MP090 ‘Incorporation of Non GBCS Non-Mandated Alerts into the SEC’ Modification Report Consultation responses

About this document

This document contains the full collated responses received to the MP090 Modification Report Consultation.

Summary of responses

Question 1: Do you believe that MP090 should be approved?

Question 1			
Respondent	Category	Response	Rationale
Edf	Large Supplier	Approve	We agree that this change better facilitates SEC Objective (a) as it will improve the interoperability of devices by ensuring that all parties are able to receive and understand the alerts that are being included as part of this change.
Electricity North West	Electricity Network Party	Approve	The modification would better facilitate SEC objective (a) as it supports the efficient provision, installation, and operation, as well as interoperability of Smart Metering Systems. The implementation of NGNM alerts into the GBCS would ensure DCC Users' systems can recognise these alerts without requiring further individual development.
SSE (OVO)	Large Supplier	Approve	As proposer and due to raising this to capture all the historical Non-Mandated alerts that were left in limbo, it would be remiss to reject this.
Scottish Power	Large Supplier	Approve	The cost is minimal, and some current messages carried by the DCC network will be brought under governance of GBCS and SEC. We therefore support the Working Group's view that, if implemented, MP090 better facilitate Objective (a).
Landis + Gyr	Other SEC Party	Approve	The modification supports the General SEC objective (a) because it better informs energy suppliers of the status of assets and any action which may be required to ensure their efficient operation.

Question 2: Please provide any further comments you may have

Question 2		
Respondent	Category	Comments
Edf	Large Supplier	-
Electricity North West	Electricity Network Party	-
SSE (OVO)	Large Supplier	-
Scottish Power	Large Supplier	-
Landis + Gyr	Other SEC Party	The alerts are typically incorporated into a device by a manufacturer to aid in the efficient operation and whilst the original supplier has a relationship with that manufacturer, that is not always the case when the meter churns to another supplier.
