

OPSG Action 50/11

SECAS to conduct a review of why further Modifications have been needed to correct issues with Modifications that have previously been implemented.

Action 50/11

- The SEC Change team has held a lessons learnt session with the DCC and concluded the following: Once the modification is approved by the industry (or the Authority) the detailed design and build work starts in earnest. At this point, whilst delving into the detail, the Service Providers work can find some minor corrections are needed to the approved legal text for the more complex technical specifications. Since these have been through the modifications process they need another modification to make, often minor, amendments.
- In addition, only when the different sets of legal text from Modifications and Change Requests have been approved and come together to form a Release can full cross-checking and alignment of the texts be completed.
- SECAS have also implemented a review process specifically around the Technical Specification legal text changes ensuring that text is fully reviewed both internally and by the most appropriate industry groups for each text such as TSIRS, TABASC and the GBCS Working Group.
