for its review; and

(ii) those amendments may be made only to the extent to which the SMKI Policy Management Authority has approved or not rejected them.

1.4.5 Registration Authority Policies and Procedures

(A) The FOC S1SPKI Registration Authority Policies and Procedures (the FOC S1SPKI RAPP) are set out in Annex E of this Policy.

1.5 Definitions and acronyms

(A) Definitions of the expressions used in this Policy are set out in Section A of the Code (Definitions and Interpretation) and Annex A of this Policy.

(B) Any acronyms used for the purposes of this Policy are set out in Section A of the Code (Definitions and Interpretation) and Annex A of this Policy.

2 PUBLICATION AND REPOSITORY RESPONSIBILITIES

2.1 FOC S1SPKI Repositories

(A) The FOC S1SPKI Operator Root CA and the FOC S1SPKI Intermediate CAs each have their own separate FOC S1SPKI Repository.

(B) The FOC S1SPKI Repository associated with the FOC S1SPKI Operator Root CA stores the following information:

(i) All copies of Issued FOC S1SPKI Operator Root CA Certificates

(ii) Certificate status and validity meta-data for each FOC S1SPCA Certificate

(C) The FOC S1SPKI Repository associated with the FOC S1SPKI Intermediate CAs shall store the following information:

(i) All copies of FOC S1SP End Entity Certificates Issued by the FOC S1SPKI Intermediate CAs.

(ii) Certificate status and validity meta-data for each FOC S1SP End Entity Certificate Issued by the FOC S1SPKI Intermediate CAs.

(iii) The latest version of the FOC S1SPKI CRL for the FOC S1SPKI Intermediate CAs.

(iv) All copies of Issued FOC S1SP CA Certificates.

(D) The FOC S1SPKI Repository associated with each of the individual Application Service Root CAs shall store the following information:

(i) All copies of the Application Service Root CA Certificate self-signed by that Application Service Root CA

(ii) All copies of Intermediate Application Service PKI CA Certificates Issued by that Application Service Root CA

(iii) All copies of Application Service End Entity Certificates Issued by the Intermediate Application Service PKI CA referred to in ii) above;

(iv) Certificate status and validity meta-data for each of the Application Service End Entity Certificates stored in that repository.

2.2 Publication of certification information

(A) See part 2.1 of this Policy.

2.3 Time or frequency of publication

(A) The FOC S1SPKI CA shall ensure that:

(i) each FOC S1SPKI End Entity Certificate is promptly accepted by a Subscriber when issued;

(ii) each FOC S1SPKICA Certificate is lodged in the applicable FOC S1SPKI Repository promptly on being Issued;

(iii) the FOC S1SPKI ARL is lodged in the FOC S1SPKI Repository, and a revised version of the FOC S1SPKI ARL is lodged in the FOC S1SPKI Repository within such time as is specified in Part 4.9.6 of this Policy; and

(iv) the FOC S1SPKI CRL is lodged in the FOC S1SPKI Repository, and a revised version of the FOC S1SPKI CRL is lodged in the FOC S1SPKI Repository within such time as is specified in Part 4.9.6 of this Policy.

(B) The Applications Service CA shall ensure that:

(i) each Application Service End Entity Certificate is promptly accepted by a Subscriber when issued;

(ii) each Application Service CA Certificate is lodged in the applicable Application Service Repository promptly on being Issued;

(iii) the FOC S1SPKI ARL is lodged in the FOC S1SPKI Repository, and a revised version of the FOC S1SPKI ARL is lodged in the FOC S1SPKI Repository within such time as is specified in Part 4.9.6 of this Policy; and

(iv) the FOC S1SPKI CRL is lodged in the FOC S1SPKI Repository, and a revised version of the FOC S1SPKI CRL is lodged in the FOC S1SPKI Repository within such time as is specified in Part 4.9.6 of this Policy.

(C) No ARLs exist for the Application Service.

2.4 Access controls on FOC S1SPKI Repositories

(A) All FOC S1SPKI Repositories and Application Service Repositories are subject to access controls using username and passwords. Only authorised FOC S1SPKI Systems and FOC S1SP Personnel have access to FOC S1SPKI Repositories and Application Service Repositories.

3 IDENTIFICATION AND AUTHENTICATION

3.1 Naming

3.1.1 Types of names

(A) The FOC S1SPKI CA shall ensure that the name of the entity that is the Subject of each Certificate is in accordance with the relevant Certificate Profile at Annex B.

3.1.2 Need for names to be meaningful

(A) The FOC S1SPKI CA shall ensure that the name of the Subject of each Certificate is meaningful and consistent with the relevant Certificate Profile in Annex B.

3.1.3 Anonymity or pseudonymity of subscribers

(A) The anonymity or pseudonymity of Subscribers is not supported under this Policy.

3.1.4 Rules for interpreting various name forms

(A) Provision in relation to name forms is made in Annex B.

3.1.5 Uniqueness of names

(A) Provision in relation to the uniqueness of names is made in Annex B.

3.1.6 Recognition, Authentication, and role of trademarks

(A) No Eligible Subscriber may make a Certificate Signing Request which contains:

(i) any information that constitutes a trademark, unless it is the holder of the Intellectual Property Rights in relation to that trademark; or

(ii) any confidential information which would be contained in a Certificate Issued in response to that Certificate Signing Request.

3.2 Initial identity validation

3.2.1 Method to prove possession of Private Key

(A) Provision is made in the FOC S1SPKI RAPP as set out in Annex E of this policy in relation to:

(i) the procedure to be followed by an Eligible Subscriber in order to prove its possession of the Private Key which is associated with the Public Key to be contained in any Certificate that is the subject of a Certificate Signing Request; and

(ii) the procedure established for this purpose is in accordance with the procedure in PKCS#10 or an equivalent cryptographic mechanism.

3.2.2 Authentication of organisation identity

(A) Only Eligible Subscribers are allowed to subscribe for Certificates under this Policy.

3.2.3 Authentication of individual identity

(A) Provision is made in the FOC S1SPKI RAPP in relation to the Authentication of

(B) persons engaged by the FOC S1SP, which provides for all such persons to have their identity and authorisation verified to ISO27001 standards or to such equivalent level within a comparable authentication framework as may be agreed by the FOC S1SP ITSC.

3.2.4 Non-verified subscriber information

(A) The FOC S1SPKICA shall verify all information in relation to Certificates Issued.

(B) Further provision on the content of a Certificate is made in Subscriber Obligations as set out in Annex C of this Policy.

3.2.5 Validation of authority

(A) See part 3.2.2 of this Policy.

3.2.6 Criteria for interoperation

[*Not applicable in this Policy*]

3.3 Identification and Authentication for re-key requests

3.3.1 Identification and Authentication for routine re-key

(A) This Policy does not support Certificate Re-Key.

(B) The FOC S1SPKI CA shall not provide a Certificate Re-Key service.

3.3.2 Identification and Authentication for re-key after revocation

[Not applicable in this policy]

3.4 Identification and Authentication for revocation request

(A) Provision is made in the Annex E of this Policy in relation to procedures designed to ensure the Authentication of FOC S1SPKI RA Personnel who submit a Certificate Revocation Request and verify that they are authorised to submit that request.

(B) Only FOC S1SPKI RA Personnel can revoke a Certificate in accordance with Annex E of this Policy.

4 CERTIFICATE LIFE-CYCLE OPERATIONAL REQUIREMENTS

4.1 Certificate Application

4.1.1 Submission of Certificate Applications

(A) Provision is made in the FOC S1SPKI RAPP as set out in Annex E of this Policy in relation to:

(i) in respect of a FOC S1SPKI End Entity Certificate:

(a) the circumstances in which an Eligible Subscriber may submit a Certificate Signing Request; and

(b) the means by which it may do so, including through the use of an authorised System; and

(ii) in respect of a FOC S1SPKI CA Certificate, the procedure to be followed by an Eligible Subscriber in order to obtain a FOC S1SPCA Certificate.

4.1.2 Enrolment Process and Responsibilities

(A) Provision is made where applicable in the FOC S1SPKI RAPP as set out in Annex E of this Policy in relation to the:

(i) establishment of an enrolment process in respect of organisations, individuals, Systems and SMETS1 Devices in order to Authenticate them and verify that they are authorised to act on behalf of an Eligible Subscriber or Authorised Subscriber in its capacity as such; and

(ii) maintenance by the FOC S1SPKI CA of a list of organisations, individuals, Systems and SMETS1 Devices enrolled in accordance with that process.

4.1.3 Enrolment Process for the Registration Authorities and its Representatives

(A) Provision is made in the FOC S1SPKI RAPP as set out in Annex E of this Policy in relation to the establishment of an enrolment process in respect of FOC S1SP Personnel, FOC S1SPKI Systems and FOC S1SPKI RA Personnel:

(i) in order to Authenticate them and verify that they are authorised to act on behalf of the FOC S1SP in its capacity as the FOC S1SPKI Registration Authority; and

(ii) including in particular, for that purpose, provision:

(a) for Authentication of all FOC S1SPKI RA Personnel by a FOC S1SPKI Registration Authority Manager; and

(b) for all FOC S1SPKI Registration Authority Personnel to have their identify and authorisation verified against a robust assured authentication framework as agreed by the FOC S1SP ITSC. See section 6.3.2 of this Certificate Policy for further information.

4.2 Certificate application processing

4.2.1 Performing identification and Authentication functions

(A) Provision is made in the FOC S1SPKI RAPP in relation to the Authentication by the FOC S1SPKI CA of Eligible Subscribers which submit a Certificate Signing Request.

4.2.2 Approval or rejection of Certificate applications

(A) Where any Certificate Signing Request fails to satisfy the requirements set out in the FOC S1SPKI RAPP as set out in Annex E of this Policy or this Policy, the FOC S1SPKI CA:

(i) shall reject it and refuse to Issue the Certificate which was the subject of the Certificate Signing Request; and

(ii) may give notice to the Party which made the Certificate Signing Request of the reasons for its rejection.

(B) Where any Certificate Signing Request satisfies the requirements set out in the FOC S1SPKI RAPP as set out in Annex E of this Policy or any other provision of this Policy, the FOC S1SPKI CA shall Issue the Certificate which was the subject of the Certificate Signing Request.

(C) This does not apply in circumstances where a Certificate is issued by a System to another System or device.

4.2.3 Time to process Certificate applications

(A) All Certificate Signing Requests will be processed promptly upon receipt.

(B) Upon receipt and successful validation of a Certificate Signing Request by the FOC S1SPKI CA, the FOC S1SPKI CA will promptly Issue a Certificate in response.

4.3 Certificate issuance

4.3.1 FOC S1SPCA Actions during Certificate Issuance

(A) The FOC S1SPKI CA may Issue a Certificate only:

(i) in accordance with the provisions of this Policy and the FOC S1SPKI RAPP as set out in Annex E of this Policy; and

(ii) in response to a Certificate Signing Request made by an Eligible Subscriber in accordance with the FOC S1SPKI RAPP as set out in Annex E of this Policy.

(B) The FOC S1SPKI CA shall ensure that:

(i) each FOC S1SPKI CA Certificate Issued by it contains information that it has verified to be correct and complete; and

(ii) each FOC S1SPKI End Entity Certificate Issued by it contains information consistent with the information in the Certificate Signing Request.

(C) A FOC S1SPCA Certificate may only be:

(i) Issued by the FOC S1SPCA; and

(ii) for that purpose, self-signed using the Operator Root CA Private Key for the Operator Root CA Certificate and signed using the Operator Root CA Private Key for a FOC S1SP Intermediate CA Certificate.

(D) A FOC S1SP End Entity Certificate may only be:

(i) Issued by an FOC S1SP Intermediate CA; and

(ii) for that purpose, signed using a FOC S1SP Intermediate CA Private Key.

(E) The FOC S1SPCA shall not Issue:

(i) an FOC S1SP Intermediate CA Certificate using an Operator Root CA Private Key after the expiry of the Validity Period of an Operator Root CA Certificate containing the Public Key associated with that Private Key;

(ii) an FOC S1SP End Entity Certificate using an FOC S1SP Intermediate CA Private Key after the expiry of the Validity Period of an FOC S1SP Intermediate CA Certificate containing the Public Key associated with that Private Key; or

(iii) any Certificate containing a Public Key where it is aware that the Public Key is the same as the Public Key contained in any other Certificate that was previously Issued by it.

(F) An Application Service CA Certificate may only be:

(i) Issued by the Application Service CA; and

(ii) for that purpose, self-signed using the Application Service Root CA Private Key for an Application Service Root CA Certificate and signed using the Application Service Root CA Private Key for an Intermediate Application Service PKI Certificate.

(G) An Application Service End Entity Certificate may only be:

(i) Issued by an Intermediate Application Service CA; and

(ii) for that purpose, signed using an Application Service Intermediate PKI CA Private Key.

(H) The Application Service CA shall not Issue:

(i) an Intermediate Application Service PKI CA Certificate using an Application Service Root CA Private Key after the expiry of the Validity Period of an Applications Service Root CA Certificate containing the Public Key associated with that Private Key;

(ii) an Application Service End Entity Certificate using an Intermediate Application Service PKI CA Private Key after the expiry of the Validity Period of an Application Service Intermediate PKI CA Certificate containing the Public Key associated with that Private Key; or

(iii) any Certificate containing a Public Key where it is aware that the Public Key is the same as the Public Key contained in any other Certificate that was previously Issued by it.

4.3.2 Notification to subscriber by the CA of issuance of Certificate

(A) Provision is made in the FOC S1SPKI RAPP as set out in Annex E of this Policy for the FOC S1SP CA to notify an Eligible Subscriber where that Eligible Subscriber is issued with a Certificate which was the subject of a Certificate Signing Request made by it.

(B) This does not apply in circumstances where a Certificate is issued by a System to another System or device.

4.4 Certificate Acceptance

4.4.1 Conduct constituting Certificate acceptance

(A) A Certificate which has been Issued by the FOC S1SPKI CA shall be treated as valid for any purposes of this Policy or the Code until it is revoked.

(B) The FOC S1SPKI CA shall maintain a record of all Certificates which have been Issued by it and are treated as accepted by a Subscriber.

4.4.2 Publication of the Certificate by the CA

(A) Provision in relation to publication of Certificates is made in Part 2 of this Policy.

4.4.3 Notification of Certificate issuance by the CA to other entities

(A) Not applicable in this Policy.

4.5 Key Pair and Certificate Usage

4.5.1 Subscriber Private Key and Certificate Usage

(A) Provision for restrictions on the use by Subscribers of Private Keys in respect of Certificates is made in this Policy.

4.5.2 Relying Party Public Key and Certificate usage

(A) Relying Party obligations are set out in Annex D of this Policy.

4.6 Certificate Renewal

4.6.1 Circumstance for Certificate Renewal

(A) This policy does not support the renewal of Certificates.

(B) The FOC S1SPKI CA may only replace and shall not renew any Certificate.

4.6.2 Who may request replacement

(A) Certificate replacement is an automated process and does not require manual intervention. The business process defines the rotation schedule of the certificate Processing Certificate replacement requests.

(B) Certificate Replacement operates under the governance of the Head End System. In its capacity as the Registration Authority it determines whether a Certificate needs to be issued and manages the creation of the CSR.

4.6.3 Notification of new Certificate issuance to subscriber

Not applicable to this Policy.

4.6.4 Conduct constituting acceptance of a replacement Certificate

Not applicable to this Policy.

4.6.5 Publication of the replacement Certificate by the CA

Not applicable to this Policy.

4.6.6 Notification of Certificate issuance by the CA to other entities

Not applicable to this Policy.

4.7 Certificate re-key

4.7.1 Circumstance for Certificate re-key

(A) This Policy does not support Certificate Re-Key.

4.7.2 Who may request certification of a new public key

Not applicable to this policy.

4.7.3 Processing Certificate re-keying requests

Not applicable to this policy.

4.7.4 Notification of new Certificate issuance to subscriber

Not applicable to this policy.

4.7.5 Conduct constituting acceptance of a re-keyed Certificate

Not applicable to this policy.

4.7.6 Publication of the re-keyed Certificate by the CA

Not applicable to this policy.

4.7.7 Notification of Certificate issuance by the CA to other entities

Not applicable to this policy.

4.8 Certificate modification

4.8.1 Circumstance for Certificate modification

(A) This policy does not support Certificate modification.

4.8.2 Who may request Certificate modification

Not applicable to this policy.

4.8.3 Processing Certificate modification requests

Not applicable to this policy.

4.8.4 Notification of new Certificate issuance to subscriber

Not applicable to this policy.

4.8.5 Conduct constituting acceptance of modified Certificate

Not applicable to this policy.

4.8.6 Publication of the modified Certificate by the CA

Not applicable to this policy.

4.8.7 Notification of Certificate issuance by the CA to other entities

Not applicable to this policy.

4.9 Certificate Revocation and Suspension

(A) This Policy does not support Certificate suspension.

(B) Certificate status information services shall identify all revoked Certificates; at least until their assigned validity period expires. A reporting API describes the status of a Certificate at a CRL Distribution Point (CDP) and can be queried by a Privileged User.

4.9.1 Circumstances for Revocation

(A) A Subscriber shall ensure that it submits a Certificate Revocation Request in relation to a Certificate in accordance with Annex E of this policy where:

- (i) immediately upon becoming aware that the Certificate has been Compromised, or is suspected of having been Compromised; or
- (ii) immediately upon ceasing to be an Eligible Subscriber in respect of that Certificate

(B) A Certificate must be Revoked:

(i) When any of the information in the Certificate is known or suspected to be inaccurate.

(ii) Upon suspected or known compromise of the Private Key associated with the Certificate.

(iii) Upon suspected or known compromise of the media holding the Private Key associated with the Certificate.

(C) The FOC S1SPKI CA, or FOC S1SPKI RA acting on their behalf may Revoke a Certificate when an entity fails to comply with any obligations set out in this Policy.

(D) Handshake information describing the exchange of information for revocation purposes can be obtained in section 2.3 'Operator Device Certificate Update' of the DCCA-0045-VN.N-SDD Trilliant S1SP WAN communication Security' documentation.

4.9.2 Who can request revocation

(A) Any Subscriber may submit a Certificate Revocation Request in relation to a Certificate for which it is the Authorised Subscriber and shall on doing so by specifying its reason for submitting the Certificate Revocation Request (which shall be a reason consistent with Part 4.9.1 of this Policy).

4.9.3 Procedure for revocation request

(A) Provision is made in the FOC S1SPKI RAPP in relation to the procedure for submitting and processing a Certificate Revocation Request.

(B) On receiving a Certificate Revocation Request, the FOC S1SPKI CA shall take reasonable steps to:

(i) Authenticate the Subscriber making that request;

(ii) Authenticate the Certificate to which the request relates; and

(iii) confirm that a reason for the request has been specified in accordance with Part 4.9.2 of this Policy.

(C) The FOC S1SPKI CA shall inform the Subscriber for a Certificate where that Certificate has been revoked.

4.9.4 Revocation request grace period

(A) None. If the Revocation request is actioned, it must reflect in the next scheduled publication of the CRL.

4.9.5 Time within which CA must process the revocation request

(A) The FOC S1SPKI CA shall ensure that it processes all Certificate Revocation Requests promptly, and in any event in accordance with such time as is specified in the FOC S1SPKI RAPP.

(B) The mechanisms, if any, that a Relying Party may use in order to check the Certificate Status Information of the Certificate upon which they wish to rely, must be via Certificate Revocation Lists or equivalent on-line protocol that permits authenticity and integrity of the Status Information to be verified

4.9.6 CRL issuance frequency (if applicable)

(A) The FOC S1SPKI CA shall ensure that an up to date version of the FOC S1SPKI ARL is lodged in the FOC S1SPKI Repository:

(i) at least once in every period of twelve months; and

(ii) promptly on the revocation of an FOC S1SPCA Certificate.

(B) Each version of the FOC S1SPKI ARL shall be valid until the date which is up to 13 months after the date on which that version of the FOC S1SPKI ARL is lodged in the FOC S1SPKI Repository.

(C) Further provision in relation to the reliance that may be placed on the FOC S1SPKI ARL (and on versions of it) is set out in Annex D (Relying Party Agreement) of this Policy.

(D) The FOC S1SPCA shall ensure that an up to date version of the FOC S1SPKI CRL is lodged in the relevant FOC S1SPKI Repository at least once in every period of 48 hours.

(E) Each version of the FOC S1SPKI CRL shall be valid until 48 hours from the time at which it is lodged in the FOC S1SPKI Repository.

(F) Further provision in relation to the reliance that may be placed on the FOC S1SPKI CRL (and on versions of it) is set out in Annex D (Relying Party Agreement) of this Policy.

(G) The FOC S1SPCA shall ensure that each up to date version of the FOC S1SPKI ARL and FOC S1SPKI CRL:

  (i) continues to include each relevant revoked Certificate until such time as the Validity Period of that Certificate has expired; and
  (ii) does not include any revoked Certificate after the Validity Period of that Certificate has expired.

(H) The FOC S1SPCA shall ensure that the FOC S1SPKI CRL contains a non-critical entry extension which identifies the reason for the revocation of each Certificate listed on it in accordance with RFC 5280 (section 5.3.1).

(I) The FOC S1SPCA shall retain a copy of the information contained in all versions of the FOC S1SPKI CRL and FOC S1SPKI ARL, together with the dates and times between which each such version was valid. This information shall be made available as soon as is reasonably practicable, on receipt of a request, to the DCC, the FOC ,FOC S1SP ITSC any Subscriber or any Relying Party.

(J) No ARL or CRL is issued in relation to the Internal Application Service CA.

4.9.7 Maximum latency for CRLs (if applicable)

(A) See part 4.9.6 of this Policy

4.9.8 On-line revocation/status checking availability

(A) The availability of Certificate Status checking shall be published though a CRL Distribution Points (CDP).

4.9.9 On-line revocation checking requirements

(A) See section 4.9.8 above

4.9.10 Other forms of revocation advertisements available

[*Not applicable in this Policy*]

4.9.11 Special requirements in the event of key compromise

(A) Where any Private Key is Compromised, then the FOC S1SP shall:

  (i) immediately notify the SMKI PMA;
  (ii) provide the SMKI PMA with all of the information known to it in relation to the nature and circumstances in the event of Compromise or suspected Compromise; and
    (a) where the Compromise or suspected Compromise relates to any Private Key;
  (iii) ensure that the Private Key is no longer used;
  (iv) promptly notify each of the Authorised Subscribers for any Certificates Issued using that Private Key.

4.9.12 Circumstances for suspension

4.9.13 Who can request suspension

[*Not applicable in this Policy*]

4.9.14 Procedure for suspension request

[Not applicable in this Policy]

4.9.15 Limits on suspension period

[Not applicable in this Policy]

4.10 Certificate status services

4.10.1 Operational characteristics

(A) The types of Certificate status checking services made available to the Authorised Subscriber is by a service endpoint. This service endpoint is available to the Authorised Subscriber as an application interface which is presented by the PKI software.

4.10.2 Service availability

(A) See part 4.9.6 of this Policy.

4.11 End of subscription

[Not applicable in this Policy].

4.12 Key escrow and recovery

4.12.1 Key escrow and recovery policy and practices

(A) This Policy does not cover Key Escrow services.
(B) The FOC S1SPKI CA shall not provide any Key Escrow services.
(C) The FOC S1SPKI recovery policies and practices are documented in the FOC S1SPKI CPS

4.12.2 Session key encapsulation and recovery policy and practices

[Not applicable in this Policy]

5 FACILITY, MANAGEMENT, AND OPERATIONAL CONTROLS

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates detailed provision in relation to the facility, management, and operational controls to be established and operated for the purposes of the exercise of its functions as the FOC S1SPKI CA.

5.1 Physical controls

5.1.1 Site location and construction

(A) The FOC S1SP shall ensure that all Data Centres must be located in List X Site accredited sites and must be ISO27001 certified.

(B) The FOC S1SP shall ensure that the FOC S1SPKI Systems are operated in a sufficiently secure environment, which shall at least satisfy the requirements set out at Section G2 (System Security: Obligations on the DCC) and Section G5 (Information Security: Obligations on the DCC and Users) of the Code.

(C) The FOC S1SP shall ensure that:

- (i) all of the physical locations in which the FOC S1SPKI Systems are situated, operated, routed or directly accessed are in the United Kingdom;
- (ii) all bespoke Security Related Functionality is developed, specified, designed, built and tested only within the United Kingdom; and
- (iii) all Security Related Functionality is integrated, configured, tested in situ, implemented, operated and maintained only within the United Kingdom.

(D) The FOC S1SP shall ensure that the FOC S1SPKI Systems cannot be indirectly accessed from any location outside the United Kingdom.

(E) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions designed to ensure that all physical locations in which the manufacture of Certificates and Time-Stamping take place are at all times manually or electronically monitored for unauthorised intrusion in accordance with:

- (i) SMKI PMA and SSC Guidance (Standards, Procedures and Guidelines) on Protective Monitoring; or
- (ii) any equivalent to the SMKI PMA and SSC Guidance (Standards, Procedures and Guidelines) on Protective Monitoring which updates or replaces it from time to time.

(F) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions designed to ensure that all PINs, passphrases and passwords used for the purposes of carrying out the functions of the FOC S1SPCA are stored in secure containers accessible only to appropriately authorised individuals.

(G) The FOC S1SP shall ensure that the FOC S1SPKI Systems are Separated from any other DCC Systems provided that the FOC S1SPCA systems does not need to be Separated from the Application Service CA Systems

5.1.2 Physical access

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions in relation to access control, including in particular provisions designed to:

- (i) establish controls such that only appropriately authorised personnel may have unescorted physical access to FOC S1SPKI Systems, or any System used for the purposes of Timestamping, Certificate generation, or Certificate life-cycle management;
- (ii) ensure that any unauthorised personnel may have physical access to such Systems only if appropriately authorised and supervised;
- (iii) ensure that a site access log is both maintained and periodically inspected for all locations at which such Systems are sited; and
- (iv) ensure that all removable media which contain sensitive plain text Data and are kept at such locations are stored in secure containers accessible only to appropriately authorised individuals.

5.1.3 Power and air conditioning

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions in relation to power and air conditioning at all physical locations in which the FOC S1SPKI Systems are situated.

5.1.4 Water exposures

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions in relation to water exposure at all physical locations in which the FOC S1SPKI Systems are situated.

5.1.5 Fire prevention and protection

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions in relation to fire prevention and protection at all physical locations in which the FOC S1SPKI Systems are situated.

5.1.6 Media storage

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions designed to ensure that appropriate controls are placed on all media used for the storage of Data held by it for the purposes of carrying out its functions as the FOC S1SPKI CA.

5.1.7 Waste disposal

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions designing to ensure all media used to store Data held by it for the purposes of carrying out its functions as the FOC S1SPKI CA are disposed of only using secure methods. Where such methods such be based on:

(i) Information Assurance Standard No. 5:2011 (Secure Sanitisation);

(ii) any equivalent to that Information Assurance Standard which updates or replaces it from time to time; or

(iii) any equivalent standard or secure method approved by the FOC S1SP ITSC.

5.1.8 Off-Site Back-Up

(A) The FOC S1SP shall ensure that Capgemini and DXC shall regularly carry out a Back-Up of:

(i) all Data held on the S1SPKI Systems which are critical to the operation of those Systems or continuity in the provision of the S1SPKI Services; and

(ii) all other sensitive Data.

(B) The FOC S1SP shall ensure that Capgemini and DXC ensure that Data which are Backed-Up in accordance with paragraph (A):

(i) are stored on media that are located in physically secure facilities in different locations to the sites at which the Data being Backed-Up are ordinarily held;

(ii) are protected in accordance with the outcome of a risk assessment, including when being transmitted for the purposes of Back-Up; and

(iii) to the extent to which they comprise S1SPKI Private Key Material, are

(iv) Backed Up to appropriate Security Containers which are stored off-line in encrypted format.

(C) The FOC S1SP shall ensure that Capgemini and DXC ensure that, where any elements of the S1SPKI Systems, any Data held for the purposes of providing the SS1SP PKI Services, or any items of Capgemini and DXC equipment are removed from their primary location, they continue to be protected in accordance with the security standard appropriate to the primary location.

(D) DCC will ensure that the S1SPKI CPS incorporates provisions in relation to paragraphs (A), (B) and (C) above.

5.2 Procedural Controls

5.2.1 Trusted Roles

(A) The FOC S1SP shall ensure that:

(i) no individual may carry out any activity which involves access to resources, or Data held on, the FOC S1SPKI Systems unless that individual has been expressly authorised to have such access;

(ii) each member of FOC S1SPKI Personnel and FOC S1SPKI RA Personnel has a clearly defined level of access to the FOC S1SPKI Systems and the premises in which they are located;

(iii) no individual member of FOC S1SPKI Personnel or FOC S1SPKI RA Personnel is capable, by acting alone, of engaging in any action by means of which the FOC S1SPKI Systems may be Compromised to a material extent; and

(iv) the FOC S1SPKI CPS incorporates provisions designed to ensure that appropriate controls are in place for the purposes of compliance by the FOC S1SPKI CA with the requirements of this Part 5.2.1 of this Policy.

5.2.2 Number of persons required per task

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions designed to establish:

(i) the appropriate separation of roles between the different members of FOC S1SPKI Personnel, FOC S1SPKI RA Personnel; and

(ii) the application of controls to the actions of all members of FOC S1SPKI Personnel or FOC S1SPKI RA Personnel who are Privileged Users, in particular:

(a) identifying any controls designed to ensure that the involvement of more than one individual is required for the performance of certain functions; and

(b) providing that the revocation of any Certificate is one such function.

(B) The FOC S1SP shall ensure that the FOC S1SPKI CPS, as a minimum, makes provision for the purposes of paragraph (A) in relation to the following areas:

(i) S1SPKI Systems administration;

(ii) S1SPKI Systems operations;

(iii) S1SPKI Systems security; and

(iv) S1SPKI Systems auditing.

5.2.3 Identification and Authentication for each role

(A) See Part 5.2.2 of this Policy.

5.2.4 Roles requiring separation of duties

(A) See Part 5.2.2 of this Policy.

5.3 Personnel controls

5.3.1 Qualifications, experience, and clearance requirements

(A) The FOC S1SP shall ensure that all FOC S1SPKI Personnel and FOC S1SPKI RA Personnel must:

(i) be appointed to their roles in writing;

(ii) be bound by contract to the terms and conditions relevant to their roles;

(iii) have received appropriate training with respect to their duties;

(iv) be bound by contract not to disclose any confidential, sensitive, personal or security-related Data except to the extent necessary for the performance of their duties or for the purposes of complying with any requirement of law; and

(v) in so far as can reasonably be ascertained by the FOC S1SP, not have been previously relieved of any past assignment (whether for the FOC S1SP or any other person) on the grounds of negligence or any other failure to perform a duty.

(B) The FOC S1SP shall ensure that all FOC S1SPKI Personnel and FOC S1SPKI RA Personnel have, as a minimum, passed an industry recognised and assured security check before commencing their roles.

(C) For Privileged Users, these assured security checks may include additional checks.

(D) The FOC S1SP shall ensure that the FOC S1SPKI CPS, as a minimum, makes provision for the purposes of paragraph (B) and (C) above.

5.3.2 Background check procedures

(A) See Part 5.3.1 of this Policy.

5.3.3 Training requirements

(A) See Part 5.3.1 of this Policy.

5.3.4 Retraining frequency and requirements

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates appropriate provisions relating to the frequency and content of retraining and refresher training to be undertaken by members of FOC S1SPKI Personnel and FOC S1SPKI RA Personnel.

5.3.5 Job rotation frequency and sequence

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates appropriate provisions relating to the frequency and sequence of job rotations to be undertaken by members of FOC S1SPKI Personnel and FOC S1SPKI RA Personnel.

5.3.6 Sanctions for unauthorized actions

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates appropriate provisions relating to sanctions for unauthorised actions undertaken by members of FOC S1SPKI Personnel and FOC S1SPKI RA Personnel.

5.3.7 Independent contractor requirements

(A) In accordance with the provisions of the Code and this Policy, references to the FOC S1SP in this Policy include references to persons with whom the FOC S1SP contracts in order to secure performance of its obligations as the FOC S1SP.

5.3.8 Documentation supplied to personnel

(A) The FOC S1SP shall ensure that all FOC S1SPKI Personnel and FOC S1SPKI RA Personnel are provided with access to all documents relevant to their roles or necessary for the performance of their duties, including in particular:

(i) this Policy;
(ii) the FOC S1SPKI CPS; and
(iii) any supporting documentation, statutes, policies or contracts.

5.4 Audit logging procedures

5.4.1 Types of events recorded

(A) The FOC S1SP shall ensure that:

(i) the FOC S1SPKI Systems record all activity in an audit log;
(ii) the FOC S1SPKI CPS incorporates a comprehensive list of all events that are to be recorded in an audit log in relation to:
  (a) the activities of FOC S1SPKI Personnel and FOC S1SPKI RA Personnel;
  (b) the use of FOC S1SPKI equipment;
  (c) the use of (including both authorised and unauthorised access, and attempted access to) any premises at which functions of the FOC S1SPCA are carried out;
  (d) communications and activities that are related to the Issue of Certificates (in so far as not captured by the FOC S1SPKI Systems audit log); and
(iii) it records in an audit log all the events specified in paragraph (ii).

5.4.2 Frequency of processing log

(A) The FOC S1SP shall ensure that:

(i) the audit logging functionality in the FOC S1SPKI Systems is fully enabled at all times;
(ii) all FOC S1SPKI Systems activity recorded in the Audit Log is recorded in a standard format that is compliant with:

(a) British Standard BS 10008:2008 (Evidential Weight and Legal Admissibility of Electronic Information);

(iii) any equivalent to that British Standard which updates or replaces it from time to time; or

(iv) an equivalent standard format that is commensurate with the standard in (i) and has been approved by the FOC S1SP ITSC.

(B) It monitors the FOC S1SPKI Systems in compliance with:

(i) SMKI PMA Guidance on Protective Monitoring;

(ii) any equivalent to that SMKI PMA Guidance on Protective Monitoring which updates or replaces it from time to time; or

(iii) equivalent guidance that is commensurate with the guidance in (i) and which has been approved by the FOC S1SP ITSC.

(C) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions which specify:

(i) how regularly information recorded in the Audit Log is to be reviewed; and

(ii) what actions are to be taken by it in response to types of events recorded in the Audit Log.

(D) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions in relation to access to the Audit Log, providing in particular that:

(i) Data contained in the Audit Log must not be accessible other than on a read-only basis; and

(ii) access to those Data must be limited to those members of FOC S1SPKI Personnel or FOC S1SPKI RA Personnel who are performing a dedicated system audit role.

5.4.3 Retention period for audit log

(A) The FOC S1SP shall:

(i) Ensure that the FOC S1SPKI Systems retain their Audit Log so that it incorporates, on any given date, a record of all system events occurring during a period of at least twelve months prior to that date; and

(ii) ensure that a copy of the Audit Log incorporating a record of all system events occurring prior to the beginning of that period is archived in accordance with the requirements of Part 5.5 of this Policy.

5.4.4 Protection of audit log

(A) The SS1SPCA shall ensure that the FOC S1SPKI CPS incorporates appropriate provisions relating to:

(i) the extent to which the Audit Log is retained electronically, the Data stored in it cannot be accessed other than on a read-only basis, and are protected from unauthorised viewing, modification and deletion in accordance with:

(a) British Standard BS 10008:2008 (Evidential Weight and Legal Admissibility of Electronic Information);

(b) any equivalent to that British Standard which updates or replaces it from time to time; or

(c) an equivalent standard format that is commensurate with the standard in (i) and has been approved by the FOC S1SP ITSC; and

(ii) the extent to which the Audit Log is retained in non-electronic form, the Data stored in it are appropriately protected from unauthorised viewing, modification and destruction in order to ensure that their integrity is maintained for evidential purposes.

5.4.5 Audit log backup procedures

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions in relation to its system for Audit Log backup procedures. This should include, as a minimum, provisions for:

(i) Data contained in the Audit Log to be backed up (or, to the extent that the Audit Log is retained in non-electronic form, are copied):

(a) on a daily basis; or

(b) if activity has taken place on the FOC S1SPKI Systems only infrequently, in accordance with the schedule for the regular Back-Up of the Data held on those Systems.

(B) All Data contained in the Audit Log which are Backed-Up are, during Back-Up:

(i) be held in accordance with the outcome of a risk assessment which is documented in the FOC SS1SPKI CPS; and

(ii) be protected to the same standard of protection as the primary copy of the Audit Log in accordance with Part 5.4.4 of this Policy.

5.4.6 Audit collection system (internal vs. external)

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions in relation to its system for collecting Data for the purpose of populating the Audit Log. Notification to event-causing subject

(B) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions in relation to its notification of any person who is (or is responsible for any System which is) the direct cause of an event recorded in the audit log.

5.4.7 Vulnerability assessments

(A) Provision is made in the FOC S1SPKI CPS in relation to the carrying out of vulnerability assessments in respect of the FOC S1SPKI Systems.

5.5 Records archival

5.5.1 Types of records archived

(A) The SS1SPCA shall ensure that it archives:

(i) the Audit Log in accordance with Part 5.4 of this Policy;

(ii) its records of all Data submitted to it by Eligible Subscribers for the purposes of Certificate Signing Requests; and

(iii) any other Data specified in this Policy as requiring to be archived in accordance with this Part 5.5.

5.5.2 Retention period for archive

(A) Where there is a need to Archive Data, the FOC S1SP CA shall ensure that any Data which is to be Archived is retained in accordance with their Data Retention and Destruction Policy.

(B) Archived information is to be retained for a period of no less than 12 months

5.5.3 Protection of archive

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates the following provisions as to how Data held in its Archive are:

(i) protected against any unauthorised access;

(ii) adequately protected against environmental threats such as temperature, humidity and magnetism; and

(iii) incapable of being modified or deleted.

5.5.4 Archive backup procedures

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions in relation to its procedures for the Back-Up of its Archive.

5.5.5 Requirements for time-stamping of records

(A) Provision in relation to Timestamping is made in Part 6.8 of this Policy.

5.5.6 Archive collection system (internal or external)

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions in relation to its system for collecting Data for the purpose of populating the Archive.

5.5.7 Procedures to obtain and verify archive information

(A) The FOC S1SP shall ensure that:

(i) Data held in the Archive are stored in a readable format during their retention period; and

(ii) those Data remains accessible at all times during their retention period, including during any period of interruption, suspension or cessation of the SS1SPCA's operations.

(B) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions in relation to the periodic verification by the FOC S1SPKI CA of the Data held in the Archive.

5.6 Key changeover

(A) The FOC S1SP shall only ever Issue a new Certificate in relation to a new Certificate Signing Request, where it is submitted by an Eligible Subscriber in accordance with the requirements of the FOC S1SPKI RAPP and the relevant provisions of this Policy.

(B) A Key Pair will require changeover in accordance with their corresponding Certificate validity period set out in Part 6.3.2 of this Policy.

(C) The FOC S1SP shall ensure that any FOC S1SPKI CA Key Pair changeovers are managed so as to prevent any disruption to the provision of the FOC S1SPKI Services.

5.7 Compromise and disaster recovery

5.7.1 Incident and compromise handling procedures

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates a business continuity plan which shall be designed to ensure:

(i) continuity in, or (where there has been unavoidable discontinuity) the recovery of, the provision of the FOC S1SPKI Services in the event of any Compromise of the FOC S1SPKI Systems or major failure in the FOC S1SP processes; and

(ii) that priority is given to maintain continuity in, or to recovering the capacity for, the revocation of Certificates and the making available of an up to date FOC S1SPKI ARL and FOC S1SPKI CRL.

(B) The FOC S1SP shall ensure that the procedures set out in the business continuity plan are:

(i) compliant with ISO 22301 and ISO 27031 (or any equivalent to those standards which update or replace them from time to time); and

(ii) tested periodically, and in any event at least once in each year, in order to ensure that they are operationally effective.

(C) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions setting out the approach to be taken by it in circumstances in which it suspects (or has reason to suspect) that any FOC S1SPKI Private Key or any part of the FOC S1SPKI Systems is Compromised.

5.7.2 Computing resources, software, and/or data are corrupted

(A) The FOC S1SP shall ensure that the business continuity plan established in accordance with Part 5.7.1 of this Policy incorporates provisions setting out the steps to be taken in the event of any loss of or corruption to computing resources, software or Data.

5.7.3 Entity Private Key compromise procedures

(A) See Part 5.7.1 of this Policy.

5.7.4 Business continuity capabilities after a disaster

(A) The FOC S1SP shall ensure that the business continuity plan established in accordance with Part 5.7.1 of this Policy is designed to ensure the recovery of the provision of the FOC S1SPKI Services within not more than 48 hours of the occurrence of any event causing discontinuity.

5.8 CA or RA termination

[*Not applicable in this Policy*]

6 TECHNICAL SECURITY CONTROLS

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates detailed provision in relation to the technical controls to be established and operated for the purposes of the exercise of its functions as the FOC S1SPKI CA.

6.1 Key pair generation and installation

6.1.1 Key pair generation

(A) The FOC S1SP shall ensure that all FOC S1SPKI CPS incorporates detailed provision in relation to the FOC S1SPKI CA Key Pair generation, where all Key Pairs which it uses for the purposes of this Policy are generated:

- (i) in a protected environment compliant with FIPS 140-2 Level 3 (or any equivalent to that Federal Information Processing Standard which updates or replaces it from time to time);
- (ii) using multi-person control, such that no single Privileged Person is capable of generating any such Key Pair; and
- (iii) using random numbers which are such as to make it computationally infeasible to regenerate those Key Pairs even with knowledge of when and by means of what equipment they were generated.

(B) The FOC S1SPKI CA shall not generate any Key Pair other than a FOC S1SPKI CA Key Pair.

(C) The FOC S1SP shall ensure that all FOC S1SPKI CA Private Keys that are not required for continuous operational purposes will be encrypted and stored securely in an off-line security container which requires M of N to activate the FOC SS1SPKI CA Private Key when required.

6.1.2 Private Key delivery to Subscriber

(A) In accordance with Part 6.1.1(B) of this Policy, the FOC S1SPKI CA shall not generate any Private Key for delivery to a Subscriber.

6.1.3 Public Key delivery to Certificate issuer

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS or the FOC S1SPKI RAPP as the case may be, incorporates provisions:

- (i) in relation to the mechanism by which Public Keys of Subscribers are delivered to it for the purpose of the exercise of its functions as the FOC S1SPKI CA; and
- (ii) ensuring that the mechanism uses a recognised standard protocol such as PKCS#10.

6.1.4 FOC S1SPCA Public Key delivery to Relying Parties

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions:

- (i) in relation to the manner by which each FOC S1SPKI CA Public Key is to be lodged in the relevant FOC S1SPKI Repository;
- (ii) designed to ensure that the FOC S1SPKI CA Public Keys are securely lodged in the FOC S1SPKI Repository in such a manner as to guarantee that their integrity is maintained; and
- (iii) ensuring that the mechanism uses a recognised standard protocol such as PKCS#10 where FOC SS1SPKI CA Public Keys are delivered direct to the Relying Party.

6.1.5 Key sizes

(A) The FOC S1SPKI CA and every Subscriber shall ensure that all Key Pairs which each of them may use for the purposes of this Policy are of the size and characteristics set out in Annex B of this Policy.

6.1.6 Public Key parameters generation and quality checking

(A) The FOC S1SPKI CA shall ensure that any Public Key used by it for the purposes of this Policy shall be of values and lengths that make the success of known attacks infeasible.

(B) Each Subscriber shall ensure that any Public Key used by it for the purposes of this Policy shall be of values and lengths that make the success of known attacks infeasible.

6.1.7 Key Usage purposes (as per X.509 v3 keyUsage field)

(A) The FOC S1SPKI CA shall ensure that each Certificate that is Issued by it has a `keyUsage` field in accordance with RFC5759 and RFC5280.

(B) The FOC S1SPKI CA shall ensure that each FOC S1SPKI End Entity Certificate that is Issued by it has a `keyUsage` of either:

(i) `digitalSignature`; or

(ii) `keyAgreement`.

(C) The FOC S1SPKI CA shall ensure that each FOC S1SPKI CA Certificate that is Issued by it has a `keyUsage` of either:

(i) `keyCertSign`; or

(ii) `CRLSign`.

(D) The FOC S1SPKI CA shall ensure that no `keyUsage` values may be set in an FOC S1SPKI End Entity Certificate or FOC S1SPKI CA Certificate other than in accordance with this Part 6.1.7.

6.2 Private Key Protection and Cryptographic Module Engineering Controls

6.2.1 Cryptographic module standards and controls

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates detailed provision in relation to the cryptographic module, standards, and controls to be established and operated for the purposes of the exercise of its functions as the FOC S1SPKI CA. Which should include, but not be limited to:

(i) ensuring that all FOC S1SPKI CA Private Keys shall be:

(a) protected to a high standard of assurance by physical and logical security controls; and

(b) stored in and operated from within a Cryptographic Module which is compliant with FIPS 140-2 Level 3 (or any equivalent to that Federal Information Processing Standard which updates or replaces it from time to time).

(ii) ensuring that all FOC S1SPKI CA Private Keys shall, where they affect the outcome of any Certificates Issued by it, be protected by, stored in and operated from within a Cryptographic Module which is compliant with FIPS 140-2 Level 3 (or any equivalent to that Federal Information Processing Standard which updates or replaces it from time to time).

(iii) ensuring that no FOC S1SPKI CA Private Key shall be made available in either complete or unencrypted form except in a Cryptographic Module which is compliant with FIPS 140-2 Level 3 (or any equivalent to that Federal Information Processing Standard which updates or replaces it from time to time).

(iv) ensuring that any Cryptographic Module which is used for any purpose related to Certificate life-cycle management shall:

(a) operate so as to block access to itself following a number of failed consecutive attempts to access it using Activation Data, where that number shall be set out in the Organisation CPS; and

(b) require to be unblocked by an authorised Privileged User who has been Authenticated as such following a process which shall be set out in the Organisation CPS.

6.2.2 Private Key (n out of m) multi-person control

(A) See Part 6.1.1 of this Policy and the FOC S1SPKI CPS for further details.

6.2.3 Private Key escrow

(A) This Policy does not support Key Escrow.

(B) The FOC S1SPKI CA shall not provide any Key Escrow service.

6.2.4 Private Key backup

(A) The FOC S1SPKI CA may Back-Up FOC S1SPKI CA Private Keys insofar as:

(i) each Private Key is protected to a standard which is at least equivalent to that required in relation to the principal Private Key in accordance with this Policy; and

(ii) where more than one Private Key is Backed-Up within a single security environment, each of the Private Keys which is Backed-Up within that environment must be protected to a standard which is at least equivalent to that required in relation to an FOC S1SPKI CA Private Key in accordance with this Policy.

(B) Participants providing trust services may backup and archive Private Keys, including CA-keys.

6.2.5 Private Key archival

No stipulation.

6.2.6 Private Key transfer into or from a cryptographic module

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates detailed provision in relation to the FOC S1SPCA Private Key transfer into or from a cryptographic module for the following purposes only:

(i) Back-Up; or

(ii) establishing an appropriate degree of resilience in relation to the provision of the SMKI Services; and

(iii) where such transfers are in accordance with a level of protection which is compliant with FIPS 140-2 Level 3 (or any equivalent to that Federal Information Processing Standard which updates or replaces it from time to time).

6.2.7 Private Key storage on cryptographic module

(A) See Part 6.2.1 of this Policy.

6.2.8 Method of activating Private Key

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates detailed provision in relation to the method of activating a Private Key, whereby:

(i) The FOC S1SPKI CA shall ensure that the Cryptographic Module in which any FOC S1SPKI CA Private Key is stored may be accessed only by a Privileged User who has been Authenticated following an Authentication process which:

(a) has an appropriate level of strength to ensure the protection of the Private Key; and

(b) involves the use of Activation Data.

6.2.9 Method of deactivating Private Key

(A) The FOC S1SP shall ensure that any FOC S1SPKI CA Private Key shall be capable of being de-activated by means of the FOC S1SPKI CA Systems, at least by:

(i) the actions of:

(a) turning off the power;

(b) logging off;

(c) carrying out a system reset; or

(d) a period of inactivity of a length which shall be set out in the FOC S1SPKI CPS.

6.2.10 Method of destroying Private Key

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions for the exercise of strict controls in relation to the destruction of FOC S1SPKI CA Keys.

(B) The FOC S1SP shall ensure that no FOC SS1SPKI CA Key (whether in active use, existing as a copy for the purposes of resilience, or Backed-Up) is destroyed except in accordance with a positive decision by the DCC or the FOC S1SP ITSC instructing the FOC S1SPKI CA to destroy it.

6.2.11 Cryptographic Module Rating

(A) See Part 6.2.1 of this Policy.

6.3 Other aspects of key pair management

6.3.1 Public key archival

(A) The FOC S1SPKI CA shall ensure that it archives Public Keys in accordance with the requirements of Part 5.5 of this Policy.

6.3.2 Certificate operational periods and key pair usage periods

(A) The FOC S1SPKI CA shall ensure that the Validity Period of each Certificate Issued by it shall be as follows:

Certificate	Validity (Years)
Operator Root CA Certificate	25 years
Intermediate Operator CA Certificate	20 years
Intermediate Enterprise CA Certificate	20 years
End Entity Operator Device Certificate	5 years
End Entity Push Certificate	5 years
End Entity Server Certificate	5 years
Application Service Root CA Certificate	25 years
Intermediate Application Service PKI CA Certificate	20 years
End Entity PKI Role CA Certificate	5 years
End Entity PKI Role RA Certificate	5 years

6.4 Activation Data

6.4.1 Activation Data generation and installation

(A) The FOC S1SPKI CA shall ensure that any secure container within which a FOC S1SPKI CA Private Key is held has Activation Data that are unique and unpredictable.

(B) The FOC S1SPKI CA shall ensure that:

(C) these Activation Data, in conjunction with any other access control, shall be of an appropriate level of strength for the purposes of protecting the FOC S1SPKI CA Private Keys; and

(D) where the Activation Data comprise any PINs, passwords or passphrases, the FOC S1SPKI CA shall have the ability to change these at any time.

6.4.2 Activation data protection

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provision for the use of such cryptographic protections and access controls as are appropriate to protect against the unauthorised use of Activation Data.

6.4.3 Other Aspects of Activation Data/

[Not applicable in this Policy]

6.5 Computer Security Controls

6.5.1 Specific Computer Security Technical Requirements

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions in relation to the identification and implementation, following the conclusion of any threat assessment, of security measures which make provision for at least the following:

(i) the establishment of access controls in relation to the activities of the FOC S1SPKI CA;
(ii) the appropriate allocation of responsibilities to Privileged Users;
(iii) the identification and Authentication of organisations, individuals and Systems involved in FOC S1SPKI CA activities;
(iv) the use of cryptography for communication and the protection of Data stored on the FOC S1SPKI CA Systems;
(v) the audit of security related events; and
(vi) the use of recovery mechanisms for FOC S1SPKI CA Keys.

6.5.2 Computer security rating

(A) The FOC S1SP shall ensure that the Organisation CPS incorporates provisions relating to the appropriate security rating of the FOC S1SPKI CA Systems.

(B) The FOC S1SP may, where not specifically required to under this Policy, use certain system components that do not possess a formal computer security rating provided that all requirements of this Policy are satisfied.

6.6 Life cycle technical controls

6.6.1 System development controls

(A) The FOC S1SPshall ensure that any software which is developed for the purpose of establishing a functionality of the FOC S1SPKI CA Systems shall:
(i) take place in a controlled environment that is sufficient to protect against the insertion into the software of malicious code;
(ii) be undertaken by a developer which has a quality system that is:
(a) compliant with recognised international standards (such as ISO 9001:2000 or an equivalent standard); and

(B) where so required, be available for inspection and approval by the DCC or the FOC S1SP ITSC and has been so inspected and approved where the case may be.

6.6.2 Security management controls

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions which are designed to ensure that the FOC S1SPKI CA Systems satisfy the requirements of Section G2 (System Security: Obligations on the DCC) and Section G5 (Information Security: Obligations on the DCC and Users) of the Code.

(B) As a minimum the scope of the FOC S1SPKI must achieve certification with following information security standard:
(i) ISO/IEC 27001:2013 (Information Technology – Security Techniques – Information Security Management Systems); or
(ii) any equivalent to that standard which updates or replaces it from time to time.

(C) The FOC S1SP shall also ensure that the FOC S1SPKI shall be independently assessed against an assurance scheme:
(i) which is recognised as an accreditation scheme for the purposes of Article 3(2) of Directive 1999/93/EC on a Community framework for electronic signatures;
(ii) which is based on ISO 27001; and
(iii) the provider of which:
(a) is used by the United Kingdom Government to provide assurance in relation to electronic trust services; and
(b) requires all its scheme assessors to be UKAS certified.

6.6.3 Life cycle security controls

(A) See Part 6.6.2 of this Policy.

6.7 Network security controls

6.7.1 Use of Offline Operator Root CA

(A) The FOC S1SP shall ensure that its functions as the FOC S1SPKI CA are carried out on a part of the FOC S1SPKI CA Systems that is neither directly nor indirectly connected to any System which is not a part of the FOC S1SPKI CA Systems.

(B) The Operator Root CA, when not operational, should be kept offline with no direct or indirect network access.

(C) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions which are designed to ensure the requirements of paragraphs (A) and (B) above.

6.7.2 Protection Against Attack

(A) The FOC S1SP shall ensure that the FOC S1SPKI CPS incorporates provisions in relation to:

- (i) using its best endeavours to ensure that the FOC S1SPKI Systems are not Compromised, and in particular for this purpose that they are designed and operated so as to detect and prevent:
- (ii) any Denial of Service Event; and
- (iii) any unauthorised attempt to connect to them.

(B) using all reasonable to steps to ensure that the FOC S1SPKI CA Systems cause or permit to be open at any time only those network ports, and allow only those protocols, which are required at that time for the effective operation of those Systems, and block all network ports and protocols which are not so required.

6.7.3 Separation of FOC S1SP Intermediate CAs

(A) The FOC S1SP shall ensure that, where its functions as the FOC S1SP Intermediate CA are carried out on a part of the FOC S1SPKI CA Systems that is connected to an external network, they are carried out on a System that is Separated from all other FOC S1SPKI CA Systems.

6.7.4 Health Check of FOC SS1SPCA Systems

(A) The FOC S1SP shall ensure that, in relation to the FOC S1SPKI CA Systems, a vulnerability assessment in accordance with Section G2.13 of the Code (Management of Vulnerabilities) is carried out with such frequency as may be specified from time to time by the Independent S1SPKM Assurance Service Provider.

6.8 Time-Stamping

6.8.1 Use of Time-Stamping

(A) The FOC S1SP shall ensure that Timestamping takes place in relation to all Certificates and all other FOC S1SPKI CA activities which require an accurate record of time.

(B) The FOC S1SP shall ensure that the FOC S1SPKI CA incorporates provisions in relation to the time source and mechanisms used by any Time-Stamping Authority which carries out Time-Stamping on behalf of the FOC S1SPKI CA.

7 CERTIFICATE, CRL PROFILES

7.1 Certificate profile

(A) The FOC S1SPCA shall only Issue Certificates in accordance with the Certificate Profiles in Annex B of this Policy.

7.1.1 Version number(s)

(A) See Annex B of this Policy.

7.1.2 Certificate extensions

(A) See Annex B of this Policy.

(B) The FOC S1SPKI CA shall process the extensions identified in sections 4.2.1 and 4.2.2 of the IETF RFC 5280 Certificate Profile Specification. The following are common Certificate extensions:

I. The Basic Constraints extension is set to TRUE for CA-Certificates only; its use is critical specifying that it is a CA-Certificate. Subscriber End Entity Certificates have the value set to FALSE.

7.1.3 Algorithm object identifiers

(A) See Annex B of this Policy.

7.1.4 Name forms

(A) See Annex B of this Policy.

7.1.5 Name constraints

(A) See Annex B of this Policy.

7.1.6 Certificate policy object identifier

(A) See Part 1.2 of this Policy.

7.1.7 Usage of Policy Constraints extension

(A) See Annex B of this Policy.

7.1.8 Policy qualifiers syntax and semantics

(A) See Annex B of this Policy.

7.1.9 Processing semantics for the critical Certificate Policies extension

(A) See Annex B of this Policy.

7.2 CRL profile

7.2.1 Version number(s)

(A) The FOC S1SPKI CA shall ensure that the FOC S1SP ARL and FOC S1SP CRL conform with X.509 v3 and IETF RFC 5280.

7.2.2 CRL and CRL entry extensions

(A) [Not applicable in this Policy].

7.3 OCSP profile

7.3.1 Version number(s)

(A) An OCSP service is not applicable in this Policy.

7.3.2 OCSP extensions

(A) [Not applicable in this Policy].

8 COMPLIANCE AUDIT AND OTHER ASSESSMENTS

8.1 Frequency or circumstances of assessment

(A) Provision in relation to this is made in Appendix AO of the Code (S1SPKM Compliance Policy).

8.2 Identity/qualifications of assessor

(A) Provision in relation to this is made in Appendix AO of the Code (S1SPKM Compliance Policy).

8.3 Assessor's relationship to assessed entity

(A) Provision in relation to this is made in Appendix AO of the Code (S1SPKM Compliance Policy).

8.4 Topics covered by assessment

(A) Provision in relation to this is made in Appendix AO of the Code (S1SPKM Compliance Policy).

8.5 Actions taken as a result of deficiency

(A) Provision in relation to this is made in Appendix AO of the Code (S1SPKM Compliance Policy).

8.6 Communication of results

(A) Provision in relation to this is made in Appendix AO of the Code (S1SPKM Compliance Policy).

9 OTHER BUSINESS AND LEGAL MATTERS

(A) This document forms part of the Smart Energy Code and the DCC is required to ensure that the FOCS1SPKI is implemented and operated in accordance with this Policy and the associated FOC S1SPKI CPS.

9.1 Fees

9.1.1 Certificate issuance or renewal fees

See the statement at the beginning of this Part.

9.1.2 Certificate access fees

See the statement at the beginning of this Part.

9.1.3 Revocation or status information access fees

See the statement at the beginning of this Part.

9.1.4 Fees for other services

See the statement at the beginning of this Part.

9.1.5 Refund policy

See the statement at the beginning of this Part.

9.2 Financial responsibility

9.2.1 Insurance coverage

See the statement at the beginning of this Part.

9.2.2 Other assets

See the statement at the beginning of this Part.

9.2.3 Insurance or warranty coverage for end-entities

See the statement at the beginning of this Part.

9.3 Confidentiality of business information

9.3.1 Scope of confidential information

See the statement at the beginning of this Part.

9.3.2 Information not within the scope of confidential information

See the statement at the beginning of this Part.

9.3.3 Responsibility to protect confidential information

See the statement at the beginning of this Part.

9.4 Privacy of personal information

See the statement at the beginning of this Part.

9.4.1 Privacy plan

See the statement at the beginning of this Part.

9.4.2 Information treated as private

See the statement at the beginning of this Part.

9.4.3 Information not deemed private

See the statement at the beginning of this Part.

9.4.4 Responsibility to protect private information

See the statement at the beginning of this Part.

9.4.5 Notice and consent to use private information

See the statement at the beginning of this Part.

9.4.6 Disclosure pursuant to judicial or administrative process

See the statement at the beginning of this Part.

9.4.7 Other information disclosure circumstances

See the statement at the beginning of this Part.

9.5 Intellectual property rights

See the statement at the beginning of this Part.

9.6 Representations and warranties

See the statement at the beginning of this Part.

9.7 Disclaimers of warranties

See the statement at the beginning of this Part.

9.8 Limitations of liability

See the statement at the beginning of this Part.

9.9 Indemnities

See the statement at the beginning of this Part.

9.10 Term and termination

9.10.1 Term

See the statement at the beginning of this Part.

9.10.2 Termination

See the statement at the beginning of this Part.

9.10.3 Effect of termination and survival

See the statement at the beginning of this Part.

9.11 Individual notices and communications with participants

9.11.1 Subscribers

See the statement at the beginning of this Part.

9.11.2 Issuing Authority

See the statement at the beginning of this Part.

9.11.3 Notification

See the statement at the beginning of this Part.

9.12 Amendments

9.12.1 Procedure for amendment

See the statement at the beginning of this Part.

9.12.2 Notification mechanism and period

See the statement at the beginning of this Part.

9.12.3 Circumstances under which OID must be changed

See the statement at the beginning of this Part.

9.13 Dispute resolution provisions

See the statement at the beginning of this Part.

9.14 Governing law

See the statement at the beginning of this Part.

9.15 Compliance with applicable law

See the statement at the beginning of this Part.

9.16 Miscellaneous provisions

9.16.1 Entire agreement

See the statement at the beginning of this Part.

9.16.2 Assignment

See the statement at the beginning of this Part.

9.16.3 Severability

See the statement at the beginning of this Part.

9.16.4 Enforcement (attorneys' fees and waiver of rights)

See the statement at the beginning of this Part.

9.16.5 Force Majeure

See the statement at the beginning of this Part.

9.17 Other provisions

9.17.1 Certificate Policy Content

See the statement at the beginning of this Part.

9.17.2 Third party rights

See the statement at the beginning of this Part.

Glossary

10 Annex A: Definitions and Interpretation

Definitions	Interpretations
Activation	means the process of making the FOC S1SP HES and Operator Private Keys stored available for use.
Activation Data	means any private Data (such as a password or the Data on a smartcard) which are used to access a Security Container.
Application Service End Entity Certificate	means either an End Entity PKI Role CA Certificate or an End Entity PKI Role RA Certificate issued by an Intermediate Application Service PKI CA as set out in Annex B of this Policy.
Application Service CA	means the FOC S1SP exercising the function of the Application Service Root CA to Issue Certificates to the Intermediate Application Service PKI CA and the Intermediate Application Service PKI CA and storing and managing Private Keys associated with those functions.
Application Service CA Certificate	means either an Application Service Root CA Certificate or an Intermediate Application Service CA Certificate.
Application Service PKI	means one of the three public key infrastructures that support the operation of each of the FOC S1SP Operator Root CA, the Intermediate Operator CA and the Intermediate Enterprise CA.
Application Service Registration Authority (Application Service RA)	Means the Application Service CA exercising the function of receiving and processing Certificate Signing Requests and Certificate Revocation Requests made in accordance with Annex E: FOC S1SPKI RAPP of this Policy.
Application Service Root Certification Authority (Application Service Root CA)	means the FOC S1SP exercising the functions of each or all of three Application Service Root CAs to Issue Intermediate Application Service PKI CA Certificates to each or all of the three Intermediate Application Service PKI CAs and storing and managing Private Keys associated with that function.
Application Service Root CA Certificate	means one of the self-signed Certificate issued by the Application Service Root CA that meets the requirements of the Application Service Root CA Certificate profile set out in Annex B and which is issued in accordance with this Policy.
Archive	means the archive of Data created in accordance with Part 5.5.1 of this Policy (and “Archives” and “Archived” shall be interpreted accordingly).
Audit Log	means the audit log created in accordance with Part 5.4.1 of this Policy and the FOC S1SPKI CPS.
Authentication	means the process of establishing that an individual, Certificate, System, SMETS1 Device or Organisation is what he or it claims to be (and “Authenticate” shall be interpreted accordingly).
Authorised Subscriber	means one of the entities described as such in Annex E of this Policy.
Back-Up	means, in relation to Data which is held on any FOC S1SP HES System, the storage of a copy of that Data for the purpose of ensuring that the copy may be used (if required) to restore or replace the original Data; and “Backed-Up” is to be interpreted accordingly.
Certificate	means any public key certificate Issued under this Certificate Policy by the FOC S1SPCA or the Application Service CA, the certificate being an electronic document issued by a FOC S1SPCA that is used to prove the

	ownership of a Public Key. Valid Certificates under this Policy are: - FOC S1SPCA Certificates; - FOC S1SP End Entity Certificates; - Application Service CA Certificates; - Application Service End Entity Certificates.
Certification Authority	means the FOC S1SPCA and/or the Application Service CA as the context requires.
Certificate Policy (known as the 'Policy' in this document)	is a document which aims to state what are the different entities of a Public Key Infrastructure (PKI), their roles and their duties.
Certificate Profile	means a table bearing that title in Annex B and specifying certain parameters to be contained within a Certificate.
Certificate Revocation List Distribution Point (CDP)	means a shared location on the network that is used to store the CRLs
Certificate Re-Key	means a change to the Public Key contained within a Certificate bearing a particular serial number which results in a new Certificate being issued.
Certificate Revocation Request (CRR)	means a request for the revocation of a Certificate made to the FOC S1SPCA, submitted in accordance with the FOC S1SPKI RAPP and this Policy.
Certificate Signing Request (CSR)	means a request for a Certificate submitted by an Authorised Subscriber in accordance with the FOC S1SPKI RAPP as set out in Annex E of this Policy.
Certificate Status	Provides details of the validity of Certificates and includes Revocation information.
Cryptographic Module	Means a Security Container.
Cryptographic Processing	means the generation, storage or use of any Secret Key Material
Data	means any information, data, knowledge, figures, methodologies, minutes, reports, forecasts, images or sounds (together with any database made up of any of these) embodied in any medium (whether tangible or electronic).
Eligible Subscriber	means one of the entities described as such (and in relation to the relevant Certificate types) in Annex E of this Policy:
End Entity Operator Device Certificate	A Certificate issued by the Operator CA that meets the requirements of the End Entity Operator Device Certificate profile set out in Annex B and which is issued in accordance with this Policy.
End Entity PKI Role CA Certificate	means one of the Certificates issued by an Intermediate Application Service PKI CA that meets the requirements of the End Entity PKI Role CA Certificate profile set out in Annex B and which is issued in accordance with this Policy.
End Entity PKI Role RA Certificate	means one of the Certificates issued by an Intermediate Application Service PKI CA that meets the requirements of the End Entity PKI Role RA Certificate profile set out in Annex B and which is issued in accordance with this Policy.
End Entity Push Certificate	A Certificate issued by the Enterprise CA that meets the requirements of the End Entity Push Certificate profile set out in Annex B and which is issued in accordance with this Policy.
End Entity Server Certificate	A Certificate issued by the Enterprise CA that meets the requirements of the End Entity Server Certificate profile set out in Annex B and which is issued in accordance with this Policy.

FOC S1SP	Means any one of the following DCC Service Providers responsible for the delivery and operation of the FOC S1SPKI service: • TRILLIANT NETWORKS OPERATIONS (UK) LTD] (registered in England and Wales under number 011321639 whose registered office is at Morgan House, Madeira Walk, Windsor, Berkshire SL4 1EP acting in its capacity as a DCC Service Provider. • CAP GEMINI UK PLC (registered in England and Wales under number 00943935 whose registered office is at No. 1 Forge End, Woking, Surrey, GU21 6DB acting in its capacity as a DCC Service Provider. • (DXC) ENTSERV UK LIMITED (registered in England and Wales under number 00053419 whose registered office is at Royal Pavilion, Wellesley road, Aldershot, GU11 1PZ, acting in its capacity as a DCC Service Provider. Where they are acting in the capacity of, and exercising the functions of one or more of: (a) FOC S1SPCA; (b) the FOC S1SPKI Registration Authority; (c) and any other aspects of the wider FOC S1SPKI Systems.
FOC S1SP Authority Revocation List (FOC S1SP ARL)	means a list, produced by the FOC S1SPCA, of all FOC S1SPCA Certificates that have been revoked in accordance with this Policy.
FOC S1SP CA Certificates	Means either an Operator Root CA Certificate, an Intermediate Enterprise CA Certificate or an Intermediate Operator CA Certificate as set out in Annex B of this Policy.

FOC S1SP Certification Authority (or FOC S1SPCA)	means the FOC S1SP, acting in the capacity and exercising the functions of one or more of the:
	(a) FOC S1SP Operator Root CA;
	(b) Intermediate Operator CA;
	(c) Intermediate Enterprise CA;
	(d) FOC S1SPCA Systems; and
	(e) FOC S1SP PKI Registration Authority.

FOC S1SP Certificate Revocation List (FOC S1SPKI CRL)	means a list, produced by the FOC S1SPKI Intermediate CA, of all FOC S1SP End Entity Certificates that have been revoked in accordance with this Certification Policy.
FOC S1SP End Entity Certificates	means either an End Entity Server Certificate, an End Entity Push Certificate, or an End Entity Operator Device Certificate issued by a FOC S1SP CA as set out in Annex B of this Policy.
FOC S1SP Head End System	means the head end system which is used by the FOC S1SP to communicate with SMETS1 CHs.
FOC S1SP Intermediate Certification Authority (FOC S1SP Intermediate CA)	means the FOC S1SP exercising the function of the FOC S1SP Intermediate Enterprise CA and the Intermediate Operator CA to Issue FOC S1SP End Entity Certificates in accordance with Annex B of this Policy.
FOC S1SP Intermediate Certification Authority Certificate (FOC S1SP Intermediate CA Certificate)	Means either an Intermediate Enterprise CA Certificate or an Intermediate Operator CA Certificate as set out in Annex B of this Policy and Issued by the FOC S1SP Root CA in accordance with this Policy.
FOC S1SP Intermediate Certification Authority Private Key (FOC S1SP Intermediate CA Private Key)	Means either: • The Intermediate Operator CA Private Key; or • The Intermediate Enterprise CA Private Key.

FOC S1SP Intermediate Certification Authority Service Provider (FOC S1SP Intermediate CA SP)	Means (DXC) ENTSERV UK LIMITED (registered in England and Wales under number 00053419 whose registered office is at Royal Pavilion, Wellesley road, Aldershot, GU11 1PZ, acting in its capacity as a DCC Service Provider.
FOC S1SP Operator Root Certification Authority (CA)	means the FOC S1SP exercising the function of the FOC S1SP Operator Root CA to Issue Certificates to the FOC S1SP Operator Root CA and the FOC S1SP Intermediate CA and storing and managing Private Keys associated with those functions.
FOC S1SP Operator Root Certification Authority Service Provider (FOC S1SP Operator Root CA SP)	means CAP GEMINI UK PLC (registered in England and Wales under number 00943935 whose registered office is at No. 1 Forge End, Woking, Surrey, GU21 6DB acting in its capacity as a DCC Service Provider.
FOC S1SPKI	means the S1SPKIs operated by the FOC S1SP including the FOC S1SP Head End Systems, FOC S1SPCA Systems, personnel, policy and procedures and any public key infrastructure established (or to be established) by FOC S1SP for the purpose, among other things, of providing secure communications between FOC S1SP, the DCC and SMETS1 Devices. It also includes the Application Service PKIs.
FOC S1SPKI CA	Means the FOC S1SPCA and the Application Service CA.
FOC S1SPKI CA Certificate	Means any FOC S1SPCA Certificate and any Application Service CA Certificate.
FOC S1SPKI CA Private Key	Any Private Key associated with a Public Key contained with any FOC S1SPCA Certificate or any Application Service CA Certificate.
FOC S1SPKI CA Key Pair	A Public Key that is (or is to be) contained within any FOC S1SPCA Certificate or any Application Service CA Certificate and the associated Private Key.
FOC S1SPKI CPS	means the Certification Practice Statement describing how this PKI is operated and maintained and corresponds to this Policy
FOC S1SPKI End Entity Certificate	Means any FOC S1SPKI End Entity Certificate or any Application Service End Entity Certificate.
FOC S1SPKI Personnel	means those persons who are engaged by the FOC S1SP under this Policy, in so far as such persons carry out, or are authorised to carry out, any function of such FOC S1SPKI System or FOC S1SPCA or Application service CA but not Registration Authority functions (see FOC S1SPKI RA Personnel).
FOC S1SPKI RAPP	is set out in the SEC document set and is the Registration Authority Policy and Procedures (RAPP) for this policy document
FOC S1SPKI Registration Authority (RA)	Means the FOC S1SPKI CA exercising the function of receiving and processing Certificate Signing Requests and Certificate Revocation Requests made in accordance with Annex E: FOC S1SPKI RAPP of this Policy.
FOC S1SPKI Registration Authority Manager	means either a director of the FOC S1SP or any other person who may be identified as such in accordance with Annex E: FOC S1SPKI RAPP of this Policy.
FOC S1SPKI Registration Authority Personnel (FOC S1SPKI RA Personnel)	means those persons who are engaged by the FOC S1SP, in so far as such persons carry out, or are authorised to carry out, any function of the FOC S1SPKI Registration Authority
FOC S1SPKI Repository	For the purposes of the FOC S1SPKI, the “FOC S1SPKI Repository” means a number of Systems for storing and (subject to

	the provisions of this Policy) making available copies of Certificates Issued pursuant to the Policy.
Hardware Security Module (HSM)	means a security module is a physical computing device that safeguards and manages digital keys, performs encryption and decryption functions for digital signatures, strong authentication and other cryptographic functions
Intermediate Application Service PKI CA Certificate	means one of the Certificates issued by the Application Service Root CA that meets the requirements of the Intermediate Application Service PKI CA Certificate profile set out in Annex B and which is issued in accordance with this Policy.
Intermediate Enterprise Certification Authority (Intermediate Enterprise CA)	means the FOC S1SP exercising the function of the Intermediate Enterprise CA to Issue End Entity Push Certificates, End Entity Server Certificates, and of storing and managing the Private Keys associated with that function.
Intermediate Enterprise Certification Authority Certificate (Intermediate Enterprise CA Certificate)	means a Certificate in the form set out in the Intermediate Enterprise CA Certificate Profile in accordance with Annex B and Issued by the FOC S1SP Root CA to the Intermediate Enterprise CA in accordance with this Policy.
Intermediate Enterprise Certification Authority Private Key (Intermediate Enterprise CA Private Key)	means a Private Key that forms a Key Pair with a Public Key held within Intermediate Enterprise CA Certificate.
Intermediate Operator CA Certificate (Intermediate Operator CA Certificate)	means a Certificate in the form set out in the Intermediate Operator CA Certificate Profile in accordance with Annex B and Issued by the FOC S1SP Root CA to the Intermediate Operator CA in accordance with this Policy.
Intermediate Operator Certification Authority (Intermediate Operator CA)	means the FOC S1SP exercising the function of the Intermediate Operator CA to Issue End Entity Operator Device Certificates and of storing and managing the Private Keys associated with that function.
Intermediate Operator Certification Authority Private Key (Intermediate Operator CA Private Key)	means a Private Key that forms a Key Pair with a Public Key held within Intermediate Operator CA Certificate.
Intermediate Application Service PKI Certification Authority (Intermediate Application Service PKI CA)	means the FOC S1SP exercising the functions of each or all of the three Intermediate Application Service PKI CAs to Issue End Entity PKI Role CA Certificates and End Entity PKI Role RA Certificates and storing and managing Private Keys associated with that Function.
Operator Root CA Certificate	means one of the self-signed Certificates issued by the FOC S1SP Operator Root CA that meets the requirements of the Operator Root CA Certificate profile set out in Annex B and that has been issued in accordance with Policy.
Policy	means this FOC S1SP Certificate Policy.
Private Key	means the private part of an asymmetric Key Pair used for the purposes of public key cryptography and which is associated with a Public Key that is contained within any Certificate that is Issued (or to be Issued) in accordance with this Policy.
Private Key Material	in relation to a Private Key, means that Private Key and the input parameters necessary to establish, use and maintain it.
Privileged User	means a FOC S1SPKI Personnel or FOC S1SPKI RA Personnel who is authorised to carry out activities which involve access to resources, or Data held, on the FOC S1SPCA System and which are capable of being a means by which the FOC S1SPCA System (or are capable of being) being compromised to a material extent

Public Key	means the public part of an asymmetric Key Pair used for the purposes of public key cryptography.
Public Key Infrastructure	is a set of roles, policies, hardware, software and procedures needed to create, manage, distribute, use, store and revoke digital Certificates and manage public-key encryption
Relying Party	means any System, Device, organisation or individual that relies on a Certificate that has been Issued under this Policy.
S1SP	means SMETS1 Service Provider
S1SPKI	means any public key infrastructure established (or to be established) for the purpose, among other things, of providing secure communications between the DCC and SMETS1 Devices.
S1SPKI CA Systems	means the FOC S1SPCA Systems and the Application Service CA Systems.
Secret Key Material	means any Private Key, Shared Secret, Symmetric Key or other functionally equivalent cryptographic material (and any associated input parameter) that is generated and maintained by the FOC S1SP CA
Security Container	means a set of hardware, software and/or firmware that is designed for : a) the secure storage of Secret Key Material; and b) the implementation of Cryptographic Processing without revealing Secret Key Material.
Security Related Functionality	means the functionality of the FOC S1SP HES Systems which is designed to detect, prevent or mitigate the adverse effect of any security compromise of that System.
Security Sub-Committee or SSC	means the Security Sub-Committee under the Smart Energy Code
Smart Energy Code	means the code of that name maintained pursuant to the smart meter communication licences granted under the UK Gas Act 1986 and the UK Electricity Act 1989
SMETS1	means the Smart Metering Equipment Technical Specifications 1
Subject	the Subject of any Certificate is the entity identified in the subject field of that Certificate
Subscriber	the FOC S1SPKI Systems or a person engaged by the S1SPKI CA (acting on behalf of the S1SPKI CA) to which a Certificate has been Issued in accordance with the requirements of this Policy.
System	means a system for generating, sending, receiving, storing (including for the purposes of Back-Up), manipulating or otherwise processing electronic communications, including all hardware, software, firmware, databases and Data associated with issuing Certificates in accordance with this Policy.
Task Manager	is a function in the Trilliant software which instructs an API to perform specific tasks such as certificate administration services.
Timestamping	means the act that takes place when a Time-Stamping Authority, in relation to a Certificate, stamps a particular datum with an accurate indicator of the time (in hours, minutes and seconds) at which the activity of stamping takes place.
Timestamping Authority	A trusted timestamp is a timestamp issued by a Trusted Third Party (TTP) acting as a Time Stamping Authority

	(TSA). It is used to prove the existence of certain data before a certain point without the possibility that the owner can backdate the timestamps.
Trust Store	or Repository holding the Certificates for each trusted CA
Validity Period	means, in respect of a Certificate, the period of time for which that Certificate is intended to be valid.

11 Annex B: FOC S1SP CA and End Entity Certificate Profiles

11.1 Certificate Structure and Contents

(A) This Annex lays out requirements as to structure and content with which FOC S1SPCA Certificates and FOC S1SP End Entity Certificates shall comply. All terms in this Annex shall, where not defined in this Policy, or the GB Companion Specification (GBCS), have the meanings in IETF RFC 5759 or IETF RFC5280.

11.2 Common requirements applicable to FOC S1SPCA Certificates and FOC S1SP End Entity Certificates

(A) All Certificates shall be compliant with IETF RFC 5759 and so with IETF RFC5280.The FOC S1SPCA shall only issue X.509 v3 certificates as defined in IETF RFC 5280 and IETF RFC 6818.

Public Key and algorithm	Issued Certificates	Internal TLS Certificates
Signature Algorithm	OID 1.2.840.10045.4.3.2 [ecdsa-with-SHA256]	OID 1.2.840.10045.4.3.2 [ecdsa-with-SHA256]
Subject Public Key	OID 1.2.840.10045.3.1.7 [ECDSA secp256r1]	OID 1.3.132.0.34 [ECDSA secp384r1]

Operator Root Certificate

Number of Keys: One per environment

12 Annex C: Subscriber Obligations

12.1 Certificate Signing Requests

(A) Each Eligible Subscriber shall ensure that all of the information contained in each Certificate Signing Request made by it is true and accurate.

(B) No Eligible Subscriber may make a Certificate Signing Request which contains:

(i) any information that constitutes a trademark, unless it is the holder of the Intellectual Property Rights in relation to that trademark; or

(ii) any confidential information which would be contained in a Certificate Issued in response to that Certificate Signing Request.

(C) Each Eligible Subscriber shall ensure that the Public Key that is included within a Certificate Signing Request is part of a Key Pair that has been generated using random numbers which are such as to make it computationally infeasible to regenerate that Key Pair even with knowledge of when and by means of what equipment it was generated.

(D) No Eligible Subscriber may make a Certificate Signing Request for the Issue of:

(i) a FOC S1SPKI CA Certificate or FOC S1SP End Entity Certificate which contains the same Public Key as a Public Key which that Eligible Subscriber knows to be contained in any other FOC S1SPKI CA Certificate or FOC S1SPKI End Entity Certificate.

12.2 Use of Certificates and Key Pairs

(A) Each Subscriber shall ensure that it does not use any Certificate, Public Key contained within a Certificate, or a Private Key associated with a Public Key contained in a Certificate, that is held by it other than for the purposes of creating, sending, receiving and processing communications sent to and from SMETS1 Devices, the DCC and the FOC S1SP pursuant to the Code.

12.3 FOC S1SPKI CA and End Entity Certificates: Protection of Private Keys

(A) Each Subscriber shall take reasonable steps to ensure that no Compromise occurs to any:

(i) Private Key which is associated with a Public Key contained in a Certificate for which it is the Subscriber; or

(ii) Secret Key Material associated with that Private Key.

12.4 Certificates: Expiry of Validity Period

(A) Each Subscriber shall, prior to the expiry of the Validity Period of a Certificate for which it is the Subscriber:

(i) request a replacement for that Certificate by applying for the Issue of a new Certificate in accordance with the provisions of this Policy.

13 Annex D: Relying Party Obligations

13.1 Relying Parties

(A) For the purposes of this Policy, a Relying Party in relation to a FOC S1SPKI CA Certificate or a FOC S1SPKI End Entity Certificate means any FOC S1SPKI System, SMETS1 Device or person which relies on the Certificate for the purposes of creating, sending, receiving or processing communications sent to and from the FOC S1SPKI System, the DCC, any person or SMETS1 Device pursuant to this Policy.

(B) For the purposes of Section L13.1, a Relying Party shall be deemed to include:

- (i) in the case of a FOC S1SPKI System which relies on a Certificate, the FOC S1SP; and
- (ii) in the case of a SMETS1 Device which relies on a Certificate, the FOC S1SP.

13.2 Duties in relation to Certificates

(A) Each Relying Party shall:

- (i) before relying on any FOC S1SPKI End Entity Certificate:
  - (a) Check Cryptographic Protection in respect of the FOC S1SP CRL on the relevant FOC S1SPKI Repository; and
  - (b) where that Certificate is shown on the FOC S1SPKI CRL as having been revoked, not rely on the Certificate;
- (ii) before relying on any FOC S1SPCA Certificate:
  - (a) Check Cryptographic Protection in respect of the FOC S1SPKI ARL on the FOC S1SPKI Repository; and
- (iii) where that Certificate is shown on the FOC S1SPKI ARL as having been revoked, not rely on the Certificate;

(B) No Relying Party may rely on a Certificate where the Validity Period of that Certificate has expired.

(C) No Relying Party may rely on a Certificate where it suspects that the Certificate has been Compromised.

(D) Each Relying Party shall take reasonable steps, by means of appropriate Systems, to verify Digital Signatures, Check Cryptographic Protection, Confirm Validity and perform other appropriate cryptographic operations before relying on any Certificate.

14 Annex E: FOC S1SPKI RAPP

14.1 Purpose

(A) This Annex E: FOC S1SPKI RAPP sets out the high-level principal obligations and activities undertaken by the FOC S1SPKI CA in its capacity as the FOC S1SPKI Registration Authority in accordance with this Policy. The FOC S1SPKI RAPP also sets out the activities undertaken by the FOC S1SPKI Registration Authority in support of the procedures as set out in this section.

(B) The FOC S1SPKI CA shall ensure that no Certificate is Issued under this Policy other than to an Eligible Subscriber for a Certificate of the relevant type.

14.2 FOC S1SPKI RAPP Principles

(A) All Certificates requested and Certificates issued under the auspices of the FOC S1SPKI CA must be:

(i) compliant with PKCS#10;
(ii) BER encoded;
(iii) compliant with the Certificate Profiles as set out in Appendix B of this Policy; and
(iv) compliant with the obligations as set out in Annex C of this Policy.

14.3 FOC S1SPKI Registration Authority Roles

(A) The FOC S1SPKI RA consists of the following roles:

(i) The Intermediate Operator CA performing the technical RA role for automatically approving End Entity Operator Device Certificates for issuance (as requested by the FOC S1SP HES on behalf of the SMETS1 Device);
(ii) FOC S1SPKI RA Personnel submitting and approving all other Certificates for issuance.

(B) Only FOC S1SPKI RA Personnel with Privileged User rights can submit and approve Certificates on behalf of Eligible Subscribers using the FOC S1SPKI CA Systems. This is enforced through:

(i) Pre-authorised and pre-approved access to FOC S1SPKI CA Systems;
(ii) Access control to the FOC S1SPKI CA Systems;
(iii) User account management (audit and logging);
(iv) Dedicated named accounts on the FOC S1SPKI CA System;

(C) Prior to being granted access to FOC S1SPKI CA Systems, all such FOC S1SPKI RA Personnel with Privileged User rights will either have:

(i) identities checked in line with personnel security standard BS7858; and/or
(ii) /background clearance checks performed in accordance with this Policy and the FOC S1SPKI CPS.

14.4 Authorised Subscribers

(A) The following are Authorised Subscribers under this Policy:
(B) a SMETS1 Device with which the FOC S1SP is to communicate;
(C) the FOC S1SP HES;
(D) the FOC S1SPCA;
(E) the Application Service CA; and
(F) FOC S1SPKI Personnel (acting on behalf of the FOC S1SP).
(G) At the point of the FOC S1SPKI RA approving the above, then it (or they) become an Authorised Subscribers.

14.5 Eligible Subscribers

(A) Where it is, or they are, an Authorised Subscriber, the following is/are an Eligible Subscriber in respect to the specified Certificates:

(i) the FOC S1SP HES which is an Eligible Subscriber for the following FOC S1SP End Entity Certificates only:

   (a) End Entity Server Certificate; or
   (b) End Entity Push Certificate;
(ii) the FOC S1SPCA is an Eligible Subscriber for all FOC S1SPCA Certificates.
(iii) SMETS1 Devices are Eligible Subscribers for the following FOC S1SP End Entity Certificate only:
   (a) End Entity Operator Device Certificate.
(iv) The Application Service CA which is an Eligible Subscriber for the following Application CA Certificates only:
   (a) Application Service Root CA Certificate;
   (b) Intermediate Application Service PKI CA Certificate.
(v) FOC S1SPKI Personnel, who are Eligible Subscribers for End Entity PKI Role RA Certificates only.
(vi) S1SPKI CA Systems which is are only Eligible Subscriber for End Entity PKI Role CA Certificates.

14.6 FOC S1SPKI Technical RA Verification and Issuance of Certificates

(A) For personnel controls, resources providing trust services, have either SC or BS7858 Clearance and training for the provisioning of digital certificates.

(B) All relevant personnel are security cleared and trained to manage the provisioning of digital certificates. The overall management of the vetting process is provided by the relevant Secure Vetting Team, liaising directly with the Account Security Officer at DCC.

Comments	Manual Certificate Generation	Automated Certificate Generation
(A) Both the Intermediate Enterprise CA and the Intermediate Operator CA are subscribers of Certificates that are Issued by the Operator Root CA which is operated by Capgemini. Another subscriber includes the Comms Hub as Certificates are issued to it by the Intermediate Operator CA. (B) The Intermediate Operator CA performs the following technical RA check in response to a Certificate Signing Request. I. An Operator Device Certificate (ODC) is issued to each Comms Hub. The Certificates are signed by the Intermediate Operator CA, with the Head End acting as a registration authority and delivering these Certificates to the Comms Hub. Each Comms Hub will	Before sending the CSR the file must be encrypted with the requestors GPG public key and signed with the senders own GPG key. This will allow the sender to validate the encryption before sending. Once encrypted the file is emailed to the requesting party representative.	Certificate changes take place under the governance of the Head End System. In its capacity as the Registration Authority it determines whether a Certificate needs to be issued and manages the creation of the CSR, rather than the end-device deciding that a Certificate needs to be issued and requesting the RA to forward a CSR to the CA. The Head End System will have established that it is communicating with a trusted device before if performs any Certificate operations. This uses the chain of trust that the Head End System has been explicitly configured with.

Comments	Manual Certificate Generation	Automated Certificate Generation
have its own ODC and Private Key, and the Head End will hold a copy of all ODCs. Each Comms Hub uses its ODC to identify itself during TLS session setup. The Certificate Signing Request is sent to a production central system (which incorporates the FOC S1SP CA Operator CA) in PKCS#10 file format. II. The Operator CA verifies the Certificate Signing Request as well as performing a proof of possession check using the PKCS#10 format. III. When the Operator CA verifies the CSR, then: a. it passes the CSR to the Comms Hub to process the Certificate Signing Request; b. If all verification checks are successful, the Comms Hub stores the Certificate chain and its own internal storage.		

14.7 Revocation of a Certificate

14.7.1 General Organisation Certificate revocation obligations

(A) The FOC S1SP shall permit each of the following individuals to request the revocation of a Certificate, where the reasons for such revocation request must be one of the permitted reasons for Certificate revocation as set out in Part 4.9 of this Policy:

(B) Any FOC S1SP ITSC member, on behalf of the FOC S1SP ITSC;

(C) Any Subscriber for a Certificate; or

(D) Any FOC S1SPKI RA Personnel, on behalf of the FOC S1SP.

(E) The FOC S1SP, in its role as FOC S1SPKI Registration Authority, shall only accept CRR via a secured electronic means as set out in this Annex E;

(F) The revocation of a Certificate shall be permanent and the FOC S1SPKI Registration Authority shall ensure that no revoked Certificate may be reinstated.

(G) The FOC S1SP shall, each month, prepare and submit a report to the DCC regarding the number and nature of Certificate revocations.

14.7.2 Procedure for Certificate Revocation

(A) The procedure for authorisation, verification and, where verified, revocation of Certificates is as set out immediately below.

(B) As soon as reasonably practicable when Certificate revocation is required:

(i) An individual as per 14.7.1 (A) of this Annex E shall submit, using the mechanisms set out in 14.7.1 (B) of this Annex E, a CRR to the FOC S1SPKI Registration Authority.

(ii) The reason for such CRR shall be one of the permitted reasons for Certificate revocation as set out in Section 4.9 of this Policy.

(iii) Each CRR shall contain the following information:

(a) Identity of the Subscriber;

(b) Unambiguously (i.e. by specifying the serial number of the Certificate) identification of the Certificate to be revoked; and

(c) The reason for the Certificate revocation.

(C) Upon receipt of the CRR, the FOC S1SPKI RA Personnel on behalf of the FOC S1SPKI RA shall, as soon as reasonably practicable:

(i) Verify and authenticate the CRR; and

(ii) Where verified and authenticated successfully, approve and then process the CRR; or

(iii) Where the CRR cannot be successfully verified and authenticated:

(a) Reject the CRR; and

(b) Inform the individual making the CRR of such rejection; and

(c) Immediately notify the FOC S1SP ITSC and the DCC of failed CRR attempts.

(D) The FOC S1SPKI RA shall, as soon as reasonably practicable following a successful CRR:

(i) Revoke the identified Certificate that is the subject of the CRR;

(ii) Update the relevant FOC S1SPKI ARL or FOC S1SPKI CRL and publish such ARL or CRL to the FOC S1SPKI Repository, as set out in this Policy; and

(iii) Notify the FOC S1SP and the DCC of the successfully revocation of the Certificate in the CRR.

(E) The FOC S1SPKI Registration Authority shall treat each CRR and any associated circumstances as confidential.

(F) The FOC S1SPKI RA shall ensure that no single individual can request and subsequently approve a CRR.

14.8 Certificate Rotation

(A) Prior to the expiry of the validity period of a given Certificate the Registration Authority (Head End [automated] and system operator [manual]) must request a new Certificate by applying for the Issuance of a new Certificate in accordance with the provisions of this Policy.

SEC Appendix AQ

SEC Variation Testing Approach Document for the CH&N Arrangements

Table of Contents

1. Definitions and Interpretation

1.1. In this SEC Variation Testing Approach Document for CH&N SEC Variations (this “CH&N SVTAD”), except where the context otherwise requires, the expressions in the left-hand column within Table 1.1 shall have the meanings given to them in the right-hand column within Table 1.1. Where not defined in this CH&N SVTAD, words beginning with a capital letter used in this document are defined in Section A of the SEC.

1.2. Where there are conflicts between this CH&N SVTAD and any related CH&N Test Approach Document or CH&N Test Coverage Document, this CH&N SVTAD shall take precedence.

1.3. Where obligations are expressed in respect of DCC Service Providers in this CH&N SVTAD, a CH&N Test Approach Document or a CH&N Test Coverage Document, these shall be construed as obligations on the DCC. Where text is included in this CH&N SVTAD, a CH&N Test Approach document or a CH&N Test Coverage Document which does not explicitly place obligations on a Party, the Panel, or Testing Participant, these shall be construed as obligations on the DCC.

Table 1.1 CH&N SVTAD Definitions

Term	Meaning
CH&N Arrangements	means arrangements for utilising the newer forms of next-generation wireless mobile telecommunications technology for the secure telecommunications platform used (or to be used) for the purposes of communicating with Enrolled Smart Metering Systems.
CH&N Mandated User Testing Document	means any document prepared pursuant to Clause 6 that sets out the approach to mandatory User Testing.
CH&N Release	means those changes to all or part of the DCC Total System that are planned to be implemented at the same time, as set out in the Joint Industry Plan, and which are necessary to support the delivery of the CH&N SEC Variations.
CH&N SEC Variations	means the variations to the SEC that are planned to support the introduction of and transition to the CH&N Arrangements as published by the DCC and/or the Secretary of State from time to time.

Term	Meaning
CH&N Solution	means the Sub-Systems delivered or changed for the purposes of the CH&N SEC Variations, including the Data Services Provider Sub-System, the 4G Communications Hubs (4GCH), Device Manager(s), Order Management System(s), Logistics, and the associated part of the SM WAN that will comprise 4G mobile communications technology.
CH&N Test Approach Document	means a document produced pursuant to Clause 4.1.
CH&N Test Coverage Document	means a document produced pursuant to Clause 4.2.
Completion Report	means a report that is produced setting out evidence demonstrating how the criteria for the completion of testing has been met.
Component Integration Test Stage	means a test stage focusing on verifying individual interactions between Sub-Systems.
Data Services Provider, or DSP	means the DCC acting from those systems identified in part a) of the definition of DCC Live Systems.
Device Manager	means a Sub-System utilised, amongst other things, to manage the interactions between the 4GCH and the rest of the Modified DCC Total System.
Joint Industry Plan (JIP)	means the part of the joint industry plan that is agreed at the Department for Energy, Security and Net Zero's smart metering design group that relates to the 4G Communications Hubs and Network Programme.
June 2024 SEC Release	means the SEC Release planned to go live in June 2024.
Link Test Stage	means a test stage focusing on the testing of interfaces and interactions within a Sub-System.
Logistics	means a Sub-System utilised to manage the logistics processes for the delivery of 4GCH.

Term	Meaning
Modified DCC Total System	means the DCC Total System as will be modified as a result of each CH&N Release.
Order Management System(s)	means a Sub-System utilised to manage the forecasting, ordering and manufacturing process for 4GCHs.
Pre-Integration Test Phase (“PIT”)	means the test phase that is inclusive of the Unit Test Stage, Link Test Stage, System Test Stage for a new or change to a Sub-System. Optionally PIT may also include a Component Integration Test Stage.
Sub-System	means an element of the Modified DCC Total System, in respect of which changes will be tested independently for the purposes of the Unit Test Stage, Link Test Stage, and System Test Stage .
System Test Stage	means a test stage focusing on verifying that a Sub-System as a whole meets specified requirements.
Systems Integration Test Phase (“SIT”)	means the test phase focusing on verifying the end-to-end operation of the Modified DCC Total System that will exist as a result of the CH&N Release that is the subject of the test phase.
TAG	means the Panel’s Testing Advisory Group.
Testing Baselines Requirements document (“TBRD”)	a document published by the Secretary of State from time to time setting out baseline versions of the Smart Energy Code for the purposes of test exit decisions
Testing Issue Thresholds	means the maximum number of extant Testing Issues that may be permitted at completion of a test phase.
Unit Test Stage	means a test stage focusing on the testing of individual hardware or software components within a Sub-System.

Term	Meaning
User Testing	means testing by one or more Users of all or part of any changes to the Modified DCC Total System in respect of a CH&N Release.

2. General

2.1. This document is the SEC Variation Testing Approach Document for the CH&N SEC Variations.

2.2. Section X11.7 of the Code requires that the DCC and each person other than the DCC that participates in (or is required to participate in) testing under a SEC Variation Testing Approach Document shall comply with the SEC Variation Testing Approach Document.

2.3. Section X11.8 of the Code specifies that Section H14 of the Code (Testing Services) and the Enduring Testing Approach Document shall apply in respect of testing under a SEC Variation Testing Approach Document as if such testing was a Testing Service under Section H14.34 (Modification Implementation Testing); and each participant in such testing shall be deemed to be a Testing Participant for such purposes.

2.4. This CH&N SVTAD sets out:

(a) the framework for the testing that is required to be undertaken for the introduction of the CH&N SEC Variations;

(b) the arrangements that apply to the development of CH&N Testing Approach Document(s) for each CH&N Release;

(c) the arrangements that apply to the development of CH&N Test Coverage Document(s) for each CH&N Release; and

(d) the rules to apply to the development of any CH&N Mandated User Testing Document(s) for each CH&N Release; and

(e) the rules to apply to the development of a methodology for the selection of devices to be used in testing.

2.5. Each of the documents described in Clause 2.4 (b)-(d) may be produced:

(a) as separate documents for the version of the Modified DCC Total System that will exist for each CH&N Release;

(b) as separate documents for each of PIT and SIT in respect of a CH&N Release;

(c) in the case of PIT for a CH&N Release, as separate documents per Sub-System; or

(d) as any combination of the aforementioned permutations,

as the DCC considers appropriate. Each document shall clearly state the CH&N Release(s) to which it pertains, and where combined, the DCC shall state in the combined document the individual parts of which it is comprised.

2.6. Testing undertaken pursuant to this CH&N SVTAD shall be performed by the DCC and any other Party that participates in it in accordance with Good Industry Practice.

2.7. The DCC shall not commence any tests in respect of a CH&N Release (including for individual Sub-Systems in PIT) until the CH&N Test Approach Document(s) and CH&N Test Coverage Document(s) that set out the approach to and coverage of those tests has been approved by the TAG.

2.8. Where the CH&N Test Approach Document produced pursuant to Clause 4.1.1 does not set out the approach to the entirety of testing that will be undertaken during the test phase to which the document relates (PIT and/or SIT) in respect of a CH&N Release, this shall be clearly stated in the CH&N Test Approach Document. The DCC shall subsequently seek TAG approval of an updated CH&N Test Approach Document(s) as and when the remaining approach to testing is planned. As set out in Clause 2.7, the DCC shall not commence any tests without a CH&N Test Approach Document setting out the approach to those tests having been agreed pursuant to Clause 4.1.2 or 4.1.4.

2.9. Where the CH&N Test Coverage Document produced pursuant to Clause 4.2.1 does not set out coverage of the entirety of testing that will be undertaken during the test phase to which the document relates (PIT and/or SIT) in respect of a CH&N Release, this shall be clearly stated in the CH&N Test Coverage Document. The DCC shall subsequently seek TAG approval of an updated CH&N Test Coverage Document(s) as and when remaining tests are planned. As set out in Clause 2.7, the DCC shall not commence any tests without a CH&N Test Coverage Document agreed pursuant to Clause 4.2.2 or 4.2.4 setting out the coverage of those tests.

Timetable for Testing

2.10. Test phases shall be commenced in the timescales that are necessary to facilitate testing in accordance with the milestones on the Joint Industry Plan.

CH&N Testing Objective

2.11. The objective of testing undertaken pursuant to this CH&N SVTAD (the “CH&N Testing Objective”) is to demonstrate that the DCC and the component parts of the Modified DCC Total System in respect of each CH&N Release operate and interoperate with User Systems and Smart Metering Systems to the extent necessary for the DCC to comply with the relevant requirements that will exist in the SEC that pertain to that CH&N Release.

Test Entry Criteria

2.12. The fulfilment of the following Entry Criteria is required to permit entry into PIT for a Sub-System or SIT in respect of each CH&N Release:

(a) test plan signed off by the DCC;

(b) all relevant Testing Approach Documents and Test Coverage Documents approved by the TAG;

(c) Test Completion Certificates for any precursor test phase issued;

(d) test specification prepared, including the production of a test traceability matrix;

(e) confirmation that the required test laboratories, Devices, tools, stubs, environments and data are in place, secure and are ready for testing; and

(f) an approval to proceed certificate for the test phase has been issued by the DCC.

3. Modification of the CH&N SVTAD

3.1. This CH&N SVTAD:

(a) shall be modified by the DCC in accordance with any direction to do so made by the Secretary of State. The DCC shall consult with Parties concerning any proposed modification to this document in accordance with any direction to do so by made by the Secretary of State;

(b) may be modified by the DCC following consultation with Parties and other relevant persons, the TAG, the Authority, and the Secretary of State, provided that:

i. prior to making any such modification, DCC must present to the Secretary of State a summary of the consultation responses received and an explanation of how the DCC has taken them into account; and

ii. it may not be modified to the extent that the Secretary of State directs otherwise; and

(c) may be modified by DCC without consultation where the modification is of a minor typographical nature, or where the modification does not have any material effect on the rights or obligations of SEC Parties or any other person who is entitled to undertake testing in accordance with this document.

4. Creation and Modification of the CH&N Test Artefacts

4.1. CH&N Testing Approach Document(s)

4.1.1. Subject to Clause 6, the DCC shall produce each CH&N Test Approach Document(s) in accordance with the requirements in Clause 2.5, which shall include the approach to testing for Sub-Systems in PIT and for the Modified DCC Total System within SIT in respect of each CH&N Release including:

(a) the proposed amendments to this Code that are the subject of or which pertain to the testing, an explanation of the associated changes to the DCC Total System, and the testing objective;

(b) the scope of the CH&N Release(s) to which the Testing Approach Document relates;

(c) the principles and approach to apply to PIT(s) and SIT(s);

(d) the testing environments to be used;

(e) whether devices are to be used in PIT and/or SIT for a CH&N Release and if so, the applicable CH&N Device Selection Methodology;

(f) ~~the process to be followed in selecting devices for use in PIT(s) and SIT(s)~~;

(g) the process for resolving Testing Issues, the applicable Testing Issue Thresholds for use in the relevant PIT completion(s) and relevant SIT completion(s) and the process for excluding Testing Issues;

(h) the exit criteria for testing to complete successfully for the relevant PIT and for the relevant SIT;

(i) any perceived risks associated with the approach to testing and the proposed mitigations;

(j) the approach to providing for assurance of the testing undertaken; and

(k) matters to be included in any Completion Reports for the relevant PIT. The DCC may combine a PIT Completion Report in respect of a CH&N Release for a Sub-System with other PIT Completion Reports in respect of other CH&N Releases pertaining to the same Sub-System, and where it does so, this shall be clearly stated in the combined Completion Report; and

(l) matters to be included in any Completion Report for the relevant SIT in respect of the CH&N Release.

4.1.2. The DCC shall submit each draft CH&N Testing Approach Document in respect of a CH&N Release to the TAG for review (and such submission by the DCC and review by the TAG may take place prior to this Clause 4.1.2 coming into effect); and:

(a) where the TAG and the DCC can reach an agreement, the relevant draft CH&N Testing Approach Document shall be updated by the DCC as necessary and deemed to be final; or

(b) where the TAG and the DCC cannot reach an agreement, the matters of disagreement shall be referred by the DCC to the Secretary of State for determination. The Secretary of State's decision on such matters shall be final and binding for the purposes of this Code and the relevant draft CH&N Testing Approach Document shall be updated by the DCC as necessary and deemed to be final.

4.1.3. The DCC shall comply with each CH&N Testing Approach Document in respect of a CH&N Release.

4.1.4. Revisions to a CH&N Testing Approach Document finalised pursuant to Clause 4.1.2:

(a) may, from time to time, be submitted by the DCC to the TAG for agreement in accordance with the provisions of Clause 4.1.1, and the provisions of Clause 4.1.1 shall apply (again) to the revised version of the document; or

(b) shall be made by the DCC in accordance with any direction to do so issued by the Secretary of State. The DCC shall consult with TAG concerning any such proposed revision in accordance with any direction to do so issued by the Secretary of State.

4.2. CH&N Test Coverage Document(s)

4.2.1. Subject to Clause 6, the DCC shall prepare each CH&N Test Coverage Document in accordance with the requirements in Clause 2.5, which shall set out the depth and breadth of testing required in the relevant PITs and relevant SIT in respect of a CH&N Release and shall include:

(c) the scope (breadth) and coverage (depth) of testing against requirements for the relevant Sub-System (in the case of PIT) and the Modified DCC Total System (in the case of SIT), identified as groupings of functional and non-functional requirements;

(d) where a Test Coverage Document covers both a PIT test phase and SIT, whether the identified requirement shall be tested in PIT or SIT;

(e) where the TAD in respect of PIT or SIT for the CH&N Release specifies that Devices will be used in testing, the list of Devices selected to be utilised in the relevant PIT or relevant SIT (as the case may be), pursuant to the applicable CH&N Device Selection Methodology referenced in the TAD ; and

(f) any perceived risks associated with the scope and coverage of testing and the proposed mitigations.

4.2.2. The DCC shall submit each draft CH&N Test Coverage Document in respect of a CH&N Release to the TAG for review (and such submission by the DCC and review by the TAG may take place prior to this Clause 4.2.3 coming into effect) and:

(a) where the TAG and the DCC can reach an agreement, the relevant draft CH&N Test Coverage Document shall be updated by the DCC as necessary and deemed to be final; or

(b) where the TAG and the DCC cannot reach an agreement, the matters of disagreement shall be referred by the DCC to the Secretary of State for determination. The Secretary of State's decision on such matters shall be final and binding for the purposes of this Code and the relevant draft CH&N Test Coverage Document shall be updated by the DCC as necessary and deemed to be final.

4.2.3. The DCC shall comply with each CH&N Test Coverage Document in respect of a CH&N Release and shall take all reasonable steps to complete the tests set out in each CH&N Test Coverage Document in accordance with the milestones on the Joint Industry Plan.

4.2.4. Revisions to a CH&N Test Coverage Document finalised pursuant to Clause 4.2.3:

(a) may, from time to time, be submitted by the DCC to the TAG for agreement in accordance with the provisions of Clause 4.2.3, and the provisions of Clause 4.2.3 shall apply (again) to the revised version of the document; or

(b) shall be made by the DCC in accordance with any direction to do so issued by the Secretary of State. The DCC shall consult with TAG concerning any such proposed revision in accordance with any direction to do so issued by the Secretary of State.

4.3. CH&N Device Selection Methodology (CH&N DSM)

4.3.1. Subject to Clause 4.3.2 and 4.3.3, the DCC shall prepare a document (the "CH&N Device Selection Methodology") for each CH&N Release which shall set out the process to be followed to select devices to be used for testing in the relevant Sub-System PITs and relevant SIT in respect of that CH&N Release.

4.3.2. A new CH&N DSM does not need to be prepared by the DCC where:

(a) the relevant Testing Approach Document for PIT and/or SIT in respect of a CH&N Release states that an existing CH&N DSM shall apply, or

(b) where the CH&N Release is not required to test with any Device, as set out in the Testing Approach Document for that CH&N Release.

4.3.3. ACH&N Device Selection Methodology shall not apply to testing for the CH&N Release that comprises part of the June 2024 SEC Release that is tested pursuant to Clause 6. Instead, the

DCC shall run tests for that CH&N Release using the devices set out in the test approach document for the June 2024 SEC Release.

4.3.4. The DCC shall submit each CH&N Device Selection Methodology to the TAG for review (and such submission by the DCC and review by the TAG may take place prior to this Clause 4.3.3 coming into effect) and:

(a) where the TAG and the DCC can reach an agreement, the relevant draft CH&N Selection Methodology shall be updated by the DCC as necessary and deemed to be final; or

(b) where the TAG and the DCC cannot reach an agreement, the matters of disagreement shall be referred by the DCC to the Secretary of State for determination. The Secretary of State's decision on such matters shall be final and binding for the purposes of this Code and the relevant draft CH&N Device Selection Methodology shall be updated by the DCC as necessary and deemed to be final.

4.3.5. Revisions to any CH&N Device Selection Methodology finalised pursuant to Clause 4.3.3:

(a) may, from time to time, be submitted by the DCC to the TAG for agreement in accordance with the provisions of Clause 4.3.3, and the provisions of Clause 4.3.3 shall apply (again) to the revised version of the document; or

(b) shall be made by the DCC in accordance with any direction to do so issued by the Secretary of State. The DCC shall consult with TAG concerning any such proposed revision in accordance with any direction to do so issued by the Secretary of State.

5. <u>Test Completion for PIT and SIT in respect of a CH&N Release</u>

5.1. Completion of testing for:

(a) PIT for each relevant Sub-System in respect of a CH&N Release; and

(b) SIT in respect of a CH&N Release,

shall, in each case, only complete when the Panel determines that the exit criteria for completion as set out in the relevant Testing Approach Document have been met.

5.2. When the DCC considers that such completion ought to occur, the DCC shall prepare a Completion Report as provided for in the relevant CH&N Testing Approach Document. The DCC shall:

(a) notify the Secretary of State, the Authority, the Panel, and the Parties that the DCC considers that testing has been completed for the test phase and, in the case of PIT, Sub-System in question in respect of the CH&N Release;

(b) provide the Authority, the Panel, and the Secretary of State with copies of the Completion Report and a list of the sections of such report that the DCC considers should be redacted prior to publication; and

(c) review the supporting documentation and evidence with regards to the relevant exit criteria with the TAG.

5.3. The Panel shall confirm the completion of testing for PIT for a Sub-System in respect of a CH&N Release and SIT in respect of a CH&N Release (as the case may be), or shall highlight where it believes the exit criteria have not been met.

5.4. Where the Panel confirms the completion of testing for the relevant test phase (subject to the Panel and the DCC reaching an agreement regarding resolution of any issues raised by the Panel) the Completion Report shall be updated by the DCC as necessary and deemed to be final.

5.5. Where the Panel declines to confirm the completion of testing for the relevant test phase, the DCC shall update the relevant Completion Report to reflect resolution of any issues where the DCC and the Panel reached an agreement, and the DCC shall then either:

(a) refer the matters where the Panel and the DCC are in disagreement to the Secretary of State for determination; or

(b) continue with testing (and Clause 5.2 shall apply again).

5.6. Where a referral has been made by the DCC pursuant to Clause 5.5, the determination of the Secretary of State shall be final and binding for the purposes of this Code as follows:

(a) where the Secretary of State agrees that testing for the relevant test phase is complete, the relevant Completion Report shall be updated by the DCC as necessary, and the contents shall be deemed to be final; or

(b) where the Secretary of State disagrees that testing for the relevant test phase is complete, the DCC shall continue with testing (and Clause 5.2 onwards shall apply again).

5.7. The DCC shall publish the final Completion Reports for the relevant test phase as soon as reasonably practicable, which shall be anonymised and redacted where directed by the Panel, on the DCC Website. The DCC shall notify the Panel, the Secretary of State, the Authority, and the SEC Parties of the publication of the reports.

6. <u>Dual Testing Governance for SEC Modifications and CH&N SEC Variations in the same SEC Release</u>

6.1. It is acknowledged that the CH&N SEC Variations required to Appendix AD (the DCC User Interface Specification) are planned to be implemented as part of the June 2024 SEC Release. Rather than producing a CH&N Test Approach Document and a CH&N Test Coverage Document in respect of those CH&N SEC Variations, the DCC shall provide for all of the matters that would normally be set out under those documents in respect of the CH&N SEC Variations to Appendix AQ be set out in a test approach document to be agreed by the TAG that also includes testing of the Modifications that comprise the June 2024 SEC Release, provided that:

(a) the entry criteria set out in Clause 2.10 shall apply in respect of the CH&N SEC Variations comprising part of the June 2024 SEC Release, and

(b) where the TAG and the DCC cannot reach an agreement on the approach to and/or coverage of the testing for the CH&N SEC Variations, the matters of disagreement shall be referred by the DCC to the Secretary of State for determination. The Secretary of State's decision on such matters shall be final and binding for the purposes of this Code and the June 2024 SEC Release testing approach document shall be updated by the DCC as necessary and deemed to be final in respect of the CH&N SEC Variations.

6.2. The DCC shall comply with the test approach document for the June 2024 SEC Release insofar as it relates to the CH&N Variations.

6.3. The provisions of Clause 5 shall apply in respect of completion of testing of the CH&N Variations that comprise part of the June 2024 SEC Release, including that where the Panel and the DCC cannot reach an agreement on whether testing has completed in respect of the CH&N SEC Variations, the matters of disagreement shall be referred to the Secretary of State for determination. It is acknowledged that the Completion Report in respect of the CH&N SEC Variations comprising part of the June 2024 Release shall form part of the Completion Report for the June 2024 SEC Release.

7. Mandatory User Testing (if Required)

7.1. Where the DCC considers that User testing is required prior to implementation of a CH&N Release, it shall set out its proposals for User testing in a draft CH&N Mandated User Testing Document for the CH&N Release, including those Users that should be required to participate in the testing and the User Role in which they are required to participate; the entry requirements for those Users required to participate in the testing, the approach to testing; the arrangements for test completion; the process for resolving testing disputes; and notification of test completion. In developing any CH&N Mandated User Testing Document, the DCC shall consult with the TAG, Parties, and other relevant stakeholders prior to the submission of the document to the Secretary of State.

7.2. Following consultation under Clause 7.1, the DCC shall submit each draft CH&N Mandated User Testing Document to the Secretary of State, indicating:

(a) why the DCC considers the draft to be fit for purpose;

(b) copies of the consultation responses received; and

(c) any areas of disagreement that arose during the consultation process and that have not been resolved.

7.3. The DCC shall comply with any direction given by the Secretary of State to re-consider, re-consult, and/or re-submit the draft document(s).

7.4. Should a CH&N Mandated User Testing Document be approved by the Secretary of State for a CH&N Release, the DCC and each Party other than the DCC that participates in (or is required to participate in) testing, as set out in such approved document, shall comply with that CH&N Mandated User Testing Document for that CH&N Release.

8. Interoperability Issues arising in UIT environments

8.1. Prior to the completion of the LSC volume manufacturing milestone set out in the Joint Industry Plan, where interoperability Testing Issues arise during testing in environments used for User testing between the Communications Hub(s) and other HAN-connected Devices, the DCC shall triage and investigate the issue (in conjunction with relevant experts both internal and external) and:

(a) where the DCC determines that the Communications Hub is non-compliant with the baseline version of the SEC specified in the Testing Baseline Requirements Document ("TBRD"), the DCC shall take the steps necessary to rectify and close the issue, or

(b) where the DCC considers that the Communications Hub is compliant with the baseline version of the SEC specified in the TBRD, the DCC shall provide to the Secretary of State a description of what the issue is and the results of its investigation, including a view of how the issue should be rectified and shall refer the matter to the Secretary of State for consideration. The Secretary of State shall determine how the Testing Issue should be rectified and shall notify its decision to the DCC and other stakeholders.

Version AR1.0

APPENDIX AR

SEC Variation Testing Approach Document for the Enduring Change of Supplier Arrangements

Contents

1 Definitions and Interpretations

1.1 In this SEC Variation Testing Approach Document for the Enduring Change of Supplier (ECoS) Arrangements (this "**ECOS SVTAD**"), except where the context otherwise requires, the expressions in the left-hand column within Table 1.1 shall have the meanings given to them in the right-hand column within Table 1.1. Where not defined in this ECoS SVTAD, words beginning with a capital letter used in this document are defined in Section A of the SEC.

1.2 Where there are conflicts between this ECoS SVTAD and the related ECoS Testing Approach Document, this ECoS SVTAD shall take precedence.

1.3 Where obligations are expressed in respect of DCC Service Providers in this ECoS SVTAD, these shall be construed as obligations on the DCC. Where text is included in this ECoS SVTAD which does not explicitly place obligations on a Party, the Panel, or Testing Participant, these shall be construed as obligations on the DCC.

Table 1.1 ECOS SVTAD Definitions

Term	Meaning
Centralised Registration Service (CRS) (aka Central Switching Service)	has the meaning given to this term in Part C of Condition 15 of the DCC Licence.
Completion Report	means a report that is produced setting out evidence demonstrating how the criteria for the completion of the testing has been met.
ECoS	the abbreviation for Enduring Change of Supplier.
ECoS Testing Approach Document	means the testing approach document produced pursuant to Clauses 3.2 – 3.5 of this document.
ECoS Mandated User Testing Document	means any document prepared pursuant to Clause 3 of this document that sets out the approach to mandatory User Testing.
ECoS Certificate	means an Organisation Certificate for which the ECoS Service Provider is the Subject.

ECoS Migration	means, in relation to a Device (or a number of Devices), the replacement of those Device Security Credentials held on or in relation to that Device (or those Devices) that have been populated with information from a TCoS Certificate with information from an ECoS Certificate and any supporting arrangements. The term "ECoS Migrated" shall be interpreted accordingly.
ECoS Service Provider	means the DCC Service Provider(s) that will support the operation of the CoS Party following the completion of the implementation of the Enduring Change of Supplier Arrangements.
Enduring Change of Supplier (ECoS) Variations	means the variations to the SEC that are planned as part of the introduction of the ECoS Arrangements, including, for the avoidance of doubt, those changes that will apply during the period of ECoS Migration. The variations shall, except to the extent agreed by the Secretary of State, additionally include those changes to the SEC that the Authority plans to make as part of the introduction of the Centralised Registration Service and which relate to the sending of Registration Data to the CoS Party.
Enduring Change of Supplier Arrangements (ECoS Arrangements)	has the meaning given to this term in Condition 13A of the DCC Licence.
Exit Criteria	means the criteria that must be met in order for testing (or a phase of testing) to complete.
Modified DCC Total System	means the DCC Total System as will be modified to enable the delivery of Services following the introduction of the ECoS Arrangements.
Subject	has the meaning given to that term in Appendix B of the SEC (Organisation Certificate Policy).
TAG	means the SEC Panel's Testing Advisory Group.
TCoS	the abbreviation for transitional change of supplier.
TCoS Certificate	means an Organisation Certificate for which the TCoS Service Provider is the Subject.
TCoS Service Provider	means the DCC Service Provider that solely supported the operation of the CoS Party prior to the commencement of the implementation of the Enduring Change of Supplier Arrangements.

Testing Issue Thresholds	means the maximum number of extant Testing Issues that may be permitted at test completion.
User Testing	means testing by one or more Users of all or part of any changes to the Modified DCC Total System that occur as a result of the ECoS Arrangements

2 General

2.1 This document is the SEC Variation Testing Approach Document for the ECoS Variations.

2.2 Section X11.7 of the Code requires that the DCC and each person other than the DCC that participates in (or is required to participate in) testing under a SEC Variation Testing Approach Document shall comply with the SEC Variation Testing Approach Document.

2.3 Section X11.8 of the Code specifies that Section H14 of the Code (Testing Services) and Appendix J of the Code (Enduring Testing Approach Document) shall apply in respect of testing under a SEC Variation Testing Approach Document as if such testing was a Testing Service under Section H14.34 (Modification Implementation Testing); and each participant in such testing shall be deemed to be a Testing Participant for such purposes.

2.4 This ECoS SVTAD sets out:

(a) the framework for the testing that is required to be undertaken for the introduction of the ECoS Variations;

(b) the arrangements that apply to the development of the ECoS Testing Approach Document; and

(c) the rules to apply to the development of any ECoS Mandated User Testing Document.

2.5 This ECoS SVTAD shall be modified by the DCC in accordance with any direction to do so made by the Secretary of State. The DCC shall consult with Parties concerning any proposed modification to those documents in accordance with any direction to do so made by the Secretary of State.

2.6 The ECoS Testing Approach Document shall be modified by the DCC in accordance with any direction to do so made by the Secretary of State. Any such modifications shall be submitted by the DCC to the TAG for agreement in accordance with the provisions of Clause 3.3, and the provisions of Clause 3.4 shall apply (again) to the revised version of the document.

2.7 This ECoS SVTAD may be modified by the DCC following consultation with Parties and other relevant persons, the TAG, the Authority, and the Secretary of State, provided that:

(a) prior to making any such modification, the DCC must present to the Secretary of State a summary of the consultation responses received and an explanation of how the DCC has taken them into account; and

(b) may not be modified to the extent that the Secretary of State directs otherwise.

2.8 The ECoS SVTAD may be modified by DCC without consultation where the modification is of a minor typographical nature, or where the modification does not have any material effect on the rights or obligations of SEC Parties or any other person who is entitled to undertake testing in accordance with this document.

3 ECoS Testing Approach Documents

3.1 Testing undertaken pursuant to this ECoS SVTAD shall be performed by the DCC and any other Party that participates in it in accordance with Good Industry Practice.

3.2 The DCC shall prepare a draft ECoS Testing Approach Document, which may include the approach to testing where it is required for the changes that comprise part of the ECoS Variations including:

(a) the proposed amendments to this Code that are the subject of the testing, an explanation of the associated changes to the Modified DCC Total System, and the testing objective;

(b) the testing environments to be used;

(c) the requirements (if any) for device testing;

(d) the requirements (if any) for security testing;

(e) the requirements (if any) for system capacity testing;

(f) the testing that shall be undertaken, both in terms of the scope of testing and the extent of testing (including negative tests) and the approach to regression testing;

(g) the requirements for ECoS Migration testing;

(h) the applicable Testing Issue Thresholds and the process for excluding Testing Issues;

(i) the exit criteria for testing to complete successfully;

(j) any perceived risks associated with the approach to testing and the proposed mitigations;

(k) the approach to providing for assurance of the testing undertaken; and

(l) matters to be included in the ECoS SEC Release Testing Completion Report (to be prepared pursuant to Clause 4.1).

3.3 The DCC shall submit the draft ECoS Testing Approach Document to the TAG for review (and such submission by the DCC and review by the TAG may take place prior to this Clause 3.3 coming into effect); and:

(a) where the TAG and the DCC can reach an agreement, the relevant draft ECoS Testing Approach Document shall be updated by the DCC as necessary and deemed to be final; or

(b) where the TAG and the DCC cannot reach an agreement on the approach to testing for the ECoS Variations, the matters of disagreement shall be referred by the DCC to the Secretary of State for determination. The Secretary of State's decision on such matters shall be final and binding for the purposes of this Code and the relevant draft ECoS Testing Approach Document shall be updated by the DCC as necessary and deemed to be final.

3.4 The DCC shall comply with the ECoS Testing Approach Document and shall take all reasonable steps to complete the tests set out in the ECoS Testing Approach

Document in accordance with the milestone plan published by the DCC for the ECoS Variations.

3.5 Revisions to the ECoS Testing Approach Document finalised pursuant to Clause 3.2 may, from time to time, be submitted by the DCC to the TAG for agreement in accordance with the provisions of Clause 3.3, and the provisions of Clause
3.4 shall apply (again) to the revised version of the document.

3.6 The ECoS Testing Approach Document shall set out the Devices to be used for testing. Where there is a disagreement between DCC and the TAG on Devices to be used for testing in respect of the ECoS changes, it shall be referred to the Secretary of State for determination whose decision shall be final and binding.

3.7 Where the DCC considers that User Testing is required prior to implementation of the ECoS Variations it shall set out its proposals for User Testing in a draft ECoS Mandated User Testing Document, including those Users that should be required to participate in the testing and the User Role in which they are required to participate; the approach to testing; the arrangements for test completion; the process for resolving testing disputes; and notification of test completion. In developing the ECoS Mandated User Testing Document, the DCC shall consult with the TAG, Parties, and other relevant stakeholders prior to the submission of the document to the Secretary of State.

3.8 Following consultation under Clause 3.7, the DCC shall submit the draft ECoS Mandated User Testing Document to the Secretary of State, indicating:

(a) why the DCC considers the draft to be fit for purpose;

(b) copies of the consultation responses received; and

(c) any areas of disagreement that arose during the consultation process and that have not been resolved.

3.9 The DCC shall comply with any direction given by the Secretary of State to re-consider, re-consult, and/or re-submit the draft document.

3.10 Should an ECoS Mandated User Testing Document be approved by the Secretary of State, the DCC and each Party other than the DCC that participates in (or is required to participate in) testing, as set out in such approved document, shall comply with that ECoS Mandated User Testing Document.

3.11 Each Supplier Party shall, where and to the extent reasonably requested by the DCC, provide information to the DCC relating to whether it intends to carry out testing of its User Systems in order to verify that it will be able to successfully submit "CoS Update Security Credentials" Service Requests under the ECoS Arrangements and have them successfully processed, and if so:

(a) when it proposes to carry out those tests;

(b) detail about the specific tests that it proposes to conduct, and

(c) following completion of the tests, whether or not the tests that it carried out demonstrated that the User could submit "CoS Update Security Credentials" Service Requests under the ECoS Arrangements and have them successfully executed.

4 Test Completion

4.1 Completion of the testing for the ECoS Variations set out in the ECoS Testing Approach Document shall only complete when the Panel determines that the Exit Criteria set out in that document for that testing have been met. When the DCC considers that such completion ought to occur, the DCC shall prepare a Completion Report (which may comprise part of an ECoS SEC Release Completion Report) as provided for in the ECoS Testing Approach Document. The DCC shall:

(a) notify the Secretary of State, the Authority, the Panel, TAG and the Parties that the DCC considers that testing has been completed;

(b) provide the Authority, the Panel, TAG and the Secretary of State with copies of the Completion Report (or where one exists, the ECoS SEC Release Completion Report), and a list of the sections of such report that the DCC considers should be redacted prior to publication; and

(c) review the supporting documentation and evidence with regards to the relevant Exit Criteria with the TAG.

4.2 The Panel shall confirm the completion of testing for the ECoS changes set out in the ECoS Testing Approach Document or shall highlight where it believes the Exit Criteria have not been met.

4.3 Where the Panel confirms the completion of testing for the ECoS changes (subject to the Panel and the DCC reaching an agreement regarding resolution of any issues raised by the Panel) the Completion Report (or where one exists, the ECoS SEC Release Completion Report) shall be updated by the DCC as necessary and deemed to be final.

4.4 Where the Panel declines to confirm the completion of testing for the ECoS changes, the DCC shall update the Completion Report (or where one exists, the ECoS SEC Release Completion Report) to reflect resolution of any issues where the DCC and the Panel reached an agreement, and the DCC shall then either:

(a) refer the matters where the Panel and the DCC disagree with respect to the ECoS changes to the Secretary of State for determination; or

(b) continue with testing (and Clause 4.1 onwards shall apply again).

4.5 Where a referral has been made by the DCC pursuant to Clause 4.4, the determination of the Secretary of State shall be final and binding for the purposes of this Code as follows:

(a) where the Secretary of State agrees that testing for the ECoS changes is complete, the relevant Completion Report (or where one exists, the ECoS SEC Release Completion Report) shall be updated by the DCC as necessary and the contents relating to the ECoS changes shall be deemed to be final; or

(b) where the Secretary of State disagrees that testing for the ECoS changes is complete, the DCC shall continue with testing (and Clause 4.1 onwards shall apply again).

4.6 The DCC shall publish the final Completion Report (or where one exists, the ECoS SEC Release Completion Report), which shall be anonymised and redacted where directed by the Panel, on the DCC Website. The DCC shall notify the Panel, the Secretary of State, the Authority, and the SEC Parties of the publication of the report.

Version 3.0

Appendix AS

ECoS Transition and Migration Approach Document

1 Introduction and General Obligations and Application of ETMAD

1.1 This Appendix is the ECoS Transition and Migration Approach Document (**ETMAD**).

1.2 Where directed to do so by the Secretary of State from time to time, the DCC shall develop and consult upon a further draft or drafts of this ETMAD and submit it to the Secretary of State in accordance with the process set out in Section G11.6 of the Code.

1.3 Subject to Clause 1.4, the DCC shall attempt ECoS Migration for all eligible TCoS Devices as soon as reasonably practicable. Devices shall only be eligible for ECoS Migration where they have been Commissioned (or in the case of a Gas Proxy Function has been installed as part of a Communications Hub Function that has been Commissioned) and have not subsequently been Decommissioned.

1.4 The DCC shall not attempt to migrate a particular Device that is deemed to be Ineligible for ECoS Migration. Devices may be Ineligible for ECoS Migration where:

(a) the Device is of a Device Model that has been classified as Non-Migratable;

(b) there is a transient issue which may impact the effectiveness of ECoS Migration such as recent or pending change of supplier, or recent Commissioning; or

(c) there is a technical issue impacting the functionality of the Device.

If the issue which made the Device Ineligible for ECoS Migration is subsequently resolved and / or no longer applies, the relevant Device shall no longer be Ineligible for ECoS Migration and the DCC shall attempt ECoS Migration for the Device in accordance with Clause 1.3.

1.5 The Responsible Supplier for each Device that holds Device Security Credentials that are populated from a TCoS Certificate, authorises the DCC to take the steps and carry out the processing set out in this ETMAD in order to ECoS Migrate each such Device.

1.6 The DCC shall not commence Bulk Migration for Devices of a particular Device Model until the DCC is reasonably satisfied that the DCC Systems can successfully migrate a Device of that particular Device Model in accordance with Clause 6.1(b).

1.7 Where the ECoS Migration of an individual Device is unsuccessful, the DCC shall complete remediation activities in accordance with the ECoS Migration Error Handling and Retry Approach, as further described in Clause 7.

1.8 The DCC shall issue reports to Supplier Parties in accordance with the ECoS Migration Reporting Regime, as further described in Clause 4. As a minimum these reports will contain details of:

(a) Devices that have Failed Migration; and

(b) Device Models that are categorised as Non-Migratable, together with the DCC's supporting rationale.

1.9 Responsible Suppliers shall monitor reports provided in accordance with Clause 1.8 and shall endeavour to resolve issues which led to the Failed Migration of Devices for which they are the Responsible Supplier, in accordance with the ECoS Migration Error Handling and Retry Approach.

1.10 Subject to Clause 1.11, where a Device is identified as being of a Device Model categorised as Non-Migratable or the issues leading to Failed Migrations cannot be resolved in accordance with Clause 1.9, the Responsible Supplier (except in the case of a Gas Proxy Function) shall upgrade the existing firmware version to a version of firmware that is functionally capable of ECoS Migration.

1.11 Where a Gas Proxy Function Device Model is identified as being of a Device Model categorised as Non-Migratable or the issues leading to Failed Migrations of a Gas Proxy Functions cannot be resolved in accordance with the ECoS Migration Error Handling and Retry Approach, the DCC shall be responsible for completing remediation activities with the aim of enabling ECoS Migration to proceed, including upgrading the existing firmware version to a version of firmware that is functionally capable of ECoS Migration (where applicable).

1.12 The DCC shall publish a list of Non-Migratable Device Models, to be updated regularly and as soon as practicable to reflect any changes identified.

1.13 Where a Party disagrees with the categorisation of a particular Device Model as Non-Migratable, the DCC shall endeavour to reach an agreed position with that Party. Where agreement cannot be reached, Parties may appeal the DCC's decision to categorise the Device Model as Non-Migratable to the Secretary of State.

1.14 Where an appeal has been made pursuant to Clause 1.13, the determination by the Secretary of State shall be final and binding for the purposes of this Code, provided that where a Device Model is categorised as Non-Migratable, the DCC may subsequently re-categorise the Device Model as being capable of ECoS Migration.

1.15 Supplier Parties shall take all reasonable steps to manage their inventory of Devices to prioritise the installation and Commissioning of TCoS Devices ahead of ECoS Devices. Supplier Parties shall take all reasonable steps to ensure manufacturers update their processes to initiate production of ECoS Devices as soon as reasonably practicable following receipt of the ECoS Certificate from the DCC.

1.16 The DCC shall manage the inventory of Communications Hubs to prioritise the provision of those that include Gas Proxy Functions with TCoS Certificates ahead of those with ECoS Certificates. The DCC shall take all reasonable steps to ensure providers of Communication Services update their processes to initiate production of ECoS Devices as soon as reasonably practicable following receipt of the ECoS Certificate from the DCC.

1.17 Prior to the addition of a new Device Model to the Certified Products List within the ECoS Migration Period, Supplier Parties intending to install Devices of that new Device Model shall ensure that, where reasonably practicable, testing is completed to demonstrate that ECoS Migration can be successfully performed on Devices of that Device Model, including the successful processing of a CoS Update Security Credentials Service Request (Service Reference Variant 6.23) after ECoS Migration has taken place.

1.18 The DCC shall provide updates and reports from time to time, to the Secretary of State relating to activities carried out in accordance with this ETMAD, in a format and frequency to be mutually agreed between the DCC and the Secretary of State.

1.19 Prior to the end of the ECoS Migration Period, DCC shall ensure that the ECoS Party has the required information to enable processing of CoS Update Security Credentials Service Requests (Service Reference Variant 6.23) for all SMETS1 Devices.

1.20 The ECoS Party may commence processing of CoS Update Security Credentials Service Requests (Service Reference Variant 6.23) for SMETS1 Devices at any time within the ECoS Migration Period, provided that relevant testing has been completed in accordance with the ECoS Testing Approach Document.

1.21 For the purposes of Section G11.11 of the Code, this ETMAD shall no longer apply (and shall be automatically deleted from the Code) on 1 November 2024 (or any such later date as the Secretary of State may direct following consultation on a proposed alternative with the Parties and the Panel).

2 <u>Defined Terms and Interpretation for the purposes of ETMAD</u>

Bulk Migration	means the ECoS Migration of more than a defined number of Devices of a particular Device Model. The number of Devices which constitutes Bulk Migration for a particular Device Model shall be defined by the DCC. For the avoidance of doubt, until the proving activities set out in Clause 6.1(b) have been successfully completed, no more than three hundred (300) Devices of a particular Device Model shall be migrated.
ECoS Device	means a Device which has Device Security Credentials which pertain to the ECoS Party.
ECoS Migration	has the meaning given to that term in Section G11.12 of this Code and the term

	"**ECoS Migrate**" shall be interpreted accordingly.
ECoS Migration Error Handling and Retry Approach	means the document defined in Clause 7.1.
ECoS Migration Incident	means an Incident that relates to the Services provided pursuant to this ETMAD.
ECoS Migration Period	means the period from commencement of ECoS Migration until this ETMAD is no longer applicable, in accordance with Clause 1.21.
ECoS Migration Reporting Regime	means the document defined in Clause 4.
ECoS Party	means the DCC when discharging the role of the ECoS Party.
Failed Migration	means in relation to a Device, the failure to complete any one or more of the steps specified in Clause 6.1(c).
Gas Proxy Function Device Model	means, in relation to a Gas Proxy Function, the Device Model of the Communications Hub of which that Gas Proxy Function forms part.
Ineligible for ECoS Migration	means a status applied to a Device where DCC shall not attempt ECoS Migration as further described in Clause 1.4.
Non-Migratable	(in respect of Devices of a particular Device Model) means that the DCC considers it to be (i) technically or operationally impracticable, or (ii)

	disproportionately costly to attempt or re-attempt ECoS Migration. Such determination by the DCC shall be subject to any determination to the contrary by the Secretary of State in response to an appeal as set out in Clause 1.13.
TCoS Device	means a Device which has Device Security Credentials which pertain to the TCoS Party.

2.1 For the purposes of this ETMAD, where any reference is made (either directly or indirectly) to the Device Model of a Gas Proxy Function, this shall be interpreted as a reference to the Device Model of the Communications Hub of which that Gas Proxy Function forms part.

2.2 For the purposes of this ETMAD, where any reference is made (either directly or indirectly) to the Responsible Supplier of a Gas Proxy Function, this shall be interpreted as the Responsible Supplier for the Gas Smart Meter Equipment connected to the Communications Hub, where available. Where there is no Gas Smart Meter Equipment connected to the Communications Hub, the Responsible Supplier of the Gas Proxy Function, shall be interpreted as the Responsible Supplier for the Electricity Smart Meter Equipment connected to the Communications Hub, where available. Where there is neither any Gas Smart Meter Equipment nor any Electricity Smart Meter Equipment, there will be no Responsible Supplier.

3 Transitional Application of Sections of the Code

Application of Section A (Definitions and Interpretation)

3.1 Whilst this ETMAD remains in force, Section A (Definitions and Interpretation) of the Code shall apply as follows:

(a) the definition of “DCC Individual Live Systems” (which has been replaced by the SMETS1 Transition and Migration Approach Document – Appendix AL) shall be amended to read as follows:

DCC Individual Live System

means, with regard to the DCC's duty to Separate parts of the DCC Total System, a part of the DCC Total System which is used:

(a) for one of the purposes specified in paragraphs (a) to (g) or (j) or paragraphs (l) or (m) of the definition of DCC Live Systems, where the part used for each such purpose shall be treated as an individual System distinct from:

(i) the part used for each other such purpose; and

(ii) any part used for a purpose specified in either paragraphs (h) to (k) of the definition of DCC Live Systems; or

(b) by a SMETS1 Service Provider for the purpose specified in paragraph (h) of the definition of DCC Live Systems, where the part used by each SMETS1 Service Provider shall be treated as an individual System distinct from:

(i) the part used by each other SMETS1 Service Provider; and

(ii) any part used for a purpose specified in any of paragraphs (a) to (g), or paragraphs (i) to (m), of the definition of DCC Live Systems; or

(c) by a DCO for the purpose specified in paragraph (i) of the definition of DCC Live Systems, where the part used by each DCO shall be treated as an individual System distinct from:

(i) the part used by each other DCO; and

(ii) any part used for a purpose specified in any of paragraphs (a) to (h) or paragraphs (j) to (m) of the definition of DCC Live Systems; or

(d) by a Requesting Party for the purpose specified in paragraph (k) of the definition of DCC Live Systems, where the part used by each Requesting Party shall be treated as an individual System distinct from:

(i) the part used by each other Requesting Party; and

(ii) any part used for the purpose specified in any of paragraphs (a) to (j) or paragraphs (l) or (m) of the definition of DCC Live Systems.

(b) the definition of "DCC Live Systems" (which has been replaced by the SMETS1 Transition and Migration Approach Document – Appendix AL) amended to read as follows:

DCC Live Systems means, with regard to the DCC's duty to Separate parts of the DCC Total System, those parts of the DCC Total System which are used for the purposes of:

(a) (other than to the extent to which the activities fall within paragraph (b), (c), (f), (g), (h), (i), (j), (k), (l) or (m) below) processing Service Requests, Pre-Commands, Commands, Service Responses and Alerts, holding or using Registration Data for the purposes of processing Service Requests and Signed Pre-Commands, and providing the Repository Service;

(b) Threshold Anomaly Detection (other than that carried out by a DCO, a SMETS1 Service Provider or the CoS Party) and (other than to the extent to which the activity falls within paragraph (d), (f), (g), (h), (i), (j), (k) or (l) below) Cryptographic Processing relating to the generation and use of a Message Authentication Code and Countersigning SMETS1 Service Requests;

(c) discharging the obligations placed on the DCC in its capacity as CoS Party;

(d) providing SMKI Services;

(e) the Self-Service Interface;

(f) discharging the DCC’s obligations under the SMKI Recovery Procedure; and

(g) the Production Proving Systems,

(h) discharging the obligations of any SMETS1 Service Provider in its capacity as such;

(i) discharging the obligations of any DCO in its capacity as such;

(j) discharging the obligations of the CSS Provider in its capacity as such;

(k) discharging the obligations of any Requesting Party in its capacity as such;

(l) discharging the obligations of the Commissioning Party in its capacity as such; and

(m) discharging the obligations of the TCoS Party in its capacity as such,

each of which shall be treated as an individual System within the DCC Live Systems.

(c) the definition of “Signed Pre-Command” shall be amended to read as follows:

Signed Pre-Command means a communication containing the Digitally Signed GBCS Payload of a Pre-Command that has been Digitally Signed by a User, the CoS Party or the TCoS Party.

(d) the following definitions shall be added:

TCoS Party means the DCC when discharging the role of the TCoS Party.

TCoS Systems The DCC Systems that were used to support the operation of the CoS Party immediately prior to the commencement of ECoS

Migration and that continue to be used to support the operation of the TCoS Party.

Application of Section G (Security)

3.2 Whilst this ETMAD remains in force, Section G (Security) of the Code shall be amended as follows:

(a) Clause G2.20(c) shall be replaced with the following:

‘(c) subject to the provisions of Sections G2.21 and G2.22, each DCC Individual Live System is Separated from each other such System.’

(b) Clause G2.21 shall be replaced with the following:

‘G2.21The DCC Individual Live System referred to at paragraph (m) of the definition of DCC Live Systems in Section A1 (Definitions) need not be Separated from the DCC Individual Live System referred to at paragraph (a) of that definition to the extent that it uses that System referred to at paragraph (a) solely for the purposes of confirming the relationship between:

(a) an MPAN or MPRN and any Party Details;

(b) an MPAN or MPRN and any Device; or

(c) any Party Details and any User ID.’

(c) Clause G2.44(a) amended such that the words “or TCoS Party” shall be added after the words “CoS Party”.

(d) Clause G11.12 amended such that the words “and the ETMAD” shall be added after the words “For the purposes of this Section G11”.

Application of Section H (DCC Services)

3.3 Whilst this ETMAD remains in force, Section H17.5 shall be amended to additionally include the following data items:

(a) ECoS party value;

(b) ECoS migration failure code;

(c) ECoS migration failure sub-code;

(d) ECoS migration date of last failure; and

(e) ECoS non-migratable flag.

Application of Section L (Smart Metering Key Infrastructure and DCC Key Infrastructure)

3.4 Whilst this ETMAD remains in force, Section L (Smart Metering Key Infrastructure and DCC Key Infrastructure) of the Code shall be amended as follows:

(a) In the table in Clause L3.18 the row corresponding to a Remote Party Role of 'transitionalCoS' shall be amended as follows:

transitionalCoS	The DCC	[Not applicable]	(c) or (m)

and the row corresponding to a Remote Party Role of 'coSPartyXmlSign' shall be amended as follows:

coSPartyXmlSign	The DCC	[Not Applicable]	(c) or (m)

(b) In the table in Clause L3.24 the row corresponding to a "DCC (transitionalCoS) Certificate" shall be amended as follows:

DCC (transitionalCoS) Certificate	digitalSignature	transitionalCoS	The role of the DCC as CoS Party or TCoS Party

Application of Appendix AB (Service Request Processing Document)

3.5 Whilst this ETMAD remains in force, Appendix AB (Service Request Processing Document) of the Code shall be amended as follows:

(a) Clause 6.4 shall be replaced with the following:

‘6.4 Clause 6.5 shall apply subject to:

(a) (in relation to SMETS2+ Service Requests only) Clauses 9 (Obligations of the DCC: 'Request Handover of DCC Controlled Device' Service Requests), and 11 (User and DCC Obligations: 'Join Service' and 'Unjoin' Service Requests for Pre-Payment Meter Interface Devices and Gas Smart Meters);

(b) (for all Service Requests other than SMETS1 Service Requests targeted at a TCoS Device) Clause 8 (Obligations of the DCC: 'CoS Update Security Credentials' Service Requests and (where relevant) Corresponding Pre-Commands); and

(c) (for all Service Requests) Clause 18 (Obligations of the DCC: Non-Device Service Requests).’

(b) Clause 8 shall be replaced with the following:

‘Obligations of the DCC: 'CoS Update Security Credentials' Service Requests and (where relevant) Corresponding Pre-Commands

8.1 The following shall apply in respect of each 'CoS Update Security Credentials' Service Request where the target Device of the Service Request is not a TCoS Device:

(a) where all of the requirements of Clause 6.1 are satisfied in respect of such a Service Request, the DCC shall send a Digitally Signed communication containing the ‘CoS Update Security Credentials’ Service Request (a “Countersigned CoS Service Request”) to the CoS Party; and

(b) following receipt of the Countersigned CoS Service Request , and immediately prior to creating any corresponding Update Security Credentials Signed Pre-Command referred to in Clause 8.2, the CoS Party shall:

(i) Check Cryptographic Protection for the Countersigned CoS Service Request received;

(ii) Confirm Validity of the Certificates used to Check Cryptographic Protection;

(iii) apply the checks set out in Clauses 6.1(a), 6.1(d), 6.1(e.), 6.1(f), 6.1(g), 6.1(j) and 6.1(k) to the Service Request contained within the Countersigned CoS Service Request; and

(iv) confirm that the Service Request is not a Replay.

8.1A The following shall apply in respect of each 'CoS Update Security Credentials' Service Request where the target Device of the Service Request is a TCoS Device and the Service Request is not a SMETS1 Service Request:

(a) where all of the requirements of Clause 6.1 are satisfied in respect of such a Service Request, the DCC shall send a Digitally Signed communication containing the 'CoS Update Security Credentials' Service Request (a "Countersigned CoS Service Request") to the TCoS Party; and

(b) following receipt of the Countersigned CoS Service Request specified in Clause 8.1A(a), and immediately prior to creating any corresponding Update Security Credentials Signed Pre-Command referred to in Clause 8.2A, the TCoS Party shall:

(i) Check Cryptographic Protection for both the communication and for the Service Request included within it;

(ii) Confirm Validity of the Certificates used to Check Cryptographic Protection for both the communication and for the Service Request included within it;

(iii) confirm that User ID of the User who submitted the Service Request and the User ID contained within in each of the Organisation Certificates included within the Service Request are all associated with the same User; and

(iv) confirm that the User ID in each of the Organisation Certificates included within the Service Request is that of the Party who is identified via:

(A) the relevant MPRN or MPAN (as applicable) included within the Service Request; and

(B) the Registration Data for that relevant MPRN or MPAN,

as being the Party who is (or is to be) the Responsible Supplier for the relevant Device on the specified execution date or, if the execution date is not specified, on the current date.

8.2 Where, in respect of the communication received in relation to a 'CoS Update Security Credentials' Service Request, the requirements of Clause 8.1(b) are satisfied, the CoS Party shall apply CoS Party Threshold Anomaly Detection in accordance with the requirements of Clause 20 (CoS Party Threshold Anomaly Detection), which may result in a cessation of processing of the Service Request by the CoS Party, but otherwise either;

(a) where the target Device of the original ‘Cos Update Security Credentials Service Request is a SMETS2+ Device,

(i) generate the GBCS Payload of an 'Update Security Credentials' Signed Pre-Command that is substantively identical to the 'CoS Update Security Credentials' Service Request;
(ii) Digitally Sign the GBCS Payload;
(iii) Incorporate the Digitally Signed GBCS Payload and the original Service Request into a single communication and Digitally Sign the communication with a CoS Party XML Signing Key to create a CoS Authorisation Response; and
(iv) send the signed CoS Authorisation Response to the DCC, or

(b) where the target Device of the original ‘Cos Update Security Credentials Service Request is a SMETS1 Device:

(i) Digitally Sign the communication with a CoS Party XML Signing Key to create a CoS Authorisation Response; and

(ii) send the signed CoS Authorisation Response to the DCC.

8.2A Where, in respect of the communication received in relation to a ‘CoS Update Security Credentials’ Service Request, the requirements of Clause 8.1A (b) are satisfied, the TCoS Party shall:

(a) generate the GBCS Payload of an 'Update Security Credentials' Signed Pre-Command that is substantively identical to the 'CoS Update Security Credentials' Service Request;

(b) Digitally Sign the GBCS Payload; and

(c) send the resultant communication as a Signed Pre-Command to the DCC.

8.3 Where, in respect of a communication received in relation to a 'CoS Update Security Credentials' Service Request, the requirements of Clause 8.1(b) are not satisfied:

(a) the CoS Party shall not undertake any further processing of the communication, and shall notify the DCC; and

(b) the DCC shall notify the User that sent the original Service Request that the Service Request cannot be processed (such notification to be sent via the DCC User Interface).

8.3A Where, in respect of the communication received in relation to a ‘CoS Update Security Credentials’ Service Request, the requirements of Clause 8.1A (b) are not satisfied:

(a) the TCoS Party shall not undertake any further processing of the communication and shall notify the DCC; and

(b) the DCC shall notify the User that sent the original Service Request that the Service Request cannot be processed (such notification to be sent via the DCC User Interface).

8.4 Where the DCC receives a CoS Authorisation Response from the CoS Party, the DCC shall apply the following checks:

(a) Check Cryptographic Protection for the CoS Authorisation Response;

(b) Confirm Validity of the Certificates used to Check Cryptographic Protection for the CoS Authorisation Response;

(c) Confirm that the Remote Party Role of the Certificate used to Check Cryptographic Protection for the CoS Authorisation Response is ‘coSPartyXmlSign’

(d) Confirm that the CoS Authorisation Response is valid and well formed;

(e) Confirm that the CoS Authorisation Response maps to a Countersigned CoS Service Request that was previously sent to the CoS Party;

(f) apply the checks set out in Clauses 6.1(a), 6.1(d), 6.1(e.), 6.1(f), 6.1(g), 6.1(j) and 6.1(k) to the Service Request contained within the CoS Authorisation Response;

(g) (in the circumstances where the target Device of the original ‘CoS Update Security Credentials Service Request is a SMETS2+ Device only) confirm that the Signed Pre-Command contained within the CoS Authorisation Response is substantively identical to the Service Request contained within the CoS Authorisation Response; and

(h) confirm that neither the CoS Authorisation Response, nor the Service Request contained within it is a Replay.

8.4A Where the DCC receives a Signed Pre-Command from the TCoS Party, the DCC shall apply the following checks:

(a) confirm that the User ID within each Organisation Certificate within the Signed Pre-Command is the same as the User ID within the corresponding Organisation Certificate in the original 'CoS Update Security Credentials' Service Request;

(b) confirm that the Device ID within the Signed Pre-Command is the same as the Device ID included in the corresponding 'CoS Update Security Credentials' Service Request;

(c) confirm that the message originated from the TCoS Party by Checking the Cryptographic Protection for the message;

(d) Confirm Validity of the Certificates used to Check Cryptographic Protection for the message;

(e) Confirm Validity of all Certificates contained within the Signed Pre-Command; and

(f) confirm that the User ID in each of the Organisation Certificates included within the Signed Pre-Command is that of the Party who is identified via:

(i) the relevant MPRN or MPAN (as applicable) with which the Device specified in the Signed Pre-Command is associated in the Smart Metering Inventory; and

(ii) the Registration Data for that relevant MPRN or MPAN,

as being the Party who is (or is to be) the Responsible Supplier for the relevant Device on the specified execution date or, if the execution date is not specified, on the current date.

8.5 Subject to Clause 14 (Orchestration of Service Requests), where all of the requirements of Clause 8.4 are satisfied in respect of a CoS Authorisation Response received from the CoS Party, the DCC shall:

(a) (in the circumstances where the target Device of the original ‘CoS Update Security Credentials Service Request is a SMETS2+ Device) send a Command associated with the Signed Pre-Command contained within the CoS Authorisation Response in accordance with Clause 13 (DCC Obligations: Sending Commands); or

(b) (in the circumstances where the target Device of the original ‘CoS Update Security Credentials Service Request is a SMETS1 Device) Countersign the CoS Update Security Credentials Service Request and send the Countersigned Service Request to the relevant SMETS1 Service Provider in accordance with the requirements of Clause 14.

8.5A Subject to Clause 14 (Orchestration of Service Requests), where all of the requirements of Clause 8.4A are satisfied in respect of a Signed Pre-Command received from the TCoS Party, the DCC shall send the associated Command in accordance with Clause 13 (DCC Obligations: Sending Commands).

8.6 Where any of the checks in Clause 8.4 are not satisfied in respect of a CoS Authorisation Response received from the CoS Party, the DCC shall:

(a) not be obliged to undertake any of the other checks that remain to be undertaken, and the DCC shall reject the CoS Authorisation Response;

(b) save where Clause 8.4(c) is not satisfied, notify the CoS Party of such rejection and of the reasons for such rejection; and

(c) notify the User that sent the original 'CoS Update Security Credentials' Service Request.

8.6A Where any of the checks in Clause 8.4A are not satisfied in respect of a Signed Pre- Command received from the TCoS Party, the DCC shall: not be obliged to undertake any of the other checks that remain to be undertaken, and the DCC shall reject the Signed Pre-Command;

(a) save where Clause 8.4A(c) is not satisfied, notify the TCoS Party of such rejection and of the reasons for such rejection; and

(b) notify the User that sent the original 'CoS Update Security Credentials' Service Request.’

Application of Appendix AC (Enrolment, Inventory and Decommissioning Procedures)

3.6 Whilst this ETMAD remains in force, Appendix AC (Enrolment, Inventory and Decommissioning Procedures) of the Code shall be amended as follows:

a) Clause 5.19 shall not apply; and

b) the text immediately below the table in Clause 3.2 shall be replaced with the following:

Where 'DCC Recovery Certificate', 'DCC CoS Certificate', 'DCC Access Control Broker Certificate' and 'DCC WAN Provider Certificate' are each Organisation Certificates created by the DCC for the purposes of occupying the relevant Trust Anchor Cells on Devices in accordance with the above table and used by those DCC Systems described in (respectively) sub-paragraphs (f), (c) or (m), (b) and (a) of the definition of DCC Live Systems.

Application of Appendix AG (Incident Management Policy)

3.7 Whilst this ETMAD remains in force, Appendix AG (Incident Management Policy) of the Code shall be amended as follows:

(a) the definition of Live Services (which has been replaced by the SMETS1 Transition and Migration Approach Document – Appendix AL) shall be replaced as follows:

Live Services means

(a) any of the Services that the DCC is obliged to provide to a User, an Authorised Subscriber, a DCC Gateway Party (once its connection is capable of operation), but excluding Testing Services;

(b) the exchange of data pursuant to Section E2;

(c) any of the Services provided pursuant to the TMAD; and

(d) any of the Services provided pursuant to the ETMAD

(b) Clause 2.1.3 shall not apply in respect to ECoS Migration Incidents;

(c) Clause 5.2 shall not apply in respect of DCC Systems to the extent that they are being used for ECoS Migration;

(d) where the DCC ought to be reasonably able to resolve an ECoS Migration Incident without the assistance of any Responsible Supplier, any incident resolution activities associated with an ECoS Migration Incident shall be assigned to the DCC; otherwise the incident resolution activities shall be assigned to the Responsible Supplier;

(e) the DCC shall raise an ECoS Migration Incident where monitoring of the DCC Systems identifies a problem with the DCC Systems to the extent that they are being used for ECoS Migration.

(f) the DCC shall not be required to raise an Incident, and no Party shall have the right to raise an ECoS Migration Incident, in circumstances where a Responsible Supplier is notified by the DCC in accordance with this ETMAD that one or more of the steps in the ECoS Migration of an individual Device has not been successfully completed, unless this is required by the ECoS Migration Error Handling and Retry Approach;

(g) Table 1 in Clause 2.4 shall be amended to include the following descriptions:

- Category 1 Incident: has a critical adverse impact on the activities necessary to carry out ECoS Migration pursuant to the ECoS Transition and Migration Approach Document;

- Category 2 Incident: has a non-critical adverse impact on the activities necessary to carry out ECoS Migration pursuant to the ECoS Transition and Migration Approach Document;

- Category 3 Incident: has a moderate adverse impact on the activities necessary to carry out ECoS Migration pursuant to the ECoS Transition and Migration Approach Document;

- Category 4 Incident: has a minor adverse impact on the activities necessary to carry out ECoS Migration pursuant to the ECoS Transition and Migration Approach Document;

- Category 5 Incident: has a minimal adverse impact on the activities necessary to carry out ECoS Migration pursuant to the ECoS Transition and Migration Approach Document; and

(h) Table 3 in Clause 5.2.1, row D8, column 2 shall be amended as follows: "The DCC experiences a failure of the systems used to support the operation of the CoS Party <u>or TCoS Party</u>".

<u>Application of Section M (General)</u>

3.8 The Responsible Supplier for each Device referred to in Clause 1.3 acknowledges that the carrying out of one or more of the steps referred to in this ETMAD, may result in the loss of Data stored on or in relation to each such Device and/or the ability to utilise the functionality of the Device. The DCC shall not be liable to the Responsible Supplier (or any other Party) for any Liability that arises from the carrying out of (or attempt to carry out) any of those steps, where (and to the extent that) the DCC has acted in accordance with this ETMAD.

3.9 The DCC shall carry out the activities and provide the services described in this ETMAD in accordance with Good Industry Practice. Each Responsible Supplier shall act in accordance with Good Industry Practice when providing support or assistance and carrying out remediation activities referred to in this ETMAD, in particular as set out in Clause 1.9.

3.10 Save for in respect of the Gas Proxy Function Device Model as set out in Clause 1.11 or where explicitly provided in this ETMAD, the DCC shall have no obligation or liability in respect of the ECoS Migration of any Device:

(a) With a Device Model that is categorised as Non Migratable; and / or

(b) which is deemed to be Ineligible for ECoS Migration until or unless the issue which made the Device Ineligible for ECoS Migration is subsequently resolved and / or no longer applies, such that the Device is no longer Ineligible for ECoS Migration.

4 Reporting

4.1 The DCC shall make available to the Panel, all Parties and (on request) the Secretary of State the ECoS Migration Reporting Regime that includes a list of the reports that the DCC shall provide to Supplier Parties in respect of ECoS Migration and provides an overview of the frequency, content of and recipients of those reports.

Updating the ECoS Migration Reporting Regime

4.2 Except where the modification to the ECoS Migration Reporting Regime is of a minor typographical nature or where the modification has no material effect on the rights or obligations of Parties, any updates to the ECoS Migration Reporting Regime shall be made according to the following the procedure:

(a) the DCC shall produce and publish an initial draft of the revised ECoS Migration Reporting Regime for consultation with Supplier Parties and such other persons as are likely to be interested;

(b) where a disagreement arises with any Supplier Party with regard to any proposal as to the content of the document, the DCC shall endeavour to reach an agreed proposal with that Supplier Party in accordance with this Clause 4.

(c) the DCC shall publish an updated draft of the ECoS Migration Reporting Regime as soon as is practicable after completion of the process described in (a) and (b) above together with:

(i) a statement of the reasons why the DCC considers that updated draft to be fit for purpose;

(ii) copies of the consultation responses received (apart from those marked confidential); and

(iii) a summary of any disagreements that arose during consultation that have not been resolved by reaching an agreed proposal.

4.3 Within fourteen (14) days of DCC publishing the updated draft ECoS Migration Reporting Regime pursuant to Clause 4.2(c), any Supplier Party may refer the document to the Secretary of State whose decision on its contents shall be final and binding. In the absence of any such referral, the updated draft published by the DCC shall become the agreed ECoS Migration Reporting Regime at the expiry of the fourteen (14) day period following its publication.

4.4 Where the modification to the ECoS Migration Reporting Regime is of a minor typographical nature or where the modification has no material effect on the rights or obligations of Parties, the DCC shall make the revised ECoS Migration Reporting Regime available to all Supplier Parties including providing the date on which it intends that the updated ECoS Migration Reporting Regime shall come into effect.

4.5 For each Supplier Party, the DCC shall detail directory structures in DCC's secure document management and storage system through which that Supplier Party can access its reports. The DCC shall provide a Supplier Party with only those files which are relevant to that Supplier Party and the DCC shall do so through the secure document management and storage system (which, at the time of drafting of this ETMAD is DCC's Microsoft SharePoint).

5 <u>Provision of Information to the DCC</u>

5.1 Each Supplier Party shall, on request from the DCC and within such reasonable time period as the DCC may specify, provide such information as may be reasonably required by the DCC to enable it to plan, co-ordinate, and undertake (and provide ongoing support for) ECoS Migration.

6 Migration Approach

6.1 The DCC shall determine:

(a) the process for selecting Devices for ECoS Migration, taking into account the Device Models and any exclusions as set out in Clause 1.4;

(b) the process for initiating ECoS Migration in a controlled and managed way, on the basis that, as a minimum, the DCC shall not commence Bulk Migration for Devices of a particular Device Model until it has first:

(i) successfully replaced the TCoS Certificate with an ECoS Certificate or a different TCoS Certificate on; and

(ii) subsequently demonstrated that a CoS Update Security Credentials Service Request (Service Reference Variant 6.23) has been successfully processed by,

a Device of that Device Model or a Device Model to which it can be upgraded by a firmware upgrade as set out in more detail in Clause 6.2, where activities referenced in 6.1(b)(i) and (ii) may have occurred prior to this version of the ETMAD becoming effective;

(c) the steps required to successfully complete ECoS Migration for an individual Device, including:

(i) the instruction to the TCoS Service Provider to initiate ECoS Migration;

(ii) review by the TCoS Service Provider to confirm that ECoS Migration can commence;

(iii) replacement of the Device Security Credentials that pertain to the TCoS Party with those that pertain to the ECoS Party on the relevant Device; and

(iv) confirmation received from both the ECoS Service Provider and TCoS Service Provider that ECoS Migration has completed successfully.

(d) the process for managing Failed Migrations, including the suspension of ECoS

Migration for certain Device Models to allow issues to be investigated and prevent ECoS Migration of Devices categorised as Non-Migratable; and

(e) the process for determining whether a Device Model should be categorised as Non-Migratable, subject to Clause 1.14.

6.2 For avoidance of doubt, Clause 6.1(b) allows DCC to commence Bulk Migration of Devices of a particular Device Model where the requirements set out at Clause 6.1(b)(i) and (ii) have been met for at least one Device of either (a) the same Device Model or (b) a Device Model with the same Manufacturer, same model and same hardware version but with a later firmware version, on the basis that, if ECoS Migration fails for any such Devices, the firmware version can be upgraded to a firmware version capable of ECoS Migration.

7 Error Handling and Retry Approach

7.1 The DCC shall make available to the Panel, all Parties and (on request) the Secretary of State the ECoS Migration Error Handling and Retry Approach that details the activities the DCC shall carry out where an ECoS Migration attempt is unsuccessful and the resolution activities the Supplier Party shall carry out in relation to Failed Migrations.

Updating the ECoS Migration Error Handling and Retry Approach

7.2 Except where the modification to the ECoS Migration Error Handling and Retry Approach is of a minor typographical nature or where the modification has no material effect on the rights or obligations of Parties, any updates to the ECoS Migration Error Handling and Retry Approach shall be made according to the following the procedure:

(a) the DCC shall produce and publish an initial draft of the revised ECoS Migration Error Handling and Retry Approach for consultation with Supplier Parties and such other persons as are likely to be interested;

(b) where a disagreement arises with any Supplier Party with regard to any proposal as to the content of the document, the DCC shall endeavour to reach an agreed proposal with that Supplier Party in accordance with this Clause 7.

(c) The DCC shall publish an updated draft of the ECoS Migration Error Handling and Retry Approach as soon as is practicable after completion of the process described in (a) and (b) above together with:

(i) a statement of the reasons why the DCC considers that updated draft to be fit for purpose;

(ii) copies of the consultation responses received (apart from those marked confidential); and

(iii) a summary of any disagreements that arose during consultation that have not been resolved by reaching an agreed proposal.

7.3 Within fourteen (14) days of DCC publishing the updated draft ECoS Migration Error Handling and Retry Approach pursuant to Clause 0(c), any Supplier Party may refer the document to the Secretary of State whose decision on its contents shall be final and binding. In the absence of any such referral, the updated draft published by the DCC shall become the agreed ECoS Migration Error Handling and Retry Approach at the expiry of the fourteen (14) day period following its publication.

7.4 Where the modification to the ECoS Migration Error Handling and Retry Approach is of a minor typographical nature or where the modification has no material effect on the rights or obligations of Parties, the DCC shall make the revised ECoS Migration Error Handling and Retry Approach available to all Supplier Parties including providing the date on which it intends that the updated Migration Error Handling and Retry Approach shall come into effect.

Version AT 2.0

Appendix AT

SMETS1 Cryptographic Key Management Policy for DLMS Devices

1. Introduction

This document constitutes the SMETS1 Cryptographic Key Management Policy for symmetric keys required to communicate with SMETS1 DLMS devices. The scope of the document covers DLMS devices which form part of the SMETS1 IOC and FOC cohorts.

The SMETS1 MOC cohort is not in scope of this policy as it utilises cryptographic controls provided by a S1SP Public Key Infrastructure (PKI) which falls under the governance of a S1SPKI Certificate Policy and S1SPKI Certification Practice Statement and is subject to TScheme certification and SMKI PMA approval.

Details relating to the cohort specific technical implementation of this policy are detailed in the SMETS1 Security Architecture Document and in each of the cohorts S1SP technical designs. The SMETS1 Security Architecture Document is controlled by the SEC Security Sub Committee (SSC).

DCC shall ensure that Symmetric Keys used in relation to communications with SMETS1 DLMS devices are managed and used in accordance with the requirements of this SMETS1 Cryptographic Key Management Policy.

The assurance of this policy forms a subset of the overarching security requirements defined in SEC Section G for the protection of Total System S1SP's and therefore is subject to the same level of assurance to DCC, SMKI PMA and SSC.

2. Requirement

The SEC requires in L14.7 that the DCC shall, in respect of each SMETS1 Symmetric Key Arrangement, develop a draft of a SMETS1 Cryptographic Key Management Policy, which shall:

(a) be in accordance with the requirements of "A10.1.2 – Key Management" of ISO 27001;

(b) set out the policy on the use, protection and duration of the Symmetric Keys throughout their entire lifecycle;

(c) make provision for managing those Symmetric Keys throughout their entire lifecycle, including in particular provision for generating, storing, archiving, distributing, retiring and destroying them;

(d) specify secure procedures and methods for:

i. generating Symmetric Keys for different cryptographic systems and different applications;
ii. distributing Symmetric Keys to intended recipients;
iii. activating the Symmetric Keys when received;
iv. storing Symmetric Keys and providing access to them for authorised users;
v. changing or updating Symmetric Keys, including provision for how and when they will be changed or updated;
vi. dealing with Compromised Symmetric Keys;
vii. revoking Symmetric Keys, including provision for how and when they are to be withdrawn or deactivated;
viii. recovering Symmetric Keys that are lost or corrupted;
ix. backing-up or archiving Symmetric Keys;
x. destroying Symmetric Keys; and
xi. the logging and auditing of key management related activities.

(a) be in accordance with the requirements of "A10.1.2 – Key Management" of ISO 27001;

This policy is in line with ISO 27001 A10.1.2 – Key Management which states:

A.10 Cryptography

A.10.1 Cryptographic controls

Objective: To ensure proper and effective use of cryptography to protect the confidentiality, authenticity and/or integrity of information.

A.10.1.1 A Policy on the use of cryptographic controls for protection of information shall be developed and implemented.

A.10.1.2 Key management: A policy on the use, protection and lifetime of cryptographic keys shall be developed and implemented through their whole lifecycle.

(b) set out the policy on the use, protection and duration of the Symmetric Keys throughout their entire lifecycle;

(b)(i) Use:

This document constitutes the SMETS1 Cryptographic Key Management Policy for SMETS1 DLMS devices.

DLMS meter types use four symmetric keys to send and receive instructions:

- Master Key (MK):
- Global Unicast Encryption Key (GUEK);
- Authentication Key (AK);
- Dedicated Key (DK)

SMETS1 DLMS devices have 5 separate 'clients' on the meter, these have defined roles:

- Public, used for unauthenticated access to non-sensitive information;
- Data Collection, a read-only interface to collect data from the meter;
- Extended Data Collection, a further interface to collect data from the meter;
- Management, used to make changes to the meter’s configuration; and
- Firmware, used to update the firmware of the meter.

Each of these clients (except Public) on each SMETS1 DLMS Device must have separate AK and GUEK keys unique to the meter and each client associated with it.

The term 'packaged key' is used for a key that is in a format for storage by the S1SP and use by the DCO and/or S1SP, these will be encrypted using a HSM stored Key Encryption Key.

The following symmetric key types and their uses are defined in this policy for use in SMETS1;

- Master Key (MK): the 'master' or 'key encryption' key for a single DLMS meter. Each SMTES1 DLMS device will have a Master Key (MK) that is used for key rotation.
- Global Unicast Encryption Key (GUEK): the encryption key for a single DLMS client on a single DLMS meter.

- Authentication Key (AK): the authentication key for a single DLMS client on a single DLMS meter.
- Dedicated Key (DK): the 'dedicated' or 'session' encryption key for an authenticated DLMS meter interaction.
- HSM Key: This is a Key Encryption Key stored inside a HSM for the encryption and decryption of symmetric DLMS meter keys stored by S1SPs outside of an HSM. There are two types of HSM Key Encryption Key defined in the SMETS1 Security Architecture:
- DCO Key: a HSM Key Encryption Key only stored in DCO HSM's and used to encrypt MKs and AKs stored at S1SPs.
- Shared Key: a HSM Key Encryption Key stored by both the DCO and S1SP in HSMs. Used to encrypt and decrypt GUEKs and DKs

Each SMETS1 S1SP shall only have access to the GUEK and (if used) DK.

For each command the DCO shall be provided by the S1SP the device specific AK, which must be stored by the S1SP in a packaged form where a DCO Key has been used to encrypt the AK.

In addition, for each command the DCO shall also be provided by the S1SP the GUEK and DK (if used) as required to perform cryptographic operations at the DCO.

(b)(ii) Protection & Cryptographic Processing

The DCC shall ensure that for Cryptographic Processing performed, that:

- is carried out by a SMETS1 Service Provider and involves the use of SMETS1 Global Unicast Encryption Key (GUEK); and
- after Post Migration Key Rotation has completed, is carried out by a DCO and involves the use of a packaged SMETS1 Authentication Key (AK);

Is, in each case, carried out within Cryptographic Modules that are compliant with FIPS 140-2 Level 3 (or any equivalent to that Federal Information Processing Standard which updates or replaces it from time to time).

The following encryption schemes must be used:

Symmetric Keys used for SMETS1 Device communication:

- AES_GCM 128 must be used for MKs and AKs
- AES_GCM 128 must be used for GUEKs;

Symmetric keys used for packaging MKs, AKs and GUEKs at the S1SP

- AES_ECB 128 must be used for DCO HSM Keys
- AES_ECB 128 must be used for Shared Keys.

All SMETS1 systems that generate, handle, store or distribute symmetric keys must be protected in line with SEC Section G security controls and assurance requirements.

b(iii) SMETS1 Symmetric Key Lifetime

As soon as reasonably practicable (and in any event within 7 days subject to device connectivity) following the Commissioning of a SMETS1 Communications Hub Function or a SMETS1 Smart Meter or a SMETS1 Gas Proxy Function the S1SP shall, via the DCO, in relation to each such Device and where supported by that Device, re-generate and replace any Authentication Keys and any Encryption Keys held by that Device.

Authentication Keys and any Encryption Keys generated via the DCO, following device commissioning do not subsequently need to be periodically re-generated and replaced during the life of the device. The DCC shall ensure the keys are re-generated and replaced where it is instructed to do so by the SMKI PMA in the following situations;

- As instructed in order to recover from a Major Incident where a compromise of the DCO or S1SP has occurred. PMA will consider as part of this process the need and impact of rotating symmetric keys at the DCO and/or the S1SP.
- If, as part of periodic risk and assurance reviews of the Section G controls at the DCO and S1SPs, relating to the handling of symmetric keys, these controls fall short of the minimum DCC require and where material risks are introduced that would require the re-generation and replacement of device, S1SP and DCO managed symmetric keys.

DCC must complete periodic risk reviews, at no more than 5 year intervals, of all symmetric key use and controls at the DCO and S1SPs, and provide evidence and assurance to SMKI PMA on the continued effectiveness of those controls.

(c) make provision for managing those Symmetric Keys throughout their entire lifecycle, including in particular provision for generating, storing, archiving, distributing, retiring and destroying them;

This policy makes provision for managing Symmetric Keys throughout their entire lifecycle as outlined below in Section (d).

(d) specify secure procedures and methods for:

(i) generating Symmetric Keys for different cryptographic systems and different applications;

Keys must be generated in line with each cohort's S1SP solution and in accordance with Clause 20.1 of SEC Appendix AM (SMETS1 Supporting Requirements) which states that as soon as reasonably practicable (and in any event within 7 days subject to devices connectivity) following the Commissioning of a SMETS1 Communications Hub Function or a SMETS1 Smart Meter or a SMETS1 Gas Proxy Function or a SMETS1 PPMID, the S1SP shall, via the DCO, in relation to each such Device and where supported by that Device, re-generate and replace any Authentication Keys and any Encryption Keys held by that Device.

Symmetric Keys will be automatically requested by each S1SP from the DCO as part of the Device commissioning process, where in relation to each such Device and where supported by that Device, the DCO will generate new Authentication Keys and Encryption Keys for each device DLMS client, with all cryptographic processing being carried out in Cryptographic Modules which are compliant with FIPS 140-2 Level 3 (or any equivalent to that Federal Information Processing Standard which updates or replaces it from time to time).

(ii) distributing Symmetric Keys to intended recipients;

Where supported by that Device each Device will have a Master Key (MK) that is used for key rotation and distribution. When AK and GUEK rotation is required as part of the SMETS1 commissioning obligations, the S1SP and DCO will, where supported by that Device, re-generate and replace any Authentication Keys and any Encryption Keys held by that Device and create a new Key value.

Where supported by that Device the Master Key will be rotated. Details relating to the cohort specific technical implementation of this rotation policy are detailed in the SMETS1 Security Architecture Document and in each of the cohorts S1SP technical designs and security management plans.

In the case of DCO and Shared HSM Key Encryption Keys, where the intended recipient is the DCO or the S1SP, keys will be distributed using appropriate secure transport mechanisms and digital signatures to sign the key packages to ensure the integrity and authentication of the symmetric key material as defined in the security architecture and agreed with the SMKI PMA.

(iii) activating the Symmetric Keys when received;

Where the S1SP, via the DCO, in relation to each such Device and, where supported, by that Device, re-generates and replaces any Authentication Keys and any Encryption Keys held by that Device, all such Symmetric Keys will be considered to be activated immediately.

(iv) storing Symmetric Keys and providing access to them for authorised users;

SMETS1 Symmetric Keys must be stored in compliance with SEC Section G security controls and with all cryptographic processing being carried out within Cryptographic Modules which are compliant with FIPS 140-2 Level 3 (or any equivalent to that Federal Information Processing Standard which updates or replaces it from time to time).

Access to any packed keys must be limited to S1SP Privileged Persons and only for support reasons.

All keys stored in HSMs shall be subject to controls where access is restricted to nominated ACS card holders only.

(v) changing or updating Symmetric Keys, including provision for how and when they will be changed or updated;

Authentication Keys and any Encryption Keys generated via the DCO, where supported by that Device following device commissioning, do not need to be periodically re-generated and replaced during the life of the Device other than as set out under **(b)(iii) SMETS1 Symmetric Key Lifetime** and they will not be changed or updated other than as set out in that section.

(vi) dealing with Compromised Symmetric Keys;

This policy only considers the compromise of SMETS1 Symmetric Keys held at the DCO and S1SP

In accordance with that set out under **(b)(iii) SMETS1 Symmetric Key Lifetime** of this policy, SMKI PMA may consider the need and impact of rotating one or more SMETS1 Symmetric Keys at the DCO and/or the S1SP.

(vii) revoking Symmetric Keys, including provision for how and when they are to be withdrawn or deactivated;

The SMETS1 Security architecture and DLMS Devices do not support the capability to revoke symmetric keys.

(viii) recovering Symmetric Keys that are lost or corrupted;

Should any of a Devices DLMS symmetric keys be corrupted or compromised, the S1SP and DCO will, where supported by that Device, re-generate and replace any Authentication Keys and any Encryption Keys held by that Device and create a new Key value.

(ix) backing-up or archiving Symmetric Keys;

As laid out in (viii) there is no requirement to backup or archive Symmetric Keys

(x) destroying Symmetric Keys;

The SMETS1 Security Architecture and DLMS Devices do not support the capability to destroy symmetric keys. Instead, the S1SP and DCO will, where supported by that Device, re-generate and replace any Authentication Keys and any Encryption Keys held by that Device and create a new Key value.

(xi) the logging and auditing of key management related activities

The S1SP and DCO systems and infrastructure that process SMETS1 DLMS symmetric keys form part of the wider DCC Total System and are therefore subject to the same obligations relating to Monitoring and Audit as outlined in **SEC Section G Monitoring and Audit (G2.26-G2.30).**

There are two types of logs generated as part of Symmetric key management activities:

- Environment and Infrastructure logs e.g. HSM and ACS access logs, which are subject to protective monitoring requirements.
- Logs generated during application transaction activities (e.g. all actions which involve interaction between DCO, S1SPs and devices for the creation or processing of symmetric keys)

Details relating to the cohort specific technical implementation of this policy are detailed in the SMETS1 Security Architecture Document and in each of the cohorts S1SP technical designs and security management plans.

Defined terms for the purposes of this SMETS1 Cryptographic Key Management Policy

Defined Term	Definition
Administrative Card Set (ACS)	Through smart card sets, security teams establish quorums, or a minimum number of cards that are required to perform a specific task on an HSM. There are two categories of smart card sets in HSM use: an ACS, which is used to authorise administrative tasks and disaster recovery, and one or more Operator Card Sets (OCS), which authorise HSMs to use specific application keys.
AES ECB	Advanced Encryption Standard (AES) Electronic codebook (ECB) is a block cipher mode of operation and is used for efficiency and speed for the packaging of symmetric keys.
AES GCM	Advanced Encryption Standard (AES) Galois/Counter Mode (GCM) is a mode of operation for symmetric-key cryptographic block ciphers which is widely adopted for its performance. AES-GCM is included in the NSA Suite B Cryptography as included in the DLMS specification.
Authentication Key (AK)	An authentication key for a single DLMS client on a SMETS1 Device.
DCO Key	DCO Key: a HSM Key Encryption Key only stored in DCO HSM's and used to encrypt MKs and AKs stored at S1SPs.
Dedicated Key (DK)	A 'dedicated' or 'session' encryption key for an authenticated DLMS meter interaction. Similar to an ephemeral TLS symmetric session key.
DLMS	Device Langue Message Specification. DLMS/COSEM (IEC 62056, EN13757-1) is the global standard for energy & water smart management, advanced control and innovative metering.
Final Operating Capability (FOC)	has the meaning set out in DCC's delivery plan for SMETS1 services produced pursuant to condition 13 of the DCC Licence.
Gamma	Means the secure communications network supported by Gamma Telecom Limited acting as a DCC Service Provider, or any such replacement network.
Global Unicast Encryption Key (GUEK)	An encryption key for a single DLMS client on a single SMETS1 Device.
Hardware Security Module (HSM)	means a Cryptographic Module.
HSM Key	This is a Key Encryption Key stored inside a HSM for the encryption and decryption of symmetric DLMS meter keys stored by S1SPs outside of an HSM. There are two types of HSM Key Encryption Key defined in the SMETS1 Security Architecture. DCO and Shared Keys.
Initial Operating Capability (IOC)	has the meaning set out in DCC's delivery plan for SMETS1 services produced pursuant to condition 13 of the DCC Licence.
Master Key (MK).	An encryption key that is unique to a single SMETS1 Device and that is used for key rotation.
Middle Operating Capability (MOC)	has the meaning set out in DCC's delivery plan for SMETS1 services produced pursuant to condition 13 of the DCC Licence.
Packaged Key	The term 'packaged' is used for a key that is in a format for storage by the S1SP and use by the DCO and/or S1SP, these will be encrypted using a HSM key.
Shared Key.	a HSM Key Encryption Key stored by both the DCO and S1SP in HSMs. Used to encrypt and decrypt GUEKs and DKs.
SMETS1 DLMS Device	A SMETS1 Device that uses DLMS and AES GCM Authenticated encryption. a SMETS1 Communications Hub Function or a SMETS1 Smart Meter or a SMETS1 Gas Proxy Function.

Wrapped Key	The term 'wrapped key' means a new key wrapped using the meter master key for transmission to the meter during key rotation via DLMS

Version 1.0

APPENDIX AU

Network Evolution Transition and Migration Approach Document

1. Introduction and General Obligations

1.1. This Appendix is the Network Evolution Transition and Migration Approach Document (NETMAD) developed by the DCC pursuant to Section F13 (Network Evolution Transition and Migration Approach Document) of the Code.

1.2. Where directed to do so by the Secretary of State from time to time, the DCC shall develop and consult upon a further draft or drafts of this NETMAD in accordance with Section F13.5 of the Code, and the DCC shall submit such further draft(s) to the Secretary of State in accordance with the process set out in Section F13.4 of the Code.

1.3. For the purposes of Section F13.8 (Expiry of the Network Evolution Transition and Migration Approach Document), this NETMAD will cease to apply on 30 June 2026 (or any such later date as the Secretary of State may direct following a consultation on a proposed alternative with the Parties and the Panel) and shall no longer have any effect from such date (but without prejudice to the rights and obligations arising prior to that date).

2. Defined Terms and Interpretation for the purpose of the NETMAD

2.1. The following definitions shall apply in the NETMAD:

Term	Meaning
4G Communications Hub	means a SMETS2+ Communications Hub that is designed to work with 4G mobile communications technology
4G SM WAN	means that part of the SM WAN that will utilise 4G mobile communications technology.
Carton	means a package of 14 4G Communication Hubs in a cardboard box.
Completion Report	means the completion report for Initial Pallet Validation to be completed pursuant to Clauses 4.9 – 4.14.
Initial Pallet Validation (or **IPV**)	means the initial trialling of 4G Communications Hubs by Supplier Parties in premises.
Initial Pallet Validation Approach Document	means a document produced pursuant to Clause 4.4 of this NETMAD

Term	Meaning
Initial Pallet Validation Stage	means the period during which Initial Pallet Validation will be conducted.
JIP Milestone	means a milestone within the Joint Industry Plan.
Joint Industry Plan (JIP)	means the part of the joint industry plan that relates to the 4G Communications Hubs and Network Programme that is agreed at the Department for Energy, Security and Net Zero's smart metering design group.
DCC's Microsoft SharePoint	means a web-based collaborative platform that DCC uses to securely share and exchange information with individual Parties.

2.2. Additionally, where defined terms from specific parts of the Code are used, the relevant part of the Code is stated. Where no specific part of the Code is stated, a defined term shall have its Section A (Definitions and Interpretation) meaning.

3. <u>Coverage Checker</u>

3.1. Prior to the "LSC: Go-Live decision" JIP Milestone being met, the DCC shall make available to each Supplier Party through the DCC's Microsoft SharePoint a searchable database with the capability to interrogate by post code and postal outcode whether a 4G Communications Hub installed in a premises at any given location:

(a) is expected to be able to connect to the 4G SM WAN from the start of the Initial Pallet Validation stage; or

(b) cannot be confirmed as being expected to be able to connect to the 4G SM WAN from the start of the Initial Pallet Validation stage.

3.2. The database provided pursuant to Clause 3.1 shall be a CSV file which is searchable by users at postcode and outcode level and shall be kept up to date. Whenever the DCC makes available an updated version of the database it shall notify each Supplier Party that it has done so.

4. <u>Initial Pallet Validation</u>

4.1. A Supplier Party shall not enrol a Smart Metering System incorporating a 4G

Communications Hub prior to the commencement of the Initial Pallet Validation Stage.

4.2. Each Supplier Party shall provide any information that the DCC reasonably requests in order to support the planning, coordination and undertaking of Initial Pallet Validation.

Initial Pallet Validation Approach Document

4.3. The DCC shall produce an Initial Pallet Validation Approach Document in accordance with Clause 4.4 which shall include the following:

(a) the entry criteria that are required to be met before the Initial Pallet Validation Stage can commence;

(b) the process for resolving Incidents occurring in respect of Services pertaining to the 4G mobile communications technology during the Initial Pallet Validation Stage, the applicable Incident thresholds that must not be exceeded in order for the Initial Pallet Validation Stage to complete successfully, and the process for excluding Incidents from counting towards those thresholds;

(c) the other exit criteria that are required to be met in order for the Initial Pallet Validation Stage to successfully complete, including the minimum activity that must be undertaken before the Initial Pallet Validation Stage can complete; and

(d) matters to be included in the completion report for the Initial Pallet Validation Stage.

4.4. The DCC shall submit a draft Initial Pallet Validation Approach Document to the Panel for review as soon as reasonably practicable (and such submission by the DCC and review by the Panel may take place prior to this Clause 4.4 coming into effect); and:

(a) where the Panel and the DCC can reach an agreement, the draft Initial Pallet Validation Approach Document shall be updated by the DCC as necessary and deemed to be final; or

(b) where the Panel and the DCC cannot reach an agreement, the matters of disagreement shall be referred by the DCC to the Secretary of State for determination. The Secretary of State’s decision on such matters shall be final and binding for the purposes of this Code and the draft Initial Pallet Validation

Approach Document shall be updated by the DCC as necessary and deemed to be final.

4.5. Revisions to the Initial Pallet Validation Approach Document finalised pursuant to Clause 4.4:

(a) may, from time to time, be submitted by the DCC to the SEC Panel in accordance with the provisions of Clause 4.4, and the provisions of Clause 4.4 shall apply (again) to the revised version of the document; or

(b) shall be made by the DCC in accordance with any direction to do so issued by the Secretary of State. The DCC shall consult with the SEC Panel concerning any such proposed revision in accordance with any direction to do so issued by the Secretary of State.

4.6. The DCC shall comply with the Initial Pallet Validation Approach Document.

Start of Initial Pallet Validation

4.7. Initial Pallet Validation shall only commence once the Panel has determined that the Initial Pallet Validation entry criteria have been met.

Completion of Initial Pallet Validation

4.8. Initial Pallet Validation shall only complete once the Panel has determined that the exit criteria for completion as set out in the Initial Pallet Validation Approach Document have been met.

4.9. When the DCC considers that Initial Pallet Validation completion ought to occur, the DCC shall prepare a Completion Report. The DCC shall:

(a) notify the Secretary of State, the Authority, the Panel, and the Parties that the DCC considers that Initial Pallet Validation has completed;

(b) provide the Authority, the Panel, and the Secretary of State with copies of the Completion Report and a list of the sections of such report that the DCC considers should be redacted prior to publication; and

(c) review the supporting documentation and evidence with regards to the relevant exit criteria with the Panel.

4.10. The Panel shall confirm the completion of Initial Pallet Validation or shall highlight where it believes the exit criteria have not been met.

4.11. Where the Panel confirms the completion of Initial Pallet Validation (subject to the Panel and the DCC reaching an agreement regarding resolution of any issues raised by the Panel) the Completion Report shall be updated by the DCC as necessary and deemed to be final.

4.12. Where the Panel declines to confirm the completion of Initial Pallet Validation, the DCC shall update the relevant Completion Report to reflect resolution of any issues where the DCC and the Panel reached an agreement, and the DCC shall then either:

(a) refer the matters where the Panel and the DCC are in disagreement to the Secretary of State for determination; or

(b) continue with the Initial Pallet Validation Stage (and Clause 4.9 shall apply again).

4.13. Where a referral has been made by the DCC pursuant to Clause 4.12, the determination of the Secretary of State shall be final and binding for the purposes of this Code as follows:

(a) where the Secretary of State agrees that Initial Pallet Validation has completed, the relevant Completion Report shall be updated by the DCC as necessary and the contents shall be deemed to be final; or

(b) where the Secretary of State disagrees that Initial Pallet Validation has completed, the DCC shall continue with the Initial Pallet Validation Stage (and Clause 4.8 onwards shall apply again).

4.14. The DCC shall publish the final Completion Reports for Initial Pallet Validation as soon as reasonably practicable on the DCC Website, which shall be anonymised and redacted where directed by the Panel. The DCC shall notify the Panel, the Secretary of State, the Authority and the Parties of the publication of the report.

5. <u>Ordering of 4G Communications Hubs for Initial Pallet Validation</u>

5.1. Each Supplier Party shall be entitled to order 4G Communications Hubs intended for use in the Initial Pallet Validation Stage in accordance with this Clause 5.

5.2. 4G Communications Hubs orders shall be supplied by the DCC in Cartons. Each Supplier Party may place a request for a minimum order of 1 Carton and a maximum order of 64 Cartons during the calendar month prior to the "Initial Pallet Orders" JIP Milestone. The DCC shall ensure that there are in total 640 Cartons (8,960 4G Communication Hubs) available for ordering by Supplier Parties.

5.3. The DCC shall make available to Supplier Parties at least one DCC contact telephone number and one DCC email address for the purposes of order requests for 4G Communications Hubs. A Supplier Party shall place any order request in writing by email by completing a template provided by the DCC for this purpose.

5.4. The template provided by the DCC pursuant to Clause 5.3 shall include :

(a) the number of Cartons of 4G Communications Hubs being ordered (which, in accordance with Clause 5.2, shall be between 1 and 64 Cartons);

(b) one Delivery Location for the order, including the following information for the Delivery Location:

(i) the full delivery address (including postcode);

(ii) days of the week and hours within those days that deliveries can be made;

(iii) a preferred delivery date within one month preceding the “Initial Pallet Supply” JIP Milestone; and

(iv) the name, email address, and telephone number for a nominated contact in relation to each Communications Hubs order.

5.5. Where a Supplier Party does not provide an order request in a number of Cartons or where the order request is more than 64 Cartons, DCC shall amend that element of the request at its discretion to comply with the requirements set out in this Clause 5..

5.6. Where the DCC receives a Communications Hub order request from a Supplier Party, the DCC shall:

(a) promptly acknowledge receipt of the request; and

(b) within five Working Days of its receipt, notify the Supplier Party in writing via email either that:

(i) the request satisfies the requirements of Clause 5.4 and is therefore being processed; or

(ii) the request does not satisfy the requirements of Clause 5.4 with respect to the minimum or maximum number of Cartons therefore that the DCC has amended the order request pursuant to Clause 5.5, provide the details of the amendment and state that the request is being processed on that basis; and/or

(iii) the request does not satisfy the other requirements of Clause 5.4 in which case the Supplier Party shall revise the request within [5] Working Days so that it does so satisfy those requirements, in order for it to be eligible for processing by the DCC.

5.7. Following completion of the steps in Clause 5.6, the DCC shall process each Supplier Party's order request in accordance with the rules set out in Clauses 5.8 – 5.15.

5.8. Where the aggregate of the order requests pursuant to Clause 5.6 exceeds 640 Cartons, the following rules shall apply and the DCC shall adjust each Supplier Party's order request accordingly:

(a) each order request for 16 Cartons or fewer shall be accepted. Each order request for more than 16 Cartons shall be reduced by one Carton. This process shall be repeated until the aggregate number of order requests does not exceed 640 Cartons, provided that the DCC shall not reduce a Supplier Party's order request below 16 Cartons; and

(b) once the rules in Clause 5.8(a) have been applied, any remaining Cartons that are available to be ordered shall be randomly allocated to individual order requests that were reduced pursuant to Clause 5.8(a).

5.9. Where the aggregate of order requests pursuant to Clause 5.6 equals 640 Cartons, no further adjustment shall be made by the DCC to each Supplier Party's order request.

5.10. Where the aggregate of order requests pursuant to Clause 5.6 is fewer than 640 Cartons, the DCC shall send an email to each Supplier Party that submitted an order request to invite them to increase their order request through an additional round of requests, stating the total amount of Cartons that are available for ordering in that additional round that have not yet been requested. Each Supplier Party shall have 5 Working Days to respond in writing via email to the DCC stating whether it wants to additionally request Cartons and if so, the number that it wishes to additionally request. Where a Supplier Party does not submit an additional order request, its order request shall not be amended.

5.11. In respect of those Supplier Parties that do submit additional order requests, where the aggregate of the additional order requests received pursuant to Clause 5.10 does not exceed the total Cartons that were available for ordering in the additional round, the DCC shall adjust each relevant Supplier Party's order request to reflect the additional amount requested by that Supplier Party.

5.12. In respect of those Supplier Parties that do submit additional order requests, where the aggregate of the additional order requests received pursuant to Clause 5.10 exceeds the total Cartons that were available for ordering in the additional round, then the following rules shall apply and the DCC shall adjust each relevant Supplier Party's order request to reflect the additional amount allocated to that Supplier Party:

(a) the DCC shall reduce the Supplier Party's additional order request by a single Carton. This process shall be repeated until the aggregate number of additional order requests does not exceed the total number of Cartons that were available for ordering in the additional round; and

(b) once the rules in Clause 5.12(a) have been applied, any remaining Cartons that are available shall be randomly allocated to individual additional order requests that were reduced pursuant to Clause 5.12(a).

5.13. In the event that a Supplier Party's order request or additional order request is amended pursuant to Clause 5.8 or Clause 5.12, the DCC shall contact that Supplier Party by email, to inform them of the amendment, setting out the reason for the change.

5.14. Each Supplier Party's accepted order for 4G Communications Hubs will be set at the amount of Cartons established pursuant to completion of the process set out in Clauses

5.8 – 5.12 (inclusive). The DCC shall notify each Supplier Party in writing via email of its accepted order amount by the "Initial Pallet Orders" JIP Milestone.

5.15. The DCC shall deliver to each Supplier Party its accepted order of 4G Communications Hubs to the location set out in the order request, within the opening hours of that location and on the delivery date established pursuant to Clause 5.4(b)(iii).

5.16. The DCC and each Supplier Party acknowledges that the DCC Licence and other parts of this Code (including Section A, Section F, the CH Handover Support Materials and the CH Installation and Maintenance Support Materials) shall be amended prior to delivery to apply in respect of the 4G Communications Hubs ordered pursuant to this Clause 5 and in respect of the Services that the DCC shall be required to provide in relation to those Communications Hubs.
