# SEC Panel Feedback

---

- **CH & Network 4G** – The SEC Panel agreed not to send the drafted letter to BEIS until after the June SEC Panel meeting where the DCC will present further information on the outstanding actions relating to Network Evolution.
- **Authority decision on DCC's derogation of Section H** – The SEC Panel noted the update on the Data Communications Company's (DCC's) derogation request against elements of SEC Section H 'DCC Services' introduced and amended by MP122A 'Operational Metrics'. This included a summary of each of the provisions the DCC requested a derogation on, the Authority's decision against each request and the plans the DCC has made to be compliant against each provision in question.
- **Cross Code Steering Group** – The Retail Energy Code (REC) is launching a Cross Code Steering Group to go live in Q3 2021 to help co-ordinate cross Code activity.
- **Smart as 'dumb'** – A SEC Panel member raised concerns around the technical capabilities for Smart Meters to be operated in 'dumb' mode (no communication or access to smart services). This was discussed under AOB at the OPSG Reporting Meeting.
