# MP128B ‘Incorrect Gas Network Operator Certificates’ Conclusions Report – version 0.1

## About this document

---

This document summarises the responses received to the Modification Report Consultation.

## Summary of conclusions

---

### Modification Report Consultation

SECAS received three responses to the Modification Report Consultation. All three believed that the modification should be approved. They considered the modification better facilitated SEC Objectives (d)<sup>1</sup> and one Party believed it also better facilitated SEC Objective (g)<sup>2</sup>.

---

<sup>1</sup> To facilitate effective competition between persons engaged in, or in Commercial Activities connected with, the Supply of Energy.

<sup>2</sup> To facilitate the efficient and transparent administration and implementation of this Code.

## Modification Report Consultation responses

---

### Summary of responses

All three respondents (one Large Supplier and two Network Parties) agreed that MP128B better facilitated SEC Objective (d), and one Network Party also added that it better facilitated SEC Objective (g). One respondent commented that the modification was sensible in that it will allow amendment of incorrect SMKI Certificates placed within a Device which previously could not be changed where the GNO was a non-DCC User.

There was one minor suggestion for a typographical amendment to the legal text (capitalisation of the 'a' in the term 'access-Control-Broker'), however the nomenclature used is taken directly from the SEC and is a specific technical reference, so this will remain as written.
