2nd October 2020

Dear Colleague,

Approval of the addition of SMETS1 Device Model Combinations to the Eligible Product Combination List for DCC SMETS1 services

On 15 September 2020 DCC published EPCL Report 7 and sought approval for the addition of the Device Model Combinations (DMCs) referenced therein to the Eligible Product Combination List (EPCL) which relate to the SMETS1 Initial Operating Capability (IOC) and Middle Operating Capability (MOC) for the DCC SMETS1 service. DCC's proposed EPCL entries are set out in the Annex to this letter.

Approval of the proposed EPCL entries would enable the migration of these devices into the DCC system and the use of SMETS1 services in respect of them by DCC Users. In doing so, this will allow energy suppliers to bring back smart services for those customers who have lost them and enable them to retain smart services on change of supplier.

In determining whether to approve the addition of the entries to the EPCL, I have sought to gain sufficient confidence that the DCC is able to support migration and subsequent operations for these specific DMCs. I have received a range of evidence on these matters including:

- DCC EPCL Report 7 setting out evidence in respect of Live Service Criteria and containing DCC's recommendations that BEIS should approve the addition of the DMCs to the EPCL; and
- Advice from my own team in BEIS including on regulatory readiness and that mitigating actions on residual risks are in place.

I have also received confirmation from the DCC that it is continuing to proactively engage energy suppliers to manage a known risk relating to active devices with an auxiliary load circuit. For Aclara devices, I have been assured by the DCC that it will exclude dormant sites where Auxiliary Load is potentially present and that the one energy supplier with potential active sites will do the same. For Itron and Elster devices, the Core Uplift 1.1 of 6th May 2020 has enabled DCC to support and re-establish connection to Auxiliary Load devices. We are, nevertheless, yet to see this in the production environment and have therefore sought assurance from the DCC that it will therefore proceed with caution.

In respect of DCO system stability, I am assured that DCC has met BEIS' stability criteria for EPCL entries and by the scrutiny from DCC Operations. The DCC should continue to proceed with caution and keep all relevant stakeholders informed as it continues migrations and manages operations.

Having considered the range of evidence and recommendations from DCC, I see no reason not to proceed. I therefore approve the addition of the DMCs outlined in the Annex of this letter to the EPCL, pursuant to clause 3.7 of the SMETS1 Transition and Migration Approach Document.

I note that further additions to the EPCL will be requested by DCC in the future and look forward to receiving the evidence and recommendations for these in due course.

Thank you to all parties who have engaged with and supported this process.

Yours faithfully,

Duncan Stone Deputy Director & Head of Delivery, Smart Metering Implementation Programme

(an official of the Department for Business, Energy & Industrial Strategy authorised to act on behalf of the Secretary of State)

ANNEX – Device Model Combinations Requested for Eligible Product Combination List – EPCL Report 7
