Dear Colleague,

Smart Metering Implementation Programme: approval of the addition of SMETS1 Device Model Combinations to the Eligible Product Combination List

On 11 August DCC published EPCL Report 6 and sought approval for the addition of the Device Model Combinations (DMCs) referenced therein to the Eligible Product Combination List (EPCL), which relate to the SMETS1 Initial Operating Capability (IOC) and Middle Operating Capacity (MOC) for the DCC SMETS1 service. DCC's proposed EPCL entries are set out in the Annex to this letter.

Approval of the proposed EPCL entries would enable the migration of these devices into the DCC system and the use of SMETS1 services in respect of them by DCC Users. In doing so, this will allow energy suppliers to bring back smart services for those energy consumers who have lost them and enable consumers to retain services on change of energy supplier.

In determining whether to approve the addition of the proposed entries to the EPCL, I have sought to gain sufficient confidence that the DCC is able to support migration and subsequent operations for these specific DMCs. I have received a range of evidence on these matters including:

- DCC's EPCL Report 6 setting out evidence in respect of Live Service Criteria and containing DCC's recommendation that BEIS should approve the addition of the DMCs to the EPCL; and
- Advice from my own team in BEIS including on regulatory readiness and that mitigating actions on residual risks are in place.

I have also received confirmation from the DCC that it is continuing to proactively engage energy suppliers to manage a known risk relating to active devices with an auxiliary load circuit. I have been assured by the DCC that it will exclude dormant sites where Auxiliary Load is potentially present and that the one energy supplier with potential active sites will do the same.

In respect of DCO system stability, I am assured by the scrutiny being given to this from DCC Operations and the positive trend on incidents. The DCC should continue to proceed with

caution and keep all relevant stakeholders informed as it continues with migrations and manages its operations.

Having considered the range of evidence and recommendations from DCC, I see no reason not to proceed. I therefore approve the addition of the DMCs outlined in the Annex of this letter to the EPCL, pursuant to clause 3.7 of the SMETS1 Transition and Migration Approach Document.

I note that further additions to the EPCL will be requested in the future and look forward to receiving the evidence and recommendations for these from DCC in due course.

Thank you to all parties who have engaged with and supported this process.

Yours sincerely,

Duncan Stone

Deputy Director & Head of Delivery, Smart Metering Implementation Programme

(an official of the Department for Business, Energy & Industrial Strategy authorised to act on behalf of the Secretary of State)
